repose, the simple majesty of form and expression, which constitute the true sublimity of sculptural representation. (*Memoir, History of the Fine Arts*, p. 52.)—In the time of Pausanias, there was still shown, at Olympia, the building in which this statue of Jupiter was made, and the posterity of Phidias had the charge of keeping the image free from whatever might sully its beauty, and were, on this account, styled *Φαειδουραϊ*. (*Pausan.*, 5, 14, 5.)—We have already remarked that, according to the best critics, this statue was executed subsequently to that in the Parthenon, and not, as the common accounts have it, before this. It was on his return to Athens, after completing the Olympian Jove, that Phidias became involved in the difficulty, which many erroneously suppose to have preceded his visit to Elis. According to Plutarch, his friendship and influence with Pericles exposed the artist to envy, and procured him many enemies, who, wishing, through him, to try what judgment the people might pass upon Pericles himself, persuaded Menon, one of his workmen, to place himself as a suppliant in the forum, and to entreat the protection of the state while he lodged an information against Phidias. The people granting his request, Menon charged the artist with having embezzled a portion of the forty talents of gold with which he had been furnished for the decoration of the statue in the Parthenon. The allegation, however, was disproved in the most satisfactory manner; for Phidias, by the advice of Pericles, had put on the golden decorations in such a way that they could be easily removed without injury to the statue. They were accordingly taken off, and, at the order of Pericles, weighed by the accusers; and the result established the perfect innocence of the artist. His enemies, however, were not to be daunted by this defeat, and a new charge was, in consequence, soon prepared against him. It was alleged that, in his representation of the battle of the Amazons upon the shield of Minerva, he had introduced his own effigy, as a bald old man taking up a large stone with both hands, and a highly-finished picture of Pericles contending with an Amazon. This was regarded as an act of impiety, and Phidias was cast into prison, to await his trial for the offence; but he died in confinement before his cause could be heard. (*Plut., Vit. Pericl.*—*Müller, de Vit. Phid.*, p. 38, *seqq.*—*Schömann, de Comit.*, p. 219.—*Platner, der Process, und die Klagen*, vol. 1, p. 353.)—The numerous works of Phidias belong to three distinct classes: *Toreutic*, or statues of mixed materials, ivory being the chief; *statues of bronze*; and *sculptures in marble*. In this enumeration are included only capital performances; for exercises in wood, plaster, clay, and minute labours in carving, are recorded to have occasionally occupied his attention.—Of the first class of works we have already mentioned the two most remarkable ones, the statues of Minerva and Jupiter. Among his works in bronze may be enumerated the following: 1. The celebrated statue of Minerva Promachos, to which we have alluded in a previous article. (*Vid. Parthenon.*)—2. A statue of Minerva, placed, like the previous one, in the Athenian Acropolis, and highly praised by Pliny (34, 8, 19). Lucian prefers it to every other work of the artist's. (*Imag.*, 4.)—3. Another statue of Minerva, removed to Rome in B.C. 168, and placed by Paulus Æmilius in the temple of Fortune. (*Plin.*, l. c.)—4. Thirteen brazen statues, dedicated at Delphi, by the Athenians, out of the spoils taken at Marathon. (*Pausan.*, 10, 30, 1.)—The following were among the productions of Phidias in marble. 1. A statue of Venus Urania, placed in a temple dedicated to this goddess, not far from the Ceramicus at Athens. It was of Parian marble. (*Pausan.*, 1, 24, 8.)—2. Another statue of Venus, of exquisite beauty, which was in the collection of Octavia at Rome. (*Plin.*, 36, 5, 4.)—3. A statue of Mercury, placed in the vicinity of Thebes. (*Pau-*

sen., 9, 10, 2.)—Phidias not only practised statuary, the art in which he was pre-eminent, but also engraving, as we learn from Martial (*Epigr.*, 3, 35), and from Julian (*Epist.*, 8, p. 377, ed. Spanh.). The pupils of this most distinguished artist were, Agoracritus, Alcámenes, and Colotes. (*Sillig, Dict. Art.*, s. v.—*Junius, Catal. Artific.*, p. 151, seqq.—*Müller, de Phid.* VII., p. 37, seqq.)—The sublime style perfected by Phidias seems almost to have expired with himself; not that the art declined, but a predilection for subjects of beauty and the softer graces, in preference to more heroic and masculine character, with the exception of the grand reliefs on the temple at Olympia, may be traced even among his immediate disciples. In the era and labours of Phidias, we discover the utmost excellence to which Grecian genius attained in the arts; and in the marbles of the British Museum, the former ornaments of the Parthenon, we certainly behold the conceptions, and, in some measure, the very practice of the great Athenian sculptor. Of the intellectual character of these admirable performances, grandeur is the prevailing principle; the grandeur of simplicity and nature, devoid of all parade or ostentation of art; and their author, to use the language of antiquity, united the three characteristics, of truth, grandeur, and minute refinement; exhibiting majesty, gravity, breadth, and magnificence of composition, with a practice scrupulous in detail, and with truth of individual representation, yet in the handling rapid, broad, and firm. This harmonious assemblage of qualities, in themselves dissimilar, in their result the same, gives to the productions of this master an ease, a grace, a vitality, resembling more the spontaneous overflowings of inspiration than the laborious offspring of thought and science. (*Mémes, History of the Fine Arts*, p. 52, seqq.)—In the course of this article, we have frequently referred to the Life of Phidias by Müller. We will end with a brief account of it, which may also serve, in some degree, as a recapitulation of what has here been advanced. Müller published, in 1827, three dissertations relative to Phidias, read before the Royal Society of Sciences at Göttingen. The first is a biographical sketch of Phidias, and establishes beyond doubt that Phidias began to embellish Athens with his works of sculpture in Olympiad 82 or 83, when Pericles was *ἐπιστράτης*; that he finished, in the third year of Olympiad 85, the statue of Minerva for the Parthenon; that the Elians, when the name of Phidias had become known over all Greece for the splendid works he had executed at Athens, induced him to come to Elis, and that he made there the statue of the Olympian Jove between Olympiads 86.3, and 86.3; and, finally, that after his return to Athens, he was thrown into prison by the enemies of Pericles, on a charge of impiety, and that he died in prison, in the first year of Olympiad 87, in which year the last work of Pericles, the Propylæa, had been finished.—The second shows the state of the fine arts before Phidias, and to what height they were carried by his genius.—The third gives a new explanation of the statues on the western front of the Parthenon at Athens. The work is in Latin, and has the following title: "*C. Odofr. Muelléri de Phidiæ Vita et Operibus Commentationes tres, &c.*" (Götting., 1827, 4to.)

PHIDON, I. a king of Argos, of the race of the Heracleids, who, breaking through the constitutional checks by which his power was restrained, made himself absolute in his native city. He soon became possessed of extensive rule by various conquests, reducing, about the 3d Olympiad, the city of Corinth under his sway, and subsequently, about the 8th Olympiad, the greater part of the Peloponnesus. (*Müller, Æginet.*, p. 51, seqq.) The Lacedæmonians were at this time too much occupied with the first Messenian war to be able to check his progress, while he himself, as the descendant of Temenus, one of the Heracleids, founded his

conquests upon his claim to the possessions of his progenitor. (*Müller*, p. 52.) Phidon is described by Herodotus (6, 127) and Pausanias (6, 22) as having exercised his authority in the most arbitrary manner of any of the Greeks. Among other acts of high-handed power was his driving out the Elian agonothetæ, or presidents of the games, and presiding himself in their stead. (*Herod.*, l. c.—*Pausan.*, l. c.) Phidon is said to have been the first who established a common standard of weights and measures for the Peloponnesians. Not that, as some maintain, he was the inventor of weights and measures, for these were in existence long before (*Salmas., de Usur.*, p. 429.—*Heyne, ad Hom.*, vol. 5, p. 389), but he caused one uniform kind of weights and measures to be used by those of the Peloponnesians whom he had reduced beneath his sway. (*Herod.*, l. c.—*Müller*, p. 56.) He is reported also to have been the first that stamped money, or, in other words, introduced among the Greeks a regular coinage. This can only mean, not, as Salmasius thinks, that he merely stamped a certain mark on silver and brass lamine, which had before been estimated by weight, but that he abolished the use of metallic bars or spits, and brought in stamped lamine for the first time. (*Müller, Æginet.*, p. 57.—*Id., Dorians*, vol. 2, p. 386, *Eng. transl.*—*Etymol. Mag.*, s. v. Ὀβολισμός.) This early mint was established in the island of Ægina, at that time subject to his sway, and the very place for one, since its inhabitants were famed for their industrious and commercial habits. (*Strab.*, 376.—*Eustath. ad Il.*, 2, p. 604.—*Marmor. Par.*, p. 25, ep. 31.) The scholiast on Pindar (*Ol.*, 13, 27) makes Phidon to have been a Corinthian; *ἔπειθ' Φεῖδων τις, Κορίνθιος ἄνθρωπος, εἴρε μέτρα καὶ σταθμιά*. This, however, can only mean, that Phidon, on the conquest of Corinth, introduced there the same weights and measures, and the same stamped money as at Ægina. Hence the more correct remark of Didymus (*ad v. 36*), *ὅτι Φεῖδων, ὁ πρῶτος κόπας Κορίνθιος τὸ μέτρον, Ἀργεῖος δὲ*. (*Müller, Æginet.*, p. 55.) But what are we to do with the authority of Aristotle, who speaks of Phidon as a Corinthian, and very early legislator (*Polit.*, 2, 3, 7, ed. Schu.), while elsewhere he makes mention of Phidon, the tyrant *πρὶς Ἀργος* (*Polit.*, 5, 8, 4, p. 218, Schu.)? The best answer is that contained in the words of Müller: "*Potest Aristoteles, de instituto vetere Corinthiorum, quod ad Phidoneum legislatorem referebant, certior factus, quis ille Phido fuerit ipse dubitare.*" (*Æginet.*, p. 56.) The question, however, still remains open to discussion, and Heyne, among others, expressly distinguishes the Corinthian from the Argive Phidon. (*Opusc. Acad.*, vol. 2, p. 255, in *notis*.) In a fragment also of Heraclides Ponticus (p. 22), mention is made of a Cumæan Phidon, who *πλείους μετέδωκε τῆς πολιτείας*. So that the name appears to have belonged to more than one legislator.—The power of the Argive Phidon is said to have been overthrown by the Lacedæmonians about the 11th Olympiad, when leisure was allowed them to attend to the affairs of the Peloponnesus, the first Messenian war having been brought to a close. The chronology of Phidon's reign has been satisfactorily settled by Müller, in his "*Æginetica*," a work to which we have already more than once referred, and in the course of the discussion he examines critically the computation of the Parian Marble, and also that of Eusebius. The same scholar has likewise explained away the difficulty in the text of Herodotus (6, 127), by supposing that the historian confounded a later Phidon with the ruler of Argos. There is no need, therefore, of any of the emendations proposed by Gronovius, Reitz, and others, although the correction suggested by Gronovius meets with the approbation of Larcher, Porson, and Gaisford. (*Larcher, ad Herod.*, l. c.—*Porson, Tracts*, p. 325.—*Gaisford ad Herod.*, l. c.—Compare *Musgrave, Disserta-*

sions, p. 178, seqq.) In the Brandenburg collection, there is a coin, described by Beger, which bears on one side a diota, with the inscription ΦΙΛΑΟ, and on the other a Boeotian shield. This has been often taken for a coin of Phidon the Argive, but on no good grounds whatever. The known device of Ægina is, almost without an exception, a tortoise, while the shield portrayed upon this coin is as exclusively a badge of Boeotia, and is too highly executed for so remote a period. It appears, also, that it was a common practice in Boeotia to inscribe the name of some magistrate upon their coins. (*Beger, Thesaurus Brandenburg.*, p. 279.—*Cardwell, Lectures on Ancient Coinage*, p. 111.)—II. A native of Cumæ. (*Vid. Phidon I.*)

PHILADELPHIA (Φιλαδέλφεια), I. a city of Lydia, southeast of Sardis. It stood on a root of Mount Tmolus, by the river Cogamus, and derived its name from its founder, Attalus Philadelphus, brother of Eumenes. The frequent earthquakes which it experienced were owing to its vicinity to the region called Catacecaumene. Even the city walls were not secure, but were shaken almost daily, and disparted. The inhabitants lived in perpetual apprehension, and were almost constantly employed in repairs. They were few in number, the people chiefly residing in the country, and cultivating the soil, which was very fertile. (*Strabo*, 628.) Tacitus mentions it among the cities restored by Tiberius, after a more than ordinary calamity of the kind to which we have just alluded. (*Ann.*, 2, 47.) In the midst of these alarms, however, Christianity flourished in Philadelphia, and the place is mentioned in the Book of Revelations as one of the seven churches of Asia (3, 7). At a later day, the zeal of the Philadelphians showed forth conspicuously in the gallant defence they made against the Turks on more than one occasion. (*G. Pachym.*, p. 290.) At length they were conquered by Bajazet in 1390. (*M. Duc.*, p. 70.—*Chalcond.*, p. 33.) The place is now called *Allah-sehr*, and preserves some remains of Christianity, and also a few monuments of heathen antiquity. Chendler states, "that it is now a mean but considerable town, of large extent, spreading up the slopes of three or four hills. Of the walls which encompassed it, many remnants are standing, but with large gaps." (*Travels*, p. 310, seq.) Mr. Arundell, who visited this place in 1828, was informed by the Greek bishop that there were "twenty-five churches in it, but that divine service was chiefly confined to five only, in which it was regularly performed every week, but in the larger number only once a year." (*Visit to the Seven Churches of Asia*, p. 170.) Mr. Fellows, who visited the spot in 1838, remarks, "Of the ancient city of Philadelphia but little remains; its walls are still standing, enclosing several hills, upon the sides of which stood the town, but they are fallen into ruins. They are built of unhewn stone, massed and cemented together with fragments of old edifices: some immense remains of buildings, huge square stone pillars, supporting brick arches, are also standing, and are called the ruins of the Christian Church. All the remains which have been pointed out to me as ruins of Christian churches appear to have been vast temples, perhaps erected by imperial command, and dedicated to nominal Christianity, but showing, in the niches and brackets for statues and architectural ornaments, traces of heathen superstition." (*Tour in Asia Minor*, p. 288.) The meaning of the modern name, Allah-sehr, is "the city of God," an appellation which forms a strange kind of coincidence with the departed glories of the place. (*Arundell*, p. 169.—Compare *Milner's History of the Seven Churches*, p. 317.)—II. A city of Cilicia Trachea, on the river Calycadnus, to the north of Seleucia Trachea. The site is thought by Leake to correspond to the modern *Ermenék*. (*Journal*, p. 117.) Captain Beaufort, on the other hand, supposes that Phila-

delphia may be represented by *Mout* or *Mood*, a town of some size, near the junction of the two principal branches of the Calycadnus. (*Karamania*, p. 223.) Leake, however, makes *Mout* to be Claudiopolis. (*Cramer's Asia Minor*, vol. 2, p. 332.)—III. The capital city of the Ammonites, situate among the mountains of Gilead, near the sources of the Jabok or Jobaccus. It received its name from Ptolemy Philadelphus. (*Steph. Byz.*) Its Oriental appellation was Rabbath Ammon. Stephanus of Byzantium informs us, that it was first called Ammana (Ammon), afterward Astarte, and at last Philadelphia. It was one of the cities of Decapolis. Pliny, in enumerating these ten cities, names Raphana after Philadelphia, which Mannert thinks may be a corruption from Rabbathammona. Abulfeda speaks of ruins at a place called *Amman*, which would seem to correspond with the site of this city. (*Mannert, Geogr.*, vol. 6, pt. 1, p. 320.)

PHILADELPHUS, the surname of the second Ptolemy of Egypt. (*Vid. Ptolemaeus II.*)

PHILÆ, an island and city of Egypt, south of Syene. The city appears to have owed its existence to the Ptolemies, who intended it as a friendly meeting-place and a common emporium for the Egyptians and the Ethiopians from Meroë. Hence, according to some, the name of the place. (Φίλαι, from φίλος.—Compare *Servius*, ad *Æn.*, 8, 323, "locum quem Philas, hoc est amicas, vocant.") Others, however, derive it from the Egyptian *Phi lakh*, "the end" or "extremity" (i. e., of Egypt), and others, again, from the Arabic *Phil*, "an elephant," making *Philæ* and *Elephantina* identical. (Consult *Jablonski, Voc. Ægypt.*, s. v.—*Opusc.*, vol. 1, p. 455, seq., ed. *Te Water*.) The island contains at present many splendid remains of antiquity. In its immediate vicinity was a small rocky island called *Abaror* (Abatos) by the Greeks, from the circumstance of its being permitted the priests alone to set foot on it, and its being hence inaccessible to others. In this place was the tomb of Osiris, Isis having here deposited his remains. (*Tetzl. ad Lycophr.*, v. 212.—*Zoega, de Obelisc.*, p. 286.—*Description de l'Égypte*, *Antiq.*, vol. 1, p. 44.—*Cruizer, Comment. Herod.*, p. 182, seqq.) The modern name is *Gezirat-el-Birbe* ("Temple-island"), in allusion to the remains of antiquity upon it. (*Mannert, Geogr.*, vol. 10, pt. 1, p. 235, seqq.)

PHILÆNI, two Carthaginian brothers, whose names have been handed down to modern times for a signal act of devotion to their country. A contest, it seems, had arisen between the Carthaginians and Cyreneans, respecting the point where their respective territories met, and this was the more difficult to be determined, since the country on the borders of the two states was a sandy desert, and without anything that might serve as a common landmark. It was agreed at last, that two individuals should set out at the same time from Carthage and Cyrene respectively, and that the spot where they might meet should be regarded as the common boundary of the two communities. The parties accordingly set out, the two Philæni having been selected by the Carthaginians for this purpose; but the two Cyreneans travelled more slowly than their Carthaginian antagonists, and only met the Philæni after the latter had advanced a considerable distance into the disputed territory. The Cyreneans thereupon accused the Philæni of unfairness, and of having started before the appointed time. The Philæni, on their part, offered to do anything to show that they had acted fairly, and the two Cyreneans then gave them their choice, either to be buried alive on the spot where they were standing, or else to allow them, the Cyreneans, to advance as far as they pleased into the disputed territory, and there be buried alive on their part. The Philæni accepted the former part of the offer, and were accordingly entombed. The Carthaginians erected two altars on the spot, which were thenceforth re-

guarded as the limits of their territory in this direction. (*Sall., Bell. Jug., 19.—Id. ib., 79.*) These altars stood in the innermost bend of the Syrtis Major, and not, as Sallust erroneously states, to the west of both the Syrtis. The story of the Phileni, moreover, as given by the Roman historian, seems to wear a doubtful appearance, from the circumstance of Cyrene's being so much nearer the point in question than Carthage. If the distance between these two cities be divided into eight equal parts, the Phileni will be found to have travelled six, and the deputies from Cyrene only two, of these parts. The truth, therefore, was probably this: the territory in dispute lay between Hesperis on the Cyrenean side, and Leptis Magna on the Carthaginian; and the deputies started from these two places, not from Carthage and Cyrene. (*Mannert, Geogr., vol. 10, pt. 2, p. 116.*)

PHILANON, an ancient bard, belonging to the worship of Apollo at Delphi, and whose name was celebrated at that place. To him was attributed the formation of Delphian choruses of virgins, which sang the birth of Latona and of her children. (*Müller, Hist. Gr. Lit., p. 24.*) He is said to have taken part in the Argonautic expedition, and passed for a son of Apollo. (*Plat., de Mus., p. 629, ed. Wyttenb.*)

PHILEMON, I. a comic poet, the rival of Menander. According to some authorities, he was a native of Syracuse (*Suidas, s. v.*), while others make him to have been born at Soli, in Cilicia. (*Strabo, 671.*) He seems to have been a writer of considerable powers. His wit, ingenuity, skill in depicting character, and expression of sentiment, are praised by Apuleius (*Florid., 3, n. 16*), while he pronounces him inferior, however, to his more celebrated antagonist. The popular voice, on the other hand, often gave Philemon the prize over Menander (*Aul. Gell., 17, 4*), perhaps because he studied more the tastes of the vulgar, or used other adroit means of popularity. This, at least, Menander gave him to understand, when on one occasion he met his rival and asked him: "Prythee, Philemon, dost thou not blush when thou gainest the prize over my head?" (*Aul. Gell., l. c.*) We may see a favourable specimen of his construction of plots in the *Trinummus* of Plautus, which is a translation from his *Θεσμικός*. (*Prolog. Trinumm., 18, seqq.*) Temperance of body, with cheerfulness of mind, prolonged his life to the great age of ninety-seven years (*Lucian, Macrob., 35*), during which period he composed ninety-seven comedies. The manner of his death is variously related. The common account makes him to have died of laughter on seeing an ass eat figs. The statement of Apuleius, however, is the most probable, according to which he expired without pain or disease, from the pure exhaustion of nature (*l. c.—Val. Max., 12, 6*).—Philemon began to exhibit comedy during the reign of Alexander, a little earlier than Menander, and before the 118th Olympiad. He died in the reign of the second Antigonos, son of Demetrios. It has been said above that he lived to the age of ninety-seven years; Suidas, however, makes it ninety-six, and other authorities ninety-nine. (*Diod., Ælog., lib. 23, ed. Bip., vol. 9, p. 318.—Clinton's Fasti Hellenici, 2d ed., p. 157.*) The fragments of Philemon are usually printed along with those of Menander. The best edition of these conjointly is that of Meineke, *Berol., 1823, 8vo.* (*Theatre of the Greeks, p. 121, ed. 4.*)—II. A son of the preceding, also a comic poet, and called, for distinction's sake, Philemon the younger (*δ νεώτερος*.—*Athen., 7, p. 391, d.*)

PHILETÆRUS, a eunuch made governor of Pergamus by Lysimachus. (*Vid. Pergamus II.*)

PHILETAS, a native of Coe, and the only poet that we know of at the court of Ptolemy I., who made him preceptor to his son and successor Ptolemy Philadelphus. Philetas was both a grammarian and poet. He composed elegies, which were the model of those of

Propertius, and he is said to have given quite a new character to this species of poetry, in his description of the joys and sorrows of love. He wrote also lyric and lighter poems. The ancients prized him very highly, and the inhabitants of Coe erected a brazen statue to him. Quintilian ranks him next to Callimachus (*10, 1, 58*). We have only a few fragments remaining of his elegies, and some verses also in the anthology. Philetas was remarkable for his devotion to study, and reduced himself by his great application to so emaciated a habit of body, that, according to the story told in Ælian, he used to wear leaden soles to his shoes or sandals (*μολύβδου πεποιμένους ἐν ταῖς ὑποδήμασι πέλας*) to prevent his being blown over by the wind! (*Ælian, V. H., 9, 14.*) Athenæus says, that he wore balls of lead around his feet (*σφαῖρας ἐκ μολύβδου πεποιμένους ἔχειν περὶ τὸ πόδε, 12, p. 552, b.*). The wonder is how he could have walked. Athenæus also states that he fairly wore himself away in fruitless endeavours to solve the sophism called by the ancients *ψευδόμενον* (or *ψευδολόγος*), and the epithet on his tomb, which this writer cites, corroborates the statement. (*Athen., 9, p. 401, s.—Casaub., ad loc.*)

PHILIPPI, a city of Thrace, to the northeast of Amphipolis, and in the immediate vicinity of Mount Pangæus. It was founded by Philip of Macedon, on the site of an old Thasian settlement. The Thasians had been attracted by the valuable gold and silver mines in this quarter, and the settlement formed by them was called Crenides, from the circumstance of its being surrounded by numerous sources which descended from the neighbouring mountain (*κρήνη, a spring*). Philip of Macedon having turned his attention to the affairs of Thrace, the possession of Crenides and Mount Pangæus naturally entered his views. Accordingly, he invaded this country, expelled the feeble Cotys from his throne, and then proceeded to found a new city on the site of the old Thasian colony, as above mentioned, which he named after himself, Philippi. (*Diod. Sic., 16, 8.*) When Macedonia became subject to the Romans, the advantages attending the peculiar situation of Philippi induced that people to settle a colony there; and we know from the Acts of the Apostles that it was already at that period one of the most flourishing cities in this part of their empire (*16, 12.—Compare Plin., 4, 10*). It is, moreover, celebrated in history from the great victory gained here by Antony and Octavianus over the forces of Brutus and Cassius, by which the republican party was completely subdued. (*Appian, Bell. Civ., 4, 107, seqq.—Dio Cass., 47, 41.*) Philippi, however, is rendered more interesting from the circumstance of its being the first place in Europe where the Gospel was preached by St. Paul (*A.D. 51*), as we know from the 16th of the Acts of the Apostles, and also from the Epistle he has addressed to his Philippian converts (*4, 15*), where the zeal and charity of the Philippians towards their apostle received a just commendation. We hear frequently of bishops of Philippi, and the town is also often mentioned by the Byzantine writers. Its ruins still retain the name of *Filibah*. (*Cramer's Anc. Greece, vol. 1, p. 301, seqq.—Mannert, Geogr., vol. 7, p. 233.*)

PHILIPPÖDIS, a city in the interior of Thrace, on the southeast side of the Hebrus, and some distance to the northwest of Hadrianopolis. It was situated in a large plain, on a mountain with three summits, and hence received also the appellation of Trimontium. It was founded by Philip of Macedon. In the Roman times it became the capital of the province of Thracia. The modern name is *Filibe* or *Philippopoli*. (*Steph. Byz., s. v.—Itin. Ant., 136.—Hierocl., p. 685.—Tacit., Ann., 3, 38.—Polyb., 6, 100.—Amm. Marc., 28, 10.*)

PHILIPPUS, I. one of the earlier kings of Macedonia, and the first of the name. He succeeded his

father Argæus, about 640 B.C. according to some chronologers, and reigned, as Eusebius states, thirty-eight years, but, according to Dexippus, thirty-five. (*Euseb.*, p. 57.—*Dexipp.*, ap. *Synecell.*, p. 262, seq.) These numbers, however, are obviously manufactured by chronologers, upon no certain or positive testimony, since none existed. (*Clinton, Fast. Hell.*, vol. 1, p. 231.)—II. The second of the name was the son of Amyntas II. of Macedonia. This latter monarch left three sons at the time of his death, under the care of their mother Eurydice. Of these, Alexander, the eldest, had just attained to man's estate; but Perdiccas, and Philip the youngest of the three, were still under age. Alexander, who appears to have been a prince of great promise, had scarcely ascended the throne, when he lost his life by the hand of an assassin. (*Diod. Sic.*, 15, 71.) During his reign, however, short as it was, he was engaged in a contest with Ptolemy of Alorus. We do not know whether Ptolemy was in any way related to the royal family, nor whether he laid claim to the crown. But it seems clear that he was favoured by the queen Eurydice, the widowed mother, and was probably her paramour. According to Diodorus and Plutarch, Pelopidas, the Theban commander, came into Macedonia to arbitrate between Alexander and Ptolemy, and Philip was one of the hostages delivered on this occasion to the umpire. As this, however, is expressly contradicted by the testimony of the contemporary orator Æschines, who relates that Philip was still in Macedonia at the time of his elder brother's death, Mr. Thirlwall inclines to the following opinion: According to Plutarch, after the murder of Alexander, which must have happened a very short time after the compromise, Pelopidas, who was in Thebes, on his second expedition against the tyrant of Phœnæ, was invited into Macedonia by the friends of the deceased king, and obliged Ptolemy to enter into an engagement to preserve the crown for the younger brothers. Ptolemy, it is said, gave fifty hostages as a security for the performance of his promises, among whom was his own son Philoxenus. It seems more natural, according to Mr. Thirlwall, that Philip should have been committed to the custody of the Thebans under these circumstances, than on the occasion of the contest between Ptolemy and Alexander. (*History of Greece*, vol. 5, p. 163.) Ptolemy kept possession of the government three years: Diodorus simply says that he reigned so long: probably, however, he never assumed any other title than that of regent, though he may have had no intention of ever resigning his power to the rightful heir. And it was, perhaps, as much in self-defence, as to avenge his brother's murder or his mother's shame, that Perdiccas killed him. Concerning the reign of Perdiccas III. we have but very scanty information. He was slain in battle by the Illyrians, in the fifth year of his rule, leaving behind him an infant son by the name of Amyntas. At the time of this event Philip was twenty-three years of age. Diodorus supposes that he was still at Thebes, but that, on receiving intelligence of his brother's death, he made his escape and suddenly appeared in Macedonia (16, 2). It is not difficult to understand how the story may have taken this form: a hostage so important, it might easily be supposed by writers acquainted with his subsequent history, would not have been willingly surrendered by the Thebans; it is certain, however, from better authority, that he had been already restored to his country, and, it is probable, early in the reign of Perdiccas, when the Thebans could have no motive for detaining him. Extravagantly as some modern writers have indulged their imagination with regard to the manner in which his time was employed during his sojourn at Thebes, it is hardly possible to overrate the importance of the opportunities it afforded him for the acquisition of various kinds of knowledge,

or to doubt that he availed himself of them with all the energy and perseverance which belonged to his character. It is, perhaps, less probable that the house of Polymnia, the father of Epaminondas, should have been chosen for his residence, as Diodorus relates, than that of Pammenes, according to Plutarch's statement: and the fable of his Pythagorean studies, worthy of Diodorus, is below criticism. But a certain tincture of philosophy was at this time deemed almost an indispensable requisite in a liberal education. It was undoubtedly, however, not the study of philosophy, either speculative or practical, that chiefly occupied Philip's attention during the period of his residence at Thebes. To the society in which it was passed, he may have been mainly indebted for that command of the Greek language, which enabled him both to write and speak it with a degree of ease and eloquence not inferior to that of the most practised orators of the day. But the most important advantages which he gained from his stay at Thebes were probably derived from the military and political lessons, with which the conversation of generals and statesmen like Epaminondas, Pelopidas, and their friends, could not fail to abound. It was by them that the art of war had been carried to the highest point it had yet reached in Greece; or rather they, more particularly Epaminondas, had given it a new form; and the details of their battles and campaigns would be eagerly collected by an intelligent and ambitious youth. Thebes was at this time the great centre of political movements: the point from which the condition, interests, and mutual relations of the Grecian states might be most distinctly surveyed. Here, too, were gained the clearest ideas of the state of parties, of the nature and working of republicanism, especially of democratical institutions: here probably Philip learned many of those secrets which often enabled him to conquer without drawing the sword. And as he was placed in one of the most favourable positions for studying the Greek character, so the need which his situation imposed on him, of continual caution and self-control must have served very greatly to sharpen his natural sagacity, and to form the address which he afterward displayed in dealing with men, and winning them for his ends. Nature had gifted him with almost every quality that could fit him for the station which he was destined to fill: a frame of extraordinary robustness, which was, no doubt, well trained in the exercises of the Theban palæstræ: a noble person, a commanding and prepossessing mien, which won respect and inspired confidence in all who approached him: ready eloquence, to which art only applied the cultivation requisite to satisfy the fastidious demands of a rhetorical age: quickness of observation, acuteness of discernment, presence of mind, fertility of invention, and dexterity in the management of men and things. There seem to have been two features in his character, which, in another station or under different circumstances, might have gone near to lower him into an ordinary person, but which were so controlled by his fortune as to contribute not a little to his success. He appears to have been by his temperament prone to almost every kind of sensual pleasure. But as his life was too busy to allow him often to indulge his bias, his occasional excesses wore the air of an amiable condescension. So his natural humour would perhaps have led him too often to forget his dignity in his intercourse with his inferiors. But to Philip, the great king, the conqueror, the restless politician, these intervals of relaxation occurred so rarely, that they might strengthen his influence with the vulgar, and could never expose him to contempt. From that he was secured by the energy of his will, which made all his faculties and accomplishments of mind and body, and even his failings, as well as what may be called, in a lower sense, his virtues, his affability, clemency, and generosity, always subservient

to the purposes of his lofty ambition. A moral estimate of such a man's character is comprised in the bare mention of his ruling passion, and cannot be enlarged by any investigation into the motives of particular actions; and it is scarcely worth while to consider him in any other light than as an instrument of Providence for fixing the destiny of nations.—It was in the 106th Olympiad, and about 360 B.C., that Philip took charge of the government of Macedonia, not as monarch, but as the nearest kinsman, and as guardian of the royal infant, the son of his brother Perdiccas. The situation in which he was now placed was one of great apparent difficulty and danger, and the throne which he had to defend was threatened by enemies in many quarters, by the victorious Illyrians as well as by the Pæonians, and lastly by an Athenian force, which was destined to place Argæus, a pretender to the crown, on the throne of Macedon. The Illyrians, happily, did not press their advantage; and the Pæonians were induced to desist from hostilities by skilful negotiations, and secret presents made to their leaders. The Athenians were encountered in the field, and, after sustaining a defeat, were forced to surrender. (*Diod. Sic.*, 16, 3.) Philip, however, generously granted them their liberty, and immediately sent a deputation to Athens with proposals of peace, which were gladly accepted. (*Demosth. in Aristocr.*, § 144.) By the death of the reigning prince of Pæonia that country was soon after annexed to the dominion of Philip, but whether by right of succession or by conquest we are not informed. He next directed his arms against the Illyrians, who were totally routed after a severe conflict. The loss of the enemy is said to have amounted to 7000 men; and they were compelled to accept the terms of peace imposed by the conqueror. They ceded to him all that they possessed east of the Lake of Lychnitia, and thus not only gave him the command of the principal pass by which they had been used to penetrate into Macedonia, but opened a way by which he might at any time descend through their own territory to the shores of the Adriatic. (Consult *Leake's Northern Greece*, vol. 8, p. 321.) It may safely be presumed that, after this brilliant success, Philip no longer hesitated to assume the kingly title. His usurpation, for such it appears to have been according to the laws of Macedon, was, however, most probably sanctioned by the unanimous consent of both the army and nation. How secure he felt himself in their affections is manifest from his treatment of his deposed nephew. He was so little jealous of him, that he brought him to his court, and, in time, bestowed the hand of one of his daughters upon him. (*Polyæn.*, 8, 60. — *Arrian, Exp. Al.*, 1, 5. — *Athenæus*, 13, p. 557.) The transfer of the crown was so quiet and noiseless that it seems not to have reached the ears of the Athenian orators, whose silence may, at all events, be admitted as a proof that there was nothing in the transaction on which they could ground a charge against Philip.—His victory over the Illyrians is connected by Diodorus with the institution of the Macedonian phalanx, which he is said to have invented. The testimony of the ancients on this point has been very confidently rejected in modern times, without any just reason. We may indeed doubt whether this body, as it existed in the beginning of Philip's reign, differed in any important feature from that which was already familiar to the Greeks, or, at least, from the Theban phalanx. But it is another question whether the Macedonian armies had ever been organized on this plan; and there is nothing to prevent us from admitting the statement of authors, certainly better informed than ourselves, that it was first introduced by Philip. Nor is there any difficulty in believing, that he at the same time made some improvements in the arms or the structure of the phalanx, which entitled it to its peculiar epithet, and him to the honour of an inventor. Both the tactics

and the discipline of the army seem to have been in a very low state under his predecessors; and this was, perhaps, the main cause of the defeats which they so often experienced from the neighbouring barbarians. Philip paid no less attention to the discipline than to the organization of his forces; and his regulations were enforced with inflexible severity.—In the course of about a year from his brother's death, Philip had freed himself from all his domestic embarrassments, and had seated himself firmly on the throne. In a summary account like the present, we must necessarily confine ourselves to a rapid sketch of the principal events of his reign. Allied with Athens, we find him, in conjunction with that power, carrying on operations against the republic of Olynthus, and seizing upon the city of Potidaea; but, soon after, from some cause which is not apparent, he made peace with the Olynthians, and turned his arms against Amphipolis, which had preserved its independence ever since the days of Brasidas. After a siege of some duration, the place was taken and added to his dominions, and Philip next turned his attention to the acquisition of some valuable gold-mines on the Thracian coast, which belonged to the people of Thasos. For this purpose he crossed the Strymon, and, having easily overcome the resistance that was offered on the part of Cotys, king of Thrace, he took possession of Crenides, the Thasian mining establishment, where he founded a considerable town, and named it Philippi. The Athenians, meanwhile, incited the Thracians and Illyrians to take up arms against the King of Macedon, whose rising power inspired them with well-founded grounds for jealousy and alarm; but the latter were again defeated by Parmenio, and Philip easily repelled the former in person. The small republic of Methone, which had also shown a spirit of hostility at the instigation of Athens, was surrounded by a Macedonian army, and, though the town held out for more than a year, and Philip received during the siege a wound by which he lost an eye, it was at length compelled to surrender. At this period, the Thessalian towns, being threatened by the forces of Lycophron, tyrant of Phæra, supported by the Phocians, urgently sought the aid of the King of Macedon. He accordingly entered Thessaly at the head of a powerful army, and in its plains encountered the enemy, commanded by Onomarchus, the Phocian leader. Here, however, the usual good fortune of Philip forsook him; and, being twice vanquished with great loss, he effected his retreat into Macedonia with considerable difficulty. Undismayed, however, by these reverses, and having quickly recruited his army, he once more entered Thessaly, whither also Onomarchus directed his march from Phocia. The two armies were again engaged at no great distance from Phæra, when Philip gained a complete victory; six thousand of the enemy having perished on the field, among whom was Onomarchus, their general. This success was followed up by the capture of Phæra, Pagassæ, and the whole of Thessaly, which henceforth warmly espoused the interests of Philip on every occasion. (*Justin.*, 8, 2. — *Polyb.*, 9, 33.) Meanwhile, the republic of Olynthus, which had recovered its strength under the protection of Macedonia, came to a rupture with that power, probably at the instigation of a party in Athens. War was, in consequence, determined upon, and the Olynthians, supported by a considerable Athenian force under Chares, twice ventured to attack the army of Philip, but, being unsuccessful on both occasions, were at length compelled to retire within the walls of their city, to which the enemy immediately laid siege. At variance among themselves, and open to treachery and defection, from the bribery employed, as it is said, on more than one occasion by Philip, the Olynthians were ultimately forced to surrender; when the King of Macedon, bent on the destruction of a state which had so often men-

aced the security of his dominions, gave up the town to plunder, and reduced the inhabitants to slavery. Intimidated by these reverses, the Athenians, not long after, sought a reconciliation with Philip, and sent a deputation, consisting of eleven of their most distinguished orators and statesmen, among whom were Æschines, Demosthenes, and Ctesiphon, to negotiate a treaty. (*Æschin., de Fals. Leg.*, p. 30.) These ambassadors were most graciously received by Philip, and on his sending envoys to Athens, with full power to settle the preliminaries, peace was concluded. (*Demosth., de Leg.*, p. 414.) Philip was now enabled to terminate the Sacred War, of which he had been invited to take the command, by the general voice of the Amphictyonic assembly. (*Vid. Phocis.*) Having passed Thermopylæ without opposition, he entered Phocia at the head of a considerable army, and was enabled to put an end at once to this obstinate struggle without farther bloodshed. He was now unanimously elected a member of the Amphictyonic council, after which he returned to Macedon, having reaped in this expedition a vast accession of fame and popularity, as the defender and supporter of religion. The success of Philip in this quarter was calculated, however, to awaken the jealousy and fears of Athens, and the party which was adverse to his interests in that city took advantage of this circumstance to urge the people to measures that could end only in a renewal of hostilities with Macedon. The Athenian commanders in Thrace were encouraged to thwart and oppose Philip in all his undertakings, and secretly to favour those towns which might revolt from him. Accordingly, when that monarch was engaged in besieging the cities of Perinthus and Selymbria, near the Hellespont, the Athenians on several occasions assisted them with supplies, and did not scruple even to make incursions into the Macedonian territory from the Chersonese. These measures could not fail to rouse the indignation of Philip, who, finally abandoning his projects on the Hellespont, turned his thoughts entirely to the overthrow of the Athenian power. Meanwhile another Sacred War had arisen, which, though of trifling magnitude in itself, produced very important results to two of the leading states of Greece. The Amphissians, who belonged to the Locri Ozolæ, had occupied by force, and cultivated a portion of the territory of Cirrha, which had been declared accursed by the Amphictyones, and unfit for culture. This act of defiance necessarily called for the interference of that assembly; and as it was to be feared that the people of Amphissa would be supported by Athens and other states, it was determined to elect Philip general of the Amphictyonic council, and to commit to him the sole direction of the measures to be pursued. (*Æschin. in Ctes.*, p. 71.—*Dem., de Cor.*) The Amphissians were, of course, easily reduced and punished; but the Athenians, who had avowedly favoured their cause, found themselves too far implicated to recede with honour upon the near approach of Philip. Finding, therefore, that he had already occupied Elætes, which commanded the principal pass into Phocia, the council was summoned, and it was determined to muster all the forces of the republic, and, if possible, to induce the Thebans to espouse their interests. An embassy was accordingly despatched to Thebes, at the head of which was Demosthenes; and such was the effect of their great orator's eloquence, that he succeeded in persuading the Boeotians to join the Athenians, notwithstanding all the arguments urged against this step by the deputy of Philip, who was present at the debate. The combined forces of the two republics took the field, and, marching towards the Phocian frontier, encamped at Cheronea, in Boeotia. Here, after some partial and indecisive actions, a general engagement at length took place, which was obstinately contested on both sides, but finally terminated in the

total discomfiture of the Athenians and their allies. This result might easily have been foreseen. Thebes possessed at the time no general of sufficient note to be even mentioned, except Theagenes, who is named only to be branded as a traitor (*Dinarchus in Dem.*, § 75), and the names of Chares, Lysicles, and Stratocles, who commanded the Athenians, could inspire little confidence. In numbers, the confederates appear to have at least equalled the enemy; but though the Sacred Band still preserved its excellent discipline and spirit, the Athenians, who had now for many years been little used to military service, were ill-matched with the Macedonian veterans led by their king, and by the able officers formed in his school, and animated by the presence of the young prince Alexander, whom his father intrusted with the command of one wing, where, however, some of his best generals were stationed at his side. We know very little more of the causes which determined the event of the battle, and these are amply sufficient to account for it. If we may believe Polyænus, Philip at first restrained the ardour of his troops, until the Athenians had spent much of the vigour and fury with which they made their onset (4, 2, 7). Then it appears Alexander made a charge, which broke the enemy's ranks, and decided the fortune of the day. (*Diod.*, 16, 88.) Alexander was in the wing opposed to the Thebans, and first charged the Sacred Band. The Thebans seem to have kept their ground longest, and probably suffered most. The Sacred Band was cut off to a man, but fighting where it stood. Demosthenes was not a hero of this kind: but he was certainly reproached with cowardice, because he escaped in the general flight, only by those who wished that he had been left on the field. Of the Athenians not more than 1000 were slain, but 2000 were taken prisoners: among these, Demades fell into the enemy's hands. The loss of the Thebans is not reported in numbers, but the prisoners were probably fewer than the slain. It was not the amount of these losses, however, that gave such importance to the battle of Cheronea, that it has been generally considered as the blow which put an end to the independence of Greece, any more than it was the loss sustained by Sparta at Leuctra that deprived her of her supremacy. But the event of this day broke up the confederacy which had been formed against Philip, as it proved that its utmost efforts could not raise a force sufficient to meet him, with any chance of success, in the field. Each of the allied states was therefore left at his mercy. The consternation which the tidings of this disaster caused at Athens was probably greater than had ever been known there, except after the loss at Ægos Potamos. As long as it remained uncertain what use Philip would make of his victory, there was certainly reason to fear the worst: and if it be true that at first he rejected the application of the heralds, who came from Lebadea to ask leave to bury the slain (*Plut., Vit. X., Orat. Hyperid.*, p. 849, a.), we might suppose that he wished to keep the vanquished a while in suspense as to their fate. That he should even have forgotten himself for a time on the scene of his triumph, intoxicated by the complete success which had suddenly crowned the plans and labours of so many years, would not be at all inconsistent with his character. He is said to have risen from the banquet to visit the field of battle, and, as he moved in dance among the bodies of the slain, though the sight of the Sacred Band drew from him an exclamation of sympathy, to have parodied and sung the commencement of one of the decrees of Demosthenes. (*Plut., Vit. Demosth.*, 20.) This anecdote is more credible than that he exposed himself to the rebuke of Demades by his behaviour to his prisoners. (*Diod. Sic.*, 16, 87.) It would be absurd to suppose, with Diodorus, that such a man as Demades, however the king might be pleased at such a moment with his freedom and wit,

could have had any influence over him; but it seems that Philip did not disdain to gain him for his own ends, and to communicate his designs to him, and employ him as his agent. The manner in which Philip finally treated his conquered enemies excited general surprise, and has earned, perhaps, more praise than it deserves. He dismissed the Athenian prisoners without ransom, several of them even newly clothed, and all with their baggage; and sent Antipater, accompanied, Justin says, by Alexander, to bear the bones of their dead, whom he had himself honoured with funeral rites (*Polyb.*, 5, 10), to Athens, with offers of peace, on terms such as an Athenian would scarcely have ventured to propose to him. The commonwealth was required, indeed, to resign a part of its foreign possessions, perhaps all but the Chersonesus, Lemnos, Imbros, and Samos (*Plut.*, *Vit. Alex.*, 28); but it was left in undisturbed possession of all its domestic resources, and its territory was even enlarged by the addition of Oropus, which Thebes was forced to resign. (*Pausan.*, 1, 34.) The value of these concessions was greatly enhanced by comparison with the conditions on which peace was granted to the Thebans. They were obliged to ransom not only their prisoners, but their dead. Not only Oropus, but the sovereignty of the Boeotian towns was taken from them. Plataea and Orchomenus were restored to as many as could be found of their old inhabitants: at least they were filled with an independent population implacably hostile to Thebes. But this was the lightest part of her punishment. She lost not only power, but freedom. She was compelled to admit a Macedonian garrison into the citadel, and to recall her exiles. The government was lodged in their hands: a council of three hundred, selected from them, was invested with supreme authority, both legislative and judicial. (*Justin.*, 9, 4.) Philip's treatment of the Athenians has been commonly accounted magnanimous. It may indeed be said, that in them he did honour to the manly resistance of open enemies, while in the case of the Thebans he punished treachery and ingratitude, and, knowing the people to be generally hostile to him, he crushed the power of the state, and used the faction which depended on him as the instrument of his vengeance. On the other hand, it must be remembered that, when this was done, he had the less reason to dread the hostility of Athens: he might safely conciliate the favour of the Greeks by a splendid example of lenity and moderation. It is not improbable that this was the course to which he was inclined by his own prepossessions. But, had it been otherwise, there were reasons enough to deter so wary a prince from violent measures, which would have driven the Athenians to despair. He had probably very early intelligence of the preparations for defence which they had begun while they expected an invasion. He might, indeed, have ravaged Attica, and have carried on a Decelean war: but it was by no means certain that he could make himself master of the city and Piræus: and nothing but a very clear prospect of immediate success could have rendered the attempt advisable. The danger of a failure, and even the inconvenience of delay, was far greater than the advantage to be reaped from it. Philip's offers were gladly, if not thankfully received at Athens; and he now saw his road open to the Peloponnesus. Proceeding to Corinth, whither he had invited all the states of Greece to send their deputies, he held a congress, as in the time of the ancient league against Persia. The avowed object of this assemblage was indeed to settle the affairs of Greece, and to put an end to intestine feuds by the authority of a supreme council. But it was well known, that Philip meant to use it for the purposes of an enterprise, which he had long cherished, the invasion, namely, of the Persian empire. All his proposals were adopted. War was declared against

Persia, and he was appointed to command the national forces with which it was to be waged. One object only now remained to detain Philip in the south of Greece: to fulfil the promises which he had made some years before to his Peloponnesian allies, to animate them by his presence, and to make Sparta feel the effects of his displeasure, for having been the only Grecian state which did not send ministers to the congress at Corinth. His march through the Peloponnesus was for the most part a peaceful, triumphant progress, and hence it may be that so few traces of it are left in our historical fragments. It is chiefly by some casual allusions to it in Polybius and Pausanias that the fact itself is ascertained. In Laconia Philip made a longer stay, and encountered some resistance. It appears, however, that in the end Sparta was compelled to submit to the terms which he prescribed. The western states beyond the isthmus likewise acknowledged his authority: the leaders of the anti-Macedonian party in Acarnania were driven into exile, and Ambracia consented to receive a Macedonian garrison. (*Diod. Sic.*, 17, 3.) Byzantium also, it seems, entered into an alliance with him, which was little more than a decent name for subjection. Thus crowned with new honours, having overcome every obstacle, and having established his power on the firmest foundation in every part of Greece, he returned in the autumn of 338 B.C. to Macedonia, to prepare for the great enterprise on which his thoughts were now wholly bent. This brilliant fortune, however, was before long overcast by a cloud of domestic troubles. Philip, not less from temperament than policy, had adopted the Oriental usage of polygamy, which, though repugnant to the ancient Greek manners, did not in this age, as we find from other examples, shock public opinion in Greece. Thus, it seems, before his marriage with Olympias, he had formed several matrimonial alliances, which might all contribute to strengthen his political interests. An Illyrian princess, a Macedonian lady, apparently of the Lyncestian family, which had some remote claims to the throne, and two from Thessaly, one a native of Pheræ, the other from Larissa, are mentioned before Olympias in the list of his wives. After his marriage with Olympias, he did not reject the hand of a Thracian princess, which was offered to him by her father. In each of these cases, however, there was an apparent motive of policy, which may have rendered the presence of so many rivals more tolerable than it would otherwise have been to Olympias, a woman of masculine spirit and violent passions, and who, as a daughter of the house of Epirus, which traced its pedigree to Achilles, no doubt regarded herself as far superior to them all in rank, and as Philip's sole legitimate consort. But after his return to Macedonia from his victorious campaign in Greece, perhaps early in the following spring, he contracted another union, for which it does not appear that he had the same excuse to plead. Cleopatra, the niece of Attalus one of his generals, had, it seems, attracted him by her beauty. He sought her hand, and their nuptials were celebrated, with the usual festivities, in the palace at Pella, where Olympias was residing. This would not be stranger than it is that Alexander was present at the banquet, which, according to the custom of the court, was prolonged until both Philip and his guests were much heated with wine. Attalus had secretly cherished the presumptuous hope, that his niece's influence over the king might induce him to alter the succession, and to appoint a child of hers heir to the throne. When the wine had thrown him off his guard, he could not refrain from disclosing his wishes, and called on the company to pray that the gods would crown the marriage of Philip and Cleopatra by the birth of a legitimate successor to the kingdom. Alexander took fire at this expression; and exclaiming, "Do you, then, count me a bastard?" hurled the gob-

let out of which he was drinking at his head. The hall became a scene of tumult. Philip started from his couch, and, instead of rebuking Attalus, drew his sword and rushed at his son; but, before he reached him, stumbled and fell. Alexander, before he withdrew, is said to have pointed to his father as he lay on the floor, with the taunt: "See the man who would pass over from Europe to Asia, upset in crossing from one couch to another." (*Plut., Vit. Alex.*, 9.—*Athenæus*, 13, p. 557.) The quarrel did not end with the intoxication of the evening, as the offence which had been given to the prince was much deeper than the momentary provocation. He and his mother quitted the kingdom; she found shelter at the court of her brother Alexander, who, after the death of Arybas, had succeeded, through Philip's intervention, to the throne of Epirus, having supplanted Eacides, the lawful heir. Alexander took up his abode in Illyria, and Philip was obliged at last to employ the good offices of a Corinthian, named Demaratus, to induce his son to return to Macedonia. (*Plut., Vit. Alex.*, 9.) It was not so easy to appease Olympias: and it was most likely with a view to baffle her intrigues that Philip negotiated a match between his brother-in-law and their daughter Cleopatra. When the brother-in-law had been gained by this offer, his sister saw that she must defer her revenge, and returned, apparently reconciled, to her husband's court. These unhappy differences, and perhaps the continued apprehension of hostile movements on the side of Illyria and Epirus, may have been the causes which prevented Philip from crossing over to Asia in person in 337 B.C. In the course of this year, however, he sent over a body of troops, under the command of Parmenio, Amyntas, and Attalus (whom, perhaps, he was glad to remove in this honourable manner from his court), to the western coast of Asia, to engage the Greek cities on his side, and to serve as a rallying point for all who were disaffected to the Persian government. It was in this same year that Pixodarus, the usurper of the Carian throne, sought the alliance of Philip, and proposed to give his eldest daughter to Aridæus, Philip's son by his Larissæan wife, Philinna, a youth of imbecile intellect. Olympias was, or affected to be, alarmed by this negotiation; several of Alexander's young companions shared her suspicions, and their insinuations persuaded him that the intended marriage was a step by which Philip designed to raise Aridæus to the throne. Under this impression he despatched Thessalus, a Greek player, who was exercising his profession at the Macedonian court, on a secret mission to Caria, to induce Pixodarus to break off the match with Aridæus and to transfer his daughter's hand to Alexander himself. Pixodarus joyfully accepted the prince's offer. But Philip, having discovered the correspondence, shamed his son out of his suspicions by an indignant expostulation, which he addressed to him in the presence of his young friend, Parmenio's son, Philotas, on the unworthiness of the connexion which he was about to form with a barbarian, who was not even an independent prince, but a Persian vassal. Alexander dropped the project, which had so strongly excited his father's resentment, that the latter wrote to Corinth to demand that Thessalus should be sent to him in chains, and banished four of Alexander's companions, Harpalus, Nearchus, Phrygius, and Ptolemæus, from Macedonia: to one of them the beginning of a wonderful elevation. So passed the year 337. Towards the end of the next spring, Philip's preparations for his Asiatic expedition were far advanced. He had summoned the Greek states to furnish their contingents, and, as became the general of the Amphictyonic council, had consulted the Delphic oracle on the event of his enterprise; and, it is said, had received an answer worthy of its ancient reputation for its politic ambiguity: "*Crowned is the victim, the altar is ready, the stroke is impending*" (*Diod. Sic.*, 16,

91), though the event renders this anecdote somewhat suspicious. It only remained, to take the precaution which he had meditated, for securing the peace of his dominions during his absence, by a closer alliance with the King of Epirus, which might also soothe Olympias. The day of the marriage was fixed, and Philip determined to celebrate the event with the utmost splendour. It afforded an opportunity which he never let slip, of attracting Greeks from all parts to his court, of dazzling them by his magnificence, and winning them by his hospitality. A solemn festival, either the national one of the Muses, or the Olympic games instituted by Archelaus, was proclaimed to be held in the ancient capital of *Ægæ*. Musical and dramatic contests were announced, for which artists of the greatest celebrity were engaged. When the time arrived, the city was crowded with strangers; not only guests invited by the king and his courtiers, but envoys deputed by most of the leading cities of Greece to honour the solemnity, and to offer presents, chiefly crowns of gold, to the king. A splendid banquet followed the nuptials. On the morrow an exhibition was to take place in the theatre: it was filled at an early hour with spectators. The entertainments began with a solemn procession, in which, among other treasures, were carried images of exquisite workmanship, and gorgeously adorned, of the twelve Olympian gods: a thirteenth, which seemed to be somewhat profanely associated with them, represented Philip himself. The shouts of an admiring, applauding multitude then announced the king's approach. He advanced in white robes and festal chaplet, with his son and the bridegroom on either side, a few paces behind him. His guards he had ordered to keep at a distance, that all might have a view of his person, and that it might not be supposed he doubted the universal good-will of the Greeks. This was the moment when a young man stepped forth from the crowd, ran up to the king, and, drawing a Celtic sword from beneath his garments, plunged it into his side. Philip fell dead. The murderer rushed towards the gates of the town, where horses were waiting for him. He was closely pursued by some of the great officers of the royal body-guard, but would have mounted before they had overtaken him if his sandals had not been caught by the stump of a vine, which brought him to the ground. In the first heat of their passion his pursuers despatched him. His name was Pausanias; and the motive that impelled him to the deed was, that he had suffered an outrage from Attalus for which Philip had refused to give him satisfaction. (*Aristot., Polit.*, 5, 8, 10.) Both Olympias and Alexander were suspected of having been privy to the deed, but, as would seem, without any very strong grounds. Indeed, the character of Alexander instinctively recoiled from every species of baseness, and yet Niebuhr, in his lectures, expresses a suspicion, almost amounting to a full conviction, of Alexander's guilt!—Thus, in the 47th year of his age and the 24th of his reign, perished Philip of Macedon, at the end of one great stage of a prosperous career, near the outset of another which opened immeasurable ground for hope. A great man certainly, according to the common scale of princes, though not a hero like his son, nor to be tried by a philosophical model. But it was something great, that one who enjoyed the pleasures of animal existence so keenly, should have encountered so much toil and danger for glory and empire. It was something still greater, that one who was so well acquainted with the worst sides of human nature, and who so often profited by them, should yet have been so capable of sympathy and esteem. If we charge him with duplicity in his political transactions, we must remember that he preferred the milder ways of gratifying his ambition to those of violence and bloodshed: that he at least desired the reputation of mercy and humanity. If he once asked whether a fortress was so inaccessible that

not even an ass laden with gold could mount to it, we may as well believe the anecdote which relates of him, that he replied to his counsellors who urged him to treat Athens with rigour, that they were advising him to destroy the theatre of his glory. (*Plut., Reg. et Imp. Apophth.*, 11.) The many examples of generous forbearance reported in Plutarch's collection of his apophthegms cannot be all groundless fictions: and the less restraint he set on many of his passions, the more amiable appears, by contrast, the self-control which he exercised, when he was tempted to an unjust or harsh use of his power. He is one of the men of whom we wish to know more, whose familiar letters and conversation must have been worth preserving. But even the history of his outward life is like an ancient statue, made up of imperfect and ill-adjusted fragments. He left the task of his life unfinished, and his death must have appeared to his contemporaries premature. We must rather admire the peculiar felicity of the juncture at which he was removed to make room for one better fitted for the work. What he had done, his successor would perhaps not have accomplished so well. What he meditated was probably much less than his son effected, and yet more than he himself would have brought to pass. If he had begun his enterprise, he would most likely have done little more than mar some splendid pages in the history of the world. (*Thirlwall's History of Greece*, vol. 6, p. 69 — *Cramer's Anc. Greece*, vol. 1, p. 174.)—III. The third of the name, was more commonly known by the name of Aridæus. (*Vid. Aridæus*).—IV. One of the sons of Alexander, slain by order of Olympias.—V. The fifth of the name, was the eldest son of Cassander, and succeeded his father on the throne of Macedon about 298 B.C. He was carried off by sickness after a reign of one year. (*Justin*, 15, 4.—*Id.*, 16, 1.)—VI. The sixth of the name, was still an infant at the death of his father, Demetrius III. of Macedon. He was left under the care of his uncle Antigonus Doseon, who, being guardian of his nephew, became, in fact, the reigning sovereign. (*Polyb.*, 2, 45.—*Plut.*, *Vit. Arat.*—*Justin*, 28, 3.) Antigonus ruled over Macedon for the space of twelve years, when his exertions in defeating the Illyrians, who had made an inroad into his territories, caused the bursting of a blood-vessel, which terminated his existence. (*Polyb.*, 2, 70.) His nephew Philip, though only fifteen years of age, now assumed the reins of government, and showed himself deficient neither in energy nor talents. Adopting the policy of his wise and able predecessor in protecting the Achæans against the ambitious designs of the Ætolians, who were now become one of the most powerful states of Greece, he engaged in what Polybius has termed the Social War, during which he obtained several important successes, and effectually repressed the daring spirit of that people. (*Polyb.*, lib. 4 et 5.) The great contest which was now waging in Italy, between Hannibal and the Romans, naturally attracted the attention of the King of Macedon; and it appears from Polybius and Livy that he actually entered into an alliance with the Carthaginian general. By securing, however, the co-operation of the Ætolians, the Romans were enabled to keep in check the forces of Philip; and, on the termination of the struggle with Carthage, sought to avenge the injury the prince had meditated by invading his hereditary dominions. Philip, for two campaigns, resisted the attacks of the Romans and their allies, the Ætolians, Eumenes, king of Pergamus, and the Rhodians; finally, however, he sustained a signal defeat at Cynoscephalæ, in the plains of Thessaly, and was compelled to sue for peace on such conditions as the victors chose to impose. These were, that Demetrius, his younger son, should be sent as a hostage to Rome, and that he should not engage in any war without their

consent. They further imposed a fine of one thousand talents, and demanded the surrender of all his galleys. (*Liv.*, 33, 30.) In the war which the Romans afterward carried on with Antiochus, king of Syria, Philip actively co-operated with the former; but, jealous of his talents, and aware also of his ambitious spirit, the Romans seized every opportunity of counteracting his efforts to restore the empire of Macedon to its former power and importance. Philip beheld this course of conduct with ill-disguised vexation and disgust; and it is probable that this mutual ill-will would have led to an open rupture if the death of Philip had not intervened. This event is said to have been hastened by the domestic troubles which concurred to embitter the latter years of his life. Dissensions had long subsisted between his two sons Perseus and Demetrius; and, by the arts of the former, who was the elder, but illegitimate, a violent prejudice had been raised in the mind of Philip against the latter, who had resided at Rome for some years as a hostage, even after peace was concluded with that power. The unfortunate Demetrius fell a victim to his brother's treachery, and his father's credulity and injustice. (*Liv.*, 40, 24.) But Philip having discovered, not long after, the fatal error into which he had been betrayed, was so stung with remorse, that anguish of mind soon brought him to the grave. (*Vid. Perseus*.) He died B.C. 179, after a reign of forty-two years. (*Clinton, Fast. Hell.*, vol. 1, p. 243.)—VII. M. Julius, a Roman emperor, of an obscure family in Trachonitis, a province of Arabia, to the south of Damascus, and hence called the Arabian. Zonaras (12, 19) and Cedrenus (vol. 1, p. 257) make Bostra, the capital of the country, to have been his native city; but the language of Aurelius Victor would rather incline us to believe that he was born in the environs of that city, since he calls him in one part "*Arabe Trachonitis*" (*de Cæs.*, 28), and in another speaks of his father as having been "*nobilissimus legionum ductor*." (*Epit.*, 26.) His first act, also, on attaining to the empire, was to found a city not far from Bostra, which he dignified with the name of Philippopolis. St. Jerome, who speaks of this foundation, confounds with the Arabian city another of the same name in Thrace. Jornandes falls into the same error (p. 108). Burckhardt found in the environs of Bostra a Greek inscription bearing the name Philippopolis, which sets the matter at rest. (*Travels*, p. 98.)—Philip entered the Roman armies, and soon distinguished himself by his services, until he was at length appointed commander of the body-guard, in the reign of Gordian III., having succeeded Mithreus, whom he was suspected of having cut off. In taking the place of Mithreus, Philip became, in fact, as his predecessor had been, the guardian of the young prince, and the master of the empire. Gordian had, under the auspices of Mithreus, undertaken, the year previous, an expedition against the Persians, which ended gloriously for the Roman arms; and he now prepared for a second campaign against the same foe, when Philip produced an artificial scarcity by intercepting the supplies of corn, and thus raised a spirit of disaffection against the young emperor. These intrigues, however, did not delay the march of the army, which advanced into Mesopotamia, defeated the Persians, and compelled their king to take shelter in the very heart of his dominions. Gordian returned triumphant, when the partisans of Philip excited a commotion in the camp, and finally compelled the emperor to receive Philip as an associate in the empire. This division of power, consummated by forcible means, could not prove of very long duration, and the young monarch was soon after deposed and put to death. His ashes were conveyed to Rome, and a splendid monument was erected to his memory, near Circæsum, on the Euphrates. Meanwhile the letters of Philip to the senate pur-

ported that Gordian had died of illness, and that the choice of the army had fallen upon him. Arganthia, king of Scythia, was encouraged to advance by the tidings of the death of Mithridates; but Philip, sacrificing the interests of the state to his own, and paying no regard to this new invasion, hastened to secure his election at Rome, where he professed to venerate the statues of Gordian, who had been deified by the senate. The fickle multitude were amused and conciliated by one of those juggles of public pageantry which are found to be so useful in turning the attention of the people from the flagitiousness of their rulers. The thousandth anniversary of the building of Rome was celebrated by splendid games, and by combats in the amphitheatre. But the claim of the "Arabian" to the empire of Rome was disputed by Decius, who had been sent to quell a sedition in Pannonia, and who joined the revolted. Philip lost a battle near Verona, and this event was to his soldiers the signal for his assassination (A.D. 249). His son was slain in the Prætorian camp. (*Capitol., Vit. Gord. Tert.*, 29, seq.—*Aurel. Vict., l. c.*—*Cassan.*, *de iis qui post Gord. Tert., principes fuer.*, § iv.)—VIII. An Acarnanian, and physician to Alexander the Great. When that monarch had been seized with a fever, after bathing, while overheated, in the cold stream of the Cydnus, and most of his medical attendants despaired of his life, Philip, who stood high in his confidence, undertook to prepare a medicine which would relieve him. In the mean while, a letter was brought to the king from Parmenio, informing him of a report, that Philip had been bribed by Darius to poison him. Alexander, it is said, had the letter in his hand when the physician came in with the draught, and, giving it to him, drank the potion while the other read; a theatrical scene, as Plutarch unsuspectingly observes, but one which would not have been invented except for such a character, and which Arrian was therefore induced, though doubtingly, to record. The remedy, or Alexander's excellent constitution, prevailed over the disease; but it was long before he had regained sufficient strength to resume his march. (*Plut., Vit. Alex.—Arrian, Exp. Al.*, 3, 4, 12, seqq.) The whole story is now regarded as a very apocryphal one. We cannot very well understand what Parmenio was doing, that he did not come himself instead of writing. One sees from Curtius (3, 6) how the narrative was embellished. In Arrian, Parmenio's letter only mentions a report which he had heard, that Philip had been bribed. In Curtius, it is asserted that he had been promised one thousand talents, and the hand of the sister of Darius. There was certainly some confusion between this story and that of Alexander the Lyncestian. Seneca (*de Ira*, 2, 23) says, that it was Olympias who sent the warning letter about Philip. (*Thirlwall's History of Greece*, vol. 6, p. 173.)—IX. A pretender to the crown of Macedonia, after the overthrow of Perseus. He is commonly known by the appellation of "Pseudophilippus." His true name was Andriacus. (*Vid. Andriacus.*)—X. The Greek translator of the work of Horapollon. From the internal evidence afforded by the translation itself, he is supposed to have lived a century or two later than Horapollon; and at a time when every remnant of actual knowledge of the subject, on which Horapollon treats, must have vanished. (*Cory, Hieroglyphics of Horapollon, pref.*, p. ix.)—XI. A comic poet of Athens, son of Aristophanes. He does not appear to have inherited any considerable portion of his father's wonderful abilities. (*Theatre of the Greeks*, p. 115, 4th ed.)—XII. A native of Opus, and a disciple of Plato. Diogenes Laertius informs us (3, 37), that Plato died before publishing his "Laws," and that Philip of Opus gave to the world the manuscript of the work, which he found among his master's tablets. (*Vid. Plato.*) Philip wrote "on Eclipses, and on the size of the Sun,

Moon, and Earth" (*περὶ ἐκλείψεων, καὶ μεγέθους ἡλίου καὶ σελήνης καὶ γῆς*). The work is cited by Stobæus. (*Schöll, Hist. Lit. Gr.*, vol. 3, p. 8.)—XIII. An epigrammatic poet, a native of Thessalonica, who flourished during the reign of Tiberius. He is sometimes called "the Macedonian," but more frequently "Philip of Thessalonica." We have eighty-five epigrams of his remaining. They display little originality, being for the most part imitations of preceding poets. (*Jacobs, Catal. Poet. Epigr.*, p. 935.) Philip of Thessalonica is the compiler of what is termed the "Second Anthology," thus continuing the work commenced by Meleager. The interval between the two compilations was about 150 years. (*Jacobs, l. c.*—*Schöll, Hist. Lit. Gr.*, vol. 4, p. 49, 55.)

PHILISCUS, I. an orator, and also an epigrammatic poet, one of whose effusions has been preserved by Plutarch, who speaks of him as a contemporary of Lysias, and a pupil of Isocrates. He was a native of Miletus in Ionia; and, besides his poetical pieces, left several harangues and a life of Lycurgus. (*Ruhnken, Hist. Crit. Orat. Gr.*, p. lxxxiii.—*Plut., X. Orat. Vit.*, p. 836.—*Suidas, s. v.*—*Jacobs, Catal. Poet. Epigr.*, p. 936.)—II. or perhaps Philicus, a tragic poet, a native of Coreyra, and contemporary with Theocritus (370 B.C.). He gave his name, as inventor, to a particular species of Iambic verse (*Mætrum Philiscum* or *Philicum*). (*Schöll, Hist. Lit. Gr.*, vol. 3, p. 86.)—III. A tragic poet, a native of Egina, and contemporary with Philiscus of Coreyra. (*Schöll, l. c.*)—IV. A sculptor of Rhodes, whose era is uncertain. He made, among others, two statues, one of Apollo, the other of Venus, which were placed in the collection of Octavia. (*Plin.*, 36, 5, 4.)

PHILISTUS, a wealthy native of Syracuse, who employed his riches in procuring the sovereign power for Dionysius the Elder. He became, subsequently, the confidant, minister, and general of the tyrant; but he lost his favour by having secretly married one of his nieces, and was driven into exile. He retired to Adria, where he wrote on the "Antiquities of Sicily," in seven books, which was carried down to the third year of the 83d Olympiad, and embraced a period of eight centuries. He composed also a "Life of Dionysius," in four books. Having been recalled from banishment by Dionysius the younger, he became the antagonist of Dion and Plato, who had gained an ascendancy over the mind of that prince. Philistus commanded the fleet of Dionysius in the naval battle with Dion and the Syracusans, which cost the tyrant his throne, and his vessel having run aground, he was taken prisoner and put to an ignominious death. Besides the two works already mentioned, Philistus wrote the life of Dionysius the younger, in two books. These three productions being united, bore the common name of *Συεληκά*. Cicero praises this historian, and calls him "almost a little Thucydides" (*pene pusillus Thucydides*).—*Ep., ad Q. Fratr.*, 2, 13.—*Compare de Divin.*, 1, 20). But Plutarch and Pausanias reproach him with having sacrificed truth to the desire of recovering the good graces of his master. Dionysius of Halicarnassus also observes, that if he has managed to resemble his model, Thucydides, it is only in two respects, in having left behind him unfinished writings, and in the disorder which prevails throughout his works. In point of sentiment and feeling, there is, according to Dionysius, no resemblance whatever between the two: Thucydides had a lofty and noble spirit; Philistus, on the other hand, yielded slavish obedience to tyrants, and sacrificed truth to them. Dionysius confesses, however, that the style of Philistus was clear, and marked by "roundness" and energy, though without figures and ornament.—Alexander the Great is said to have greatly admired the works of Philistus, and they formed part of his portable library. The fragments of this writer have

been collected by Gölter, in his work "*De situ et Origine Syracusanorum*," p. 177.—M. Sevin, in his "*Recherches sur la vie et les écrits de Philistius*" (*Mém. de l'Acad. des Insér.*, vol. 13, p. 1, seqq.), maintains that Philistius was a pupil of Isocrates; Gölter, however, shows very conclusively, that Sevin was misled by a corrupt passage in Cicero (*de Orat.*, 2, 23), where, instead of "*Philisti*," we ought to read "*Philisci*," and where the reference can only be to Philiscus the Milesian. (Gölter, *Op. cit.*, p. 112, seqq.—*Dion. Hal.*, *De Vet. Script. cens.* (Op., ed. Reiske, vol. 5, p. 427).—*Id.*, *Epist. ad Cn. Pomp.* (Op., vol. 6, p. 780).—Schöll, *Hist. Lit. Gr.*, vol. 2, p. 177, seqq.—*Saints-Croix*, *Examen des Hist. d'Alex.*, p. 12.)

PHILO, I. a statuary, in the age of Alexander the Great. This is evident from the circumstance of his having made a statue of Hephæstion. (*Tatian, Orat. ad Gr.*, 55.) This artist is undoubtedly referred to in a well-known inscription given by Wheeler (*Ann.*, 200.—*Compare Spahn, Misc. Erud. Antiq.*, 332.—*Chishull, Antiq. Asiat.*, p. 59, seqq.—*Jacobs, Anthol. Gr.*, 3, 1, p. 192.—*Sillig, Dict. Art.*, s. v.).—II. A native of Byzantium, who flourished about 150 B.C. He must not be confounded with the architect Philo, who, in the time of the orator Lysurgus, built the arsenal in the Piræus.—Philo of Byzantium was the author of a treatise having relation to mechanics, in five books, of which only the last two remain to us. These treat of the making of missile weapons (*Βελοποιικά*, or *Ὀπυνοποιικά*), of the construction of towers, walls, ditches, as well as other works required for the siege of cities. There is ascribed to him also a work on the "*Seven Wonders of the World*" (*Περὶ τῶν Ἑπτὰ Θεαμάτων*). These wonders are, the gardens of Semiramis, the pyramids of Egypt, the statue of Jupiter at Olympia, the colossus of Rhodes, the walls of Babylon, the temple of Diana at Ephesus, and the Mausoleum. The last chapter of the work, however, is wanting, and the last but one is in a very mutilated state. It is a production of very little value, excepting the chapter which treats of the Colossus of Rhodes, and the fragment that remains of the description of the Ephesian temple, two monuments which Philo himself saw. As he no doubt had also beheld the tomb of Mausolus, we have to regret the loss of the last chapter, in which this was described. The style, however, of this work indicates a more recent writer than the author of the *Βελοποιικά*. The two books of the treatise relating to Missiles, &c., are to be found in the collection of the "*Ancient Mathematicians*" (*Mathematici Veteres*, Paris, 1693, p. 49–104). The first five chapters of the "*Seven Wonders*" were published, for the first time, by Leo Allatius, *Rom.*, 1640, 8vo, with a very careless Latin version. A corrected edition was given by De Boissieu, who accompanied M. de Crequi in his embassy to Rome, and delivered a harangue before Urban VIII. This edition was corrected by the Vatican MS., and appeared at the end of the *Ibis* of Ovid published in 1661, at the Lyons press, 8vo. It is rarely met with, and was unknown to Bast, who, when the Vatican MS. was brought to Paris, published the variations contained in it, though they were already given in the edition of Boissieu. This edition of Boissieu swarms with typographical errors; but it is accompanied by a good Latin version. The edition of Allatius, corrected by Gronovius, was reprinted in the *Thesaurus Antiq. Crit.*, vol. 7, with the fragment of the sixth chapter, which Holstenius had found. Teucher promised a new edition in 1811, but it never saw the light, the editor having died before he could complete it. In 1816, Orelli published a new edition, with the text corrected after Boissieu and Bast, and with "*Testimonia Veterum*," &c. This is the best edition: it contains also the fragments of the Sophist Callinicus, and of Adrian of Tyre. (*Schöll, Hist. Lit. Gr.*, vol. 3, p. 367.—*Hof-*

mann, Lex. Bibliogr., vol. 3, p. 324.)—III. Called, for distinction's sake, *Judeus* (*Ἰουδαῖος*) or "*the Jew*," was a native of Alexandria, a member of a sacerdotal family, and flourished about 40 A.D. He belonged to the sect of the Pharisees, and was a great zealot for the religion of his fathers. On occasion of a tumult which had taken place at Alexandria, the Hellenistic Jews of this city sent him to Rome to carry their justification before the Emperor Caligula; but the latter refused to receive him into his presence. Philo was a man of great learning. He had carefully studied all the Grecian systems of philosophy, and he made an admirable use of this knowledge in accomplishing the object which he had in view, of presenting the pagans, namely, with the sacred Scriptures of his nation as the perfection of all human wisdom. Of all the systems of profane philosophy, no one suited his views so well as the Platonic. His inclination towards a contemplative life was nurtured by the perusal of Plato's writings, while their mysterious tendency served to inflame his imagination. The ideas of Plato were amalgamated with Philo's doctrine respecting the Scriptures, and he may thus be regarded as the precursor of that strange philosophy which, one hundred and fifty years after his time, developed itself in Egypt. The style of Philo is expressly modelled after that of Plato. A perusal of his works, which are quite numerous, is not only interesting for the study of the New-Platonic philosophy, but extremely important for understanding the Septuagint and the books of the New Testament. Mai discovered, in 1816, some unedited fragments of this writer. An Armenian translation was also found at Lemberg, in Galicia, by Zohrab, an Armenian, in 1791, which contained thirteen productions of Philo, of which eight no longer exist in Greek. (*Mai de Philonis Judæi et Eusebii Pamphele scriptis ineditis Dissertatio*, Mediolani, 1816, 8vo.) The best edition of Philo is that of Mangey, *London*, 1742, 2 vols. fol.: the latest is that of Richter, forming the second part of the "*Bibliotheca Sacra*," *Leips.*, 1828–1830, 8 vols. 12mo. It contains merely the text. The two works found by Mai were published at Milan in 1818, 8vo, and Aueher published at Venice, in 1823, a Latin translation of the three works of Philo, of which Zohrab had found the Armenian text. The Hebrew Lexicon of Philo, which exists only in a Latin version, and which is found in no edition of his works, is contained in the second volume of the works of St. Jerome, published in Paris, 1633. (*Schöll, Hist. Lit. Gr.*, vol. 5, p. 65, seqq.—*Hoffmann, Lex. Bibliogr.*, vol. 3, p. 325, seq.)—IV. An epigrammatic poet, who flourished from the reign of Nero to that of Hadrian. He celebrated, in a separate production, the reign of the latter. Eudocia states (p. 424), that he composed four books of epigrams. Only one small distich remains. (*Jacobs, Catal. Post. Epigr.*, p. 936.)—V. A native of Larissa, the pupil and successor of Clitomachus in the chair of the New Academy. He also taught at Rome, having retired to that city from Athens during the Mithradatic war, B.C. 100. By some he has been considered the founder of a *Fourth Academy*. Philo confined a scepticism to a contradiction of the metaphysics of the Stoics and their pretended *criteria* of knowledge: he contradicted the sphere of logic; made moral philosophy merely a matter of public instruction; and endeavoured to prove that the Old and New Academies equally doubted the certainty of speculative knowledge. Cicero was one of his auditors, and often makes mention of him in his writings. (*Tennemann, Manual Hist. Philos.*, p. 154.—*Compare Schöll, Hist. Lit. Gr.*, vol. 5, p. 198.)

PHILOCTETES, a Thessalian prince, son of Poean or Poean, king of Meliboea. According to the account of Apollodorus and others, which we have followed in the narrative of the death of Hercules, that hero gave him bow and arrows to Poen, father of Philoctetes, as

a reward for having kindled his funeral pile on Mount Etna, when all his immediate followers declined so to do. A different form, however, is given to the story by Hyginus and other authorities, who make Hercules to have bestowed the gift on Philoctetes, the son, for having performed the same service which other mythologists assign to the father. (*Hygin., fab.*, 36.—*Schol. ad Hom., Il.*, 6.—*Ovid., Met.*, 9, 234.—*Serv. ad Æn.*, 3, 402.—*Muncker, ad Hygin., l.c.*) Sophocles, again, differs from both accounts, in assigning the task of kindling the pile to Hyllus, the son of the hero himself. (*Soph., Trach.*, 1211, 1270, 1273.)—Philoctetes, as one of the suitors of Helen, was compelled to take part in the war against Priam. He led the forces of Methone, Thaumacia, Melibcea, and Olizon, and sailed from Aulis, along with the rest of the fleet, to the land of Troy. He was not, however, suffered to remain for any long time an inmate of the Grecian camp. A very offensive wound in his foot, and the loud and ill-omened cries of suffering which he was constantly uttering, induced the Greeks to move him from their vicinity, and, having transported him to the island of Lemnos, they treacherously left him there. Ulysses is said to have planned and executed the deed. (*Soph., Philoct.*, 5.) The causes of the wound of Philoctetes are differently stated by mythologists. Some ascribe it to the bite of a serpent, which Juno sent to attack him, because he had kindled the funeral pile for Hercules, and had collected his ashes; and they make him to have received the wound in the island of Lemnos, and to have been there abandoned by the Greeks. (*Hygin., fab.*, 102.) The scholiast on Homer (*Il.*, 2, 722) says that he was bitten in Lemnos, at the altar of Minerva surnamed Chrysa (compare *Philostratus, Icon.*, p. 863, *ed. Morell*), while Dictys of Crete (2, 14) and Tzetzes (*ad Lycophr.*, 911) make him to have received his wound in the city of Chrysa, near Troy. Others, again, laid the scene of the fable in the small island of New, near Lemnos. (*Steph. Byz., s. v. Néau.*) Theocritus says that he was wounded by the serpent while contemplating the tomb of Troilus, in the temple of the Thymbræan Apollo. (*Meurs. ad Lycophr.*, 912.) Finally, the scholiast on Sophocles tells us that Philoctetes was bitten on the shore of Lemnos, while in the act of raising an altar to Hercules. (*Schol. ad Soph., Philoct.*, 269.)—The Greeks, having been informed by an oracle that Troy could not be taken without the arrows of Hercules, despatched Ulysses and Pyrrhus to Lemnos, to urge Philoctetes to put an end, by his presence, to the tedious siege. The chief, whose resentment towards the Greeks, and especially towards Ulysses, the immediate promoter of his removal from the camp, was still unabated, refused to comply with their summons, and would have persisted in his refusal had not Hercules appeared, and enjoined upon him, on a promise that his wounds should be cured, to accede to the request that was made of him. Philoctetes accordingly returned to the camp before Troy, where he was cured by Machaon, and where he particularly distinguished himself by his valour, and by his dexterity in the use of the bow. Paris, among others, fell by his hand. (*Tzetz. ad Lycophr.*, 911.—*Hygin., fab.*, 112, 114.) Philoctetes survived the siege; but, instead of returning to Greece, settled with his followers in Italy, where he founded the city of Petilia in the territory of the Brutii. (*Virgil, Æn.*, 3, 401.)—Servius, in his commentary on Virgil, gives another and very different legend concerning the Thessalian hero. According to this version of the fable, Philoctetes was the companion and friend of Hercules, and the latter, just before his death, enjoined upon him, with an oath, not to disclose where his ashes were interred, and he gave him, on condition of his preserving the secret, his bow and arrows. When the Greeks were informed by the oracle that Troy could not be taken without the arrows of Hercu-

les, they went in quest of Philoctetes (who, according to this account, had not gone to the Trojan war), and made inquiries of him respecting the son of Alcmena. At first, Philoctetes pretended not to know where he was; at length, however, he informed them that he was dead. The Greeks then urging him to declare where the hero was buried, Philoctetes, in order to evade his oath, struck the ground with his foot, without uttering a word, and the spot was discovered. He himself was then led away to the war; but, not long after, one of the arrows fell on the foot with which he had betrayed the burial-place of Hercules, and inflicted a painful and most noisome wound. The Greeks for a long time bore with him on account of the oracle. At last, their patience being exhausted, and the stench of the wound, together with the cries of the sufferer, being quite insupportable, Philoctetes was conveyed to the island of Lemnos, his arrows being first taken from him. His wound preventing a return to his native country, he sailed from Lemnos to Italy, and founded Petilia; and here he was finally cured. (*Serv. ad Virg., Æn.*, 3, 401.) Sophocles has made the sufferings of Philoctetes the subject of one of his tragedies. (*Vid. Sophocles.*)

PHILOLAUS, a Pythagorean philosopher, born at Crotona, but who afterward lived at Thebes, and also at Heraclea. He was a disciple of Archytas, and flourished in the time of Plato. It was from him that Plato purchased the written records of the Pythagorean system, contrary to an express oath taken by the society of Pythagoreans, pledging themselves to keep secret the mysteries of their sect. Plutarch relates, that Philolaus was one of the persons who escaped from the house which was burned by Cylon during the life of Pythagoras; but this account cannot be correct. Philolaus was contemporary with Plato; and, therefore, certainly not with Pythagoras. Interfering in affairs of state, he fell a sacrifice to political jealousy. Philolaus treated the doctrines of nature with great subtlety, but, at the same time, with great obscurity; referring everything that exists to mathematical principles. He taught that the world is one whole, which has a fiery centre, about which the ten celestial spheres revolve, heaven, the sun, the planets, the earth, and the moon.—At Thebes, Philolaus was the teacher of Simmias and Cebes, before they came to Socrates at Athens. (*Plat., Phæd.*, p. 61.) Fragments of the writings of this philosopher have come down to us, the genuineness of which has been satisfactorily established by Böckh in his two treatises. (*Böckh, de Platonico Systemate, &c., Heidelberg.*, 1810, 4to.—*Id., Philolaus des Pythagoreers Lehren, &c., Berlin.*, 1819, 8vo.—*Enfield, Hist. Phil.*, vol. 1, p. 411, *seq.*—*Ritter, Hist. Philos.*, vol. 1, p. 348, *seq.*)

PHILOMELA, daughter of Pandion, king of Athens, and sister to Procne, who had married Tereus, king of Thrace. (*Vid. Pandion.*) Procne became by Tereus the mother of a son named Itys; but, after living some time in Thrace, she became desirous of seeing her sister, and, at her request, Tereus went to Athens, and prevailed on Pandion to let Philomela accompany him back to Thrace. On the way thither he violated her; and, fearing the truth might be discovered, he cut out her tongue and confined her. She contrived, however, to communicate her story to her sister by means of characters woven into a peplos or robe. Procne, who had been informed by Tereus that she had died by the way, and who had for some time been plunged in the greatest affliction for her loss, now sought her out and released her; and, killing her own son Itys, served up his flesh to his father. The two sisters fled away; and Tereus, discovering the truth, pursued them with an axe. Finding themselves nearly overtaken, they prayed to the gods to change them into birds: Procne immediately became a nightingale (*ἀγροδόν*), and Philomela a swallow (*χεριδόν*). Tereus

was also changed, and became a *koopoo* (κοοψ). (*Apollod.*, 3, 13.—*Ovid, Met.*, 6, 424, seq.—*Hygin.*, *fab.*, 45.—*Schol. ad Aristoph.*, *Av.*, 212.—*Eudocia*, 327.)—Like so many others, this story is told with considerable variations. According to some, Tereus had early conceived a passion for Philomela, and he obtained her in marriage by pretending that Procne was dead. (*Apollod.*, l. c.—*Hygin.*, l. c.) Again, there is great discrepancy respecting the transformation, some saying that Procne, others that Philomela, was the nightingale. This last, which has the signification of the name in its favour (Philomela being *song-loving*), was not, however, the prevalent opinion. It was also said that Tereus was changed into a hawk, and that Itys became a wood-pigeon.—The legend we have here been giving is one of those invented to account mythically for the habits and properties of animals. The twitter of the swallow sounds like *Itys, Itys*; the note of the nightingale was regarded as lugubrious, and the *koopoo* chases these birds. (*Keightley's Mythology*, p. 379, seq.)

ΠΙΛΟΠΑΤΩΡ, the surname of the fourth Ptolemy of Egypt. (*Vid. Ptolemæus*.)

PHILOPÆMEN, a distinguished general of the Achæan league, born at Megalopolis, in Arcadia, and educated under the best masters. He was no sooner able to bear arms, than he entered among the troops which the city of Megalopolis sent to make incursions into Laconia, and in these inroads never failed to give some remarkable proof of his prudence and valour. When Cleomenes, king of Sparta, attacked Megalopolis, Philopæmen greatly signalized himself among the defenders of the place. He distinguished himself no less, some time after this, in the battle of Sellasia, where Antigonus Doson gained a complete victory over Cleomenes, B.C. 222. Antigonus, who had been an eyewitness of his gallant behaviour, and who admired his talents and virtues, offered him a considerable command in his army, but Philopæmen declined it, because he knew, as Plutarch observes, that he could not bear to be under the direction of another. Not choosing, however, to remain idle, and hearing that there was war in Crete, he sailed to that island to exercise and improve his military talents. When he had served there for some time, he returned home with high reputation, and was immediately appointed by the Achæans general of the horse. In the exercise of this command, he acquitted himself with signal ability; so much so, in fact, that the Achæan horse, heretofore of no reputation, soon became famous over all Greece. He was not long after appointed to the command of all the Achæan forces, and zealously employed himself in reforming the discipline of the army, and infusing a proper spirit into the soldiers of the republic. An opportunity occurred soon after this, of ascertaining how the troops had profited by his instruction. Machanidas, tyrant of Lacedæmon, with a numerous and powerful army, was watching a favourable moment to subdue the whole of the Peloponnesus. As soon, then, as intelligence was brought that he had attacked the Mantineans, Philopæmen took the field against him, and defeated and slew him. The Lacedæmonians lost on this occasion above 8000 men, of whom 4000 were left dead upon the field. The Achæans, in commemoration of the valour of Philopæmen, set up at Delphi a brazen statue, representing him in the very act of slaying the tyrant. At a subsequent period, however, he experienced a reverse of fortune; for, having ventured to engage in a naval battle with Nabis, the successor of Machanidas, he was not only defeated, but in danger of being lost through the leaky condition of his own vessel, which was an old one fitted up for the occasion. His want of skill, however, on this element was amply compensated not long after by a victory over the land forces of the enemy, commanded by Nabis in person, the greater part of whom were cut off.

When Nabis had been assassinated by the Ætolians (*vid. Nabis*), Philopæmen performed another distinguished service for his countrymen, by inducing the Spartans to join the Achæan league. Sparta, indeed, was an acquisition of no small importance to the confederacy, of which she was now become a member. It was also a most acceptable service to the principal Lacedæmonians, who hoped henceforth to have him for the guardian of their newly-recovered freedom. Having sold, therefore, the house and property of Nabis by a public decree, they voted the money, which amounted to 120 talents, to Philopæmen, and determined to send it by persons deputed from their own number. But so high was the private character of the illustrious Megalopolitan, that it was a difficult matter to find any individual who would venture to speak to him on the subject. At last, one Timolaus, who was connected with Philopæmen by the ties of hospitality, undertook the task; but when he went to Megalopolis, and observed the purity and simplicity of his private life, he uttered not a word respecting the present, but, having assigned another cause for his visit, returned to Lacedæmon. He was sent a second time, but still could not mention the money. In a third visit, he introduced the subject with much hesitation, and stated to him the kind intentions of Sparta. But Philopæmen immediately declined the offer, and, going himself to Lacedæmon, advised the people not to tempt the good with the money, but to employ it rather in silencing the opposition of the bad. And yet it was in this same city that he afterward inflicted, as the general of the Achæan league, an act of severe intimidation; for Lacedæmon having violated the terms of the compact, her walls were demolished by Philopæmen, the institutions of Lycurgus were abolished, and the laws of the Achæans were established in their room. Not long after this the city of Messene withdrew from the Achæan league, and a war was the consequence, in which the forces of the confederacy proved altogether superior, until their success was turned into mourning by a great and most unexpected disaster. Philopæmen was surprised by the enemy when passing with a small party of cavalry through a difficult defile. It was thought that he might have escaped by the aid of some light-armed Thracians and Cretans in his band; but he would not quit the horsemen, whom he had recently selected from the noblest of the Achæans; and, while he was bringing up the rear, and bravely covering the retreat, his horse fell under him. He was seventy years old, and weakened by recent sickness; and he lay stunned and motionless under his horse till he was found by the Messenians. The popular feeling was in his favour, since it was remembered that the Messenian state had formerly received important benefits at his hands; but the magistrates were hostile, most of them having been the authors of the revolt, and it was resolved by them that Philopæmen should die. He was accordingly compelled to drink a cup of poison. His eulogy is summed up by Polybius with the words, that in forty years, during which he played a distinguished part in a democratical community, he never incurred the enmity of the people, though he spoke and acted freely and boldly, nor ever courted popular favour by unworthy compliance.—We have a biography of him by Plutarch. (*Polyb.*, 2, 40.—*Id.*, 2, 67, seqq.—*Id.*, 11, 10, &c.—*Plut. in Vit.*)

PHILOSTRATUS, I. Flavius, surnamed, for distinction's sake, the elder, was the son of Philostratus of Lemnos, who is represented to us as one of the greatest orators of his time. He lived towards the end of the second century of our era, at the court of the Emperor Septimius Severus, and at the commencement of the third, under Alexander. It was to please the Empress Julia, the wife of Severus, who had a strong predilection for literary pursuits, that Philostratus composed the most famous of his works, the *Life of Apollonius*

of Τυαῖα (Ἀπολλωνίου τοῦ Τυανεύς βίος), a well-known charlatan and wonder-worker, whom his biographer wishes to represent as a supernatural being. Hence Eunapius of Sardis, in speaking of this book, remarks, that, instead of being called the Life of Apollonius, it ought to be entitled, a *History of the visit of God unto men* (θεὸν ἐπιδημίαν ἐκ ἀνθρώπων θεοῦ καλεῖν). Three writers before the time of Philostratus had given Lives of Apollonius, namely, Damis of Ninus, his friend, and two unknown writers, Maximus and Mœragenes. Their works were of service to Philostratus in framing his compilation; a compilation entirely destitute of critical arrangement, filled with the most absurd fables, and swarming with geographical errors and with anachronisms. And yet, notwithstanding these so serious defects, the work is useful for an acquaintance with the Pythagorean philosophy, and the history of the emperors who reigned after Nero.—A question naturally presents itself in relation to this singular piece of biography. Did Philostratus, in writing it, wish to parody the life and miracles of the divine founder of our religion? It is difficult to exculpate him from such an intention. Various particulars in the biography of Apollonius, such as the announcement of his nativity, made to his mother by Proteus; the incarnation of this Egyptian divinity in the person of Apollonius; the miracles by which his birth was accompanied; those that are attributed to the individual himself; and his ascension into heaven, appear borrowed from the life of our Saviour; and within less than a century after Philostratus wrote, in the time of Dioclesian, Hierocles of Nicomedia opposed this work to the gospels. Huet was the first that ascribed an evil intention to Philostratus (*Demonstr. Evang. Propos.*, 9, c. 147); while the opposite side is maintained by Meiners (*Gesch. der Wissensch.*, &c., vol. 1, p. 258) and by Tiedemann (*Geist. der Speculat. Philos.*, vol. 3, p. 116).—Philostratus has also left us, under the title of Ἡρωικά (*Heroica*), the fabulous history of twenty-one heroes of the Trojan war. This work is in the form of a dialogue between a Phœnician mariner and a vinedresser of Thrace, who had heard all these particulars from the lips of Proteus. Another work is the *Elkôves*, in two books. It is a discourse on a gallery of paintings which was at Naples, and contains some valuable remarks on the state of the arts at this period. We have also the *Lives of the Sophists* (βίος σοφιστῶν), in two books, the first containing the lives of the philosophical sophists, the second those of the rhetorical. The former are twenty-six in number; the latter thirty-three. It is an interesting work, and gives an amusing account of the sophists of the day, their vanity and impudence, their jealousies and quarrels, their corrupt morals; a living picture, in fine, of the fall of the art and the corruption of literary men. There exist also from the pen of Philostratus sixty-three letters, and an epigram in the Anthology. There are only two editions of the entire works of Philostratus; that of Morell, Paris, 1608, fol., and that of Olearius, Lips., 1709, fol. The latter is the better one of the two, although in numerous instances it only copies the errors of the former. Olearius is said to have appropriated to his own use the notes of Reinesius, written on the margin of a copy of Morell's edition, which he obtained from the library of Zeitz; and then to have destroyed this copy. (*Hoffmann, Lex. Bibliogr.*, vol. 3, p. 235.) In 1806, Boissonade published a good edition of the *Heroica*, from the Paris press, in 8vo, and Welcker an edition of the *Elkôves* of both the elder and younger Philostratus, with archaeological illustrations by himself, and a commentary by F. Jacobs, Lips., 1825, 8vo. Among the works that may be consulted in relation to Philostratus are the following: *Baden, de arte et judicio Philostrati in describendis imaginibus, Hafn.*, 1792, 4to.—*Bekkri Specimen var. lect. et ob-*

servat. in Philostratum, Acc. F. Crouzeri Annot., Heidelb., 1818, 8vo.—*Hamaker, Lectiones Philostratae, Lugd. Bat.*, pars 1., 1816, 8vo.—*Heyne, Philostrati imagines, &c., Götting.*, 1796, 1801 (*Progr.*), fol.—*Jacobs, Exercitationes Criticæ in script. vet.*, vol. 2, Lips., 1797, 8vo.—II. A nephew of the former, called, for distinction's sake, Philostratus the younger. He was the author of a work which has come down to us under the title of *Elkôves* (like that of the elder Philostratus). It is contained in a single book, and is less a description of paintings that have actually existed, than a collection of subjects for artists. This work is commonly printed along with the *Elkôves* of the elder Philostratus. The latest and best edition is that of Welcker, Lips., 1825, 8vo. (*Schöll, Hist. Lit. Gr.*, vol. 4, p. 288, seqq.)

PHILOSTRAS, son of Parmenio. He distinguished himself on many occasions, but was at last accused of conspiring against the life of Alexander. The monarch was encamped at Artacoana when information of this design was brought to him. The informer was a boy of infamous character, and the persons accused were officers, though not of exalted rank. The informer said, that he had at first told his secret to Philotas, who had daily access to Alexander, but who had taken no notice of it for two days, at the end of which time, through the means of another officer near Alexander's person, the information was conveyed to the king. This threw strong suspicion on Philotas, who, however, was not implicated by either the informer or any of the accused in their confessions. But Craterus, who had an old jealousy against Philotas, on account of the favour which the latter enjoyed with the king, encouraged the suspicions of Alexander, who recollected what Philotas had said at the time when the former claimed Jupiter Ammon for his father, that he pitied those who were doomed to serve a man that fancied himself to be a god. Craterus had also, for some time previous, bribed a courtesan intimate with Philotas, who reported to him, and through him, to the king, all the boastful vapourings and expressions of discontent uttered by Philotas in his unguarded moments. In short, Alexander, according to Quintus Curtius, was induced to order Philotas to be tortured in consequence of the suggestions of Craterus, Hephæstion, and others of the king's companions. Cæneus, who had married the sister of Philotas, was one of the most violent against the accused, for fear, it was supposed, of being thought an abettor of his brother-in-law. The torture was administered by Craterus himself, and Philotas, after enduring dreadful agonies, confessed, though in vague terms, that he had conspired against the life of Alexander, and that his father Parmenio was cognizant of it. This being considered sufficient evidence, Philotas was stoned to death; and Parmenio suffered not long after him. (*Vid. Parmenio. Quint. Curt.*, 6, 7, 18.—*Arrian, Exp. Al.*, 3, 26, seqq.)

PHILOXENUS, I. a native of the island of Cythera, born 439 B.C. He is highly praised as a dithyrambic poet by the ancient writers. The inhabitants of Cythera having been subjected by the Lacedæmonians, Philoxenus, while still a boy, came as a slave into the hands of a Spartan, and afterward into those of the younger Melanippides, who instructed him in the poetic art, and gave him his freedom. Philoxenus lived subsequently at the court of Dionysius the elder, tyrant of Syracuse, where he acquired the character of a *bon vivant* and a wit. Dionysius, on one occasion, gave him one of his dramas to correct, and the poet is said to have run his pen through the whole. The offended tyrant sent him to the quarries, and the poet is said to have there composed the best of his dramas, entitled *Cyclops*. Ælian says, that the hole or chamber in which he wrote his play was shown a long time after to strangers, and went by the poet's name. (*Var.*

Hist., 12, 44.) Philoxenus was afterward restored to favour, and the tyrant, imagining that he would now find in him a more complimentary critic, invited him to attend the reading of one of his poems. Philoxenus, after enduring the infliction for a while, rose from his seat, and, on being asked by Dionysius whither he was going, coolly replied, "To the quarries!" (*Nicol. Damasc.*, *ap. Stob.*, 13, 16, p. 145. — *Suid.*, s. v. ἀπαγέ με εἰς τὰς λατομίας. — *Id.*, s. v. Λατομίας. — *Hellad.*, *ap. Phot.*, *Cod.*, 279.) Eustathius gives a curious account of his having escaped on this occasion, by dexterously using a word susceptible of a double meaning. Dionysius, according to this version of the story, read one of his tragedies to Philoxenus, and then asked him what kind of a play it appeared to him to be. The poet answered, "A sad one" (οἰκτρόν), meaning sad stuff; but Dionysius thought he meant a drama full of pathos, and took his remark as a compliment. (*Eustath.* *ad. Od.*, p. 1691.) According to the scholiast on Aristophanes (*Plut.*, 290), Philoxenus was sent to the quarries for having rivalled the tyrant in the affections of a concubine named Galatæa. Having escaped, however, from this confinement, he fled to his native island, and there avenged himself by writing a drama, in which Dionysius was represented under the character of the Cyclops Polyphemus, enamoured of the nymph Galatæa. The allusion was the more galling, as Dionysius laboured under a weakness of sight, or, more probably, saw well with only one of his eyes. (*Schol. ad. Aristoph.*, l. c. — Compare *Athenæus*, 1, p. 7.) — The reputation of Philoxenus rested more, however, upon his lyric than upon his dramatic productions. Athenæus has preserved some extracts from his works, particularly one from his comic, or, rather, burlesque poem, entitled *Δείπνον*, or "The Entertainment." Philoxenus was noted for his gluttony, and Athenæus records a wish of his (8, p. 341, d.), that he might have a throat three cubits long, in order that the pleasure arising from the tasting of his food might be the more prolonged. (Compare *Ælian*, 10, 9.) He is said to have died of a surfeit, in eating a polypos two cubits in size. (*Athenæus*, 8, p. 341. — *Schöll, Gesch. Lit. Gr.*, vol. 1, p. 206.) — II. A native of Leucadia. Böckh considers this one to have been the glutton, and the Cyprian poet. (*Schöll, Gesch. Lit. Gr.*, vol. 1, p. 207, *Anm.* 1.) — III. or Flavius Philoxenus, was consul A.D. 525, and is commonly known as the author of a Latin-Greek Lexicon, in which the Latin words were explained in Greek. H. Stephens gave this Lexicon, without knowing the name of the compiler, in his "*Glossaria duo e situ vetustatis eruta*," Paris, 1573, fol. It appears under the name of Philoxenus in the collection of Bonav. Vulcanius. It forms part also of the London edition of Stephens's Thesaurus, 1826. (*Schöll, Gesch. Lit. Gr.*, vol. 3, p. 193.)

PHILYRA, one of the Oceanides, and the mother of Chiron by Saturn. The god, dreading the jealousy of his wife Rhea, changed Philyra into a mare, and himself into a horse. The offspring of their love was the Centaur Chiron, half man, half horse. Philyra was so ashamed of the monstrous shape of the child, that she prayed the gods to change her form and nature. She was accordingly metamorphosed into the linden-tree, called by her name among the Greeks (Φιλύρα, *Philyra*). (*Hygin.*, *fab.*, 138.) Modern expounders of mythology, however, make Φιλύρα equivalent to Φιλόλυπα, "lyre-loving," and consider it a very fit designation for the mother of one who was so skilled in music as Chiron. (*Welcker, Nachtrag zur Tril.*, p. 53, *not.*)

PHILYRIDES, a patronymic of Chiron, the son of Philyra. (*Virg.*, *G.*, 3, 550.)

PHINEUS, I. a son of Agenor (or, according to some, of Neptune), who was gifted with prophetic powers, and reigned at Salmydessus, on the coast of Thrace. He married Cleopatra, the daughter of Boreas and

Orithyia, and became by her the father of two sons, Plexippes and Pandion. Cleopatra having died, he married Idæa, the daughter of Dardanos, who, becoming jealous of her step-children, maligned them to their father, and the latter, believing the slander, deprived them of sight and imprisoned them. According to the commonly-received account, the gods, to punish him, struck him with blindness, and sent the Harpies to torment him. These fell monsters came flying the instant food was set before him, carried off the greater portion of it, and so defiled what they left that no mortal could endure to eat it. The Argonauts coming to consult Phineus about their future course, he promised to direct them, on condition of their delivering him from the Harpies. This they undertook to do. The table was spread; the Harpies instantly descended, screaming, and seized the viands. Zetes and Calais, the winged sons of Boreas, then drew their swords and pursued them through the air. The Harpies flew along the Propontis, over the Ægean Sea and Greece, to some islets beyond the Peloponnesus, where their pursuers came up with them, and were about to slay them, when Iris, appearing, forbade the deed, and the Harpies were dismissed, on their taking a solemn oath never more to molest Phineus. The isles were thenceforth named the *Strophades* (Στροφάδες, from στρέφω, "to turn"), because the sons of Boreas there turned back from the pursuit. (*Apollon. Rh.*, 2, 284.) — The legend of Phineus appears to have assumed a variety of shapes among the ancient writers, and this would seem to have been owing to its being frequently made the subject of dramatic composition. Thus, there was a "Phineus" composed by Æschylus; another by Sophocles; not to speak of inferior dramatists. (*Heyne, ad Apollod.*, 1, 9, 21.) One version of the story made Phineus to have been blinded by Neptune, because he pointed out to Phryxus the route to Scythia. This was given in particular by Hesiod in his *Eoa*. (*Schol. ad Apollod. Rhod.*, 2, 181.) The same poet, according to Strabo (463), gave another legend elsewhere, which related that Phineus had been carried off by the Harpies to the northern regions of the earth, the land of the Galactophagi. (Compare *Orphica*, v. 675, *seqq.*) Another account, mentioned by Apollodorus, made Phineus to have been blinded by Boreas and the Argonauts (*Apollod.*, 1, 9, 21. — *Id.*, 3, 15, 4); while Diodorus Siculus states, that Zetes and Calais, in conjunction with Hercules, made war upon the Thracians, liberated the two sons of Phineus from confinement, and that Hercules slew the king himself in battle. (*Diod. Sic.*, 4, 44.) Finally, some innovator, guided probably by this passage of Diodorus, would seem to have changed *ὄν Βορέα* in the text of Apollodorus (3, 15, 4), into *ὄν Βορέαδας*, and hence arose another version of the fable, that Phineus had been blinded by the sons of Boreas, for his cruel treatment of their relatives. (*Heyne, ad Apollod.*, l. c.) — II. The brother of Cepheus, king of Æthiopia. Andromeda, daughter of the latter, had been promised him in marriage; and when she was given to Perseus, a contest arose, in which Phineus was changed to stone by the Gorgon's head which Perseus had brought with him. (*Vid.* Andromeda and Danaë.)

PHINTIAS, I. a city of Sicily, to the east of Gela, on the southern coast. It was founded by Phintias, a tyrant of Agrigentum, who began to reign the next year after the death of Agathocles. Phintias transferred to his new city the inhabitants of Gela (*Diod. Sic.*, 22, 2), which latter place from this time became deserted and ceased to exist. (*Strabo*, 272.) Cluver makes Phintias correspond to the modern *Alicata*; but Mannert proves very conclusively from Diodorus and Polybius, that it lay to the east of Gela, not to the west, as it appears on D'Anville's map, near the mouth of the river *Drillo*. (*Geogr.*, vol. 9, pt. 2, p. 349, *seqq.*) — II. A tyrant of Agrigentum, the year after the

death of Agathocles. He was the founder of Phintias, a city of Sicily to the east of Gela. (*Vid.* Phintias I.)

ΦΛΕΨΘΗΚΩΝ, a river of the lower world, which rolled in waves of fire. Hence its name Φλεψέθων, from φλέγω, "to burn." The god of the stream was fabled by the poets to be the son of Cocytus. (*Stat., Theb.*, 4, 522.—*Senec., Thyest.*, 1018.—*Virg., Æn.*, 6, 264.)

PHLEGON, I. a native of Tralles, in Lydia, one of the Emperor Hadrian's freedmen. He wrote a species of universal chronicle, commencing with the first Olympiad, since he regarded all that preceded this period as fabulous. In this work he recounted all the events that had taken place in every quarter of the globe, during the four years of each Olympiad. Hence it bore the title of *Ὀλυμπιονικῶν καὶ Χρονικῶν συναγωγή* ("A Collection of Olympic Conquerors, and of Events"). Independently of a fragment, which appears to have formed the introduction to the work, we have only remaining of it what relates to the 176th Olympiad. Photius has preserved this for us; and from this it would appear that Phlegon confined himself to a simple enumeration of facts, without taking any trouble about ornament of style, or without accompanying his work with any reflections. Photius, therefore, had good reason, no doubt, to consider its perusal as somewhat fatiguing. The loss of the work, however, is the more to be lamented, since ancient historians in general neglect chronology too much. It was in this work that Phlegon made mention of the famous eclipse of the sun in the eighteenth year of the reign of Tiberius, which, according to him, produced so great an obscurity that the stars were seen at the sixth hour of the day (12 o'clock at noon), and which was accompanied with an earthquake. It was the eclipse that occurred at our Saviour's crucifixion. (*Euseb., ep. Syn. cell.*, p. 325.) Numerous works have appeared in England on this passage of Phlegon, where the eclipse is mentioned. Among these, the following may be enumerated: "*Sykes, Dissertation upon the Eclipse mentioned by Phlegon.*" London, 1732, 8vo.—"*The Testimony of Phlegon vindicated, &c., by W. Whiston.*" London, 1732, 8vo. To this work there was a reply by Sykes, to whom Whiston rejoined.—"*Phlegon examined critically and impartially, by John Chapman.*" London, 1748, 8vo, &c.—We have remaining two small works of Phlegon: one, entitled *Περὶ θαυμασίων*, "Of wonderful Things," containing a collection of most absurd stories, which could only have been made by a man equally destitute of critical acumen and sound judgment; the other treats "of Persons who have attained to a very advanced old age (*Περὶ Μακροβίου*), and is a dry catalogue of individuals who had reached the age of 100 to 140 years. Phlegon was the author of several other works, which are now lost, such as, "*An Abridgment of the Work on the Olympiads.*" a "*Description of Sicily.*" a treatise "*on Roman Festivals.*" another "*on the most Remarkable Points of the City of Rome.*" and "*a Life of Hadrian.*" Spartianus informs us, that this biography was believed to have been written by the emperor himself, who borrowed for the purpose the name of his freedman. (*Spart., Vit. Hadr.*, 15.) Phlegon is thought to have been the author also of a small work, on "*Females distinguished for Skill and Courage in War*" (*Γυναικες ἐν πολέμοις σπουδαὶ καὶ ἀνδρείαι*), containing short notices of Semiramis, Nitocris, &c. The best editions of Phlegon are, that of Meursius, *Lugd. Bat.*, 1690, 4to, and that of Franz, *Hal.*, 1822, 8vo, containing the critical observations of Bast. The latter, however, which is very negligently printed, does not comprehend the work on remarkable women. This last-mentioned production was published by Heeren, in the *Bibliothek für alle Lit. und Kunst*, Nos. VI. and VII., after a MS. belonging to the Escurial, which was copied by Tychsen,

and after another copy which was in the Barberini library at Rome, and which Holstenius had made from a Florence MS. (*Schöll, Hist. Lit.*, vol. 4, p. 201, *seqq.*)—II. One of the four horses of the sun. The name means "the Burning one" (φλέγων, from φλέγω, "to burn"). (*Ovid, Met.*, 2, 154.) The names of the Sun-god's steeds are differently given by different poets. (Consult *Munker, ad Hygin., fab.*, 183.—*Spanheim, ad Callim., H. in Del.*, 169.)

PHLEGEA, I. the earlier name of the peninsula of Pallene in Thrace (afterward Macedonia). The appellation is derived from φλέγω, "to burn," and the place was fabled to have witnessed the conflict between the gods and the earth-born Titans. The spot most probably had been volcanic at an early period. (*Kind., Nem.*, 1, 100.—*Schol. et Böckh, ad loc.*)—II. More commonly Phlegrai Campi, a region of Italy, respecting which a tradition was related similar to that in the case of the peninsula of Pallene. (*Vid.* Phlegra I.) The territory of Italy thus denominated formed part of ancient Campania, and appears to have experienced in a very great degree the destructive effects of subterranean fires. Here we find Mount Vesuvius; the *Solfaterra*, still smoking, as the poets have pretended, from Jupiter's thunder; the *Monte Nuovo*, which was suddenly thrown up from the bowels of the earth on the day of St. Michael's feast, in the year 1538; the *Monte Barbara*, formerly Mons Gaurus; the grotto of the Sybil; the noxious and gloomy lakes of Avernus and Acheron, &c. It is not improbable that these objects terrified the Greeks in their first voyages to the coast, and that they were afterward embellished and exaggerated by the fancy and fiction of the poets. (*Plin.*, 3, 6.—*Sil. Ital.*, 8, 540.—*Propert.*, 1, 30, 8.)

ΦΙΛΕΨΥΛΑΙ (Φλεγύαι), the followers of Phlegyas, in Boeotia. (*Vid.* Phlegyas.)

ΦΙΛΕΨΥΛΑΣ, son of Mars and Chrysogenea, the daughter of Halmus. Pausanias relates (9, 84), that the country about Orchomenus in Boeotia was first possessed by Andreus, the son of the river Peneus, who named it from himself Andreia. He was succeeded by his son Eteocles, who is said to have been the first that sacrificed to the Graces. Eteocles gave a portion of his territory to Halmus, the son of Sisyphus of Corinth, to whose posterity, on Eteocles dying childless, the kingdom came: for Halmus had two daughters, Chrysogenea and Chryse, the former of whom, as we have already said, became by Mars the mother of Phlegyas; the latter bore to Neptune a son named Minyas. Phlegyas obtained the dominion after Eteocles, and named the country Phlegyonitis. He also built a city called Phlegys, into which he collected the bravest warriors of Greece. These separated themselves from the other people of the country, and took to robbing and plundering. They even ventured to assail and burn the temple of Delphi; and Jupiter, on account of their impiety, finally destroyed them with lightning and pestilence. A few only escaped to Phocis. (*Keightley's Mythology*, p. 346.)—The Phlegyans are regarded by Buttmann as belonging to the universal tradition of an impious people being destroyed by fire from heaven. Müller regards the Phlegyans as being the same with the Lapithæ and the military class of the Minyans. Their name probably (Φλεγύαι, from φλέγω, "to burn") gave occasion to the legend of their destruction. (*Keightley, l. c.*)

PHLIUS, a small independent republic of the Peloponnesus, adjoining Corinth and Sicyon on the north, Arcadia on the west, and the Nemean and Cleonæan districts of Argolis on the south and southeast. (*Strabo*, 382.) It is sometimes, however, referred to Argolis, since Homer represents it, under the early name of Arasthyrea, as dependant on the kingdom of Mycenæ. (*Il.*, 2, 569.) The remains of the city of Phlius are to be seen not far from *Agios Georgios*, on the road

to the Lake of Stymphalus in Arcadia. (*Gall. Itin. of the Morea*, p. 169.)

PHOCÆA, a maritime town of Ionia, in Asia Minor, southwest of Cyma, and the most northern of the Ionian cities. It was founded, as Pausanias reports, by some emigrants of Phocis, under the guidance of two Athenian chiefs, named Philogenes and Damon. The city was built, with the consent of the Cymæans, on part of their territory; nor was it included in the Ionian confederacy till its citizens had consented to place at the head of the government princes of the line of Codrus. Its favourable situation for commerce made it known from a very early period; and, as Miletus enjoyed almost exclusively the trade of the Euxine, so Phocæa had become possessed of great maritime ascendancy in the western part of the Mediterranean. The colony of Alalia in Corsica was of Phocæan origin, and Phocæan vessels traded to Tartessus and the southwestern coast of Spain. It was in these distant voyages, no doubt, that their long vessels of fifty oars, which they had adopted from the Carthaginians, were commonly employed; and they would seem to have been the first of the Greeks that employed ships of this construction. (*Herod.*, 1, 163.) Herodotus informs us, that the Phocæans were the first Greeks that made their countrymen acquainted with the Adriatic, and the coasts of Tyrrhenia and Spain. Tartessus was the spot which they most frequented; and they so conciliated the favour of Arganthonius, sovereign of the country, that he sought to induce them to leave Ionia and settle in his dominions. On their declining this offer, he munificently presented them with a large sum of money, for the purpose of raising a strong line of fortifications around their city, a precaution which the growing power of the Median empire seemed to render necessary. The historian observes, that the liberality of the Iberian sovereign was attested by the circuit of its walls, which were several stadia in length, and by the size and solid construction of the stones employed. Phocæa was one of the first Ionian cities besieged by the army of Cyrus under the command of Harpagus. Having invested the place, he summoned the inhabitants to surrender, declaring that it would be a sufficient token of submission if they would pull down one battlement of their wall, and consecrate one dwelling in their city. The Phocæans, aware that to comply with this demand was to forfeit their independence, but conscious also of their inability to resist the overwhelming power of Cyrus, determined to abandon their native soil, and seek their fortune in another clime. Having formed this resolution, and obtained from the Persian general a truce of one day, under the pretence of a wish to deliberate on his proposal, they launched their ships, and, embarking with their wives and children, and their most valuable effects, sailed to Chios. On their arrival in that island, they sought to purchase the Cænusses, a neighbouring group of islands, belonging to the Chians; but the people of Chios, fearing a diminution of their own commerce from such active neighbours, refused to comply with their wishes, and the Phocæans resolved to sail to Corsica, where, twenty years prior to these events, they had founded a town named Alalia. Before sailing thither, however, they touched at Phocæa, and, having surprised the Persian garrison left there by Harpagus, put it to the sword. They then bound themselves by a solemn oath to abandon their native land, and not to return to it until a mass of iron which they cast into the sea should rise to the surface. Nevertheless, one half of their number, overcome by the feelings which the sight of their city recalled to their minds, could not be prevailed upon to forsake it a second time. The rest continued their voyage to Corsica, and were well received by their countrymen already settled in the island. During the five years in which they remained

there, they rendered themselves formidable to the surrounding nations by their piracies and depredations, so that at length the Tuscans and Carthaginians united their forces to check these aggressors and destroy their power. The hostile fleets met in the Sardinian sea, and, after a most obstinate engagement, the Phocæans succeeded in beating off the enemy. They sustained, however, so great a loss in the conflict, and their ships were so crippled, that, despairing of being able to continue the contest against their powerful foes, they resolved to abandon Corsica, and proceed to Rhegium in Italy. Soon after their arrival in that port, they were persuaded to settle at Velia or Elea, in Lucania, by a citizen of Poseidonia. This new colony became, in process of time, a considerable and flourishing town. (*Herod.*, 1, 163, *seqq.*)—It is remarkable that Herodotus, in this detailed account of the settlements made at different times by the Phocæans, should have made no mention of the most important and celebrated of their foundations, namely Massilia, or the modern *Marseille*, which he notices only once, and that incidentally, and not as a Phocæan colony (5, 9). Thucydides, however, distinctly ascribes the origin of that city to the Phocæans (1, 13), as also Strabo, who enters very fully into the history of that event. (*Strab.*, 179, *seqq.*—*Id.*, 647.—Compare *Liv.*, 5, 34.—*Athenaus*, 13, p. 576.—*Steph. Byz.*, s. v. *Μαασάλια*.) It is probable that Massilia had been already founded by the Phocæans, before they were forced by the Persians to abandon Ionia; and that the Corsican settlement was but an offshoot of the principal colony.—Phocæa still continued to exist under the Persian dominion, but greatly reduced in population and commerce. This is apparent from the fact of its having been able to contribute only three ships to the combined fleet of the revolted Ionians assembled at Lade. Little mention is made of Phocæa subsequent to the events of this insurrection. (*Thucyd.*, 8, 31.) Some centuries later, however, it is described by Livy as a town of some size and consequence, on occasion of its being besieged by a Roman naval force, in the war against Antiochus. (*Liv.*, 37, 31.) "The town," says the historian, "stands at the bottom of a bay, and is of an oblong shape. The wall encompasses a space of two miles and a half in length, and then contracts into a narrow, wedge-like form, which place they call *Λαμπτήρ* (Lampter, or 'the lighthouse'). The breadth here is one thousand two hundred paces; and a tongue of land, stretching out about a mile towards the sea, divides the bay nearly in the middle, as if with a line, and where it is connected with the main land by a narrow isthmus, so as to form two very safe harbours, one on each side. The one that fronts the south is called *Ναυσταθμός*, the station for ships, from the circumstance of its being capable of containing a vast number; the other is close to Lampter." We can trace the existence of Phocæa through the Cæsars by means of its coins, and Pliny (5, 31), and even down to the latest period of the Byzantine empire, with the help of the annalists and ecclesiastical writers. (*Hierocl., Synecd.*, p. 166.—*Act. Concil. Eph. et Concil. Chalced.*) We learn from Michael Ducas (*Ann.*, p. 89), that a new town was built not far from the ancient site, which still retains the name of *Παλαιο-Φωγία*, by some Genoese, in the reign of Amurath. This, as Chandler informs us (*Travels in Asia Minor*, p. 96), is situated on the isthmus mentioned above in Livy's description. (*Cramer's Asia Minor*, vol. 1. p. 330, *seqq.*—*Rennell, Geography of Western Asia*, vol. 2, p. 5.)

PHOCION, a celebrated Athenian, born about 400 B.C. A common, but, perhaps, too easily-received tradition, made him of obscure origin, and the son of a turner. Be this as it may, he certainly received a careful education, and attended the lectures of Plato, and afterward of Xenocrates. Phocion was remark-

able, in a corrupt age, for purity and simplicity of character, and, though he erred in his political views, yet in his private relations he certainly deserved the praise of a virtuous and excellent man. His first service in warfare was under Chabrias, to whom he proved himself, on many occasions, of signal utility, urging him on when too slow in his operations, and endeavouring to bring him to act coolly when unreasonably violent. In this way he eventually gained a remarkable ascendancy over that commander, so that Chabrias intrusted him with the most important commissions, and assigned to him the most prominent commands. In the naval battle fought off Naxos, Phocion had charge of the left wing of the fleet, and contributed essentially, by his gallant bearing, to the success of the day. The Athenians began now to regard him as one who gave promise of distinguished usefulness to the state. In entering on public affairs, Phocion appears to have taken Aristides and Pericles for his models, and to have endeavoured to attain to eminence in both civil and military affairs, a union of characters by no means common in his time. He was elected general five-and-forty times, without having once attended at the election; having been always appointed in his absence, at the free motion of his countrymen. This was the more honourable to him, as Phocion was one who generally opposed their inclinations, and never said or did anything with a view to recommend himself. In his military capacity, Phocion signalized himself on several occasions. He defeated the forces of Philip of Macedon, which that monarch had sent into Euboea, with the view of getting a footing in that island: he saved Byzantium from Philip; took several of his ships, and recovered many cities which had been garrisoned by his troops. As a statesman, however, Phocion seems less deserving of praise. His great error was too strong an attachment to pacific relations with Macedon, a line of policy which brought him into direct collision with Demosthenes, though it subsequently secured for him the favour of Alexander. In this, however, there was nothing corrupt: the principles of Phocion were pure, and his desire for peace was a sincere one; but his great fault was in despairing too readily of his country. Alexander, to testify his regard for Phocion, sent him a present of 100 talents, which the latter, however, unhesitatingly refused. The same monarch offered him his choice of one of four Asiatic cities; but Phocion again declined the gift, and Alexander died soon afterward. We find Phocion, at a later period, in pursuance of his usual line of policy, opposing the Lamian war; and, in consequence, sent to Antipater to treat of peace, when that war had eventuated unsuccessfully for Athens. When the city had submitted, and a Macedonian garrison was placed in Munychia, the chief authority at Athens was vested in Phocion, who was recommended by his superior character and talents, and by the high esteem in which he was known to be held by Antipater. On the death of the latter, however, new troubles commenced. (*Vid.* Polysperchon) The Athenian people held an assembly, with every circumstance of tumult and confusion, in which they voted the complete re-establishment of democracy, and the death or banishment of all who had borne office in the oligarchy, of whom the most conspicuous was Phocion. The exiles fled to the camp of Alexander, son of Polysperchon, and were sent by him to his father, and recommended to his favour. They were followed thither by an Athenian embassy, sent to accuse them and to demand their surrender. Polysperchon basely gave up the fugitives, in word, to stand their trial, but, in truth, to perish by the party-fury of their bitterest enemies. When the victims were brought before the assembly, their voices were drowned by the clamour of their judges, who were mostly of the persons newly restored to a share in the government, from which they had been excluded

after the victory of Antipater. Every one was hooted down who attempted to speak in favour of the accused, and a tumultuous vote was passed condemning all the prisoners to death. They were for the most part men of distinguished rank and respectable character, and, while their hard fate affected many with pity and consternation, there were others who vented in insults that envious malice which, while its objects were in prosperity, had been prudently suppressed. One of these wretches is said to have apit on Phocion as he was led to prison; but the outrage failed to ruffle the composure of the captive, who only looked towards the magistrates and asked, "Will no one stop this man's indecency?" Before he drank the hemlock he was asked if he had any message for his son Phocus: "Only," he said, "not to bear a grudge against the Athenians." As the draught prepared proved not sufficient for all, and the jailer demanded to be paid for a fresh supply, he desired one of his friends to satisfy the man, observing that Athens was a place where one could not even die for nothing. His body, according to law in cases of treason, was carried to the waste ground between Megaris and Attica, where, as his friends did not venture to take part in the funeral obsequies, it received the last offices from the hands of hirelings and strangers. His bones were collected by a Megarian woman, who interred them by the hearth of her dwelling, as a sacred deposit for better times. When the angry passions of the people had subsided, the remembrance of his virtues revived. His bones were brought back to Athens and publicly interred, and a bronze statue was erected to his memory. Agnonides, one of those most instrumental in effecting his condemnation, had sentence of death passed against him by the popular assembly, and two of his other accusers having fled from the city, were overtaken by the vengeance of Phocus. These were effects of a change rather in the times than in the opinions of men. But the more the Athenians resigned themselves to the prospect of permanent subjection to foreign rule, the better they were disposed to revere the character of Phocion. Had he lived in an earlier period, he might have served his country, like Nicias, with unsullied honour. In a later age he might have passed his life in peaceful obscurity. His lot fell on dark and troubled times, when it was difficult to act with dignity, and when the best patriot might be inclined to despair. But he despaired and yet acted. He despaired not merely of his country, which any one may innocently do; but also for her, which no man has a right to do. He would have forced her to despair of herself. He resisted every attempt that was made by bolder and more sanguine patriots to restore her independence. He did not withdraw from public life: he acted as the tool of his country's enemies, as the servant of a foreign master: content to mitigate the pressure of the degrading yoke which he had helped to impose. Towards the close of his life he descended lower and lower, constant only in his opposition to whatever bore the aspect of freedom. The fellow who spat on him, in his way to execution, was perhaps a more estimable person than the man to whom he would have surrendered Athens as well as himself. He left a character politically worse than doubtful: one which his private worth alone redeems from the infamy that clings to the names of a Callimachon and a Demades: a warning to all who may be placed in like circumstances, to shun his example, whether they value their own peace or the esteem of posterity. (*Plut.*, *Vit. Phoc.* — *Thirlwall's Greece*, vol. 7, p. 266, *seq.*)

PHOCIS, a small tract of country in Greece Proper, bordering on the Locri Ozolæ and Doris to the west and northwest, and the Opuntian Locri to the north; while to the east it was bounded by the Boeotian territory, and to the south by the Corinthian Gulf. (*Strabo*

ho, 416.) Its appellation was said to be derived from Phocus the son of *Æacus*. (*Pausan.*, 2, 4.—*Eustath.* ad *Il.*, 2, 519.) The more ancient inhabitants of the country were probably of the race of the *Leleges*; but the name of *Phocians* already prevailed at the time of the siege of *Troy*, since we find them enumerated in *Homer's* catalogue of *Grecian* warriors. (*Il.*, 2, 517.) From *Herodotus* we learn that, prior to the *Persian* invasion, the *Phocians* had been much engaged in war with the *Thessalians*, and had often successfully resisted the invasions of that people (8, 27, *seqq.*—*Pausan.*, 10, 1). But when the defile of *Thermopylae* was forced by the army of *Xerxes*, the *Thessalians*, who had espoused the cause of that monarch, are said to have urged him, out of enmity to the *Phocians*, to ravage and lay waste with fire and sword the territory of this people. (*Herod.*, 8, 32.) *Delphi* and *Parnassus* on this occasion served as places of refuge for many of the unfortunate inhabitants; but numbers fell into the hands of the victorious *Persians*, and were compelled to serve in their ranks under the command of *Mardonius*. (*Herod.*, 9, 17.) They seized, however, the earliest opportunity of joining their fellow-countrymen in arms; and many of the *Persians*, who were dispersed after the rout of *Platæa*, are said to have fallen victims to their revengeful fury. (*Herod.*, 9, 31.—*Pausan.*, 10, 2.)—A little prior to the *Peloponnesian* war, a dispute arose respecting the temple at *Delphi*, which threatened to involve in hostilities the principal states of *Greece*. This edifice was claimed apparently by the *Phocians* as the common property of the whole nation, whereas the *Delphians* asserted it to be their own exclusive possession. The *Lacedæmonians* are said by *Thucydides* to have declared in favour of the latter, whose cause they maintained by force of arms. The *Athenians*, on the other hand, were no less favourable to the *Phocians*, and, on the retreat of the *Spartan* forces, sent a body of troops to occupy the temple, and deliver it into their hands. The service thus rendered by the *Athenians* seems greatly to have cemented the ties of friendly union which already subsisted between the two republics. (*Thucyd.*, 3, 95.)—After the battle of *Leuctra*, *Phocis*, as we learn from *Xenophon*, became subject for a time to *Boeotia* (*Hist. Gr.*, 6, 5, 23), until a change of circumstances gave a new impulse to the character of this small republic, and called forth all the energies of the people in defence of their country. A fine had been imposed on them by an edict of the *Amphictyons* for some reason, which *Pausanias* professes not to have been able to ascertain, and which they themselves conceived to be wholly unmerited. *Diodorus* asserts that it was in consequence of their having cultivated a part of the *Cirrhæan* territory which had been declared sacred (16, 23). By the advice of *Philomelus*, a *Phocian* high in rank and estimation, it was determined to oppose the execution of the hostile decree, and, in order more effectually to secure the means of resistance, to seize upon the temple of *Delphi* and its treasures. This measure having been carried into immediate execution, they were thus furnished with abundant supplies for raising troops to defend their country. (*Pausan.*, 10, 2.—*Diod. Sic.*, l. c.) These events led to what the *Greek* historians have termed the *Sacred War*, which broke out in the second year of the 106th *Olympiad*, B.C. 355. The *Thebans* were the first to take up arms in the cause of religion, which had been thus openly violated by the *Phocians*; and, in a battle that took place soon after the commencement of hostilities, the latter were defeated with considerable loss, and their leader *Philomelus* perished in the rout which ensued. (*Diod. Sic.*, 16, 31.—*Pausan.*, 10, 2.) The *Phocians*, however, were not intimidated by this ill success, and, having raised a fresh army, headed by *Onomarchus*, they obtained several important advantages against the *Amphictyonic* army, notwithstanding

the accession of *Philip* of *Macedon* to the confederacy. *Onomarchus*, having united his forces with those of *Lycophron*, tyrant of *Phœæ*, then at war with *Philip*, was enabled to vanquish the latter in two successive engagements, and compel him to evacuate *Thessaly*. *Philip*, however, was soon in a state to resume hostilities and re-enter *Thessaly*, when a third battle was fought, which terminated in the discomfiture and death of *Onomarchus*. *Diodorus* asserts that he was taken prisoner, and put to death by order of *Philip*; *Pausanias*, that he perished by the hands of his own soldiers. (*Diod. Sic.*, 16, 35.—*Pausan.*, 10, 2.) He was succeeded by his brother *Phayllus*, who at first appears to have been successful, but was at length overthrown in several engagements with the *Boeotian* troops; and was soon after seized with a disorder which terminated fatally. On his death the command devolved upon *Phalæmus*, who, according to *Pausanias* (10, 2), was his son, but *Diodorus* affirms that he was the son of *Onomarchus*. This leader being not long after deposed, the army was intrusted to a commission, at the head of which was *Philo*, whose total want of probity soon became evident, by the disappearance of large sums from the sacred treasury. He was, in consequence, brought to trial, condemned, and put to death. *Diodorus* estimates the whole amount of what was taken from *Delphi* during the war at 10,000 talents (16, 56). *Phalæmus* was now restored to the command; but, finding the resources of the state nearly exhausted, and *Philip* being placed by the *Amphictyonic* council at the head of their forces, he deemed all farther resistance useless, and submitted to the *King* of *Macedon* on condition of being allowed to retire with his troops to the *Peloponnesus*. This convention put an end at once to the *Sacred War*, after a duration of ten years, when a decree was passed in the *Amphictyonic* council, by which it was adjudged that the walls of all the *Phocian* towns should be razed to the ground, and their right of voting in the council transferred to those of *Macedonia*. (*Diod. Sic.*, 16, 60.) *Phocis*, however, soon after recovered from this state of degradation and subjection, by the assistance of *Athens* and *Thebes*, who united in restoring its cities in a great measure to their former condition. In return for these benefits, the *Phocians* joined the confederacy that had been formed by the two republics against *Philip*; they also took part in the *Lamian* war after the death of *Alexander*; and when the *Gauls* made their unsuccessful attempt on the temple of *Delphi*, they are said by *Pausanias* to have displayed the greatest zeal and alacrity in the pursuit of the common enemy, as if anxious to efface the recollection of the disgrace they had formerly incurred. (*Pausan.*, 10, 3.) Other passages, which serve to illustrate the history of *Phocis*, will be found in *Demoisthenes* (*de Fals. Legat.*), *Isocrates* (*ad Phil.*), *Aristotle* (*Anal. Pr.*, 2, 24).—The maritime part of this province occupied an extent of coast of nearly one day's sail, as *Dicæarchus* reports (v. 79), from the border of the *Loeri Ozolæ* to the confines of *Boeotia*. (*Cramer's Anc. Greece*, vol. 2, p. 147, *seqq.*)

Phocus, the son of *Phocion*. He was remarkable only for a dissolute mode of life, and was in no respect worthy of his parent, although *Phocion* had sent him to *Sparta* to be trained after the strict discipline of *Lycurgus*. (*Plut.*, *Vit. Phoc.*)

PHOCYLIDÆS, a *gnomic* poet contemporary with *Theognis*, and a native of *Miletus*, whom *Suidas* calls a philosopher, and whose birth-year he makes to have been 647 after the fall of *Troy*, or *Olympiad* 59. The ancient writers are silent respecting his life, and the few genuine fragments which we possess of his poems contain no allusion to his personal circumstances. He composed epic and elegiac poems, which the ancients ranked, like the productions of *Theognis*, in the *gnomic* class. (*Isocr. ad Nicocl.*, *init.*—*Id. ib.*, c. 12.—

Die Chrysees, Or., 2, *init.*) Suidas says, his verses were pilfered from the Sibylline books, a remark derived, in all probability, from some father of the church, and to be understood in just the opposite sense. In order to stamp his productions with the impress of genuineness, Phocylides found it necessary to accompany them with the perpetually-recurring introduction, "This, too, is a saying of Phocylides;" just as Theognis, at the end of his poem on Cynos, appended his name as a mark of literary property. What we have at present remaining of Phocylides consists, for the most part, of hexameters, and breathes a quite different spirit from the Dorian gnomes of Theognis, with which the Ionic precepts of the Milesian poet are often directly at variance. For example, in place of coming forward as an ardent defender of aristocratical principles, and as a martyr to his political creed, the advantages of birth are to him altogether indifferent. The contest, in fact, between aristocracy and democratical principles was by no means so obstinate and violent in the Ionian cities as in those of Dorian extraction. There is more of a philosophical character in the poetry of Phocylides, more reference to the common weal, and a greater wish to promote its true interests, than in the aristocratic gnomes of Theognis. He composed his gnomic precepts in two or three verses each, and was considered as not belonging to those who produced long continuous poems, but rather as loving the philosophical conciseness of separate and individual propositions. The longest fragment we have of Phocylides consists of eight hexameters, in which he draws a picture of the different classes of females, and compares them with as many classes of animals. In treating of individual or personal subjects, however, he appears to have employed the elegiac measure, as in the case of the satirical effusion against the islanders of Leros. The verses of Phocylides were so highly esteemed, that they were recited by the rhapsodists along with those of Homer, Hesiod, Archilochus, and Mimnermus. A poem that still exists, under the title of *Ποίημα νουθητικόν* (*Exhortation*), in 217 hexameters, is sometimes, though incorrectly, ascribed to him. It is probably the production of some Christian writer of the twelfth or thirteenth century. The fragments of Phocylides are found in the collections of Stephens, Brunck, Gaisford, Boissonnade, and others. Schier gave a separate edition of them in 1761, *Lips.*, 8vo. (*Bode, Geschichte der Lyrischen Dichtk. der Hell.*, vol. 1, p. 243, *seqq.*—*Schöll, Hist. Lit. Gr.*, vol. 1, p. 240, *seqq.*)

PHŒBE, I. one of the female Titans, the offspring of Heaven and Earth (Cœlus and Terra). From her union with Cœus, another of the Titans, sprang Latona and Asteria. The name Phœbe (*Φοῖβη*) signifies *the bright one* (from *φῶς*, "to shine"); and Cœus (*Κοῖος*), *the burning* (from *καίω*, "to burn"). (*Keightley's Mythology*, p. 64.)—II. One of the names of Diana, or the Moon. (*Vid.* Diana.)

PHŒBUS, one of the names of Apollo, derived from *φῶς* "to shine." (*Vid.* Apollo.)

PHŒNICIA or PHŒNICIA (*Φοινίκη*), a country of Asia, extending along the coast of Syria, from the river Eleutherus and the city and island of Aradus, on the north, to Mount Carmel on the south. In all probability, however, some of the cities on the coast below Carmel may likewise have belonged to Phœnicia, and hence Ptolemy carries the southern limit of the country as far down as the river Chorseus, on which Cæsarea lay. In general parlance, indeed, the whole line of coast was termed Phœnicia, from Aradus to the confines of Egypt, though the stricter limits are those first given. The tract of country thus denominated was only 35 geographical miles from Aradus to Carmel, or 100 in its greatest extent. The breadth was very limited, the ranges of Libanus and Antilibanus forming its utmost barrier to the east. The surface of the

country was in general sandy and hilly, and not well adapted for agriculture; but, to counterbalance this, the coast abounded in good harbours, the fisheries were excellent, while the mountain-ranges in the interior afforded, in their cedar forests, a rich supply of timber for naval and other purposes. Hence the early proficiency which the Phœnicians made in navigation, and hence the flourishing commercial cities which covered the whole line of coast.

1. Origin of the name Phœnicia.

Respecting the etymology of the name Phœnicia or Phœnicia, various conjectures have been offered. Bochart maintains, that the appellation comes from *Beni-Anak* (or *Ben-Anak*, contracted *Beanak*), "the sons of Anak," a name by which, according to him, the people of Phœnicia designated themselves in their own language. From this he says the Greeks first made *Phœnac*, and afterward *Phœnice* and *Phœnix*, softening down the Oriental appellation in their usual way. (*Bochart, Canaan*, 1, 1, col. 347.) To this etymology it is well objected by Gesenius, that the domestic appellation of the Phœnician race was not *Beni-Anak* or *Ben-Anak*, but *Kenaanim*, and their country *Kenaan*. That this was the native name of the nation is also clear from the Phœnician coinage, on which we read *Kenaan*. (*Gesen., Phœn. Monument.*, p. 338, *not.*—*Id. ib.*, p. 271.) The Punic settlers in Africa, moreover, gave themselves the same appellation. Thus, St. Augustine informs us, that the country-people near Hippo, on being asked whence they derived their origin, answered that they were *Kenani*, i. e., Kenaanites, or from *Kenaan*. (*Augustin., Expos. ad Rom.*—*Eckhel, Doctr. Num.*, vol. 4, p. 409.—*Gesenius, Gesch. der hebr. Sprache*, &c., p. 16.)—Equally unfortunate with Bochart's is the etymology proposed by Arius Montanus and others, who deduce *Phœnice* and *Phœnicia* from *Phœnakim*, contracted from *Phœ-Anakim* ("the Anakim"), the prefix *Phœ* being analogous, in their opinion, to the Egyptian article *Pi*, as it appears in the term *Pharaoh* (*Pi-Ro*, i. e., "the king"). The same argument may be urged against this as against Bochart's derivation.—There are other Oriental etymologies; such as Scaliger's, from the Hebrew-Phœnician *Pinchas* (the same with the proper name *Phineas*); and Fuller's, from the Syriac, *panak*, "to bring up delicately." These scarcely deserve mention, and certainly do not need refutation.—The most common opinion, at the present day, is that which makes the terms *Phœnice* and *Phœnicia* of Grecian and not of Oriental origin, and which deduces them from the Greek term *φοινίς*, in its signification of "a palm-tree;" so that Phœnicia or Phœnicia will signify "the land of palm-trees" or "Palm-land." Gesenius, however, doubts the accuracy of this explanation, and is inclined to trace the names in question to *φοινίς*, in its sense of "purple," making *Phœnicia*, therefore, to mean "the land of the purple-dye," in allusion to the famous purple or crimson of Tyre: "*Videant autem cruditi, siine φοινίκων appellatio ducta a φοινίς, purpure, cui affines sunt φοινός, φοινής (Π., 12, 202), purpureus, sanguineus (conj. φόνος), φοινίσσω rubescio; ita ut φοινίς appellative purpurarium designet.*" (*Phœn. Monument.*, p. 338, *not.*) This suggestion of Gesenius's is most probably the true one, since it is more natural to suppose, that the purple cloths of Phœnicia were made known to the Greeks by the Phœnician traders, for a long period before the Greeks themselves were allowed to visit in their own vessels the Syrian coast, and become acquainted with the physical features of the country.—Before quitting this subject, it may not be amiss to remark, that among many of the Roman writers, the terms *Phœnices* (*Phœnicus*) and *Pœni* (*Punicus*) are made so far to differ in meaning, as that the first indicates the Phœnicians, properly so called, and the latter their descendants or

PHENICIA.

colonists in Africa, such as the Carthaginians, &c. This distinction, however, has no good ground on which to rest. The term *Φοίνικες*, in Greek, comprises not only the Phœnicians, but also the Carthaginians as well as the other Pœni (*Herod.*, 5, 46.—*Eurip.*, *Troad.*, 222.—*Böckh*, *ad Pind.*, *Pyth.*, 1, 72), a usage which is imitated by the Latin poets: thus we have in Silius Italicus (13, 730) the form *Phœnicum* for *Panorum*, and (16, 25) *Phœnix* for *Panus*. Indeed, the term *Panus* is nothing more than *Φοίνιξ* itself, adapted to the analogy of the Latin tongue; just as from the Greek *Φοινίκιος* comes the old Latin form *Panicus*, found in Cato and Varro, and from this the more usual *Funicus*. (Compare *cœrare* and *curare*; *mania*, *munia*, and *munire*; *pœna* and *punio*.—*Ge-senius*, *l. c.*—*Festus*, *ed. Müller*, p. 241, *Fragm. e Cod. Farn.*, L. 16.)

2. History, Commerce, Arts, &c., of the Phœnicians.

The Phœnicians were a branch of that widely-extended race known by the common appellation of Aramœan or Semitic. To this great family the Hebrews and the Arabians belonged, as well as the inhabitants of the wide plain between the northern waters of the Euphrates and Tigris. The Phœnicians themselves, according to their own account, came originally from the shores of the Persian Gulf (*Herod.*, 7, 89), and Strabo informs us, that in the isles of Tyre and Aradus, in the gulf just named, were found temples similar to those of the Phœnicians, and that the inhabitants of these isles claimed the cities of Tyre and Aradus, on the coast of Phœnicia, as colonies of theirs. (*Strabo*, 766.) The establishment, indeed, of the earlier Phœnician race in the Persian Gulf, and the enterprising habits which always characterized this remarkable people, would seem to point to a very active commerce carried on in the Indian seas, at a period long antecedent to positive history, and may perhaps furnish some clew to the marks of early civilization that are discovered along the western shores of the American continent. (Compare *Ritter*, *Erdkunde*, vol. 2, p. 163.)—The loss of the Phœnician annals renders it difficult to investigate the history of this people. Our principal authorities are the Hebrew writers of the second book of Kings, and Ezekiel and Isaiah. Herodotus, Josephus, and Strabo help to supply the deficiency. Incidental notices are found in other writers also. The Phœnician towns were probably independent states, with a small territory around them: the political union that existed among them till the era of the Persians, was preserved by a common religious worship. The town of Tyre seems to have had a kind of supremacy over the rest, being the richest city, and containing the temple of the national god, whom the Greeks call the Tyrian Hercules. The several cities were governed by supreme hereditary magistrates named kings. Hiram was king of Tyre, and a friend of Solomon, the king of Israel. When Xerxes invaded Greece, there was a King of Tyre, and also a King of Sidon in his army. (*Herod.*, 8, 67.) We infer from a few passages of the ancient writers, and from the enterprising spirit of the Phœnicians, that the despotism of Asia did not exist among them. The Sidonians are the first people recorded in history who formed a commercial connexion between Asia and Europe; the articles which they manufactured, or procured from other parts of Asia, were distributed by them over the coasts of the Mediterranean. These long voyages led to colonial establishments, and to the diffusion of the useful arts. The island of Cyprus contained Phœnician colonies: they established themselves in many of the small islands of the Archipelago, particularly in those where the precious metals were found. The island of Thasus exhibited, in the time of Herodotus, manifest traces of their excavations. (*Herod.*, 6, 47.) With the early Greeks of the main land the Phœni-

PHENICIA.

cians had occasional commercial connexions: they furnished the natives with trinkets and female ornaments, and sometimes carried off the people. (*Herod.*, 1, 1.) Slave-dealing was one source of wealth to the Tyrians (*Ezekiel* xxvii., 12); the simple narrative of Eumæus, in the 15th book of the *Odyssey*, presents a natural picture of this practice. We know nothing of Phœnician settlements in Italy; but they occupied Sicily before the Greeks, and retired towards the western parts, as the nation became more numerous and powerful in the island. (*Thucyd.*, 6, 2.) The great object of the enterprise of the Phœnicians, and the seat of their chief colonial establishments, was the southern part of Spain, or the modern province of Andalusia. The silver-mines and the gold-dust of the peninsula made Spain to the Tyrians what Peru once was to the Spaniards. Not far from the mouths of the Bætis are two small islands: on one of these the Tyrians founded the city of Gadeira or Gades, *Cádiz*, and built a temple to their national god, which existed even in the age of Strabo, and was justly considered a curious monument of antiquity. The advantageous situation of Gades, west of the Pillars of Hercules, and on the waters of the Atlantic Ocean, would naturally lead to voyages of discovery; but these were always confined to coasting. Of these voyages no records are preserved. The Phœnicians are said to have supplied the Greeks and the Asiatics with two articles, which are supposed to indicate an acquaintance with the southwestern angle of Britain and the coast of Prussia, on the Baltic Sea. These were tin and amber. With regard to the first, however, though there can be little doubt that the Phœnicians, and the Romans long after them, traded for it to the Cassiterides, or Scilly Isles, yet the Greeks, in all probability, obtained their supply of it by an overland trade from India. (*Vid.* India.) The amber certainly came from the shores of the Baltic, but whether it was obtained by actual sailing thither, or procured by an overland trade at the head-waters of the Adriatic, remains, among modern scholars, a disputed point. An argument in favour of the former of these opinions may be drawn from the fact of the Phœnicians' having been acquainted with the existence of the *Rodanus*, a small river near *Dantzic*, on the Prussian coast. (*Vid.* Eridanus.)—The connexion between the parent city of Tyre and her distant possessions in Europe and Africa was probably only a commercial one. Whatever might have been their original condition, they were independent places in the time of Herodotus (1, 163). The Phœnician colonies on the northern coast of Africa were at least as old as the settlements in the south of Spain. They were situated in a fertile region, which, by its position, formed, between Central Africa and the shores of the Mediterranean, a point of union similar to that which Tyre furnished between Asia and Europe. Utica was the first establishment on the African coast: Carthage, called by the Greeks *Carchedon*, was the next: other towns afterward sprung up. For the history of Phœnician commerce, particularly the commerce with Asia, we possess a most valuable document in the 27th chapter of *Ezekiel*. The Hebrew prophet lived at the time of the greatest splendour of Tyre, before her Eastern conquerors diminished her traffic and deprived her of national independence. At an earlier period, the Phœnicians had friendly connexions with the Hebrews. Solomon, the most powerful of their kings, made Jerusalem, during his life, the centre of Eastern magnificence and wealth. The Tyrians gladly formed an alliance with this potentate, and by his permission obtained the navigation of the Red Sea. The town of Eziongaber, which Solomon had taken from the people of Edom, was the point to which the Tyrian and Hebrew navies brought the gold and precious stones of Ophir. The Phœnicians also established trading-posts

PHENICIA.

on the west side of the Persian Gulf. Here the ancient geographers placed the isles of Aradus and Tyrus, to which the Tyrians brought the products of India. They were taken by the caravans across the Arabian desert to Tyre on the Mediterranean, at that time the great mart of the world.—A commercial road between Tyre and the Euphrates would be necessary to diffuse the products of Tyrian industry and commerce, and also to procure the valuable wool furnished by the nomadic tribes. In the Syrian desert, about three days' journey from the old ford of the Euphrates, modern travellers behold with astonishment the magnificent and extensive ruins of Palmyra. The Arabs of the desert still call it Tadmor, and attribute these buildings to the magic power of Solomon. We are told that Solomon built Baalath and Tadmor in the wilderness. The latter was no doubt intended as a great *entrepôt* between the Euphrates and the sea. Its situation, and the possession of springs of water in an arid desert, would not fail to attract a prince so wise as Solomon, and a merchant with such extensive dealings as Hiram.—From the mountains of Armenia, the Tyrians procured copper and slaves: the regions of the Caucasus, at the present day, supply the harems of the Turks and Persians with the females of Georgia and Circassia.—The Phœnicians seem, in the earlier ages, not to have had very extensive dealings with the Egyptians: but cotton and cotton cloths are enumerated among the articles which they received from Egypt. When Thebes, in Upper Egypt, ceased to be the place of resort for the caravans of Africa and Asia, the favourable situation of Memphis, at the apex of the Delta, made it the chief mart of Egypt; and the Tyrians who traded there were so numerous, that a part of the city was inhabited by them.—Grain of various kinds was carried to Tyre from the country of the Hebrews and other parts of Syria. Solomon gave Hiram wheat and oil; and the Tyrian, in exchange, furnished him with the pines and cedars of Libanus.—The commercial intercourse between the Greeks and Tyrians appears never to have been great: the two trading nations of the Mediterranean were probably jealous of one another; and, besides this, their colonies led them in different directions. Sicily was the point where the Greek and Tyrian merchant met in competition. When the Phœnicians were obliged to submit to the Persians, we find their navy willingly and actively employed against their commercial rivals.—Tyre was, before the era of the Persians, the centre of the traffic of the ancient world: in her markets were found the products of all the countries between India and Spain, between the extremity of the great peninsula of sandy Arabia, and the snowy summits of Caucasus. Her vessels were found in the Mediterranean, on the Atlantic, and in the Indian Ocean. There was even a tradition, that in the time of Necho, king of Egypt, some Tyrian ships, at the desire of that king, sailed down the Red Sea; and, after circumnavigating the continent of Africa, entered the Mediterranean at the Strait of Gibraltar. (*Vid. Africa.*)—The Phœnicians furnished the world with several articles produced by their own industry and skill. The dyed cloths of Sidon, and the woven vests and needlework of Phœnician women, were in high repute among the ancient Greeks. The name of Tyrian purple is familiar, even in modern times; but it is a mistake to suppose that a single colour is to be understood: deep red and violet colours were those which were most highly prized. The liquor of a shellfish, that was found in abundance on their coast, supplied them with the various colours denominated purple. (*Plin.*, 9, 36.) It was principally woollen cloths the Tyrians used to dye, though cotton and linen dyed garments are mentioned also.—The Phœnicians are said to have possessed the art of making glass: it is probable they had manufactured this article for many centuries at Sidon and

PHENICIA.

Sarepta. Little trinkets and ornaments were also made by this people. The Phœnician merchant offers for sale to the females of Syria a string of amber beads with gold ornaments. (*Hom.*, *Od.*, 14, 459.) The ivory, which they procured from Æthiopia and India, received new forms under the skilful hands of the Tyrians; and all the costly decorations of Solomon's temple were made under the direction of an artist of Tyre, whose mother was "a woman of the daughters of Dan, and his father a man of Tyre." (*Chronicles*, 2, 1, 14; 2, 4, 17.—*Long's Ancient Geography*, p. 3, *seqq.*—*Heeren, Ideen*, vol. 2, p. 1, *seqq.*)

3. Decline of Phœnician Commerce.

The Phœnicians, from what has just been remarked, were then a manufacturing and a trading people, depending on others for their subsistence, in some points resembling the English, in others more like the Dutch. The prosperity of such a people could not be everlasting, and it is interesting to examine into the causes of their decline. It is probable that the increase of the wealth and power of Carthage was in some degree prejudicial to the parent state, as the trade of Spain must have fallen, in a great measure, into the hands of the former. In such a case, it is likely that the Phœnicians must have had to pay dearer for its productions than heretofore, and perhaps, as Carthage and the other colonies were manufacturers also, the demand for Phœnician goods decreased. It is also supposed, that the Phœnicians must have suffered by the planting of the Grecian colonies on the coast of Asia Minor, as these likewise manufactured to a great extent, and, it is almost certain, traded directly, by means of caravans, with Thapsacus on the Euphrates, to which place the goods of Babylon and India were brought up the river. We doubt, however, if they interfered much with the Phœnicians, as their trade took chiefly a northern direction, extending into Tartary, and perhaps to China. The settlement of the Greeks in Egypt, however, must have been positively injurious to them, as the wine-trade of that country, of which they appear before this to have had the monopoly, must have been now, in great measure, carried on by the Greeks in their own bottoms; and perhaps this is the true reason of the hostility which the Phœnicians are said to have evinced to the Greeks in the time of the Persian war. It is remarkable enough, that in the accounts which we have of the trade of Athens and Corinth, no mention is made of any with the Phœnicians. Perhaps their chief commerce was with the colonies in Asia. From the Hebrew prophet it appears that they traded with the Ionians (of Asia) and with the people of the Peloponnesus. The rivalry just noted, however, could have but little affected the prosperity of the Phœnicians. The real cause of their decline was the commotions that took place in Western Asia, which caused the downfall of so many states; for independent states are always better customers to a manufacturing people than those which are under the yoke of foreigners. While the kingdoms of Israel, Judah, Damascus, and others flourished, the demand for Phœnician manufactures must have been far greater than after they became subject to the monarchs of Babylon and Persia. Let any one, for example, compare Judah under her kings with Judah after the return from captivity. The very circumstance of there being no court must have made a great difference to those who supplied them with luxuries. The conquest and reduction to provinces of Babylonia and Egypt by the Persian monarch must have greatly affected the Phœnician commerce; but it was the foundation of Alexandria by the Macedonian conqueror which proved the ruin of the trade of both Phœnicia and Babylon, just as the discovery of the passage to India by the Cape of Good Hope ruined, in a great measure, Bagdad, Alexandria, and Venice—the Tyre of the middle ages. From that time

the decline of the prosperity of the towns on the coast of Phœnicia was rapid and irremediable. (*Foreign Quarterly Review*, No. 27, p. 211, *seq.*)

4. Did Phœnicia give an alphabet to Greece?

On this point, though for a long time made the subject of learned discussion, there is now no room for dispute. The names of most of the letters, their order, and the forms which they exhibit in the most ancient monuments, all confirm the truth of the tradition, that the Greek alphabet was derived from the Phœnician; and every doubt on this head, which a hasty view of it, in its later state, might suggest, has long since received the most satisfactory solution. Several changes were necessary to adapt the Eastern characters to a foreign and totally different language. The powers of those which were unsuited to the Greek organs were exchanged for others which were wanting in the Phœnician alphabet; some elements were finally rejected as superfluous from the written language, though they were retained for the purpose of numeration; and, in process of time, the peculiar demands of the Greek language were satisfied by the invention of some new signs. The alterations which the figures of the Greek characters underwent may be partly traced to the inversion of their position, which took place when the Greeks instinctively dropped the Eastern practice of writing from right to left; a change the gradual progress of which is visible in several extant inscriptions. This fact, therefore, is established by evidence, which could scarcely borrow any additional weight from the highest classical authority. But the epoch at which the Greeks received their alphabet from the Phœnicians is a point as to which we cannot expect to find similar proof; and the event is so remote, that the testimony even of the best historians cannot be deemed sufficient immediately to remove all doubt upon the question. A statement, however, deserving of attention, both on account of its author, and of its internal marks of diligent and thoughtful inquiry, is given by Herodotus. The Phœnicians, he relates, who came with Cadmus to Thebes, introduced letters, along with other branches of knowledge, among the Greeks: the characters were at first precisely the same as those which the Phœnicians continued to use in his own day; but their powers and form were gradually changed, first by the Phœnician colonists themselves, and afterward by the Greeks of the adjacent region, who were Ionians. These, as they received their letters from Phœnician teachers, named them *Phœnician letters*; and the historian adds, that, in his own time, the Ionians called their books or rolls, though made from the Egyptian papyrus, *skins*, because this was the material which they had used at an earlier period, as many barbarous nations even then continued to do. It cannot be denied that this account appears, at first sight, perfectly clear and probable; and yet there are some points in it which, on closer inspection, raise a suspicion of its accuracy. The vague manner in which Herodotus describes the Ionians, who were neighbours of the Phœnician colony, seems to imply that what he says of them is not grounded on any direct tradition, but is a mere hypothesis or inference. The fact which he appears to have ascertained is, that the Asiatic Ionians, who were, according to his own view, a very mixed race, were beforehand with the other Greeks in the art of writing: they called their books or rolls by a name which probably expressed the Phœnician word for the same thing, and they described their alphabet by the epithet which marked its Oriental origin. But, as the historian thought he had sufficient grounds for believing that it had been first communicated to the Greeks by the Phœnician colony at Thebes, he concludes that the Asiatic Ionians must have received it, not directly from the Phœnicians, but through their European forefathers. Still, if this was

the process by which he arrived at his conclusion, it would not follow that he was in error. But if we examine the only reasons which he assigns for his belief that the most ancient Greek alphabet was found at Thebes, we find that they are such as we cannot rely on, though to him they would seem perfectly demonstrative. He produces three inscriptions in verse, which he had seen himself, engraved on some vessels in a temple at Thebes, and in characters which he calls *Cadmæan*, and which he says nearly resembled the Ionian. These inscriptions purported to record donations made to the temple before the Trojan war, and to be contemporaneous with the acts which they recorded. And that they were really ancient need not be questioned, though imitations of an obsolete mode of writing were not uncommon in Greece; but their genuineness cannot be safely assumed as the ground of an argument. Other grounds he may indeed have had; but, since he does not mention them, they are to us none, and we are left to form our own judgment on the disputed question of the *Cadmæan* colony at Thebes. (*Thirlwall's Greece*, vol. 1, p. 238, *seq.*) We have already, in a previous article (*vid. Cadmus*), shown the utter improbability of any Phœnician colony under Cadmus, and have traced this latter name to a Pelasgic origin. In this way, perhaps, the two traditions may be reconciled; one of which makes the Phœnicians to have introduced letters into Greece, while the other states that they were previously known to, and invented by the Pelasgi. It is probable that two distinct periods of time are here alluded to, an earlier and a later introduction of them; in both instances, however, from Phœnicia. When the alphabet of this country was first brought in, its use may have been extremely limited; it may have come in, as Knight supposes, with the first Pelasgic settlers, who may have brought an alphabet much less perfect, and, therefore, probably more ancient than the so-called *Cadmæan*. The second introduction of letters found the Greeks, in all likelihood, much more advanced in civilization, and it therefore took a firmer hold, and became the subject of more established and general tradition. (Consult *Knight, Analytical Essay on the Greek Alphabet*, p. 120.—*Sandford, Remarks on Thiersch's Gr. Gr.*, p. 6.—*Hug, die Erfindung der Buchstabenschrift*, p. 7.)

5. Remains of the Phœnician Language.

The remains of the Phœnician language at the present day consist of, 1. *Coins and inscriptions*. 2. *Glosses and Phœnician proper names*, occurring in the Greek and Latin writers. 3. *A Phœnician passage* of considerable length (together with some shorter specimens) in the *Pœnulus* of Plautus.—The coins and inscriptions give us the written forms of the language with great accuracy, but throw no light on the sounds of the Phœnician tongue or its system of pronunciation, since in almost every instance the vowels are omitted. The ablest work on these is that of Gesenius, entitled "*Scriptura Linguaeque Phœnicia Monumenta quotquot supersunt*," &c., *Lips.*, 1837, 4to.—On the other hand, the Punic words that occur in the Greek and Roman writers, give, it is true, a sound expressed in the characters of those languages, and show us with what vowels they were enunciated by the Phœnicians: still, however, there is often very great difficulty in tracing back these same words to a Phœnician orthography, since the common or vulgar mode of pronouncing was accustomed to contract certain forms, and to neglect in others the letters that were necessary to indicate the etymology of the term.—The most curious remnant, however, of the Phœnician tongue is the passage, already referred to, in *Plautus*. It occurs in the first scene of the fifth act of the *Pœnulus*, and consists of ten entire Punic verses, expressed in Latin characters (for the remaining six are Liby-

Phœnician, or, as some think, vulgar Punic), to which are to be added fourteen short sentences, intermingled with a Latin dialogue, in the second and third scenes. Modern scholars have, at various times, exercised their skill in remodelling and explaining these specimens of the Phœnician, and in attempting to recall them to the analogy of the Hebrew tongue. Some have confined their attention to particular words or individual sentences, such as Joseph Scaliger (*ad fragm. Græcorum*, p. 32), Aldrete (*Antigüedades*, p. 207), Selden (*de Dis Syris, proleg.*, c. 2), Le Moine (*Varia Sacra*, p. 100, 113), Hyde (*ad Perisæol.*, p. 45), Reinesius (*ἱεροπούνεια lingua Punicæ*, c. 12), Tychoen (*Nov. Act. Upsal.*, vol. 7, p. 100, *seq.*), and many others, enumerated by Fabricius (*Bibl. Lat.*, vol. 1, p. 5), and by the Bipont editor of Plautus (vol. 1, p. xix.). A smaller number have undertaken to interpret all the Punic specimens contained in the three scenes alluded to. The first of these was Petitus (Petit), who, in his work entitled "*Miscellaneorum Libri novem*" (p. 68, *seqq.*, Paris, 1640, 4to), endeavoured to mould the Punic of the three scenes into Hebrew, and gave a translation of them in Latin. Pareus, who came after, also exhibited the Punic of Plautus in a Hebrew dress, and even added vowel points; but the whole is done so carelessly and strangely, that the words resemble Chinese and Mongul as much as they do Hebrew. This was in the first and second editions of his Plautus. In the third, however, he adopted the interpretation of Petitus, and even enlarged upon it in a poetical paraphrase. Many subsequent editors of Plautus have followed in the same path, such as Boxhorn, Operarius, Gronovius, and Ernesti. Sixteen years after Petitus, the learned Bochart published the result of his labours on the Punic of the first scene, in his Sacred Geography (*Canaan*, 2, 6), and executed the task with so much learning and ability, that, during nearly two centuries, until the explanation given by Gesenius in 1837, though there may have been some who have given more probable interpretations of particular phrases and words, no one was found more successful in explaining the passage as a whole. (*Gesen.*, *Phæn. Mon.*, p. 359.) Clericus (Le Clerc) closely follows the interpretation of Bochart (*Biblioth. Univ. et Hist.*, vol. 9, p. 256), though he errs in thinking that each verse consists of two hemistichs, which have a similarity of ending. Passing over some others who have written on this same subject, we come to the three most recent exponents of this much-contested passage; namely, Bellermann (*Versuch einer Erklärung der Punicischen Stellen im Pœnulus des Plautus. Stück, 1-3, Berlin, 1806-1808, ed. 2, 1812*), Count de Robiano (*Études sur l'écriture, &c., suivies d'un essai sur la langue Punique, Paris, 1834, 4to*), and Gesenius (*Phæn. Mon.*, p. 366, *seqq.*). The first two, abandoning the true view of the subject, as taken by Bochart, regard the whole sixteen verses as Punic, and endeavour, after the example of Petitus, to adapt them, by every possible expedient, to the analogy of the Hebrew tongue. Bellermann, however, in doing this, confines himself within the regular limits of Hebraism, whereas Robiano calls in to his aid, at one time the Syriac, at another the Arabic, and discovers also many peculiarities in the structure of the Punic language, of which no one dreamed before, and the sole authority for which is found in his own imagination. The explanation of Gesenius, as may readily be inferred from his known proficiency in Oriental scholarship, is now regarded as having borne away the palm, though some parts have been made the subject of criticism by the learned of his own country. (*Gesen.*, *Phæn. Mon.*, p. 366. — *Jahrbücher für wissenschaftliche Kritik*, 1839, p. 539, *seqq.*)—The writers thus far mentioned have, with the exception, perhaps, of Robiano, attempted to illustrate the Punic of Plautus by a reference to the Hebrew, occasionally calling in the Chaldee and Syriac. This

undoubtedly is the more correct course, and far superior to the plan pursued by those who have had recourse to the Arabic, as, for example, Casiri (*Bibl. Escorial.*, vol. 2, p. 27), or to the Maltese idiom, as Agius de Soldanis (*Dissertazione cioè vera spiegazione della scena della comedia di Plauto in Pœnulo, Rom.*, 1751, 4to.) Another class of writers hardly deserve mention. They are those dreaming visionaries, who call in to their aid the Irish language! such as Vallancey (*Essay on the Antig. of the Irish Lang.*, Dublin, 1722, 8vo; *Lond.*, 1808, 8vo), O'Connor (*Chronicles of Eri, &c., from the original MSS. in the Phœnician dialect (!) of the Scythian language, London, 1822, 2 vols. 8vo*), Villaneuva, (*Phœnician Ireland, translated by H. O'Brien, Lond.*, 1833, 8vo), or who have recourse to the Basque, as De l'Écluse (*Grammaire Basque, Toulouse, 1826, 8vo*), and Santa Teresa (*Robiano, Études, &c.*, p. 78.—*Gesenius, Phæn. Mon.*, p. 357, *seqq.*).

6. General character of the Phœnician tongue.

That the Phœnician or Punic language was closely allied to the Hebrew, we learn from the express testimony of St. Jerome and St. Augustine. The latter, in particular, is a very high authority on this subject, since he lived in Africa at a period when the Punic tongue was still spoken in that country, and since, in one part of his writings, he even acknowledges himself to be of Punic origin. (*Contra Julian.*, lib. 3, c. 17.) On another occasion, referring to the Hebrew and Punic, he remarks, "*Isa lingua non multum inter se differunt.*" (*Quæst. in Jud.*, lib. 7, qu. 16.—*Op.*, ed. Benedict., vol. 3, p. 477.) So again, speaking of our Saviour, he says, "*Hunc Hebræi dicunt Messiam, quod verbum lingua Punicæ consonum est, sicut alia permulta et pene omnia.*" (*Contra lit. Petil.*, 2, 104.—*Op.*, vol. 9, col. 198.) Again, in another part of his writings, he observes, "*Cognata quippe sunt lingue ista et vicina, Hebræa, Punicæ et Syra.*" (*In Joann.*, tract. 15.—*Op.*, vol. 3, col. 302.) In commenting on the words of our Saviour (*Serm.*, 35), where he explains what is meant by the term "*Mammon*," he says, "*Hebraum verbum est, cognatum lingua Punicæ: ista enim lingua significationis quadam vicinitate sociantur.*" To the same effect St. Jerome: "*Tyrus et Sidon in Phœnicis litora principes civitates, &c. Quarum Carthago colonia. Unde et Pœni sermone corrupto quasi Phœni appellantur. Quarum lingua lingua Hebræa magna ex parte confinis est.*" (*In Jerem.*, 5, 25.) So again, "*Lingua quoque Punicæ, quæ de Hebræorum fontibus manare dicitur, propriè virgo alma appellatur.*" (*In Jes.*, 3, 7.)—Modern scholars, as many as have turned their attention to the subject, have come to the same conclusion, although on one point there exists among them a great difference of opinion. Some of them maintain, for instance, that, with the exception of a slight difference in the mode of writing and pronouncing, the Phœnician was identical with the Hebrew, and free from any forms derived from the cognate dialects. (*Tychoen, Comment. de ling. Phæn. et Hebr. mutua æqualitate*, p. 89.—*Akerblad, de Inscr. Oxon.*, p. 28.—*Fabricy, de Phæn. lit. fontibus*, p. 29, 221.—*Gesenius, Gesch. der Hebr. Sprache, &c.*, p. 229.) Others affirm, that the Phœnician is like the Hebrew, it is true; but, at the same time, intermingled with Arabic, Syriac, Chaldee, and Samaritan forms. Among these latter may be mentioned Bochart, Mazocchi, Clericus, Sappuhn, Peyron, and Hamaker. The last-mentioned writer, indeed, exceeds all bounds, and blends, in his explanations, all the Semitic tongues, so that he forms for himself a Phœnician language very far removed from the true one. (*Hamaker, Diatrib.*, p. 65.—*Id.*, *Miscell. Phæn.*, *præf.*, p. viii., &c.)—If we follow the authority of Gesenius, and we do not know a safer one to take for our guide, the chief features in the

Phœnician language may be briefly stated as follows : 1. The Phœnician agrees in most, if not all, respects with the Hebrew, whether we regard roots, or the mode of forming and inflecting words.—2. Wherever the usage of the earlier writers of the Old Testament differs from that of the later ones, the Phœnician agrees with the latter rather than with the former.—3. Only a few words are found that savour of Aramæism, nor will more Aramæisms be found in the remains of the Phœnician language than in the books of the Old Testament.—4. There are still fewer resemblances to Arabism. The most remarkable of these is in the case of the article, which on one occasion occurs under the full form *al*, and often under that of *a*, though most frequently it coincides with the Hebrew form.—Other words, which now can only be explained through the medium of the Arabic, were undoubtedly, at an earlier period, equally with many *ἀπὸς λεγόμενα* of the Old Testament, not less Hebrew than Arabic.—5. Among the peculiarities of the Phœnician and Punic tongues, the following may be noted : (a) A defective mode of orthography, in which the *matres lectionis* are employed as sparingly as possible. (b) In pronouncing, the Phœnicians (the Carthaginians certainly) expressed the long *o* by *û*; as, *zufes, lu, alomuth, &c.* (c) Instead of Segol and Schwa mobile, they appear to have employed an obtuse kind of sound, which the Roman writers expressed by the vowel *y*; as, *ytk* (Hebrew *etk*, the mark of the accusative), *ynnyu* (*ecce cum*), &c. (d) The syllable *al* they contracted into *o*, analogous somewhat to the French *cheval* (cheveau), *chevaux*. For other peculiarities consult Gesenius (*Phœn. Mon.*, p. 336).

PHŒNICIA. *Vid.* Phœnicæ.

PHŒNIX, I. a fabulous bird, of which Herodotus gives the following account in that part of his work which treats of Egypt. "The phœnix is another sacred bird, which I have never seen in effigy. He rarely appears in Egypt; once only in five hundred years, immediately after the death of his father, as the Heliopolitans affirm. If the painters describe him truly, his feathers represent a mixture of crimson and gold; and he resembles the eagle in outline and size. They affirm that he contrives the following thing, which to me is not credible. They say that he comes from Arabia, and, bringing the body of his father enclosed in myrrh, buries him in the temple of the sun; and that he brings him in the following manner. First he moulds as great a quantity of myrrh into the shape of an egg as he is well able to carry; and, after having tried the weight, he hollows out the egg, and puts his parent into it, and stops up with some more myrrh the hole through which he had introduced the body, so that the weight is the same as before: he then carries the whole mass to the temple of the sun in Egypt. Such is the account they give of the phœnix." (*Herod.*, 2, 73.)—The whole of this fable is evidently astronomical, and the following very ingenious explanation has been given by Marcoz. He assumes as the basis of his remarks the fragment of Hesiod preserved by Plutarch in his treatise *De Oraculorum Defectu*. (*Περὶ τῶν ἐκλελοιπ. χρηστ.*—*Op., ed. Reiske*, vol. 7, p. 635.)

ἐννέα τοι ζῶει γενεὰς λακέρυζα κορώνη
ἀνδρῶν ᾗδόντων· ἑλαφὸς δὲ τε τετρακόρωνος·
τρεῖς δ' ἐλάφους ὁ κόραξ γηράσκειται· αὐτὰρ ὁ φοῖνιξ
ἐννέα τοὺς κόρακας· δέκα δ' ἡμεῖς τοὺς φοίνικας
νύμφαι ἐπὶ Λόκαμοι, κοῖραι Διὸς αἰγιόχοιο.

"The noisy crow lives nine generations of men who are in the bloom of years; the stag attains the age of four crows; the raven, in its turn, equals three stags in length of days; while the phœnix lives nine ravens. We nymphs, fair-of-tresses, daughters of Jove the ægis-bearer, attain to the age of ten phœnixes." (*Compare Anson.. Idyll.*, 18.—*Plin.*, 7, 48.—*Gaisford*, 1054

Poët. Min. Græc., vol. 1, p. 189.)—The whole computation here turns upon the meaning of the term *generation* (*γενεά*). Marcoz takes the moon for his guide; and as this luminary ceases, like man, to exist, only, like him, again to arise, the period of its revolution becomes the standard required. Twenty-seven days and a third, then, converted into twenty-seven years and a third, give the measure of a generation among men. Reducing this, in order to make the analogy with the moon as complete as possible, he gives twenty-six years and two thirds as the result. The computation is then as follows :

Nine generations of men, or the life of one crow, make $234\frac{2}{3}$	240 years.
Four lives of the crow, or that of a stag, make	960 years.
Three lives of a stag, or that of a raven, make	2880 years.
Nine lives of the raven, or that of the phœnix, make	25920 years.

This period of 25920 years is precisely the duration of the Great Year (*Magnus Annus*) of the fixed stars, having for its element exactly 50°, the annual precession of the equinoxes. From this computation also we will be enabled to perceive how 50°, converted into years, and multiplied by $1+2+3+4$, that is, by 10, gave the Egyptians 500 years as the duration of the phœnix. These numbers, $1+2+3+4$, indicate that the 50 seconds, converted into years, traverse successively the four quarters of the ecliptic, in order to form the Great Year, the astronomical duration of the life of the phœnix. (*Marcoz, Astronomie Solaire d'Hipparque*, p. xvi., seq.)—II. Son of Amyntor, king of Argos, and the preceptor of Achilles, to whom he was so attached that he accompanied him to the Trojan war. According to the Homeric account (*Il.*, 9, 447, seq.), Amyntor having transferred his affections from his lawful wife, Hippodamia, to a concubine, the former besought her son Phœnix to gain the affections of his father's mistress, and alienate her from Amyntor. Phœnix succeeded in his suit, and his enraged father imprecated upon him the bitterest curses. The son, therefore, notwithstanding the entreaties and efforts of his relations to detain him at his parent's court, fled to Phthia, in Thessaly, where he was kindly received by Peleus, monarch of the country, who assigned him a territory on the confines of Phthia, and the sway over the Dolopians. He intrusted him also with the education of his son Achilles.—Such is the Homeric account. Later writers, however, make Amyntor to have put out his son's eyes, and the latter to have fled in this condition to Peleus, who led him to Chiron, and persuaded the centaur to restore him to sight. (*Lycophron*, 422.—*Tzet.*, ad *Lycophr.*, l. c.) The curse uttered against Phœnix was, that he might remain ever childless, and hence Tzetzes seeks to explain the story of his blindness, by making it a figurative allusion to his childless condition, a father's offspring being as it were his eyes in the language of antiquity. (*Tzet.*, l. c.—*Müller, ad schol. Tzet.*, l. c.)—Apollodorus says that Phœnix was blinded by his father, on a false charge preferred against him by the concubine (*καταφυσσαμένης φθορὰν φθίας τῆς τοῦ πατρὸς παλλακίδος*.—*Apollod.*, 3, 13, 8). The variations in the legend arose probably from the circumstance, of the tragic poets having frequently made the story of Phœnix the subject of their compositions, and having, of course, introduced more or less variations from the original tale. (*Heyne, ad Apollod.*, l. c.) There was a Phœnix of Sophocles, another of Euripides, and a third of Ion. (*Valck., Distich.*, c. 24.)—To return to the story of the son of Amyntor: after the death of Achilles, Phœnix was one of those commissioned to return to Greece and bring young Pyrrhus to the war. On the fall of Troy, he returned with that prince to Thessaly, in which country he con-

tinued until his death. He was buried, according to Strabo, near the junction of the small river Phœnix with the Asopus, the former of these streams having received its name from him. (*Strab.*, 428.)—III. A son of Agenor, sent, as well as his brothers Cadmus and Cilix, in quest of their sister Europa. Not having succeeded in finding her, he was fabled to have settled in and given name to Phœnicia. (*Apollod.*, 3, 1, 1.—Consult *Hayne*, *ad loc.*)

PHOLŌS, a mountain of Elia, at the base of which stood the town of Pylus, between the heads of the rivers Peneus and Selleis. (*Strabo*, 339.)

PHOLUS, a centaur, son of Silenus and the nymph Melia, and residing at Pholoë in Elis. In the performance of his fourth task, which was to bring the Erymanthian boar alive to Eurystheus, Hercules took his road through Pholoë, where he was hospitably entertained by Pholus. The centaur set before his guest roast meat, though he himself fared on raw. Hercules asking for wine, his host said he feared to open the jar, which was the common property of the centaurs; but, when pressed by the hero, he consented to uncloset it for him. The fragrance of the wine spread over the mountain, and soon brought all the centaurs, armed with stones and pine sticks, to the cave of Pholus. The first who ventured to enter were driven back by Hercules with burning brands: he hunted the remainder with his arrows to Males. When Hercules returned to Pholoë from this pursuit, he found Pholus lying dead along with several others; for, having drawn the arrow out of the body of one of them, while he was wondering how so small a thing could destroy such large beings, it dropped out of his hand and stuck in his foot, and he died immediately. (*Apollod.*, 2, 5, 4, *seqq.*—*Keightley's Mythology*, p. 355, *seq.*)

PHORBAS, a son of Priam and Epithesia, killed during the Trojan war by Menelaus. The god Somnus borrowed his features when he deceived Palinurus, and buried him into the sea from the vessel of Æneas. (*Vid. Palinurus.*)

PHORCŪDES or GRÆÆ, the daughters of Phorcys and Ceto. They were hoary-haired from their birth, whence their other name of Grææ ("the Gray Maids"). They were two in number, "well-robed" Phephredo (*Horrtifer*), and "yellow-robed" Enyo (*Shaker*). (*Hesiod*, *Theog.*, 270, *seq.*) We find them always united with the Gorgons, whose guards they were, according to Æschylus. (*Eratosth.*, *Cat.*, 22.—*Hygin.*, *P. A.*, 2, 12.—*Volcker*, *Myth. Geog.*, 41.) This poet described them as three long-lived maids, swan-formed, having one eye and one tooth in common, on whom neither the sun with his beams, nor the nightly moon ever looks. (*Prom. Vinc.*, 800, *seqq.*) Perseus, it is said, intercepted the eye as they were handing it from the one to the other, and, having thus blinded the guards, was enabled to come on the Gorgons unperceived. The name of the third sister given by the later writers is Deino (*Terrifier*). (*Apollod.*, 2, 4, 2.—*Keightley's Mythology*, p. 252.)

PHORCŪNEUS, son of Inachus and the ocean-nymph Melia, and second king of Argolis. He was the first man, according to one tradition, while another makes him to have collected the rude inhabitants into one society, and to have given them fire and social institutions. (*Apollod.*, 2, 1.—*Pausanias*, 2, 15, 6.) He also decided a dispute for the land, between Juno and Neptune, in favour of the former, who thence became the tutelar deity of Argos. By the nymph Laodice Phoroneus had a son named Apis, from whom the peninsula, according to one account, was called Apia; and a daughter Niobe, the first mortal woman who enjoyed the love of Jupiter. Her offspring by the god were Argus and Pelasgus, and the country was fabled to have been named from the former, the people from the latter. (*Keightley's Mythology*, p. 405.)

PHOTIUS, a patriarch of Constantinople in the ninth

century, of a noble family, and who enjoyed the reputation of being the most learned and accomplished man of his age. He was a native of the capital, and for some time a layman, having been sent as an ambassador to Assyria by the Emperor Michael. In this capacity Photius acquitted himself so well as to gain the favour of his imperial master, who appointed him, on his return, commander of the imperial guard (*Πρωτοσπαθῆριος*), and subsequently chief secretary (*Πρωτοσηκρήτης*, *Protosecretarius*). These dignities gave him access to the privy council, and the privilege of taking part in their deliberations; and his ambition being now awakened, he strove to ingratiate himself with Bardas, the uncle of the emperor, whom the latter had associated with himself on the throne, and upon whom he had thrown all the cares of government. Bardas, having become displeased with the patriarch Ignatius, sent him into banishment, and appointed Photius to the vacant see (December 25, A.D. 857), who went through all the ecclesiastical orders in six successive days, having been consecrated monk, anagnostes, subdeacon, deacon, priest, and patriarch. During the succeeding ten years, a controversy was carried on with much acrimony between him and Pope Nicholas the First, in the course of which each party excommunicated the other, and the consequence was a complete separation of the Eastern and Western churches. Bardas, his patron, being at length taken off by his nephew and associate in the empire, Michael the Third, that prince was in his turn assassinated by Basilus, the Macedonian, who then ascended the throne in 866. But Photius, denouncing him for the murder, was in the following year removed, to make way for his old enemy Ignatius, and was forced to retire into banishment. He was recalled in 878. An anecdote, related by Simon Logothetes (*Annal. in Basil.*, n. 6, p. 341, *ed. Ven.*), explains the cause of his recall. Photius forged a document which traced the genealogy of Basilus to Tiridates, king of Armenia. He imitated so skillfully the ancient characters, that, when the work in question, placed by his means in the imperial library, and found, as if by chance, by one of his confidential friends, was placed before the emperor, there was no one able to decipher it but Photius. He maintained himself in the patriarchal chair during the rest of that reign; but was at length accused, on insufficient grounds, of conspiring against the new sovereign, Leo the Philosopher, when that prince once more removed him, and sent him, in 886, into confinement in an Armenian monastery, where he died in 891. Photius appears to have been very learned and very wicked—a great scholar and a consummate hypocrite—not only neglecting the occasions of doing good which presented themselves, but perverting the finest talents to the worst purposes. This learned though corrupt prelate was the author of a work entitled *Μυριοβιβλιον* (*Myriobiblon*), or *Bibliotheca*, containing extracts from, and a critical judgment upon, two hundred and eighty (the title says 279) works, which were read by him during his embassy to Assyria, and a summary of the contents of which had been requested by his brother Tarasius. If this statement be correct, the ambassador must have had but little to do in his diplomatic capacity. There is a story, that, as often as he had read an author, and made his extracts from him, he threw the manuscript into the fire, in order to enhance the value of his own abridgment. This statement, indeed, is sufficiently improbable; but it may possibly have originated from some known propensity of the patriarch to literary dishonesty. It is highly probable that some grammarian pursued this same method with regard to Hesychius, whose original lexicon he first epitomised, and then destroyed. The *Myriobiblon* of Photius was the precursor, and has served as the model, of works of a critical and bibliographical nature. It is characterized by neither order nor method. Pagan

and Christian writers, ancient and modern, follow one another as chance caused their works to fall into the hands of the author; thus we pass from a work of an erotic nature to one that treats of philosophy or theology, from an historian to an orator; the productions of the same writer are not even considered together. Generally speaking, the greater number of the productions of which Photius gives us critical notices and extracts, have reference to theology, to the decrees of councils, and to religious disputes; profane literature with him occupies only a secondary rank. Nevertheless, among the works of historians, philosophers, orators, grammarians, romancers, geographers, mathematicians, and physicians, that Photius has read, and on which he gives his opinion, or from which he favours us with extracts, there are between seventy and eighty that are lost, and of which we would know nothing or next to nothing without the aid of the Myriobiblon. In the case of some works, Photius contents himself with giving merely a short literary notice, while from others he makes extracts of greater or less size. He was the author, likewise, of a work called *Nomocanon*, or a collection of the canons of the church. He compiled also a glossary or *Lexicon* (*Δίξων συναγωγή*), which has only reached us in an imperfect and mutilated state. The various MSS. of this work in different libraries on the Continent are mere transcripts from each other, and originally from one, venerable for its antiquity, which was formerly in the possession of the celebrated Thomas Gale, and which is now deposited in the library of Trinity College, Cambridge. This manuscript, which is on parchment, bears such evident marks of great antiquity, that it may not unreasonably be supposed to have been a transcript from the author's copy. The various transcripts from this ancient MS. were miserably faulty and corrupt, and it was natural that scholars, who wished for the publication of this lexicon, should be desirous of seeing it printed from the Galean MS. in preference to any other. Hermann, indeed, published an edition in 1818, from two transcripts, but he gives merely the naked text, with scarcely a single correction, or any attempt whatsoever towards the restitution of the text. At the end of the volume, however, are some ingenious and valuable observations of Schneider. Porson, meanwhile, had transcribed and corrected this lexicon for the press, from the Galean MS.; and when unfortunately his copy had been destroyed by fire, had, with incredible industry and patience, begun the task afresh, and completed another transcript in his own excellent handwriting. His death, however, for a time prevented the appearance of the work, until at length his labours were given to the world by Dobree, in 1822, *Lond.*, 8vo. This edition, however, notwithstanding all the praise so justly bestowed upon it, is greatly injured by want of more editorial skill and labour, the *Addenda* and *Corrigenda* occupying 44 pages. Photius, who threw together his lexicon upon a much more confined plan than Hesychius, probably brought to his undertaking greater learning and judgment than the latter, and seems to have given most of his authorities from his own knowledge of the authors whom he cites. Yet even his work is little more than a compilation, of which many parts are copied verbatim from the scholia on Plato, the *Lexicon* of Harpocration, that of Pausanias, and, in all probability, from the *Λεξικά Κωμικά καὶ Τραγικά* of Theo or Didymus, from which latter the grammarians derived most of their explanations of the scenic phrases of the Greeks. These Dramatic Lexicons are unfortunately lost; but there is in the royal library of Paris a MS., which seems to be an epitome of one of them, under the title of 'Ἄλλος Ἀλφάβητος. And, with a little care and discrimination, a very considerable part of them might be recovered from the pages of existing grammarians. Photius also enriched his work from the *Lexica Rhetorica*, and the Platonic

Lexicon of Timæus; nor has he forgotten the *Lexicon Technologicum* of Philemon. The patriarch informs us, in his preface, that his dictionary is destined principally for the explanation of the remarkable words which occur in the Greek orators and historians, but occasionally to illustrate the phraseology of the poets. Several lacunæ occur in the MSS., the leaves being torn out from the Galean copy, from ἀδιακρίτως to ἐπώνυμοι, and from φορητῶς to φιλοδράπιδας.—Photius has left also a collection of letters, in one of which, addressed to the Bulgarian prince Michael, there is a brief history of Seven Œcumenical Councils.—The best edition of the Myriobiblon or Bibliotheca is that of Bekker, *Berol.*, 1824, 2 vols. 4to. The text is corrected from a Venice manuscript, and also three Paris ones. The previous editions are accompanied by a Latin version of Schott's, which is far from accurate. Bekker's edition gives the Greek text without a version.—The *Nomocanon* was first printed in 1615, *Paris*, 4to, with the commentaries of Balsamon, patriarch of Antioch. A second edition appeared in 1661, with a Latin version, and with additions and corrections. It is much superior to the previous one.—The *Epistles* were edited by Montague, bishop of Norwich, *Lond.*, 1651, fol.; but he has given only 248 letters, whereas a much greater number exists. A curious and rare edition was also published in 1705, fol., under the care of Dositheus, patriarch of Jerusalem, and Anthimus, a Greek bishop. (*Schöll, Hist. Lit. Gr.*, vol. 6, p. 285.—*Id. ib.*, p. 301.—*Id. ib.*, vol. 7, p. 31.—*Id. ib.*, p. 238.—*Edinburgh Review*, No. 42, p. 329, *seqq.*—*Weiss, in Biogr. Univ.*, vol. 34, p. 218, *seqq.*—*Hoffmann, Lex. Bibliogr.*, vol. 3, p. 246, *seqq.*)

PHRAÏTES, a name common to several Parthian kings. (*Vid. Parthia*.)

PHRAÏTES, the same as Phraates. (*Vid. Phraates*.)
PHRAORTES, son and successor of Deioces, on the throne of Media. He reigned from B.C. 657 to 635, greatly extended the Median empire, subdued the Persians, and many other nations, but fell in an expedition against the Assyrians of Ninus or Nineveh. (*Herod.*, 1, 102.—*Vid. Media*.)

PHRICONIS, a surname given to Cyma in *Æolis*. (*Vid. Cyma*.)

PHRIXUS, son of Athamas, king of Orchomenus in Boeotia, and Nephele. (Consult the commencement of the article *Argonautæ*.)

PHYRGIA, a country of Asia Minor, bounded on the north by Paphlagonia and Bithynia, on the south by the range of Taurus and Pisidia, on the west by Caria and Lydia, and on the east by Cappadocia and Pontus.—Herodotus relates (2, 2), that Psammithichus, king of Egypt, having made an experiment to discover which was the most ancient nation in the world, ascertained that the Phrygians surpassed all other people in priority of existence. (*Vid. Psammithichus*.) The story itself is childishly absurd; but the fact that the Egyptians allowed the highest degree of antiquity to this nation is important, and deserves attention. What the Greeks knew of the origin of the Phrygians does not accord, however, with the Egyptian hypothesis. Herodotus has elsewhere reported that they came originally from Macedonia, where they lived under the name of Briges (or Bryges), and that, when they crossed over into Asia, this was changed to Phryges (7, 73). This account has been generally followed by subsequent writers, especially Strabo (295), who appears to quote Xanthus, and Menecrates of Elms, Artemidorus, and others, who made the origin of nations and cities the object of their inquiries. (*Strab.*, 572.—*Id.*, 680.—Compare *Plin.*, 5, 32.—*Steph. Byz.*, s. v. *Βρύγες*.) It is certain, indeed, that there was a people named Briges or Bryges, of Thracian origin, living in Macedonia at the time that Herodotus was writing (6, 45; 7, 185); and tradition had long fixed

the abode of the Phrygian Midas, who was a chief or monarch of this people, near Mount Bermius, in Macedonia. (*Herod.*, 8, 138.—Compare *Nicand.*, *ap. Athen.*, 16, p. 683.—*Bion*, *ap. eund.*, 2, p. 45.) Again, the strong affinity which was allowed to exist between the Phrygians, Lydians, Carians, and Mysians, who were all supposed to have crossed from Thrace into Asia Minor, serves to corroborate the hypothesis which regards the Phrygian migration in particular; but, while there seems no reasonable doubt of the Thracian origin of this people, it is not so easy to establish the period of their settling in Asia. Xanthus is represented by Strabo (680) as fixing their arrival in that country somewhat after the Trojan war; but the geographer justly observes, that, according to Homer, the Phrygians were already settled on the banks of the Sangarius before that era, and were engaged in a war with the Amazons (*Il.*, 3, 187); and, if mythological accounts are to have any weight, the existence of a Midas in Asia Minor, long before the period alluded to, would prove that there had been a Phrygian migration in times to which authentic history does not extend. (Compare *Canon*, *Narrat.*, *ap. Phot.*, *cod.* 186.) Great as was the ascendancy, however, of the Thracian stock, produced by so many tribes of that vast family pouring in at various times, there must have entered into the composition of the Phrygian nation some other element besides the one which formed its leading feature. It has been conjectured, and with great show of probability, that the Thracian Bryges found the country, which from them took the name of Phrygia, occupied by some earlier possessors, but who were too weak to resist the invaders. What name this people bore cannot now be ascertained; but there can be little doubt that they were of Asiatic origin; probably Leuco-Syrians or Cappadocians. Herodotus, indeed, has stated a circumstance, which, if true, would go far to overthrow the theory of a Thracian origin for the Phrygian people. In the muster which he makes of Xerxes' myriads, he informs us that the Phrygians and Armenians were armed alike; the latter being, as he observes, colonists of the former. (*Herod.*, 7, 73.) Herodotus, however, is quite singular in this statement, which is, moreover, at variance with all received notions on the subject. The Armenians are a people of the highest antiquity, and we must not seek for their primitive stock beyond the upper valleys of the Tigris and Euphrates; in other words, they are a purely Asiatic people; and if there existed any resemblance between them and the Phrygians, we ought rather to account for it by supposing that the latter were not altogether Europeans, but mingled with an indigenous race of Asia, whose stock was also common to the Armenians.—The political history of the Phrygians is neither so brilliant nor so interesting as that of their neighbours the Lydians. What we gather respecting them from ancient writers is, generally, that they crossed over from Europe into Asia, under the conduct of their leader Midas, nearly a hundred years before the Trojan war. (*Canon*, *ap. Phot.*, *cod.*, 186.) That they settled first on the shores of the Hellespont and around Mount Ida, whence they gradually extended themselves to the shores of the Ascanian lake and the valley of the Sangarius. It is probable that the Doliones, Mygdones, and Bebryces, who held originally the coasts of Mysia and Bithynia, were Phrygians. The Mygdones were contiguous to the Bryges in Macedonian Thrace, and they are often classed with the Phrygians by the poets. Driven seaward from the Hellespont and the coast of the Propontis by the Teucri, Mysi, and Bithyni, the Phrygians took up a more central position in what may be called the great basin of Asia Minor. Still preserving the line of the Sangarius, they occupied, to the southwest of that great river, the upper valleys of the Maeander and Rhyndacus, to-

wards the Mysian Olympus, and those of the Hermus and Hyllus on the side of Lydia. On the west they ranged along Catacecaumene and ancient Mæonia, till they reached the Mæander. The head of that river, with its tributary streams, was included within their territory. To the south they held the northern slope of Mount Cadmus, which, with its continuation, a branch of Taurus, formed their frontier on the side of Caria, Milyas, and Pisidia, as far as the borders of Cilicia. To the east of the Sangarius the ancient Phrygians spread along the borders of Paphlagonia till they met the great river Halys, which divided them from Pontus, and, farther south, from Cappadocia and Isauria. This extensive country was very unequal in its climate and fertility. That which lay in the plains and valleys, watered by rivers, exceeded in richness and beauty almost every other part of the peninsula (*Herod.*, 5, 49); but many a tract was rendered bleak and desolate by vast ranges of mountains, or uninhabitable from extensive lakes and fens impregnated with salt, or scorching deserts destitute of trees and vegetation. (Compare *Fellows' Asia Minor*, p. 127.)—The Phrygians appear at first to have been under the dominion of kings; but whether these were absolute over the whole country, or each was the chief of a petty canton, is not certain. The latter, more probably, was the case, since we hear of Midæum and Gordium, near the Sangarius, as royal towns, corresponding with the well-known names of Midas and Gordius (*Strab.*, 568); and again, Celæne, seated in a very opposite direction, near the source of the Mæander, appears to have been the chief city of a Phrygian principality. (*Athenaus*, 10, p. 415.) The first Phrygian prince, whose actions come within the sphere of an authenticated history, is Midas, the son of Gordius, who, as Herodotus relates, was the first barbarian that made offerings to the god at Delphi. He dedicated his throne of justice, the workmanship of which, as the historian affirms, was worthy of admiration (1, 14). At this period the Phrygians were independent, but under the reign of Croesus the Lydian we hear of their being subject to that sovereign (1, 28). The conqueror was probably content with exacting from the Phrygian ruler an avowal of his inferiority, in the shape of a tribute or tax; for the tragic tale of the Phrygian Adrastus affords evidence that the ancient dynasty of that country still held dominion, as the vassal of Croesus. (*Herod.*, 1, 35.) Adrastus is said to have been the son of Gordius, who was himself the son of Midas. The latter was probably the grandson of the Midas who dedicated his throne to the shrine at Delphi, and is called son of Gordius; so that we have a regular alternation of monarchs, bearing those two names from father to son, for seven generations. Indeed, these two names are so common, that they would seem to have been appellatives rather than proper names. The first Gordius is probably the one who is indebted for a place in history to the puzzle which he invented; but which, if it had not fallen into the way of Alexander, would probably never have given rise to the proverbial expression of "the Gordian knot." (*Arrian*, *Exp. Al.*, 2, 8.) After the overthrow of the Lydian monarchy by Cyrus, Phrygia was annexed to the Persian empire, and, under the division made by Darius, formed part of the Hellespontine or Bithynian satrapy. (*Herod.*, 3, 91.) In the partition of Alexander's dominions, it fell at first into the hands of Antigonus, then of the Seleucids, and, after the defeat of Antiochus, was ceded to Eumenes, king of Pergamus, but finally reverted to the Romans. (*Polyb.*, 23, 27.—*Liv.*, 37, 56.) At that time Phrygia had sustained a considerable diminution of territorial extent, owing to the migration of a large body of Gauls into Asia, where they settled in the very centre of the province; and, having succeeded in appropriating to themselves a considerable tract of country, formed a new province and

people, named Galatia and Galatæ, or Gallo-Græci.—The Phrygians are generally stigmatized by the ancients as a slavish nation, destitute of courage or energy, and possessing but little skill in anything save music and dancing. (*Athenaus*, 1, p. 27.—*Virg.*, *Æn.*, 12, 99.—*Eurip.*, *Alcest.*, 678.—*Id.*, *Orest.*, 1447.—*Athenaus*, 14, p. 624, *seqq.*)—Phrygia, considered with respect to the territory once occupied by the people from whence it obtained its appellation, was divided into the Great and Less. The latter, which was also called the Hellespontine Phrygia, still retained that name, even when the Phrygians had long retired from that part of Asia Minor, to make way for the Mysians, Teucrians, and Dardaniens; and it would be hazardous to pronounce how much of what is included under Mysia and Troas belonged to what was evidently only a political division. Besides this ancient classification, we find in the Lower Empire the province divided into *Phrygia Pacatiana* and *Phrygia Salutaris*. The name *Epictetus*, or "the Acquired," was given to that portion of the province which was annexed by the Romans to the kingdom of Pergamus. (*Cramer's Asia Minor*, vol. 2, p. 1, *seqq.*)

PHRYNICHUS, I. an Athenian tragic poet, a scholar of Theopis. The dates of his birth and death are alike unknown: it seems probable that he died in Sicily. (*Clinton, Fast. Hell.*, vol. 2, p. xxxi., note (t).) He gained a tragic victory in 511 B.C., and another in 476, when Themistocles was his choragus. (*Plut.*, *Vit. Themist.*) The play which he produced on this occasion was probably the *Phœnissæ*, and *Æschylus* is charged with having made use of this tragedy in the composition of his *Perseus*, which appeared four years after (*Arg. ad Pers.*), a charge which *Æschylus* seems to rebut in "the Frogs" of *Aristophanes* (v. 1294, *seqq.*). In 494 B.C., *Miletus* was taken by the Persians, and Phrynichus, unfortunately for himself, selected the capture of that city as the subject of an historical tragedy. The skill of the dramatist, and the recent occurrence of the event, affected the audience even to tears, and Phrynichus was fined 1000 drachmæ for having recalled so forcibly a painful recollection of the misfortunes of an ally. (*Herod.*, 6, 21.) According to *Suidas*, Phrynichus was the first who introduced a female mask on the stage, that is, who brought in female characters; for, on the ancient stage, the characters of females were always sustained by males in appropriate dress. Bentley is thought to have purposely mistranslated this passage of *Suidas*, in his Dissertation on Phalaris (vol. 1, p. 291, ed. Dyce.—*Donaldson, Theatre of the Greeks*, p. 47). Phrynichus seems to have been chiefly remarkable for the sweetness of his melodies, and the great variety and cleverness of his figure-dances. (*Aristoph.*, *Av.*, 748.—*Id.*, *Vesp.*, 269.—*Id.* *ib.*, 219.—*Plutarch, Symp.*, 3, 9.) The Aristophanic Agathon speaks generally of the beauty of his dramas (*Thesmoph.*, 164, *seqq.*), though, of course, they fell far short of the grandeur of *Æschylus*, and the perfect art of *Sophocles*. The names of seventeen tragedies attributed to him have come down to us, but it is probable that some of these belonged to two other writers, who bore the same name. (*Theatre of the Greeks*, ed. 4, p. 59, *seq.*)—II. A comic poet, who must be carefully distinguished from the tragedian of the same name. He exhibited his first piece in the year 485 B.C., and was attacked as a plagiarist in the *Θορμολόγοι* of *Hermippus*, which was written before the death of *Sitalces*, or, in other words, before 424 B.C. (*Clinton, Fast. Hell.*, vol. 2, p. 67.) In 414 B.C., when *Amesipias* was first with the *Κωμαῖοι*, and *Aristophanes* second with the *Ὀπιδῆς*, Phrynichus was third with the *Μονότροπος*. (*Arg.*, *Av.*) In 405 B.C., *Philonides* was first with the *Βάρπαχοι* of *Aristophanes*, Phrynichus second with the *Μαῦσαι*, and *Plato* third with the *Κλεοφών*. (*Arg.*, *Ran.*) He is ridiculed by *Aristophanes* in the *Βάρπαχοι* for his cus-

tom of introducing grumbling slaves on the stage. The names of ten of his pieces are known to us. (*Fabric.*, *Bibl. Gr.*, vol. 2, p. 483, ed. *Harles*.—*Theatre of the Greeks*, ed. 4, p. 101.)—III. A native of Arabia, as is supposed, but who established himself in Bithynia in the latter half of the second century of our era. He compiled a *Lexicon of Attic forms of Expression* (*Ἐκλογὴ Ἀττικῶν ῥημάτων καὶ ὀνομάτων*). We have also from the same writer another work, entitled *Προπαρασκευὴ σοφιστικὴ* (*Sophistic Apparatus*), in thirty-seven books, a production of considerable importance on account of the numerous quotations which it contains from ancient writers. Phrynichus distinguishes between words, according to the style to which they are adapted, which is either the oratorical, the historical, or the familiar kind. As models of genuine Atticism, he recommends *Plato*, *Demosthenes*, and the other Attic orators, *Thucydides*, *Xenophon*, *Æschines*, the *Socratic*, *Critias*, and the two authentic discourses of *Antisthenes*; and among the poets, *Aristophanes* and the three great tragic writers. He then makes a new arrangement of these authors, and places *Plato*, *Demosthenes*, and *Æschines* in the first rank. As regards his own style, Phrynichus is justly chargeable with great prolixity.—The best edition of the *Lexicon* is that of *Lobeck, Lips.*, 1820, 8vo. Of the "Sophistic Apparatus" *Montfaucon* published a portion in his "*Catalogus Bibliothecæ Coislinianæ*," p. 465, *seqq.* *Bast* made another extract from the MS. (No. 345, *Biblioth. Coislin.*, at present in the Royal library at Paris), accompanied with critical remarks, which has passed from the Continent to England. In 1814, *Bekker* published a part in the first volume of his "*Anecdota Græca*," under the title, *Ἐκ τῶν Φρυνίχου τοῦ Ἀραβίου τῆς σοφιστικῆς προπαρασκευῆς*. (*Schöll, Hist. Lit. Gr.*, vol. 5, p. 12.)

PHRYIA, a district of Thessaly, forming part of the larger district of Phthiotis. (*Vid. Phthiotis*.)

PHTHIOTIS, a district of Thessaly, including, according to *Strabo*, all the southern portion of that country, as far as Mount Ceta and the Malic Gulf. To the west it bordered on Dolopia, and on the east reached the confines of Magnesia. Referring to the geographical arrangement adopted by *Homer*, we shall find, that he comprised within this extent of territory the districts of Phthia and Hellas properly so called, and, generally speaking, the dominions of *Achilles*, together with those of *Protesilaus* and *Eurypylus*. (*Strab.*, 432, *seqq.*) Many of his commentators have imagined that Phthia was not to be distinguished from the divisions of Hellas and Achaia, also mentioned by him. But other critics, as *Strabo* observes, were of a different opinion, and the expressions of the poet certainly lead us to adopt that notion in preference to the other. (*Il.*, 2, 683.—*Il.*, 1, 478.—*Cramer's Ancient Greece*, vol. 1, p. 397.)

PHYENOTUS. *Vid. Cornutus*.

PHYA, a tall and beautiful woman of Attica, whom *Pisistratus*, when he wished to re-establish himself in his usurped power, arrayed like the goddess *Minerva*, and led to the city in a chariot, making the populace believe that the goddess herself came to restore him to power. Such is the account of *Herodotus* (1, 59). Consult, however, remarks under the article *Pisistratus*.

PHYCUS (gen. -*antis*: in Greek, *Φυκοῦς*, gen. -*οἰντοῦς*), a promontory of Cyrenaica, northwest of *Apollonia*, and now *Ras Sem*.

PHYLLOX, I. a town of Macedonia, in the interior of *Pieria*, according to *Ptolemy* (p. 84), and of which *Pliny* (4, 10) makes mention. Some similarity to the ancient name is discoverable in that of *Phili*, situate on the *Haliacmon*, somewhat to the west of *Servicia*.—II. A town of *Epirus*, supposed to correspond with the vestiges observed by *Hughes* (vol. 2, p. 483) near the village of *Velchista*, on the western side of the lake

of *Iosmina*.—III. A town of Thessaly, in the Magneſian diſtrict, near Phthiotic Thebes, and on the river Sperchius. It was the native place of Proteſilaus, who is hence ſometimes called Phylacides. There was a temple here conſecrated to him. (*Pind., Isth.*, 1, 83.—Compare *Hom., Il.*, 2, 698.) Sir W. Gell is inclined to place the ruins of this town near the village of *Agios Theodoros*, "on a high ſituation, which, with its poſition, as a ſort of guard (*φυλακή*) to the entrance of the gulf, ſuggeſts the probability of its being Phylace." (*Ibid.*, p. 255.) But Strabo aſſerts that Phylace was near Thebes, conſequently it could not have been ſo much to the ſouth as *Agios Theodoros*. (*Cramer's Anc. Greece*, vol. 1, p. 407.)

PHYLE, a place celebrated in the hiſtory of Athens as the ſcene of Thraſybulus's firſt exploit in behalf of his oppreſſed country. It was ſituate about 100 ſtadia from Athens, to the northweſt, according to Dio- dorus (41, p. 415); but Demotheſenes eſtimates the diſtance at more than 120 ſtadīa. (*Pſeph., in Or. de Cor.*, p. 338.—Compare *Xen., Hiſt. Gr.*, 2, 4, 2.—Strabo, 396.) The ſtreſſ of Phyle, according to Sir W. Gell (*Ibid.*, p. 52), is now *Bigla Caſtro*. "It is ſituated on a lofty precipice, and, though ſmall, muſt have been almoſt impregnable, as it can only be approached by an iſthmus on the eaſt. Hence is a moſt magnificent view of the plain of Athens, with the Acropolis and Hymettus, and the ſea in the diſtance." Dodwell, however, maintains, that its modern name is *Argiro Caſtro*. The town of Phyle was placed at the foot of the caſtle or acropolis; ſome traces of it ſtill remain. (*Tour*, vol. 1, p. 502.—*Cramer's Anc. Greece*, vol. 2, p. 405.)

PHYLLIS, I. daughter of Sithon, king of Thrace, and betrothed to Demophoon, ſon of Theſeus, who, on his return from Troy, had ſtopped on the Thracian coaſt, and there became acquainted with and enamoured of the princeſs. A day having been fixed for their union, Demophoon ſet ſail for Athens, in order to arrange affairs at home, promiſing to return at an appointed time. He did not come, however, at the expiration of the period which he had fixed, and Phyllis, fancying herſelf deſerted, put an end to her exiſtence. The trees that ſprang up around her tomb were ſaid at a certain ſeaſon to mourn her untimely fate, by their leaves withering and falling to the ground. (*Hygin., fab.*, 59.) According to another account, Phyllis was changed after death into an almond-tree, deſtitute of leaves; and Demophoon having returned a few days ſubſequent, and having clasped the tree in his embrace, it put forth leaves, as if conſcious of the preſence of a once-beloved object. Hence, ſays the fable, leaves were called *φύλλα* in Greek, from the name of Phyllis (*φύλλισ*). (*Serv. ad Virg., Ecl.*, 5, 10.) Ovid has made the abſence of Demophoon from Thrace the ſubject of one of his heroic epiſtles.—It is ſaid that Phyllis, when watching for the return of Demophoon, made nine journeys to the Thracian coaſt, whence the ſpot was called *Ennea-Hodoi* (*Ἐννεὰ Ὀδοί*) or "the Nine Ways." (*Hygin., l. c.*) The true reaſon of the name, however, was the meeting here of as many roads from different parts of Thrace and Macedon. (*Walpole's Collect.* vol. 2, p. 510.)—Tzetzes gives a ſomewhat different account of the affair, eſpecially as regards Demophoon, whom he calls Acanas, and whom he makes to have been thrown from his horſe when hurrying back to Phyllis, and to have been tranſixed by his own ſword. (*Tzetz. ad Lycophr.*, 496.)—II. A region of Thrace, forming part of Edonia, and ſituate to the north of Mount Pangæus. (*Herod.*, 7, 114.)

PHYSCON, a ſurname of one of the Ptolemies, king of Egypt, from his great abdominal rotundity (*φύσκων*, "the paunch;" from *φύσκη*, "the lower belly").

PHYSCOS, a town of Caria, oppoſite Rhodes, and ſubject to that iſland. (*Steph. Byz.*, s. v.)

PICENTES, a people of Italy, occupying what was called Picenum. (*Vid.* Picenum.)

PICENTIA, a city of Campania, about ſeven miles beyond Salernum, and once the capital of the Picentini. (*Strabo*, 251.—*Mela*, 2, 4.—*Pliny*, 3, 5.) It is now *Vicenza* or *Bicenza*.

PICENTINI, a people of Italy, ſouth of Campania, occupying an inconfiderable extent of territory, from the promontory of Minerva to the mouth of the river Silarus. We are informed by Strabo, that theſe were a portion of the inhabitants of Picenum whom the Romans tranſplanted thither to people the ſhores of the Gulf of Poſidonia or Pæstum. It is probable that their removal took place after the conqueſt of Picenum, and the complete ſubjugation of this portion of ancient Campania, then occupied by the Samnites. Cluver fixes the date at A.U.C. 463. (*Ital. Ant.*, vol. 2, p. 1188.) According to the ſame writer, the Picentini were at a ſubſequent period compelled by the Romans to abandon the few towns which they poſſeſſed, and to reſide in villages and hamlets, in conſequence of having ſided with Hannibal in the ſecond Punic war. As a farther puniſhment, they were excluded from military ſervice, and allowed only to perform the duties of couriers and meſſengers. (*Strabo*, 251.—*Plin.*, 3, 5.—*Cramer's Anc. Italy*, vol. 2, p. 214.)

PICENUM, a diſtrict of Italy, along the Adriatic, ſouth and eaſt of Umbria. Little has been aſcertained reſpecting the Picentes, its inhabitants, except the fact that they were a colony of the Sabines, ſent out in conſequence of a vow of a ſacred ſpring, and ſaid to have been guided to this land by a woodpecker (*picus*), a bird ſacred to Mars. (*Strabo*, 240.—*Plin.*, 3, 13.) In this region they had to contend with the Umbrians, who had wreſted it from the Liburni and Siculi. (*Plin.*, l. c.) But the Sabines were not apparently the firſt or ſole poſſeſſors of the country. The Siculi, Liburni, and Umbri, according to Pliny (3, 13), the Pelasgi, as Silius Italicus reports (8, 445), and the Tyrrheni, according to Strabo (241), all at different periods formed ſettlements in that part of Italy. The conqueſt of Picenum coſt the Romans but little trouble. It was effected about 484 A.U.C., not long after the expedition of Pyrrhus into Italy (*Liv., Epit.*, 16.—*Florus*, 1, 19), when 360,000 men, as Pliny aſſures us, ſubmitted to the Roman authorities. From the ſame writer we learn, that Picenum conſtituted the fifth region in the diſviſion of Auguſtus. This province was conſidered one of the moſt fertile parts of Italy. (*Liv.*, 22, 9.—*Strabo*, 240.) The produce of its fruit-trees was particularly eſteemed. (*Hor., Sat.*, 2, 4, 70.—*Id., Sat.*, 2, 3, 272.—*Juv., Sat.*, 11, 72.) It may be regarded as limited to the north by the river *Æſis*. To the weſt it was ſeparated from Umbria and the Sabine country by the central chain of the Apennines. Its boundary to the ſouth was the river *Matrinus*, if we include in this diſviſion the Prætutii, a ſmall tribe confined between the *Matrinus* and *Helvinus*. (*Cramer's Anc. Italy*, vol. 1, p. 279, *ſeqq.*)

PICETI, a Caledonian race, firſt mentioned under this denomination in a panegyric of Eumenius, A.D. 297. Various derivations have been aſſigned for their name, among which the moſt common is that which deduces it from the Latin *picti* ("painted"), in reference to the cuſtom which the ancient Britons had of painting their bodies of a blue colour. This etymology, however, can hardly be correct, ſince the cuſtom to which we have juſt referred was common to all the Britons, not confined to one particular tribe. The ſimpleſt derivation, therefore, appears to be that which makes the name in queſtion come from the Gaelic *pictiù*, "robbers" or "plunderers," the Picets being famed for their marauding expeditions into the country to the ſouth of them. According to Adelung, their true national name was *Cruitnich*, "corn-eaters," from their hav-

ing devoted a part of their territory to the raising of grain. (*Adelung, Mithradates*, vol. 2, p. 96.)

PICTORUMS, a people of Aquitanic Gaul, a short distance below the Ligeris or *Loire*. Their territory corresponds to the modern *Poitou*. Ptolemy assigns them two capitals, Augustoritum and Limonum, but the former in strictness belonged to the Lemovices. The city of Limonum, the true capital, answers to the modern *Poitiers*. Strabo gives the name of this people with the short penult; Ptolemy with the long one. The short quantity is followed by Lucan (1, 436). Ammianus Marcellinus uses the form *Pictavi*. (*Amm. Marcell.*, 16, 11.)

PICUMNUS and **PILUMNUS**, two deities of the Latins, presiding over nuptial auspices. (*Non.*, c. 12, n. 36.—*Varro, ap. Non.*, l. c.) The new-born child, too, was placed by the midwife on the ground, and the favour of these deities was propitiated for it. *Pilumnus* was also one of the three deities who kept off *Silvanus* from lying-in women at night. (*Varro, frag.*, p. 231.) The other two were *Intercido* and *Deverra*. Three men went by night round the house, to signify that these deities were watchful: they first struck the threshold with an axe, then with a pestle (*pilum*), and finally swept (*deverrare*) with brooms; because trees are not cut (*caduntur*) and pruned without an axe, corn bruised without a pestle, or heaped up without brooms. Hence the names of the deities, who prevented the wood-god *Silvanus* from molesting parturient females. (*Keightley's Mythology*, p. 537.) *Servius*, in place of *Picumnus*, uses the name *Pithumnus*, and makes this deity to have been the brother of *Pilumnus*, and to have discovered the art of manuring land; hence he was also called *Stercutius* and *Sterquilinus*, from *stercus*, "manure." The same authority makes *Pilumnus* to have invented the art of pounding corn in a mortar (*pilum*), whence his name. (*Serv. ad Virg., Æn.*, 9, 4.—Compare *Plin.*, 3, 18.) Some of the ancient grammarians regarded these two deities as identical with *Castor* and *Pollux*, than which nothing can be more erroneous. *Piso*, one of this class of writers, deduced the name *Pilumnus* from *pello*, "to drive away" or "avert," because he averted the evils that are incident to infancy, "*quia pellit mala infantia*." (*Spangenberg, Vet. Lat. Relig. Domest.*, p. 65.)

PICUS, a fabulous king of Latium, son of Saturn, and celebrated for his beauty and his love of steeds. He married *Canens*, the daughter of *Janus* and *Venilia*, renowned for the sweetness and power of her voice. One day *Picus* went forth to the chase clad in a purple cloak, bound round his neck with gold. He entered the wood where *Circe* happened to be at that time gathering magic herbs. She was instantly struck with love, and implored the prince to respond to her passion. *Picus*, faithful to his beloved *Canens*, indignantly spurned her advances, and *Circe*, in revenge, struck him with her wand, and instantly he was changed into a bird with purple plumage and a yellow ring around its neck. This bird was called by his name *Picus*, "the woodpecker." (*Ovid, Met.*, 14, 320, seqq.—*Plut., Quart. Rom.*, 21.) *Servius* says that *Picus* was married to *Pomona* (*ad Æn.*, 7, 190).—This legend seems to have been devised to give an origin for the woodpecker after the manner of the Greeks. (*Keightley's Mythology*, p. 536.—Compare *Spangenberg, Vet. Lat. Rel. Dom.*, p. 62.)

PINAKIA, l. a region of Macedonia, directly north of Thessaly, and extending along the Thracian Gulf. It formed one of the most interesting parts of Macedonia, both in consideration of the traditions to which it has given birth, as being the first seat of the Muses, and the birthplace of *Orpheus*; and also of the important events which occurred there at a later period, involving the destiny of the Macedonian empire, and many other parts of Greece. The name of *Pieria*,

which was known to *Homer* (*Il.*, 14, 236), was derived apparently from the *Pieræa*, a Thracian people, who were subsequently expelled by the *Temendæ*, the conquerors of Macedonia, and driven north beyond the *Strymon* and *Mount Pangæus*, where they formed a new settlement. (*Thucyd.*, 2, 99.—*Herod.*, 7, 112.) The boundaries which historians and geographers have assigned to this province vary; for *Strabo*, or, rather, his epitomiser, includes it between the *Haliacmon* and *Axius*. (*Strab.*, 330.) *Livy* also seems to place it north of *Dium* (44, 9), while most authors ascribe that town to *Pieria*. Ptolemy gives the name of *Pieria* to all the country between the mouth of the *Peneus* and that of the *Ludias*. (*Cramer's Anc. Greece*, vol. 1, p. 204.)—II. A district of Syria, bounded on the west by the *Sinus Issicus*, on the north by *Mount Pierias* (the southern continuation of *Amanus*), from which the region received its name. (*Ptol.*—*Bischoff und Müller, Wörterb. der Geogr.*, p. 851.)

PIERIDES, I. a name given to the Muses, from the district of *Pieria*, their natal region. (*Vid. Musæ*).—II. The nine daughters of *Pierus*, who challenged the Muses to a contest of skill, and were overcome and changed into magpies. Some suppose that the victorious Muses took their name, just as *Minerva*, according to some authorities, assumed that of the giant *Pallas* after she had conquered him. (*Ovid, Met.*, 5, 300.)

PIRÆUS, a native of Thessaly, father of the *Pierides* who challenged the Muses. (*Vid. Pierides*, II.)

PIGÆUM MARE, an appellation given to the extreme Northern Ocean, from its being supposed to be in a semi-congealed or sluggish state. (*Plin.*, 4, 13.—*Tacit., Germ.*, 45.)

PILUMNUS. *Vid. Picumnus*.

PIMPLÆA, a small town of Macedonia, not far from *Dium* and *Libethra*, where *Orpheus* was said by some to have been born. (*Strab., Epic.*, 330.—*Apollon. Rhod.*, 1, 23, et *Schol. ad loc.*—*Lycophr.*, v. 273.)

PINARIUS and **POTITII**, two distinguished families among the subjects of *Evander*, at the time when *Hercules* visited Italy on his return from Spain. A sacrifice having been offered to the hero by *Evander*, the *Potitii* and *Pinarii* were invited to assist in the ceremonies and share the entertainment. It happened that the *Potitii* attended in time, and the entrails were served up to them; the *Pinarii*, arriving after the entrails were eaten, came in for the rest of the feast; hence it continued a rule, as long as the *Pinarian* family existed, that they should not eat of the entrails. The *Potitii*, instructed by *Evander*, were directors of that solemnity for many ages, until the solemn office of the family was delegated to public servants, on which the whole race of the *Potitii* became extinct. This desecration of the rites of *Hercules* was brought about, it is said, by the censor *Appius Claudius*, who induced the *Potitii* by means of a large sum of money to teach the manner of performing these rites to the public slaves mentioned above. (*Liv.*, 1, 7.—*Id.*, 9, 29.—*Festus*, s. v. *Potitium*.—*Serv. ad Æn.*, 8, 269.)

PINARUS, a river of Cilicia Campestris, rising in *Mount Amanus*, and falling into the *Sinus Issicus* near *Issus*. The Greek and Persian armies were at first drawn up on opposite banks of this stream: *Darius* on the side of *Issus*, *Alexander* towards *Syria*. The modern name of the *Pinarus* is the *Delicous*. (*French Strabo*, vol. 4, pt. 2, p. 384.)

PINDARUS, a celebrated lyric poet of Thebes, in *Boeotia*, born, according to *Böckh*, in the spring of 522 B.C. (*Olympiad* 64.3), and who died, according to a probable statement, at the age of eighty. (*Pindar, ed. Böckh*, vol. 3, p. 12.—Compare *Clinton, Fast. Hell.*, vol. 1, p. 17, who makes his birth-year 516 B.C.) He was, therefore, nearly in the prime of life at the time when *Xerxes* invaded Greece, and when the battles of *Thermopylæ* and *Salamis* were fought;

and he thus belongs to that period of the Greek nation when its great qualities were first distinctly unfolded, and when it exhibited an energy of action and a spirit of enterprise never afterward surpassed, together with a love of poetry, art, and philosophy, which produced much, and promised to produce more. His native place was Cynocephala, a village in the territory of Thebes, and the family of the poet seems to have been skilled in music: since we learn from the ancient biographies of him, that his father or his uncle was a flute-player. But Pindar, very early in life, soared far beyond the sphere of a flute-player at festivals, or even a lyric poet of merely local celebrity. Although, in his time, the voices of Pærian bards, and of epic poets of the Hesiodic school, had long been mute in Bœotia, yet there was still much love for music and poetry, which had taken the prevailing form of lyric and choral compositions. That these arts were widely cultivated in Bœotia is proved by the fact that two females, Myrtis and Corinna, had attained celebrity in them during the youth of Pindar. Both were competitors with him in poetry. Myrtis strove with the bard for a prize at public games; and although Corinna said, "It is not meet that the clear-toned Myrtis, a woman born, should enter the lists with Pindar," yet she is said (perhaps from jealousy of his rising fame) to have often contended against him in the agonies, and five times to have gained the victory. (*Ælian*, V. H., 13, 24.) Corinna also assisted the young poet with her advice; and it is related of her, that she recommended him to ornament his productions with mythical narrations; but that, when he had composed a hymn, in the first six verses of which (still extant) almost the whole of the Theban mythology was introduced, she smiled and said, "We should sow with the hand, not with the whole sack."—Pindar placed himself under the tuition of Lasus of Hermione, a distinguished poet, but probably better versed in the theory than the practice of poetry and music. Since Pindar made these arts the whole business of his life, and was nothing but a poet and musician, he soon extended the boundaries of his art to the whole Greek nation, and composed poems of the choral lyric kind for persons in all parts of Greece. At the age of twenty he composed a song of victory in honour of a Thessalian youth belonging to the family of the Aleuadæ (*Pyth.* 10, composed in Olympiad 69.3, B.C. 502). We find him employed soon afterward for the Sicilian rulers, Hiero of Syracuse and Theron of Agrigentum; for Arceilaus, king of Cyrene, and Amyntas, king of Macedonia, as well as for the free cities of Greece. He made no distinction according to the race of the persons whom he celebrated: he was honoured and loved by the Ionian states for himself as well as for his art: the Athenians made him their public guest (*πρόξενος*); and the inhabitants of Ceos employed him to compose a processional song (*προσόδιον*), although they had their own poets, Simonides and Bacchylides. Pindar, however, was not a common mercenary poet, always ready to sing the praises of him whose bread he ate. He received, indeed, money and presents for his poems, according to the general usage previously introduced by Simonides; yet his poems are the genuine expression of his thoughts and feelings. In his praises of virtue and good fortune, the colours which he employs are not too vivid: nor does he avoid the darker shades of his subject; he often suggests topics of consolation for past and present evil, and sometimes warns and exhorts to avoid future calamity. Thus he ventures to speak freely to the powerful Hiero, whose many great and noble qualities were alloyed by insatiable cupidity and ambition, which his courtiers well knew how to turn to a bad account; and he addresses himself in the same manly tone to Arceilaus IV., king of Cyrene, who afterward brought on the ruin of his dynasty by his tyrannical severity. Thus lofty and dignified

was the position which Pindar assumed with regard to these princes; and, in accordance with this, he frequently proclaims, that frankness and sincerity are always laudable. But his intercourse with the princes of his time appears to have been limited to poetry. We do not find him, like Simonides, the daily associate, counsellor, and friend of kings and statesmen; he plays no part in the public events of the time, either as a politician or a courtier. Neither was his name, like that of Simonides, distinguished in the Persian war: partly because his fellow-citizens, the Thebans, were, together with half of the Grecian nation, on the Persian side, while the spirit of independence and victory was with the other half. Nevertheless, the lofty character of Pindar's muse rises superior to these unfavourable circumstances. He did not, indeed, make the vain attempt of gaining over the Thebans to the cause of Greece; but he sought to appease the internal dissensions which threatened to destroy Thebes during the war, by admonishing his fellow-citizens to union and concord (*Polyb.*, 4, 31, 5.—*Fræg. incert.*, 125, ed. Böckh); and, after the war was ended, he openly proclaims, in odes intended for the Æginetans and Athenians, his admiration of the heroism of the victors.—Having mentioned nearly all that is known of the events of Pindar's life, and his relations to his contemporaries, we proceed to consider him more closely as a poet, and to examine the character and form of his poetical productions. The only class of poems which enable us to judge of Pindar's general style are the *ἐπινίκια*, or *triumphal odes*. Pindar, indeed, excelled in all the known varieties of choral poetry; namely, hymns to the gods, pæans, and dithyrambs appropriate to the worship of particular divinities, odes for processions (*προσόδια*), songs of maidens (*ραπθέραι*), mimic dancing songs (*ἐπαρχήματα*), drinking songs (*σκολιά*), dirges (*θρήνοι*), and encomiastic odes to princes (*ἐγκύμια*), which last approached most nearly to the *ἐπινίκια*. The poems of Pindar in these various styles were nearly as renowned among the ancients as the triumphal odes, which is proved by the numerous quotations of them. Horace, too, in enumerating the different styles of Pindar's poetry, puts the dithyramb first, then the hymns, and afterward the epinikia and the dirges. Nevertheless, there must have been some decided superiority in the epinikia, which caused them to be more frequently transcribed in the later period of antiquity, and thus rescued them from perishing with the rest of the Greek lyric poetry. At any rate, these odes, from the vast variety of their subjects and style, and their refined and elaborate structure, some approaching to hymns and pæans, others to scolia and hyporchemes, serve to indemnify us for the loss of the other sorts of lyric poetry. We will now explain, as briefly as possible, the occasion of an epinikian ode, and the mode of its execution. A victory has been gained in a contest at a festival, particularly at one of the four great games most prized by the Greeks. Such a victory as this, which shed a lustre not only on the victor himself, but on his family, and even on his native city, demanded a solemn celebration. This celebration might be performed by the victor's friends on the spot where the prize was obtained; as, for example, at Olympia, when, in the evening, after the termination of the contests, by the light of the moon, the whole sanctuary resounded with joyful songs after the manner of encomia; or it might be deferred till after the victor's solemn return to his native city, where it was sometimes repeated in following years, in commemoration of his success. A celebration of this kind always had a religious character; it often began with a procession to an altar or temple, in the place where the games had been held, or in the native city of the conqueror; a sacrifice, followed by a banquet, was then offered at the temple, or in the house of the victor; and the whole solemnity concluded

ded with the merry and boisterous revel called by the Greeks *αἶμος*. At this sacred and, at the same time, joyous solemnity (a mingled character frequent among the Greeks), appeared the chorus, trained by the poet or some other skilled person, for the purpose of reciting the triumphal hymn, which was considered the fairest ornament of the festival. It was during either the procession or the banquet that the hymn was recited, as it was not properly a religious hymn, which could be combined with the sacrifice. The form of the poem must, to a certain extent, have been determined by the occasion on which it was to be recited. From expressions which occur in several epinikian odes, it is probable that all odes consisting of strophes without epodes were sung during a procession to a temple or to the house of the victor; although there are others which contain expressions denoting movement, and which yet have epodes. It is possible that the epodes in the latter odes may have been sung at certain intervals when the procession was not advancing; for an epode, according to the statements of the ancients, always required that the chorus should be at rest. But by far the greater number of the odes of Pindar were sung at the *Comos*, at the jovial termination of the feast: and hence Pindar himself more frequently names his odes from the *Comos* than from the victory. The occasion of the epinikian ode—a victory in the sacred games—and its end—the ennobling of a solemnity connected with the worship of the gods—required that it should be composed in a lofty and dignified style. But, on the other hand, the boisterous mirth of the feast did not admit the severity of the antique poetic style, like that of the hymns and *nomos*; it demanded a free and lively expression of feeling, in harmony with the occasion of the festival, and suggesting the noblest ideas connected with the victor. Pindar, however, gives no detailed description of the victory, as this would have been only a repetition of the spectacle which had already been beheld with enthusiasm by the assembled Greeks; nay, he often bestows only a few words on the victory, recording its place, and the sort of contest in which it was won. On the other hand, we often find a precise enumeration of all the victories, not only of the actual victor, but of his entire family: this must evidently have been required of the poet. Nevertheless, he does not (as many writers have supposed) treat the victory as a merely secondary object; which he despatches quickly, in order to pass on to objects of greater interest. The victory, in truth, is always the point upon which the whole of the ode turns; only he regards it, not simply as an incident, but as connected with the whole life of the victor. Pindar establishes this connexion by forming a high conception of the fortunes and character of the victor, and by representing the victory as the result of them. And as the Greeks were less accustomed to consider a man in his individual capacity than as a member of his state and his family, so Pindar considers the renown of the victor in connexion with the past and the present condition of the race and state to which he belongs. Even, however, when the skill of the victor is put in the foreground, Pindar, in general, does not content himself with celebrating this bodily prowess alone, but he usually adds some moral virtue which the victor has shown, or which he recommends and extols. This virtue is sometimes moderation, sometimes wisdom, sometimes filial love, sometimes piety to the gods. The latter is frequently represented as the main cause of the victory; the victor having thereby obtained the protection of the deities who preside over gymnastic contests, as Mercury or the Dioscuri.—Whatever might be the theme of one of Pindar's epinikian odes, it would naturally not be developed with the systematic completeness of a philosophical treatise. Pindar, however, has undoubtedly much of that sententious

wisdom, which began to show itself among the Greeks at the time of the Seven Wise Men, and which formed an important element of elegiac and choral lyric poetry before the time of Pindar.—The other element of his poetry, his mythical narratives, occupies, however, far more space in most of his odes. That these are not mere digressions for the sake of ornament has been fully proved by modern commentators.—This admixture of apophthegmatic maxims and typical narratives would alone render it difficult to follow the thread of Pindar's meaning; but, in addition to this cause of obscurity, the entire plan of his poetry is so intricate, that a modern reader often fails to understand the connexion of the parts, even where he thinks he has found a clew. Pindar begins an ode full of the lofty conception which he has formed of the glorious destiny of the victor; and he seems, as it were, carried away by the flood of images which this conception pours forth. He does not attempt to express directly the general ideas, but follows the strain of thought which it suggests into its details, though without losing sight of their reference to the main object. Accordingly, when he has pursued a train of thought, either in an apophthegmatic or mythical form, up to a certain point, he breaks off, before he has gone far enough to make the application to the victor sufficiently clear; he then takes up another thread, which is, perhaps, soon dropped for a fresh one; and at the end of the ode he gathers up all these different threads, and weaves them together into one web, in which the general idea predominates. By reserving the explanations of his allusions until the end, Pindar contrives that his odes should consist of parts which are not complete or intelligible in themselves; and thus the curiosity of the reader is kept on the stretch throughout the entire ode.—The characteristics of Pindar's poetry, which have just been explained, may be discovered in all his epinikian odes. Their agreement, however, in this respect, is quite consistent with the extraordinary variety of style and expression which belongs to this class of poems. Every epinikian ode of Pindar has its peculiar tone, depending upon the course of the ideas and the consequent choice of the expressions. The principal differences are connected with the choice of the rhythms, which again is regulated by the musical style. According to the last distinction, the epinikia of Pindar are of three sorts, Doric, Æolic, and Lydian; which can be easily distinguished, although each admits of innumerable varieties. In respect of metre, every ode of Pindar has an individual character, no two odes being of the same metrical structure. In the Doric ode the same metrical forms occur as those which prevailed in the choral lyric poetry of Stesichorus, namely, systems of dactyls and trochaic dipodies, which most nearly approach the stateliness of the hexameter. Accordingly, a severe dignity pervades these odes; the mythical narrations are developed with greater fulness, and the ideas are limited to the subject, and are free from personal feeling; in short, their general character is that of calmness and elevation. The language is epic, with a slight Doric tinge, which adds to its brilliancy and dignity. The rhythms of the Æolic odes resemble those of the Lesbian poetry, in which light dactylic, trochaic, or logæædic metres prevailed: these rhythms, however, when applied to choral lyric poetry, were rendered far more various, and thus often acquired a character of greater volubility and liveliness. The Æolic odes, from the rapidity and variety of their movement, have a less uniform character than the Doric odes; for example, the first Olympic, with its joyous and glowing images, is very different from the second, in which a lofty melancholy is expressed, and from the ninth, which has an air of proud and complacent self-reliance. The language of the Æolic epinikia is also bolder, more difficult in its syn-

tax, and marked by rarer dialectic forms. Lastly, there are the Lydian odes, the number of which is inconsiderable: their metre is mostly trochaic, and of a particularly soft character, agreeing with the tone of the poetry. Pindar appears to have preferred the Lydian rhythms for odes which were destined to be sung during a procession to a temple or at the altar, and in which the favour of the deity was implored in an humble spirit. (*Müller, Gr. Lit.*, p. 216, *seqq.*)

—The scholar comes to the study of Pindar, as to that of one whom fable and history, poetry and criticism, have alike delighted to honour. The writers of Greece speak of him as the man whose birth was celebrated by the songs and dances of the deities themselves, in joyous anticipation of those immortal hymns which he was to frame in their praise; to whom in after life the God of Poetry himself devoted a share of the offerings brought to his shrine, and conceded a chair of honour in his most favoured temple. These were indeed fables, but fables that evinced the truth: the reputation which they testified went on increasing in magnitude and splendour. The glory of succeeding poets, the severity of the most refined criticism, the spread of sceptic philosophy no way impaired it; it was not obscured by the literary darkness of his country; it was not overpowered by the literary brightness of rival states. The fastidious Athenian was proud of the compliment paid to his city by a Boeotian; the elegant Rhodian inscribed his verses in letters of gold within the temple of his guardian deity; and, in a later age, Alexander, the son of Philip, "bade spare the house of Pindarus," when Thebes fell in ruins beneath his hand. Pindar has not improperly been called the Sacerdotal Poet of Greece; and that he must have been of high consideration with the priesthood will be easily believed. He stood forth the champion of the "graceful religion of Greece;" and he seems to have laboured, on the one hand, to defend it from the sneers and profaneness of the philosophers; and, on the other, to spiritualize it, and to prevent its degenerating into the mere image-worship of the vulgar. His deities, therefore, are neither like those of Homer, nor the insulted Olympians of Æschylus; they come in visions of the night; they stand in a moment before the eyes of the mortal who prays to them, and whom they deign to favour; they see and hear all things; they flit in an instant from land to land, and the elements yield, and are innoxious to their impassible forms. But these forms are not minutely described; the fables respecting them are rejected in the whole as untrue, or better versions of them are given. With Pindar the deity is not the capricious, jealous being, whose evil eye the fortunate man has reason to tremble at; but just, benignant, the author and wise ruler of all things: whom it is dreadful to slander, and with whom it is idle to contend: he moulds everything to his will; he bows the spirit of the high-minded, and crowns with glory the moderate and humble; he is the guardian of princes, and if he deign not to be a guide to the ruler of the city, it is hard indeed to restore the people to order and peace. Nor is this all. Pindar is not merely a devout, but he is also an eminently moral poet. Plato observes of him, in the Menon, that he maintained the immortality of the soul; and he lays down, with remarkable distinctness, the doctrine of future happiness or misery. On principles such as these, it is no wonder that Pindar's poetry should abound with maxims of the highest morality in every part; not a page, indeed, is without them. They spread a colour over the whole, of which no idea can be given by a few extracts. (*Quarterly Review*, No. 66, p. 410, *seqq.*)—We have remaining, at the present day, forty-five of the Epinikia, or triumphal odes of Pindar, together with some few fragments of his other productions. The Epinikia are divided into four classes or kinds, and derive their names respectively from

the four great games of Greece. Thus we have, 1st, *Olympic Odes*, to the number of fourteen; 2d, *Pythian*, to the number of twelve; 3d, *Nemean*, eleven in number; and, 4th, *Isthmian*, amounting to eight. This division, however, is not that of the poet himself; we owe it to the grammarian Aristophanes of Byzantium. This individual selected out of the general collection of Epinikia a certain number of pieces that had reference, more or less, to victories gained at the several games of Greece. It did not suffice, in the eyes of this critic, that an ode should celebrate some victory gained in these assemblies in order to be judged worthy of a place in his selection; for there are fragments remaining of the poems of Pindar which have direct allusion to such subjects, and yet were excluded by Aristophanes. On the other hand, we find, in the selection made by him, one ode, having no reference to any particular victory, namely, the second Pythian; as well as some others, which, though they celebrate deeds of martial prowess, contain no mention whatever of those peculiar exploits, of which the four great national celebrations of the Hellenic race were respectively the theatres.—Hermann has shown, that the basis of Pindar's diction is epic, but that he employs Doric forms as often as they appear more expressive, or are better adapted to the metre which he employs. Sometimes he gives the preference to Æolic forms, which was his native dialect. Hermann also remarks, that the verses of Pindar abound in *hiatus*, without there being any appearance of his having used the digamma, which in his days had partially disappeared from the Æolic dialect, and which Alcæus and Sappho had only occasionally employed. After the example of the ancient poets, he makes the vowel long which is followed by a mute and liquid. The remark of Hermann respecting the mixture of dialects in Pindar has been acquiesced in by Böckh, who observes, that the copyists have frequently removed the Doricisms from the Olympic Odes, while they have been preserved more carefully in the other works of the poet.—The best edition of Pindar is that of Böckh, *Lips.*, 1811–23, 3 vols. 4to. The text is corrected by the aid of thirty-seven MSS. Previous to the appearance of this edition, that of Heyne was regarded as the best. Heyne's work appeared in 1773, *Götting.*, 2 vols. 8vo. A second edition of it was published in 1798, *Götting.*, 3 vols. 8vo, containing Hermann's commentary on the metres of Pindar. The third edition appeared, after Heyne's death, in 1817, under the supervision of Schæffer. An excellent school and college edition, by L. Disson, based on that of Böckh, forms part of Jacobs's and Rost's "Bibliotheca Græca," *Goth. et Erfurd.*, 1830, 8vo. (*Schöll, Gesch. Gr. Lit.*, vol. 1, p. 196, *seqq.*—*Id. ib.*, vol. 3, p. 598.)

PINDENISSEUS, a city of Cilicia, belonging to the Eleuthero-Cilices. It was situated on a height of great elevation and strength, forming part of the range of Amanus. Cicero took it after a siege of 57 days, and compelled the Tibareni, a neighbouring tribe, to submit likewise. The modern *Behesni* is supposed to occupy its site. (*Cic., Ep. ad Fam.*, 15, 4.—*Id., Ep. ad Att.*, 5, 20.)

PINDUS, I. a name applied by the Greeks to the elevated chain which separates Thessaly from Epirus, and the waters falling into the Ionian Sea and Ambracian Gulf, from those streams which discharge themselves into the Ægean. Towards the north it joined the great Illyrian and Macedonian ridges of Bora and Scardus, while to the south it was connected with the ramifications of Ceta, and the Etolian and Acarnanian mountains. (*Herodotus*, 7, 129.—*Strabo*, 430.—*Pind.*, *Pyth.*, 9, 27.—*Virgil, Eclog.*, 10, 11.—*Ovid, Metamorph.*, 2, 224.—*Cramer's Ancient Greece*, vol. 1, p. 353.)—II. A town and river of Doris in Greece. The river flowed into the Cephissus at Lileæ, a Phocian town. According to Strabo, the

earlier name of the town was Acryphas. (*Strabo*, 437.)

PIRÆUM, a small fortress of Corinthia, on the Sinus Corinthiacus, and not far from the promontory of Olmis. It was taken on one occasion by Agesilaus. (*Xen., Hist. Gr.*, 4, 5, 5.—*Id.*, *Vit. Ages.*, 2, 18.) We must not confound this place with the Corinthian harbour of Piræus, on the Sinus Saronicus, near the confines of Argolis. (*Cramer's Ancient Greece*, vol. 3, p. 34.)

PIRÆUS (Πειραιῆς), or ΠΙΡÆΥΣ (Πειραιεύς), a celebrated and capacious harbour of Athens, at some distance from it, but joined to it by long walls, called *μακρὰ τεῖχη*. The southern wall was built by Themistocles, and was 36 stadia long and 40 cubits high; this height was but half of what Themistocles designed. The northern was built by Pericles; its height the same as the former, its length 40 stadia. Both of these walls were sufficiently broad on the top to admit of two wagons passing each other. The stones were of an enormous size, joined together without any cement, but with clamps of iron and lead, which, with their own weight, easily sufficed to unite walls even of so great a height as 40 cubits (60 feet). Upon both of the walls a great number of turrets were erected, which were turned into dwelling-houses when the Athenians became so numerous that the city was not large enough to contain them. The wall which encompassed the Munychia, and joined it to the Piræus, was 60 stadia, and the exterior wall on the other side of the city was 43 stadia, in length. Athens had three harbours, of which the Piræus was by far the largest. East of it was the second one, called Munychia; and, still farther east, the third, called Phalerus, the least frequented of the three. The entrance of the Piræus was narrow, being contracted by two projecting promontories. Within, however, it was very capacious, and contained three large basins or ports, named Cantharus, Aphrodisus, and Zea. The first was called after an ancient hero, the second after Venus, the third from the term *ζῆα*, signifying *bread-corn*. The Piræus is said to have been capable of containing 300 ships. The walls which joined it to Athens, with all its fortifications, were totally demolished when Lysander put an end to the Peloponnesian war by the reduction of Attica. They were rebuilt by Conon with the money supplied by the Persian commander Pharnabazus, after the defeat of the Lacedæmonians, in the battle off the Arginusæ Insule. In after days the Piræus suffered greatly from Sylla, who demolished the walls, and set fire to the armory and arsenals. It must not be imagined, however, that the Piræus was a mere harbour. It was, in fact, a city of itself, abounding with temples, porticoes, and other magnificent structures. Strabo compares the maritime part of Athens to the city of the Rhodians, since it was thickly inhabited, and enclosed with a wall, comprehending within its circuit the Piræus and the other ports. Little, however, remains of the former splendour of the Piræus. According to Hobhouse, nothing now is left to lead one to suppose that it was ever a large and flourishing port. (*Journey*, vol. 1, p. 299.) The ancient Zea is a marsh, and Cantharus of but little depth. The deepest water is at the mouth of the ancient Aphrodisus. He adds, that the ships of the ancients must have been extremely small, if 300 could be contained within the Piræus, since he saw an Hydriote merchant-vessel, of about 200 tons, at anchor in the port, which appeared too large for the station, and an English sloop of war was warned that she would run aground if she attempted to enter, and was therefore compelled to anchor in the straits between Salamis and the port once called Phoron. The Piræus is now called *Draco* by the Greeks, but by the Franks *Porto Leone*, from the figure of a stone lion with which it was anciently adorned, and which was carried away by the Venetians.

1. Athenian Imports and Exports.

The commodities which Attica did not produce within her own territory, were obtained by foreign commerce, and, unless the importation was prevented by some extraordinary obstacle, such, for example, as war, there could be no danger of a scarcity, even in the case of a failure of the crops, because it consumed the surplus produce of other countries. (*Xen., Repub. Ath.*, 2, 6.) Although not an island, yet it possessed all the advantages of insular position, that is, excellent harbours conveniently situated, in which it received supplies during all winds; in addition to which, it had sufficient facilities for inland traffic: the intercourse with other countries was promoted by the purity of the coin, as the merchant, not being obliged to take a return freight, had the option of carrying out bullion, although Athens abounded in commodities which would meet with a ready sale. (*Xen., de Vect.*, 1, 7.) If a stagnation in trade was not produced by war or piracy, all the products of foreign countries came to Athens; and articles which in other places could hardly be obtained single, were collected together at the Piræus. (*Thucyd.*, 2, 38.—*Isocr.*, *Paneg.*, p. 34, *ed. Hall.*) Besides the corn, the costly wines, iron, brass, and other objects of commerce, which came from all the regions of the Mediterranean, they imported from the coasts of the Black Sea slaves, timber for ship-building, salt fish, honey, wax, tar, wool, rigging, leather, goatskins, &c.; from Byzantium, Thrace, and Macedonia, timber, slaves, and salt fish; also, slaves from Thessaly, whither they came from the interior; and carpets and fine wool from Phrygia and Miletus. "All the finest products," says Xenophon, "of Sicily, of Italy, Cyprus, Lydia, the Pontus, and the Peloponnesus, Athens, by her empire of the sea, is able to collect into one spot." (*Repub. Ath.*, 2, 7.) To this far-extended intercourse the same author attributes the mixture of all dialects which prevailed at Athens, and the admission of barbarous words into the language of ordinary life. On the other hand, Athens conveyed to different regions the products of her own soil and labour; in addition to which, the Athenian merchant trafficked in commodities which they collected in other countries. Thus, they took up wine from the islands and shores of the Ægean Sea, at Peparethus, Cos, Thasus, and elsewhere, and transported it to the Euxine. (*Demosth. in Lacrit.*, p. 935.) The trade in books alone appears to have made but small advances in Greece, a branch of industry which was more widely extended in the Roman Empire after the reign of Augustus. There was, it is true, a book-market (*τὰ βιβλία*) at Athens (*Jul. Poll.*, 9, 47), and books were exported to the Euxine and to Thrace (*Xen., Anab.*, 7, 5, 14), but there can be no doubt that the books meant were merely blank volumes. The trade in manuscripts was in the time of Plato so little common, that Hermodorus, who sold the books of this writer in Sicily, gave occasion to a proverb, "Hermodorus carries on trade with writings." (*Cic., Ep. ad Att.*, 13, 21.—*Suid.*, s. v. λόγιον ἐμπορεύειν.) At a subsequent period, while Zeno the Stoic was still a youth, dealers in manuscripts are mentioned as having been at Athens. (*Diog. Laert.*, in *Vit.*) The merchant-vessels appear to have been of considerable size; not to quote an extraordinary instance, we find in Demosthenes (in *Phorm.*) a vessel of this kind, which, besides the cargo, the slaves, and the ship's crew, carried 300 free inhabitants. (*Böckh, Public Economy of Athens*, vol. 1, p. 65, *seqq.*, *Eng. transl.*)

2. Credit System of the Athenians.

The advocates for a credit system at the present day will be agreeably surprised to find one fully established among the Athenians, and deemed by that in-

telligent people essential to commercial operations. The system of banking pursued at Athens gave occasion to a new kind of money, constructed upon the credit of individuals or of companies, and acting as a substitute for the legal currency. In the time of Demosthenes (vol. 2, p. 1236, *ed. Reiske*), and even at an earlier period, bankers appear to have been numerous, not only in Piræus, but also in the upper city; and it was principally by their means that capital, which would otherwise have been unemployed, was distributed and made productive. Athenian bankers were, in many instances, manufacturers or speculators in land, conducting the different branches of their business by means of partners or confidential servants, and acquiring a sufficient profit to remunerate themselves, and to pay a small rate of interest for the capital entrusted to them. But this was not the only benefit they imparted to the operations of commerce. Their ledgers were books of transfer, and the entries made in them, although they cannot properly be called a part of the circulation, acted in all other respects as bills of exchange. In this particular their banks bore a strong resemblance to modern banks of deposits. A depositor desired his banker to transfer to some other name a portion of the credit assigned to him in the books of the bank (*Demosth., πρὸς Καλλίμ.*—vol. 2, p. 1236, *ed. Reiske*); and by this method, aided, as it probably was, by a general understanding among the bankers (or, in the modern phrase, a clearing house), credit was easily and constantly converted into money in ancient Athens. "If you do not know," says Demosthenes, "that credit is the readiest capital for acquiring wealth, you know positively nothing." (*Εἰ δὲ τοῦτο ἀγνοεῖς, οὐκ οἶστίς τις ἀπορρὴ τῶν πᾶσιν ἐστὶ μεγίστη πρὸς χρηματισμὸν, πᾶν ἂν ἀνθρώπου.*—vol. 2, p. 958, *ed. Reiske*.) The spirit of refinement may be traced one step further. Orders were certainly issued by the government in anticipation of future receipts, and may fairly be considered as having had the force and operation of exchequer bills. They were known by the name of *δυνατολογήματα*. We learn, for instance, from the inscription of the Choiseul marble (*Böckh, Corp. Inscript.*, vol. 1, p. 219), written near the close of the Peloponnesian war, that bills of this description were drawn at that time by the government at Athens on the receiver-general at Samos, and made payable, in one instance, to the paymaster at Athens; in another, to the general of division at Samos. These bills were doubtless employed as money, on the credit of the in-coming taxes, and entered probably, together with others of the same kind, into the circulation of the period. (*Cardwell's Lectures on the Coinage of the Greeks and Romans*, p. 20, *seqq.*)

PIRÆUS, a fountain near Corinth, on the route from the city to the harbour of Lechæum. According to the statement of Pausanias (2, 3), the fountain was of white marble, and the water issued from various artificial caverns into one open basin. This fountain is celebrated by the ancient poets as being sacred to the Muses, and here Bellerophon is said to have seized the winged horse Pegasus, preparatory to his enterprise against the Chimæra. (*Pind., Olymp.*, 13, 85. —*Eurip., Med.*, 67. —*Id., Troad.*, 205. —*Soph., Electr.*, 475, &c.) The fountain was fabled to have derived its name from the nymph Pirene, who was said to have dissolved in tears at the death of her son Cenchreas, accidentally slain by Diana. (*Pausan., l. c.*)

PIRITHOÛS, son of Ixion and Dia, and one of the chieftains of, according to another account, the monarch of the Lapithæ. He is memorable in mythological narrative for his friendship with Theseus, which, though of a most intimate nature, originated nevertheless in the midst of arms. The renown of Theseus having spread widely over Greece, Pirithoûs, it seems, became desirous of not only beholding him, but also

of witnessing his exploits, and he accordingly made an irruption into the plain of Marathon, and carried off the herds of the King of Athens. Theseus, on receiving information, went to repel the plunderers. The moment Pirithoûs beheld him, he was seized with secret admiration, and, stretching out his hand as a token of peace, exclaimed, "Be judge thyself! What satisfaction dost thou require?"—"Thy friendship," replied the Athenian; and they thereupon swore eternal fidelity. Theseus and Pirithoûs were both present at the hunt of the Calydonian boar; and the former also took part in the famous conflict between the Centaurs and Lapithæ. The cause of this contest was as follows: Pirithoûs, having obtained the hand of Hippodamia, daughter of Adrastus, king of Argos, the chiefs of his nation, the Lapithæ, were all invited to the wedding, as were also the Centaurs, who dwelt in the neighbourhood of Pelion. Theseus, Nestor, and other strangers were likewise present. At the feast, Eurytion, one of the Centaurs, became intoxicated with the wine, and attempted to offer violence to the bride. A dreadful conflict thereupon arose, in which several of the Centaurs were slain, and they were finally driven from Pelion, and obliged to retire to other regions. (*Vid. Lapithæ.*)—Like faithful comrades, Theseus and Pirithoûs aided each other in every project, and, the death of Hippodamia having subsequently left Pirithoûs free to form a new attachment, the two friends, equally ambitious in their love, resolved to possess each a daughter of the king of the gods. Theseus fixed his thoughts on Helen, then a child of but nine years. The friends planned the carrying her off, and succeeded. Placing her under the care of his mother Æthra, at Aphidnæ, Theseus prepared to assist his friend in a bolder and more perilous attempt: for Pirithoûs resolved to venture on the daring deed, of carrying away from the palace of the monarch of the under-world his queen Proserpina. Theseus, though aware of the risk, would not abandon his friend. They descended together to the region of shadows; but Pluto, knowing their design, seized them, and placed them upon an enchanted rock at the gate of his realms. Here they sat, unable to move, till Hercules, passing by in his descent for Cerberus, freed Theseus, having taken him by the hand and raised him up; but when he would do the same for Pirithoûs, the earth quaked, and he left him. Pirithoûs therefore remained everlastingly on the rock, in punishment of his audacious attempt. (*Apollod.*, 1, 8, 2.—*Id.*, 2, 5, 12.—*Plut., Vit. These.*—*Hygin., fab.*, 14, 79, 155.—*Virg., Æn.*, 7, 304.—*Keightley's Mythology*, p. 316, 323, 392.)

PISA, an ancient city of Elis, giving name to the district of Pisatis, in which it was situated. Tradition assigned its foundation to Pissus, grandson of Æolus (*Pausan.*, 6, 32); but, as no trace of it remains, its very existence was questioned in later ages, as we are informed by Strabo (356), some affirming that there was only a fountain of the name, and that those writers who spoke of a city meant only to express the kingdom or principality of the Pisatæ, originally composed of eight towns. Other authors, however, have acknowledged its existence (*Pind., Ol.*, 2, 4.—*Id., Ol.*, 10, 61); and Herodotus states that the distance from Pisa to Athens was 1485 stadia (2, 7). Its site was commonly supposed to be on a hill between two mountains, named Ossa and Olympus, and on the left bank of the Alpheûs (*Strabo, l. c.*); but Pausanias could nowhere discover any vestiges of a town, the soil being entirely covered with vines. (*Pausan., l. c.*—*Plin.*, 4, 5.—*Schol. ad Pind., Olymp.*, 10, 55.) It is generally agreed that the Pisatæ were in possession of the temple of Olympia, and presided at the celebration of the games from the earliest period of their institution, till their rights were usurped by the Eleans and Heraclidæ. They did not, however, tamely sub-

mit to this injury on the part of their more powerful neighbours, and, having procured the assistance of Phidon, tyrant of Argos, recovered Olympia, where, in the eighth Olympiad, they again celebrated the festival; but the Eleans, in their turn, obtaining succour from Sparta, defeated Phidon, and once more expelled the Pisates from Olympia. (*Ephor., ap. Strab.*, 358.—*Pausan.*, 6, 22.) These, during the 34th Olympiad, being at that time under the authority of Pantaleon, who had possessed himself of the sovereign power, made another effort to regain their ancient prerogative, and, having succeeded in vanquishing their opponents, retained possession of the disputed ground for several years. The final struggle took place in the forty-eighth Olympiad, when the people of Pisa, as Pausanias affirms, supported by the Triphylia, and other neighbouring towns which had revolted from Elis, made war upon that state. The Eleans, however, aided by Sparta, proved victorious, and put an end for ever to this contest by the destruction of Pisa and the other confederate towns. (*Pausan.*, 6, 22.—*Strabo*, 355.) According to the scholiast on Pindar, the city of Pisa was distant only six stadia from Olympia, in which case we might fix its site near that of *Miracca*, a little to the east of the celebrated spot now called *Antitalla*; but Pausanias evidently leads us to suppose it stood on the opposite bank of the river. (*Cramer's Anc. Greece*, vol. 3, p. 93, *seqq.*)

Piaæ (or *Pisa*, as it is sometimes written), a city of Etruria, on the river Arnus or *Arno*, about a league from its mouth. We learn from Strabo (222), that formerly it stood at the junction of the Ausar (*Serchio*) and Arnus, but now they both flow into the sea by separate channels. The origin of *Piaæ* is lost amid the fables to which the Trojan war gave rise, and which are common to so many Italian cities. If we are to believe a tradition recorded by Strabo (*l. c.*), it owed its foundation to some of the followers of Nestor, in their wanderings after the fall of Troy. The poets have not failed to adopt this idea. (*Virg., Æn.*, 10, 179.—*Rutil.*, *Itin.*, 1, 565.) Lycophron says it was taken by Tyrrhenus from the Ligurians (v. 1241). Servius reports, that Cato had not been able to discover who occupied *Piaæ* before the Tyrrheni under Tarcho, with the exception of the Teutones, from which account it might be inferred that the most ancient possessors of *Piaæ* were of northern origin. (*Serv. ad Æn.*, 10, 179.) Dionysius of Halicarnassus names it among the towns occupied by the Pelasgi in the territory of the Siculi. The earliest mention we have of this city in Roman history is in Polybius (2, 16, and 27), from whom we collect, as well as from Livy (21, 39), that its harbour was much frequented by the Romans, in their communication with Sardinia, Gaul, and Spain. It was here that Scipio landed his army when returning from the mouths of the Rhone to oppose Hannibal in Italy. It became a colony 572 A.U.C. (*Liv.*, 41, 43.) Strabo speaks of it as having been formerly an important naval station: in his day it was still a very flourishing commercial town, from the supplies of timber which it furnished to the fleets, and the costly marbles which the neighbouring quarries afforded for the splendid palaces and villas of Rome. (Consult *Plin.*, 3, 5.—*Ptol.*, p. 64.) Its territory produced wine, and the species of wheat called *siligo*. (*Plin.*, 14, 3.—*Id.*, 18, 9.) The Portus Pisanus was at the mouth of the river, and is described by Rutilius. (*Itin.*, 1, 531.—*Cramer, Anc. It.*, vol. 1, p. 173.) The modern *Pisa* occupies the site of the ancient city.

PISANDER, I. an early Greek poet, born at Camirus, in the island of Rhodes, and supposed to have flourished about 660 B.C., although some made him earlier than Hesiod, and contemporary with Eumolpus. He wrote a poem, entitled "Heracles," on the labours and exploits of Hercules, of which frequent mention is made by the grammarians. The Alexandrian critics

assigned him a rank among epic poets after Homer, Hesiod, Panyasis, and Antimachus. We have an epigram in his praise, among those ascribed to Theocritus (*ep.* 20), and Strabo likewise mentions him among the eminent natives of Rhodes. (*Strab.*, 655.—*Id.*, 688.—Compare *Quintilian*, 10, 1, 56.) Reiske has advanced the opinion, that the 24th and 25th Idyls of Theocritus are portions of the poem of Pisander. Both these Idyls, though of considerable length, are imperfect. One is entitled *Ἡρακλῆος*, "The Young Hercules;" the other *Ἡρακλῆος Ἀεοντοφόρος*, "Hercules, the lion-slayer." There is also an Idyl of Moschus, the 4th, entitled *Μεγάρα, γυναῖκα Ἡρακλέους*, "Megara, wife of Hercules," which Reiske assigns to the same source with the two other pieces just mentioned. (Consult *Harles, ad Theocrit.*, *Id.*, 26.—*Heyne, Excurs.*, 1, *ad Æn.*, 2, p. 285.)—II. A Greek poet, born at Laranda, a city of Lycaonia, in Asia Minor, and who lived during the reign of Alexander Severus. He composed a long poem, entitled *Ἡρωικὰ Θεογονίαι*, in which he sang of the nuptials of gods and heroes. The 16th book of this poem is cited, and Suidas calls the whole production a history varied after the epic manner. One of the interlocutors in the *Saturnalia* of Macrobius (5, 2) accuses Virgil of having translated from Pisander almost all the second book of the *Æneid*, and particularly the story of the wooden horse. It is evident that Macrobius refers in this to Pisander of Camirus; but he is altogether wrong. We know, from the *Chrestomathy* of Proclus, that Virgil borrowed from Arctinus and Lesches the history of the horse; and, in fact, the later Pisander, who lived in the time of Severus, borrowed from Virgil himself. (*Heyne, Excurs.*, 1, *ad Æn.*, 2, p. 287.—*Schöll, Hist. Lit. Gr.*, vol. 5, p. 381.)—III. An epigrammatic poet, supposed by Jacobs to be the same with the native of Camirus above mentioned. (*Catal. Poët. Epigr.*, p. 939.) Heyne, however, thinks that he was identical with the younger Pisander. (*Excurs.*, 1, *ad Æn.*, 2, p. 288.)—IV. An Athenian, one of the leaders of the oligarchical party, and instrumental in bringing about the establishment of the Council of Four Hundred. (*Plut., Vit. Alcib.*)—V. A Spartan admiral, in the time of Agesilaus, slain in a naval battle with Conon near Cnidus, B.C. 394. (*Corn. Nep., Vit. Con.—Justin.*, 6, 3.)

PISAURUM, a city of Umbria, on the seacoast, below Ariminum, and near the river *Pisaurus*. Its origin is uncertain. It became a Roman colony A.U.C. 568 (*Liv.*, 39, 44), but whether it was colonized again by Julius Cæsar or Augustus is uncertain. Inscriptions, however, give it the title of *Col. Julia*. The climate of *Pisaurum* seems to have been in bad repute, according to the opinion of Catullus (81, 3). The modern name of the place is *Pesaro*. (*Cramer's Anc. Italy*, vol. 1, p. 256.)

PISAURUS, a river of Umbria, running into the Adriatic near *Pisaurum*. Lucan (2, 406) writes the name *Isaurus*. (Consult *Corte, ad loc.*) The modern appellation is *la Foglia*.

PISIDIA, a country of Asia Minor, bounded on the west and north by Phrygia, on the east by Isauria, and on the south by Pamphylia. It was a mountainous country, inhabited by a race of the same origin probably as the rude inhabitants of Cilicia Trachea. They seldom paid obedience to the Persian kings; and Alexander the Great found them divided into a number of small independent republics. After the time of Alexander, this country was frequently the lurking-place of the inferior party. In the time of the Seleucids, several Pisidian dynasties arose on the frontiers of Phrygia: they enlarged their territories by conquest, so that several of the towns founded by the kings of Syria came to be called Pisidian cities, such as Antiochia, Laodicea, &c. In the time of the Romans, the number of these states of freebooters seems to have

increased, while in the interior the old republics, such as Termessus, Selge, and others, mere mountain-fortresses, still remained unoppressed, so that it was very seldom any of the towns paid tribute to the mistress of the world. It is true that Augustus did subject the whole of Pisidia to the Roman empire, but it was only in name. Even the Goths could do nothing against it. History, therefore, does not recognise it as the province of any great kingdom.—The boundary-line between Pisidia and Pamphylia is a matter not very clearly ascertained. The following remarks of Rennell are worthy of a place here. "The ancients seem to have been agreed in the opinion that Pamphylia occupied the seacoast from Phaselis to Coracesium; but the boundary between it and Pisidia appears not to have been decided. For instance, Termessus is said to be in Pamphylia by Livy (38, 15), and also by Ptolemy; but Strabo places it in Pisidia, and Arrian calls it a colony of Pisidia. Livy and Ptolemy arrange Pamphylia and Pisidia as one country, under the name of Pamphylia. The former, who describes in detail the history of the Roman war there, and who may be supposed to have studied its geography, includes Pisidia, if not Isauria, in Pamphylia. For he says that part of Pamphylia lay on one side, and part on the other side of Taurus (38, 39). Now Pisidia is said by Strabo to occupy the summits of Taurus, between Sagalassus and Homonada, together with a number of cities, which he specifies, on both sides of Taurus, including even Antiochia of Pisidia. Livy, then, actually includes in Pamphylia the province described by Strabo as Pisidia, and appears to include Isauria also. At the same time, he admitted the existence of a province under the name of Pisidia; for he repeatedly mentions it, and says that the people of Sagalassus are Pisidians. On the whole, therefore, one cannot doubt but that he regarded Pisidia as a province of Pamphylia. Ptolemy, as we have observed, arranged Pamphylia and Pisidia together as one country; or, rather, makes Pisidia a province of Pamphylia, and subdivides it into Pisidia proper and Pisidia of Phrygia. He has also a province of Pamphylia. In the distribution of the parts of Pamphylia at large, Ptolemy assigns to the province of that name the tract towards the sea, which includes Olbia, Attalea, and Side, on the coast; Termessus, Selge, Aspendus, Perge, &c., more inland. And Pisidia contained the inland parts, extending beyond Taurus northward, and containing the cities of Baris, Amblada, Lysinoë, Cormasa, &c. Moreover, his Pisidia extended to the neighbourhood of Celene and Apamea Cibotus. Pliny is much too brief on the subject. It is only to be collected from him (5, 27), that the capital of Pisidia was Antiochia; and that the other principal cities were Sagalassus and Oroanda. That it was shut in by Lyconia, and had for neighbours the people of Philomelium, Thymbrium, Peltæ, &c. And, finally, that the state of Homonada, formed of close and deep valleys, within Taurus, had the mountains of Pisidia lying above it. From all this we may collect, that the Pisidia of Pliny extended along the north of Pamphylia and of Taurus, from the district of Sagalassus westward, to that of Homonada eastward; the latter being on the common frontiers of Lyconia, Cilicia Trachea, and Pisidia. The Pisidia of Pliny, therefore, agrees with that of Ptolemy, and will be found to agree also with that of Strabo. Strabo (667) clearly distinguishes Pisidia and Pamphylia as two distinct countries: that is, Pamphylia as a maritime country, extending from Lycia to Cilicia Trachea, in length along the coast 640 stadia; and Pisidia (p. 569, *seqq.*) occupying the summits of Taurus, or, rather, the whole base of that region, from Sagalassus and Termessus to Homonada; and that it occupied certain tracts of land below Taurus on both sides. And besides the general extent given it by this de-

scription, he classes so many places belonging to it as to prove that it has a great extent in point of breadth; for Selge appears to have been at a great distance to the south of the main ridge, and Antiochia of Pisidia is from thirty to thirty-five miles to the north of it." (*Rennell's Geography of Western Asia*, vol. 2, p. 71, *seqq.*)

PISISTRATIDÆ, a patronymic appellation given to Hippias and Hipparchus, the sons of Pisistratus.

PISISTRATUS, a celebrated Athenian, who obtained the tyranny at Athens. His family traced their descent from Peleus; and Codrus, the last king of Athens, belonged to the same house. (*Larcher, ad Herod.*, 1, 59.) Herodotus relates, that Hippocrates, the father of Pisistratus, being present on one occasion at the Olympic games, met with a remarkable prodigy. According to the historian, he had just offered a sacrifice, and the caldrons were standing near the altar, filled with pieces of the flesh of the victim and with water, when, on a sudden, these bubbled up without the agency of fire, and began to run over. Chilo, the Lacedæmonian, who happened to be present, and was a witness of what had taken place, advised Hippocrates not to marry, or, if he had already a wife, to repudiate her. His counsel, however, was disregarded, and Pisistratus was born to Hippocrates. (*Herod.*, 1, 59.)—Not long after the legislation of Solon had been established at Athens, and while the lawgiver himself was away in foreign lands, the state became again distracted by contentions between the old parties of the Plain, the Coast, and the Highlands. The first of these was headed by Lycurgus; the second by Megacles, a grandson of the archon who brought the memorable stain and curse upon his house by the massacre of the adherents of Cylon; and the third by Pisistratus. Solon, therefore, on his return to Athens, found that faction had been actively labouring to pervert and undo his work. He had early detected the secret designs of Pisistratus, and is said to have observed of him, that nothing but his ambition prevented him from displaying the highest qualities of a man and a citizen. But it was in vain that he endeavoured to avert the danger, which he saw threatened by the struggle of the factions, and in vain did he use all his influence to reconcile their chiefs. This was the more difficult, because the views of all were perhaps equally selfish, and none was so conscious of his own integrity as to rely on the professions of the others. Pisistratus is said to have listened respectfully to Solon's remonstrances; but he waited only for an opportunity of executing his project. When his scheme appeared to be ripe for action, he was one day drawn in a chariot into the public place, his own person and his mules disfigured with recent wounds, inflicted, as the sequel proved, by his own hand, which he showed to the multitude, while he told them that on his way into the country he had narrowly escaped a band of assassins, who had been employed to murder the friend of the people. While the indignation of the crowd was fresh, and from all sides assurances were heard that they would defend him from his enemies, an assembly was called by his partisans, in which one of them, named Ariston, came forward with a motion, that a guard of fifty citizens, armed with clubs, should be decreed to protect the person of Pisistratus. Solon, the only man who ventured to oppose this proposition, warned the assembly of its pernicious consequences, but in vain. The body-guard was decreed; and the people, who eagerly passed the decree, not keeping a jealous eye on the manner of its execution, Pisistratus took advantage of this to raise a force and make himself master of the citadel. Perhaps his partisans represented this as a necessary precaution, to guard it against the enemies of the people. Megacles and the Alcmaeonidæ left the city. Solon, after an ineffectual attempt to rouse his countrymen against the growing power which was making

such rapid strides towards tyranny, is said to have taken down his arms, and laid them in the street before his door, as a sign that he had made his last effort in the cause of liberty and the laws. Lycurgus and his party seem to have submitted quietly for a time to the authority of Pisistratus, waiting, as the event showed, for a more favourable opportunity of overthrowing him. The usurper was satisfied with the substance of power, and endeavoured as much as possible to prevent his dominion from being seen and felt. He made no visible changes in the constitution, but suffered the ordinary magistrates to be appointed in the usual manner, the tribunals to retain their authority, and the laws to hold their course. In his own person he affected the demeanour of a private citizen, and displayed his submission to the laws by appearing before the Areopagus to answer a charge of murder, which, however, the accuser did not think fit to prosecute. He continued to show honour to Solon, to court his friendship, and ask his advice, which Solon did not think himself bound to withhold where it might be useful to his country, lest he should appear to sanction the usurpation which he had denounced. He probably looked upon the government of Pisistratus, though at variance with the principles of his constitution, as a less evil than would have ensued from the success of either of the other parties; and even as good, so far as it prevented them from acquiring a similar preponderance. Solon died the year following that in which the revolution took place (B.C. 559), and Pisistratus soon after lost the power which he had usurped, the rival factions of Lycurgus and Megacles having united to overthrow him. But no sooner had these two parties accomplished their object, than they quarrelled among themselves, and, at the end of five years, Megacles, finding himself the weaker, made overtures of reconciliation to Pisistratus, and offered to bestow on him the hand of his daughter, and to assist him in recovering the station he had lost. The contract being concluded, the two leaders concerted a plan for executing the main condition, the restoration of Pisistratus. For this purpose Herodotus supposes them to have devised an artifice, which excites his astonishment at the simplicity of the people on whom it was practised, and which appears to him to degrade the national character of the Greeks, who, he observes, had of old been distinguished from the barbarians by their superior sagacity. Yet, in itself, the incident seems neither very extraordinary, nor a proof that the contrivers reckoned on an enormous measure of credulity in their countrymen. In one of the Attic villages they found a woman, Phya by name, of unusually high stature, and comely form and features. Having arrayed her in a complete suit of armour, and instructed her to maintain a carriage becoming the part she was to assume, they placed her in a chariot, and sent heralds before her to the city, who proclaimed that Minerva herself was bringing back Pisistratus to her own citadel, and exhorted the Athenians to receive the favourite of the goddess. Pisistratus rode by the woman's side. When they reached the city, the Athenians, according to Herodotus, believing that they saw the goddess in person, adored her and received Pisistratus. This story would indeed be singular if we consider the expedient in the light of a stratagem, on which the confederates relied for overcoming the resistance which they might otherwise have expected from their adversaries. But it seems quite as probable that the pageant was only designed to add extraordinary solemnity to the entrance of Pisistratus, and to suggest the reflection that it was by the especial favour of Heaven he had been so unexpectedly restored. The new coalition must have rendered all resistance hopeless. As the procession passed, the populace no doubt gazed, some in awe, all in wonder; but there is no reason to think that the result would

have been different if they had all seen through the artifice. Pisistratus, restored to power, nominally performed his part of the compact by marrying the daughter of Megacles; but it was soon discovered that he had no intention of really uniting his blood with a family which was commonly thought to be struck with an everlasting curse, and that he treated his young wife as one only in name. The Alcmaeonids were indignant at the affront, and at the breach of faith, and once more determined to make common cause with the party of Lycurgus. Once more the balance inclined against Pisistratus, and, unable to resist the combined force of his adversaries, he retired into exile to Eretria in Euboea. Here he deliberated with his sons Hippias, Hipparchus, and Thessalus, the offspring of a previous marriage, whether he should not abandon all thoughts of returning to Attica. They appear to have been divided in their wishes or opinions; but Hippias, the eldest, prevailed on his father again to make head against his enemies. He possessed lands on the river Strymon in Thrace, which yielded a large revenue, and his interest was strong in several Greek cities, especially at Thebes and Argos. He now exerted it to the utmost to gather contributions towards his projected enterprise, and by the end of ten years he had completed his preparations; a body of mercenaries was brought to him from Argos, the Thebans distinguished themselves by the liberality of their subsidies, and Lygdamis, one of the most powerful men in the island of Naxos, came to his aid with all the troops and money he could raise. In the eleventh or twelfth year after his last expulsion, he set sail from Eretria, and landed on the plain of Marathon, to recover his sovereignty by open force. The government of his opponents was not popular, and Pisistratus had many friends in the country and in Athens, who, on his arrival, flocked to his camp. The result proved a fortunate one. The leaders of the hostile factions found themselves deserted eventually by all but their most zealous adherents, who, with them, abandoned the city, and left Pisistratus undisputed master of Athens. What he had so hardly won, he prepared to hold henceforth with a firmer grasp. He no longer relied on the affections of the common people, but took a body of foreign mercenaries into constant pay; and seizing the children of some of the principal citizens, who had not made their escape, and whom he suspected of being ill-disposed towards him, he sent them to Naxos, which he had reduced under the power of his friend Lygdamis, to be kept as hostages. Pisistratus appears to have maintained a considerable naval force, and to have extended the Athenian power abroad; while at home he still preserved the forms of Solon's institutions, and courted popularity by munificent largesses, and by throwing open his gardens to the poorer citizens. (*Athenæus*, 12, p. 532.) At the same time he tightened the reins of government, and he appears to have made use of the authority of the Areopagus to maintain a rigorous police. He enforced Solon's law, which required every citizen to give an account of his means of gaining a subsistence, and punished idleness; and hence by some he was supposed to have been the author of it. It afforded him a pretext for removing from the city a great number of the poorer sort, who had no regular employment, and for compelling them to engage in rural occupations, in which, however, he assisted the indigent with his purses. The same policy prompted him, no less, perhaps, than his love for the arts, to adorn Athens with many useful or magnificent works. Among the latter was a temple of Apollo, and one dedicated to the Olympian Jove, of which he only lived to complete the substructions, and which remained unfinished for 700 years, exciting the wonder, and sometimes the despair, of posterity by the vastness of the design, in which it surpassed every other that the

ancient world ever raised in honour of the father of the gods. Among the monuments in which splendour and usefulness were equally combined, were the Lyceum, a garden at a short distance from Athens, sacred to the Lycian Apollo, where stately buildings, destined for the exercises of the Athenian youth, rose amid shady groves, which became one of the most celebrated haunts of philosophy; and the fountain of Callirrhoe, which, from the new channels in which Pisistratus distributed its waters, was afterward called the fountain of the Nine Springs (*ἑννέαιρονες*). To defray the expense of these and his other undertakings, he laid a tithe on the produce of the land: an impost which seems to have excited great discontent in the class affected by it, and, so far as it was applied to the public buildings, was, in fact, a tax on the rich for the employment of the poor; but which, if we might trust a late and obscure writer, was only revived by Pisistratus after the example of the ancient kings of Attica. (*Diog. Laert.*, 1, 53.) He is also believed to have been the author of a wise and beneficent law, which Solon, however, is said to have suggested, for supporting citizens disabled in war at the public expense. According to a tradition once very generally received, posterity has been indebted to him for a benefit greater than any which he conferred on his contemporaries, in the preservation of the Homeric poems, which till now had been scattered in unconnected rhapsodies. After every abatement that can be required in this story for misunderstanding and exaggeration, we cannot doubt that Pisistratus at least made a collection of the poet's works, superior in extent and accuracy to all that had preceded it, and thus certainly diffused the knowledge of them more widely among his countrymen, perhaps preserved something that might have been lost to future generations. In either case he might claim the same merit as a lover of literature: and this was not a taste which derived any part of its gratification from the vanity of exclusive possession. He is said to have been the first person in Greece who collected a library, and to have earned a still higher praise by the genuine liberality with which he imparted its contents to the public. On the whole, though we cannot approve of the steps by which he mounted to power, we must own that he made a princely use of it; and may believe that, though under his dynasty Athens could never have risen to the greatness she afterward attained, she was indebted to his rule for a season of repose, during which she gained much of that strength which she finally unfolded. Pisistratus retained his sovereignty to the end of his life, and died at an advanced age, thirty-three years after his first usurpation, B.C. 527. He was succeeded by his sons, Hippias, Hipparchus, and Thessalus. (*Thirlwall's Greece*, vol. 2, p. 55, *seq.*)

Piso, the name of a celebrated family at Rome, a branch of the Calpurnian *gens*, which house claimed descent from Calpus, the son of Numa Pompilius. The family of the Pisones had both a patrician and plebeian side. The principal individuals of the name were: I. C. Calpurnius Piso, city prætor in 212 B.C., and who had the command of the Capitol and citadel when Hannibal marched out against Rome. He was afterward sent into Etruria as commander of the Roman forces, and at a subsequent period had charge of Capua in Campania, after which his command in Etruria was renewed. (*Liv.*, 25, 41.—*Id.*, 26, 10, 15, et 28.—*Id.*, 27, 6, &c.)—II. C. Calpurnius Piso, was prætor B.C. 187. He obtained Farther Spain for his province, where he signalized his valour, and, in conjunction with L. Quintius Crispinus, prætor of Hither Spain, gained a decisive victory over the revolted Spaniards. More than thirty thousand of the enemy fell in the battle. On his return to Rome he obtained a triumph. He subsequently attained to the consulship (B.C. 180), in which office he died, having been poisoned, as was

believed, by his wife Hostilia. (*Liv.*, 29, 6.—*Id.*, 30, 8 et 21.—*Id.*, 39, 30, *seq.*—*Id.*, 40, 35.—*Id.*, 40, 37.)—III. L. Calpurnius Piso, surnamed *Frugi*, was tribune of the commons B.C. 149, and afterward twice consul (135 and 133 B.C.). Piso was one of the most remarkable men of the Roman state, from the union of talents and virtues that marked his character. An able speaker, a learned lawyer, a sound statesman, and a wise and valiant commander, he distinguished himself still more by his purity of morals, and by a frugality and old-Roman plainness of life which obtained for him the surname of *Frugi*. He quieted the troubles to which the revolt of the slaves had given rise in Sicily, and signalized his valour against the insurgents. Piso wrote memoirs or annals of his time, which, according to Cicero (*Brut.*, 27), were composed in a very dry and lifeless manner, although Aulus Gellius (11, 14) speaks of their "*simplicissima suavitatis*." (*Cic.*, *de Orat.*, 2, 29.—*Id.*, *pro Font.*, 24.—*Id.*, in *Verr.*, 5, 69.—*Val. Max.*, 2, 7.—*Id.*, 4, 3.—*Le Clerc, Journaux chez les Romains*, p. 26, 150.)—IV. L. Calpurnius Piso, son of the preceding, inherited, if not the talents, at least the virtues, of his father. He was sent prætor into Spain, where he died soon after. (*Cic.*, in *Verr.*, 1, 35.—*Id.*, 3, 85, &c.)—V. C. Calpurnius Piso, was consul with Acilius Glabrio, 67 B.C., and signalized his magistracy by warmly defending the prerogatives of the consular office against the attacks of the commons and their tribunes. He was also the author of a law against bribery at elections. (*Cic.*, *pro Flacc.*, 75.—*Val. Max.*, 3, 8.)—VI. A young Roman, whom indigence (the result of profligate habits) and a turbulent disposition induced to take part in the conspiracy of Catiline. The leading men at Rome, anxious to get rid of a troublesome and dangerous individual, caused him to be sent as questor, with prætorian powers, into Hither Spain. He was not long after assassinated in his province. (*Sall.*, *Cat.*, 18, *seq.*)—VII. C. Calpurnius Frugi, a descendant of the individual mentioned above (No. III.), and son-in-law of Cicero. He was the first husband of Tullia, and is highly praised by Cicero for his virtues and his oratorical abilities. Piso exerted himself strenuously for the recall of his father-in-law, but died a short time before this took place. (*Cic.*, *ad Q. post red.*, 3.—*Id.*, *Ep. ad Fam.*, 14, 1.—*Id.*, *Brut.*, 78, &c.)—VIII. L. Calpurnius Piso, father-in-law of Cæsar, and consul B.C. 58. Before attaining to this office he had been accused of extortion, and only escaped condemnation through the influence of his son-in-law. Cicero was allied to Piso by marriage, and the latter had given him many marks of friendship and confidence; but Clodius eventually gained Piso over to his views, by promising to obtain for him the province of Macedonia, and he accordingly joined the demagogue in his efforts to procure the banishment of Cicero, which event took place in Piso's consulship. Having obtained the reward of his perfidy, he set out for his province; but his whole conduct there was marked by debauchery, rapine, and cruelty. The senate recalled him, chiefly through the exertions of Cicero, who in this way avenged himself on Piso for his previous conduct. On Piso's return, he had the hardihood to attack Cicero in open senate, and complain of the treatment he had received at his hands. He reproached him also with the disgrace of exile, with excessive vanity, and other weaknesses. Cicero replied, on the spot, in an invective speech, the severest, perhaps, that ever fell from the lips of any man, in which the whole life and conduct of Piso are portrayed in the darkest colours, and which must band him down as a detestable character to all posterity. Notwithstanding this, however, Piso was afterward censor along with Appius Claudius (A.U.C. 702); and we find him, at a subsequent period, appointed one of the three commissioners who were sent by the senate to treat with An-

tony. Piso, in his outward deportment, if we believe the picture drawn of him by Cicero, affected the mien and garb of a philosopher; but this garb of rigid virtue covered a most lewd and vicious mind. (*Cic. in Pis.—Middleton's Life of Cicero.*)—IX. L. Calpurnius Piso, son of the preceding, inherited many of the vices of his father, but redeemed them, in some degree, by his talents. He was at first one of the warmest opponents of the party of Cæsar, and took an active part in the war in Africa. (*Hirt., Bell. Af.*) After the death of Cæsar, he followed the fortunes of Brutus and Cassius, until the overthrow of the republican forces. Being at length restored to his country, he refused all public offices, until Augustus prevailed upon him to accept the consulship. This was in A.U.C. 731, Augustus himself being his colleague. He was afterward named governor of Pamphylia, and conducted himself with great ability in his province. Having subsequently received orders to pass into Europe, in order to oppose the Bessi, a Thracian tribe, he gained a complete victory over them. He was appointed, after this, prefect of the city by Tiberius, whose favour he is said to have gained by drinking with him for two days and two nights in succession. (*Plin., 14, 38.*) Piso appears to have been a man of pleasure, who passed his evenings at table, and slept till noon; but he possessed such capacity for business, that the remainder of the day sufficed for the despatch of those important affairs with which he was successively intrusted by Augustus and Tiberius. It was to this individual and his two sons that the epistle of Horace, commonly called the "Art of Poetry," was addressed. (*Sueton., Vit. Tib., 42.—Senec., Ep., 83.—Vell. Pat., 2, 92.*)—X. Cn. Calpurnius Piso, son of the preceding, was a man of violent passions, impatient of control, and possessing much of the haughty spirit of his sire. To the pride derived from such a father he united the insolence of wealth, acquired by his marriage with Plancina, who, besides her high descent, possessed immoderate riches. Tiberius appointed him governor of Syria, and was said to have given him secret instructions to thwart the movements of Germanicus. Plancina, in like manner, had her lesson from Livia, with full instructions to mortify, in every possible way, the pride of Agrippina. These machinations proved but too successful. Germanicus was cut off, and Piso, accused of having poisoned him by both his widow Agrippina and the public voice, and finding himself deserted by all, even by the emperor, put an end to his existence, A.D. 20. (*Tacit., Ann., 3, 43.—Id., 2, 55.—Id., 2, 69, seqq.*)—XI. C. Calpurnius Piso, leader of the celebrated conspiracy against Nero. His eloquence and his amiable qualities had conciliated to such a degree the public esteem, that the majority of the conspirators intended him as the successor of the emperor. The plot was discovered on the very morning of the day intended for its execution, and Piso, instead of at once adopting energetic measures, and attempting to seize upon the throne by open force, as his friends advised him to do, shut himself up in his mansion and opened his veins. (*Tacit., Ann., 15, 48, seqq.*)—XII. C. Piso Licinianus, adopted son of the Emperor Galba, made himself universally esteemed by his integrity, his disinterestedness, and by an austerity of manners that recalled the earlier days of Rome. He was put to death, by order of Otho, after the fall of Galba, at the age of 31 years. (*Tacit., Hist., 1, 14.—Id. ib., 3, 68.—Id. ib., 4, 11, 40.*)

PISUX (*Baker*), a surname given to Jupiter by the Romans, because, when their city was taken by the Gauls, the god was believed to have inspired them with the idea of throwing down loaves from the Tarpeian Hill where they were besieged, that the enemy might suppose that they were not in want of provisions, though, in reality, they were near surrendering through famine. This deceived the Gauls, and they soon

after raised the siege. (*Ovid, Fast., 6, 377, seqq.—Lactant., 1, 20.*)

PISTOIA, a town of Etruria, northeast of Luca, and at the foot of the Apennines. Pliny calls it Pistorium (3, 5), but Ptolemy (p. 64) and others give it the appellation of Pistoria. The modern name is Pistoia. This town is memorable in the history of Rome as having witnessed in its vicinity the close of Catiline's desperate but short career. (*Sall., Cat., 62.*) The spot on which the action was fought is too imperfectly marked by the concise narrative of Sallust to be now recognised. We may conjecture that it was to the north of Pistoia, and near the modern road from that place to Modena. (*Cramer's Anc. Greece, vol. 1, p. 177.*)

PITANE, a town of Æolis, in Asia Minor, to the northwest of the mouth of the river Caicus. Scylax makes mention of it, and Strabo gives it two harbours. (*Scylax, Periplus, p. 37.—Strab., 614.*) The small river Evenus flowed near its walls. Herodotus names this place among the eleven cities of Æolis. (*Manert, Geogr., vol. 6, pt. 3, p. 398.*)

PITHECUSA. *Vid. Ænaria.*

PITHOLEON, a foolish poet, the author of some silly epigrams, in which Greek and Latin expressions were intermingled together. (*Schol. ad Hor., Sat., 1, 10, 22.*) Bentley thinks that the individual to whom Horace refers was the same of whom Suetonius (*Vit. Jul., 75*) makes mention, under the name of Pitholaus, as having been the author of some defamatory verses against Julius Cæsar, and that Horace styles him Pitholeon, because Pitholaus would have been unmanageable in hexameter verse. (*Benl. ad Horat., l. c.*)

PITTACUS, a native of Mytilene in Lesbos, and one of the so-called wise men of Greece, was born about 650 B.C. Having obtained popularity among his countrymen by successfully opposing the tyrant Melanchrus, he was intrusted with the command of a fleet, in a war with the Athenians concerning some territory which they had seized in the island. In the course of this war, the Athenian commander Phryno, a man of uncommon size and strength, challenged him to single combat. Providing himself with a net, which he concealed under his buckler, he took the first opportunity to throw it over the head of his antagonist, and by this means gained an easy victory. (*Diog. Laert., Vit. Pit.—Polyæn., 1, 25.*) According to Strabo's account, Pittacus came into the field armed with a casting-net, a trident, and a dagger (*Strab., 599*), and it is said that from this stratagem of the Mytilenean was borrowed the mode of fighting practised by the Roman gladiators called *Retiarii*. (*Polyæn., l. c.—Festus, s. v. Retiarius.*) From this time Pittacus was held in high esteem among the Mytileneans, and was intrusted with the supreme power in the state. (*Aristot., Polit., 3, 15.—Diog. Laert., in Vit.*) Among other valuable presents, his countrymen offered him as much of the lands which had been recovered from the Athenians as he chose; but he only accepted of so much as he could measure by a single cast of a javelin: and one half of this small portion he afterward dedicated to Apollo, saying, concerning the remainder, that the half was better than the whole. (*Plut., de Herod. Malign., p. 857.—Op., ed. Reiske, vol. 9, p. 265.—Hes., Op. et. D., 40.*) Cornelius Nepos says, that the Mytileneans offered him many thousand acres, but that he took only a hundred. (*Vit. Thucyd., 4, 11.*) Pittacus displayed great moderation in his treatment of his enemies, among whom one of the most violent was the poet Alcæus, who frequently made him the object of his satire. Finding it necessary to lay severe restrictions upon drunkenness, to which the Lesbians were particularly addicted, Pittacus passed a law which subjected offenders of this class to double punishment for any crime committed in a state of intoxication. When he had established such regulations

in the island as promised to secure its peace and prosperity, he voluntarily resigned his power, which he had held for ten years, and retired to private life. —The following maxims and precepts are ascribed to him. The first office of prudence is to foresee threatening misfortunes, and prevent them. Power discovers the man. Never talk of your schemes before they are executed, lest, if you fail to accomplish them, you be exposed to the double mortification of disappointment and ridicule. Whatever you do, do it well. Do not that to your neighbour which you would take ill from him. Be watchful of opportunities. (*Diog. Laert.*, in *Vit.* — *Plut.*, *Conviv. Sap.* — *Larcher*, ad *Herod.*, 1, 27. — *Enfield*, *Hist. Phil.*, vol. 1, p. 144.)

PITHEUS, a king of Trozene in Argolis, son of Pelops and Hippodamia. He gave his daughter Æthra in marriage to Ægeus, king of Athens, and brought up Theseus at his court. (*Vid.* Theseus.) He also reared Hippolytus, the son of Theseus. (*Euryp.*, *Hippol.*, 11. — *Schol.*, ad *loc.*) Pitheus was famed for his wisdom, and Pausanias ascribes to him a work on the art of speaking, given to the world by a native of Epidaurus, and which he says he himself saw. He also states, that Pitheus taught this same art in a temple of the Muses at Trozene. The same writer likewise mentions the tomb of Pitheus, which was still seen in his day, and on which were three thrones or seats of white stone, on which the monarch and two assistants were accustomed to sit when dispensing justice. The whole story of this monarch, however, appears to be mythical in its character. (*Pausan.*, 2, 31. — *Plut.*, *Vit. These.*)

PIRYONÆUS, a small island off the coast of Argolis. It lay opposite to Epidaurus, and was situate six miles from the coast, and seventeen from Ægina. (*Plin.*, 4, 11.)

PIRYŪSA, a small island off the coast of Argolis, near Aristera. The modern name is *Tulea*. (*Plin.*, 4, 12.)

PIRYŪΣ, a group of small islands in the Mediterranean, off the coast of Spain, and lying to the south-west of the Balears. They derived their name from the number of pine-trees (*πίρυς*, a pine) which grew in them. The largest is Ebusus or *Iwica*, and next to it is Ophiusa or *las Columbretes*. (*Mela*, 2, 7. — *Plin.*, 3, 5.)

PLACENTIA, a city of Gallia Cisalpina, at the confluence of the Trebia and Padus. It is now *Piacenza*. This place was colonized by the Romans, with Cremona, A.U.C. 535, to serve as a bulwark against the Gauls, and to oppose the threatened approach of Hannibal. (*Polyb.*, 3, 40. — *Liv.*, 21, 25. — *Vell. Pat.*, 1, 14.) Its utility in this latter respect was fully proved, by its affording a secure retreat to the Roman general after the battle of Ticinus, and more especially after the disaster of Trebia. (*Polyb.*, 3, 66. — *Liv.*, 21, 56.) Placentia withstood all the efforts of the victorious Hannibal, and also, eleven years after, the attempts which his brother Hasdrubal made to obtain possession of it. The resistance which it offered to the latter caused a delay that led to his overthrow, and thus eventually, perhaps, saved the empire. After the termination of the second Punic war, it was, however, taken and burned by the Gauls, headed by Hamilcar the Carthaginian (*Liv.*, 31, 10), but soon after was restored by the consul Valerius, 557 A.U.C. (*Liv.*, 34, 21) Placentia had acquired the rights of a municipal city in Cicero's time. (*Or.* in *Pis.*, 1.) Strabo speaks of it as a celebrated town (216), and Tacitus extols it as a powerful and opulent colony. (*Hist.*, 2, 17, *seqq.*) Its theatre, situate without the walls, was burned in the civil war between Otho and Vitellius. (*Suet.*, *Oth.*, 9. — *Plin.*, 3, 15. — *Cramer's Anc. Italy*, vol. 1, p. 79, *seqq.*)

PLACIDIŌA, a daughter of Theodosius the Great, and sister to Arcadius and Honorius. She resided most

commonly at the court of the latter, and was present when Rome was first invested by the arms of Alaric, being then about twenty years of age. Placidia became a hostage in the hands of the victor, according to some a captive, and her personal attractions won for her the hand of Ataulphus or Adolphus, the brother-in-law of Alaric, and king of the Visigoths. After the death of Ataulphus, she married Constantius, and became the mother of Valentinian III. Having lost her second husband, she acted as guardian for her son, and reigned twenty-five years in his name, and the character of that unworthy emperor gradually countenanced the suspicion, that Placidia had enervated his youth by a dissolute education, and studiously diverted his attention from every manly and honourable pursuit. Amid the decay of military spirit, her armies were commanded by two generals, Aëtius and Boniface, who may be deservedly named as the last of the Romans. Placidia died at Rome, A.D. 450. She was buried at Ravenna, where her sepulchre, and even her corpse, seated in a chair of cypress-wood, were preserved for ages. (*Ducange*, *Fam. Byzant.*, p. 72. — *Tillemont*, *Hist. des Emp.*, vol. 5, p. 260, 386, &c. — *Id.* *ib.*, vol. 6, p. 240. — *Gibbon*, *Decline and Fall*, c. 31, 32, 35.)

PLANASIA, a small island between Corsica and Iva, now *Pianosa*. Tacitus relates, that Augustus was persuaded by Livia to banish his nephew Agrippa Posthumus hither. (*Ann.*, 1, 3 — *Ibid.*, 2, 39.) This island is also noticed by Strabo (123) and Ptolemy (p. 67).

PLANCINA, granddaughter of L. Munatius Plancus, and wife of Piso, governor of Syria in the reign of Tiberius. (*Vid.* Piso X.) She was supposed to have been an accomplice with her husband in shortening the days of Germanicus, but was saved by the influence of Livia, her protectress. As long as Piso, who had been put to his trial, had any hope of acquittal, her language was that of a woman willing to share all changes with her husband, and, if he was doomed to fall, determined to perish with him. But, when she had obtained safety for herself, she left him to his fate. At a later period, however, she was about being proceeded against for her criminal conduct, when, in despair, she laid violent hands on herself, and suffered at last the slow but just reward of a flagitious life. (*Tacit.*, *Ann.*, 2, 43, 55, 75; 3, 9, 15; 6, 26.)

PLANCUS, I. T. Bursæ, a tribune of the commons, 52 B.C. He took part in the troubles excited by the death of Clodius, and, on the expiration of his office, was accused and condemned, notwithstanding the interest made by Pompey in his behalf. (*Cic.*, *Ep. ad Fam.*, 2, 9.) — II. L. Munatius, a native of Tibur, was in early life a pupil of Cicero's, and obtained considerable eminence in the oratorical art. He afterward commanded a legion under Cæsar in Gaul. On the assassination of that individual, Plancus acted at first a very equivocal part, and frequently changed sides, attaching himself successively to each party according as it became powerful. Thus we find him, after the victory at Mutina, affecting the utmost zeal for the cause of Brutus and freedom; and subsequently, when he saw Antony re-established in power, he went over to him with four legions which he had at the time under his command. He obtained upon this the consulship along with Lepidus, B.C. 42. Tired at last of Antony, he sided with Octavius, who received him with the utmost cordiality. It was Plancus who proposed in the senate that the title of Augustus should be bestowed on Octavius. The ancient writers reproach him, besides his political versatility, with a total forgetfulness on one occasion of all dignity and self-respect. This was at the court of Cleopatra, in Alexandria, when he appeared on the public stage in the character of a sea-god, having his person painted green, and in a state of almost complete nudity; wearing a crown

of reeds on his head, and with the tail of a fish attached to his body behind. Planus, however, appears to have been a man of literary tastes, and we have an ode addressed to him by Horace on one occasion, when he had become suspected of disaffection by Augustus, and was meditating his departure from Italy. (*Plut., Vit. Ant.—Vell. Patere., 2, 63.—Horat., Od., 1, 7, &c.*)

PLANUDÆS, Maximus, a Greek monk, commonly designated "of Constantinople," probably by reason of his having long resided there; for he was, in fact, a native of Nicomedia. He was a man of great learning and various acquirements, and flourished in the fourteenth century. In 1327, the Emperor Andronicus Paleologus sent him as ambassador to the Venetian republic. He is said to have been the first Greek that made use of the Arabic numerals, as they are called. Planudes has given us, 1. A collection of Æopic fables, together with a very absurd life of the ancient fabulist himself; 2. An Anthology, selected from that of Constantine Cephalas; 3. A poetical Eloge on Claudius Ptolemy; 4. Some grammatical works; 5. A Greek translation of Cæsar's Commentaries of the Gallic war; 6. A prose translation of the Metamorphoses and Heroides of Ovid; 7. A translation of the Disticha of Cato into Greek verse; 8. Various unedited works. (*Schöll, Hist. Lit. Gr., vol. 1, p. 252.*)

PLATÆA (gen. -æ) and PLATÆÆ (gen. -arum), a town of Boeotia, of very ancient date, situate at the foot of Mount Cithæron, and near the river Asopus, which divided its territory from that of Thebes. (*Strabo, 412.*) Homer writes the name in the singular (*Πλάταια*), but the historians use the plural (*Πλάταιαι*). The Platæans, animated by a spirit of independence, had early separated themselves from the Boeotian confederacy, conceiving the objects of this political union to be hostile to their real interests; and had, in consequence of the enmity of the latter city, been induced to place themselves under the protection of Athens. (*Herod., 6, 108.*) Grateful for the services which they received on this occasion from that power, they testified their zeal in its behalf by sending a thousand soldiers to Marathon, who thus shared the glory of that memorable day. (*Herod., l. c.*) The Platæans also manned some of the Athenian vessels at Artemisium, and fought in several battles which took place off that promontory; though not at Salamis, as they had returned to their homes after the Greeks withdrew from the Euripus, in order to place their families and valuables in safety, and could not, therefore, arrive in time. (*Herod., 8, 45.*) They also fought most bravely in the great battle which took place near their city against Mardonius the Persian general, and earned the thanks of Pausanias and the confederate Greek commanders for their gallant conduct on this as well as other occasions. (*Herod., 9, 28.—Thucyd., 3, 53, seqq.*) But it is asserted by Demosthenes that they afterward incurred the hatred of the Lacedæmonians, and more especially of their kings, for having caused the inscription set up by Pausanias, in commemoration of the victory over the Persians, to be altered. (*In Naer., p. 1378.*) Platæa, which was afterward burned by the army of Xerxes (*Herod., 8, 50*), was soon restored with the assistance of Athens, and the alliance between the two cities was cemented more closely than before. The attack made upon Platæa by a party of Thebans at night was the first act of aggression committed on the Peloponnesian side in the war which took place not long after. The enterprise failed. (*Thucyd., 2, 1, seqq.*) The natural enmity of Thebes against this little republic was now raised to its height by this defeat, and pressing solicitations were made to the Spartan government to assist in taking signal vengeance on the Platæans for their adherence to the Athenian interests. Accordingly, in the third year of

the war, a large Peloponnesian force, under Archidamus, king of Sparta, arrived under the walls of Platæa, and, having summoned the inhabitants to abandon their alliance with Athens, proceeded, on their refusal, to lay siege to the town. The narrative of these operations, and the heroic defence of the Platæans, the circumvallation and blockade of the city by the enemy, with the daring and successful escape of a part of the garrison, are given with the greatest detail by Thucydides, and certainly form one of the most interesting portions of his history. (*Thucyd., 2, 71, seqq.—Id., 3, 20, seqq.*) Worn out at length by hunger and fatigue, those Platæans who remained in the town were compelled to yield to their persevering and relentless foes, who, instigated by the implacable resentment of the Thebans, caused all who surrendered to be put to death, and razed the town to the ground, with the exception of one building, constructed out of the ruins of the city, which they consecrated to Juno, and employed as a house of reception for travellers. From Pausanias we learn, that Platæa was again restored after the peace of Antalcidas; but when the Spartans seized on the Cadmeian citadel, the Thebans, suspecting that the Platæans were privy to the enterprise, took possession of the town by stratagem, and once more levelled its foundations to the ground (*9, 1*). Though it seems to have been the intention of Philip, and also of Alexander, to restore Platæa (*Arrian, 1, 9.—Plut., Vit. Alex., c. 34*), this was not carried into effect till the reign of Cassander, who is said to have rebuilt both Thebes and Platæa at the same time. (*Pausan., 9, 3.*) Dicaearchus, who lived about that period, represents the town as still existing, when he says, "The inhabitants of Platæa have nothing to say for themselves, except that they are colonists of Athens, and that the battle between the Persians and the Greeks took place near their town" (*Stat., Græc., p. 14.*)—The ruins of Platæa, according to Dr. Clarke, are situated upon a promontory projecting from the base of Cithæron.—The place has now the usual appellation bestowed upon the ruins of Grecian citadels; it is called *Palæo Castro*. The walls are of the earliest kind of military structure, consisting of very considerable masses, evenly hewn, and well built. (*Clarke's Travels, vol. 7, p. 106, Lond. ed.*)—The walls of Platæa, according to Sir W. Gell, may be traced near the little village of *Kochia* in their circuit. The whole forms a triangle, having a citadel of the same form in the southern angle, with a gate towards the mountain at the point. The northwestern angle seems to have been the portion which was restored after the destruction of the city. The north side is about 1025 yards in length, the west 1154, and the east 1120. It is about six geographical miles from the Cadmeia of Thebes. (*Ilin., p. 111.—Cramer's Anc. Greece, vol. 2, p. 312, seqq.*)—As the battle of Platæa, between the Greeks and Persians, forms so important a feature in their history, some account of it may be here appended.—Mardonius, being informed by the Argives, who were secretly in his interest, that the Lacedæmonians were in motion, withdrew his army into Boeotia, for the sake of engaging near the friendly city of Thebes, and in a more level country, and, therefore, more favourable to his cavalry. Before leaving Athens he burned and demolished what remained of the city. The Athenians crossed from Salamis, and the confederate army being assembled at Eleusis, advanced to Erythra, on the border of Boeotia, where it took up a position on the roots of Mount Cithæron. The heavy-armed troops of the Grecian army amounted to 38,700, of whom the Lacedæmonians contributed 10,000. Of these 5000 were Spartans, from the city, each of whom was attended by seven light-armed Helots. In the rest of the army it is computed that to each heavy-armed soldier there was one light-armed attendant. Besides, there were

1000 light-armed Theopians, the remaining strength of that little state, all its heavy-armed troops having fallen at Thermopylæ, and those who remained being probably the poorer citizens, who were unable to purchase the full armour, or to maintain themselves in distant warfare. With these the entire numbers were nearly 110,000. The army was led by Pausanias, the Spartan commander, who was cousin and guardian to the minor-king Pleistarchus, the son of Leonidas. The Athenian force of 8000 heavy-armed men was led by Aristides. Mardonius's army consisted of 300,000 Asiatics and about 50,000 Macedonian and Greek auxiliaries.—The first attack was made by the Persian cavalry, who, continually riding up in small parties, discharged their arrows and retired, annoying the Greeks without any retaliation. The Megarians being placed in the most exposed part of the line, sent to Pausanias to say that they could no longer maintain their ground, and a picked band of 300 Athenians volunteered to relieve them. They took with them some archers, a service which the Athenians cultivated with an attention and success unusual in Greece; and soon after their arrival, Masistius, the general of the Persian cavalry, his horse being wounded with an arrow, was dismounted and killed. All the horse now making a desperate charge, forced back the 300, till the rest coming up to support the Athenians, they were repulsed with great slaughter. The army was encouraged by this success, but its present position was inconvenient, particularly for want of water, and it was resolved to move into the territory of Platæa. A dispute arose between the Athenians and the Tegeans for the post of honour at the extremity of the left wing; but it was prevented from proceeding to extremity by the wise moderation of the Athenian commanders, who, still maintaining their claim of right, professed themselves willing, nevertheless, to take their place wherever the Lacedæmonians might appoint. The Lacedæmonians decided in their favour, placing them at the extremity of the left wing, and the Tegeans in the right, next to themselves.—Mardonius now drew up his army according to the advice of the Thebans, opposing the Persians to the Lacedæmonians and Tegeans, the Boeotians and other Greeks in his service to the Athenians, and to the other bodies that occupied the centre the Medes and the rest of the Asiatics. The soothsayers on each side predicted success to the party which received the attack; in compliance, probably, with the policy of the commanders, each of whom, being posted on ground advantageous to himself, was unwilling to leave it and enter on that which had been chosen by his adversary. Ten days were spent in inaction, except that the Persian horse were harassing the Greeks, and, latterly, intercepting their convoys; but, on the eleventh, Mardonius, growing impatient, called a council of war, and resolved, against the opinion of Artabazus, to attack the Greeks on the following day. The same night Alexander the Macedonian, riding alone and secretly to the Athenian encampment, asked to speak to the commanders, and gave them notice of the resolution taken.—Pausanias, being informed of this by the Athenian generals, proposed a change in the order of battle, by which the Athenians should be opposed to the Persians, of whose mode of fighting they alone had experience, while in their place the Lacedæmonians should act against the Boeotian and other Grecian auxiliaries. The Athenians readily consented, and the troops began to move while the morn was breaking; but Mardonius made a counter-movement of his Greek and Persian troops, and the Lacedæmonians desisted from their purpose when they saw that it was known. Mardonius sent a herald to reproach them with their fear, and then commenced the action with his horse, who harassed the Greeks severely, and filled up the spring from which their water had been supplied. The Greeks now suffered

both from the attacks of the cavalry, and from the want of water and food, their convoys being cut off; and it was resolved to proceed at night to a position nearer Platæa, where water abounded, and the ground was less favourable to horse. Accordingly, in the night the army was moved; but the Greeks of the centre had been so disheartened by the attacks of the cavalry, that, instead of taking up the appointed position, they fled to the city of Platæa. There remained on the one wing the Lacedæmonians (10,000 heavy-armed) and the Tegeans (1500); on the other, the Athenians (8000), with the Platæans (600), who always accompanied them, and who had carried their zeal so far, that, though an inland people, they helped to man the Athenian ships at Argemissium. Including the light-armed, those who stood their ground were, of the Lacedæmonians and Tegeans 53,000, of the Athenians and Platæans about 17,300. The march of the Lacedæmonians and Tegeans was delayed by the obstinacy of Amompharetus, a Spartan officer, who, viewing the intended movement as a flight, long refused to join in it. The day was dawning, and the Lacedæmonians, through fear of the horse, proceeded over the roots of Cithæron. The Athenians, who had waited for the movement of the allies, went by the plain. Mardonius, on seeing the Greeks, as it seemed, retreating, was filled with exultation, and immediately led the Persians after them, while the other Asiatics followed tumultuously, thinking the day won. The Lacedæmonians, on the approach of the cavalry, sent to the Athenians for assistance, begging that, if they were unable to come, they would at least send the archers; but the Athenians, when preparing to comply with the summons, were prevented by the attack of the Greeks in the Persian service.—The battle was joined on both sides. The Persians fought with great bravery; but neither bravery nor vast superiority in numbers could compensate for their inferiority in arms and discipline, and they were at length defeated with great slaughter, Mardonius being killed. The other Asiatics fled immediately, when they saw the Persians broken. Of the Grecian auxiliaries opposed to the Athenians, many were slack in their exertions, as not being hearty in the cause; but the Boeotians, who formed the strongest body, were zealous for the success of Mardonius, and they fought long and hard before they were defeated. The Boeotians fled towards Thebes, the Asiatics to their intrenched camp, their flight being in some degree protected by the Asiatic and Boeotian cavalry. On hearing that their friends were victorious, the Greeks of the centre returned in haste and disorder to the field; and the Megarians and Phliasians, going by the plain, were charged and broken with considerable loss by some Theban horse.—The fugitives who escaped into the camp were in time to close the gates and man the walls against the Lacedæmonians and Tegeans; and, the assailants being unskilled in the attack of fortifications, they made a successful defence till the arrival of the Athenians, who went about the work more skilfully, and soon gained entrance. The passions of the Greeks were inflamed to the utmost by long distress and danger, and no mercy was shown. Of the 300,000 men who were left with Mardonius, 40,000 had been led from the field by Artabazus when it first became evident that the Persians were losing the battle; but of the others not 3000 are said to have survived the battle and the subsequent massacre. (*Herod.*, 9, 25, *seqq.*—*Libr. Us. Knowl.*, *Hist. Greece*, p. 40, *seqq.*)

PLATO, I. a celebrated philosopher, by descent an Athenian, but the place of whose birth was the island of Ægina, where his father, Aristo, resided after that island became subject to Athens. His origin is traced back, on his father's side, to Codrus, and on that of his mother, Perictiona, through five generations, to Solon. (*Proclus*, *ad Timæum*, p. 25.) The time of

his birth is commonly placed in the first year of the 88th Olympiad (B.C. 428), but, perhaps, may be more accurately fixed in B.C. 429. (*Clinton, Fast. Hellen.*, p. 63.) Fable has made Apollo his father, and has said that he was born of a virgin. (*Plut., Sympos.*, 8, 1.—*Hieron., adv. Jov. Op.*, vol. 4, p. 186, ed. *Par.*) He was originally named Aristocles, from his grandfather, and he received that of Plato (Πλάτων) from either the breadth of his shoulders or of his forehead, the appellation being derived from πλατύς, "broad." This latter name is thought to have been given him in early youth. (*Diog. Laert.*, 3, 4.—*Senec., Ep.*, 68.—*Apuleius, de dogm. Plat.—Op.*, ed. *Oudend.*, vol. 2, p. 180.) Plutarch relates that he was hump-backed, but this, perhaps, was not a natural defect; it may have first appeared late in life, as a result of his severe studies. (*Plut., de Audiend. Poët.*, 26, 53.) Other ancient writers, on the contrary, speak in high terms of his manly and noble mien. The only authentic bust that we have of him is at present in the gallery at Florence. It was discovered near Athens in the 15th century, and purchased by Lorenzo de Medici. In this bust, the forehead of the philosopher is remarkably large. (*Visconti, Icon. Gr.*, vol. 1, p. 172, ed. 4to.)—Plato first learned grammar, that is, reading and writing, from Dionysius. In gymnastics, Ariston was his teacher; and he excelled so much in these physical exercises, that he went, as is said, into a public contest at the Isthmian and Pythian games. (*Diog. Laert.*, 3, 4.—*Apul.*, p. 184.—*Olympiod., Vit. Plat.*) He studied painting and music under the tuition of Draco, a scholar of Damon, and Metellus of Agrigentum. But his favourite employment in his youthful years was poetry. The lively fancy and powerful style which his philosophical writings so amply display, must naturally have impelled him, at an early period of life, to make some attempts at composition, which were assuredly not without influence on the beautiful form of his later works. After he had made use of the instruction of the most eminent teachers of poetry in all its forms, he proceeded to make an essay himself in heroic verse; but when he compared his production with the masterpieces of Homer, he consigned it to the flames. He next tried lyric poetry, but with no better success; and finally turned his attention to dramatic composition. He elaborated four pieces, or a tetralogy, consisting of three separate tragedies and one satyric drama; but an accident induced him to quit for ever this career, to which he was not probably destined. A short time before the festival of Bacchus, when his pieces were to be brought upon the stage, he happened to hear Socrates conversing, and was so captivated by the charms of his manners as from that moment to abandon poetry, and apply himself earnestly to the study of philosophy. (*Ælian, Var. Hist.*, 10, 21, seq.—*Val. Max.*, 1, 6.—*Plin.*, 11, 29.) But, though Plato abandoned his poetic attempts, yet he still attended to the reading of the poets, particularly Homer, Aristophanes, and Sophron, as his favourite occupation (*Olympiod., Vit. Plat.*); and he appears to have derived from them, in part, the dramatic arrangement of his dialogues. It was then customary for young men who were preparing for the polite world, or to distinguish themselves in any manner, to attend a course in philosophy. Plato had already heard the instructions of Cratylus, a disciple of the school of Heraclitus. (*Aristot., Metaphys.*, 1, 6.—*Apul.*, p. 185.) When Diogenes, Olympiodorus, and other writers assert that he did not become a scholar of Cratylus till after the death of Socrates, they give less credit to Aristotle and Apuleius than they deserve; the former a contemporary, the latter drawing his information from Speusippus. (*Tennemann's Life of Plato, Edwards's transl.*, p. 316, seq.) Plato was 20 years of age when he became acquainted with Socrates, and he continued a stated disciple of that philo-

sopher for the space of eight years, until the death of the latter. During all this period, Socrates regarded him as one of his most faithful pupils. Light as must have been the task of education in respect to the mind, since Plato was quite teachable, and, in addition to his eminent talents, possessed of great susceptibility for moral studies, still, on the other hand, it was difficult for Socrates to satisfy the aspiring and inquisitive spirit of his pupil. In all his conversations, he started questions, raised doubts, and always demanded new reasons, without allowing himself to be satisfied with those already given. (*Vit. Plat.*, 13.—*Bibliothek der Alten Lit.*) This liveliness and activity of mind could not render Socrates displeased with his manner of thinking; so little, indeed, was this the case, that Plato already, in the lifetime of Socrates, wrote dialogues, in which he introduced his teacher as the principal person, and carried on the discussions in a method that was not entirely his own. Many writers think they have discovered that Socrates was by no means satisfied with the course of Plato, in falsely imputing to him so many things which he had never said. But they can adduce no satisfactory ground or competent testimony for their conclusion. The single thing to which they appeal can prove nothing for them, because it is ambiguous. It is said, that when Plato brought forward his *Lysis* in the presence of Socrates, the latter exclaimed, "By Hercules! how many things does the young man falsely report of me!" (*Diog. Laert.*, 3, 35.) The more probable opinion, however, is, that the story is incorrectly related, and that Socrates merely alluded to the rich and figurative style of Plato, as contrasted with his own simple manner of expression. (*Tennemann, Life of Plato, Edw. transl.*, p. 324.) Plato always cherished a deep affection and esteem for his master, and, when the latter was brought to trial, undertook to plead his cause; but the partiality and violence of the judges would not permit him to proceed. After the condemnation, he presented his master with money sufficient to redeem his life, which, however, Socrates refused to accept. During his imprisonment Plato attended him, and was present at a conversation which he held with his friends concerning the immortality of the soul, the substance of which he afterward committed to writing in the beautiful dialogue entitled *Phædo*, not, however, without interweaving his own opinions and language. (Compare *Cicero, de Nat. Deor.*, 3, 33.) Upon the death of his master he withdrew, with several other friends of Socrates, to Megara, where they were hospitably entertained by Euclid, and remained till the ferment at Athens subsided. Brucker says, that Plato received instruction in dialectics from Euclid. (*Hist. Crit. Philos.*, vol. 1, p. 611, 633.) But no other writer has any reference to it. It is rather probable that both, in their philosophical conversations, sought to enrich and to settle each other's knowledge. Hence Cicero relates, that the Megarean philosopher drew many of his opinions from Plato. (*Academ. Quæst.*, 4, 42.) Desirous of making himself master of all the wisdom and learning which the age could furnish, Plato, after this, travelled into every country which was so far enlightened as to promise him any recompense of his labour. He first visited that part of Magna Græcia where a celebrated school of philosophy had been established by Pythagoras. According to Cicero, Quintilian, and Valerius Maximus, the particular object of this visit was to enrich his theoretical knowledge; but, according to Apuleius, it was with more especial reference to moral improvement. It is commonly believed that Plato became formally a scholar of the Pythagoreans, and many persons are expressly named as his teachers in the doctrines of that sect of philosophy. But this multitude of teachers is of itself sufficient to excite suspicion; and, besides, Plato must then have been at least thirty years old, and was undoubtedly ac-

quainted with the Pythagorean system long previous to his Italian voyage. How long Plato remained in Italy cannot be determined, since all the accounts relative to this point are deficient. But so much is certain, that he did not leave this country before he had gained the entire friendship of the principal Pythagoreans, of which they subsequently gave most unequivocal proofs. From Italy Plato went to Cyrene, a celebrated Greek colony in Africa. It is not certain whether he visited Sicily in passing. According to Apuleius, the object of his journey was to learn mathematics of Theodorus. This mathematician, whose fame, perhaps, surpassed his knowledge, had given instruction to the young in Athens in this branch of science; and Plato, in all probability, merely wished now to complete his knowledge on this subject. (*Tennemann's Life of Plato*, *Edo. tr.*, p. 336.) From Cyrene he proceeded to Egypt, and, in order to travel with more safety upon his journey to the last-named country, he assumed the character of a merchant, and, as a seller of oil, passed through the kingdom of Artaxerxes Mnemon. Wherever he came, he obtained information from the Egyptian priests concerning their astronomical observations and calculations. It has been asserted that it was in Egypt that Plato acquired his opinions concerning the origin of the world, and learned the doctrines of transmigration and the immortality of the soul; but it is more than probable that he learned the latter doctrine from Socrates, and the former from the school of Pythagoras. It is not likely that Plato, in the habit of a merchant, could have obtained access to the sacred mysteries of Egypt; for, in the case of Pythagoras, the Egyptian priests were so unwilling to communicate their secrets to strangers, that even a royal mandate was scarcely sufficient in a single instance to procure this indulgence. Little regard is therefore due to the opinions of those who assert that Plato derived his system of philosophy from the Egyptians. (*Iamblich. Myst. Æg.*, 1, 2, p. 3.) That Plato's stay in Egypt extended to a period of thirteen years, as some maintain, or even three years, as others state, is highly incredible; especially as there is no trace in his works of Egyptian research. All that he tells us of Egypt indicates at most a very scanty acquaintance with the subject; and, although he praises the industry of the priests, his estimate of their scientific attainments is far from favourable. (*Repub.*, 4, p. 435.) Nor is there a better foundation for supposing that, during his residence in Egypt, Plato became acquainted with the doctrine of the Hebrews, and enriched his system with spoils from their sacred books. (*Huet, Dem. Pr.*, 4, 2, § 15.—*Gale's Court of the Gentiles*.) This opinion has, it is true, been maintained by several Jewish and Christian writers, but it has little foundation beyond mere conjecture; and it is not difficult to perceive that it originated in that injudicious zeal for the honour of revelation, which led these writers to make the Hebrew scriptures or traditions the source of all Gentile wisdom. After his Egyptian travels Plato came to Sicily, and visited Syracuse when he was about forty years of age, in the eighty-ninth Olympiad, and in the reign of Dionysius the Elder. According to the statement of all the writers who make mention of this tour, his only object was to see the volcano of Etna; but, from the seventh letter ascribed to him, it would seem that higher objects engaged his attention, and that his wish was to study the character of the inhabitants, their institutions and laws. At the court of Dionysius Plato became acquainted with Dio, the brother-in-law of the tyrant, and Dio endeavoured to produce an influence upon the mind of Dionysius by the conversation of Plato. But the attempt failed, and had nearly cost the philosopher his life. Dionysius was highly incensed at the result of an argument in which he was worried by Plato, who took occasion also to advance

in the course of it some bold and unpalatable truths, and, in the first heat of his passion, he would almost have punished the hardihood of the philosopher with death, unless Dio and Aristomenes had together restrained him from it. They conceived, therefore, that Plato could no longer stay at Syracuse without hazard, and accordingly secured a passage for him in a ship which was about to carry home Polis, a Lacedæmonian ambassador, or, according to Olympiodorus, a merchant of Ægina. Dionysius heard of it, and bribed Polis either to throw Plato overboard, or, if his conscience would not allow him to do that, to sell him as a slave. He was accordingly sold by the treacherous Polis on the island of Ægina, which was then involved in war with Athens. According to some writers, he was sold by the Æginetans. A certain Anniceris, from Cyrene, redeemed him for twenty or thirty minæ. Plato's friends and scholars (according to some, Dio alone) collected this sum in order to indemnify Anniceris, who, however, was so noble minded, that with the money he purchased a garden in the Academy, and presented it to the philosopher. When Plato had completed his travels, and had reached the end of their various dangers and calamities, he returned to Athens, and began publicly to teach philosophy in the Academy. He had here a garden from paternal inheritance, which was purchased for five hundred drachmæ; so that, if the story of Anniceris be true, Plato must have had two gardens in this place, which also a passage from Diogenes allows us to conjecture. This writer remarks, that Plato taught philosophy first in the Academy, but afterward in a garden at Colonus. (*Diog.*, 3, 5.) His Academy soon became celebrated, and was numerous attended by high-born and noble young men: for he had before, by means of his travels, and probably by some publications, acquired a distinguished name. (*Tennemann, Life of Plato*, *Edo. tra.*, p. 342, *seq.*) Plato taught in the Academy for a period of twenty-two years prior to his second journey to Syracuse, which he undertook at the instigation of Dio, who hoped, by the lessons of the philosopher, to influence the character of the new ruler of Syracuse. This prince, it is said, had been brought up by his father wholly destitute of an enlightened education, and it was now the task of Plato to form his mind by philosophy. It seems, at the same time, to have been the plan of Dio and Plato to bring about, by philosophical instruction, a wholesome reform of the Sicilian constitution, by giving it a more aristocratic character. But, whatever may have been their intentions, they were all frustrated by the weak and voluptuous character of Dionysius. Dio became the object of the tyrant's suspicion, and was conveyed away to the coast of Italy, without, however, forfeiting his possessions. In this conjuncture of affairs, Plato did not long remain in Syracuse, where his position would at best have been ambiguous. He returned to Athens, but, in consequence of some fresh disagreement between Dionysius and Dio, with respect to the property of the latter, he was induced to take a third journey to Syracuse. The reconciliation, which it was his object to effect, completely miscarried; he himself came to an open rupture with Dionysius, and only obtained a free departure from Sicily through the active interposition of his Pythagorean friends at Tarentum. It does not appear that he took any part in the later conduct of Sicilian affairs, though his nephew and disciple Speusippus, and others of the Academy, rendered personal assistance to Dio, in a warlike expedition against Dionysius. From this time Plato seems to have passed his old age in tranquillity in his garden, near the Academy, engaged with the instruction of numerous disciples, and the prosecution of his literary labours. He died while yet actively employed about his philosophical compositions. Having enjoyed the advantage of an athletic constitution, and lived all his

PLATO.

days temperately, he arrived at the eighty-first, or, according to some writers, the seventy-ninth, year of his age, and died, through the mere decay of nature, in the first year of the 108th Olympiad. He passed his whole life in a state of celibacy, and therefore left no natural heirs, but transferred his effects by will to his friend Adimantus. The grove and garden, which had been the scene of his philosophical labours, at last afforded him a sepulchre. Statues and altars were erected to his memory; the day of his birth long continued to be celebrated as a festival by his followers; and his portrait is to this day preserved in gems; but the most lasting monuments of his genius are his writings, which have been transmitted, without material injury, to the present times.—The personal character of Plato has been very differently represented. On the one hand, his encomiasts have not failed to adorn him with every excellence, and to express the most superstitious veneration for his memory. His enemies, on the other, have not scrupled to load him with reproach, and charge him with practices shamefully inconsistent with the purity and dignity of the philosophical character. (*Athenæus*, 11, p. 507.—*Diog. Laert.*, 3, 28.) We cannot so implicitly adopt the panegyrics of the former, as to suppose him to have been free from human frailties; and we have a right to require much better proofs than his calumniators have adduced, before we can suppose him to have been capable of sinking, from the sublime speculations of philosophy, into the most infamous vices. The reproaches with which Plato has been assailed, as having boasted that he could supply their master's place to the bereaved disciples of Socrates, but ill agrees with the pious affection with which he bewailed his death, and ascribed to him, as the fruits of his lessons, his whole philosophy. Nor can we help thinking that there is much injustice in the charge brought against him, of malice and ill feeling towards his fellow-scholars; though, at the same time, we must admit, that, to all appearances, he did not cultivate a very intimate friendship with any one among them, who afterward became illustrious in philosophy: nay, more, it appears that he reviewed with some bitterness the doctrines of Aristippus, Antisthenes, and Euclid. To the more soaring flight of his own lofty views, their incomplete and exclusive notions must unquestionably have appeared unworthy of the school of Socrates, and, as they began by attacking his own system, it was but natural that Plato should retaliate with some degree of bitterness and warmth. The by no means exalted opinion entertained by Plato of his philosophical contemporaries necessarily became a farther ground for the charge against him of overweening haughtiness; and it would even appear that other causes existed for the imputation. A certain contempt for the mass of the people stands out prominently enough in his writings, while his commendation of philosophy, as opposed to common sense, might easily have been taken as personal. Besides all this, the splendour of his school, especially when compared with the simplicity and even poverty of the Socratic, seems to have betokened a degree of pretension and display, which naturally brought upon it the ridicule of the comic writers. It cannot be dissembled, that Plato gave to philosophy and to human culture in general a tendency towards ornament and refinement, a splendour of language and form, far removed from the pristine severity and rigour, and greatly favouring the fast-growing spirit of effeminacy. His school was less a school of hardy deeds for all, than of polished culture for the higher classes, who had no other object than to enhance the enjoyment of their privileges and wealth. This remark, however, does not so much apply to Plato as to the age in which he lived, and to which nothing else was left than to moderate and retard the decline of morality by its intellectual progress and en-

PLATO.

lightenment. (*Ritter, History of Philosophy*, vol. 2, p. 182, *Eng. tr.*)—Several anecdotes are preserved, which reflect honour upon the moral principles and character of Plato. Such was his command of temper, that, when he was lifting up his hand to correct his servant for some offence, perceiving himself angry, he kept his arm fixed in that posture, and said to a friend, who at that moment asked him what he was doing, "I am punishing a passionate man."—At another time, he said to one of his slaves, "I would chastise you if I were not angry."—At the Olympic games he happened to pass a day with some strangers, who were much delighted with his easy and affable conversation, but were no farther informed concerning him than that his name was Plato; for he had purposely avoided saying anything respecting Socrates or the Academy. At parting, he invited them, when they should visit Athens, to take up their residence at his house. Not long afterward they accepted his invitation, and were courteously entertained. During their stay, they requested that he would introduce them to his namesake, the famous philosopher, and show them his Academy. Plato, smiling, said, "I am the person you wish to see." The discovery surprised them exceedingly; for they could not easily persuade themselves that so eminent a philosopher would condescend to converse so familiarly with strangers. (*Ælian, Var. Hist.*, 4, 9.)—When Plato was told that his enemies were busily employed in circulating reports to his disadvantage, he said, "I will live so that none shall believe them."—One of his friends, remarking that he seemed as desirous to learn himself as to teach others, asked him how long he intended to be a scholar. "As long," replied he, "as I am not ashamed to grow wiser and better."—It is from the writings of Plato chiefly that we are to form a judgment of his merit as a philosopher, and of the service which he rendered to science. No one can be conversant with these without perceiving that his actions always retained a strong tincture of that poetical spirit which he discovered in his first productions. This is the principal ground of those lofty encomiums which both ancient and modern critics have passed upon his style, and particularly of the high estimation in which it was held by Cicero, who, treating of the subject of diction, says, "That if Jupiter were to speak in the Greek tongue, he would use the language of Plato." (*De Orat.*, 3, 30.)—The accurate Stagirite describes it as "A middle species of diction, between verse and prose." (*Arist., ap. Laert.*) Some of his dialogues are elevated by such sublime and glowing conceptions, are enriched with such copious diction, and flow in so harmonious a rhythm, that they may be truly pronounced highly poetical. Even in the discussion of abstract subjects, the language of Plato is often clear, simple, and full of harmony. At other times, however, he becomes turgid and swelling, and involves himself in obscurities which were either the offspring of a lofty fancy, or borrowed from the Italic school. Several ancient critics have noticed these blemishes in the writings of Plato. The same inequality which is so apparent in the style of Plato, may also be observed in his conceptions. While he adheres to the school of Socrates, and discourses upon moral topics, he is much more pleasing than when he loses himself with Pythagoras, in abstruse speculations.—The dialogues of Plato, which treat of various subjects, and were written with different views, are classed by the ancients under the two heads of *didactic* and *inquisitive*. The *didactic* are subdivided into *speculative* (including *physical* and *logical*), and *practical* (comprehending *ethical* and *political*). The second class, the *inquisitive*, is characterized by terms taken from the athletic art, and divided into the *gymnastic* and *agonistic*. The dialogues termed *gymnastic* were imagined to be similar to the *exercise*, and were subdivided into the *maieutic* (as re-

sembling the teaching of the rudiments of the art; and the *peirastic* (as represented by a skirmish, or trial of proficiency). The *agonistic* dialogues, supposed to resemble the *combat*, were either *endeictic* (as exhibiting specimens of skill), or *anatreptic* (as presenting the spectacle of a *perfect defeat*). Instead of this whimsical classification, they may more properly be divided into *physical, logical, ethical, and political*.—The writings of Plato were originally collected by Hermodorus, one of his pupils. One circumstance it is particularly necessary to remark: that, among other things which Plato received from foreign philosophy, he was careful to borrow the art of concealing his real opinions. His inclination towards this kind of concealment appears from the obscure language which abounds in his writings, and may indeed be learned from his own express assertions. "It is a difficult thing," he observes, "to discover the nature of the Creator of the universe; and, being discovered, it is impossible, and would even be impious, to expose the discovery to vulgar understandings." This concealed method of philosophizing he was induced to adopt from a regard to personal safety, and from motives of vanity. (*Enfield's History of Philosophy*, vol. 1, p. 206, *seqq.*)—Plato, by his philosophical education, and the superiority of his natural talents, was placed on an eminence which gave him a commanding view of the systems of his contemporaries, without allowing him to be involved in their prejudices. (*Sophista*, vol. 2, p. 252, 265, *ed. Bip.*—*Cratyl.*, p. 345, 286.) He always considered theoretical and practical philosophy as forming essential parts of the same whole; and thought it was only by means of true philosophy that human nature could attain its proper perfection. (*De Repub.*, vol. 7, p. 78, *ed. Bip.*)—His critical acquaintance with preceding systems, and his own advantages, enabled Plato to form more adequate notions of the proper end, extent, and character of philosophy. Philosophy he defined to be science, properly so called. The source of knowledge he pronounced to be, not the evidence of our senses, which are occupied with *contingent* matter, nor yet the *understanding*, but Reason (*Phædo*, vol. 1, p. 325, *ed. Bip.*), whose object is that which is *invariable and absolute* (*τὸ ἄνυκλον ἐν*.—*Phædr.*, vol. 10, p. 247, *ed. Bip.*). He held the doctrine of the existence in the soul of certain *innate ideas* (*νοήματα*), which form the basis of our conceptions, and the elements of our practical resolutions. To these *Ideas*, as he termed them (the eternal *παράδειγματα*, types and models of all things, and the *ἀρχαί*, or principles of our knowledge), we refer the infinite variety of individual objects presented to us (*τὸ ἄπειρον* and *τὰ πολλά*). Hence it follows, that all these details of knowledge are not the results of experience, but only developed by it. The soul recollects the *ideas*, in proportion as it becomes acquainted with their copies (*εἰκασίματα*), with which the world is filled; the process being that of recalling to mind the circumstances of a state of pre-existence. (*Phædo*, vol. 1, p. 74, 75. — *Phædr.*, vol. 10, p. 249.) Inasmuch as the objects thus presented to the mind correspond in part with its *ideas*, they must have some principle in common; that principle is the Divinity, who has formed these external objects after the model of the *ideas*. (*De Repub.*, 6, vol. 7, p. 116, *seqq.*—*Tim.*, vol. 9, p. 348.) Such are the fundamental doctrines of the philosophy of Plato; in accordance with which he placed the principles of identity and contradiction among the highest laws of philosophy (*Phædr.*, vol. 10, p. 226, 230. — *De Repub.*, 6, vol. 7, p. 122, &c.), and drew a distinction between *Empirical* knowledge and *Rational*; the one being derived from the intellectual, the other from the External world (*κόσμος αἰσθητός* and *νοητός*); making the latter the only true object of philosophy.—The division of philosophy into *Logic* (*Dialectics*), *Metaphysics* (*Physiology* or

Physics), and *Morals* (the Political Science), has been principally brought about by Plato (*Seztus ad. Math.*, 7, 16), who clearly laid down the chief attributes of each of these sciences, and their mutual dependencies, and distinguished also between the analytical and synthetical methods. Philosophy, therefore, is under great obligation to him, *quoad formam*. She is no less indebted to him for the lights he has thrown upon the above parts considered separately; though he did not profess to deliver a system of each, but continually excited the attention of others, in order to farther discoveries.—Plato considered the soul to be a self-acting energy (*αὐτὸ ἐαυτὸ κινεῖν*.—*De Leg.*, 10, vol. 9, p. 88, *seqq.*); and, viewed as combined with the body, he distinguished in it two parts, the rational (*λογιστικὸς νοῦς*), and the irrational or animal (*ἄλογιστικὸν* or *ἐπιθυμητικὸν*), mutually corrected by a sort of middle term (*θυμὸς* or *τὸ θυμοειδές*). The animal part has its origin in the imprisonment of the soul in the body; the intellectual still retains a consciousness of the *Ideas*, whereby it is capable of returning to the happy condition of spirits. In Plato we discover also a more complete discrimination of the faculties of knowledge, sensation, and volition (*De Repub.*, 4, vol. 6, p. 367, *ed. Bip.*), with admirable remarks on their operations, and on the different species of perception, of sensation, of motives determining the will, as well as the relations between thought and speech. (*Theæt.*, *ed. Steph.*, p. 189, *E.*, *seqq.*—*Phileb.*, p. 38, *D.*)—Plato has rendered no less service to philosophy by affording it the first sketch of the laws of thought, the rules of propositions, of conclusions, and proof, and of the analytic method: the distinction drawn between the Universal (*κοινόν*) and Substance (*οὐσία*); and the Particular and the Accidental. He diligently investigated the characteristics of Truth, and detected the signs of the *phenomenon* or *apparent* Truth. To him we owe the first attempt at the construction of a philosophical language (in the *Cratylus*); the first development of an abstract idea of knowledge and science; the first logical statement of the properties of Matter, Form, Substance, Accident, Cause and Effect, of Natural and Independent causes of Reality (*τὸ ἐν*), and of Apparent Reality (*φανόμενον*); a more adequate idea of the Divinity, as a Being eminently good, with a more accurate induction of the Divine Attributes, especially the moral ones; accompanied by remarks on the popular religion, and an essay towards a demonstration of the existence of God by reasonings drawn from Cosmology. (*De Leg.*, 10, vol. 9, p. 68; 12, vol. 9, p. 229. — *Phileb.*, vol. 4, p. 224. — *Epinomis.*, vol. 9, p. 254, *seqq.*) He represents the Divinity as the author of the world, inasmuch as he introduced into rude matter (*ἔλας*—*τὸ ἀμορφον*) order and harmony, by moulding it after the *Ideas*, and conferring, together with a rotatory motion, a harmonious body, governed, as in the case of individual animals, by a rational spirit. (*Tennemann, Manual of Philos.*, p. 110, *seqq.*, *Johnston's transl.*)—In theology, the fundamental doctrine of Plato, as of all other ancient philosophers, is, that from nothing nothing can proceed. This universal axiom, applied not only to the infinite efficient, but to the material cause, Plato, in his *Timæus*, assumes as the ground of his reasoning concerning the origin of the world. In this dialogue, which comprehends his whole doctrine on the subject of the formation of the universe, matter is so manifestly spoken of as eternally coexisting with God, that this part of his doctrine could not have been mistaken by so many learned and able writers, had they not been seduced by the desire of establishing a coincidence of doctrine between the writings of Plato and Moses. It is certain that neither Cicero (*Acad. Quæst.*, 1, 6), nor Apuleius (1, p. 184), nor Alcinoüs (c. 13), nor even the later commentator Chalcidius, understood their master in any other sense than as ad-

mitting two primary and incorruptible principles, God and Matter. The passages quoted by those who maintain the contrary opinion are by no means sufficient for their purpose.—Matter, according to Plato, is an eternal and infinite principle. His doctrine on this head is thus explained by Cicero (*Acad. Quest.*, i, 8): "Matter, from which all things are produced and formed, is a substance without form or quality, but capable of receiving all forms and undergoing every kind of change; in which, however, it never suffers annihilation, but merely a solution of its parts, which are in their nature infinitely divisible, and move in portions of space which are also infinitely indivisible. When that principle which we call quality is moved, and acts upon matter, it undergoes an entire change, and those forms are produced from which arises the diversified and coherent system of the universe." This doctrine Plato unfolds at large in his *Timæus*, and particularly insists on the notion, that matter has originally no form, but is capable of receiving any. He calls it the mother and receptacle of forms, by the union of which with matter the universe becomes perceptible to the senses; and maintains that the visible world owes its form to the energy of the divine intellectual nature.—It was also a doctrine of Plato, that there is in matter a necessary, but blind and refractory, force; and that hence arises a propensity in matter to disorder and deformity, which is the cause of all the imperfection that appears in the works of God, and the origin of evil. On this subject Plato writes with wonderful obscurity; but, as far as we are able to trace his conceptions, he appears to have thought, that matter, from its nature, resists the will of the Supreme Artificer, so that he cannot perfectly execute his designs; and that this is the cause of the mixture of good and evil which is found in the material world. The principle opposite to matter, in the system of Plato, is God. He taught that there is an intelligent cause, which is the origin of all spiritual being, and the former of the material world. The nature of this great Being he pronounced it difficult to discover, and, when discovered, impossible to divulge. The existence of God he inferred from the marks of intelligence which appear in the form and arrangement of bodies in the visible world; and, from the unity of the material system, he concluded that the mind by which it was formed must be one. God, according to Plato, is the Supreme Intelligence, incorporeal, without beginning, end, or change, and capable of being perceived only by the mind. The Divine Reason, the eternal region of Ideas or forms, Plato speaks of as having always existed, and as the Divine principle which established the order of the world. He appears to have conceived of this principle, as distinct not merely from matter, but from the efficient cause, and as eternally containing within itself Ideas, or intelligible forms, which, flowing from the fountain of the divine essence, have in themselves a real existence, and which, in the formation of the visible world, were, by the energy of the efficient cause, united to matter, to produce sensible bodies.—It was another doctrine in the Platonic system, that the Deity formed the material world after a perfect archetype, which had eternally subsisted in his Reason, and endued it with a soul. "God," says he, "produced mind prior in time as well as in excellence to the body, that the latter might be subject to the former.—From that substance, which is indivisible and always the same, and from that which is corporeal and divisible, he compounded a third kind of substance, participating in the nature of both."—This substance, which is not eternal, but produced, and which derives the superior part of its nature from God, and the inferior from matter, Plato supposed to be the animating principle in the universe, pervading and adorning all things. This third principle in nature is, in the Platonic system, inferior to the Deity, being de-

rived from that Divine Reason which is the seat of the Ideal world; herein differing fundamentally from the Stoical doctrine of the soul of the world, which supposed the essence of the Divine nature diffused through the universe. It is evident, from this account of the doctrine of Plato concerning God and the soul of the world, that it differs materially from the doctrine of the Trinity afterward received into the Christian Church. Plato did not suppose three substances in one divine essence, separate from the visible world; but taught that the λόγος, or Reason of God, is the seat of the intelligible world or of Ideas, and that the soul of the world is a third subordinate nature, compounded of intelligence and matter. In the language of Plato, the universe, being animated by a soul which proceeds from God, is the Son of God; and several parts of nature, particularly the heavenly bodies, are Gods. He probably conceived many subordinate divinities to have been produced at the same time with the soul of the world, and imagined that the Supreme Being appointed them to the charge of forming animal bodies, and superintending the visible world: a doctrine which he seems to have borrowed from the Pythagoreans, and particularly from *Timæus* the Locrian.—Plato appears to have taught, that the soul of man is derived by emanation from God; but that this emanation was not immediate, but through the intervention of the soul of the world, which was itself debased by some material admixture; and, consequently, that the human soul, receding farther from the First Intelligence, is inferior in perception to the soul of the world. He teaches, also, in express terms, the doctrine of the immortality of the rational soul; but he has rested the proof of this doctrine upon arguments drawn from the more fanciful parts of his system. For example: In nature, all things terminate in their contraries; the state of sleep terminates in that of waking; and the reverse: so life ends in death, and death in life. The soul is a simple indivisible substance, and therefore incapable of dissolution or corruption. The objects to which it naturally adheres are spiritual and incorruptible; therefore its nature is so. All our knowledge is acquired by the reminiscence of ideas contemplated in a prior state: as the soul must have existed before this life, it is probable it will continue to exist after it. Life being the conjunction of the soul with the body, death is nothing more than their separation. Whatever is the principle of motion must be incapable of destruction. Such is the substance of the arguments for the immortality of the soul, contained in the celebrated dialogue of the *Phædo*. It is happy for mankind that their belief of this important doctrine rests upon firmer grounds than this futile reasoning. (*Enfield's History of Philosophy*, vol. 1, p. 229, *segg.*)—The interesting research which Plato carried so far, respecting the Supreme Good, belongs to the subject of *Morals*. Virtue he defined to be the imitation of God, or the effort of man to attain to a resemblance of his original; or, in other terms, a union and harmony of all our principles and actions according to reason, whence results the highest degree of happiness. Virtue is *one*, but compounded of four elements: Wisdom, Courage or Constancy, Temperance, and Justice; which are otherwise termed the four cardinal virtues. Such virtues he describes as arising out of an independence of, and superiority to, the influence of the senses. In his practical philosophy Plato blended a right principle of moral obligation with a spirit of gentleness and humanity; and education he described as a liberal cultivation and moral discipline of the mind. Politics he defined to be the application, on a great scale, of the laws of morality; a society being composed of individuals, and therefore under similar obligations; and its end to be liberty and concord. In giving a sketch of his Republic, as governed according to reason, Plato had particularly

an eye to the character and the political difficulties of the Greeks, connecting at the same time the discussion of this subject with his metaphysical opinions respecting the soul.—Beauty he considered to be the sensible representation of moral and physical perfection; consequently it is one with Truth and Goodness, and inspires love which leads to virtue, forming what is called Platonic love. (*Tennemann, Manual*, p. 117.)

I. General View of the Philosophy of Plato.

It requires, indeed, considerable knowledge of the history of philosophy to appreciate the whole influence which Plato has exercised upon the human mind; and, still more, a thorough acquaintance with his works to comprehend their real scope and depth. It is, therefore, not surprising that such an erroneous estimate of his character should generally prevail; so that, as Schleiermacher well observes (*Pref. to Introd. to Dialogues*), his brilliant passages should have dazzled the eyes of students until they forgot that in the mind of Plato these were but resting-stones and reliefs (necessary concessions to human weakness) to enable the mind to ascend to a far higher range of thought. And yet there are certain eras in the history of human reason, in which the operation of Platonism comes out in a form too striking to permit any doubt of its power or disrespect to its memory. It was something more than eloquence and fancy which Cicero, perplexed as he sometimes seems to be with the dialectical manoeuvres of Plato, discovered in those theories through which he proposed to conduct the spirit of philosophy into Rome. It was not mere ingenuity and abstraction which induced the reformers of heathenism to adopt his name, so that, in the words of Augustine (*De Civit. Dei*, 8, 10), "*recentiores quique philosophi nobilissimi, quibus Plato sectandus placuit, noluerint se dici Peripateticos aut Academicos, sed Platonicos.*" Something more than ordinary reason (and so the wisest Christians always thought) must have informed that spirit which, after lying dormant for three centuries, was resuscitated in the first age of Christianity, and entered into that body of rationalism which, whether under the name of Gnosticism or the Alexandrian School, rose up by the side of the true faith, to wrestle with its untried strength, and to bring out its full form, in precision, by struggles with an antagonist like itself. Once more, at the revival of literature, Plato was selected as the leader of the new philosophical spirit, which was to throw off the yoke of Romanism, and with it the law of Christianity. Wherever Plato has led, he has elevated and improved the human mind. He has been followed too far—farther than the Christian may follow him; and many fatal errors have been sheltered under his name. But those which have really sprung from him have been errors of the heart; errors which have not degraded human nature, nor stifled the principle of virtue. Even the scepticism of the later academics offers no exception, for it had no authority whatever in the general principles of Plato. Enthusiasm, mysticism, and fanaticism have been the extravagances of Platonism; coldness, materialism, and scepticism the perversions of Aristotle. Each, when retained in his proper subordination, has been a useful servant to the cause of Christianity. But the work which Plato has performed is far higher than that of Aristotle; one has drilled the intellect, the other disciplined the affections; one aided in sinking deep the truths of Christianity, and expanding its form, the other complicated and entangled its parts by endeavouring to reduce them to system; one supplied materials, the other lent instruments to shape them; one fairly met the enemies of Christianity upon the ground of reason, the other secretly gave way to them without deserting the standard of authority; one, when it rebelled, rebelled openly, and threw up heresy; the other never rebelled, but engendered and

supported corruption. No men have more mistaken the nature of Plato's system than those who have regarded it as a speculative fabric, such as men of powerful intellect have wrought out at times in schools and cloisters, when the tranquillity of society enabled them to think, without any necessity for action. Much, if not all, of the Eastern philosophy was of this caste. It sprang up like a tree in the desert, very beautiful but very useless, under an atmosphere fixed and changeless, perfect in all its outlines from the absence of anything to disturb it. Such, also, was much of the new Alexandrian speculations, until Julian brought them to bear practically upon the purification of the heathen polytheism. Such also was scholasticism, and such many of the rival theories which have since sprung up in Germany under the stimulus of a craving curiosity, which found nothing to do but to think. We shall, however, never understand the value of Plato's philosophy, and still less the arrangement and dependance of its parts, without viewing it in this light, as a practical, not a speculative, system. Even considered as a revival of the modified doctrine of Pythagoras, which, probably, is the true point of view, it is still practical. Pythagoras was full of other thoughts than the abstract relation of numbers, when he organized his wonderful society to restore something like right government and religious subordination in the republics of Magna Græcia. He was as far from dreaming away his reason in empty metaphysics, though high and abstract truth was a necessary condition of his system, as Loyola was from resting in the subtleties of scholastic theology when he created his singular polity for upholding the Romanist faith. Plato's great object was man. He lived with man, felt as a man, held intercourse with kings, interested himself deeply in the political revolutions of Sicily, was the pupil of one whose boast it was to have brought down philosophy from heaven to earth, that it might raise man up from earth to heaven; and, above all, he was a witness and actor in the midst of that ferment of humanity exhibited in the democracy of Athens. When states are at peace and property secure, and the wheels of common life move on regularly and quietly upon their fixed lines, men with active minds may sit and speculate upon the stars, or analyze ideas. But it is not so in the great convulsions of society. The object constantly before the eyes of Plato was the incorporated spirit, the *μυτα σπέρμα* of human lawlessness. (*Repub.*, 6, p. 219.) He saw it, indeed, in an exhausted state, its power passed away, its splendour torn off, and all the sores and ulcers (*Gorgias*, p. 109) which other demagogues had pampered and concealed, now laid bare and beyond cure. But it was still a spectacle to absorb the mind of every good and thoughtful man. The state of the Athenian democracy is the real clew to the philosophy of Plato. It would be proved, if by nothing else, by one little touch in the Republic. The Republic is the summary of his whole system, and the keystone of all the other dialogues are uniformly let into it. But the object of the Republic is to exhibit the misery of man let loose from law, and to throw out a general plan for making him subject to law, and thus to perfect his nature. It is exhibited on a large scale in the person of a state, and in the masterly historical sketch with which, in the eighth and ninth books, he draws the changes of society. Having painted in the minutest detail the form of a licentious democracy, he fixes it by the slightest allusion (it was, perhaps, all he could hazard) on the existing state of Athens; and then passes on to a frightful prophecy of that tyranny which would inevitably follow. All the other dialogues bring us to the Republic, and the Republic brings us to this as its end and aim. On this view every part of his system will fall naturally into place. Even questions apparently farthest from any practical intention are thus connected

PLATO.

with his plan. If in the *Sophist* he indulges in the most subtle analysis of our notion of being, it is to overthrow the fundamental fallacy of that metaphysical school which was denying all virtue by confounding all truth, and thus poisoning human nature at its source, and justifying the grossest crimes both of the state and of its leaders. If he returns again and again to his noble theory of Ideas, it is to fix certain immutable distinctions of right and wrong, good and evil; and to raise up the mind to the contemplation of a being of perfect goodness, prior in existence, superior in power, unamenable in its independence to those fancies and passions of mankind which had become, before the eyes of Plato, in individuals unbridled lusts, and in the state an insanity of tyranny. If in the *Parmenides* he takes us into the obtrusest mysteries of metaphysics—the nature of unity and number—this also was rendered necessary, not only to obviate objection to his own theory of ideas, but to fix the great doctrine of unity in a Divine Being—unity in goodness—one truth in action and thought—as opposed to that polytheism of reason which makes every man's conscience his god. It grappled also with a mystery which meets us at the foundation of every deep theory, and in the forms of every popular belief, in Christianity as well as in heathenism; a mystery which, true in itself, as wholly distinct from man, has yet a corresponding mystery in the constitution of the human mind; and which compelled even the heathen philosopher to state the same seeming paradox for the very foundation of his system, which Christianity lays down at once as its grand and all-comprehensive doctrine. All unity implies plurality—all plurality must end in unity. So also the inquiry in the *Theætetus* into the nature of science bore no resemblance whatever in its object to any mere speculative theories of Kant or his followers. It was a necessary part of that system which was to become the antagonist of the *Sophists*, and to contend for the preservation of truth against a ruinous sensualism and empiricism, which was sapping all the foundations of society. Even the seemingly frivolous and often wearisome subtleties which occur in the *Sophist*, the *Euthydemus*, and the *Politicus*, are intended as dialectical exercises for the pupil whom Plato is forming to become the saviour and guardian of a state. Even the philological absurdities of the *Cratylus* are to be explained in the same way. He perpetually suggests the fact in the dialogues themselves. And in the *Republic* (lib. 7) he gives at length the principles on which they are introduced. Very much of the plan of his dialogues, for reasons which he himself supplies, is purposely left in obscurity. And the test of the statement here made must lie in a careful reference to the works themselves. But it is impossible to believe that Plato, the "first of philosophers," who made practical goodness and duty the one great end of life; whose whole history, as well as his theories, are full of views, not of speculative fancies, but of practical improvement to society (*Conviv.*, p. 280); the friend of Dion, the adviser of Dionysius, the pupil of Socrates, the writer of the *Republic* and the *Laws*; who recognised, indeed, intellect and truth as necessary conditions of man's perfection, but made "the good and the beautiful," his heart and his affections, the ruling principle of his actions; who never looked down upon minds beneath him without thinking of the task of education, and never raised his eyes to that image of the Deity which he had formed from all imaginable perfection, without seeing in it, not merely an abstraction of intellect, unity, identity, eternity, but goodness, and love, and justice; the Maker of the world, because he delighted in the happiness of his creatures; the Dispenser of rewards beyond the grave, the Cause of all good things (*Repub.*, lib. 10), the Father and King of all: it is impossible to believe that such a man, with strong affections, consummate devo-

PLATO.

tion to his end, absolute unity of purpose inculcated in all his doctrines, and exhibited in the outlines of his work, should have stood before any scene of humanity, least of all before the spectacle of an Athenian democracy, without having his whole soul possessed by man and the relations of man, instead of things and the relations of things; that he should have wasted those powers, so elevated and so pure, in idle subtleties; that he should have thrown out his fancies in fragments, as one whose life was aimless; or that, wrought as they are in every line with a consummate art, linked together to the observing eye by ten thousand of the finest reticulations, they were not intended as a system; and as a system will come out to us when the focus is rightly adjusted, and the whole is regarded as a mighty effort to elevate man to his perfection, and his perfection where only it can be reached, in a social and political form. We are most anxious to fix attention on this point (let it be a fancy—take it as hypothesis, only try it), because, wherever it has been lost (and we cannot name the commentator who has wholly found it), the whole of Plato's works have been viewed in inextricable confusion. Even Schleiermacher has failed in his clew. Men seem to have wandered about as in a maze; here admiring, there perplexed, there completely at a stand. No order, no limits, no end. Fragments have been dealt with as wholes, and wholes as fragments; irony mistaken for earnestness, and earnestness for irony; play for the fancy gravely dealt with as meditation for the reason, and exercises for boys treated as the serious occupation of men. Spurious pieces have been admitted which destroyed all consistency of thought. Doubts raised to remove error or rouse curiosity, have been carried off as final decisions, until Plato, the very dogmatist of philosophy, has been made the ringleader of Pyrrhonists and sceptics. And even the holiest and purest of ethics, which never stopped short of its object till man's mind was withdrawn from sense and his heart was fixed upon its God, has been calumniated and perverted. But take this central position: look as a philosopher on man, and on man, in his whole personality, as a living, immortal soul, instinct with affection and feeling, which cannot rest except in beings like himself. See him vainly struggling to realize that noble creation for which he was formed at first, and to raise up a polity or church in the faculties of his own nature, and from the members of civil society; then contemplate the wreck of such a plan in the contaminated youth and remorseless tyranny of the Athenian commonwealth; all that was noble in its nature, its "lion heart" and "human reason" (*Repub.*, lib. 9, p. 345), "starved, emaciated, and degraded;" and the "many-headed monster of its passions," *πολυκεφάλον θρέμμα*, "howling round and tearing it to pieces;" and then a new light will fall upon the meaning and order of these works, which were intended to do all that mere philosophy could do—to raise a solemn protest against the sins which it witnessed; to overthrow the sophistries which pandered to those corruptions; to open a nobler scene; and to create some yearning for its attainment in those few untainted minds which nature had prepared for its enjoyment. In this view all will be clear: the grand close of all the dialogues in the *Republic* and *Laws*; the striking mode in which all the rest are worked into these two; the commencement of them in the *Phædrus*, and the perfect consistency of that piece, in any other view so wild and heterogeneous; the deep, melancholy tone which pervades every allusion of Plato to scenes before his eyes; the anticipation of coming evil; the sort of prophetic elevation as he opens his "dream" of that city wherein all goodness should dwell—"whether such has ever existed in the infinity of days gone by, or even now exists in the East far from our sight and knowledge, or will be perchance hereafter"—but "which, though

it be not on earth, must have a pattern of it laid up in heaven, for him who wishes to behold it, and, beholding, resolves to dwell there." (*Repub.*, lib. 9, p. 349.) So also we shall enter into the educational character of his works; their high practical morality, the mode in which every question is carried up into the nature of truth, and, through truth, is connected with virtue; the position which theology occupies, and the practical mode in which it is applied; the absence of those abstract metaphysical speculations on the nature of the Deity, into which human reason always falls when it analyzes mental conceptions beyond what practical duty requires; and into which the Neo-Platonicians did fall, and, still more, the Gnostics, while they boasted of their own ingenuity, and ridiculed Plato as one who had not, like them, penetrated "into the depths of the Intelligible Essence." (*Porphyr.*, *Vit. Plato*, c. 14.) Even the form of Plato's works will derive new light and beauty from considering them as instruments of instruction, not vehicles for speculation. The mode in which curiosity is roused by the fractured lines of the dialogue; the arresting the attention by demanding an answer to every position; the gradual opening of difficulties; the carrying of the eye and imagination to the truth by portions of broken winding-stairs of argument, leading to dark recesses, and ruinously hung together in masses, rather than the throwing open before the reader an easy ascending plane, which requires no labour and stimulates no thought. So also the successive overthrow of opinions; the sudden starting up of doubts in apparently the most open ground; the skill with which the drama of the argument is broken up into scenes and acts, heightened by a stage decoration, and relieved with the solemn or the grotesque; the rich melo-dramatic myths which so often close them; the character of Socrates himself embodying the attributes and duties of the Greek chorus; the selection of the parties among the young; the tests which are applied to ascertain if they possess the qualities of mind which, in the Republic (lib. 7), are declared to be necessary for those who make any progress in goodness; the gradual development of the system in exact proportion to the industry and ingenuity of the hearer; and the order of the sceptical dialogue, all more or less destructive of errors without any declaration of the truth, and forming series of enigmas, to lead, like an avenue of sphinxes, to the grand, open portal of the Republic: all these and many other points will assume a wholly different character, whether we consider Plato's work as intended to declare his opinions, or as constructed for the purpose of extricating, by a tried and thoughtful process, the minds which it was still possible to save from the follies, and sins, and miseries in which the madness of the age and a vicious system of education were plunging them. All this, to persons who never read Plato, or read him carelessly and contemptuously, as men in this day do read whatever they do not understand, at the first glimpse will appear exaggerated and enthusiastic. And no answer can be given but a demand that the trial should be made, and the hypothesis taken as a clue. If it is false, it will fail. But none whom wise men would wish to follow have ever approached the name of Plato without reverence and gratitude. All have been impressed especially with his exquisite skill as an artist or constructor of his works (*Schleiermacher*, *Introd. Pref.*); and none have drawn a plan which gives harmony and symmetry to them all. Some plans, however, must exist. If we want to form a judgment on the grandeur of some vast cathedral, we do not plant ourselves in a nook, before some disproportioned arch, or out of sight of the central aisle. We seek for that point of view in which the builder himself beheld it before he commenced the work, and then the whole fabric comes out. And the illustration will bear to be dwelt on. Whoever studies Plato is

treading on holy ground. So heathens always felt it. So even Christianity confessed. (*Clem. Alex.*, 1, p. 39, 316.) And we may stand among his venerable works as in a vast and consecrated fabric; "vistas and aisles of thoughts opening on every side; high thoughts, that raise the mind to heaven; pillars, and niches, and cells within cells, mixing in seeming confusion, and a veil of tracery, and foliage, and grotesque imagery thrown over all, but all rich with a light streaming through "dim religious forms;" all leading up to God; all blessed with an effluence from Him, though an effluence dimmed and half lost in the contaminated reason of man. (*British Critic and Quarterly Theological Review*, No. 47, p. 3, *seqq.*)

II. Works of Plato.

We have thirty-five dialogues generally ascribed to Plato, and thirteen epistles; or fifty-six dialogues, if we count each book of the Republic and Laws separately. These dialogues have somewhat of a dramatic form, and are intended for the more intelligent class of readers, and those who are habituated to the exercise of reflection. The brilliant imagination of the author has strewn upon them all the flowers of eloquence, and adorned them with all the graces of the Attic diction; and he has frequently interwoven with them poetic allegories, and political and theological fictions. The analogy between the dialogues of Plato and dramatic pieces is in many respects so great, that, according to Diogenes Laertius, a certain Thrasyllus formed the idea of dividing them into so many tetralogies. Still we must not imagine from this that Plato had proposed to himself to treat of the same subject in a series of works.—Schleiermacher, the celebrated German translator of Plato, divides these dialogues into four classes: those of the first class comprehend the elements of philosophy; as the Phædrus, Protagoras, Parmenides, Lysis, Laches, Charmides, and Euthyphron. In the dialogues of the second class, these principles receive their application; as in the Gorgias, Theætetus, Menon, Euthydemus, Sophists, Politicus, Phædon, and Philebus. In the dialogues of the third class, the investigations are of a more profound character; as the Timæus, Critias, Republic, and Laws. The fourth class comprehends what he terms dialogues of circumstance, as the Crito, and the Defence of Socrates. This distribution is certainly an ingenious one; but, in order to be of any real value, the first three classes ought to form also three chronological series, and we ought thus to see the system of Plato come into existence, develop itself, and attain to maturity: this, however, is not the case.—Another German writer (*Socher, über Platons Schriften*, München, 1820, 8vo) proposes to group the dialogues in the following manner: 1. Dialogues relative to the trial and death of Socrates: the Euthyphron, Defence, Crito, Phædrus, Cratylus: 2. Dialogues which form a kind of continuation to each other: the Theætetus, Sophists, Politicus, Republic, Timæus, and Critias: 3. Dialogues directed against false philosophy: the Euthydemus, Protagoras, Gorgias, Ion, Hippias: 4. Dialogues treating of speculative questions: the Phædon, Theætetus, Sophists, Philebus, Timæus, and Parmenides: 5. Dialogues devoted to politics, or the art of government: the Politicus, Minos, Republic, Laws, Epinomis: 6. Dialogues treating of rhetorical topics: the Gorgias, Menexenus, Phædrus, Banquet: 7. Dialogues relative to individuals accustomed to associate with Socrates: the Theages, first Alcibiades, Laches, Theætetus: 8. Dialogues in which the question is discussed, whether virtue can be taught: the Euthydemus, Protagoras, and Menon: 9. Dialogues in which false opinions are considered: the Theætetus, Sophists, Euthydemus, Cratylus: 10. Dialogues, the titles of which indicate particular subjects; as the Charmides, or of Moderation; the Laches, or of Bravery;

the *Lysis*, or of Friendship; the *Euthyphron*, or of Piety, &c.—It will appear from this classification, that the same dialogue may thus belong to different categories at the same time, according to the point of view in which we regard it; which destroys, of course, all the utility of the arrangement.—We come now to another question of much greater importance. Independently of the thirty-five dialogues commonly attributed to Plato, there are eight which the unanimous opinions of the grammarians, at the commencement of our era, has rejected as spurious. In the number, however, of the thirty-five, there are several, of the authenticity of which doubts have been entertained from time to time, until, in our own days, the rigid criticism of Germany has undertaken to eliminate a large number of these dialogues from the list of the works of Plato. Four writers, in particular, have turned their attention to this subject: Tennemann, Schleiermacher, Ast, and Socher. (*Tennemann, System der Platonischen Philosophie*, 4 vols. 8vo, 1792.—*Schleiermacher, Platons Werke*, 8 vols. 8vo, Berlin, 1817–26.—*Ast, Platons Leben und Schriften*, Leipzig, 1816, 8vo.—*Socher, über Platons Schriften*, München, 1820, 8vo.) To these may be added Thiersch, the author of an able criticism on the work of Ast (*Jahrbuch der Literatur*, Wien., 1818, vol. 3, p. 59, *seqq.*). What renders the decision of this question peculiarly difficult is, that, of the writers contemporary with Plato, Xenophon alone remains to us, and he makes no mention of him. Aristotle, his disciple, refers but seldom to his master's dialogues: sometimes he mentions his opinions, but always under the name of Socrates, and that, too, when he even refers to dialogues in which the last-mentioned philosopher is not one of the interlocutors, as in the *Laws*. All the works of the philosophers of the three following centuries are lost, down to Dionysius of Halicarnassus, who is one of the principal authorities in this inquiry. The number of witnesses increases very considerably after this; but they lived at a period when that species of criticism which is able to separate the false from the true was as yet completely unknown. The classification of Thrasyllus makes us acquainted with the opinion of the grammarians of his time, relative to the authenticity of the dialogues of Plato: those which he excludes from his categories were regarded as supposititious, but we are unacquainted with the grounds on which the claim of legitimacy was allowed to the rest, unless it be that the claim in their case was never contested. Amid this array of negative authorities, Ast, who of all the moderns has pushed his scepticism on this head the farthest, thinks that the only one deserving of being combated is that of Aristotle, and he endeavours to destroy the weight of his testimony by denying Aristotle any authority in matters of criticism. But can any one for a moment imagine that a man of high intellectual endowments, after having passed twenty years of his life with Plato, could be so grossly deceived respecting the works of his master? Admitting, too, the possibility that one so eminently gifted with discernment and taste could mistake to such a degree the style of his master, is it at all probable that he could have been deceived also as to the fact whether Plato did compose such or such a work? After having rid himself in this unsatisfactory manner of the testimony of Aristotle, Ast, acknowledging the authority of fourteen dialogues, attacks at the same time the remaining twenty-one by arguments deduced from the style in which they are written. He finds them inferior in this point of view to the others, and against some no doubt the charge will hold good; but the question may fairly be asked in reply, whether a writer, in other respects classic, ought, in all his productions, to attain to that perfection which he appears to have reached in some? Most of the arguments advanced by Ast have been refuted by Thiersch and Socher. The latter writer, however,

in assigning to Plato the greater part of the dialogues which Schleiermacher and Ast consider spurious, is unwilling himself to acknowledge the legitimacy of the Sophists, Politicus, and Parmenides.—Another interesting question is that which has reference to the chronological order of the dialogues. This question has a double aspect: it regards both the time when the dialogue is supposed to have taken place, and that when the author is thought to have composed it. It is often impossible to fix the former of these periods, by reason of the numerous anachronisms with which Plato is justly chargeable. So numerous, indeed, are they, that we are tempted to believe that Plato attached no importance whatever to the giving an air of historic probability to his dialogues. The second period, that of their composition, is important in a different point of view; for, were it possible to fix with certainty the time when each dialogue was written, and thus to determine the chronological order of the whole collection, we would be much better able to mark the development of his system. We must bear in mind, however, that the historical data afforded by any one dialogue is often insufficient for fixing the period when it was written, because Plato is very negligent in point of chronology.—The literary life of Plato has been divided into four periods: the first ends with the death of Socrates, and reaches to the thirtieth year of Plato's life; the second extends to the founding of the Academy, or Plato's fortieth year; the third embraces the maturity of his life, or about twenty years; the fourth his old age, also of twenty years.—To the first of these periods belong the four dialogues in which reference is made to the trial and death of Socrates, such as the *Euthyphron*, *Crito*, *Defence of Socrates*, and *Phædo*. Socher is undoubtedly right in conjecturing that this latter was written immediately after the death of Socrates. The reasons urged by Schleiermacher for placing it in a later period are purely speculative, and advanced merely for the purpose of supporting his system.—In the same period, and even prior to the four dialogues just named, are ranged the *Theages*, one of the first of Plato's productions, the *Laches*, first *Alcibiades*, *Hipparchus*, *Minos*, *Rivals*, *Charmides*, *Lysis*, second *Hippias*, *Clitophon*, *Cratylus*, and *Meno*, supposing all these to be the compositions of Plato.—Ten dialogues are placed in the second period, either because they contain some chronological particular which enables us to assign them to the time that intervened between the death of Socrates and the founding of the Academy; or because, though wanting such an index of their age, they still evidently belong to this period. In all these productions, Plato appears to have had for his object the continuation of the enterprise which had been interrupted by the death of Socrates, namely, the war against the Sophists. These dialogues are the *Ion*, *Euthydemus*, the first *Hippias*, the *Protagoras*, *Gorgias*, *Theætetus*, *Sophist*, *Politicus*, *Parmenides*, and *Philebus*.—All the other dialogues of Plato, excepting the *Timæus* and *Critias*, namely, the *Phædrus*, *Menæxenus*, *Banquet*, *Republic*, were written by him in the prime of his life, and before age had impaired his mental powers, or during the twenty years in which he directed the Academy. In the fourth period, Plato wrote the letters that have come down to us (supposing that these are actually his), his great work on the laws, and the two dialogues entitled *Timæus* and *Critias*.—We will now proceed to give a brief sketch of the individual productions of the philosopher, premising that most of the Platonic dialogues have, as will presently be perceived, a double title. The former of these is commonly the name of the individual who bears the most prominent part in the dialogue; the second is the addition of some later hand, and has reference to the contents of the dialogue itself. As these contents, however, are, for the most part, very diversified in their nature, this

second class of titles are frequently apt to mislead the casual observer. (*Wolf, ad Sympos.*, p. 35, *seq.*—*Ast, ad Repub.*, p. 313.—*Morgenstern, ad Repub.*, p. 29.)—The works of Plato, then, are as follows: 1. *Πρωταγόρας*, *ἡ σοφιστική*, "*Protagoras, or the Sophists*." This dialogue, a *chef-d'œuvre* of Plato, is directed against the sophists, who are described in it as exceedingly unfit either to impart knowledge of virtue to others, or to inspire them with the desire of practising it. Protagoras, one of the most celebrated of this class of philosophers, and who, in the course of the dialogue, is made to appear a model of *charlatanerie*, had arrived at Athens. A certain Hippocrates, unwilling to lose so favourable an opportunity of receiving instruction, requests Socrates to present him to the sophist. Socrates consents, but first impresses Hippocrates with the propriety of his ascertaining the true nature of the science which this stranger has brought with him, before he ventures to become one of his pupils. They, in consequence, pay a visit to Protagoras, and find him surrounded by a numerous and brilliant auditory. A colloquy thereupon begins between the sophist and Socrates, in which Prodicus and Hippias, friends of the former, also bear a part. The object of Protagoras is to show the possibility of learning virtue as one learns an art or exercise; but the questions put by Socrates embarrass him to such a degree, and the answers he makes from time to time involve him in so many contradictions, that the futility of the pretended science of the sophists becomes fully apparent. No little mistake has been caused by giving to the term "sophist" a wrong etymological signification. It does not mean what is denoted by the word in English, artful and illogical reasoners: the Sophists were the persons who professed to make others wise. They were the great instructors. Undoubtedly the office they assumed implied their own personal wisdom; and the necessity of maintaining appearances without any real stock of knowledge, coupled with the principle of pleasing without any regard to truth, seduced them into the habits of ingenious trickery which have since been known by their name. But, as Protagoras himself states, it was as the original introducers of a wholly new scheme of education that they took their stand, made their money, and incurred, in no few instances, the odium of political innovators. In this light they were regarded by Plato. Nothing could be more tempting than the condition of the youth of Athens, for clever, conceited, ambitious men, by their own theory disencumbered of a conscience, and obliged, by a sense of duty, to provide for their own indulgences, to undertake the task of fitting them for those public duties of life which in a Grecian democracy occupied the whole field of action. And rhetoric, as the main engine of political eminence, they were thoroughly capable of teaching. The habit of disputation, which sent Hippias every year to the Olympic games, to challenge a run upon his pantological budget, and to improvise on all possible questions; just as scholasticism, in the middle ages, sent scholars up and down Europe, to posit their theses and syllogisms at the gates of universities, had given them a thorough command, not over language alone, but over all the arts of concealing ignorance and misleading weakness which were necessary to a popular demagogue. Language, as the instrument of power over minds; language, as the imperfect medium of communicating ideas, and, therefore, the readiest means of mixing and embezzling them in the transfer; language, as the art of pleasing; language, as the never-failing subject for etymological ingenuity to anatomize; language, again, as the natural transcript of the human mind, and the human mind in that low, vulgar form, in which alone a popular leader or an expediency-philosopher can see it, or wish to see it; language, in all these lights, was to the sophists everything. It was their stock in trade; the nostrum they offered for sale, the ready, unblush-

ing witness to all their paradoxes. Hence the prominence given in so many of Plato's dialogues to the subject of language; and especially the unvariable connexion between the practical abuse of rhetoric and metaphysical discussions on the nature of pleasure and of truth. This is also the key to the *Cratylus*, a dialogue which, by the most singular misconception, has been searched by Greek critics for etymologies, but which is, in reality, a serious extravaganza, to expose the Horne-Toolism of the day, and its connexion with the metaphysics of sophistry. (*British Critic and Quarterly Theological Review*, No 47, p. 31, *seq.*)—The *Protagoras* shows that Plato, wholly engrossed with the philosophical topics which he makes Socrates and his interlocutors discuss, troubles himself but little about guarding against anachronisms. In this dialogue Pericles and his two sons are still living, a circumstance which necessarily supposes the era of the piece to have been prior to B.C. 429; and yet, at the same time, we see, in the course of this same dialogue, that the rich Callias has already lost his father Hipponicus. Now we know, from a passage in the orator Andocides, that Hipponicus was killed in the battle of Delium, or B.C. 424. Thus Plato makes Pericles to have died five or six years too late, or Hipponicus five or six years too early. (*Journal des Savans*, 1820, p. 678.)—2. *Φαίδρος*, *ἡ περὶ τοῦ καλοῦ*, "*Phaedrus, or concerning Beauty*." This dialogue is a sort of continuation of the preceding. In the *Protagoras*, Plato shows that the sophists were bad guides to conduct one along the path to virtue, since they were unacquainted with it themselves; and now, in the *Phaedrus*, he characterizes their rhetoric as a futile art. Hænisch, however, gives a more general explanation of the object of this dialogue. (*Lysias Amatorius, Græce, ed. Hænisch. Præmissa est Commentatio de auctore orationis, utrum Lysias sit an Platonis, Lips.*, 1827.) This dialogue was composed, according to Stallbaum, in the fourth year of the 98th Olympiad. (*Stallb., Disputatio de Platonis vita, &c.*, p. 25.) It may be regarded as consisting of two parts, the first of which has a practical, the other a theoretical tendency. In the first of these Plato proves his thesis by an example, namely, by a discourse on love or beauty, composed by Lysias, who had just left the school of the sophists, and to which Socrates opposes one on the same subject: in the second part, the principles and rules of the sophists are examined. It is in this dialogue that we remark for the first time that blending of the Socratic philosophy with the dogmas of the schools of Ionia, Etes, and Italy, which characterizes the system of Plato. These dogmas are, that of a previous state of existence, the reminiscences of which are the source of all our knowledge; that of the immortality of the soul; that of the three virtues, or energies of the soul (*λογιστικὴν, θυμηκὴν, ἐπιθυμητικὴν*). The *Phædrus* is filled with poetry, and the discourse on Love, put in the mouth of Socrates, is almost a continual parody on Homer. Whether the discourse on Love or Beauty, mentioned in this dialogue, was actually a production of Lysias, is a question which Hænisch has made the subject of a separate dissertation, and for the affirmative of which he gives his suffrage. (Compare Böckh, *ad Plat. Minorem*, p. 182.—*Van Heusde, Init. Platon.*, vol. 1, p. 101.)—3. *Γοργίας*, *ἡ περὶ ῥητορικῆς*, "*Gorgias, or concerning Rhetoric*." Rhetoric, which in the *Phædrus* has been considered as an art, is regarded in the *Gorgias* in a political point of view. Socrates disputes with Gorgias, the rhetor Polus, and Callicles, on the utility of the science under this latter aspect: he represents it as dangerous, because, instead of proposing to itself, as its only object, the triumph of truth, it is mostly employed for the purpose of gaining the suffrages of the multitude.—In this dialogue Plato not only attacks the sophists, whose political influence is depicted as pernicious to the repub-

lie, but also the enemies and calumniators of Socrates, and even many of the illustrious men whom Athens had produced, especially Pericles. What most of all, however, characterizes this production, is, that Socrates does not pursue his ordinary method of question and answer; he pronounces, on the contrary, connected discourses; and, far from merely stating doubts, he expresses his sentiments in clear and precise terms. In general, there reigns in this dialogue a more serious tone than that which pervades the two previous ones, and less of irony. But the place of the latter is supplied by a caustic kind of manner, which is not found in the others. According to Stallbaum, this dialogue was written not long after 413 B.C. A writer in the *Jena Review* controverts this opinion. (*Stallbaum, ad Phileb.*, p. xl.—*Jena Allgem. Lit. Zeit.*, 1822, No. 195.)—4. *Φαίδρον, ἢ περὶ Ψυχῆς*, "*Phædon, or concerning the Soul*." This dialogue is one of the most remarkable of those that bear the name of Plato. The interlocutors are Phædon, the subsequent founder of the school of Elis, and Echecrates. The former of these gives the latter an account of all that happened towards the close of Socrates' life, and relates the conversation of this philosopher with Cebes and Simmias. Socrates undertakes to prove the immortality of the soul by its spirituality; and we have here the first traces of a demonstration, which modern philosophy, under the guidance of revelation, has carried on to so successful a result. The doctrine which Plato here puts into the mouth of Socrates is not entirely pure; it is amalgamated with the Pythagorean hypothesis of the metempsychosis, and with all sorts of fables borrowed from the Greek mythology.—The Phædon is regarded by all critics as one of the dialogues of Plato respecting the authenticity of which not the least doubt can be raised. And yet, if we are to believe an epigram in the *Anthology* (*Epidict.*, n. 368, *Anthol. Pal.*; 1, 44, *Anthol. Plan.*), the celebrated Panætius rejected it as supposititious. It is most probable, however, that the author of the epigram in question mistook the sense of the passage in which Panætius spoke of the Phædon, and that the philosopher merely meant to say that Plato puts into the mouth of Socrates a doctrine which he, Panætius, did not admit; for we know from Cicero that Panætius differed in this point from the tenets of Plato. (*Tusc. Disp.*, 1, 32.)—5. *Θεαίτητος, ἢ περὶ ἐπιστήμης*, "*Theætetus, or concerning Science*." The geometer, Theodorus of Cyrene, his pupil Theætetus, and Socrates, are the interlocutors in this dialogue: the subject discussed is the nature of science. Socrates, assuming the character of ignorance, and comparing himself to a midwife, pretends that all his wisdom is limited to the aiding of others in giving birth to their ideas. Under this pretext he refuses to define science; and yet, at the same time, he shows the inadmissibility of all the definitions given by Theætetus. This dialogue is a kind of sportive dialectics, and leads to no positive result. In it Plato, as usual, combats the sophists; he turns his arms, too, against all the schools that had been produced from the Socratic, namely, the Megaric, Cynic, and Cyrenaic: he attacks, in particular, the dualistic system of Heraclitus.—6. *Σοφιστής, ἢ περὶ τοῦ ὄντος*, "*The Sophist, or concerning that which exists*." This dialogue is a continuation, as it were, of the preceding. After having shown, in the Theætetus, that there exists no science obtained through the medium of the senses, Plato here examines the contrary doctrine, maintained by the Eleatic school, namely, that of existence, and shows its inadmissibility. Although the subject of this dialogue is speculative and abstract in its nature, Plato nevertheless has succeeded in imparting to it a pleasing and varied air, and has sprinkled it with many satirical allusions: the greater part of these last, however, are lost for us, from our limited acquaintance with the

circumstances to which they refer.—7. *Πολιτικός, ἢ περὶ βασιλείας*, "*The Statesman, or concerning the Art of Governing*." The researches commenced in the Theætetus and Sophist are applied in this dialogue to the case of the statesman. We are here made acquainted with Plato's ideas respecting Providence, or the manner in which God governs the world, as well as respecting the changes which the latter has undergone. We see in it also his opinion on the different forms of government, among which he gives the preference to that in which the power is vested in the hands of a single person. This dialogue contains an Oriental mythus, according to which the Deity takes rest at certain periods, and during this time abandons to chance the government of the world. Such a doctrine being unworthy of Plato, Socher thinks that this dialogue, as well as the Sophist, cannot be regarded as his. And yet they must, in that event, have been produced by some contemporary, since Aristotle cites the present dialogue, though in truth without assigning it to Plato by name.—8. *Παρμενίδης, ἢ περὶ ἰδέων*, "*Parmenides, or concerning Ideas*." This dialogue is a kind of appendage to the three that precede. As in these the false dialectics of the Megaric school had been refuted, so in this Parmenides, the head of the true dialectic system, comes forward to support his doctrine of absolute unity, and does it with great force of reasoning. The Parmenides is the most difficult of all Plato's works, as well from the abstract topics and metaphysical subtleties discussed in it, as because the author is driven to the necessity of employing terms either entirely new, or else little used, in treating of matters on which no writer had as yet exercised his pen. The Parmenides leads to no positive result: it has merely for its end the demonstration of certain propositions of a philosophical nature; and it tends solely to exercise the mind in metaphysical speculation, and to show, by an example, the true dialectic method. It is uncertain, however, whether we have the end of this production. The Parmenides has a form entirely philosophic, and without any dramatic movement. The characters of the several interlocutors are not as distinctly marked as in the other dialogues. Socrates appears in it as a very young person, and as one just beginning to turn his attention to philosophical subjects, and to whom many of the propositions of the schools are as yet new. It has been inferred from this circumstance that Plato wished to give credit to the tradition that Socrates had seen Parmenides in his youth. Socher rejects this dialogue, together with the two that immediately follow. (Consult *Schmidt, Parmenides als dialektisches Kunstwerk dargestellt*, Berlin, 1891.—*Goetz, Uebers. des Parmen.*, pt. iv, p. 107.)—9. *Κρατύλος, ἢ περὶ ὀνομάτων ὀρθότητος*, "*Cratylus, or concerning the Correct Use of Words*." This dialogue is written in ridicule of the etymologies to which the sophists attached so much importance as to make use of them for demonstrations with which to support their propositions. They even went so far as to assert that we may learn the nature of objects from the words by which they are designated, inasmuch as a perfect accordance prevailed between each thing in nature, and the appellation by which it was known. Agreeing in the main principle, they made of it applications widely different in their nature. The adherents of the Eleatic school pretended that the authors of language, in their invention of words, went on the supposition that everything in nature is immutable: the followers of Heraclitus maintained directly the reverse. Setting out from these two points of view, so diametrically opposed to each other, these philosophers analyzed the meaning of words, each in accordance with his favourite theory.—Of the interlocutors of the Cratylus, one, Hermogenes, a disciple of Parmenides, maintains that there is an inherent force and propriety in words, in-

dependent of all conventional arrangement; the other, Cratylus, a disciple of Heraclitus, regards them as arbitrary signs of our ideas, imposed on the objects which they designate, either from accident, use, or some fitness which they possess. Socrates shows the insufficiency of each of these systems, without, however, replacing them by a third. This discussion gives rise to many etymological discussions, which cannot now be very interesting for us.—10. *Φιλέβος, ἡ περὶ ἡδονῆς*, "*Philebus, or concerning Pleasure*." This dialogue is distinguished from those already mentioned in that it is not limited to the overthrow of false doctrines, but examines the subject matter itself with great care. It has an end in view strictly dogmatical, that is, to establish a truth and enunciate a positive proposition: this proposition is, that good consists neither in pleasure nor in knowledge, but in the union of the first and the second with the sovereign good, which is God. The Philebus is almost entirely devoid of irony; but it is sometimes deficient in clearness. It is one of the principal sources from which to obtain an acquaintance with the moral system of Plato.—11. *Συμπόσιον, ἡ περὶ ἔρωτος*, "*The Banquet, or concerning Love*." Plato appears to have had a double object in view in writing this dialogue: the first, to discourse upon the nature of love; and the other, to defend Socrates against the calumnies to which he had been exposed. Agathon celebrates by a banquet a poetical victory which has just been gained by him. The guests agree that each one, in turn, shall write a eulogium on love. Phædrus, Pausanias, Eryximachus, Aristophanes, and Agathon, speak each on this subject, according to their respective principles and views; and in this species of oratorical encounter, Aristophanes assumes a character most in accordance with his peculiar talent, that of satire. Socrates, who succeeds, paints metaphysical love, that is, philosophy, the end of which is to excite the love of virtue, the only true and imperishable source of beauty. The Banquet is that one of the productions of Plato on which he would seem to have bestowed the greatest care. He has spread over it all the riches of his imagination, his eloquence, and his talent for composition.—12. *Πολιτεία, ἡ περὶ δίκαιου*, "*A Republic, or concerning what is Just*." The following able analysis of this celebrated production is deserving of insertion. (*Southern Review*, No. 7, p. 127, seqg.) "To say of Plato's Republic that it is the idea of a perfect commonwealth, is not to give by any means an adequate, or even a just description of it. It is, in one sense, to be sure, a dream of social and political perfection, and, so far, its common title is not altogether inapplicable to it; but it bears hardly any resemblance to the things that generally pass under that name; to the figments, for example, of Harrington and Sir Thomas More. Compared with it, Telemachus, though a mere epic in prose, is didactic and practical; the *Cyropædia* deserves to be regarded as the manual of soldiers and statesmen, and as the best scheme of discipline for forming them. Plato's is a mere vision, and that vision is altogether characteristic of his genius as his contemporaries conceived of it. It is something between prose and poetry in style; it is something made up both of poetry and philosophy in the plan and design. But a very small part of it is given to any topics that can pretend to the character of political. Indeed, Socrates expressly says, that the institution of a commonwealth is but a subordinate object with him. His principal aim is to unfold the mystery of perfect justice. Of the title of the work, the latter part (*περὶ δίκαιου*) is unquestionably the more appropriate designation. If it were possible to have any doubts, after reading the work, the repeated and emphatic declarations of the philosopher himself would remove them. It is in the second book that he first alludes to the commonwealth, and then the purpose

for which he professes to treat of it is unequivocally explained. He compares himself to one who, not having very good eyes, is required to read a text at some distance from him, written in distressingly small letters, and who prepares himself for his task by conning over the very same text which he happens to find set forth somewhere else in larger characters. The justice, the high and perfect justice, whose nature he is endeavouring to penetrate and unfold, exists not only in individuals, but, on a grander scale, in the more conspicuous and palpable image of that artificial being, a body politic. This idea is perpetually recurring. Thus it runs through the whole eighth book, which, it may be remarked by the way, is a dissertation of incomparable excellence, and decidedly the most practical part of the work. In this book he treats of *injustice*. He again resorts to the larger type, to the capital letters. He illustrates the effects of that vice, or, rather, of that vicious and diseased state of the soul, by corresponding distempers and mutations of the body politic. We are told that the form of government is an image of the character of the citizen; that whatever may be said of the democracy or the oligarchy, applies as strictly to the democrat and the oligarchist; that there are as many shapes or species of polity, as there are types or varieties of the human soul; that, as the most perfect commonwealth is only public virtue embodied in the institutions of a country, so every vice generates some abuse or corruption in the state, some pernicious disorder, some lawless power incompatible with national liberty. In running this parallel between the individual and the corporate existence, he unfolds his idea of the *τὸ δίκαιον*, not in a prologue, as Tiedemann affirms, but throughout the whole body of his work. He begins by showing that there can be no happiness without it here; and ends by a revelation of other worlds, and a state of beatific perfection, which it fits the soul to enter upon hereafter. We must take care, however, not to confound this sublime justice with the vulgar attribute commonly known by that name. Plato's justice is that so magnificently described by Hooker, 'that law whose seat is the bosom of God, and whose voice the harmony of the world.'—The whole dialogue is a Pythagorean mystery. Plato finds the key of the universe in the doctrine of number and proportion. He sees them pervading all nature, moral and physical, holding together its most distant parts and most heterogeneous materials, and harmonizing them into order, and beauty, and rhythm. Socrates declares his assent to the Pythagorean tenet, that astronomy is to the eye what music is to the ear. The spheres, with the Sirens that preside over them, and the sweet melodies of that eternal diapason, the four elements combined in the formation of the world, the beautiful vicissitude of the seasons, light and darkness, height and depth, all existences and their negations, all antecedents and consequences, all cause and effect, reveal the same mystery to the adept. Man is, in like manner, subject throughout his whole nature to this universal law. Of the four cardinal virtues, take temperance for an example. What is it but a perfect discipline of the passions by which they are all equally controlled, or, rather, a perfect concord and symphony in which each sounds its proper note and no other; in which no desire is either too high or too low; in which the enjoyment of the present moment is never allowed to hurt that of the future, nor passion to rebel against reason, nor one passion to invade the province or to usurp the rights of another. The *τὸ δίκαιον* goes somewhat farther. It is that state of the soul wherein the three parts of which it is composed, the intellectual, the irascible, and the sensual, exercise each its proper function and influence; in which the four cardinal virtues are blended together in such just proportion, in such symphonious unison; in which all the faculties of the mind, while they are

fully developed, are so well disciplined and disposed, that nothing jarring or discordant, nothing uneven or irregular, is ever perceived in them. And so in the larger type, a perfect polity is that in which the same proportion and fitness are observed; in which the different orders of society move in their own sphere, and do only their appointed work; in which intellect governs, and strength and passion submit; that is, counsellors advise, soldiers make war, and the labouring classes employ themselves in their humble, but necessary and productive calling. The division of labour is a fundamental principle of Plato's legislation, and is enforced by very severe penalties. He considers it as in the highest degree absurd, as out of all reason and proportion, that one man should pretend to be good at many things.—On the other hand, the most fearfully depraved condition of society is that which Polybius calls an *ochlocracy*; an anarchy of jacobins and sansculottes, where every passion breaks loose in wild disorder, and no law is obeyed, no right respected, no decorum observed; where young men despise their seniors, and old men affect the manners of youth, and children are disobedient to their parents, wives to their husbands, slaves to their masters. The justice of which he speaks is not, therefore, the single cardinal virtue known by that name. It is not commutative justice, nor retributive justice, nor (except, perhaps, in a qualified sense) distributive justice. It does not consist in mere outward conformity or specific acts. Its seat is in the inmost mind; its influence is the music of the soul; it makes the whole nature of the true philosopher a concert of disciplined affections, a choir of virtues attuned to the most perfect accord among themselves, and falling in with the mysterious and everlasting harmonies of heaven and earth.—This general idea is still farther illustrated by the scheme of education in Plato's Republic. It is extremely simple; for young men it consists only of music and gymnastics; for adepts of an advanced age, it is the study of truth, pure truth, the good, the *τὸ δὴ*, the divine monad, the one eternal, unchangeable. It is in the third book that he orders the former division of the scheme. It is necessary to cultivate with equal care both the parts of which it is composed, and to allow of no excess or imperfection in either. They who are addicted exclusively to music become effeminate and slothful; they, on the other hand, who only discipline their nature by the exercises of the gymnasium, become rude and savage. This music, as Tiedemann observes, is mystic and mathematical. Pythagoras and Plato thought everything musical of divine origin.—God gave us these great correctives of the soul and of the body, not for the sake of either separately, but that all their powers, and functions, and impulses, should be fully brought out into action; and, above all, be harmonized into mutual assistance and perfect union. Plato's whole method and discipline is directed to this end. He banishes from his ideal territory the Lydian and Ionic measures as 'softly sweet' and wanton, while he retains, for certain purposes, the grave Dorian mood, and the spirit-stirring Phrygian. So, in like manner, he expels all the poets except the didactic, with Homer at their head. The tragic poets were, in reference to moral education, especially offensive to him. In conformity with the same principle, he proscribes all manner of deliciousness and excess, Sicilian feasts, and Corinthian girls, and Attic dainties, as leading to corruption of manners, and to the necessity of laws and penalties, of the judge and executioner. No innovation whatever is to be tolerated in this system of discipline, especially in what regards music and gymnastics; the slightest change in which Plato affirms to produce decided, however secret and insidious, effects upon the character and manners of a whole people. When his citizens, divided into four orders, to correspond with the cardinal vir-

tues, have gone through their preparatory discipline, and discharged in their day and generation the duties that were respectively allotted to them, they (at least the better sort of them) must, in the calm of declining life, turn to the study of the true philosophy; not such as is taught by mercenary sophists, mere shallow fallacies, mountebank tricks to impose upon ignorance, vile arts to ingratiate one's self with that *savage beast* (a favourite image with the ancient writers), the wayward and tyrannical demus. Nor such philosophy as bestows its thoughts upon the depraved manners of men, or the fluctuating and perishable objects around us; but that deep wisdom, that rapturous and holy contemplation, which abstracts itself from the senses and the changeable scenes of life and nature, and is wrapped up in the harmony and grandeur of the universe, in communing with the First Good and the First Fair, the infinite and unutterable beauty, fountain of all light to the soul, 'the bright countenance of truth' revealed to the purified mind 'in the quiet and still air of delightful studies. By such contemplations the soul shall attain to the perfection of virtue, and be prepared for the great moral change, the glorious transfiguration that is to crown its aspiring progress to beatitude and immortality.'"—13. *Τίμαιος, ἢ περὶ φύσεως*, "*Timæus, or concerning Nature*." In this dialogue Critias relates the tradition of an ancient Athenian state, anterior to the deluge of Deucalion, and which was governed by laws not unlike those of Egypt. The Athenians, said this tradition, made war, at this remote period, against the inhabitants of Atlantis, an island situate beyond the Pillars of Hercules. The inhabitants of Atlantis ruled over Libya and Western Europe, and would have subjugated the Greeks also, had not the Athenians made successful opposition to their progress. After this fable, the philosopher Timæus, of Locri, develops his system concerning God, the origin and nature of the world, men, and animals. Through the whole of this exposition there prevails the usual tone of the Pythagorean school. Plato is commonly supposed to have followed, in the composition of this dialogue, the work attributed to the philosopher of Locri, which we still possess.—14. *Κριτίας, ἢ Ἀτλαντικός*, "*Critias, or the Atlantic*." This dialogue is a continuation of the preceding. Critias here gives in detail what he had only sketched forth in the *Timæus*, respecting an island in the Atlantic (*vid. Atlantis*), inhabited anciently by a civilized and conquering race, and which had been ingulfed by the sea. He gives an account of the laws, manners, and institutions of this people. It is easy to perceive that the whole of this recital is a mere fiction, a species of political romance, by which Plato wished to prove the possibility of such a republic being established as he had framed in his own imagination. And yet it is more than probable that the ancients had some obscure tradition among them relative to the existence of a large continent to the west of the Straits of Gibraltar, and of this we find traces even in the pages of Strabo.—The Critias of Plato has given rise to various hypotheses and reveries, and the writers of the last two centuries have very actively exercised their pens on so attractive a subject. Some have found the Atlantis of Plato in Palestine, others in India, and others, again, in the Canaries and Azores. (Consult *Voss, Weltkunde der Alten*, p. 8, 26.—*Latreille, Memoires sur divers sujets*, &c., p. 146.—*Bailly, Lettres sur l'Atlantide de Platon*, &c., Lond., 1775, 8vo.—*Vid. Atlantis*.)—This dialogue is an unfinished one. It appears that death prevented the author from putting a finishing hand to it.—We have now enumerated the fourteen dialogues which Ast believes to be undoubtedly authentic. And yet we have seen that in this number there are three which Socher rejects. We will now proceed to the twenty-one other dialogues, which, though commonly regarded as the productions of Plato, have nevertheless become

the subjects of critical scepticism, since Schleiermacher thought he had discovered in some of them what was not characteristic of Plato, and since Ast has rejected them all indiscriminately. — 15. Νόμον ἢ περὶ νομοθετίας βιβλία 16, "Twelve books of Laws, or concerning Legislation." This work has, until lately, been regarded as that production of antiquity which most distinguishes itself by the importance of its subject, and the richness of the materials connected with it; as that in which the philosopher, abandoning the paths of imagination, enters into those of real life, and unfolds a part of his system, the putting of which into practice he considered as possible; for it cannot but be admitted that the Laws are to be viewed as the production of Plato's old age. Böckh makes the work to have been written in Plato's seventy-fourth year (*ad Min.*, p. 73). Plato here traces the basis of a legislation less ideal, and more conformable to the weakness of human nature, than that which he had given in his Republic. The scene of the dialogue is laid in the island of Crete. The author criticises the codes of Minos and Lycurgus, as having no other object in view but the formation of warriors. He shows that the object of a legislator ought to be to maintain the freedom and union of the citizens, and to establish a wise form of government. Examining the different forms of government that had existed in Greece or other countries, he exposes their several defects. In the course of these remarks, he traces, in his third book, a character of Cyrus far different from that which Xenophon has left. It is commonly supposed that Plato wished, in so doing, to retaliate on Xenophon, whose Cyropaedia appeared to him to have been directed against the first two books of his Republic. Böckh, however, has written against this opinion. (*De Simulultate, quam Plato cum Xenophontis exercuisse fertur, Berol.*, 1811.) After these preliminary observations, the philosopher enters more directly on his subject in the fourth book. He treats at first of the worship of the gods, the basis of every well-regulated state. The fifth book contains the elements of social order, the duties of children towards their parents, of parents towards their children, the duties of citizens and of strangers. He then considers the political form of the state that is to be founded. Plato, if he is the author of the work, renounces in it all the chimeras of his youth, the community of property, and of women and children. In the sixth book he treats of magistrates, of the laws of marriage, of slavery; in the seventh of the education of children; in the eighth of public festivals and of commerce; in the ninth of crimes; in the tenth of religion; in the eleventh of contracts, testaments, &c.; in the twelfth of various topics, such as military discipline, oaths, right of property, prescription, &c.—Every page of the Laws is in contradiction to the Republic. Nevertheless, the Laws existed in the time of Aristotle; and this philosopher, who cites them by name, expresses no doubts whatever as to their authenticity. The difference of style between this work and some other productions of Plato may be easily explained by the difference of age. Ast objects, that Plato himself declares the Republic, Timæus, and Critias to be his last works, and that after this he will write a dialogue, in which Hermogenes shall be the speaker. Now, as the Critias appears to have been never finished, and as the Hermogenes was not written, Ast concludes that Plato did not compose the dialogue of the Laws. (*Ast, Platon's Leben und Schriften*, p. 379, *seqq.*) Plato, however, does not exactly say what Ast makes him assert. He merely speaks of the Timæus and Critias as forming a kind of continuation to the Republic, and announces that he will one day add to them the Hermogenes, without, however, assuring us that this will be his last work. May we not suppose that it was the composition of a work as considerable as

this of the Laws that called off the attention of the author from his design of writing the Hermogenes? — Diogenes Laertius informs us (3, 37), that Plato died before publishing his Laws, and that Philip of Opus, one of his disciples, gave to the world the manuscript, which he found among his master's tablets. This curious account, which leaves no doubt as to the period of life when Plato wrote the work in question, has furnished Ast with a new hypothesis. He thinks that some disciple of Plato fabricated the Laws to serve as a supplement to the Republic. The authenticity of the work, on the other hand, has been supported by Thiersch, in his critique on the work of Ast (*Wien. Jahrb.*), and in a prize essay by Diltthey, *Götting.*, 1820, 4to. — 16. Ἐπινόμις, ἢ νυκτερινὸς σύλλογος, "Epinomis, or the Nocturnal Assembly." This dialogue forms a kind of supplement to the Laws. It treats of the establishment of a body of magistrates, who are to act as guardians of the laws and conservators of the constitution. Diogenes Laertius (3, 37) says that Philip of Opus was regarded as the author of the Epinomis, and it is easy to conceive that the editor of a posthumous work might be tempted to add to it something of his own. (Compare *Suidas*, s. v. φιλόσοφος.) — 17. Μένων, ἢ περὶ ἀρετῆς, "Menon, or concerning Virtue." Various questions started in the Protagoras, Phædrus, Gorgias, and Phædon, are developed more fully in this piece: they all have reference to the fundamental inquiry, "Can virtue be made a subject of instruction." The Menon contains mention of a fact (p. 90, A., *ed. Steph.*) which proves it to have been written at least six years after the death of Socrates. The philosopher just mentioned blames, in the course of this dialogue, the Theban Ismenies for having enriched himself with the gold of Persia: this fact belongs to the third year of the 96th Olympiad (394 B.C.), and is one with which Socrates could not have been acquainted. (*Böckh, ad Min.*, p. 48. — *Id., de Simulultate*, &c., p. 24, 28. — *Schleiermacher, Uebersetz. Plat.*, vol. 2, pt. 1, p. 356, *seqq.* — On the opposite side of the question, consult *Buttmann, ad Menon*, *ed.* 3, p. 48. — *Stallbaum, ad Menon*, p. 103, *seqq.*) Socher maintains the authenticity of this dialogue against Ast. On the tendency of the piece, and the period whence it was written, consult Stallbaum, in the valuable Prolegomena to his edition of the Menon; and, on the difficult mathematical passage, Mollweide, in his "Commentationes tres Mathematico-Philologicae," *Lips.*, 1813; and also Wex, in his "Commentatio de loco Mathematico in Platonis Menone," *Lips.*, 1825. The student is also referred to the *Philolog. Literaturblatt zur Allgem. Schulzeitung.*, Jahrg., 1827, 2te Abtheil. No. 5, where the merits of Klügel, Wolf, Müller, Gedike, Schleiermacher, Buttmann, Mollweide, Wex, and other scholars, in elucidating this same passage, are respectively weighed. — 18. Εὐθύδημος, ἢ ἐριστικός, "Euthydemus, or the Disputer." In this dialogue, Socrates relates to Crito the conversation which he has had with two sophists of the Eristic school, named Euthydemus and Dionysodorus. He ridicules with great spirit the false syllogisms and captious reasonings of the philosophers of this school. — As a piece of composition, this dialogue is one of the most perfect of Plato's. Schleiermacher admires its vivacity, and Ast, who regards it as supposititious, confesses that it is superior to many of the productions of Plato. — 19. Χαρμίδης, ἢ περὶ σωφροσύνης, "Charmides, or concerning Temperance." Socrates here refutes, perhaps with a little too much subtlety, the definitions which the young Charmides gives of temperance or moderation. Although this dialogue is not without merit, Socher adds himself to the number of those who consider it as supposititious. Schleiermacher is of the opposite opinion. (Consult *Ockmann*, "Charmides Platonis qui fertur dialogus num sit genuinus queritur,"

Bresl., 1826.)—20. *Ἀβούρ, ἡ περὶ φιλίας, "Lysis, or concerning Friendship."* The author here treats, without coming to any decision, a question which has occupied much of the attention both of ancient and modern philosophers, namely, "What produces friendship and love?" (Plato's and Aristotle's ideas on friendship are finely given by Bouterwek, in the fourth volume of the "*Neuen Vesta*.") According to Diogenes Laertius (3, 24), Socrates, on hearing this dialogue read, exclaimed, "By Hercules! how many things does this young man falsely report of me!" Hence it appears to have been the work of Plato's youth. Schleiermacher regards this dialogue as authentic. Ast and Socher reject it.—21. *Ἀλκιβιάδης ὁ μείζων, ἡ περὶ φύσεως ἀνθρώπου, "The first (or greater) Alcibiades, or concerning the Nature of Man."* The second member of this title, added by the commentators, does not suit the subject. The dialogue has reference merely to Alcibiades, who, young and presumptuous, without knowledge and without experience, is on the point of presenting himself before the people to be employed in the government of the state. Socrates directs him to study first the principles of law and politics. The end of this piece is to show the true nature of the attachment which Socrates had for this young man, an attachment which made him so desirous of correcting his faults.—As Socrates, in the course of this dialogue, compares the Deity to light, certain commentators have discovered in this expression the germe, as they think, of the system of emanation, in which God is light and matter is darkness.—Schleiermacher considers this production as supposititious.—22. *Ἀλκιβιάδης β', ἡ περὶ προσευχῆς, "The second Alcibiades, or concerning Prayer."* Socrates shows Alcibiades the emptiness and inconsistency of the prayers which mortals address to the divinity, unable as they are to tell whether the things for which they pray will turn to their advantage or not. Socher declares against this dialogue.—23. *Μενέξενος, ἡ ἐπιτάφιος, "Menexenus, or the Funeral Oration."* This funeral oration, in honour of those Athenians who had died for their country, is put in the mouth of Aspasia, and is supposed to have been an extemporaneous production on her part. The end of Plato, in composing this satirical piece, was, without doubt, to show that oratory was not a very difficult art. Böckh very acutely maintains, in his commentary on the *Minos*, that Plato, in many of his dialogues, comes forth in a polemic attitude against the celebrated Lysias, and especially in his *Menexenus*. (Böckh, *ad Min.*, p. 182, *seqq.*) The events connected with the history of Athens, which are alluded to in the course of this dialogue, reach to the peace of Antalcidas, concluded fourteen years after the death of Socrates. This anachronism, which may be pardoned in a satirical production, has nevertheless induced Schleiermacher to regard as supposititious the beginning and end of the dialogue. Schleiermacher's opinion, which is also that of Ast, and which was first started by Schlegel, in Wieland's *Attische Museum* (vol. 1, pt. 3, p. 262, *seqq.*), has found an opponent in Loers, in his edition of the *Menexenus*, *Colon. Agripp.*, 1824.—24. *Λάχης, ἡ περὶ ἀνδρείας, "Laches, or concerning Bravery."* The author shows that it is difficult to say what bravery properly is: his principal object, however, is to enforce the necessity of not confining the education of the young to mere bodily exercises.—25. *Ἰππίας ὁ μείζων, ἡ περὶ τοῦ καλοῦ, "The greater Hippias, or concerning what is Beautiful."* A piece of banter against the sophist Hippias.—26. *Ἰππίας ὁ ἐλάττω, ἡ περὶ ψευδοῦς, "Hippias the Less, or concerning Falseness."* In order to ridicule more effectually the vanity of Hippias, who pretended to a knowledge of all sciences and all arts, so as to boast that he carried nothing about him that was not his own manufacture, as his clothing, his ring,

&c., Socrates proves that this universal genius is not able to maintain, with any success, a thesis evidently true. The captious reasonings in which he entangles his adversary, extort from the latter a proposition manifestly false, namely, that a lie is preferable to the truth.—27. *Εὐθύφρων, ἡ περὶ δόλου, "Euthyphron, or concerning Piety."* This dialogue, written after the accusation of Socrates, and before his condemnation, appears to have a double end; first, to establish by the principles of dialectics the idea of piety, which Socrates numbered among the cardinal virtues, but of which only a passing notice is taken in the previous dialogues; and, secondly, that of defending Socrates against the charge of irreligion. Plato shows the falsity of the ideas entertained by the vulgar, and even by the priests, in relation to what was agreeable to the Deity, and to the religious duties of men; and he justifies Socrates by showing that it was only on this ground the philosopher attacked the national religion. The interlocutors are Socrates and a certain Euthyphron, who, from a sense of religious duty, misunderstood by him, was induced to become the accuser of his own father. Socrates compels him to confess that he does not even know in what religious duty consists; he ridicules the notions which the vulgar entertain of the Deity; but, unhappily, he is satisfied with throwing down, without thinking of building up again, for he puts nothing in the place of the system which he has prostrated; it would have been dangerous, however, to have done this, under the circumstances of the case. The light tone in which the process against Socrates is alluded to, would seem to show that his friends deceived themselves as to the result.—Ast attacks the authenticity of this dialogue, on the ground principally of its not containing any one speculative view. Wiggers, on the contrary, has defended it, in his "*Commentatio in Platonis Euthyphronem*," *Rostock*, 1805, 4to.—28. *Ἴων, ἡ περὶ Ἰλίουδόου, "Ion, or concerning the Iliad"* (more correctly, *of Poetic Enthusiasm*). The interlocutors are Socrates and Ion, the latter a native of Ephesus, and one of those rhapsodists who roamed through Greece, reciting the poems of Homer, Hesiod, and other great masters of the art. Much difference of opinion has prevailed in relation both to the merit of this dialogue and the object which Plato had in view in composing it. Sydenham (*Synopsis, or General views, of the Works of Plato*, *London*, 1759, 4to) and Arnaud (*Mém. de l'Acad. des Inscr., &c.*, vol. 37, p. 1, *seqq.*) consider this production as levelled at the poets, "those eternal enemies of truth." As Plato, however, was afraid of incurring the resentment of this irascible class of persons, he only attacked, say the writers just named, the rhapsodists. Socher also views this dialogue in the light of a satire against poets. Some commentators, on the other hand, think that there is no necessity for going so far in order to discover Plato's object: it was to repress the enthusiasm of the blinded admirers of poetry, which is as distinctly opposed to truth as the false logic of the sophists. (*Platonis Ion*, ed. Nitsch, *Lips.*, 1822, 8vo.)—29. *Σωκράτους ἀπολογία, "Defence of Socrates."* Diogenes Laertius (2, 41) informs us, that Plato made an attempt to defend Socrates before his judges, but that the latter refused to hear him. The present piece, written after the death of Socrates, is a monument erected to his memory, and an *éloge* pronounced, as it were, before all Greece. Placed in the mouth of him whom it undertakes to defend, it combines simplicity and modesty with truth, and with that dignity which a good man derives from the consciousness of innocence, when he is attacked by the wicked. We learn, indeed, from Xenophon, that this was precisely the tone in which Socrates addressed his judges, and that, instead of deigning to refute the charges alleged against him, he merely unfolded to their view the history of his past life. Dionysius

of Halicarnassus calls this production an enlogium under the form of an apology (ed. Reiske, vol. 5, p. 295, 368). Böckh maintains, that Plato wrote the "Defence of Socrates" in a spirit of rivalry towards the one composed by Lysias; and he refers to Plutarch (*X. Orat. Vit.—Op.*, ed. Reiske, vol. 9, p. 324). Ast, on the contrary, remarks that Plutarch appears rather to have had in his eye the oration of Lysias mentioned in the *Phædrus*. (Böckh, *ad Min.*, p. 162.—*Ast, Platons Leben*, &c., p. 492.—Compare Beck, *Comment. Societ. Philolog. Leps.*, vol. 4, pt. 1, p. 28.)—30. *Κριτων, ἢ περὶ πρακτεῶς*, "*Crito, or concerning the Duty of a Citizen.*" The scene of this dialogue between Crito and Socrates is in the prison where the latter is confined, during the interval between his condemnation and death. Crito advises him to fly, and hints that the keeper of the prison has been bribed by him, and that all things are ready for his escape. Socrates, on the other hand, maintains that it is not allowed a citizen to withdraw himself from that authority which has power over him, nor to break the tacit compact by which he has bound himself to obey the laws of his country. Not only Ast, but another writer also, has attacked the authenticity of this dialogue. (Delbrück, *Sokrates*, Köln., 1819, 8vo.) It has found, however, vigorous supporters in Thiersch, Socher, and Bremi. (*Philologische Beyträge aus der Schweiz*, Zurich, 1819, 8vo, p. 143.)—31. *Θεάγης, ἢ περὶ σοφίας*, "*Theages, or concerning Wisdom.*" Demodocus having brought to Socrates his son Theages, desirous of learning that kind of wisdom by which one is fitted for governing the state, Socrates declines the proposal, on the ground that he has not yet heard the voice of his Genius, without whose approbation nothing that he might undertake would succeed. The end of the dialogue is to show that the method of Socrates differs from that of the sophists, in that the former gives no regular instruction to his disciples, but forms them to virtue in his society and by his converse. This dialogue contains some very fine passages. Schleiermacher regards it as supposititious.—32. *Ἀντιπαρκαί, ἢ περὶ φιλοσοφίας*, "*The Rivals*," also entitled *Ἐπαρκαί, ἢ περὶ φιλοσοφίας*, "*The Lovers, or concerning Philosophy.*" A very feeble dialogue, the object of which is to show that Socrates estimated virtue and justice above everything else, and cared very little for purely speculative researches.—33. *Ἱππάρχος, ἢ φιλοκερδῆς*, "*Hipparchus, or the Lover of Gain.*" This dialogue, which is very probably mutilated, is deficient in plan. It treats of the false ideas that men entertain respecting the acquisition and love of gain. The author advances in the course of it some historical paradoxes. Socher, who defends several dialogues against the attacks of Schleiermacher and Ast, acknowledges, with them, and also with Wolf (*Prolegom. ad Hom.*, p. cliv.), that this is not one of Plato's productions. Valckenaer (*ad Herod.*, 5, 55) had already expressed the same opinion.—34. *Μίνως, ἢ περὶ νόμου*, "*Minos, or concerning Law.*" Socrates discourses, in this dialogue, with a certain Minos on the nature of law, which he takes, in its most extended sense, as the rule of all our actions. We here find the first elements of the doctrine of modern philosophers respecting the law of nature and the moral law. The authenticity of this dialogue has been ably attacked by Böckh, with whom Socher agrees. (Böckh, *Comment. in Platonis dialog. qui vulgo inscribuntur Min.*, &c., Hala, 1806, 4to.)—35. *Κλεωπόων, ἢ πορορεπτικὸς*, "*Chilophon, or the Exhortation.*" This discourse, in which the nature of virtue is investigated, is not entire. Stephens and Serranus (*De Serres*) reject it from the list of Plato's works.—We will now give the titles of eight other productions, also attributed to this philosopher, but which bear so openly upon their fronts the stamp of falsification, that the ancients themselves, though sometimes far from scrupulous in matters of criti-

cism, regarded them as strangers to Plato. 1. *Ἐρυξίας, ἢ Ἐραστράτος, ἢ περὶ πλοῦτος*, "*Eryxias, or Erastetratus, or concerning Wealth.*" Diogenes Laertius already regarded this dialogue as spurious (3, 62). It is the same that is sometimes ascribed to Æschines Socraticus.—2. *Ἀλκυῶν, ἢ περὶ μεταμορφώσεως*, "*Halcyon, or concerning Metamorphosis.*" This dialogue, which is found also among the works of Lucian, treats of the wonders of nature. Diogenes attributes it to the academician Leo.—3. *Σίσυφος, ἢ περὶ τοῦ βουλευέσθαι*, "*Sisyphus, or concerning Deliberation.*"—4. *Ἀξιοχῶς, ἢ περὶ θανάτου*, "*Axiachus, or concerning Death.*" This dialogue is one of those ascribed to Æschines, or Xenocrates of Chalcedon. (Böckh, *Præf. in Sim. Socrat. dial.*, p. vi.—Wyttenbach, *Philomath.*, pt. 2, p. 37.)—5. *Δημόδοκος, ἢ περὶ τοῦ συμβουλευέσθαι*, "*Demodocus, or concerning Consultation.*"—6. *Ὅροι*, "*Definitions.*" Ascribed also to Speusippus.—7. *Περὶ ἀρετῆς, εἰ διδασκόντων*, "*Concerning Virtue, whether it is a thing to be taught.*" This dialogue resembles the Menon; it treats of the same subject, but less in detail, and with some difference of manner. Socher regards it as the first sketch, or else an imperfect edition, of the Menon, and he therefore places it among the genuine works of Plato. Le Clerc attributes it to Æschines. (*Æschinis Socrat.*, *Dial.*, *Amst.*, 1711.)—8. *Περὶ δικαίου*, "*Concerning Justice.*" In 1806, Böckh published a dissertation on the Minos of Plato, tending to show that the opinion of Schleiermacher, adopted by Wolf, was correct, which made this production to be a spurious one. He advanced also a peculiar hypothesis respecting the author of the work. Diogenes Laertius (3, 122) informs us, that Socrates was in the habit of frequenting the shop of a certain shoemaker or currier, named Simon, for the purpose of discoursing there with his friends; that this Simon was accustomed to commit to writing all that he could remember of these conversations; and that he afterward published thirty-three of these dialogues, among which were four with the following titles: *Περὶ νόμου*, "*Of Law*;" *Περὶ φιλοκερδῆς*, "*Of the Love of Gain*;" *Περὶ δικαίου*, "*Of Justice*;" and *Περὶ ἀρετῆς*, "*Of Virtue.*" He adds, that Simon was the first who thought of publishing the Socratic conversations, and that, from the rank in life of the one who gave them to the world, they were called *ἔκνικαὶ διάλογοι*, "*The Shoemaker-dialogues*," and from their contents, "*Socratic.*" Ast, however, regards the epithet *ἔκνικός*, here, as indicating something "low" or "mean." (Compare Heindorff, *ad Charmid.*, p. 83.) Böckh, after having shown that the dialogue entitled Minos originally bore the appellation *περὶ νόμου*, and the Hipparchus that of *περὶ φιλοκερδῆς*, concludes that these two dialogues, hitherto ascribed to Plato, are of the number of those published by Simon. This hypothesis having met with no opponents during three years (whether it was that the conclusion seemed a plausible one, or because it was in accordance with the sceptical spirit that distinguishes the literature of Germany), Böckh grew bolder, and in 1810 actually gave to the world these two dialogues, entitled *περὶ ἀρετῆς* and *περὶ δικαίου*, under the name of Simon the Socratic ("Simonis Socratici, ut videtur, dialogi iv., de lege, de lucri cupidine, de justo, ac de virtute. Ad dicti sunt incerti auctoris dialogi Eryxii et Axiochus. Græcæ recensuit, et præfationem criticam præmisit A. Böckh." *Heidelb.*, 1810, 8vo). His whole theory, however, has been ably refuted by Letronne. (*Journal des Savans*, 1820, p. 675, seqq.)—There exists also, under the name of Plato, a correspondence which would be one of great interest if it really came from the founder of the Academy, because it contains particulars of an historical, as well as political and philosophical, nature. These Letters, some of which are of considerable length, have reference to the visits made

pleasing and artless to those Romans who lived in an age of excessive refinement and cultivation; but this apparent merit was rather accidental than the effect of poetic art. Making, however, some allowance for this, there can be no doubt that Plautus wonderfully improved and refined the Latin language from the rude form to which it had been moulded by Ennius. That he should have effected such an alteration is not a little remarkable. Plautus was nearly contemporary with the Father of Roman song; according to most accounts, he was born a slave; he was condemned, during a great part of his life, to the drudgery of the lowest manual labour; and, as far as we learn, he was not distinguished by the patronage of the great, nor admitted into patrician society. Ennius, on the other hand, if he did not pass his life in affluence, spent it in the exercise of an honourable profession, and was the chosen and familiar friend of Cato, Scipio Africanus, Fulvius Nobilior, and Lælius, the most learned and polished citizens of the Roman republic, whose unrestrained conversation and intercourse must have bestowed on him advantages which Plautus never enjoyed. But perhaps the circumstance of his Greek original, which contributed so much to his learning and refinement, and qualified him for such exalted society, may have been unfavourable to that native purity of Latin diction, which the Umbrian slave imbibed from the unmixt fountains of conversation and nature.—The chief excellence of Plautus is generally reputed to consist in the wit and comic force of his dialogue; and, accordingly, the lines in Horace's Art of Poetry, in which he derides the ancient Romans for having foolishly admired the "*Plautinos sales*," have been the subject of much reprehension among critics. That the wit of Plautus often degenerates into buffoonery, scurrility, and quibbles, sometimes even into obscenity; and that, in his constant attempts at merriment, he too often tries to excite laughter by exaggerated expressions as well as by extravagant actions, cannot, indeed, be denied. This was partly owing to the immensity of the Roman theatres and to the masks of the actors, which must have rendered caricature and grotesque inventions essential to the production of that due effect which, with such scenic apparatus, could not be created unless by overstepping the modesty of nature. It must always be recollected, that the plays of Plautus were written solely to be represented, and not to be read. Even in modern times, and subsequent to the invention of printing, the greatest dramatists, Shakespeare, for example, cared little about the publication of their plays; and in every age or country in which dramatic poetry has flourished, it has been intended for public representation, and adapted to the tastes of a promiscuous audience. In the days of Plautus, the smiles of the polite critic were not enough for a Latin comedian, because in those days there were few polite critics at Rome; he required the shouts and laughter of the multitude, who could be fully gratified only by the broadest grins of comedy. Accordingly, many of the jests of Plautus are such as might be expected from a writer anxious to accommodate himself to the taste of the times, and naturally catching the spirit of ribaldry which then prevailed. It being, then, the great object of Plautus to excite the merriment of the rabble, he, of course, was little anxious about the strict preservation of the dramatic unities; and it was a greater object with him to bring a striking scene into view, than to preserve the unities of place. In the *Aulularia*, part of the action is laid in the miser's house, and part in the various places where he goes to conceal his treasure; in the *Mostellaria* and *Truculentus*, the scene changes from the street to apartments in various houses. But, notwithstanding these and other irregularities, Plautus so enchanted the people by the drollery of his wit and the buffoonery of his scenes, that he continued the reigning

favourite of the stage long after the plays of Cæcilius, Afranius, and even Terence were first represented. (*Dunlop's Roman Literature*, vol. 1, p. 126, seq., *Lond. ed.*)—The best editions of Plautus are, that of Camerarius, *Basil*, 1558, 8vo; that of Lambinus, *Letet.*, 1576, fol.; that of Gruter, *Lugd. Bat.*, 1592, in which the division into acts, scenes, and verses first appears; that of Taubmann, *Witteb.*, 1632, 4to; that of Müller, *Berol.*, 1755, 8vo, 2 vols.; that of Ernesti, *Lips.*, 1760, 8vo, 2 vols.; the Bipont edition, 1779–88, 8vo, 2 vols., in which the text is corrected by Brunck; that of Schmieder, *Götting.*, 1804, 8vo, 2 vols.; that of Bothe, *Berol.*, 1809, 8vo, and that forming part of the collection of Lemaire, *Paris*, 1830, 4 vols. 8vo.

ΠΛΕΙΑΔΕΣ (Πλειάδες), I. the daughters of Atlas and the ocean-nymph Pleione. They were seven in number, and their names were Maia, Electra, Taygeta, Halcyone, Celæno, Sterope, and Merope. The first three became the mothers, by Jupiter, of Mercury, Dardanus, and Lacedæmon. Halcyone and Celæno bore to Neptune Hyrieus and Lycus; Sterope brought forth CEnomaüs to Mars; and Merope married Sisyphus. (*Schol. ad Il.*, 18, 486.—*Apollod.*, 3, 1.—*Hygin.*, *Poët. Astron.*, 2, 21.) These nymphs hunted with Diana; on one of which occasions Orion, happening to see them, became enamoured, and pursued them. In their distress they prayed to the gods to change their form, and Jupiter, taking compassion, turned them into pigeons, and afterward made them a constellation in the sky. (*Schol. ad Il.*, l. c.) According to Pindar, the Pleiades were passing through Bœotia with their mother, when they were met by Orion, and his chase of them lasted for five years. (*Etym. Mag.*, s. v. Πλειάς.) Hyginus (l. c.) says seven years. (*Keightley's Mythology*, p. 464.)—The constellation of the Pleiades, rising in the spring, brought with it the spring-rains, and opened navigation. Hence, according to the common etymology, the name is derived from πλέω (πλεῖω), "to sail," and is thought to indicate the stars that are favourable to navigation. (*Vöcker, Mythol. des Iap. Geschlechtes*, p. 77.) Ideler, however, thinks it more probable that the appellation is derived from the Greek πλεῖς, "full," denoting a cluster of stars; whence, perhaps, the expression of Manilius (4, 523), "*glomerabile sidus*." Aratus (v. 257) calls the Pleiades ἐκκράτορες, "moving in seven paths" (compare *Eurip.*, *Iph. in Aul.*, v. 6), although one can only discern six stars. Hence Ovid says of these same stars (*Fast.*, 4, 170), "*Quæ septem dici, sex tamen esse solent*." On the other hand, Hipparchus asserts (*ad Arat.*, *Phæn.*, 1, 14), that in a clear night seven stars can be seen. The whole admits of a very easy solution. The group of the Pleiades consists of one star of the third magnitude, three of the fifth, two of the sixth magnitude, and several smaller ones. It requires, therefore, a very good eye to discern in this constellation more than six stars. Hence, among the ancients, since no more than six could be seen with the naked eye, and yet since, as with us, a seventh star, a Πλειάς ἐκπύστερος (*Eratosth.*, c. 14), was mentioned, the conclusion was that one of the cluster was lost. Some thought that it had been destroyed by lightning (*Theon.*, *Schol. ad Arat.*, l. c.); others, making the lost Pleiad to have been Electra, fabled that she withdrew her light in sorrow at the fall of Ilum, and the misfortunes of her descendants, Dardanus having been the son of Electra and Jupiter (*Schol. ad Arat.*, l. c., where for τοῦ ἡλίου we must read τῆς Ἰλίου, and for τὸν ἡλίον ἀλίσκομενον must substitute τὴν Ἰλίον ἀλίσκομένην.—Compare *Ovid, Fast.*, 4, 177: "*Electra Troja spectare ruinas non tulit*." According to another account, the "lost Pleiad" was Merope, who withdrew her light because ashamed of having alone married a mortal. (*Ovid, Fast.*, 4, 175.) Others, again, affirmed that the star

is question moved away from its own constellation, and became the third or middle one in the tail of the Greater Bear, where it received the name of *Ἀλώρη*: "the Fox." (*Ideler, Sternnamen*, p. 145.)—From their rising in the spring, the Pleiades were called by the Romans *Vergiliae*. (*Festus. — Iridor., Orig.*, 3, 70.) This constellation appears to have been one of the earliest that were observed by the Greeks. It is mentioned by Homer (*Il.*, 18, 483, *seqq.*—*Od.*, 5, 272, *seqq.*); and in Hesiod an acquaintance with it is supposed to be so widely spread, that the daily labours of the farmer can be determined by its rising and setting. (*Hes., Op. et D.*, 383, 615.) The metrical form of the name is *Ἡγληΐάδες* and *Ἡλειάδες*, and hence some have been led into the erroneous opinion, that the name of the constellation was derived from *πτελέα*, a "pigeon" or "dove," in allusion to the fancied appearance of the cluster. (*Schwenk, Mythol. Skizzen*, p. 2.)—The Pleiades are assigned on the celestial sphere to a position in the rear of Taurus. (*Hyg., Poet. Astron.*, 30.) Proclus and Geminus, however, place them on the back of the animal; while Hipparchus makes them belong, not to Taurus; but to the foot of Perseus. (*Theon. ad Arat., Phan.*, 254.—*Völcker, Mythol. der Iap. Geschl.*, p. 78.)—II. The name of Pleiades was also given to seven tragic writers, and the same appellation to seven other poets, of the Alexandrian school. (*Vid. Alexandrina Schola*, near the conclusion of the article.)

Πλειόνη, one of the Oceanides, who married Atlas, king of Mauritania, by whom she had twelve daughters, and a son called Hyas. Seven of the daughters were changed into a constellation called *Pleiades*, and the rest into another called *Hyades*. (*Ovid, Fast.*, 5, 84.)

Πλεμνύριον, a promontory of Sicily, in the immediate neighbourhood of Syracuse, and facing the island of Ortigia, forming with this island the entrance to the great harbour of that city. Its modern name is *Marsa d'Olivera*. (*Dorvill. Sic.*, p. 191.—*Thucyd.*, 7, 4.—*Wesseling, ad Diad. Sic.*, vol. 6, p. 555, *ed. Bip.*) It was fortified by Nicias during the siege of Syracuse by the Athenians, as being well adapted by its situation for receiving supplies by sea; and here also he erected three forts or castles, the largest of which contained all the warlike implements, and the provisions of the army. At a subsequent period of the war, the Athenians were compelled to abandon this post, and fortified themselves near Dascon, in its vicinity. (*Thucyd.*, l. c.—*Id.*, 7, 23.) The position of *Πλεμνύριον* may be regarded as one of the early causes of the failure of the expedition against Syracuse; for, as the place was destitute of fresh water, and the soldiers had to go to a distance for it, numbers of them were cut off from day to day by the Syracusans. (*Letronne, ad Thucyd.*, 7, 4, p. 76.—*Göller, de situ et origine Syracusarum*, p. 76, *seqq.*)

Πλευροξίαι, a people of Gallia Belgica, tributary to the Nervii. Their precise situation is unknown. Lemaire places them in the vicinity of Tornacum, now Tournay. (*Ind. Geogr., ad Cas.*, p. 339.—*Cas.*, B. G., 5, 39.)

Πλινίος, I. Secundus, C., surnamed the Elder, and also the *Naturalist*, a distinguished Roman writer, born of a noble family, in the ninth year of the reign of Tiberius, A.D. 23. St. Jerome, in his Chronicle of Eusebius, and a Life of Pliny ascribed to Suetonius, make him to have been a native of Comum; but since, in the dedicatory epistle prefixed to his *Natural History*, he calls Catullus his compatriot (*conterraneum*), and since Catullus was born at Verona, this last-mentioned city has disputed with Comum the honour of having given birth to the naturalist, and writings without number have been elicited by the controversy. One thing, however, is certain, that the Plinian family was settled at Comum, and possessed a large property in the neighbourhood, and inscriptions have been dis-

covered there relative to several of its members. It was at Comum, too, that the younger Pliny, so well known by his Letters, and the nephew of the naturalist, was born. Pliny the Elder came to Rome at an early period, and attended the lectures of Appian, but it does not appear that he saw the Emperor Tiberius, the latter having already retired to Capreae. From the account which he gives of the jewels which he saw at Lollia Paulina's, it has been supposed, that, notwithstanding his youth, he assisted occasionally at the court of Caligula. His attention was attracted, even at this early period, by the interesting productions of nature, and particularly by the remarkable animals which the emperors exhibited in the public spectacles. He relates in detail, and as an eyewitness, the particulars of a combat in the presence of the Roman people, with a large monster of the deep, which had been taken alive in the harbour of Ostia. This event having taken place while Claudius was constructing the port in question, that is, in the second year of his reign, Pliny could not have been at that time more than about nineteen years of age. We learn from himself, that, about his twenty-second year, he resided for a time on the coast of Africa, where he witnessed the change of sex in the case of Larius Coscicius, who, from having been, as was supposed, a girl, found himself transformed, the very day of his marriage, into a boy! Some modern writers have supposed, on no very strong grounds, however, that at this age Pliny served in the Roman fleet, and that he visited Britain, Egypt, and Greece. It appears, on the contrary, from the testimony of his nephew, that he was employed, while yet quite young, in the Roman armies in Germany. He there served under Lucius Pomponius, whose friendship he gained, and who intrusted him with the command of a part of the cavalry. He must have availed himself very fully of this opportunity to explore the country of Germany, since he informs us that he had seen the sources of the Danube, and had also visited the Chauci, a tribe that dwelt on the borders of the ocean. It was during the operations in Germany that he wrote his first work, in which he treated of the art of hurling a javelin from on horseback (*De Jactatione Equestri*). His second work, which was a Life of Pomponius, in two books, was dictated by his strong attachment to that commander, and by the gratitude which he felt towards him for his numerous favours. A dream which he had during this same war, and in which the shade of Drusus appeared to him and urged him to write that prince's memoirs, induced him to engage in a literary enterprise of great labour, that of writing, namely, the history of all the wars carried on in Germany by the Romans, and which he executed eventually, in the compass of twenty books. Having returned to Rome about the age of thirty years, he there pleaded several causes, according to the custom of the Romans, who were fond of allying the profession of arms to the practice of the bar. He passed, also, a part of his time at Comum, where he superintended the education of his nephew; and it was probably with the view of being useful to the latter that he composed a work entitled *Studiosus*, in which he began with the orator from his cradle, and conducted him onward until he had reached the perfection of his art. Judging from a quotation made by Quintilian, we are led to infer that, in this work, Pliny even pointed out the manner in which the orator should regulate his dress, his person, his deportment on the tribunal, &c. It appears, that during the greater part of the reign of Nero, Pliny remained without employment. His nephew informs us, that, towards the close of Nero's reign, when the terror inspired by that monster prevented any one from devoting his attention to pursuits a little more liberal and elevated than ordinary, Pliny composed a work in eight books, entitled *Dubii Sermonis*, which was,

without doubt, a grammatical treatise on the precise signification and use of words. And yet it is difficult, if we follow chronological computation, not to believe that Nero named him his procurator in Spain; for it is certain, from the words of his nephew, that he filled this office: he himself mentions certain observations made by him in this country, and we find no other period in his life in which he could have gone thither. We may presume that he continued in Spain during the civil wars of Galba, Otho, and Vitellius, and even during the first years of the reign of Vespasian. It was during this period that he lost his brother-in-law; and, being unable, by reason of his absence abroad, to become his nephew's guardian, the care of the latter was intrusted to Virginius Rufus. On his return, Pliny would seem to have stopped for a time in the south of Gaul; for he describes, with remarkable exactness, the province of Narbonensis, and, in particular, the fountain of Vauluse. He informs us that he saw in this quarter a stone said to have fallen from heaven. Vespasian, with whom he had been on intimate terms during the wars in Germany, gave him a very favourable reception, and was in the habit of calling him to him every morning before sunrise; which, according to Suetonius and Xiphilinus, was a privilege reserved by that emperor only for his particular friends. It cannot be affirmed, with any great degree of certainty, that Vespasian elevated Pliny to the rank of senator. Some writers state, moreover, though without any proof, that Pliny served in the war of Titus against the Jews. What he remarks concerning Judæa is not sufficiently exact to induce us to believe that he speaks from personal observation; and, besides, we can hardly assign to any other part of his life except this, the composition of his work on the *History of his own Times*, in thirty-one books, and forming a continuation of that of Aufidius Bassus. If Pliny, however, did not serve in the Jewish war, he was not less the friend of Titus on that account, having been his companion in the course of other contests; and it was to this prince that he dedicated the last and most important of his writings, his *Natural History*, in thirty-seven books. The titles given to Titus in the dedication show that this laborious work was concluded in the 78th year of our era; and it is evident that it must have occupied the greater part of his life to collect together the materials. This great work is the only one of Pliny's that has come down to us. It forms, at the same time, one of the most valuable monuments left us by antiquity, and is a proof of the most astonishing industry in a man whose time was so much occupied, first by military affairs, and subsequently by those of a civil nature. In order fully to appreciate this vast and celebrated work, we must regard it under three different aspects; its *plan*, its *facts*, and its *style*. The plan is an immense one. Pliny does not propose to himself to write merely a natural history, in the restricted sense in which we employ the phrase at the present day, that is, a treatise, more or less detailed, respecting animals, plants, and minerals; he embraces in his plan astronomy, physics, geography, agriculture, commerce, medicine, and the arts, as well as natural history properly so called; and he continually mingles with his remarks on these subjects a variety of observations relative to the moral constitution of man and the history of nations: so that, in many respects, his work may be regarded as having been in its day a sort of encyclopedia. After having given, in his first book, a kind of table of contents, and the names of the authors who are to supply him with facts and materials, he treats, in the second, of the world, the elements, the stars, &c. The four following books give a geographical sketch of the then known world. The seventh treats of the different races of men, and of the distinctive qualities of the human species, of the great characters which it has pro-

duced, and of the most remarkable human inventions. Four books are then devoted to terrestrial animals, to fishes, to birds, and to insects. The species belonging to each class are arranged according to their size or importance: their habits, their useful or hurtful properties, and their most remarkable characteristics are also discussed. At the end of the book on insects he speaks of certain substances produced by animals, and of the parts that compose the human frame. Botany occupies the largest space in the work. Ten books are devoted to an account of plants, their culture, their uses in domestic economy and the arts, and five to an enumeration of their medicinal properties. Five others treat of the remedies derived from animals; and in the last five Pliny treats of metals, mining, earths, stones, and the employment of the latter for the purposes of life, for the calls of luxury, and for the arts; while under the head of colours he makes mention of the most celebrated paintings, and under the head of stones and marbles treats of the finest pieces of statuary and the most valuable gems. It is impossible but that, in even rapidly running over this prodigious number of subjects, Pliny should make us acquainted with a multitude of remarkable facts, and which are the more valuable to us as he is the only author that relates them. Unhappily, however, the manner in which he has collected and stated them makes them lose a large portion of their value, as well from his mingling together the true and the false, in an almost equal degree, as more particularly from the difficulty, and, in some cases, the impossibility, of discovering exactly to what creatures he alludes. Pliny was not such an observer of nature as Aristotle; still less was he a man of genius sufficient to seize, like this great philosopher, the laws and the relations by which nature has regulated her various productions. He is, in general, nothing more than a mere compiler, and often, too, a compiler unacquainted himself with the things about which he collects the opinions of others, and, consequently, unable to appreciate the true force of these opinions, or sometimes even to comprehend their exact meaning. In a word, he is a writer almost entirely devoid of critical acumen, who, after having passed a large part of his time in making extracts from the works of others, has arranged them under certain chapters, adding thereunto, from time to time, his own reflections, which have nothing to do with scientific discussion, properly so called, but either present specimens of the most superstitious belief, or are the declamations of a chagrined philosopher, who accuses, without ceasing, men, nature, and the gods themselves. We must be careful, therefore, not to regard the facts which he has accumulated in their relations to the opinion which he himself forms; but we must restore them in thought to the writers from whom he has derived them, and then apply to them the rules of sound criticism, in conformity with what we know of the writers themselves, and the circumstances in which they found themselves placed. Studied in this way, the *Natural History* of Pliny presents one of the richest mines of learning, since, according to his own statement, it contains extracts from more than two thousand volumes, written by authors of every description, travellers, historians, geographers, philosophers, physicians, &c.; authors, with many of whom we only become acquainted in the pages of Pliny. A comparison of his extracts with the originals themselves, where the latter have come down to us, and more particularly with the writings of Aristotle, will show that Pliny, in making his selections, was far from giving the preference, on every occasion, to what was most important or most exact in the authors whom he consulted. He appears, in general, to have a strong predilection for things of a singular or marvellous nature; for such, too, as harmonize more than others with the contrasts he is fond of insti-

tating, or the reproaches he is in the habit of making against Providence. He does not, it is true, extend an equal degree of credence to everything that he relates, but it is at mere random that he either doubts or affirms, and the most puerile tales are not always those which most excite his incredulity. There is not, for example, a single fable of the Greek travellers, concerning men without heads, others without mouths, concerning men with only one foot, or very long ears, which he does not place in his seventh book, and that, too, with so much confidence as to terminate this catalogue of wonders with the following remark: "*Hæc atque talia ex hominum genere, ludibria sibi, nobis miracula, ingeniosa fecit natura.*" We may without difficulty, therefore, after observing this facility in giving credence to ridiculous stories about the human species, form an idea of the degree of discernment which Pliny has exercised in his selection of authorities respecting animals either entirely new or but little known. Hence the most fabulous creations, martichori with human heads and the tails of scorpions, winged horses, the catoblepas whose sight alone was able to kill, play their part in his work by the side of the elephant and lion. And yet all is not false, even in those narratives that are most replete with falsities. We may sometimes detect the truth which has served them for a basis, by recalling to mind that these are extracts from the works of travellers, and by supposing that ignorance, and the love of the marvellous, on the part of ancient travellers, have led them into these exaggerations, and have dictated to them those vague and superficial descriptions, of which we find so great a number even in modern books of travels. Another very important defect in Pliny is that he does not always give the true sense of the authors whom he translates, especially when designating different species of animals. Notwithstanding the very limited means possessed by us at the present day of judging with any degree of certainty respecting this kind of error, it is easy to prove that on many occasions he has substituted for the Greek word, which in Aristotle designates one kind of animal, a Latin word which belongs to one entirely different. It is true, indeed, that one of the greatest difficulties experienced by the ancient naturalists was that of fixing a nomenclature, and their vicious and defective method shows itself in Pliny more than in any other. The descriptions, or, rather, imperfect indications, which he gives, are almost always insufficient for recognising the several species, when tradition has failed to preserve the particular name; and there is even a large number whose names alone are given, without any characteristic mark, or any means of distinguishing them from one another. If it were possible still to doubt respecting the advantages enjoyed by the modern over the ancient methods, these doubts would be completely dispelled, on discovering that almost all the ancient writers have said relative to the virtues of their plants is completely valueless for us, from the impossibility of distinguishing the individual plants to which they refer. Our regret, however, on this account, will be greatly diminished, if we call to mind with how little care the ancients, and Pliny in particular, have designated the medical virtues of plants. They attribute so many false and even absurd properties to those plants which we know, that we may be allowed to be very indifferent respecting the virtues of those which we do not know. If we believe that part of Pliny's work which treats of the *materia medica*, there is no human ailment for which nature has not prepared twenty remedies; and, most unfortunately, for the space of two centuries after the revival of learning, medical men took great pleasure in repeating these puerilities.—As regards the facts, therefore, detailed in his work, Pliny possesses at the present day no real interest, except as regards certain processes followed

by the ancients in the arts, and certain particulars of an historical and geographical nature, of which we would have been ignorant without his aid. That portion of his work which is devoted to the arts is the one that merits the most careful study. He traces their progress, he describes their products, he names the most celebrated artists, he indicates the manner in which their labours are conducted, and it cannot be doubted but that, if well understood, he would make us acquainted with some of those secrets by means of which the ancients executed works that we have only been able imperfectly to imitate. Here again, however, the difficulties of his nomenclature present themselves; he names numerous substances, they are substances that must enter into compositions, or be subjected to the operation of the arts, and yet we know not what they are. With difficulty are we enabled to divine the nature of a few, by means of certain rather equivocal characteristics that are related of them; and hence it is that we may be said to be in want, even at the present day, of a true commentary on Pliny's Natural History, a work that would require the most extensive acquaintance with every department of physical knowledge.—If, however, Pliny has but little merit for us as a critic and a naturalist, the case is different with regard to his talents as a writer, and the immense treasure of Latin terms and forms of expression with which the abundance of his materials obliged him to supply himself, and which make his work one of the richest depôts of the Roman tongue. It has been justly remarked, that without Pliny it would be impossible to re-establish the Latin language; and this remark must be understood, not only with regard to words, but also their various acceptations, and the turn and movement of sentences. It is certain, also, that wherever he can indulge in general ideas or philosophic views, his language assumes a tone of energy and vivacity, and his thoughts somewhat of unexpected boldness, which make amends for the dryness of previous enumerations, and may find favour for him with the generality of his readers, and atone in some degree for the insufficiency of his scientific indications. It must be confessed, at the same time, however, that he is too fond of seeking for points and antitheses; that he is occasionally harsh; and that, on many occasions, his language is marked by an obscurity which arises less from the subject-matter than from the desire of appearing sententious and condensed. But he is everywhere dignified and grave, everywhere full of love for justice and of respect for virtue; of horror for cruelty and baseness, of which he had before his eyes such fearful examples; and of contempt for that unbridled luxury which had so deeply corrupted the spirit of his countrymen. In this point of view Pliny cannot be too highly praised; and, notwithstanding the defects that we are compelled to notice in him when we view him as a naturalist, we may still regard him among the most distinguished writers, and those most worthy of the epithet of classic, that flourished after the age of Augustus.—In his religious principles, Pliny was almost an atheist, or, at least, he acknowledged no other deity but the world; and few philosophers have explained the system of Pantheism more in detail, and with greater spirit and energy, than he has done in his second book.—The *Natural History* was Pliny's last work, for he perished the year after its publication. The particulars of his death are given in a letter of the younger Pliny to the historian Tacitus, who was anxious to transmit an account of it to posterity. The elder Pliny was then at Misenum, in command of the fleet which was appointed to guard all that part of the Mediterranean comprehended between Italy, Gaul, Spain, and Africa. We will give the rest of the account in the words of his nephew: "On the 24th of August, about one in the afternoon, my mother desired him to observe a cloud which ap-

peared of a very unusual size and shape. He had just returned from taking the benefit of the sun, and, after bathing himself in cold water, and taking a slight repast, had retired to his study. He immediately arose and went out upon an eminence, from whence he might more distinctly view this very uncommon appearance. It was not, at that distance, discernible from what mountain this cloud issued, but it was found afterward to ascend from Vesuvius. I cannot give you a more exact description of its figure than by resembling it to that of a pine-tree, for it shot up to a great height in the form of a trunk, which extended itself at the top into a sort of branches; occasionally, I imagine, either by a sudden gust of air that impelled it, the force of which decreased as it advanced upward, or the cloud itself, being pressed back again by its own weight, expanded in this manner: it appeared sometimes bright, and sometimes dark and spotted, as it was either more or less impregnated with earth and cinders. This extraordinary phenomenon excited my uncle's philosophical curiosity to take a nearer view of it. He ordered a light vessel to be got ready, and gave me the liberty, if I thought proper, to attend him. I rather chose to continue my studies, for, as it had happened, he had given me employment of that kind. As he was coming out of the house, he received a note from Rectina, the wife of Bassus, who was in the utmost alarm at the imminent danger which threatened her; for the villa being situated at the foot of Mount Vesuvius, there was no way to escape but by the sea; she earnestly entreated him, therefore, to come to her assistance. He accordingly changed his first design, and what he began with a philosophical, he pursued with a heroic, turn of mind. He ordered the galleys to put to sea, and went himself on board with an intention of assisting not only Rectina, but several others; for the villas stand extremely thick on that beautiful coast. When hastening to the place from whence others fled with the utmost terror, he steered his direct course to the point of danger, and with so much calmness and presence of mind as to be able to make and dictate his observations upon the motion and figure of that dreadful scene. He was now so nigh the mountain, that the cinders, which grew thicker and hotter the nearer he approached, fell into the ships, together with pumice-stones, and black pieces of burning rock. They were likewise in danger, not only of being aground by the sudden retreat of the sea, but also from the vast fragments which rolled down from the mountain, and obstructed all the shore. Here he stopped to consider whether he should return back again; to which the pilot advising him, '*Fortune,*' said he, '*befriends the brave; carry me to Pomponianus.*' Pomponianus was then at Stabiae, separated by a gulf, which the sea, after several insensible windings, forms upon the shore. He had already sent his baggage on board; for, though he was not at that time in actual danger, yet, being within the view of it, and, indeed, extremely near, if it should in the least increase, he was determined to put to sea as soon as the wind should change. It was favourable, however, for carrying my uncle to Pomponianus, whom he found in the greatest consternation. He embraced him with eagerness, encouraging and exhorting him to keep up his spirits; and, the more to dissipate his fears, he ordered the baths to be got ready with an air of complete unconcern. After having bathed, he sat down to supper with great cheerfulness, or, at least (what is equally heroic), with all the appearance of it. In the mean time the eruption from Mount Vesuvius flamed out in several places with much violence, which the darkness of the night contributed to render still more visible and dreadful. But my uncle, in order to soothe the apprehensions of his friend, assured him it was only the burning of the villages, which the country people had abandoned to the flames. After this he

retired to rest, and it is most certain he was so little discomposed as to fall into a deep sleep; for, being pretty fat, and breathing hard, those who attended without actually heard him snore. The court which led to his apartment being now almost filled with stones and ashes, if he had continued there any time longer, it would have been impossible for him to have made his way out: it was thought proper, therefore, to awaken him. He got up, and went to Pomponianus and the rest of his company, who were not unconcerned enough to think of going to bed. They consulted together whether it would be most prudent to trust to the houses, which now shook from side to side with frequent and violent concussions, or fly to the open fields, where the calcined stones and cinders, though light indeed, yet fell in large showers, and threatened destruction. In this distress they resolved for the fields, as the less dangerous situation of the two: a resolution which, while the rest of the company were hurried into it by their fears, my uncle embraced upon cool and deliberate consideration. They went out, then, having pillows tied upon their heads with napkins; and this was their whole defence against the storm of stones that fell around them. It was now day everywhere else, but there a deeper darkness prevailed than in the most obscure night; which, however, was in some degree dissipated by torches, and other lights of various kinds. They thought proper to go down farther upon the shore, to observe if they might safely put out to sea; but they found the waves still running extremely high and boisterous. There my uncle, having drunk a draught or two of cold water, threw himself down upon a cloth which was spread for him, when immediately the flames, and a strong smell of sulphur, which was the forerunner of them, dispersed the rest of the company, and obliged him to rise. He raised himself up with the assistance of two of his servants, and instantly fell down dead; suffocated, as I conjecture, by some gross and noxious vapour, having always had weak lungs, and being frequently subject to a difficulty of breathing. As soon as it was light again, which was not till the third day after, his body was found entire, and without any marks of violence upon it, exactly in the same posture as he fell, and looking more like one asleep than dead." (*Plin., Ep., 6, 16, Melmoth's transl.*)—The eruption here mentioned is evidently the one of which many historians have made mention, and which, occurring in the first year of the reign of Titus, destroyed the cities of Herculaneum and Pompeii.—The younger Pliny, in a letter to Macer (3, 5), where he gives a list of his uncle's works, states, that he died at the age of fifty-six years. We cannot, therefore, comprehend how Sammonicus Serenus, and, after him, Macrobius, St. Jerome, and St. Prosper, have made him live until the twelfth year of the reign of Trajan, unless they have confounded together the uncle and nephew.—The younger Pliny gives an interesting account of his uncle's indefatigable application. "You will wonder," he observes, in another of his letters, "how a man so engaged as he was could find time to compose such a number of books, and some of them, too, upon abstruse subjects. But your surprise will rise still higher when you hear that for some time he engaged in the profession of an advocate; that he died in his fifty-sixth year; that, from the time of his quitting the bar to his death, he was employed in the highest posts and in the service of his prince. But he had a quick apprehension, joined to unwearied application. In summer he always began his studies as soon as it was night; in winter, generally at one in the morning, but never later than two, and often at midnight. No man ever spent less time in bed, inasmuch that he would sometimes, without retiring from his book, take a short sleep and then pursue his studies. After a short and light repast at noon (agreeably to the good

old custom of our ancestors), he would frequently, in the summer, if he was disengaged from business, repose himself in the sun; during which time some author was read to him, from which he made extracts and observations, as, indeed, was his constant method, whatever book he read: for it was a maxim of his, that 'no book was so bad but something might be learned from it.' When this was over, he generally went into the cold bath, and, as soon as he came out of it, just took some slight refreshment, and then reposed himself for a little while. Thus, as if it had been a new day, he immediately resumed his studies till supper-time, when a book was again read to him, upon which he would make some hasty remarks. I remember once, his reader having pronounced some word wrong, a person at table made him repeat it again, upon which my uncle asked his friend if he understood it. The other acknowledging that he did, *Why, then, said he, would you make him go back again? We have lost by this interruption above ten lines: so covetous was this great man of his time.* In summer he always rose from supper by daylight, and in winter as soon as it was dark: and this was an invariable rule with him. Such was his manner of life amid the noise and hurry of the city; but in the country his whole time was devoted to study without intermission, excepting only when he bathed. But in this exception I include no more than the time he was actually in the bath, for all the time he was rubbed and wiped he was employed either in hearing some book read to him, or in dictating himself. In his journeys he lost no time from his studies; but his mind at those seasons being disengaged from all other thoughts, applied itself wholly to that single pursuit. A secretary constantly attended him in his chariot, who, in the winter, wore a particular sort of warm gloves, that the sharpness of the weather might not occasion any interruption to his studies; and, for the same reason, my uncle always used a chair in Rome. I remember he once reproved me for walking: 'You might,' said he, 'employ those hours to more advantage: for he thought all time lost not given to study. By this extraordinary application he found time to write so many volumes, besides one hundred and sixty which he left me, consisting of a kind of commonplace, written on both sides, in a very small character; so that one might fairly reckon the number considerably more.' (*Cuvier, Biogr. Univ.*, vol. 35, p. 67, *seqq.*) The best edition of Pliny is that forming part of the collection of Lemaire, *Paris*, 1827-32, 11 vols. 8vo. The following editions are also valuable: that of Dalechamp, *Paris*, 1587, fol.; that of Hardouin, *Paris*, 1723, 3 vols. fol. (reprinted with additions and improvements from the edition of 1685, in 5 vols. 4to); and more particularly that of Franzius, *Lips.*, 1778-91, 10 vols. 8vo. There is also a French translation, in 20 vols. 8vo., *Paris*, 1829-33, by De Grandsegne, with annotations by some of the most eminent scientific men in France. It is an excellent work.—II. C. Plinius Cæcilius Secundus, surnamed, for distinction sake, the "Younger," was born at or near Comum, about the sixth year of the reign of Nero, or A.D. 61. His mother was a sister of the elder Pliny; and as he lost his father, Lucius Cæcilius, at an early age, he removed, with his surviving parent, to the house of his uncle. Here he resided for some years, and, having been adopted by his uncle, took the name of the latter in addition to his parental one of Cæcilius. Pliny the younger appears to have been of a delicate constitution, and even in his youth to have possessed little personal activity and enterprise; for, at the time of the famous eruption of Vesuvius, when he was between seventeen and eighteen, he continued his studies at home, and allowed his uncle to set out to the mountain without him. It was on this occasion that the latter lost his life. In literature, however, the

younger Pliny made considerable progress even at an early age. His uncle had given him a careful education; he composed a Greek tragedy when only fourteen, and wrote Latin verses on several occasions throughout his life. His principal attention, however, was devoted to the study of eloquence; and he had for instructors in this department the celebrated Quintilian, and others of the most eminent men of the day. Pliny, as we have already remarked, was nearly eighteen years of age at the time of his uncle's death. One year after this he appeared as a pleader at the bar. In his twentieth year he served as a tribune in Syria, and remained eighteen months in that country. On his return to Rome he was appointed one of the questors of the emperor. The duties of these functionaries consisted in reading to the senate the rescripts of the prince. Not long after he became tribune of the people. At the age of thirty he was appointed prætor; and after this he passed several years in retirement, in order not to attract the notice of Domitian. He would not, however, have escaped the fate which threatened all the eminent men of the day, had it not been for the death of Domitian, since there was found among the papers of the latter a denunciation of Pliny, which had recently been sent to the emperor. Nerva and Trajan recalled him to the discharge of public duties, and the latter prince appointed him administrator of the public treasury, an office which he filled for the space of two years. After attaining to the high offices of consul and augur, Pliny was appointed by Trajan to the government of Bithynia, a province in which many abuses existed, and which it required a man of ability and integrity to remove. (*Epist.*, 10, 41.) Pliny was then in his forty-first or forty-second year. The trust so honourably committed to him he seems to have discharged with great fidelity; and the attention to every branch of his duties, which his letters to Trajan display, is peculiarly praiseworthy in a man of sedentary habits, and accustomed to the enjoyments of his villas, and the stimulants of literary glory at Rome. He remained in his government for the space of two years, and it was during this period (A.D. 107) that he wrote his celebrated letter to Trajan respecting the Christians in his province. (*Epist.*, 10, 97.) This letter, and the emperor's reply, furnish numerous important testimonials to the state of Christianity at that early day, and to the purity of Christian principles.—The period of Pliny's death is quite uncertain; he is generally supposed, however, to have ended his days A.D. 110, in the forty-ninth year of his age.—His character, as a husband, a master, and a friend, was affectionate, kind, and generous. He displayed also a noble liberality towards Comum, his native place, by forming a public library there, and devoting a yearly sum of three hundred thousand sesterces, for ever, to the maintenance of children, born of free parents, who were citizens of Comum.—A man like Pliny, of considerable talents and learning, possessed of great wealth, and of an amiable and generous disposition, was sure to meet with many friends, and with still more who would gratify his vanity by their praises and apparent admiration of his abilities. But as a writer he has done nothing to entitle him to a very high place in the judgment of posterity. Still, however, no Roman, from the time of Cicero, acquired so high a reputation for eloquence. All his discourses, however, are lost, with the single exception of the *Panegyric* on Trajan. Pliny, having been appointed consul, addressed to the emperor a discourse, in which he thanked him for the honour bestowed, and, at the same time, eulogized the character and actions of the prince. It was delivered in open senate, and was then enlarged and published. (*Epist.*, 3, 18.) This production belongs to a class of compositions, the whole object of which was to produce a striking effect, and it must not aspire to any greater reward. It is in-

genious and eloquent, but by its very nature affords no room for the exercise of the higher faculties of the mind; nor will its readers, excepting those who are fond of historical researches, derive from it any more substantial benefit than the pleasure which a mere elegant composition can impart. To those, however, who are curious in matters of history, it will certainly prove interesting, since, although it only covers the early years of Trajan's sway, it nevertheless furnishes us with a number of facts, of which we should otherwise be ignorant; for what Suetonius and Tacitus wrote concerning Trajan is lost, as is the case, also, with this same portion of the history of Dio Cassius, and with the different accounts of Trajan's reign that are cited by Lampridius, in his life of Alexander Severus.—Pliny is also known to modern times by his *Letters*. These consist of ten books, and were published by himself. From the first to the ninth book inclusive, we have letters addressed to individuals of all descriptions. The tenth book contains the letters and reports sent by Pliny to Trajan, together with some answers of that prince. The Letters of Pliny are valuable to us, as all original letters of other times must be, because they necessarily throw much light on the period at which they were written. But many of them are ridiculously studied, and leave the impression, so fatal to our interest in the perusal of such compositions, that they were written for the express purpose of publication. Among the letters of Pliny that have obtained the greatest celebrity, are the two in which he gives an account of the elder Pliny's mode of life, and of the circumstances connected with his death; two others, which contain a description of villas of his own; and one in which he gives an account of his proceedings against the Christians, and to which we have already referred. The authenticity of this last-mentioned letter has been attacked by Semler, an eminent German divine (*Historia Ecclesiastica Selecta Capitula*, Hal., 1767, 3 vols. 8vo.—*Neue Versuche die Kirchen-Historie der ersten Jahrhunderte mehr aufzuklären*, Leipzig, 1787, 8vo). This critic maintains that the letter in question was forged by Tertullian; but his arguments, if they deserve the name, would invalidate the authority of almost every literary monument of ancient times. This same letter of Pliny's gave rise to an absurd legend at a later date, according to which, Pliny having met, in the island of Crete, with Titus, the disciple of St. Paul, was converted by him, and afterward suffered martyrdom.—The design of writing a history, which Pliny at one time entertained, he never carried into execution. (*Epist.*, 5, 8.) The work "*De Viris Illustribus*" has been erroneously ascribed to him, as has also the dialogue "*De Causis corruptæ eloquentiæ*." (Mason, *Vit. Plin.*—Schöll, *Hist. Lit. Rom.*, vol. 2, p. 408, seq.—Bähr, *Gesch. Röm. Lit.*, vol. 1, p. 566, seq.)—The best edition of Pliny is that of Lemaire, Paris, 1823, 2 vols. 8vo. It is the edition of Geener, improved by Schaeffer (Leips., 1805, 8vo), with additions by Lemaire.

PLISTHENES, a son of Atreus, king of Argos; father of Menelaus and Agamemnon. (Vid. Agamemnon, and Atreidæ.)

PLORINOPOLIS, a city of Thrace, to the south of Hadrianopolis, founded and named in honour of the Empress Plotina. On its site, at a later period, appeared the city of Didymotichos, now *Demotica*. (*Itin. Ant.*, 322.—*Procop. de Ed.*, 4, 11.)

PLUTARCHUS, a philosopher of the New-Platonic school, born A.D. 205, at Lycopolis in Egypt. Nature had endowed him with superior parts, particularly with an extraordinary depth of understanding, and a bold and vigorous imagination. He early manifested these abilities in the school of Ammonius at Alexandria. Subsequently he determined to accompany the army of Gordian to the East, in order to study the Oriental systems on their native soil. He returned a dreamer,

perpetually occupied with profound but extravagant meditations, labouring to attain the comprehension of the absolute by contemplation; a notion borrowed from Plato, which became exaggerated in his hands. Carried away by his enthusiasm, he thought that he was developing the designs of the philosopher of the Academy, when, in fact, he exhibited his thoughts only partially and incompletely. The impetuous vivacity of his temper, which caused him perpetually to fall into extravagances, prevented his reducing his mystical rationalism to a system. His various scattered treatises were collected by Porphyry in six Enneades. He died in Campania, A.D. 270, having taught at Rome, and excited the almost superstitious veneration of his disciples.—An admirable analysis is given of the system of Plotinus by Tennemann, though occasionally somewhat obscure in its details. (*Manual of the History of Philosophy*, p. 187, seq., Johnson's transl.) The best edition of Plotinus is that of Creuzer, Oxon., 1835, 3 vols. 4to. An edition of the treatise *De Pulchritudine* was published in 1814, 8vo, Lips., by the same editor. (Hoffmann, *Lex. Bibliogr.*, vol. 3, p. 336.)

PLUTARCHUS, one of the most generally known and frequently cited, and hence, if the expression be allowed, one of the most popular, writers of antiquity. He was a native of Chæronea in Bœotia, but the period of his birth is not exactly ascertained. Plutarch himself informs us, that he was studying under Ammonius, at Delphi, when Nero visited Greece, which would be the 66th year of our era; and hence we may conjecture that he was born towards the close of the reign of Claudius, about the middle of the first century. Plutarch belonged to an honourable family, in which a fondness for study and literary pursuits had long been hereditary. In his early days he saw at one and the same time his father, his grandfather, and great grandfather in being; and he was brought up under the influence of ancient manners, and in this sweet family-converse, which imparted to his character an air of integrity and goodness, that shows itself in so many of his numerous writings. In the school of Ammonius, which he attended when still quite young, and where he formed an intimate friendship with a descendant of Themistocles, he received instruction in mathematics and philosophy. Without doubt, he carefully attended also, under able instructors, to the various departments of belles-lettres, and his works plainly show that the perusal of the poets had supplied his memory with ample materials. It appears that, while still quite young, he was employed by his fellow-citizens in some negotiations with neighbouring cities. The same motive led him to Rome, whither all the Greeks possessed of any industry or talent had been accustomed regularly to come for more than a century, to seek reputation and fortunes, either by attaching themselves to some powerful individuals, or by giving public lectures on philosophy and eloquence. Plutarch, it may readily be supposed, did not neglect this latter mode of acquiring celebrity. He himself declares, that during his sojourn in Italy, he could not find time to become sufficiently acquainted with the Latin tongue, by reason of the public business with which he was charged, and the frequent conferences he had with educated men on matters of a philosophic nature, about which they came to consult him. He spoke, he professed in his own language; according to the privilege which the Greeks had preserved of imposing their idiom on their conquerors, and of making it the natural language of philosophy and letters. These public lectures, these declamations, were evidently the first germe of the numerous moral treatises that Plutarch subsequently composed. The philosopher of Chæronea exercised at Rome that profession of sophist, the very name of which is now become a by-word, and the mere existence of which seems to indi-

ente the decline of national literature, but which was more than once rendered illustrious at Rome by great talents and the effects of persecution. It is well known, that, under the bad emperors, and amid the universal slavery that then prevailed, philosophy was the only asylum to which liberty fled when banished from the forum and the senate. Philosophy, in earlier days, had effected the ruin of the republic; it was then only a vain scepticism, abused to their own bad purposes by the ambitious and the corrupting. Adopting a better vocation, it became, at a later period, a species of religion, embraced by men of resolute spirit; they needed a wisdom that might teach them how to escape, by death, the cruelty of the oppressor, and they called, for this purpose, stoicism to their aid. Plutarch, the most constant and the most contemptuous opposer of the Epicurean doctrines; Plutarch, the admirer of Plato, and a disciple of his in the belief of the soul's immortality, of divine justice, and of moral good, taught his hearers truths, less pure, indeed, than those of Christianity, but which, nevertheless, in some degree adapted themselves to the pressing wants of heroic and elevated minds.—It is not known whether Plutarch prolonged his stay in Italy until that period when Domitian, by a public decree, banished all philosophers from that country. Some critics have supposed that he made many visits to Rome, but none after the reign of this emperor. One thing, however, appears well ascertained, that he returned, when still young, to his native country, and that he remained there for the rest of his days. During this his long sojourn in the land of his fathers, Plutarch was continually occupied with plans for the benefit of his countrymen; and, to give but a single instance of his zeal in the public service, he not only filled the office of archon, the chief dignity in his native city, but even discharged with great exactness, and without the least reluctance, the duties of an inferior office, that of inspector of public works, which compelled him, he tells us, to measure tile, and keep a register of the loads of stone that were brought to him. All this accords but ill with the statement of Suidas, that Plutarch was honoured with the consulship by Trajan. Such a supposition is contradicted both by the silence of history and the usages of the Romans. Another and more recent tradition, which makes Plutarch to have been the preceptor of Trajan, appears to rest on no better foundation, and can derive no support whatever from any of the genuine works of the philosopher. An employment, however, which Plutarch does seem to have filled, was that of priest of Apollo, which connected him with the sacerdotal corporation at Delphi. The period of his death is not known; but the probability is that he lived and philosophized until an advanced age, as would appear both from the tone of some of his writings and various anecdotes that are related of him.—The several productions of this writer will now be briefly examined. The work to which he owes his chief celebrity is that which bears the title of *Βίοι παράλληλοι* ("Parallel Lives"). In this he gives biographical sketches of forty-four individuals, distinguished for their virtues, their talents, and their adventures, some Greek, others Roman, and gives them in such a way that a Roman is always compared with a Greek. Five other biographies are isolated ones; twelve or fourteen are lost. The five isolated lives are those of Artaxerxes Mnemon, Aratus, Galba, Otho, and Homer, though this last is probably not Plutarch's. The lives that have perished are those of Epaminondas, Scipio, Augustus, Tiberius, Caligula, Claudius, Nero, Vitellius, Hesiod, Pindar, Crates the Cynic, Delphantes, Aristomenes, and Aratus the poet.—Many regard the Lives of Plutarch as models of biography. The principal art of the writer consists in the delineation of character; but it has been objected to him, and, it would seem, with justice, that his characters are all

of a piece; that he represents his heroes either as completely enlaved by some passion, or as perfectly virtuous, and that he has not been able to depict the almost infinite variety of shades between vice and virtue. What renders the perusal of these biographies particularly attractive, is our seeing his personages constantly in action; we follow them amid public affairs, we accompany them to the scenes of private life, to the interior of their dwellings, and into the very bosom of their families. "We are not writing histories," observes Plutarch himself, "but lives. Neither is it always in the most distinguished exploits that men's virtues and vices may be best discerned; but frequently some unimportant action, some short saying or jest, distinguishes a person's real character more than fields of carnage, the greatest battles, or the most important sieges. As painters, therefore, in their portraits, labour the likeness in the face, and particularly about the eyes, in which the peculiar turn of mind most appears, and run over the rest with a less careful hand, so must we be permitted to strike off the features of the soul, in order to give a real likeness of these great men, and leave to others the circumstantial detail of their toils and their achievements." (*Vit. Alex.*, c. 1.) This reasoning of Plutarch's is no doubt very just, but it supposes that the writer does not go in quest of anecdotes, and that he exercises a sound and rigid criticism in the selection of those which he actually receives. Such, however, is not the case with Plutarch.—Another defect with which he may be justly charged, is the having entirely neglected the order of chronology, so that frequently his narrative presents only an incoherent mass of facts, and the perusal of his lives leaves behind it, at times, only a confused impression. On the other hand, the Lives of Plutarch contain a treasure of practical philosophy, of morality, and of sound and useful maxims, the fruit of a long experience: indeed, it may be asserted, that oftentimes these Lives are only so many historical commentaries on certain maxims. Notwithstanding all their faults, however, the Lives of Plutarch are full of instruction for those who wish to become well acquainted with Greek and Roman history, since the author has drawn from many sources that are closed upon us. He cherished an ardent love for liberty, or, rather, democracy, which he confounded with liberty, and he has been reproached with allowing himself, on certain occasions, to be so far led away by his enthusiasm as to mistake for heroism a forgetfulness of the sentiments of nature. For example, though he would seem to state with impartiality the different sensations produced by the punishment of the sons of Brutus, and the assassination of the brother of Timoleon, still it is evident, from the manner in which he expresses himself, that he approves of these two actions, and that, in his eyes, the authors of them were deserving of commendation, and free from all reproach. (*Sainte-Croix, Examen, &c.*, p. 74, 2d ed.) Plutarch, moreover, is not even entitled to the praise of being an impartial writer. The desire of showing that there was a time when the Greeks were superior to the Romans, pervades all his recitals, and prejudices him in favour of his Grecian heroes. His ignorance of the Latin tongue, which he himself avows in his Lives of Demosthenes and Cato, leads him into various errors relative to Roman history. His style has neither the purity of the Attic, nor the noble simplicity which distinguishes the classic writers. He is overloaded with erudition, and with allusions that are often obscure for us.—An able examination of the sources whence Plutarch derived the materials for his lives, is given by Heeren (*De fontibus et auctoritate vitarum parallelarum Plutarchi Commentationes IV.*, Götting., 1820, 8vo), and this inquiry becomes indispensably necessary to the professed scholar, who wishes to ascertain the degree of confidence that is due to the

biographical sketches of Plutarch, though our limits forbid our entering on the detail. It may be said, in a few words, that Plutarch, in the composition of his Lives, consulted all the existing historians; that he did not, however, blindly follow them, but weighed their respective statements in the balance of justice, and, when their accounts were contradictory, adopted such as seemed to him most probable.—The other historical works of Plutarch are the following: 1. *Ῥωμαίων καὶ Ἀλρίαι Ῥωμαίων* ("Roman Questions"). These are researches on certain Roman usages: for example, Why, in the ceremony of marriage, the bride is required to touch water and fire? Why, in the same ceremony, they light five tapers? Why travellers, who, having been considered dead, return eventually home, cannot enter into their houses by the door, but must descend through the roof, &c.—2. *Ἑλληνικά, καὶ Ἀλρίαι Ἑλληνικά* ("Hellenica, or Grecian Questions"). We have here similar discourses on points of Grecian antiquity.—3. *Περὶ παραλλήλων Ἑλληνικῶν καὶ Ῥωμαίων* ("Parallels drawn from Grecian and Roman History"). In order to show that certain events in Grecian history, which appear fabulous, are entitled to full confidence, Plutarch opposes to them certain analogous events from Roman history. This production is unworthy of Plutarch, and very probably supposititious. It possesses no other merit than that of having preserved a large number of fragments of Greek historians, who are either otherwise unknown, or whose works have not come down to us.—4. *Περὶ τῆς Ῥωμαίων τύχης* ("Of the Fortune of the Romans").—5. and 6. Two discourses *περὶ τῆς Ἀλεξάνδρου τύχης καὶ ἀρετῆς* ("On the Fortune or Valour of Alexander"). In one of these Plutarch undertakes to show that Alexander owed his success to himself, not to Fortune. In the other, he attempts to prove, that his virtues were not the offspring of a blind and capricious Fortune, and that his talents and the resources of his intellect cannot be regarded as favours bestowed by this same Fortune. These two discourses are preceded by one (No. 4) which shows the true object of the others. Plutarch, in this, endeavours to prove, that the Roman exploits are less the effect of valour and wisdom, than the result of the influence of Fortune; and, among the favours conferred by this goddess, he enumerates the unexpected death of Alexander, at the very time that he was menacing Italy with his victorious arms. In all this we clearly see the jealousy and vanity of the Greeks, who, from the time that they first fell under the Roman yoke, never ceased detracting from the glory of this republic, and ascribing its rapid progress to some blind and unknown cause. One of the motives that induced Polybius, moreover, to write his history, was to undeceive his countrymen on this point, and prove to them that the prosperity of Rome was owing, not to the caprices of Fortune, but to good conduct and valour.—7. *Πότερον Ἀθηναῖοι κατὰ πόλεμον ἢ κατὰ σοφίαν ἐνδοξότεροι;* ("Whether the Athenians are more renowned for War or for the Sciences"). The commencement and conclusion are wanting. The text of what remains of this piece is very corrupt.—8. *Περὶ Ἰσιδος καὶ Ὀσιρίδος* ("Of Isis and Osiris"). This treatise contains a number of very curious remarks on the Egyptian mythology, but it is, at the same time, that very one of the works of Plutarch in which his want of critical skill is most apparent. His object was to give the mythological traditions of the Egyptians a philosophical sense, in order to justify them before the tribunal of reason. Hence this treatise can only be employed with great caution in studying this branch of ancient mythology.—9. *Ἐπιτομή τῆς συγκρίσεως Μενάνδρου καὶ Ἀριστοφάνους* ("Abridgment of the Comparison between Menander and Aristophanes"). An extract, probably, from some lost work of Plutarch's.—10. *Περὶ τῆς Ἐποδότην κακοηθείας* ("Of the Malignity of Herodotus").

From a mistaken principle of patriotism, Plutarch here attacks the veracity of Herodotus as an historian. The latter has found an able advocate in the Abbé Geinot. (*Mém. de l'Acad. des Inscrip.*, &c., vols. 30, 36, and 38.—11. *Βίος τῶν δέκα ῥητόρων* ("Biography of the ten Orators"). This work is evidently supposititious. Photius has inserted it in his Bibliotheca, with many omissions and additions, but without stating that it was written by Plutarch. Hence some critics have ascribed it to the patriarch himself. This piece, however, bears the stamp of an age much earlier than that of Photius.—We can only glance at the philosophical, or, as they are more commonly called, the moral, works of Plutarch. He was not a profound philosopher. He had formed for himself a peculiar system, made up from the opinions of various schools, but particularly from those of Plato and the Academicians, which he has sometimes only imperfectly understood. He detested the doctrines of Epicurus and the Porch, and the hatred he had vowed towards their respective schools renders him sometimes unjust towards their founders. He was not free from superstition, and he pushed to excess his devotion towards the gods of paganism. His philosophical or moral works are more than sixty in number. They are full of information as regards an acquaintance with ancient philosophy; and they have the additional merit of preserving for us a number of passages from authors whose works have perished. An analysis of these writings is given by Schöll (*Hist. Lit. Gr.*, vol. 5, p. 77, seq.).—The best editions of the whole works of Plutarch are, that of Reiske, *Lips.*, 1774–82, 12 vols. 8vo; that of Huten, *Tubing.*, 1796–98, 14 vols. 8vo, and that forming part of the Tauchnitz collection. The best edition of the Lives alone is that of Coray, *Paris*, 1809–15, 6 vols. 8vo; and the best edition of the Moral works is that of Wyttenbach, *Oxon.*, 1795, 6 vols. 4to, and 12 vols. 8vo.

ΠΛΥΤΟ (Πλούτων), called also Hades (Ἅιδης) and Aidoneus (Ἄιδωνεύς), as well as Orcus and Dis, was the brother of Jupiter and Neptune, and lord of the lower world, or the abode of the dead. He is described as a being inexorable and deaf to supplication—for from his realms there is no return—and an object of aversion and hatred to both gods and men. (*Il.*, 2, 158, seq.) All the latter were sure to be, sooner or later, collected into his kingdom. The name Hades appears to denote invisibility, being derived from *a*, "not," and *eidō*, "to see," and signifying of the nature of the realm over which he bore sway. The appellation of Pluto was received by him at a later period, and would seem to be connected with the term *πλοῦτος*, "wealth," as mines within the earth are the producers of the precious metals. This notion Voss thinks began to prevail when the Greeks first visited Spain, the country most abundant in gold. (*Mythol. Briefe*, vol. 2, p. 175.) Heyne, on the other hand, is of opinion that the name in question was first given in the mysteries (*ad Apollod.*, 3, 12, 6). It is employed occasionally by the Attic dramatists (*Soph.*, *Antig.*, 1200.—*Eurip.*, *Alcest.*, 370.—*Aristoph.*, *Plut.*, 727), and it became the prevalent one in later times, when Hades came to signify a place rather than a person.—The adventures of Pluto were few, for the gloomy nature of himself and his realm did not offer much field for such legends of the gods as Grecian fancy delighted in; yet he too had his love-adventures. The tale of his carrying off Proserpina is one of the most celebrated in antiquity. (*Vid.* Proserpina.) He loved, we are told, and carried off to Erebus the ocean-nymph Leuce; and, when she died, he caused a tree, named from her (*λευκή*, "white poplar"), to spring up in the Elysian fields. (*Servius ad Virg.*, *Ecl.*, 1, 61.) Another of his loves was the nymph Menthe, whom Proserpina, out of jealousy, turned into the

plant which bears her name. (*Schol. ad Nicand., Alex., 374.*—*Oppian, Hal., 3, 486.*—*Ovid, Met., 10, 730.*)—Pluto, Homer tells us, was once wounded in the shoulder by the arrows of Hercules; but, from the ambiguity of the phrase used by the poet (*ἐν πλάτῃ*, *Il., 8, 395*), it is difficult to determine the scene of the conflict. Some say that it was at the gate of the nether world, when the hero was sent to drag the dog of Hades to the realms of day. (*Schol. ad Il., l. c.*—*Heyne ad Il., l. c.*—*Schol. ad Od., 11, 605.*) Others maintain that it was in Pylos, where the god was aiding his worshippers against the son of Jupiter. (*Apollod., 2, 7, 3.*—*Pausan., 6, 25.*—*Pind., Ol., 9, 50.*—*Schol. ad Pind., l. c.*) Heyne, Müller, and Buttmann are in favour of this sense of the phrase.—The region over which Pluto presided is represented in the *Iliad* and in the *Theogony* as being within the earth. (*Il., 3, 378.*—*Il., 9, 568.*—*Il., 20, 61.*—*Il., 23, 100.*—*Theog., 456, 767.*) In the *Odyssey* it is placed in the dark region beyond the stream of Ocean. (*Od., 10, 508.*—*Il., 11, 1.*) Its name is Erebus, with which the appellation Hades became afterward synonymous. The poets everywhere describe it as dreary, dark, and cheerless. The dead, without distinction of good or evil, age or rank, wander there, conversing about their former state on earth: they are unhappy, and they feel their wretched state acutely. They have no strength, or power of mind or body. Some few, enemies of the gods, such as Sisyphus, Tityus, Tantalus, are punished for their crimes, but not apart from the rest of the dead. Nothing can be more gloomy and comfortless than the whole aspect of the realm of Hades as pictured by Homer.—In process of time, when communication with Egypt and Asia had enlarged the sphere of the ideas of the Greeks, the nether world underwent a total change. It was now divided into two separate regions: Tartarus, which, in the time of Homer and Hesiod, was thought to lie far beneath it, and to be the prison of the Titans, became one of these regions, and the place of punishment for wicked men; and Elysium, which lay on the shore of the streams of Ocean, the retreat of the children and relatives of the king of the gods, was moved down thither to form the place of reward for good men. A stream encompassed the domains of Hades, over which the dead, on paying their passage-money (*ψάλλον*), were ferried by Charon. The three-headed dog Cerberus guarded the entrance; and the three judges, Minos, Æacus, and Rhadamanthus, allotted his place of bliss or of pain to each of the dead who was brought before their tribunal. This idea is probably founded on the passage in the *Odyssey* (11, 568) where the hero says he saw Minos judging in Erebus; but, according to the earlier belief, he only judged there as Orion hunted; in other words, he pursued the same occupation as on earth. According to the fine myth in Plato (*Gorgias*, p. 523), Æacus and Rhadamanthus sit at the point in the mead where the path branches off to the Islands of the Blessed and to Tartarus (compare *Virg., Æn., 6, 540*); the former judging the dead from Europe, the latter those from Asia. If any case proves too difficult for them, it is reserved for the decision of Minos.—The *River of Oblivion* (*ὁ τῆς λήθης ποταμός*) was added to those of Homer's trans-Oceanic region (Acheron, Pyriphlegethon, and Cocytus), and the dead were led to drink of its waters previous to their returning to animate other bodies on earth. In the sixth book of Virgil's *Æneid* will be found the richest and fullest description of the new-modified under-world, and for those who love to trace the progress and change of ideas, it will not be an uninteresting employment to compare it with that in the seventh book of Homer's *Odyssey*.—In reading the "portentous falsehoods" (*Lobeck, Aglaoph., p. 811*) of the Egyptian priests on this subject, one is at a loss which most to wonder at, their audacity, or the credu-

lity of the Greeks. For the former asserted, and the latter believed, that Orpheus and Homer had both learned wisdom on the banks of the Nile; and that the Erebus of Greece, and all its parts, personages, and usages, were but transcripts of the mode of burial in Egypt. Here the corpse was, on payment of a piece of money, conveyed by a ferryman (named Charon in the language of Egypt) over the Acherusian lake, after it had received its sentence from the judges appointed for that purpose. Oceanus was but the Egyptian name for the Nile; the Gates of the Sun were merely those of Heliopolis; and Hermes, the conductor of souls, was familiar to the Egyptians; and thus they boldly and falsely appropriated to themselves all the mythic ideas of Greece.—It is worthy of notice, with what unanimity the early races of men placed the abode of departed souls either beneath the earth or in the remote regions of the West. The former notion owes its origin, in all probability, to the simple circumstance of the mortal remains of man being deposited by most nations in the bosom of the earth; and the habits of thinking and speaking which thence arose, led to the notion of the soul also being placed in a region within the earth. The calmness and stillness of evening succeeding the toils of the day, the majesty of the sun sinking, as it were, to rest amid the glories of the western sky, exert a powerful influence over the human mind, and lead us almost insensibly to picture the West as a region of bliss and tranquillity. The idea of its being the abode of the departed good was therefore an obvious one. Finally, the analogy of the conclusion of the day and the setting of the sun with the close of life, may have led the Greeks, or, it may be, the Phœnicians, to place the dwelling of the dead in general in the dark land on the western shore of Ocean.—Hades, we are told by Homer, possessed a helmet which rendered its wearer invisible; it was forged for him by Vulcan, the later writers say, in the time of the war against the Titans. Minerva wore it when aiding Diomedes against Mars (*Il., 5, 845*). When Perseus went on his expedition against the Gorgons, the helm of invisibility covered his brow. (*Apollod., 1, 6, 2.*)—By artists the god of the lower world was represented similar to his brothers, but he was distinguished from them by his gloomy and rigid mien. (*Keightley's Mythology*, p. 89, *seqq.*) Pluto had a temple at Rome under the title of *Summanus*, dedicated to him during the war with Pyrrhus. (*Ovid, Fast., 6, 731.*) The cypress, the narcissus, the adonis, and the thighs of victims, were sacred to him; black animals were sacrificed to him, such as black oxen and sheep. (*Tibull., 3, 5, 33.*) His title *Summanus* was given to him as being *summus mentium*; but Ovid questions whether this deity was the same as Pluto. (*Fuss, Rom. Ant., p. 360.*)

PLUTUS, son of Iasion or Iasius, by Ceres, the goddess of corn, has been confounded by many of the mythologists with Pluto, though plainly distinguished from him as being the god of riches. He was brought up by the goddesses of peace, and, on that account, Pax was represented at Athens as holding the god of wealth in her lap. The ancients represented him as blind, and bestowing his favours indiscriminately on the good and bad. He appears as an actor in the comedy of Aristophanes called after his name, and also bears a part in the *Timon* of Lucian. The Greek form Πλούσιος means "wealth." The popular belief among the ancients assigned him a dwelling-place in the subterranean regions of Spain, a country famed for its precious metals. Phœdrus relates, in one of his fables, that when Hercules was received into heaven, and was saluting the gods who thronged around with their congratulations, he turned away his look when Plutus drew near, assigning as a reason for this to Jupiter, who inquired the cause of his strange conduct, that he hated Plutus because he was the friend of the bad,

and, besides, corrupted both good and bad with his gifts. The fable is borrowed, with some slight alteration, from the Greek. (*Phædr.*, fab., 4, 12.)

PLUVIUS, a surname of Jupiter, as god of rain. He was invoked by that name among the Romans, whenever the earth was parched up by continual heat, and was in want of refreshing showers. (*Tibull.*, 1, 8, 26.)

PNYX, the place of public assembly at Athens, especially during elections, so called from the crowds accustomed to assemble therein (*ἀπὸ τοῦ πενικνύσθαι*). The Pnyx was situate on a low hill, sloping down to the north, at the western verge of the city, and at a quarter of a mile to the west of the Acropolis. It was a large semicircular area, of which the southern side, or diameter, was formed by a long line of limestone rock, hewn so as to present the appearance of a vertical wall, in the centre of which, and projecting from it, was a solid pedestal, carved out of the living rock, ascended by steps, and based upon seats of the same material. This was the celebrated Bema, from which the orators addressed the people. The lowest or most northern part of the semicircular curve was supported by a terrace wall of polygonal blocks. (*Wordsworth's Greece*, p. 150.—*Aristoph.*, *Acharn.*, 20.—*Jul. Poll.*, 8, 10.)

PODALIRIUS, son of Æsculapius and Epione, and a celebrated physician of antiquity. Xenophon calls him and his brother Machaon pupils of Chiron the centaur (*Cyneg.*, 1, 14), an assertion which Aristides takes the unnecessary trouble of refuting. (*Orat. in Asclepiad.*, vol. 1, p. 76, ed. Cant.) The two brothers were also distinguished for eloquence, and for their acquaintance with the military art. (*Xen.*, l. c.) According to Quintus Calaber, Machaon was the elder, and also instructed Podalirius. (*Paralipom.*, *Hom.*, 8, 60.) They were both present at the siege of Troy, and made themselves so conspicuous by their valour, that Homer ranks them among the first of the Grecian heroes. Their skill in the healing art was also highly serviceable to the wounded, and they were at last excused from the fight, and from all the fatigues of war, in order to have more time to attend to those who were injured. On his return from Troy, Podalirius was driven by a tempest to the coast of Caria, where he either settled in, or founded, the city of Syrna, called by some Syrus. (*Pausan.*, 3, 26.—*Siebelis*, ad loc.) The more common account is in favour of his having founded the place, and he is said to have called it after Syrna, the daughter of Dametas, king of the country. He had cured her, it seems, of the effects of a fall from the roof of a mansion, by bleeding her in both arms at the moment when her life was despaired of; and he received her in marriage, together with the sovereignty of the Carian Chersonese. (*Steph. Byz.*, s. v. Σέρνα.) This story furnishes the first instance of a physician's having practised bleeding, at least among the Greeks. (*Sprengel, Hist. de la Méd.*, vol. 1, p. 131.) Another account makes Podalirius to have been assassinated on the coast of Ausonia, in the territory of the Daunians, in Italy, and to have been worshipped after death under the name of ὥρων ἀσθεῖς, "healer of diseases." (*Lycophr.*, 1046, seqq.) Strabo, moreover, says, that the tomb of Podalirius was to be seen at the distance of 100 stadia from the sea, in the country of the Daunians. (*Strab.*, 436.)

PODAROS, I. the first name of Priam. When Troy was taken by Hercules, he was redeemed from slavery by his sister Hesione, and thence received the name of Priam. (*Vid. Priamus.*)—II. The son of Ipheclus, of Thessaly, and brother of Proteilaus. He went with twenty ships to the Trojan war, and, after his brother's death, commanded both divisions, amounting to forty vessels. (*Hom.*, *Il.* 2, 698, seqq.—*Eustath.*, ad loc.—*Muncker*, ad *Hygin*, fab., 97.)

PODARON, one of the Harpies, mother of two of the

horses of Achilles by the wind Zephyrus. (*Hom.*, *Il.*, 16, 150.—Consult *Heyne, Excurs.*, ad loc.) The name implies swiftness of feet (from ποός, "a foot" and ἀργός, "swift.")

POKAS, the father of Philoctetes. The son is hence called "Pæantia proles" by Ovid. (*Mét.*, 13, 46.)

POECILE, a celebrated portico at Athens, which received its name from the paintings with which it was adorned (*ποικίλη στροφή*, from *ποικίλος*, "discoloured"). Its more ancient name is said to have been Peisianæctus. (*Diog. Laert.*, *Vit. Zen.*—*Plin.*, *Vit. Cim.*) The pictures were by Polygnotus, Micon, and Pamphilus, and represented the battle between Theseus and the Amazons, the contest at Marathon, and other achievements of the Athenians. (*Pausan.*, 1, 15.—*Diog. Laert.*, l. c.—*Plin.*, 36, 9.—*Ælian*, *Hist. An.*, 7, 38.) Here were suspended also the shields of the Scioneans of Thrace, and those of the Lacedæmonians taken in the island of Sphacteria. (*Pausan.*, 1, 15.) It was in this portico that Zeno first opened his school, which was hence denominated the "Stoic." (The "school of the porch," from στροφή.) No less than 1500 citizens of Athens are said to have been destroyed by the thirty tyrants in the Poecile. (*Diog. Laert.*, l. c.—*Isocr.*, *Areop.*—*Æschin.*, *de Fals. Leg.*) Colonel Leake supposes that some walls, which are still to be seen at the church of *Panaghia Fanaromeni*, are the remains of this celebrated portico. (*Topography of Athens*, p. 118.—*Cramer's Anc. Greece*, vol. 2, p. 818.)

POENI, a name common to both the Phœnicians and Carthaginians. (Consult remarks under the article Phœnicia, page 1049, col. 2, near the end.)

POSEON, a name given to the harbour of Trozæne from its shape, being formed by a curved strip of land which resembled a beard (*πώγων*): hence arose the proverbial joke, *πλεῖσταις εἰς Τροίηνα*, which was addressed to those whose chins were but scantily provided. (*Adag. Græc. Zenob.*) This port was formerly so capacious as to contain a large fleet. We are told by Herodotus that the Greek ships were ordered to assemble there prior to the battle of Salamis (43.—*Strab.*, 273). At present it is shallow, obstructed by sand, and accessible only to small boats. (*Dodwell*, vol. 2, p. 268.—*Chandler*, vol. 2, p. 263.—*Cramer's Anc. Greece*, vol. 3, p. 266.)

POLA, a town of Istria, on the western coast, near the southern extremity, or Promontorium Polaticum. It still preserves its name unchanged. Tradition reported it to have been founded by the Colchians, whom Æetes had sent in pursuit of the Argonauts. It became afterward a Roman colony, and took the name of Pietas Julia. (*Pliny*, 3, 19.—*Mela*, 2, 4.—*Cramer's Anc. Italy*, vol. 1, p. 136.)

POLEMARCHUS. *Vid. Archon.*

POLÆMON, I. an Athenian of good family, who in his youth was addicted to infamous pleasures. The manner in which he was reclaimed from his licentious course of life, and brought under the discipline of philosophy, affords a memorable example of the power of eloquence when it is employed in the cause of virtue. As he was one morning, about the rising of the sun, returning home from the revels of the night, clad in a loose robe, crowned with a garland, strongly perfumed and intoxicated with wine, he passed by the school of Xenocrates, and saw him surrounded by his disciples. Unable to resist so fortunate an opportunity of indulging his sportive humour, he rushed, without ceremony, into the school, and took his place among the philosophers. The whole assembly was astonished at this rude and indecent intrusion, and all but Xenocrates discovered signs of resentment. The philosopher, however, preserved the perfect command of his countenance; and, with great presence of mind, turned his discourse from the subject on which he was lecturing to the topics of temperance and modesty, which he recommended with

so much strength of argument and energy of language, that Polemon was constrained to yield to the force of conviction. Instead of turning Xenocrates and his doctrine to ridicule, he became sensible of the folly of his former conduct, was heartily ashamed of the contemptible figure which he made in so respectable an assembly, took his garland from his head, concealed his naked arm under his cloak, assumed a sedate and thoughtful aspect, and, in short, resolved from that hour to relinquish his licentious pleasures, and to devote himself to the pursuit of wisdom. Thus was this young man, by the powerful energy of truth and eloquence, converted from an infamous libertine to a respectable philosopher. In such a sudden change of character, it is difficult to avoid passing from one extreme to another. Polemon, after his reformation, in order to brace up his mind to the tone of rigid virtue, constantly practised the severest austerity and most hardy fortitude. From the thirtieth year of his age to his death he drank nothing but water. When he suffered violent pain, he showed no external sign of anguish. In order to preserve his mind undisturbed by passion, he habituated himself to speak in a uniform tone of voice, without elevation or depression. The austerity of his manners, however, was tempered with urbanity and generosity. He was fond of solitude, and passed much of his time in a garden near his school. He died at an advanced age, of consumption. Of the tenets of Polemon little is said by the ancients, because he strictly adhered to the doctrine of Plato. The direction of the Academy devolved upon him after the death of Xenocrates. He is said to have taught that the world is God; but this was, doubtless, according to the Platonic system, which made the soul of the world an inferior divinity. (*Diog. Laert.*, 4, 16.—*Suid.*, s. v.—*Val. Max.*, 6, 9.—*Cic.*, *de Fin.*, 4, 6.—*Athenaus*, 2, p. 44.—*Stob.*, *Eclog. Phys.*, 1, 3.—*Enfield's Hist. of Philos.*, vol. 1, p. 247, seq.)—II. A son of Zeno of Apamea, made king of Pontus by Antony, after the latter had deposed Darius, son of Pharnaces. (*Appian, Bell. Civ.*, 5, 75.) This person, who had the art to ingratiate himself alike with Antony, Augustus, and Agrippa, was made king of that eastern part of Pontus, named Polemoniacus after him. He was killed in an expedition against some barbarians of Sindice, near the Pelus Mæotis; but his widow, Pythodoria, was reigning in his stead at the time that Strabo wrote his Geography. (*Strab.*, 556, 578.—*Dio Cass.*, 53, 25.—*Id.*, 54, 24.)—III. Son and successor of the preceding, was placed on the throne by Caligula, and had his dominions afterward enlarged by Claudius with a portion of Cilicia. Nero eventually converted Pontus into a Roman province. (*Suet.*, *Vit. Ner.*, 18.—*Crusius, ad loc.*)—IV. Antonius, a celebrated sophist and public speaker, in the second century of our era. He was a native of Laodicea on the Lycus, and of a consular family, and was held in high esteem by Trajan, Hadrian, and Antoninus Pius. Polemon spent the greater part of his life in Smyrna, where he opened a school of rhetoric, and was sent on several occasions as ambassador to Hadrian. He accumulated a large fortune by his oratorical talents, but made many enemies by his excessive haughtiness. He became a great sufferer by the gout, and at the age of fifty-six years, having become disgusted with life on account of the tortures to which his complaint subjected him, he returned to his native city, entered the tomb of his family, which he caused to be closed upon him, and there ended his existence. We have remaining of his works only two declamations or oratorical exercises, entitled "*Funeral Discourses*" (*Επιτάφιοι λόγοι*). They are discourses feigned to have been delivered in honour of those who fell at Marathon, by their own fathers. The Emperor Marcus Aurelius, in a letter to Fronto, describes him as a writer of ability, but less

pleasing than instructive. (*Front., Reliq.*, p. 50, ed. Niebuhr.) The little that we possess of the writings of Polemon neither authorizes us to adhere to this opinion nor to contradict it. It is true, however, that the two declamations which have reached us are written in a vigorous style, but are devoid of elegance. It was principally, too, for his strength and vehemence that the ancients held Polemon in esteem, and called him "*the Trumpet of Olympus*" (*Σάλπιγξ Ὀλυμπιακή*). St. Gregory Nazianzen studied and imitated him. The best edition of the two declamations of Polemon is that of Orellius, *Lips.*, 1819, 8vo. (*Schöll, Hist. Lit. Gr.*, vol. 4, p. 226, seq.)—V. Surnamed Periægates, lived during the reign of Ptolemy Epiphanes, about 200 B.C. He was a pupil of the Stoic Panætius, and wrote a "*History of Greece*" (*Ἀδύος Ἑλληνικός*) in eleven books, wherein he carefully observed chronology. This work is lost. Athenæus cites many other productions of Polemon, "*On the Acropolis of Athens*," "*On the Paintings to be seen at Sicily*" (Plutarch has borrowed from the latter an anecdote, which he gives in his *Life of Aratus*), "*On Inscriptions*," &c. Polemon appears also as a geographical writer. He composed a "*Description of the Earth*" (*Κοσμικὴ Περιήγησις*), whence he obtained the surname of *Periægates* (*Περιηγητής*). He wrote also a "*Description of Ilium*" (*Περιήγησις Ἰλίου*), and, under the title of *Krisis*, a work on the origin of the cities of Phocia, Pontus, &c. All these are lost. Strabo and the scholiasts cite another work of Polemon's, written against Eratosthenes, in which the latter was accused of never having seen Athens. (*Schöll, Hist. Lit. Gr.*, vol. 3, p. 223.—*Id. ib.*, vol. 3, p. 390.—*Id. ib.*, vol. 4, p. 53.)—VI. A writer on Physiognomy, supposed to be the same with the pupil of Xenocrates mentioned above (No. I.). He composed a "*Manual of Physiognomy*," entitled *Φυσιγνωμικόν*, or *Φυσιγνωμικὸν Ἐγχειρίδιον*. It was published by Peruscius at the end of his *Ælian, Rom.*, 1545, 4to, and is also contained in the collection of Franz, "*Scriptores Physiognomiae Veteres*," *Altenb.*, 1780, 8vo.

POLEMONIUM, a city of Asia Minor, on the coast of Pontus; situate, according to Pliny (6, 4), one hundred and twenty miles from Amisus. It derived its name from Polemon, the son of Zeno, its founder. This place is not mentioned by Strabo, and therefore was probably founded after his time; but it is noticed by Ptolemy; and in the Table Itinerary it is marked as a place of consequence. Mannert is inclined to think that Polemonium was built on the site of an earlier place called Side. The modern name is said to be *Vatisa* or *Fatsa*, which reminds us of the ancient fortress of Phatisane, that once stood about ten stadia to the west. (*Arrian, Periplus Mar. Eux.*, p. 17.—*Periplus Anon.*, p. 4.—*Mannert, Geogr.*, vol. 6, pt. 2, p. 439.)

POLIAS (Πολιάς), a surname of Minerva, as the protectress of cities. This name was particularly applied to her in Athens, and indicated the original Minerva of Athens, the Minerva who had contested the soil of Attica with Neptune, and had triumphed in the contest. She was, therefore, the original protectress of the Acropolis and the city; to her the embroidered Peplus at the festival of the Panathenæa was dedicated; it was to her temple that Orestes came as a suppliant from Delphi, when he fled from the Eumenides; before her statue burned the golden lamp, both night and day, which was fed with oil only once a year; the sacred serpent, the guardian of the Acropolis, dwelt here; here was the silver-footed throne, on which Xerxes sat when he viewed the battle of Salamis; and here, too, was the sword of Mardonius, the Persian general at Plataea.—The temple of Minerva Polias was under the same roof with the Erechtheum, the two forming an entire building, of which the eastern divi-

ion was consecrated to the worship of the goddess; and the western, including the northern and southern porticoes, was sacred to the deified daughter of Cecrops, the nymph Pandorus. On the same site had previously stood the temple of Erechtheus; and from this circumstance, as well as from the fact that his altar still remained, the entire building retained the name of the Erechtheum. Within the sacred enclosure were preserved the holiest objects of Athenian veneration, among which the most precious were the olive of Minerva and the fountain of Neptune, both of which sprung up at the bidding of those divinities, when there was contention among the gods concerning the guardianship of Athens. Here, too, was the oldest and most deeply-venerated of the statues of the Athenian goddess; a figure carved in olive-wood, but of which the legend affirmed that it had fallen from heaven. (*Wordsworth's Greece*, p. 144. — *Stuart's Antiquities of Athens*, p. 37, *Lond.*, 1837, 12mo.) Müller has written an interesting work on the Temple and Worship of Minerva Polias, under the following title: "*Minerva Poliadis Sacra et Edem in arce Athenarum illustravit C. O. Müller*," *Götting.*, 1820, 4to.

POLIOCRATES (Πολιοκράτης), "*the besieger of cities*," a surname given to Demetrius, son of Antigonus. (*Vid.* Demetrius I.)

POLITES, I. a son of Priam and Hecuba, killed by Pyrrhus in his father's presence. (*Virg.* *Æn.*, 2, 536.)—II. His son, who bore the same name, followed Æneas into Italy, and was one of the friends of young Ascanius. (*Virg.*, 5, 584.)

POLLA ARGENTARIA, the wife of the poet Lucan. (*Vid.* Lucanus.)

POLLENTIA, a town of Liguria, southeast of Alba Pompeia. It was a municipium, and is chiefly celebrated for its wool. (*Plin.*, 8, 48. — *Colum.*, 7, 2. — *Sil. Ital.*, 8, 599.) A battle was fought in its vicinity between Stilico and the Goths, the success of which appears to have been very doubtful. (*Oros.*, 7, 37.) But Claudian speaks of it as the greatest triumph of his hero. (*De Bell. Get.*, 605.) The modern village of *Polenza* stands near the site of the ancient city. (*Cramer's Anc. Italy*, vol. 1, p. 28.)

POLLIO, I. C. Asinius, a Roman consul in the time of Augustus, who, though of humble birth, was one of the most remarkable men and most distinguished patrons of literature during the age in which he lived; and when we consider the brilliant part which he acted as a military commander, politician, and man of letters, it is singular we have so few remains of his writings, and such brief records of his actions. Pollio was born in the 675th year of the city, and he had, consequently, reached the age of thirty before the liberties of his country were subverted. During the times of the republic, he so well performed the parts of a citizen and patriot, that in one of Cicero's letters he is classed with Cato for his love of liberty and virtue. But in pursuing this line of conduct he offended some of the partisans of Pompey, and was forced, as he afterward alleged, to espouse the part of Cæsar, in order to shield himself from their resentment. (*Cic.*, *Ep. ad Fam.*, 10, 31.) He became a favourite officer of Julius Cæsar, whom he served with inviolable fidelity, and ever entertained for him the most devoted attachment. A short while before the dictator's death, he was sent to Spain at the head of a considerable army, to crush the party which Sextus Pompey had recently formed in that province; but he was not very successful in his prosecution of this warfare. (*Dio Cass.*, 46.) After the assassination of Cæsar, he offered his army and services to the senate; and, in his letters to Cicero, made the strongest professions of love of liberty and zeal for the commonwealth, declaring that he would neither desert nor survive the republic. (*Cic.*, *Ep. ad Fam.*, 10, 33.) The hypocrisy of these

protestations was evinced almost as soon as the letters in which they were contained had reached the capital; for his old fellow-soldier, Antony, having retreated into Gaul after his defeat at Modena, Pollio joined him from Spain with all the troops he commanded. He farther contrived to disunite the fickle Plancus from his colleague Decimus Brutus, and to bring him over, with his army, to the enemies of the republic. By these measures he contributed more, perhaps, than any other of his contemporaries, to extinguish all hopes of the restoration of the commonwealth, and to throw the whole power of the state into the hands of the triumvirate. Having thus been chiefly instrumental in ruining the cause of liberty, that proud spirit of freedom or *ferocia*, as Tacitus calls it, which he afterward assumed, and the restoration of the *Ætrian liberties*, which stood on the Aventine Hill, must have been looked on as a farce by his fellow-citizens, and has been considered by posterity as little better than imposture. Pollio was present at the formation of the triumvirate which took place in a small island of the Reno, a stream that passes near Bologna. Amid other sacrifices of friends and relatives then made by the heads of political parties, Pollio gave up his own father-in-law to the resentment of his new associates. He is said, however, to have repressed by his authority many disorders of the times, and to have mitigated, so far as was in his power, the cruelty of the triumvirs. In the year 713, which was that of his first consulship, a quarrel having arisen between Augustus and Lucius Antonius, the brother of the triumvir, concerning the settlement of the veterans in the lands allotted them, Pollio occupied the north of Italy for the Antonian party. His spirit and valour had acquired him such reputation among the soldiery, that, while his friend Munatius Plancus, though of higher birth and rank, was deserted by his troops, Pollio was enabled to make head against Agrippa and Augustus with not less than seven legions, and to retain the whole of the Venetian territory in the interests of Antony. In order to subvert his forces, he laid heavy contributions on the towns, and exacted them with the utmost rigour. The Paduans, in particular, who had been always attached to the cause of liberty and the republic, smarted severely under his displeasure and avarice. He stripped their city of everything valuable, whether public or private, and proclaimed a reward to the slave who should discover the concealment of his master. The contest between Lucius Antonius and Augustus was followed by the treaty of Brundisium, by which a new division of the empire was made among the triumvirs; and, according to this distribution, the province of Dalmatia was included in the department of the empire allotted to Marc Antony. This rugged country, not yet completely subdued by the Romans, had been constantly in the view of Pollio while he commanded on the northeast coast of Italy. A massacre committed by the natives on a Roman colony formed a pretext for its invasion. With the consent of Antony, if not by his express orders, Pollio led the army, which he had now commanded for five years, to quell the insurrection. He quickly dispersed the tumultuary bodies of natives which had assembled to oppose him; took their capital, *Salona* (now *Spalatro*), and returned triumphant to Rome. This triumph closed his military and political career. The cause of Antony, which Pollio had supported both by his able conduct and the reputation of his name, had now sunk so low in Italy, that it could no longer be maintained against his rival with any regard to safety, interest, or character. He declined, however, to follow Augustus to the battle of Actium; and to the solicitations which were used with the view of inducing him actually to espouse his interests, Pollio is said to have replied, "*Mæ in Antonium majora merita sunt, illius in me beneficia notiora; itaque discrimine ves-*

tu me subtraham, at ero præda victoria." (*Vell. Pat.*, 2, 86.) From this period till his death (which happened at his Tusculan villa in 755 U.C., when he had reached the age of eighty) Pollio withdrew almost entirely from public affairs. He was naturally of a bold, assuming, and overbearing temper; he affected a stern predilection for the forms and manners of the ancient republic; and, having amassed an enormous fortune during the proscriptions, he never sought to ingratiate himself with Augustus. Accordingly, though he was respected and esteemed, he was not beloved by the emperor. During the contest with Lucius Antonius, several stinging epigrams were directed against him by Augustus. Pollio was well able to retort, but he did not choose, as he himself expressed it, "in eum scribere qui potest proscibere." (*Macrob., Saturn.*, 2, 4.) His neutrality during the war with Antony and Cleopatra, though permitted by Augustus, would little tend to conciliate his favour; and that prince saw around him so many able ministers who had uniformly supported his interests, that he had no occasion to require the assistance or counsel of Pollio. With the exception, therefore, of occasionally pleading in the Forum, Pollio devoted all his time to literary composition and the protection of literary men. No Roman of that period was more capable of enjoying retirement with dignity, or relishing it with taste. He possessed everything which could render his retreat delightful: an excellent education, distinguished talents, a knowledge of mankind, and a splendid fortune. To all the strength and solidity of understanding requisite to give him weight in the serious or important affairs of life, he united the most lively and agreeable vein of wit and pleasantry. His genius and acquirements enabled him likewise to shine in the noblest branches of polite literature: poetry, eloquence, and history, in which last department Seneca prefers his style to that of Livy. He had, no doubt, effectually improved the opportunities which the times afforded, of enriching himself at the cost of others; and no one had profited more by the forfeited estates during the period of the proscriptions; but it should not be forgotten, that whatever fortune he amassed was converted to the most laudable purposes: the formation of a public library, the collection of the most eminent productions of art, and the encouragement of learning and literary men. Pliny, in his *Natural History*, informs us, that Pollio was the first person who erected a public library at Rome. It was placed in the vicinity of the *Atrium Libertatis*, which he had constructed on the Aventine Hill; and the expense of the establishment was defrayed from the spoils of conquered enemies (7, 30; 35, 2). From the same author we have an account of his fine collection of statues by Praxiteles and other masters (34, 5), which he was extremely desirous should be publicly seen and commended. Among the labours of Praxiteles are mentioned a Silenus, an Apollo, a Neptune, and a Venus. The specimens of the works of other artists exhibited the Centaurs carrying off the Nymphs, by Archesitas; Jupiter, surnamed Hospitalis, by Pamphilus, a scholar of Praxiteles; a sitting Vesta; and, finally, Zethus, Amphion, and Dirce, fastened by a cord to the bull, all formed out of one stone, and brought from Rhodes by the direction of Pollio. Still more useful and praiseworthy was the patronage which he extended to men of genius. In youth, his character and conversational talents had rendered him a favourite with the master-spirits of Rome: Cæsar, Calvus, and Catullus, who shone in his earlier years; and in more advanced life, he in turn favoured and protected Virgil and Horace, whose eulogies are still the basis of his fame. Pollio commanded in the district where the farm of Virgil lay; and at the division of lands among the soldiery, was of service to him in procuring the restoration of his property. That distinguished poet composed his eclogues, it is said, by the advice of

Pollio; and in the fourth of the number he has beautifully testified his gratitude for the friendship and protection which had been extended to him. The odes of Horace show the familiarity which subsisted between the poet and his patron; the former ventures to give the latter advice concerning the history of the civil wars, on which he was then engaged; and to warn him of the danger to which he might be exposed by treating such a subject. Timagenes, the rhetorician and historian, spent his old age in the house of Pollio; though he had incurred the displeasure of Augustus by some bitter railery and sarcasms directed against the imperial family. But, while Pollio protected learned men, he seems to have been a severe, and, according to some, a capricious critic, on the writings both of his own contemporaries and of authors who had immediately preceded him. He was envious of the reputation of Cicero, and expressed himself with severity on the blemishes of his style (*Seneca, Suas.*, 6.—*Quint., Inst. Orat.*, 12, 1): he called in question the accuracy of the facts related in Cæsar's *Commentaries* (*Sueton., de Illust. Grammat.*); and he discovered provincial expressions in the noble history of Livy. (*Quint., Inst. Orat.*, 1, 5.) His jealous love of praise and spirit of competition led him to introduce one custom which probably proved injurious to poetry: the fashion of an author reading his productions at private meetings of the most learned and refined of his contemporaries. These recitations, as they were called, led to the desire of writing for the sake of effect, and were less calculated to improve the purity of taste than to engender ostentatious display. (*Dunlop's Roman Literature*, vol. 3, p. 48, seqq.)—II. Vedius. (*Vid. Pausilypus.*)

POLLUX, I. (in Greek Πολουδῆς) a son of Jupiter by Leda, the wife of Tyndarus. He was brother to Castor. (*Vid. Castor.*)—II. (or Πολυδῆς) Julius, a native of Naceratis, in Egypt, who flourished about 175 A.D., and died in the reign of the Emperor Commodus. He followed, it would seem, the profession of sophist at Athens, and acquired so much reputation there, that the Emperor Marcus Aurelius intrusted him with the education of his son; but the instructions of the preceptor were unable to correct the vicious propensities of the pupil. It has been supposed that Lucian intended to ridicule Pollux in his *Lexiphanes* and *Rhetorum Præceptor* (Περὶ τῶν ῥητορικῶν διδασκαλίας), but Hemsterhusius has undertaken to disprove this, in the preface to his edition of the *Onomasticon*. The strongest argument adduced by him against this supposition, which rests on the testimony of one of the scholiasts, is that such a satire would be unjust. The principal work of Pollux, and the only one that remains to us, is entitled Ὀνομαστικόν ("Onomasticon"). The following is the explanation which Hemsterhusius gives of this title. "*Onomasticorum minus est commoda rebus nomina imponere, et docere quibus verbis ubi quædam et florentie elegantia rem unam designare possumus: non enim in Onomasticis unquam proprio quodam loco de vocum difficultatibus interpretatione agebatur, sed quo pacto propriis res quævis et pluribus insigniri posset verbis.*"—Pollux does not, like other lexicographers, follow the alphabetical arrangement; he has divided his work into nine books, according to the matters of which he treats, or, rather, he has united nine separate works under the general title of "Onomasticon." These nine productions would seem to have been published originally in a separate and consecutive order, from the circumstance of their each having a preface or dedication, addressed to the Emperor Commodus. The subjects of the nine books are as follows: 1. Of Gods, Kings, Swiftmess and Slowness, Dyeing, Commerce and the Mechanic Arts, Fertility and Sterility, Seasons, Houses, Ships, things relating to War, Horses, Agriculture, the component parts of a Plough, those of

a Chariot, Bee.—2. Of the Age of Men; of what precedes and follows Birth; of the Members of the Human Frame; of the External and Internal Parts of the Body.

—3. Of the various relations between the Members of a Family or a City; of Friends, Country, Love; of the Relation between Master and Slave; of Metals, Travels, Roads; of Gayety and Sadness; of Happiness; of Rivers; of the Avaricious, the Industrious, and the Idle; of Buying and Selling, &c.—4. Of the Sciences.

—5. Of the Chase, Animals, &c.—6. Of Repasts; of various Crimes, &c.—7. Of various Arts and Trades.

—8. Of Justice, and the public Administration of it.

—9. Of Cities, Edifices, Games, &c.—10. Of Vases, Utensils, &c.—The value of the work, for acquiring

not only a knowledge of Greek terms, but also of antiquities, is conceded by all. The interest, moreover, is considerably increased by the citations from authors whose works are lost. Julius Pollux composed many other works that have not come down to us, such as *Dissertations* (*Διαλέξεις*) and *Declamations* (*Μελέται*); and among these are mentioned a discourse pronounced on the occasion of the marriage of Commodus, an eulogy on Rome, and an accusation of Socrates.

The best edition of the *Onomasticon* is that of Hemsterhusius, *Amst.*, 1706, fol. There is a later one by W. Dindorf, *Lips.*, 1824, 5 vols., in 6 parts, containing the notes of former editors.—III. An ecclesiastical writer in the ninth century, not to be confounded with the author of the *Onomasticon*. He compiled a chronology, which commences with the creation. The author calls it *Ἱστορία φυσική* ("a physical history"), because his work enlarges greatly respecting the creation of the world. It is rather, however, an ecclesiastical than a political history. The best edition is that of Hardt, *Monach.*, 1792, 8vo. Hardt supposed that this work was just newly discovered; but the Abbé Morelli has proved that this is the same work with that entitled *Historia Sacra ab orbe condito ad Valentianum et Valentem Imp.*, a Biancono, *Bonon.*, 1779, fol.

POLYÆNUS, I. a native of Lampascus, and one of the friends of Epicurus. He had attended previously to mathematical studies. (*Cic. de Fin.*, 1, 6.)—II. A native of Sardis, a sophist in the time of Julius Cæsar, and who is thought to have taken his prænomen (Julius) from the family that protected him. We have four epigrams by him remaining.—III. A native of Macedonia, a rhetorician or advocate, who flourished about the middle of the second century of our era. He published a work entitled *Στρατηγηματικά* ("Military Stratagems"), in eight books, of which the sixth and seventh are imperfect. This work, addressed to Marcus Aurelius and Lucius Verus, during their campaign against the Parthians, is of little value to military men, but not without interest in an historical point of view. It is well written, though rather affected, and too much loaded with ornament. Polyænus has been justly censured for admitting into his list of stratagems instances of treachery and perfidy unworthy of warriors, and undeserving of being regarded as *russe de guerre*. He is inexcusable on another point: he mutilates and distorts facts; he wishes to convert every military operation into a stratagem, particularly those of Alexander, a prince who contended openly with his foes, and detested stratagems of every kind. The most useful edition of Polyænus is that of Mursinna, *Berol.*, 1756, 12mo. A more correct text than the former is given by Coray in the *Parerga Bibl. Hell.*, Paris, 1809, 8vo, forming the first volume of this collection. A critical edition, however, is still a desideratum. (*Schöll, Hist. Lit. Gr.*, vol. 5, p. 268, seqq.)—IV. A native of Athens, an historical writer. (*Euseb., Chron.*, 1, p. 25.)

POLYBIUS, an eminent Greek historian, born at Megalopolis, in Arcadia, about B.C. 203. His father Lycortas was prætor of the Achaean republic and the friend of Philopomen, and under the latter Polybius learned the art of war, while he received from his own fa-

ther the lessons of civil and political wisdom. He played a distinguished part in the history of his country as ambassador to the Roman generals, and as a commander of the Achaean cavalry. At the age of about 15 years he was selected by his father to join an embassy to Egypt, which, however, was not sent. At the age of 40 years he was carried as a hostage to Rome, and continued there for the space of 17 years. He became the friend, the adviser, and the companion in arms of the younger Scipio. In order to collect materials for his great historical work, which he now projected, he travelled into Gaul, Spain, and even traversed a part of the Atlantic. Scipio gave him access to the registers or records known by the name of *libri censuales*, which were preserved in the temple of Jupiter Capitolinus, as well as to other historic monuments. On his return to Greece, after the decree of the senate which granted the Achaean hostages permission to return to their homes, he proved of great service to his countrymen, and endeavoured, though fruitlessly, to dissuade them from a war with the Romans. The war broke out when he was in Africa, whither he had accompanied Scipio, and with whom he was present at the taking of Carthage. He hastened home, but appears to have arrived only after the fall of Corinth. Greece having been reduced under the Roman power, he traversed the Peloponnesus as commissary, and by his mild and obliging deportment won the affections of all. Some years after he travelled into Egypt; in the year of Rome 620, he accompanied Scipio into Spain, and finally he returned to Achaia, where he died at the advanced age of about 82 years, of a fall from his horse.—Polybius gave to the world various historical writings, which are entirely lost, with the exception of his *General History* (*Ἱστορία καθολική*), in forty books. It embraced a period of 53 years, from the commencement of the second Punic war (A.U.C. 555) to the reduction of Macedonia into a Roman province (A.U.C. 587). Thirty-eight books were devoted to the events of this period; while two others precede them, and serve as an introduction to the work. In these last the historian runs rapidly over the interval which had elapsed between the taking of Rome by the Gauls and the first descent of the Romans on Sicily, and after this enumerates what had occurred up to the commencement of the second Punic war. His object was to prove that the Romans did not owe their greatness to a mere blind fatality; he wished it to be made known by what steps, and by favour of what events, they had become masters, in so short a time, of so extensive an empire. (*Lucas, Ueber Polybius Darstellung des Ätolischen Bundes, Königsb.*, 1827, p. 6, seqq.) His history is of a general nature, because he does not confine himself merely to those events which related to the Romans, but embraces, at the same time, whatever had passed during that period among every nation of the world. Of the 40 books which it originally comprehended, time has spared only the first five entire. Of the rest, as far as the 17th, we have merely fragments, though of considerable size. Of the remaining books we have nothing left except what is found in two meagre abridgments which the Emperor Constantine Porphyrogenitus, in the tenth century, caused to be made of the whole work. The one of these is entitled "Embassies," or the history of treaties of peace; the other is styled "Virtues and Vices." Among the fragments that remain of Polybius are from the 17th to the 40th chapters of the sixth book, inclusive, which treat of the Roman art of war, and have often been published separately under this title. That part of the history which is lost embraced a narrative of those events of which the historian was himself an eyewitness; an irreparable loss for us, though Livy made frequent use of it. The history of Polybius possesses, in one respect, a peculiar character, distinguishing it from the works of all the historians who had preceded him.

Not content with relating events in the order in which they had occurred, he goes back to the causes which produced them; he unfolds their attendant circumstances, and the consequences they have brought with them. He judges the actions of men, and paints the characters of the principal actors. In a word, he forms the judgment of the reader, and causes him to indulge in reflections which ought to prepare him for the administration of public affairs (*πράγματα*). Hence the title of his history, *ἱστορία πραγμάτων*. Never has a history been written by a man of more good sense, of more perspicacity, or of a sounder judgment, and one more free from all manner of prejudice. Few writers have united in a greater degree a knowledge of military and political affairs; no one has carried farther a rigid impartiality, and a respect for virtue. Cicero gives an animated character of this history in his treatise *De Oratore* (2, 15.—Compare the remarks of Ast, *Grundriss der Philologie*, p. 202).—The style of Polybius is not free from faults. The period when the Attic dialect was spoken in all its purity had long passed away, and he wrote in the new dialect which had arisen after the death of Alexander. A long residence also out of his native country, and sometimes among barbarian nations, had rendered him, in some little degree, a stranger to his mother-tongue. Though his diction is always noble, yet he occasionally mingles with it foreign terms, and even Latinisms. We find in him, too, phrases borrowed from the school of Alexandrian, and passages taken from the poets; he loves, also, occasional digressions; but, whenever he indulges in these, they are always instructive.—“In Polybius,” says Müller, “we find neither the art of Herodotus, nor the strength of Thucydides, nor the conciseness of Xenophon, who says all in a few words: Polybius is a statesman full of his subject, who, caring little for the approbation of literary men, writes for statesmen; reason is his distinctive character.” (*Allgemeine Geschichte*, 6, 2).—Dionysius of Halicarnassus (*De Comp. Verb.*, c. 4) remarks, that no man of taste can endure to read the work of Polybius to the end. It is strange that he did not take into consideration the highly attractive nature of the events, and the spirit with which they are narrated.—Besides his general history, Polybius wrote “Memoirs of the Life of Philipomen” (lib. 16, *Exc. Peiræc.*, p. 28), a work on “Tactics” (lib. 9, *Exc.*, c. 20), and a letter “on the situation of Laconia,” addressed to Zeno of Rhodes (lib. 16, *Exc.*). From a passage of Cicero, moreover (*Ep. ad Fam.*, 5, 12), it would appear that Polybius had written a detached “History of the Numantine war.” It is probable that his visit to Spain, during the second consulship of Scipio, gave him the idea of this last-mentioned work, and furnished him with the materials.—Plutarch relates that Marcus Brutus, the assassin of Cæsar, made an abridgment of the history of Polybius, and that he was occupied with this in his tent on the evening preceding the battle of Philippi. Casaubon is hence led to infer that the abridgment or epitome which we possess, from the 7th to the 17th books, may be the work of Brutus; but this abridgment is made with so little judgment that we cannot properly ascribe it to that distinguished Roman.—The best edition of Polybius is that of Schweighæuser, *Lips.*, 1789–95, 9 vols. 8vo. Orellius published in 1816, from the Leipzig press, the commentary of Aeneas Tacticus, in one volume 8vo, as a supplement to this edition. The *Excerpta Vaticana* of Polybius, which Mai first made known in his “*Scriptorum Veterum nova Collectio*” (vol. 2, *Rom.*, 1827, 4to, p. 369–404), were afterward published anew, under the title of “*Polybii Historiarum Excerpta Vaticana*,” by Geel, *Lugd. Bat.*, 1829, 8vo; and “*Polybii et Appiani Historiarum Excerpta Vaticana*,” by Lucht, *Altonæ*, 1830, 8vo. (*Schöll, Griech. Litt.*, vol. 2, p. 136, seqq.—*Id. ib.*, vol. 2, p. 608.)

POLYBUS, a king of Corinth, and the adoptive father of Oedipus. (*Vid. Oedipus*.) He was succeeded by Adrastus, who had fled to Corinth for protection (*Pausan.*, 2, 6.)

POLYCARPUS, a father and martyr of the church, born probably at Smyrna during the reign of Nero. He was a disciple of the Apostle John, and was by him appointed bishop of that city; and he is thought to be the angel of the church of Smyrna, to whom the epistle in the second chapter of Revelations is addressed. Ignatius also esteemed Polycarp highly, who, when the former was condemned to die, comforted and encouraged him in his sufferings. On the event of a controversy between the Eastern and Western churches, respecting the proper time for celebrating Easter, Polycarp undertook a journey, to Rome to confer with Anicetus; but, though nothing satisfactory took place on that affair, he violently while at Rome, opposed the heresies of Marcion and Valentinus, and converted many of their followers. During the persecution of the Christians under Marcus Aurelius, Polycarp suffered martyrdom with the most heroic fortitude, A.D. 169. When he was going to the flames, the proconsul offered him his life if he would blaspheme Christ, to which the venerable prelate answered, “*Eighty and six years have I served him, and he has ever treated me with kindness; how, then, can I blaspheme him?*” His “*Epistles to the Philippians*,” the only one of his pieces which has been preserved, is contained in Archbishop Wake’s “*Genuine Epistles*.” The best edition of the original is that by Aldrich, *Oxon.*, 8vo, 1708. Another edition appeared from the same press, by Smith, 1709, 4to.

POLYCLETUS, I. a celebrated sculptor and statuary, who flourished about 430 B.C. Pausanias (8, 6) calls him an Argive; but Pliny (34, 8, 19) introduces his name with the epithet of “*Sicyonian*.” In order to reconcile these two conflicting authorities, it has been conjectured that the artist was descended from Sicyonian parents, and was born at Sicyon, but was afterward presented by the Argives with the freedom of their city. Another supposition is, that, when a young man, he went to Argos, in order to avail himself of the instructions of the celebrated Ageladas, that he remained there, and having thus made Argos, as it were, his second native city, styled himself on his productions, not a *Sicyonian*, but an *Argive*. (*Sillig, Dict. Art.*, p. 108).—Polycletus may be said to have perfected that which his predecessor, Phidias, had invented. He did not possess the grandeur of imagination which characterized this great artist, nor did he even attempt, like him, to create the images of the most powerful deities. It seems, indeed, that he excelled less in representing the robust and manly graces of the human frame, than in the sweet, tender, and unconscious loveliness of childhood. In his works, however, he manifested an equal aspiration after ideal beauty with Phidias. He seems to have laboured to render his statues perfect in their kind, by the most scrupulous care in the finishing. Hence he is said to have observed, that “the work becomes most difficult when it comes to the nail.” He framed a statue of a life-guardsmen (*Δορυφόρος, Doryphoros*), so marvelously exact in its proportions, and so exquisite in its symmetry, that it was called “*the Rule*” (*Κανών*), and became the model whence artists derived their canons of criticism which determined the correctness of a work. (*Plin.*, l. c.—*Cic.*, *Brut.*, 86.—*Lucian, de Saltat.*, 75.) He executed also a statue of a youth binding a fillet (*Διαδουμένης, Diadumenus*), of so perfect a beauty that it was valued at the high price of a hundred talents. Another of his celebrated works represented two boys playing at dice, which was regarded with the highest admiration in after days at Rome, where it was in the possession of the Emperor Titus. Polycletus is said to have carried alto-reliefs,

which Phidias invented, to perfection. He discovered the art of balancing of figures on one leg; and is said to have been so partial to this mode of representing the human form, that he almost invariably adopted it in his statues. He is accused by Varro of too great uniformity in his figures, and the constant repetition of the same idea. Nothing could exceed the exactness of symmetry with which he framed his statues; but it seems that they were destitute of passion, sentiment, and expression. It is singular that, notwithstanding the refinement, the extreme polish, and exactness of finishing with which his works were in general elaborated, he represented the hair in knots, after the fashion of the ancient sculptors. These defects, however, seem to have derogated but little from his fame, either in his own age or in after times. (*Encycl. Metropol.*, div. 2, vol. 1, p. 400, seq.)—Polyclitus used, in many of his works, the brass of Ægina. (*Plin.*, 34, 2, 5.) His highest glory, perhaps, was obtained from a statue made of ivory and gold, and dedicated in the Heraeum by the citizens of Argos and Mycenæ. The estimation in which this work was held is evident from Strabo (561). The production itself is described in Pausanias (2, 17, 4), whose remarks are admirably illustrated by Böttiger (*Andeut.*, 123).—Like other statues of the same age, Polycletus was also distinguished as an architect, and erected a theatre, with a dome, at Epidaurus, on a piece of ground consecrated to Æsculapius. This building Pausanias pronounces to be superior, in respect of symmetry and elegance, to every other theatre, not excepting even those at Rome. All ancient writers bestow the highest praises on Polycletus. Cicero pronounces his works absolutely perfect. (*Brut.*, 18.) Quintilian mentions his diligence and the gracefulness of his productions, but intimates that they were deficient in majestic dignity. (*Quint.*, 12, 10.) Dionysius of Halicarnassus says of his works, conjointly with those of Phidias, that they were esteemed *κατὰ τὸ σεμνὸν καὶ μεγαλότερον καὶ ἀειμαρτύρον* (*de Isocr.*, p. 95, *ed. Sylb.*). The breasts of his statues were particularly admired. (*Auct. ad Herenn.*, 4, 6.) We find also, in other writers, several narratives illustrative of his skill, and his accurate judgment of the arts. Consult, in particular, Plutarch (*Symp.*, 2, 3) and Ælian (*V. H.*, 14, 8, 16). He wrote also a treatise on the *Symmetry of the Members of the Human Body*, of which Galen makes mention. (*Περὶ τῶν καθ' ἑνὸς μέρους καὶ πλάτ.*, 4, 3, vol. 5, p. 449, *ed. Kuhn*.—*Sillig, Dict. Art.*, p. 104.)—II. A statuary, a native of Argos, who flourished a little before Olymp. 100. He executed, among other works, a figure of Hecate at Argos, the Amyclee Venus, and a statue of Alcibiades. (*Pausan.*, 2, 22.—*Dio Chrysost.*, *Orat.*, 37, vol. 2, p. 123, *ed. Reiske*.—*Sillig, Dict. Art.*, p. 104.)

POLYCRATES, I. a tyrant of Samos, who raised himself to the chief power, from the condition of a private person, by his abilities alone, about 566 B.C. His history is narrated at length by Herodotus. He shared, at first, the government of his country with his two brothers Pantaleon and Syloson; but subsequently he caused the former to be put to death, and expelled the latter; after which he reigned with undivided authority. His successes were great and rapid, and he acquired a power which made him dreaded equally by his subjects and neighbours; and his alliance was courted by some of the most powerful sovereigns of that period. He conquered the Lesbians and other islanders, and had a fleet of 100 ships, a navy superior to that of any one state recorded at so early a date. (*Herod.*, 3, 39.—*Thucyd.*, 1, 13.—*Strab.*, 637.) The Samians attempted to revolt from him; but, though they were assisted in the undertaking by the Lacedæmonians, they failed of success, and many were driven into exile. (*Herod.*, 3, 44, seqq.) The Spartans landed in the island with a large force, and besieged the

principal city with vigour, but they were finally forced to abandon the enterprise, after the lapse of forty days. (*Herod.*, 3, 54, seqq.) The Samian exiles then retired to Crete, where they founded Cydonia.—Polycrates was remarkable for the good fortune which, for a long period, constantly attended him. So extraordinary, in fact, was the prosperity which he enjoyed, that Amasis, king of Egypt, his friend and ally, advised him by letter to break the course of it, by depriving himself of some one of his most valuable possessions. This advice was in accordance with the heathen belief, that a long career of uninterrupted felicity was sure to terminate in the greatest misery. Polycrates, having resolved to follow the counsels of Amasis, selected an emerald ring which he was accustomed to use as a signet, and which he regarded as his rarest treasure; he then embarked on board a galley, and, when he had reached the open sea, consigned this ring to the waves. Strange to relate, about five or six days afterward, while Polycrates was still grieving for the loss of the costly jewel, a fisherman brought to his palace, as a present for the monarch, a very large fish which he had caught, and, on opening it, the ring was found in its belly! Polycrates wrote word of this to Amasis, who immediately broke off the alliance with him, through fear of sharing the evil fortune with which he was certain that the tyrant of Samos would ultimately be visited. (*Herod.*, 3, 40, seqq.) The prediction of Amasis was at last fully verified. Polycrates fell a victim to the cruel and artful designs of the Persian satrap Orontes, who lured him on by the temptation of immense wealth; and, having induced him to come to Magnesia, on the river Mæander, and thus got him into his power, nailed him to a cross. (*Herod.*, 3, 120, seqq.) Herodotus alleges two reasons for this conduct on the part of Orontes; one, that he was led to the step by the reproaches of an acquaintance, the governor of Dascylium, who upbraided him for not having added Samos to the Persian dominions, when it lay so near, and had been seized by a private citizen (Polycrates), with the help of but fifteen armed men; the other, that a messenger from Orontes had been disrespectfully treated by Polycrates. The daughter of Polycrates had dissuaded her father from going to Orontes, on account of ill-omened dreams with which she had been visited, but her advice was disregarded. She dreamed, for example, that she saw her father aloft in the air, washed by Jupiter and anointed by the sun. The circumstance of her father's being suspended on a cross fulfilled the vision. He was washed by Jupiter, that is, by the rain, and anointed by the sun, "which extracted," says Herodotus, "the moisture from his body." (*Herod.*, 3, 125.)—Polycrates, though tainted by many vices, knew how to estimate and reward merit. He cultivated a friendship with Anacreon, and retained the physician Democedes at his court. Pythagoras was also his contemporary; but, unable to witness, as it is said, the dependence of his country, he quitted Samos, in order to cultivate science in foreign countries. (*Herod.*, 3, 121.—*Id.*, 3, 131.—*Strab.*, 638.)—II. An Athenian rhetorician and sophist, who wrote an encomium on Bœsiris, and another on Clytemnestra. His object in selecting these as the subjects of his imaginary declamations appears to have been to attract public notice. (*Quintil.*, 2, 17.) He wrote also an Oration against Socrates; not the one, however, which his accuser uttered against that philosopher, but a mere exercise of his skill. It was composed, too, after the death of Socrates. Isocrates criticises both the eulogium on Bœsiris and the speech against Socrates, in his treatise entitled also *Bœsiris*. (*Isocr.*, *Bœsir.*, 2.—*Argument. incert. auct. ad Isocr.*, *Bœsir.*—*Ælian, Var. Hist.*, 11, 10.—*Perizon. ad El.*, l. c.—*Athenæus*, 8, p. 335, a.)

POLYDAMAS, I. a Trojan, son of Antenor by The-

ane, the sister of Hecuba. He married Lycaste, a natural daughter of Priam. According to Dares, Polydamas, in conjunction with Antenor and Æneas, betrayed Troy to the Greeks. (*Dar., Phryg.*, 39, *seqq.*)—II. A son of Panthous, and born the same night as Hector. He was distinguished for wisdom and valour. Dictys of Crete makes him to have been slain by Ajax. Homer, however, is silent about the manner of his death. (*Dict. Crét.*, 2, 7.—*Hom., Il.*, 11, 57.—*Id. ib.*, 14, 458, &c.)—III. A celebrated athlete of Scotusæ, remarkable for his great size and strength of body, in both of which respects he is said to have surpassed all the men of his time. He was conquered, indeed, according to one account, by Promachus of Pallene, at the Olympic games, but this was denied by his countrymen the Theolians. (*Pausan.*, 6, 5.—*Id.*, 7, 27.) He is said to have killed lions with his hands, tearing them in pieces like so many lambs. (*Diod. Sic., fragm.*, 18, p. 640, *ed. Wess.*) Pausanias, however, merely says that he met a lion on one occasion, and, though unarmed, destroyed it in emulation of Hercules (6, 5). At another time he seized the largest and fiercest bull in a herd, and held it so firmly by one of its hind legs, that the animal, after many efforts, only managed to escape at length with the loss of its hoof. He could also hold back a chariot, when advancing at full speed, so firmly with one hand, that the charioteer could not urge it onward in the least by the most vigorous application of the lash to his steeds. The fame of his exploits obtained for him an invitation to the court of Artaxerxes, where he slew three of the royal body-guard, called the immortals, who attacked him at once. He lost his life by an act of foolhardiness; for, having one day entered a cave along with some friends for the purpose of carousing in this cool retreat, the roof of the cave became rent on a sudden, and was on the point of falling. The rest of the party fled; but Polydamas, endeavouring to support with his arms the falling mass, was crushed beneath it. A statue was erected to him at Olympia, on the pedestal of which was inscribed a narrative of his exploits. (*Pausan.*, 6, 5.) Lucian says, that the touch of this statue was believed to cure fevers. (*Deor. Concl.*, 12.)

POLYDORUS, king of the island of Seriphus when Danaë and her son Perseus were wafted thither. (*Vid. Danaë, and Perseus.*)

POLYDORUS, I. a son of Cadmus and Harmonia. He succeeded his father on the throne of Thebes, and married Nycteis, daughter of Nycteus, by whom he became the father of Labdacus. (*Apollod.*, 3, 4, 2.—*Id.*, 3, 5, 4.—Consult *Heyne, ad loc.*)—II. A son of Priam and Hecuba, treacherously put to death by Polymnestor, king of Thrace, to whose care his father had consigned him, on account of his early years, towards the close of the Trojan war. (*Vid. Polymnestor.*) According to the legend followed by Euripides, in his play of the "Hecuba," the body of the young Trojan prince was thrown into the sea, and, having been washed up by the waves on the beach, was there found by Hecuba, then a prisoner to the Greeks. Virgil, however, following a different version of the fable, makes him to have been transfixed by many spears, and these spears to have grown into trees over his corpse. When Æneas visited the Thracian coast, and was preparing to offer a sacrifice in this spot, he endeavoured to pull up some of these trees, in order to procure boughs for shading the altar. From the root of the first tree thus plucked from the earth, drops of blood issued. The same thing happened when another was pulled up; until at last the voice of Polydorus was heard from the ground, entreating Æneas to forbear. Funeral rites were thereupon prepared for him, and a tomb erected to his memory. (*Æn.*, 3, 19, *seqq.*)

POLYNOTUS, one of the most distinguished painters

of antiquity. He was a native of Thasos, but obtained the right of citizenship at Athens; and hence Theophrastus calls him an Athenian (*ap. Plin.*, 7, 56). The period when he flourished has been made a matter of dispute. Pliny observes, that he lived before the 80th Olympiad; some modern philologists, however, conjecture that the period of his fame was about Olymp. 80. (*Jen. Lit. Journ.*, 1805, vol. 3, p. 34.)—As Polygnotus was born at Thasos, and was there instructed by his father Aglaophon, it seems necessary to inquire at what period he removed to Athens; and no time can be fixed on with greater probability than that in which Cimon returned to Athens, after bringing Thasos under the dominion of his countrymen. (*Müller, Nunt. Liter. Götting.*, 1824, *scid.* 115.) It is a very consistent supposition, that Polygnotus accompanied Cimon on his return; and there existed a powerful reason for Cimon to solicit the artist to remove with him to Athens, that he might have his assistance, namely, in embellishing with paintings those public buildings which he had either begun to erect or had in contemplation. Among the most important of these buildings was the temple of Theseus, still existing, reared on the ashes of the ancient hero, which were brought by Cimon from Scyros. This last circumstance took place B.C. 469; and it is highly probable that in the following year the temple itself was commenced. All these particulars concur to support the opinion that Polygnotus flourished about Olymp. 80.—This distinguished painter seems to have contributed more largely to the advancement of his art than all who had preceded him. Before his time, the countenance was represented as destitute of animation and fire, and a kind of leaden dulness pervaded its features. His triumph it was to kindle up expression in the face, and to throw feeling and intellect into the whole frame. He was the Prometheus of painting. He also first represented the mouth open, so that the teeth were displayed, and occasion was given to use that part of the visage in the expression of peculiar emotions. He first clothed his figures in light, airy, and transparent draperies, which he elegantly threw about the forms of his women. He was, in short, the author of both delicacy and expression in the paintings of Greece: but his style is said to have been hard, and his colouring not equal to his design.—His great works consisted of those with which he adorned the Pæcile (*Παύλιον Στάδιον*) at Athens. The decoration of this building was, on the part of Polygnotus, gratuitous (*Plut., Vit. Cim.*, 4); whereas Mycon, a contemporary artist, who was employed in adorning another part of the same building, received a liberal compensation for the exertions of his genius. Polygnotus, however, was not without his reward. The Amphictyonic council offered him a public expression of thanks for having also gratuitously embellished the temple at Delphi, and decreed that, whenever he should travel, he was to be entertained at the public expense. One of his pictures was preserved at Rome, representing a man on a scaling-ladder, with a target in his hand, so contrived that it was impossible to tell whether he was going upward or descending.—Polygnotus and Mycon were the first who used, in painting, the kind of ochre termed Athenian "oil." (*Plin.*, 33, 12, 56.) The former likewise made a kind of ink from the husks of grapes, styled "strygion" (*Plin.*, 35, 6, 36); and he left behind him some paintings in enamel. (*Plin.*, 35, 11, 36.) Cicero mentions him among those who executed paintings with only four colours (*Cic., Brut.*, 18); and Quintilian observes, that his productions were very highly esteemed even in later periods. (*Quintil.*, 12, 10.) Aristotle calls him *παράειρος ἄνθρωπος* (*Polit.*, 8, 5); and he elsewhere contrasts the three artists, Polygnotus, Pæon, and Dionysius, in that the paintings of the first were more favourable than nature, those of the

second more unfavourable, and those of the last exact representations. (*Arist., Poët.*, 2, 2.) Pliny states, that Polygnotus likewise gave attention to statuary. (*Plin.*, 34, 8, 18.—*Sillig., Dict. Art.*, s. v.)

POLYHYNIA and POLYMNIA, one of the Muses, daughter of Jupiter and Mnemosyne, who presided over singing and rhetoric, and was deemed the inventress of harmony. She was represented veiled in white, holding a sceptre in her left hand, and with her right raised up, as if ready to harrangue. Ausonius describes her attributes in the following line, "*Signat cuncta manus, loquitur Polyhymnia gestu.*" (*Idyll.*, ult.) The etymology of the name is disputed. According to the common acceptation of the term, it comes from πολύς, "*much*," and ὕμνος, "*a song*" or "*hymn*," and indicates one who is much given to singing. Some, however, deduce it from πολύς and μνήμη, "*memory*," and therefore write the name *Polymnēia*, making her the Muse that watches over the remembrance of things and the establishment of truth. Hence Virgil remarks, "*Nam verum fateamur: amat Polymnēia verum.*" (*Ciris*, 55.—Consult *Heyne*, ad loc. in *Var. Lect.*)

POLYMNESOR or POLYMNESOR, a king of the Thracian Chersonese, who married Ilione, one of the daughters of Priam. When Troy was besieged by the Greeks, Priam sent his youngest son Polydorus, with a large amount of treasure, to the court of Polymnesor, and consigned him to the care of that monarch. His object in doing this was to guard the young prince against the contingencies of war, and, at the same time, to provide resources for the surviving members of his family, in case Troy should fall. As long as the city withstood the attacks of its foes, Polymnesor remained faithful to his charge. But when the tidings reached him of the death of Priam and the destruction of Troy, he murdered Polydorus, and seized upon the treasure. A very short time after this, the Grecian fleet touched at the Chersonese on its return home, bearing with it the Trojan captives, in the number of whom was Hecuba, the mother of Polydorus. Here one of the female Trojans discovered the corpse of the young prince amid the waves on the shore, Polymnesor having thrown it into the sea. The dreadful intelligence was immediately communicated to Hecuba, who, calling to mind the fearful dreams which had visited her during the previous night, immediately concluded that Polymnesor was the murderer. Resolving to avenge the death of her son, and having obtained from Agamemnon a promise that he would not interfere, she enticed Polymnesor within, under a promise of showing him where some treasures were hid, and then, with the aid of the other female captives, she deprived him of sight, having first murdered before his eyes his two sons who had accompanied him. (*Eurip.*, *Hec.*)—Hyginus gives a different version of the legend. According to this writer, when Polydorus was sent to Thrace, his sister Ilione, apprehensive of her husband's cruelty, changed him for her son Diphilus, who was of the same age, so that Polydorus passed for her son, and Diphilus for her brother, the monarch being altogether unacquainted with the imposition. After the destruction of Troy, the conquerors, who wished the house and family of Priam to be extirpated, offered Electra, the daughter of Agamemnon, in marriage to Polymnesor, if he would destroy Ilione and Polydorus. The monarch accepted the offer, and immediately murdered his own son Diphilus, whom he had been taught to regard as Polydorus. Polydorus, who passed as the son of Polymnesor, consulted the oracle after the murder of Diphilus; and when he was informed that his father was dead, his mother a captive in the hands of the Greeks, and his country in ruins, he communicated the answer of the god to Ilione, whom he had always regarded as his parent. Ilione told him the measures she had pursued to save his life, and upon this he avenged the perfidy of Pol-

ymnesor by putting out his eyes. (*Hygin.*, *fab.*, 109.)

POLYNICES, a son of Œdipus, king of Thebes, by Jocasta. He inherited his father's throne with his brother Eteocles, and it was agreed between the two brothers that they should reign each a year alternately. Eteocles first ascended the throne by right of seniority; but, when the year was expired, he refused to resign the crown to his brother. Polynices thereupon fled to Argos, where he married Argia, the daughter of Adrastus, king of the land. Adrastus levied a large army to enforce the claims of his son-in-law to the throne, and laid siege to the city of Thebes. The command of the army was divided among seven chieftains, who were to attack each one of the seven gates of the city. All the Argive leaders, with the exception of Adrastus, were slain, and the war ended by a single combat between Eteocles and Polynices, in which both brothers fell. (*Vid.* Eteocles.)

POLYPHEMUS, a son of Neptune, and one of the Cyclopes in Sicily. He is represented as of monstrous size, with but one eye, and that in the centre of his forehead, and as leading a pastoral life. According to the Homeric fable, Ulysses, on his return from Troy, was thrown upon that part of the coast of Sicily which was inhabited by the Cyclopes; and having, with twelve of his companions, entered the cave of Polyphemus during his absence, they were found therein by him on his return, and were kept immured for the purpose of being devoured. Four of the companions of the Grecian chief fell a prey to the voracity of the monster; and Ulysses would probably have shared the same fate, had he not adopted the following expedient. Having intoxicated the Cyclops, he availed himself of his state of insensibility to deprive him of sight, by means of a large stake which had been discovered in the cave, and which, after having sharpened it to a point and heated it in the fire, he plunged into his eye. Polyphemus roared so loudly with pain that he roused the other Cyclopes from their mountain retreats. On inquiring the cause of his tuteries, they were told by Polyphemus that *No man* (Ὀδύς), the name which Ulysses had applied to himself, had inflicted the calamity, whereupon they retired to their dens, recommending him to supplicate his father Neptune for aid, since his malady came not, as he himself said, from human hands, and must therefore be a visitation from Jove. The monster then, having removed the immense stone which blocked up the mouth of the cave, placed himself at its entrance to prevent the escape of his enemies. Ulysses, however, eluded his vigilance by fastening the sheep together, "three and three," with osier bands, and by tying one of his companions beneath the middle one of every three. In this way the whole party passed out safely, the hero himself bringing up the rear, and clinging to the belly of a thick-fleeced and favourite ram. (*Hom.*, *Od.*, 9, 172, *seqq.*) Virgil has embellished his *Æneid* by interweaving the story of Ulysses and the Cyclops. He feigns that the prince of Ithaca, in the hurry of departure, had left behind him one of his followers, Achæmenides by name, who, after supporting a miserable existence in the woods by the meager fare of roots and berries, gladly threw himself into the hands of the Trojans when *Æneas* was coasting along the island of Sicily. (*Virg.*, *Æn.*, 3, 588, *seqq.*) Homer relates, that it was the wrath of Neptune for the injury inflicted on his son by Ulysses that induced the god to destroy his vessel on the Phœacian coast. (*Od.*, 11, 101, *seqq.*—*Od.*, 5, 286, *seqq.*)

POLYSPERCHON, an *Ætolian*, a general of Alexander's, who commanded the *Stymphæans* in the battle of Arbela, and afterward subdued *Babæcens* for the conqueror. The freedom of his remarks on a subsequent occasion, when he saw a Persian prostrating himself before Alexander, so offended that prince, that

he threw him into prison, and only pardoned him after a considerable time had elapsed. We find Polysperchon, subsequently to this, again intrusted with a command, and sent to besiege the city of Ora, on Alexander's march to India. He took the place in a short time. After Alexander's death, he passed over into Europe, and subdued the Thessalians, who had revolted from the Macedonian power. In B.C. 319, Antipater, then on his deathbed, bestowed the regency of the empire on Polysperchon, as the oldest of all the surviving captains of Alexander, and committed to his care the two kings, who appear to have resided at Pella ever since the death of Perdiccas. Cassander, the son of Antipater, deeply irritated at this preference of a stranger, endeavoured to form a party against the new regent, and with this view engaged Ptolemy and Antigonus on his side. Polysperchon, on his part, neglected nothing that was necessary to strengthen his interests; and he found himself compelled to have recourse to measures, of which some were injudicious, and others positively hurtful. The only wise step which he took during this emergency was an alliance with Eumenes, whom, in the name of the kings, he appointed sole general of the army serving in Asia, and invested, at the same time, with the uncontrolled disposal of all the resources of the eastern empire. Desirous, too, by all possible means, to increase the popularity of his cause in Macedon, and to check the influence of Eurydice, who had still a powerful party in the army, Polysperchon advised the recall of Olympias, the mother of Alexander. But he had soon reason to repent of this step; for Olympias, still untaught by events, and thirsting for revenge, returned to the Macedonian capital only to gratify her worst passions, and to disturb the tranquillity of private life. But of all the measures into which Polysperchon was driven by the pressure of affairs, none was more questionable than the following. Eager to retain the Greeks in his interest, and to defeat the plans of Cassander, who, before the death of Antipater was known at Athens, had sent Nicanor thither to succeed Menyllus in the command of the garrison of Munychia, and had soon after made himself master of the Piræus, Polysperchon published an edict for re-establishing democracy in all the states which owned the protection of Macedon. The policy of this step was not less wicked than its effects were pernicious: the boon of democracy created such a degree of contention and popular licentiousness in most of the states, that the arms of the citizens were for a time employed against one another. Almost every individual distinguished by rank or merit was stripped of his property, banished, or put to death. The condition of Athens, controlled by the garrison in the Munychia, prevented the people of that city from partaking of the benefit held out to them by Polysperchon. But when Alexander, the son of the latter, reached Athens with a body of forces, the democracy was restored, and Phocion and others were put to death. (*Vid.* Phocion.) Cassander, however, soon after made himself master of Athens, and Polysperchon, on receiving intelligence of this, immediately hastened to besiege him in that city; but, as the siege took up much time, he left part of his troops before the place, and advanced with the rest into the Peloponnesus, to force the city of Megalopolis to surrender. The attempt, however, was an unsuccessful one; and it was fortunate for the military character of the protector that an apology for his sudden retreat into Macedon was afforded by the violent conduct of Olympias, who had already embroiled that part of the kingdom so seriously as to endanger the life and power of the elder king. In the contest that ensued, Cassander proved ultimately victorious; Olympias was taken and put to death, and Polysperchon, driven from Macedon, took refuge among his countrymen the Ætolians. After the murder of Al-

exander Ægus and his mother Roxana by Cassander, Polysperchon, who still retained some strongholds in the Peloponnesus, invited from Pergamus Hercules, the son of Alexander by Barcine, four years older than his brother recently murdered, but from the illegitimacy of his birth deemed incapable of succession. On the arrival of the young prince, Polysperchon began hostile movements: he obtained the hearty co-operation of the Ætolians; his standard was joined by many malcontents from Macedon, and he stood on the frontiers of that kingdom with an army twenty thousand strong, while the troops which Cassander sent to oppose him wavered in their affections. The danger was imminent; but Cassander knew the man with whom he had to deal. By bribes and promises he prevailed upon Polysperchon to murder the youth, whom he affected to honour as his sovereign. Polysperchon, however, did not obtain the principal object for which he had been tempted to incur this most enormous guilt. This was the command of the Peloponnesus, towards which country, with the recommendation and aid of Cassander, he now directed his march. But the inhabitants of that peninsula, assisted by the Boeotians, opposed his return southward. He was obliged to winter in Locria, and thence returned to a castle commanding a small district between Epirus and Ætolia. The recovery of this stronghold, which had formerly belonged to him, and of which he had been deprived by Cassander, now rewarded his detestable wickedness; and here probably this veteran in villany, who had once awayed the protectorial sceptre, ended many years afterward his ignominious life; a life deformed by everything atrocious in cruelty and detestable in crime. (*Diod. Sic.* lib. 17, 18, 19, &c.—*Quint. Curt.*, 4, 13.—*Id.*, 5, 4.—*Id.*, 8, 5.—*Justin.*, 10, 10.—*Id.*, 13, 6.—*Id.*, 14, 5, &c.—*Tzetx. in Lycophr.*, 801.)

POLYXENA, a daughter of Priam and Hecuba, celebrated for her beauty and misfortunes. According to the account given by Dictys of Crete, Hecuba, accompanied by many Trojan females, and among the rest by Cassandra and Polyxena, was performing certain sacred rites to Apollo in the vicinity of Troy, when Achilles, who was anxious to witness these ceremonies, came suddenly on the party with some companions of his. Struck by the beauty of Polyxena, the warrior, after fruitlessly contending with his passion for a few days, sent to ask the maiden in marriage from Hector. The Trojan chief agreed to give his sister, provided Achilles would betray to him the whole Grecian army. Achilles returned for answer that he would bring the whole war to a close if Polyxena were delivered to him. Hector replied that he must either betray the whole host, or else slay the Atrides and Ajax. This, of course, irritated Achilles, and the negotiation was broken off. After the death of Hector, Polyxena, according to the same authority, accompanied her father to the tent of Achilles, in order to obtain the restoration of her brother's corpse, and the Grecian chieftain, on beholding her, felt all his former passion renewed. Some time after this, Priam, taking advantage of a truce occasioned by a sacrifice to the Thymbrean Apollo, in which both armies joined, sent a herald to Achilles with a private message relative to Polyxena. The Grecian chief received the messenger in the grove of Apollo, and, having then entered the temple, was treacherously slain by Paris and Deiphobus. After the capture of Troy, Polyxena was immolated by Neoptolemus to the manes of his father. According to one account, the shade of Achilles appeared on the summit of his tomb, and demanded the sacrifice. (*Dict. Crét.*, 3, 2, *seqq.*—*Id.*, 4, 10.—*Id.*, 5, 13, &c.—*Hygin.*, fab. 110.—*Tzetx. ad Lycophr.*, 269.—*Ovid. Met.*, 13, 439, *seqq.*—*Eurip.*, *Hec.*, 37.—*Virg.*, *Æn.*, 3, 321.)

POLYXO, I. a priestess of Apollo's temple in Lem-

nos. She was also nurse to Queen Hypsipyle. It was by her advice that the Lemnian women murdered their husbands. (*Apoll. Rhod.*, 1, 668.—*Val. Flacc.*, 2, 316.—*Hygin.*, *fab.*, 16.)—II. A female, a native of Argos, who married Tlepolemus, son of Hercules. When her husband was compelled to flee, in consequence of the accidental homicide of Licymnius, brother of Alcmena, Polyxo accompanied him to Rhodes, where the inhabitants chose him for their king. On the death of Tlepolemus, who fell in the Trojan war, Polyxo became sole mistress of the kingdom, and during her reign Helen came to Rhodes, having been driven from the Peloponnesus, after the death of Menelaus, by Nicostratus and Megapenthes. Polyxo, determined to avenge her husband's fall, caused some of her female attendants to habit themselves like Furies, seize Helen while bathing, and hang her on a tree. The Rhodians afterward, in memory of the deed, consecrated a temple to Helen, giving her the surname of *Dendritis* (*Δενδρίτις*) from the manner of her death. (*Pausan.*, 3, 19, 10.—*Siebelis ad Pausan.*, l. c.—*Böttiger*, *Furiensmasken*, p. 47, seq.)

POLYZELUS, I. a poet of the old comedy, who flourished about the time of the battle of Arginusæ. The titles of some of his pieces have reached us. (*Fabric.*, *Bibl. Gr.*, v. 2, p. 488, ed. *Harles*.—*Hemsterhus ad Pollux.*, 10, 76.)—II. An historian, a native of Rhodes. (*Voss, Hist. Gr.*, 3, p. 406.—*Athenæus*, 8, p. 361, c.)

POMETIA. *Vid.* *Succisa Pomelia*.

POMONA (from *pomum*, "fruit"), a goddess among the Romans, presiding over fruit-trees. Her worship was of long standing at Rome, where there was a *Flamen Pomonalis*, who sacrificed to her every year for the preservation of the fruit. The story of Pomona and Vertumnus is prettily told by Ovid. This Hamadryad lived in the time of Procas, king of Alba. She was devoted to the culture of gardens, to which she confined herself, shunning all society with the male deities. Vertumnus, among others, was enamoured of her, and under various shapes tried to win her hand: sometimes he came as a reaper, sometimes as a haymaker, sometimes as a ploughman or a vine-dresser: he was a soldier and a fisherman, but to equally little purpose. At length, under the guise of an old woman, he won the confidence of the goddess; and, by enlarging on the evils of a single life and the blessings of the wedded state; by launching out into the praises of Vertumnus, and relating a tale of the punishment of female cruelty to a lover, he sought to move the heart of Pomona: then resuming his real form, he obtained the hand of the no longer reluctant nymph. (*Ovid, Met.*, 14, 622, seqq.—*Keightley's Mythology*, p. 539.)

POMPEIA GENS, an illustrious plebeian family at Rome, divided into two branches, the *Rufi* and *Strabones*. A subdivision of the *Rufi* bore the surname of *Bithynicus*, from a victory gained by one of their number in Bithynia. From the line of the Strabones Pompey the Great was descended. (*Vell. Patere.*, 2, 21.—*Putean. ad Vell.*, l. c.)

POMPEIA, I. daughter of Q. Pompeius, and third wife of Julius Cæsar. She was suspected of criminal intercourse with Clodius, who introduced himself into her dwelling, during the festival of the Bona Dea, in the disguise of a female musician. Cæsar divorced Pompeia; but when the trial of Clodius came on for this act of impiety, he gave no testimony against him; neither did he affirm that he was certain of any injury done to his bed: he only said, "he had divorced Pompeia, because the wife of Cæsar ought not only to be clear from such a crime, but also from the very suspicion of it." (*Plut., Vit. Cæs.—Id., Vit. Cæs.*)—II. Daughter of Pompey the Great, was married to Faustus Sylla. After the battle of Thapsus, she fell into the hands of Cæsar, who generously preserved her life and property. (*Hist., Bell. Afr.*, 96.)—III. A daughter

of Sextus Pompeius and Scribonia, promised in marriage to Metellus, as a pledge of peace between her father and the triumvirs. She was wedded, however, eventually to Scribonius Libo.—IV. Macrina, great-granddaughter of Theophanes of Miletus, who had been a firm friend to Pompey. Tiberius put her to death because she belonged to a family that had been hostile to Cæsar. (*Tacit., Ann.*, 6, 18.)

POMPEIA LEX, I. *de Parricidio*, a law proposed by Pompey when consul, and enacted by the people. It gave a wider acceptance to the term "parricide," and made it apply to the killing of any near relation. (*Heinecc., Ant. Rom., ed. Haubold*, p. 790, seq.)—II. *De vi*, by Pompey when sole consul, A.U.C. 701, that an inquiry should be made into the murder of Clodius on the Appian Way, the burning of the senate-house, and the attack made on the house of Lepidus the interrex. (*Sigonius, de Judiciis*, 2, 32, p. 676.—*Heinecc., ed. Haubold*, p. 796.)—III. *De ambitu*, by the same, against bribery and corruption in elections, with the infliction of new and severe punishments. (*Dio Cass.*, 39, 37.—*Id.*, 40, 53.)—IV. *Judiciaria*, by the same; retaining the Aurelian law, but ordaining that the Judges should be chosen from among those of the highest fortune in the different orders. (*Cic. in Pis.*, 39.—*Id., Phil.*, 1, 8.)—V. *De Comitiis*, by the same, that no one should be allowed to stand candidate for an office in his absence. In this law Julius Cæsar was expressly excepted. (*Sueton., Vit. Jul.*, 28.—*Dio Cass.*, 40, 66.)

POMPEII or POMPEIA (the first being the Latin, the second the Greek, form of its name), a city of Campania in the immediate vicinity of Mount Vesuvius. Of this city it may be truly said, that it has become far more celebrated in modern times than it ever could have been in the most flourishing period of its existence. Tradition ascribed the origin of Pompeii, as well as that of Herculaneum, to Hercules (*Dion. Hal.*, c. 44), and, like that city, it was in turn occupied by the Oscans, Etruscans, Samnites, and Romans. At the instigation of the Samnites, Pompeii and Herculaneum took an active part in the Social war, but were finally reduced by Sylla. (*Vell. Patere.*, 3, 16.) In the general peace which followed, Pompeii obtained the rights of a municipal town, and became also a military colony, at the head of which was Publius Sylla, nephew of the dictator. This officer being accused before the senate of having excited some tumult at Pompeii, was ably defended by Cicero. (*Orat. pro Syll.*, 21.) Other colonies appear to have been subsequently sent thither under Augustus and Nero. In the reign of the latter, a bloody affray occurred at Pompeii, during the exhibition of a fight of gladiators, between the inhabitants of that place and those of Nuceria, in which many lives were lost. The Pompeians were, in consequence, deprived of these shows for ten years, and several individuals were banished. (*Tac., Ann.*, 14, 17.) Shortly after, we hear of the destruction of a considerable portion of the city by an earthquake. (*Tac., Ann.*, 15, 22.—*Senec., Quæst. Nat.*, 6, 1.) Of the more complete catastrophe which buried Pompeii under the ashes of Vesuvius, we have no positive account; but it is reasonably conjectured that it was caused by the famous eruption in the reign of Titus. (*Vid.* *Herculæum*.) The ruins of Pompeii were accidentally discovered in 1748, consequently long after the time of Cluverius. It is curious to follow that indefatigable geographer in his search of its position, which he finally fixes at *Stafesi*, on the banks of the *Sarno*. He would have been more correct if he had removed it about two miles from that river, and placed it nearer the base of Mount Vesuvius. (*Cramer's Anc. Italy*, vol. 2, p. 179.) The opinion generally maintained, that the people of this city were surprised and overwhelmed by the volcanic storm while in the theatre, is not a very probable one. The num-

ber of skeletons discovered in Pompeii does not exceed sixty; and ten times this number would be inconsiderable, when compared with the extent and population of the city. Besides, the first agitation and threatening aspect of the mountain must have filled every breast with terror, and banished all gaiety and amusement. No doubt the previous intimations were of such a nature as to have fully apprized the inhabitants of their danger, and induced the great mass of them to save themselves by flight. The discovery of Pompeii (*vid.* Herculaneum), after having lain so long buried and unknown, has furnished us with many curious and valuable remains of antiquity. The excavations are still continued. Although two thirds are still covered, it is estimated that the town was three quarters of a mile in length by nearly half a mile in breadth. The walls are from eighteen to twenty feet high, and twelve thick, and contained several main gates, of which six have been uncovered. Twenty streets, fifteen feet wide, paved with lava, and having footways of three feet broad, have also been excavated. The houses are joined together, and are generally only two stories, with terraces for roofs. The fronts are often shops, with inscriptions, frescoes, and ornaments of every kind. The principal rooms are in the rear: in the centre is a court, which often contains a marble fountain. In some of the houses the rooms have been found very richly ornamented. A forum, surrounded by handsome buildings, two theatres, temples, baths, fountains, statues, urns, utensils of all sorts, &c., have been discovered. Most of the objects of curiosity have been deposited in the museums of Naples and Portici: among them are a great number of manuscripts. It is certainly surprising, that this most interesting city should have remained undiscovered till so late a period, and that antiquaries and learned men should have so long and materially erred about its situation. In many places, masses of ruins, portions of the buried theatres, temples, and houses, were not two feet below the surface of the soil. The country people were continually digging up pieces of worked marble and other antique objects. In several spots they had even laid open the outer walls of the town; and yet men did not find out what it was that the peculiarly isolated mound of cinders and ashes, earth and pumice-stone covered. There is another circumstance which increases the wonder of Pompeii being so long concealed. A subterranean canal, cut from the river Sarno, traverses the city, and is seen darkly and silently gliding under the temple of Isia. This is said to have been cut towards the middle of the fifteenth century, to supply the contiguous town of *Torre dell' Annunziata* with fresh water; it probably ran anciently in the same channel; but, in cutting it or clearing it, workmen must have crossed under Pompeii from one side to the other.—For a more detailed account of the excavations made at this place, consult Sir W. Gell's "*Pompeiana*," *London*, 1832, 8vo; Within's *Views of Pompeii*; Cooke's *Delineations* (*London*, 1827, 2 vols. fol., 90 plates); Bibent's *Plan of Pompeii* (*Paris*, 1826), showing the progress of the excavations from 1763 to 1825; Romanelli, *Viaggio a Pompei ed Ercolano*, &c.

POMPEIUS, I. Q. Nepos Rufus, was consul B.C. 141, and the first of the Pompeian family who was elevated to that high office. He is said to have attained to it by practising a deception on his friend Lælius, who was a candidate for the same station, by promising to obtain votes for him, but obtaining them, in fact, for himself. Pompeius was sent into Spain, where he laid fruitless siege to Numantia: he gained, however, some slight advantages over the Edetani. Having been continued in command the ensuing year, he again besieged Numantia, and by dint of intrigues induced the inhabitants to solicit a treaty of peace, which he granted them on very advantageous terms.

Not long after this, however, when a successor had come, Pompeius denied the whole affair, and insisted that the Numantines had surrendered at discretion. The matter was laid before the Roman senate, and, notwithstanding the numerous proofs adduced by the Numantine deputies, it was decided that no such treaty had been made. Pompeius was afterward accused of extortion, but his great wealth afforded him the means of acquittal. He was chosen censor B.C. 139. (*Vell. Paterc.*, 2, 1.—*Id.*, 2, 21.—*Id.*, 2, 90.—*Florus*, 2, 18.)—II. Q. Rufus, son of the preceding, was consul with Sylla, B.C. 88, and, together with his colleague, opposed the law by which the tribune Sulpicius sought to extend the rights of citizenship to all the Italian allies. War having been declared against Mithradates, and Asia and Italy being named the provinces of the consuls, the latter fell to the lot of Pompeius. (*Appian, Bell. Mith.*, 55.) Before Sylla departed for his command, he endeavoured, together with his colleague, to baffle the projects of Sulpicius by proclaiming frequent holidays, and ordering, consequently, a suspension of the public business. But Sulpicius, on one of these occasions, attacked the consuls with an armed force, calling upon them to repeal their proclamation for the festival; and, on their refusal, a riot ensued, in which Pompeius escaped with difficulty to a place of concealment; but his son was killed. At a subsequent period, when Sylla had made himself master of Rome and re-established his party, Pompeius was sent to take command of the army, that was still kept on foot, to oppose the remnants of the Italian confederacy. But he was murdered by the troops as soon as he arrived among them, the soldiers having been instigated to the deed by Cn. Pompeius, the general whom Quintus was to supersede. (*Appian, Bell. Civ.*, 1, 55, *seq.*—*Vell. Paterc.*, 2, 17.—*Liv.*, *Epi.*, 77.)—III. Cn. Strabo, father of Pompey the Great, was one of the principal Roman commanders in the Social war. He brought the siege of Asculum to a triumphant issue (*Liv.*, *Epi.*, 75, 76), an event which was peculiarly gratifying to the Romans, as that town had set the first example of revolt, and had accompanied it with the massacre of two Roman officers and a number of Roman citizens. He also gained a victory over the Marsi, and compelled that people, together with the Vestini, Marrucini, and Peligni, to make a separate peace. This is the same Cn. Pompeius who is mentioned at the close of the previous article (No. II.), as having instigated his soldiery to murder Q. Pompeius, the new commander sent to supersede him. He retained, after that, the command of the army in Umbria, and was applied to by the senate for aid against Cinna; but, being more anxious to make the troubles of his country an occasion of his own advancement, he remained for some time in suspense, as if waiting to see which party would purchase his services at the highest price, and thus allowed Cinna and his faction to consolidate their force beyond the possibility of successful resistance. At last, however, he resolved to march to Rome, and espouse the cause of the senate. A battle was fought between his army and that of Cinna immediately under the walls of the capital. But, though the slaughter was great, the event seems to have been indecisive; and, soon after, Cn. Pompeius was killed by lightning in his own tent. (*Vell. Paterc.*, 2, 44.—*Appian, Bell. Civ.*, 1, 68.)—According to Plutarch, the Romans never entertained a stronger and more rancorous hatred for any general than for Pompeius Strabo. They dragged his corpse from the bier on the way to the funeral pile, and treated it with the greatest indignity. (*Plut.*, *Vit. Pomp.* *init.*)—IV. Cneius, surnamed *Magnus*, or "the Great," was the son of Cn. Pompeius Strabo (No. III.), and holds a conspicuous rank in Roman history, by reason of his numerous exploits, and, more particularly, his collision

with Julius Cæsar. He was born B.C. 106, the same year with Cicero. As soon as he had assumed the manly gown, he entered the Roman army, and made his first campaigns with great distinction under the orders of his parent. The beauty of his person, the grace and elegance of his manners, and his winning eloquence, gained him, at an early age, the hearts of both citizens and soldiers; and he even, on one occasion, possessed sufficient influence to save the life of his father, when Cinna had gained over some of the soldiery of Strabo, and a mutiny ensued. After the death of his parent, a charge was preferred against the latter that he had converted the public money to his own use; and Pompey, as his heir, was obliged to answer it. But he pleaded his own cause with so much ability and acuteness, and gained so much applause, that Antistius, the prætor, who had the hearing of the cause, conceived a high regard for him, and offered him his daughter in marriage. After the establishment of Cinna's power at Rome, Pompey retired to Picenum, where he possessed some property, and where his father's memory, hated as it was by the Romans, was regarded with respect and affection. To account for this, we must suppose that, during the long period of his military command in that neighbourhood, he had prevented his soldiers from being burdensome to the people, and had found means of obliging or gratifying some of the principal inhabitants. Be this as it may, the son possessed so much influence in Picenum as to succeed in raising an army of three legions, or about sixteen or seventeen thousand men. With this force he set out to join Sylla, and, after successfully repelling several attacks from the adverse party, he effected a junction with that commander, who received him in the most flattering manner, and saluted him, though a mere youth, only 23 years of age, with the title of *Imperator*. So struck, indeed, was Sylla with the merits of the young Roman, that he persuaded Pompey to divorce the daughter of Antistius, and marry Æmilia, the daughter-in-law of Sylla. Three years after this (B.C. 80), Pompey retook Sicily from the partisans of Marius, and drove them also from Africa, in forty days. The Roman people were astonished at these rapid successes, but they served at the same time to excite the jealousy of Sylla, who commanded him to dismiss his forces and return to Rome. On his coming back to the capital, Pompey was received with every mark of favour by Sylla. According to Plutarch, the latter hastened to meet him, and, embracing him in the most affectionate manner, saluted him aloud with the surname of "*Magnus*," or "the Great," a title which Pompey thenceforward was always accustomed to bear. The jealousy of the dictator, however, was revived when Pompey demanded a triumph. Sylla declared to him that he should oppose this claim with all his power; but Pompey did not hesitate to reply, that the people were more ready to worship the rising than the setting sun, and Sylla yielded. Pompey therefore obtained the honour of a triumph, though he was the first Roman who had been admitted to it without possessing a higher dignity than that of knighthood, and was not yet of the legal age to be received into the senate. Sylla soon after abdicated the dictatorship, and, at the consular election, had the mortification to feel his rival's ascendancy. After the death of Sylla, Pompey came to be generally considered as chief of the aristocratic party, and as heir of the influence exercised by Sylla over the minds of the soldiery. New troubles soon broke out, occasioned principally by the ambitious projects of the consul Lepidus, who aimed at supreme power; but he was soon overpowered by the united forces of Catulus and Pompey. A period of quiet now ensued, and Catulus endeavoured to oblige Pompey to dismiss his troops. This the latter evaded under various pretexts, until the progress of Sertorius

induced the senate to send Pompey, now thirty years of age, to the support of Metellus, who was unequal to cope with so able an adversary. He was invested with proconsular power. The two commanders, who acted independently of each other, though with a mutually good understanding, were both defeated through the superior activity and skill of Sertorius. Pompey lost two battles, and was personally in danger; and as long as Sertorius was alive, the war was continued with little success. But Sertorius having been murdered by his own officers, and succeeded in the command by Perpenna, Pompey and Metellus soon brought the struggle to an end. On his return to Italy the servile war was raging. Crassus had already gained a decisive victory over Spartacus, the leader of the rebels, and nothing was left for Pompey but to complete the destruction of the remnant of the servile forces; yet he assumed the merit of this triumph, and displayed so little moderation in his success, that he was suspected of wishing to tread in the footsteps of Sylla. He triumphed a second time, and was chosen consul B.C. 70, although he had yet held none of those civil offices, through which it was customary to pass to the consulship. His colleague was Crassus. Two years after the expiration of this office, the pirates, encouraged by the Mithradatic war, had become so powerful in the Mediterranean, that they carried on a regular warfare along a great extent of coast, and were masters of 1000 galleys and 400 towns. The tribune Gabinius, a man devoted to the interests of Pompey, proposed that an individual (whose name he did not mention) should be invested with extraordinary powers, by sea and land, for three years, to put an end to the outrages of the pirates. Several friends of the constitution spoke with warmth against this proposition; but it was carried by a large majority, and the power was conferred on Pompey, with the title of proconsul. In four months he cleared the sea of the ships of the pirates, got possession of their fortresses and towns, set free a great number of prisoners, and took captive 20,000 pirates, to whom, no less prudently than humanely, he assigned the coast-towns of Cilicia and other provinces, which had been abandoned by their inhabitants, and thus deprived them of an opportunity of returning to their former course. Meanwhile the war against Mithradates had been carried on with various fortune; and although Lucullus had pushed the enemy hard, yet the latter still found new means to continue the contest. The tribune Manilius then proposed that Pompey should be placed over Lucullus in the conduct of the war against Mithradates and Tigranes, and likewise over all the other Roman generals in the Asiatic provinces, and that all the armies in that quarter should be under his control, at the same time that he retained the supreme command by sea. This was a greater accumulation of power than had ever been intrusted to any Roman citizen, and several distinguished men were resolved to oppose a proposition so dangerous to freedom with their whole influence: but Pompey was so high in the popular favour, that, on the day appointed for considering the proposition, only Hortensius and Catulus had the courage to speak against it; while Cicero, who hoped to obtain the consulship through the support of the Pompeian party, advocated it with all his eloquence, and Cæsar, to whom such deviations from the constitution were acceptable, used all his influence in favour of it. Cicero's oration *Pro Lege Manilia* contains a sketch of Pompey's public life, with the most splendid eulogy that perhaps was ever made on any individual. The law was adopted by all the tribes, and Pompey, with assumed reluctance, yielded to the wishes of his fellow-citizens. He arrived in Asia B.C. 67, and received the command from Lucullus, who was the less able to conceal his chagrin, as Pompey industriously abolished all his regulations. The operations of Pom-

pey, in bringing the Mithradatic war to a close, have been related elsewhere. (*Vid.* Mithradates VI.) After Pompey had settled the affairs of Asia, he visited Greece, where he displayed his respect for philosophy by making a valuable gift to the city of Athens. On his return to Italy, he dismissed his army as soon as he landed at Brundisium, and entered Rome as a private man. The whole city met him with acclamations; his claim of a triumph was admitted without opposition, and never had Rome yet witnessed such a display as on the two days of his triumphal procession. Pompey's plan was now, under the appearance of a private individual, to maintain the first place in the state; but he found obstacles on every side. Lucullus and Crassus were superior to him in wealth; the zealous republicans looked upon him with suspicion; and Cæsar was laying the foundation of his future greatness. The last-mentioned individual, on his return from Spain, aspired to the consulship. To effect this purpose, he reconciled Pompey and Crassus with each other, and united them in forming the coalition which is known in history under the name of the *First Triumvirate*. He was chosen consul B.C. 59, and, by the marriage of his daughter Julia with Pompey (*Æmilia* having died in childhood), seemed to have secured his union with the latter. From this time Pompey countenanced measures which, as a good citizen, he should have opposed as subversive of freedom. He allowed his own eulogist, Cicero, to be driven into banishment by the tribune Clodius, whom he had attached to his interest; but, having afterward himself quarrelled with Clodius, he had Cicero recalled. He supported the illegal nomination of Cæsar to a five years' command in Gaul; the fatal consequences of which compliance appeared but too plainly afterward.—The fall of Crassus in Parthia left but two masters to the Roman world; and, on the death of Julia in childhood, these friends became rivals. (*Encyclop. Americ.*, vol. 10, p. 239, *seqq.*) Pompey's studied deference to the senate secured his influence with that body; and he gained the good-will of the people by his judicious discharge of the duties of commissary of supplies during a time of scarcity. In the mean time, he secretly fomented the disorders of the state, and the abuses practised in the filling up the magistracies, many of which remained vacant for eight months, and others were supplied by insufficient and ignorant persons, through the disgust of those who were capable of sustaining them with ability and honour. The friends of Pompey whispered about the necessity of a dictator, and pointed to him as the man whose great services, and whose devotion to the senate and the people, entitled him to expect the general suffrage; while he himself appeared to decline the station, and even made a show of being indignant at the proposal. His position at Rome, while Cæsar was absent in his province, was singularly advantageous to his pretensions: he had, in fact, always kept himself in the public eye; and in the triumvirate division of power, which he had himself planned (B.C. 50), in order to strengthen his own influence by the rising talents and activity of Cæsar, and the high birth and riches of Crassus, he had taken care to reserve to himself Rome, where he continued to reside, governing the Spain by his lieutenants, while he despatched Crassus to Asia and Cæsar to the Gauls. He had also acquired a popularity by rescinding, under one of his consulships, the law which Sylla, for his own purposes, had enacted, to restrain the power of the tribunes of the commons. At this time he gratified both senate and people by procuring, through the agency of the tribune Milo (B.C. 57), the recall of Cicero from the banishment into which he had been driven by the tribune Clodius, on a charge of having executed Cethegus and Lentulus (implicated in the Catilinarian conspiracy) without the forms of law. Cicero had

provoked the enmity of Clodius by prosecuting him for intruding, in the disguise of a musician, into a female religious assembly, where he sought an assignation with Pompeia, the wife of Cæsar. Cæsar, though he divorced the lady, with the observation that "Cæsar's wife should not even be suspected," overlooked the affront of Clodius to himself, withheld his own evidence against him at the trial, and even furthered his election to the tribuneship. He was actuated in this by resentment towards Cicero, who had termed the *Triumvirate* a conspiracy against the public liberty; and, under a similar feeling, Pompey had at first connived at Cicero's banishment (B.C. 58); but, as Clodius, who had seized Cicero's villas and confiscated his property, began to carry himself arrogantly towards Pompey, and conceive himself his equal, Pompey, as has been said, within two years procured the decree to be reversed. The sequel of this intrigue was such as to accelerate his advance to the dictatorship. Clodius, as he was returning to Rome on horseback from the country, was set upon and murdered by Milo and some attendants, who were quitting the city. As Milo was on his way to his native town, in disgust at the perfidy of Pompey, who had disappointed him of the consulship promised as the price of his services, it should not seem that this affray was the result of Pompey's instigation. The populace, struck with consternation, passed the night in the streets, and, with the dawn of day, brought in the body of Clodius. At the suggestion of some tribunes, his friends, it was carried into the senate-house, either to intimate suspicion of the senate, or in honour of the senatorian rank of the deceased. Here the benches were torn up, a pile constructed, and the body consumed; but the conflagration caught the senate-house and several adjoining buildings. Milo, less apprehensive of punishment than irritated at the respect paid to Clodius, returned to the city with his colleague Cæcilius, and, distributing money to a part of the multitude, addressed them from the tribunal as if they were a regular assembly; excusing the affair as an accidental rencounter, and endeavouring to obtain a verdict of acquittal: he ended with inveighing against Clodius. While he was haranguing, the rest of the tribunes, and that part of the populace which had not been bribed, rushed into the forum armed: Milo and Cæcilius put on slaves' habits and escaped; but a bloody, indiscriminate assault was made on the other citizens, of which the friends of Milo were not alone the objects, but all who passed by or fell in the way of the rioters, especially those who were splendidly dressed and wore gold rings. The tumult continued several days, during which there was a suspension of all government; stones were thrown and weapons drawn in the streets, and houses set on fire. The slaves armed themselves, and, breaking into dwellings under pretence of searching for Milo, carried off everything of value that was portable. The senate assembled in a state of great terror, and, turning their eyes upon Pompey, proposed to him the acceptance of the dictatorship. But, by the persuasion of Cato, they invested him with the same power under the title of *Sole Consul*. This was probably with the secret understanding of Pompey himself, as the title of dictator had become odious since the tyranny of Sylla. That Pompey and Cato were in agreement, appears from this: that the vote of the latter was recompensed by the appointment of quaestor to Cyprus; the senate having decreed the reduction of that island to a Roman province, and the confiscation of the treasures of King Ptolemy, on account of the exorbitant ransom demanded for Clodius when taken by pirates. Pompey proceeded to restore order and to pass popular acts. He condemned Milo for murder. He framed a law against bribery and corruption, and instigated an inquiry into the acts of administration of all who had held magisterial offices from the time of his own first consulship.

This, although plausibly directed at what Pompey justly called the root of the state disorders, seemed to be aimed covertly at Cæsar; though Pompey appeared offended at the suggestion, and affected to consider Cæsar as above suspicion. He presided in the court during the trials with a guard, that the judges might not be intimidated. Several, convicted of intrigue and malversation, were banished, and others fined. With a great appearance of moderation, he declined to hold the single consulship to the extent of the full period, and for the rest of the year adopted his father-in-law, Lucius Scipio, as his colleague; but, even after the return to the regular consulships, as well as for the months during which Scipio was associated with himself in office, he continued, in reality, to direct the affairs of state. The senate gave him two additional legions, and prolonged his command in his provinces. Hitherto Pompey had proceeded with infinite address; but the craftiness of his policy was no match for the frankness and directness of that of Cæsar, who acted in this conjuncture, so critical to the Roman liberty, with a real moderation and candour that absolutely disconcerted his rival. Cæsar, indeed, who was made acquainted, by the exiles that flocked to his camp, with everything passing at Rome, and who found himself obliged to stand on the defensive, availed himself of the means which his acquired wealth placed in his hands, and which the practice of the age too much countenanced, to divide the hostile party by buying off the enmity of some of them newly elected to office. Aware of the cabals which were forming against him, Cæsar knew that, in returning to a private station, he should be placed at the feet of Pompey and his party: he therefore resisted the decree of his recall till he could assure himself of such conditions as would prevent his obedience from being attended with danger. His demands were reasonable; his propositions fair and open, and his desire of effecting a compromise apparently sincere. The uninterrupted continuation of a consul's office through several years, and even his creation in his absence, were not unconstitutional: both had been granted to Marius; and Cæsar himself had been re-elected, while absent, by the ten tribunes; Pompey, when he brought in the law against allowing absent candidates to stand, having made a special exception in favour of Cæsar, and recorded it. His requests that he might stand for the consulship in his absence; that he might retain his army till chosen consul; that he might have his command prolonged in the province of Hither Gaul, should that of Farther Gaul not be also conceded to him, were refused. In the irritation of the moment, he is said to have grasped the hilt of his sword, and ejaculated, "This shall give it me." Curio, in the mean time, loudly protested against Cæsar's being recalled, unless Pompey would also disband his legions and resign his provinces; and the people were so satisfied with the equity of the proposal, that they accompanied the tribune to his own door, and strewed flowers in his way. Pompey professed that he had received his command against his will, and that he would cheerfully lay it down, though the time was not yet expired; thus contrasting his own moderation with the unwillingness of Cæsar to relinquish office, even at the termination of the full period. Curio, however, contended openly that the promise was not to be taken for the performance; but exclaimed against Pompey's avarice of power; and urged with such adroitness the necessity either of both retaining their commands, that the one might be a check on any unconstitutional designs of the other, or of both alike resigning, that he brought the senate over to his opinion, the consul Marcellus bitterly observing to the majority, "Take your victory, and have Cæsar for your master." But on a rumour that Cæsar had crossed the Alps and was on his march to Rome, the consul ran to Pompey, and, presenting him

with a sword, said, "We order you to march against Cæsar and fight for your country." Curio fled to Cæsar, who had lately returned from Britain, and was approaching Ravenna; and urged him to draw together his forces and advance upon Rome. But Cæsar was still apparently anxious for peace; and sent, by Curio, letters to the senate, in which he distinctly offered to resign his command, provided Pompey would do the same; otherwise he would not only retain it, but would come in person, and revenge the injuries offered to himself and to the country. This was received with loud cries, as a declaration of war; and Lucius Domitius was appointed as Cæsar's successor, and ordered to march with four thousand new-raised troops. Neither the senate nor Pompey seem to have been in the least prepared. Pompey, with his usual art, had redemanded from Cæsar the legion which he had lent him, on pretence of an expedition to Syria against the Parthians. Cæsar had not only sent back the legion, but added another of his own. They halted at Capua, and spread the report, either from ignorance, or, as they were handsomely paid by Cæsar, probably from instructions given them, that Cæsar's army was disaffected to him, and, if occasion served, would gladly come over to Pompey. His credulity and security were such, that he neglected to make the necessary levies till the opportunity was lost. While he was at last exerting himself, under the authority of the senate, in collecting 13,000 veterans from Thessaly, and mercenaries from foreign nations, and in making forced contributions of money and munitions of war in the cities of Italy, Cæsar, leaving his commanders to concentrate and hasten the march of the rest of his army, took the field with some cavalry and a division of 6000 men. He sent forward a picked detachment to surprise Ariminum, the first Italian city after passing the frontier of Gaul, and, throwing himself into his chariot while his friends were sitting at the supper-table, crossed the Rubicon, with the exclamation, "The die is cast." When the news reached Rome, the senate repented their rejection of Cæsar's equitable proposals; and Cicero moved that an embassy should be sent to him to treat for peace, but was overruled by the consuls. Pompey had boasted that, if need were, he could raise an army by stamping with his foot; and Favonius reminded him, in a tone of raillery, that "it was high time for him to stamp." Domitius, who had been sent to supersede Cæsar, was by him besieged in Corfinium, taken prisoner, and honourably dismissed, his troops going over to Cæsar. Pompey, with the consuls, and the greater part of the senate and the nobility, abandoned Rome and passed over into Greece. On entering Rome, Cæsar was, by the remnant of the senate, created dictator; but he held the office only eleven days, exchanging it for that of consul, and taking Servilius as his colleague. Having seized the treasury, and secured Sicily and Sardinia, the granaries of Rome, by appointing his governors, he set out for Spain, where, in the hither province, he reduced, by cutting off their supplies, the Pompeian army under Petreius and Afranius, consisting of five legions, whom he dismissed in safety, and allowed to join Pompey; and in the farther province he compelled the surrender of Varro with his legion. It is singular that his lieutenants were everywhere unsuccessful: Dolabella and Caius Antonius, who had it in charge to secure the Adriatic, were surrounded with a superior fleet by Pompey's lieutenant, Octavius Libo; Domitius lost an army in Pontus; and Curio, in Africa, after his troops had suffered much by drinking of poisoned waters, risked a rash action with Varus and Juba, king of Mauritania, the ally of Pompey, and was slain. Cæsar himself experienced a reverse in Illyricum, where, his army being reduced to such straits as to eat bread made with herbs, he assaulted, near Dyrrachium, the intrenched camp of Pompey, whose policy had been to decline a battle,

and was repulsed, with the general panic of his troops and the loss of many standards; and his own camp would have been taken if Pompey had not drawn off his forces in apprehension of an ambuscade; on which Cæsar remarked that "the war could have been at an end, if Pompey knew how to use victory." Cæsar retreated into Thessaly, and was followed by Pompey. A general battle was fought on the plains of Pharsalus; the army of Pompey being greatly superior in numbers, as it consisted of 40,000 foot and 12,000 horse, composed of the transmarine legions and the auxiliary forces of different kings and tetrarchs; while that of Cæsar did not exceed 30,000 foot and 1000 horse. Pompey was, however, out-maneuvred, his army thrown into total rout, his camp pillaged, and himself obliged to fly, leaving the field with only his son Sextus and a few followers of rank. He set sail from Mytilene, having taken on board his wife Cornelia, and made for Egypt, intending to claim the hospitality of the young King Ptolemy, to whom the senate had appointed him guardian. As he came near Mount Casius, the Egyptian army was seen on the shore, and their fleet lying off at some distance, when, presently, a boat was observed approaching the ship from the land. The persons in the boat invited him to enter, for the purpose of landing; but, as he was stepping ashore, he was stabbed in the sight of his wife and son; and his head and ring were sent to Cæsar, who, shedding tears, turned away his face, and ordered the head to be burned with perfumes in the Roman method.—(*Ellen's Roman Emperors*, p. 4, *seqq.*, *Introd.*)—Cornelia and her friends instantly put to sea, and escaped the pursuit of the Egyptian fleet, which at first threatened to intercept them. Their feelings, as is natural, were, for the moment, so engrossed by their own danger that they could scarcely comprehend the full extent of their loss (*Cic.*, *Tusc. Disp.*, 3, 27); nor was it till they reached the port of Tyre in safety that grief succeeded to apprehension, and they began to understand what cause they had for sorrow. But the tears that were shed for Pompey were not only those of domestic affliction; his fate called forth a more general and honourable mourning. No man had ever gained, at so early an age, the affections of his countrymen; none had enjoyed them so largely, or preserved them so long with so little interruption; and, at the distance of eighteen centuries, the feeling of his contemporaries may be sanctioned by the sober judgment of history. He entered upon public life as a distinguished member of an oppressed party, which was just arriving at its hour of triumph and retaliation; he saw his associates plunged in rapine and massacre, but he preserved himself pure from the contagion of their crimes; and when the death of Sylla left him at the head of the aristocratical party, he served them ably and faithfully with his sword, while he endeavoured to mitigate the evils of their ascendancy, by restoring to the commons of Rome, on the earliest opportunity, the most important of those privileges and liberties which they had lost under the tyranny of their late master. He received the due reward of his honest patriotism in the unusual honours and trusts that were conferred upon him; but his greatness could not corrupt his virtue; and the boundless powers with which he was repeatedly invested, he wielded with the highest ability and uprightness to the accomplishment of his task, and then, without any undue attempts to prolong their duration, he honestly resigned them. At a period of general cruelty and extortion towards the enemies and subjects of the commonwealth, the character of Pompey, in his foreign commands, was marked by its humanity and spotless integrity; his conquest of the pirates was effected with wonderful rapidity, and cemented by a merciful policy, which, instead of taking vengeance for the past, accomplished the prevention of evil for the

future: his presence in Asia, when he conducted the war with Mithradates, was no less a relief to the provinces from the tyranny of their governors, than it was their protection from the arms of the enemy. It is true that wounded vanity led him, after his return from Asia, to unite himself, for a time, with some unworthy associates; and this connexion, as it ultimately led to all the misfortunes, so did it immediately tempt him to the worst faults of his political life, and involved him in a career of difficulty, mortification, and shame. But after this disgraceful fall, he again returned to his natural station, and was universally regarded as the fit protector of the laws and liberty of his country, when they were threatened by Cæsar's rebellion. In the conduct of the civil war he showed something of weakness and vacillation; but his abilities, though considerable, were far from equal to those of his adversary; and his inferiority was most seen in that want of steadiness in the pursuit of his own plans, which caused him to abandon a system already sanctioned by success, and to persuade himself that he might yield with propriety to the ill-judged impatience of his followers for battle. His death is one of the few tragical events of those times which may be regarded with unmixed compassion. It was not accompanied, like that of Cato and Brutus, with the rashness and despair of suicide; nor can it be regarded, like that of Cæsar, as the punishment of crimes, unlawfully inflicted, indeed, yet suffered deservedly. With a character of rare purity and tenderness in all his domestic relations, he was slaughtered before the eyes of his wife and son; while flying from the ruin of a most just cause, he was murdered by those whose kindness he was entitled to claim. His virtues have not been transmitted to posterity with their deserved fame; and while the violent republican writers have exalted the memory of Cato and Brutus, Pompey's many and rare merits have been forgotten in the faults of the Triumvirate, and in the weakness of temper which he displayed in the conduct of his last campaign. (*Encycl. Metropol.*, div. 3, vol. 3, p. 262.)—V. Cneius, elder son of Pompey the Great, was sent by his father into Asia, at the commencement of the civil war, to raise a large naval and land force from all the provinces of the East. After the death of his parent he passed into Spain, where two lieutenants of Pompey had reunited some of the scattered remnants of the republican army. His party soon became powerful, and he saw himself in a few months at the head of thirteen legions, and in possession of a considerable fleet. Cæsar, finding that he must act in person against him, left Rome for the Spanish peninsula, and, by a series of bold manœuvres, compelled the son of Pompey to engage in battle in the plain of Munda (45 B.C.). This action, the last that was fought between the Pompeian party and Cæsar, terminated, after the most desperate efforts, in favour of the latter; and the son of Pompey, having been wounded in the fight, was slain in endeavouring to make his escape. (*Auct.*, *Bell. Hisp.*—*Appian, Bell. Civ.*, 2, 87, *seqq.*)—VI. Sextus, second son of Pompey the Great, and surnamed sometimes, for distinction's sake, Pompey the Younger, is celebrated in Roman history for the part that he played after the death of Cæsar, and for the resistance which he made to Antony and Octavius. After the battle of Pharsalia, he proceeded, with some senators, to rejoin his father in Pamphylia; but, hearing of the latter's death, he fled to Cyprus, thence to Africa, and finally to Spain, where he joined his brother Cneius with a few vessels. The disastrous battle of Munda, however, again compelled him to fly; but he found himself, after some lapse of time, at the head of a considerable force, composed of the remnants of the army at Munda, and he succeeded in defeating two lieutenants of Cæsar. After the death of the latter, Sextus Pompey applied to the Roman senate for the

restitution of his father's property. Antony supported his claim, and Sextus, without obtaining precisely what he solicited, still received as an indemnity a large sum of money from the public treasury, and with it the title of commander of the seas. In place, however, of going to Rome to enjoy his success, he got together all the vessels he could find in the harbours of Spain and Gaul, and, as soon as he saw the second triumvirate formed, he made himself master of Sicily, and gained over Octavius the battle of Scylla. While proscription was raging at Rome, Sextus opened an asylum for the fugitives, and promised to any one who should save the life of a proscribed person twice as much as the triumvire offered for his head. Many were saved in consequence by his generous care. At the same time, his fleet increased to so large a size in the Mediterranean as to intercept the supplies of grain intended for the Roman capital, and the people, dreading a famine, compelled Antony and Octavius to negotiate for a peace with the son of Pompey. Sextus demanded nothing less than to be admitted into the triumvirate at the expense of Lepidus, who was to be displaced; and he would, in all likelihood, have obtained what he sought, had not his friends compelled him to hasten the conclusion of the alliance. As it was, however, the terms agreed upon were extremely favourable to Sextus. Sicily, Sardinia, Corsica, and Achaia were given him; he was promised the consulship for the ensuing year, and the proscribed persons whom he had saved were erased from the fatal list. The peace, however, proved a hollow one. Hostilities soon commenced anew, and Octavius encountered two defeats, one through his lieutenant Calvisius, and another in person. Two years after, however, having repaired his losses, he proved more successful. Agrippa, his lieutenant, gained an important advantage over the fleet of Pompey off Mylæ, on the coast of Sicily, and afterward a decisive victory between Mylæ and Naulochus. Sextus, now without resources, fled with sixteen vessels to Asia, where he excited new troubles; but, at the end of a few months, he fell into the hands of Antony's lieutenants, who put him to death B.C. 36. In allusion to his great naval power, Sextus Pompey used to style himself "the son of Neptune" (*Nepotunus*.—*Horat. Epod.*, 9, 7.—*Misch.*, *ad loc.*—*Dio Cass.*, 48, 19.—*Vell. Pat.*, 2, 72.—*Flor.*, 4, 3.—*Plut.*, *Vit. Ant.*—*Appian, Bell. Civ.*, 2, 105.—*Id. ib.*, 4, 84, &c.)

POMRĀLO, a city of Hispania Tarraconensis, in the territory of the Vascones, now *Pampeluna*. (*Plin.*, 1, 3.—*Strab.*, 161.)

POMPILIUS NUMA, the second king of Rome. (*Vid. Numa*.)

POMPONIUS, I. ATTICUS. (*Vid. Atticus*).—II. MELA. (*Vid. Mela*).—III. FESTUS. (*Vid. Festus*).—IV. ANDRONICUS, a native of Syria, and a follower of the Epicurean sect. He pursued, at Rome, the profession of a grammarian, but his attachment to philosophical pursuits prevented him from being very useful as a philological instructor. He was a contemporary of M. Antonius Gniphio, who was one of Cicero's instructors. Finding this latter grammarian, as well as others of inferior note, preferred to himself, he retired to Cumæ, where he lived in great poverty, and composed several works. These were published by Orbilius after the death of Andronicus. (*Sueton., de Illustr. Gram.*, 9).—V. MARCELLINUS, a Latin grammarian in the time of Tiberius. Suetonius describes him as a most troublesome extractor of correctness in Latin style. He occasionally pleaded causes, and is said to have been originally a pugilist. (*Sueton., de Illustr. Gram.*, 22).—VI. SECUNDUS, a Roman tragic poet, who flourished in the middle of the first century of our era, and died 60 A.D., after having held the office of consul. His works are lost. He is said to have been more remarkable for eloquence and brilliancy as a writer, than

for tragic spirit. (*Dial. de caus. corr. eloq.*, 13.—*Lipsius, ad Tac.*, *Ann.*, 11, 13.—*Bähr, Gesch. Röm. Lit.*, p. 88).—VII. SEXTUS, a Roman lawyer, who appears to have lived in the time of Hadrian and Antonines Pius. He attained to high reputation as a jurist, and wrote several works on jurisprudence. (*Bähr, Gesch. Röm. Lit.*, p. 749.)

POMPTINÆ PALŪDES. *Vid. Pontine Paludee*.

PONTIA, now *Ponza*, an island off the coast of Latium, and south of the promontory of Circeii. According to Livy (9, 38), it received a Roman colony A.U.C. 441, and it obtained the thanks of the Roman senate in the second Punic war. It became afterward the spot to which the victims of Tiberius and Caligula were secretly conveyed, to be afterward despatched, or doomed to a perpetual exile. (*Suet., Tib.*, 64.—*Id.*, *Cal.*, 15.) Among these might be numbered many Christian martyrs. (*Cramer's Anc. Italy*, vol. 2, p. 135.)

PONTINÆ, POMETINÆ, or POMPTINÆ PALŪDES, a marshy tract of country in the territory of the Velsci, deriving its appellation from the town of Sueasa Pomestia, in whose vicinity it was situate. These fens are occasioned by the quantity of water carried into the plain by numberless streams which rise at the foot of the adjacent mountains, and, for want of a sufficient declivity, creep sluggishly over the level space, and sometimes stagnate in pools, or lose themselves in the sands. Two rivers principally contributed to the formation of these marshes, the Ufens or *Uffente*, and the Nymphæus or *Ninfa*. The flat and swampy tract spread to the foot of the Volscian mountains, and covered an extent of eight miles in breadth and thirty in length with mud and infection. We are informed by Mucianus, an ancient writer quoted by Pliny, that there were at one time no less than twenty-three cities to be found in this district (3, 5). Consequently, it is to be inferred that formerly these marshes did not exist, or that they were confined to a much smaller space of ground. That it was cultivated appears clearly from Livy (2, 34); and we are told by the same historian that the Pomptinus ager was once portioned out to the Roman people (6, 21). Indeed, it is evident that the waters must have been gradually increasing from the decline of the Roman empire, until the successful exertions made by the Roman pontiffs arrested their baneful progress. When this district was occupied by flourishing cities, and an active and industrious population was ever ready to check the increase of stagnation, it might easily be kept under; but after the ambition of Rome and her system of universal dominion had rendered this tract of country desolate, these wastes and fens naturally increased, and, in process of time, gained so much ground as to render any attempt to remedy the evil only temporary and inefficient. It is supposed that, when Appius Claudius constructed the road named after him, he made the first attempt to drain these marshes; but this is not certain, as no such work is mentioned in the accounts we have of the formation of this Roman way. (*Livy*, 9, 29.) But about one hundred and thirty years after, there is a positive statement of that object having been partly effected by the consul Corn. Cethegus. (*Liv., Epit.*, 46.) Julius Cæsar is said to have intended to divert the course of the Tiber from Ostia, and carry it through these marshes to Terracina; but the plan perished with him, and gave way to the more moderate but more practicable one of Augustus. This emperor endeavoured to carry off the superfluous waters by opening a canal all along the Via Appia, from Forum Appii to the grove of Feronia. It was customary to embark on the canal in the nighttime, as Strabo relates and Horace practised, "because the vapours that arise from these swamps are less noxious in the cool of the night than in the heat of the day." This canal

still remains, and is called *Cameta*. These marshes were neglected after the time of Augustus until the reigns of Nerva and Trajan, the latter of whom drained the country from Treponti and Terracina, and restored the Appian Way, which the neglect of the marshes in the previous reigns had rendered nearly impassable. During the convulsions of the following centuries, the marshes were again overflowed, until again drained in the reign of Theodoric, by Cæcilius Decius, a public-spirited individual, and apparently with good effect. (*Cassiod.*, 2, *Epist.* 32 and 33.) They were never, however, completely exhausted of their water until the pontificate of Pius VI., although many preceding popes had made the experiment. During the French invasion, however, the precautions necessary to keep open the canals of communication were neglected, and the waters again began to stagnate. These marshes, therefore, are again formidable at the present day, and, though contracted in their limits, still corrupt the atmosphere for many miles around. (*Cramer's Anc. Italy*, vol. 2, p. 96, *seqq.*)

PONTIUS, an able commander of the Samnites, who entrapped the Roman army in the defile of Samnium called the "Caudine Forks" (*Furca Caudina*), and compelled them to pass under the yoke. (*Liv.*, 9, 2, *seqq.*) He was afterward defeated in his turn, and subjected to the same ignominy by the Romans. (*Liv.*, 9, 16.)

PONTUS, I. a country of Asia Minor. The name implies a political rather than a geographical division of territory: having been applied, in the first instance, to the coast of the Euxine, situated between the Colchian territory and the river Halye, it was, in process of time, extended to the mountainous districts which lie towards Cappadocia and Armenia; and it even, at one time, included Paphlagonia and part of Bithynia. The denomination itself was unknown to Herodotus, who always designated this part of Asia by referring to the particular tribes who inhabited it, and who then enjoyed a separate political existence, though tributary to the Persian empire. Xenophon also appears to have been ignorant of it, since he adheres always to the same local distinctions of nations and tribes used by Herodotus; such as the Chalybes, Tibareni, Mosynœci, &c. It was not till after the death of Alexander that the Pontine dynasty makes any figure in history; and an account of it will be found under the article Mithradates.—After the overthrow of Mithradates the Great, Pompey annexed the greater part of Pontus to Bithynia, and the rest he assigned to Deiotarus, tetrarch of Galatia, and a zealous ally of Rome; a small portion of Paphlagonia being reserved for some native chiefs of that country. (*Strab.*, 541, *seqq.*—*Appian, Bell. Mithrad.*, c. 114.) During the civil wars waged by Cæsar and Pompey, Pharnaces made an attempt to recover his hereditary dominions, and succeeded in taking Sinope, Amisus, and some other towns of Pontus. But Julius Cæsar, after the defeat and death of Pompey, marched into Pontus, and, encountering the army of Pharnaces near the city of Zela, gained a complete victory; the facility with which it was obtained being expressed by the victor in those celebrated words, "*Veni, Vidi, Vici.*" (*Hirt.*, *Bell. Alex.*, c. 72.—*Plut.*, *Vit. Cæs.*—*Sueton.*, *Vit. Jul.*, c. 37.—*Dio Cass.*, 42, 47.) After his defeat, Pharnaces retired to the Bosphorus, where he was slain by some of his own followers. (*Appian, Bell. Mithrad.*, 120.—*Dio Cass.*, l. c.) He left a son named Darius, who was made king of Pontus for a short time by Antony, but he was soon deposed, and Polemo, son of Zeno of Apamea, was appointed in his stead. This person, who had the art to ingratiate himself alike with Antony, Augustus, and Agrippa, was made king of the eastern portion of Pontus, named from him Polemoniæus. Polemo was slain in an expedition against some barbarians of Sindice, near the Palus Mæotis;

but his widow, Pythodoria, was reigning in his stead at the time that Strabo wrote his Geography. (*Strab.*, 556, 578.—*Dio Cass.*, 53, 26.—*Id.*, 54, 24.)—Ptolemy divides Pontus into three districts, which he terms *Galaticus*, *Cappadocius*, and *Polemoniæus*; and, under the Byzantine emperors, the two former were included under the name of *Helenopontus*, derived from Helena, the mother of Constantine, as they had been usually comprehended before by the Romans themselves under that of Pontica Prima. (*Dio Cass.*, 51, 2.—*Sueton.*, *Vit. Ner.*, 18.—*Ptol.*, p. 126.—*Justin.*, *Novell.*, 28, 1.)—Pontus was chiefly a mountainous country, especially towards the northeast frontier. Here we have some of the highest table-land in Asia, whence flow the great streams of the Euphrates and Tigris, the Araxes and Phasis. The climate was consequently extremely bleak and severe, the soil rugged and barren, and the different tribes scattered over its surface wild and savage to the last degree. (*Xen. Anab.*, 5, 4.—*Strab.*, 548, *seq.*) But the western portion of the country, around the Halye, and the valleys of the Thermodon and Iris, were rich and fertile, and abounded in produce of every kind, and furnished the finest flocks and herds. There were also mines of salt, iron, and rock crystal; and the coast exhibited some large and flourishing Greek cities, possessed of good harbours, and having an extensive traffic with the other parts of the Euxine, the Hellespont, and the *Ægean*. (*Cramer's Asia Minor*, vol. 1, p. 256, *seqq.*)

PONTUS EUXINUS, the ancient name for the Black Sea. According to the common opinion, its earliest name was *Ἀἰετός* ("inhospitable"), in allusion to the character of the nations along its shores; and this appellation was changed to *ἑσπετός* ("hospitable"), when Grecian colonies had settled on these same coasts, and had introduced the usages of civilized life. Some Biblical commentators, however, think they discover the name of Euxine, or rather *Ἀἰετός*, in the Scripture term *Aschkenaz*. (*Rosenmüller, Schol. in Genes.*, 10, 3.)—The Pontus Euxinus is now probably in the same state that it was in the earliest historic age; the western part is shallow, but the eastern, which is very deep, has been attempted to be fathomed in some places without success. The water of that sea is, in many places, as fresh as that of the rivers which flow into it. The evaporation of the fresh water facilitates the formation of ice, which is not uncommon; the congelation is thus occasioned by the freshness of the water, and that large sea is sometimes frozen to a considerable distance from the shore.—The Pontus Euxinus is nothing more than a vast lake; it bears all the marks of one; flows, like those in North America, through a kind of river, which forms at first the narrow channel of Constantinople, or Thracian Bosphorus; it then assumes the appearance of a small lake, called the Propontis, or *Sea of Marmara*, passes towards the southwest, and takes anew the form of a large river, which has been termed the Hellespont, or *Dardanelles*. These channels resemble many other outlets of lakes; the great body of water that flows through so narrow an opening need not excite wonder, although it has given rise to various hypotheses. (*Vid. Mediterraneum Mare.*—*Malte-Brun, Geogr.*, vol. 6, p. 121, *Am. ed.*)

POPILIUS, I. M. Popilius Lænas, was consul B.C. 356, and in that same year defeated the Tiburtines, who had made a nocturnal incursion into the Roman territory, and had advanced to the city gates. (*Liv.*, 7, 12.) At a subsequent period he accused C. Licinius Stolo under his own law, and effected his condemnation. (*Liv.*, 7, 16.) He obtained the consulship a second time, B.C. 353; and a third time, B.C. 347, in which year he defeated the Gauls, who had made an irruption into the Latin territory, and obtained for this a triumph. (*Liv.*, 7, 23, *seq.*) Two years after this he was chosen consul for the fourth time. (*Liv.*, 7,

28.) He is said to have been the first of the Popilian family that bore the surname of Lænas, and this appellation is said to have been obtained as follows. Being at one time priest of Carmenta (*Flamen Carmentalis*), and conducting a public sacrifice in his sacerdotal robe, or *lena*, intelligence was brought him that a sedition had broken out among the commons; he hastened to the public assembly arrayed in his *lena*, and quelled the tumult by his authority and eloquence. (*Cicero, Brut.*, 14.)—II. M. Popilius Lænas, was consul 173 B.C. Having marched of his own accord, during the war with the Ligurians, into the territory of the Sæteliates, who had committed no sort of hostility against the Romans, and coming to an engagement with them, he obtained a complete victory, and sold those who had survived the battle into slavery. The senate immediately passed a decree, ordering him to restore the money which he had received from the sale of the Sæteliates, to set the latter at liberty, give them back their effects and arms, and immediately to quit the province. Popilius, however, disobeyed this mandate; and yet, notwithstanding this open contumacy, he proceeded to Rome, inveighed severely against the assembled senate, and then returned to his province. Being afterward accused for this outrage against the laws, he was sheltered from punishment by the influence of his brother. (*Virg. Popilius III.*) He afterward accompanied the consul Philippus to Macedonia as military tribune, B.C. 169. (*Liv.*, 40, 43.—*Id.*, 41, 14, *seq.*—*Id.*, 42, 7, *seqq.*—*Id.*, 44, 1.)—III. C. Popilius Lænas, brother of the preceding, attained to the consulship B.C. 173, and only signalized his administration of that office by his intrigues in favour of his brother when charged with official misconduct. (*Virg. Popilius II.*) Not long after this he was sent, with two other senators, to Egypt, on account of the differences subsisting between Cleopatra and Ptolemy Euergetes on the one hand, and Antiochus Epiphanes on the other. Antiochus was at the gates of Alexandria, and preparing to lay siege to the city when the Roman deputies arrived. The decree of the senate, which they communicated to him, was to the following effect: that Antiochus should make peace with Ptolemy and retire from Egypt; but, Antiochus wishing to elude it by evasive answers, Popilius haughtily drew a circle round him in the sand with a rod which he held in his hand, and ordered the monarch to give him an answer to carry home to the senate before he stirred out of the circle which had just been traced. The king was struck with astonishment, but, after a moment's reflection, promised to obey, and accordingly evacuated Egypt. (*Liv.*, 41, 18.—*Id.*, 42, 9, *seqq.*—*Id.*, 44, 19, *seqq.*—*Id.*, 45, 10.—*Vell. Pat.*, 12, 10.—*Justin.*, 34, 3.)—IV. A tribune, who commanded the party which slew Cicero. It is said that the orator had defended him at one time against a charge of parricide. This, however, some regard as a pure invention of the later grammarians, who sought for brilliant themes on which to declaim. (*Senec. Rhet.*, 3, *contros.* 17.)

POPILICOLA. *Virg. PUBLICOLA.*

POPPEA SABINA, I. daughter of Poppæus Sabinus, and wife of T. Ollius. She lived in the time of the Emperor Claudius, and was the most beautiful woman of her time, but disgraced herself by her scandalous excesses. Messalina, having become jealous of her, compelled her to destroy herself. (*Tacit., Ann.*, 11, 2.—*Id. ib.*, 11, 4.—*Id. ib.*, 13, 45.)—II. Daughter of the preceding, inherited all her mother's beauty and frailty. Her father was T. Ollius, who had been involved in the disgrace of Sejanus, and she preferred to his name, therefore, that of her maternal grandfather Poppæus Sabinus, who had borne the consulship, and had been graced with the insignia of a triumph. (*Tacit., Ann.*, 13, 45.) The young Poppæa united in herself every attraction of wealth, beauty, and noble

birth. She possessed all things, in fine, to borrow the words of Tacitus, except a virtuous heart. (*"Hæc mulieri cuncta alia fuere, præter honestum animum."* *Tacit.*, l. c.) She was first married to Rufus Crispinus, prefect of the prætorian cohorts under Claudius, and bore him a daughter; but, having been seduced by Otho, she left her husband and lived with the latter. Nero was now on the throne, and Otho was the companion of his debaucheries. Either through vanity or indiscretion, the charms of Poppæa were made a constant theme of eulogium by Otho in the presence of the emperor, until the curiosity of the latter was excited, and he became desirous of beholding her. His licentious spirit soon acknowledged the power of her charms, and the air of modest reserve assumed by this artful and abandoned woman only drew him the more effectually into her toils. Otho was put out of the way by being sent to Lusitania with the title of governor; and Poppæa now obtained over the emperor such an irresistible ascendancy, that he no longer listened to the admonitions of Seneca, or to the remonstrances of Burrhus. Having herself violated all the bonds of chastity and connubial faith, the mistress of the emperor wished to become his wife; but, as she could not hope to see the Empress Octavia repudiated while Agrippina lived, she employed every art of intrigue and falsehood upon the mind of her paramour, with the view of exciting suspicion against his mother, and thereby paving the way for that act of parricide which has left so indelible a stain upon his character. After the destruction of Agrippina, Nero divorced Octavia, and the unprincipled Poppæa was raised to the throne. The schemes of this wicked woman did not, however, end here. Fearful lest the mild virtues of Octavia might cause a return of affection on the part of Nero, she procured her banishment from Rome, on false testimony of adulterous conduct; and when, through fear of an insurrection of the people, the emperor was compelled to recall the daughter of Claudius, the artful Poppæa alarmed the fears of Nero by telling him that his former wife was at the head of a numerous party in the state, and the unfortunate Octavia was deprived of existence. In the year 63, Poppæa was delivered of a daughter, an event which threw Nero into transports of joy. He named the infant Claudia, and decreed to her and her mother the title of Augusta. The child, however, the subject of so many hopes, died at the end of four months, and the grief of Nero was as excessive as had been his joy at its birth. Poppæa herself survived her offspring only two years, having expired from a blow which she received from the foot of her brutal husband, when many months advanced in her pregnancy; A.D. 65. On returning to himself, Nero was the more afflicted at her death, since with her he lost the only hope he had entertained of an heir to his dominions. Her body was embalmed, and placed in the tomb of the Cæsars. The emperor himself pronounced her funeral eulogy, and not being able to praise her virtues, contented himself, as Tacitus remarks, with eulogizing her beauty, and the favours which fortune had heaped upon her.—No female ever carried to a greater extent the refinements and luxuries of the toilet. She is said to have been the first Roman lady that wore a mask on her face when going abroad, in order to protect her complexion from the rays of the sun. Whenever she made any excursion from Rome, she was followed by a train of 500 asses, whose milk furnished her with a bath for preserving the fairness and softness of her skin. She was the inventress also of a species of pomade, made of bread soaked in asses' milk, and laid over the face at night. (*Juvenal.*, 6, 487.—*Böttiger, Sabina.*, p. 14.)—Otho, who never ceased to cherish an attachment for Poppæa, caused her statues, which had been thrown down with those of Nero, to be replaced on their pedestals during the short period

that he was in power. (*Tacit., Ann.*, 13, 45.—*Id. ib.*, 15, 71.—*Id. ib.*, 13, 46.—*Id. ib.*, 14, 60.—*Id. ib.*, 15, 23.—*Id. ib.*, 16, 6, &c.)

POPÆUS SABINUS, the maternal grandfather of the Empress Poppæa. He held under Tiberius the government of Mœsia, to which were added Achaia and Macedonia. (*Tacit., Ann.*, 1, 80.) In A.D. 25, he obtained the insignia of a triumph for successes over the Thracian tribes. (*Tacit., Ann.*, 4, 46.) He also attained to the office of consul. Poppæus died A.D. 35. (*Tacit., Ann.*, 6, 39.)

POPULONIA (or **POPULONTUM**), a flourishing city of Etruria, on the coast, on a line with Vetulona. It was the naval arsenal of the Etrurians, and was the only considerable place which that nation founded immediately on the coast. In other instances they were prevented from doing this by the want of commodious havens, and through their fear of being exposed to the attacks of pirates. But the harbour of Populonium, now *Porto Baratto*, possessed peculiar advantages; it was secure and of great extent, and, from its proximity to the island of Elba, so rich in metals, of the highest importance; as the produce of the mines appears never to have been prepared for use in the island itself, but was always sent over to Populonium for that purpose. (*Aristot., de Mirab.*, p. 1158.—*Strabo*, 223.) Strabo has accurately described the site of Populonium from personal inspection; he tells us that it was placed on a lofty cliff that ran out into the sea like a peninsula. On the summit was a tower for watching the approach of the thunny fish. The real name of this city, as we may perceive from its numerous coins, was Pupluna, in which a strong analogy exists with some Etruscan names, such as Luna, and Vettluna, and probably others belonging to cities which we know only by their Latin names. (*Lenzi, Saggio, &c.*, vol. 2, p. 27.—*Cramer's Anc. Italy*, vol. 1, p. 188, *seqq.*)

PORCIA, a daughter of the younger Cato (Uticensis). She was first married to Bibulus, and, after his death, to her cousin Brutus. When the latter had taken part in the conspiracy against Cæsar, and strove to conceal from his wife the uneasiness which the fatal secret occasioned him, Porcia, having suspected that he was revolving in mind some difficult and dangerous enterprise, gave herself a severe wound in the thigh, which she concealed from her husband, but which brought on considerable fever. Brutus was much afflicted on her account, and, as he was attending her in the height of her suffering, she discovered to him the wound which she had inflicted on her own person, and, in assigning a motive for the deed, said that her object was to see whether she was proof against pain, and whether she had courage to share his most hidden secrets. The husband, struck with admiration of this heroic firmness, disclosed to her the conspiracy which was forming. According to one account, she ended her days, after the overthrow and death of Brutus, by holding burning coals in her mouth until she was suffocated. Another statement, however, made her to have died before her husband. (*Plut., Vit. Bruti.*) Valerius Maximus, however, says that she gave herself the wound after the secret had been imparted to her, and on the night after the assassination of Cæsar. (*Val. Max.*, 3, 2, 15.)

PORCIA LEX, *de civitate*, ordained that no magistrate should punish with death, or scourge with rods, a Roman citizen when condemned, but should allow him the alternative of exile. It was brought forward by M. Porcius Leca, tribune of the commons, A.U.C. 557, and was, in fact, only a renewal of the Valerian law, which had been twice renewed previously; once by Valerius Publicola and Horatius (A.U.C. 305), and again by Valerius Corvus (A.U.C. 453). The Porcian law strengthened it by increasing the penalty against infraction. But even this Porcian law, the existence of which is attested by a coin, fell into neglect, and is

supposed, from a passage in Aulus Gellius (10, 3), to have been last revived by Sempronius Gracchus. It referred probably to those who had been condemned by a magistrate in the first instance, not to such as had been cast in an appeal from his sentence. (*Fuss, Rom. Antiq.*, p. 75, *seq.*—*Liv.*, 10, 9.—*Sallust, Bell. Cat.*, 51.)

PORCIUS, Latro, a rhetorician, styled by Quintilian (10, 6) "*Imprimis clari nominis professor.*" He is supposed by some to have been the author of a declamation against Cicero, which has come down to us which others ascribe to Sallust or to Vibius Crispus. He killed himself while labouring under a quarrelsome (A.U.C. 750.—B.C. 4).

PORPHYRION, son of Cælus and Terra, one of the giants who made war against Jupiter, by whom, in conjunction with Hercules, he was slain. (*Apollod.*, 1, 6, 2.—*Horat., Od.*, 3, 4, 54.)

PORPHYRIUS, a celebrated Plotinian philosopher, of the Platonic school, a learned and zealous supporter of pagan theology, and an inveterate enemy to the Christian faith. He was a native of Tyre, and was born A.D. 233. His father very early introduced him to the study of literature and philosophy under the Christian preceptor Origen, probably while the latter was teaching at Cæsarea in Palestine. His juvenile education was completed at Athens by Longinus, whose high reputation for learning and genius brought him pupils from many distant countries. Under this excellent instructor he gained an extensive acquaintance with antiquity, improved his taste in literature, and enlarged his knowledge of the Plotinian philosophy. It is doubtless, in a great measure, to be ascribed to Longinus, that we find so many proofs of erudition, and so much elegance of style, in the writings of Porphyry. His original name was Melek, which in Syriac signifies king, and hence he was sometimes called *king*. Afterward Longinus changed his name to Porphyryus, from *porphura*, the Greek for purple, a colour usually worn by kings and princes. From this time we have little information concerning this philosopher, till we find him, about the thirtieth year of his age, becoming at Rome a disciple of Plotinus, who had before this time acquired great fame as a teacher of philosophy. Porphyry was six years a diligent student of the eclectic system, and became so entirely attached to his master, and so perfectly acquainted with his doctrine, that Plotinus esteemed him one of the greatest ornaments of his school, and frequently employed him in refuting the objections of his opponents, and in explaining to his younger pupils the more difficult parts of his writings: he even intrusted him with the charge of methodising and correcting his works. The fanatical spirit of philosophy, to which Porphyry addicted himself, concurred with his natural propensity towards melancholy to produce a resolution, which he formed about the thirty-sixth year of his age, of putting an end to his life; purposing hereby, according to the Platonic doctrine, to release his soul from her wretched prison, the body. From this mad design he was, however, dissuaded by his master, who advised him to divert his melancholy by taking a journey to Sicily, to visit his friend Probus, an accomplished and excellent man, who lived near Lilybæum. Porphyry followed the advice of Plotinus, and recovered the vigour and tranquillity of his mind. After the death of Plotinus, Porphyry, still remaining in Sicily, appeared as an open and implacable adversary to the Christian religion. Some have maintained that in his youth he had been a Christian; but of this there is no sufficient proof. It is not improbable, that while he was a boy under the care of Origen, he gained some acquaintance with the Jewish and Christian scriptures. He wrote fifteen different treatises against Christianity, which the Emperor Theodosius ordered to be destroyed: an injudicious act of zeal, which the real friends of Chris-

tianity, no less than its enemies, will always regret; for truth can never suffer by a fair discussion; and falsehood and calumny must always, in the issue, serve the cause they are designed to injure. The spirit of those writings of Porphyry which are lost, may be in some measure apprehended from the fragments which are preserved by ecclesiastical historians. Many able advocates for Christianity appeared on this occasion, the principal of whom were Methodios, Apollinarius, and Eusebius. So vehement and lasting was the indignation which was excited against the memory of Porphyry, that Constantine, in order to cast the severest possible censure upon the Arian sect, published an edict ranking them among the professed enemies of Christianity, and requiring that they should, from that time, be branded with the name of Porphyrians. Porphyry, after remaining many years in Sicily, returned to Rome, and taught the doctrines of Plotinus; pretending to be not only a philosopher, endued with superior wisdom, but a divine person, favoured with supernatural communications from Heaven. He himself relates (*Vit. Plot.*, c. 23), that, in the sixty-eighth year of his age, he was in a sacred ecstasy, in which he saw the Supreme Intelligence, the God who is superior to all gods, without an image. This vision Augustine supposes to have been an illusion of some evil spirit: it was more probably the natural effect of a heated imagination; unless, indeed, it be added to the long list of fictions with which the writings of Porphyry abound. He died about 304 A.D. Of his numerous works, the only pieces which have escaped the depredations of time (except sundry fragments, dispersed through various authors) are his "*Life of Pythagoras*" (*Πυθαγόρου βίος*), a book "*On the Cave of the Nymphs in the Odyssey*" (*Περὶ τοῦ ἐν Ὀδυσσείᾳ τῶν Νυμφῶν ὄντος*), "*Homeric Questions*" (*Ὅμηρικὰ ζητήματα*), a fragment "*On the Styx*" (*Περὶ Στυγὸς*), "*An Epistle to Anebo, the Egyptian*" (*Πρὸς Ἀνεβὸν τὸν Αἰγύπτιον*), a treatise "*On the Five Predicables*" (*Περὶ τῶν πέντε πρὸς ὅντων*), commonly prefixed to the logical works of Aristotle, "*Thoughts on Intelligibles*" (*Πρὸς τὰ νοητὰ Ἀπορίσμοι*), a treatise "*On Abstinence from Animal Food*" (*Περὶ ἀποχῆς τῶν ἐπιφύγων*), a "*Life of Plotinus*" (*Περὶ Πλωτίνου βίου*), "*A Commentary on the Harmonics of Ptolemy*" (*Ἐκ τῶ Ἀρμονικῶ Πτολεμαίου ὑπόμνημα*), and a few other unimportant pieces. (*Enfield's History of Philosophy*, vol. 2, p. 65, seq.—*Schöll, Hist. Lit. Gr.*, vol. 5, p. 131, seq.) The best edition of the *Life of Pythagoras* is that given by Kieseling at the end of his edition of Iamblichus's *Life of Pythagoras* (*Lips.*, 1818, 2 vols. 8vo); of the treatise on Abstinence from Animal Food, the best is that of Rheer (*Lugd. Bat.*, 1792, 4to), which contains also in the same volume Van Goen's edition of the work on the Cave of the Nymphs. The *Life of Plotinus* is given with the edition of the *Enneades* of the latter.

PORSENNA or PORSENA (called also Lars Porsenna), was Lucumo of Clusium, and the most powerful of all the Etrurian monarchs of his time. Tarquinius Superbus, after being driven from his throne, finding the inability of the Veientians and Tarquinians to replace him, applied to Porsenna. This monarch raised a large army and marched towards Rome. He was met by the Romans near the fortress on the Janiculan Hill; but almost at the first encounter they took to flight, and the Etrurians pursued them impetuously as they sought safety by crossing the Pons Sublicius. It was then that the gallant feat of Cocles was performed, who, seeing the danger of the city's being taken at once if the enemy should enter it along with the flying Romans, posted himself on the bridge, made head against the pursuers, and, calling on his countrymen to cut down the part of the bridge between him and the city, plunged into the Tiber when this was effected, and swam in safety to the opposite side.

Porsenna, however, retained possession of the Janiculum, and, sending his army across the river in boats, pillaged the country, cut off all supplies, and reduced Rome to the utmost distress by famine. In this emergency, Caius Mutius undertook to rid his country of this dangerous enemy. He made his way into the camp of Porsenna, and entered into the very prætorium, where he slew the king's secretary, mistaking him, from his appearance, for the monarch himself. He was immediately seized and brought before Porsenna. Here he acknowledged the deed, and told the king that his danger was by no means over. Porsenna threatened him with death by torture unless he divulged the plots by which his life was threatened. Mutius immediately stretched forth his right hand, and thrust it into the fire of an altar which was burning before the king, saying, "Behold how much I regard your threat of torture." He held it in the flames till it was consumed, without a feature of his stern countenance indicating that he felt the pain. Porsenna, struck with his noble daring and contempt of suffering, commanded him to be set at liberty; and Mutius then told him, in requital for his generosity, that he was only one of three hundred patrician youths who had vowed to kill the monarch, and that he must prepare for their attempts, which would be not less daring than his own. From that time Mutius was called *Scævola*, or "left-handed," because he had thus lost the use of his right hand. Alarmed by the dangers which threatened him from foes so determined, Porsenna offered terms of peace to the Romans. A treaty was at length concluded, according to which Porsenna ceased to maintain the cause of the Tarquins; but demanded the restitution of all the lands which the Romans had at any time taken from the states of Etruria, and that twenty hostages, ten youths and ten maidens, of the first houses, should be given up to him for security that the treaty would be faithfully observed. The legend relates that Clodia, one of the hostages, escaped from the Etrurian camp, swam across the Tiber on horseback, amid showers of darts from her baffled pursuers; but that the Romans, jealous of their reputation for good faith, sent her back to Porsenna. Not to be ostentatious in generosity, he gave to her and her female companions their freedom, and permitted her to take with her half of the youths; while she, with the delicacy of a Roman maiden, selected those only who were of tender years. The Romans then, at the final settlement of the treaty, sent, as a present to Porsenna, an ivory throne and sceptre, a golden crown, and a triumphal robe, the offerings by which the Etruscan cities had once acknowledged the sovereignty of Tarquinius. When Porsenna quitted Rome, he entered the Latin territories, and attacked Aricia, the chief town of Latium. The Aricians, being aided by the other Latin cities, and also by the Cumæans, under the command of Aristodemus, defeated the Etruscans in a great battle, and put a stop to their aggressions. The Romans received the fugitives from Porsenna's army, and treated them with great kindness; in requital of which, Porsenna restored to them the lands which he had conquered beyond the Tiber. (*Liv.*, 2, 2, &c.—*Plut.*, *Vit. Public.*—*Florus*, 1, 10.)—Such is an outline of the poetical legends respecting the great war with Porsenna. Niebuhr has examined the subject with great ability, and has been followed by Arnold and other writers. The war with Porsenna was in reality a great outbreak of the Etruscan power upon the nations southward of Etruria, in the very front of whom lay the Romans. The result of the war is, indeed, as strangely disguised as Charlemagne's invasion of Spain is in the Romances. Rome was completely conquered; all the territory which the kings had won on the right bank of the Tiber was now lost. Rome itself was surrendered to the Etrurian conqueror (whence the language of Tacitus: "*Salem Jovis optimi maximi*,"

... *quam non Porsetenna, dedita urbe, neque Galli cepta, temerare potuissent.*"—*Hist.*, 3, 79; his sovereignty was fully acknowledged by the offerings of the ivory throne, the sceptre, crown, and triumphal robe, the usual badges of submission among the Etrurian cities, as we have already remarked. (*Dion. Hal.*, 5, 34.) The Romans, moreover, gave up their arms, and only recovered their city and territory on condition of their renouncing the use of iron, except for implements of husbandry. Hence the language of Pliny (34, 14): "*In fadere, quod expulsis regibus populo Romano dedit Porsetenna, nominatim comprehensum invenimus, ne ferro nisi in agricultura uterentur.*" In this latter statement we have an incidental hint of the Eastern origin and customs of the Etrurians; in proof of which, reference may be made to the way in which the Philistines tyrannized over the Israelites during one of their periods of conquest. (Compare 1 *Samuel*, xiii, 19, *seqq.*—*Niebuhr, Rom. Hist.*, vol. 1, p. 475, *seqq.*—*Arnold's History of Rome*, vol. 1, p. 125, *seq.*)—The remains of Porsetenna were interred in a splendid mausoleum near Clusium, for some remarks on which consult the article on Clusium.

POETUNUS, a sea-deity. (*Vid.* Melicerta.)

PORUS, king of a part of northern India, between the Hydaspes and Acesines, and remarkable for stature, strength, and dignity of mien. When Alexander invaded India, Porus collected his forces on the left bank of the Hydaspes to defend the passage. The stream was deep and rapid, and, at the time Alexander reached it, was perhaps little less than a mile broad. The Macedonian monarch, however, crossed the river by stratagem, at the distance of a day's march above his camp, and defeated the son of Porus. In a subsequent action he gained a decisive victory over Porus himself, who was taken prisoner. On being brought into the presence of Alexander, all that Porus would ask of his conqueror was to be treated as a king; and when Alexander replied that this was no more than a king must do for his own sake, and bade him make some request for himself, his reply was still, that all was included in this. His expectations could scarcely have equalled the conqueror's munificence. He was not only reinstated in his royal dignity, but received a large addition of territory. Yet it was certainly not pure magnanimity or admiration of his character that determined Alexander to this proceeding. His object seems to have been, in some degree, to secure the Macedonian ascendancy in the Punjab by a stroke of policy, and to adjust the balance of power between Porus and Taxiles, who might have become formidable without a rival. (*Pfuf., Vit. Alex.*—*Arrian, Exp. Al.*, 5, 8, &c.—*Curt.*, 8, 8, &c.—*Thirlwall's Greece*, vol. 7, p. 22.)

POSIDŒUM, I. a promontory in Caria, between Miletus and the Iassian Gulf. (*Mela*, 1, 17.)—II. A promontory of Chios, nearest the mainland of Ionia.—III. A promontory in the northern part of Bithynia, now *Tschautsche-Aghisi*, &c.—The name implies a promontory sacred to Neptune (*Ποσειδών*).

POSIDON (*Ποσειδών*), the name of Neptune among the Greeks. (*Vid.* Neptuneus.)

POSIDONIA. *Vid.* Pæstum.

POSITONIUS, I. a Stoic philosopher, a native of Apamea in Syria, and the last of that series of Stoics which belongs to the history of the Greek philosophy. He taught at Rhodes with so great reputation, that Pompey came hither, on his return from Syria, after the close of the Mithradatic war, for the purpose of attending his lectures. When the Roman commander arrived at his house, he forbade his licitor to knock, as was usual, at the door. The hero, who had subdued the Eastern and Western world, paid homage to philosophy by lowering the fasces at the gate of Posidonius. When he was informed that he was at that

time sick of the gout, he visited him in his confinement, and expressed great regret that he could not attend upon his school. Upon this, Posidonius, forgetting his pain, gratified his guest by delivering a discourse in his presence, the object of which was to prove that nothing is good which is not honourable. (*Cic., Tusc. Quæst.*, 2, 25.—*Plin., Epist.*, 6, 30.) Posidonius studied natural as well as moral science; and, in order to represent the celestial phenomena, he constructed a kind of *planetarium*, by means of which he exhibited the apparent motions of the sun, moon, and planets round the earth. (*Cic., N. D.*, 2, 34.) Cicero says that he himself attended upon this philosopher (*N. D.*, 1, 3); and a later writer asserts, that he was brought to Rome by Marcellus, A.U.C. 702. (*Suid.*, s. v.—*Enfield's Hist. Philos.*, vol. 1, p. 360, *seq.*) Posidonius was also known as an historical writer, having composed a continuation of the history of Polybius, under the title of "A History of the events that have occurred subsequent to Polybius" (*Ἱστορία τῶν μετὰ Πολύβιον*). It appears to have extended to B.C. 63, or the close of the Mithradatic war. This work is lost, and, though its loss is much to be regretted, since we have no historians for the period of which it treated, yet our disappointment is somewhat diminished by the consideration that Plutarch drew from it a large part of his materials for the lives of Marius, Sylla, and Sertorius. (*Schöll, Hist. Lit. Gr.*, vol. 4, p. 76.) The fragments of Posidonius were collected and edited by Bake, *Lugd. Bat.*, 1810, 8vo.—II. An astronomer and mathematician of Alexandria. He was the disciple of Zeno, and contemporary with, or else a short time posterior to, Eratosthenes. He probably flourished about 260 B.C. He is particularly celebrated on account of his having employed himself in endeavouring to ascertain the measure of the circumference of the earth by means of the altitude of a fixed star. According to Cleomedes, he concluded that it was 240,000 stadia; but, according to Strabo, he made it 180,000 only. He is the reputed author of a treatise on military tactics, mentioned in the first chapter of Ælian's work on the same subject. No fragments of his writings remain. (Consult in relation to him, Delambre, in *Biogr. Univ.*, vol. 35, p. 481, and the work of the same writer on the History of Ancient Astronomy, vol. 1, p. 219, 223, &c.)

POSTVERTA, a goddess at Rome, who presided over painful travails of women. (*Ovid, Fast.*, 1, 633.—*Varro, ap. Gell., N. A.*, 16, 16.—*Gruter, Inscript.*, p. 60, n. 9.)

POTAMIDES, nymphs who presided over rivers and fountains, as their name (derived from *ποταμός*, "a river") implies.

POTAMOS, a philosopher of Alexandria, whose era is not determined. While he selected what he judged most tenable from every system, he pretended to form of these extracts a separate doctrine of his own; concerning which we have not sufficient details to enable us to judge. (*Diag. Laert.*, 1, 21.—*Tenemann, Manual of Phil.*, p. 172.)

POTAMOS, a borough of Attica, connected with the tribe Leontia, where was the tomb of Ion, the son of Xanthus. (*Pausan.*, 1, 31.) The remains of Potamos are laid down in modern maps at the mouth of a small river to the south of port Raphia. (*Cramer's Ancient Greece*, vol. 2, p. 381.)

POTIDÆA, a city of Macedonia, situated on the isthmus connecting the peninsula of Pallene with the mainland. It was founded by the Corinthians (*Thucyd.*, 1, 56.—*Scymn., ch.*, v. 628), though at what period is not apparent; it must, however, have existed some time before the Persian war, as we know from Herodotus that it sent troops to Plataea (9, 28), having already surrendered to the Persians on their march into Greece. (*Herod.*, 7, 123.) But, after the battle

of Salamis, it closed its gates against Artabazus, who, at the head of a large detachment from the army destined to act under Mardonius, had escorted Xerxes to the Hellespont. On his return, this general laid siege to the place, of which he would probably have obtained possession, through the treachery of one of its citizens, had not the plot been actually discovered. The attempt subsequently made against Potidæa by the Persians proved very disastrous, from a sudden influx of the sea, which occurred as the troops were crossing the bay to attack the town, and which occasioned the loss of a great part of the Persian forces, obliging the remainder to make a hasty retreat. (*Herod.*, 8, 127, *seqq.*) After the termination of this war, Potidæa appears to have fallen under the subjection of the Athenians, as it was then termed a tributary city. We learn from Thucydides, that the harsh conduct of Athens towards the Potidæans, who were naturally inclined to the Dorian interest, compelled them to revolt, and to seek the protection of Perdiccas and the Corinthians (1, 56, *seqq.*). After a severe action, in which the Athenians were finally victorious, the town was regularly besieged by both sea and land; but it was not until near the conclusion of the second year that it capitulated, when the Athenian troops, greatly diminished by the plague, which had been conveyed thither from Athens, entered the place, the inhabitants being allowed to withdraw whither they chose. It was afterward recolonized from Athens. (*Thucyd.*, 2, 70.) On the occupation of Amphipolis, and other towns of Thrace, by Brasidas, that general attempted to seize upon the garrison of Potidæa; but the attack having failed, he withdrew his forces from the walls. (*Thucyd.*, 4, 135) Many years after this event, Potidæa appears to have revolted from Athens (*Xen., Hist. Gr.*, 5, 216); as we learn from Diodorus that it was taken by Timotheus, general of that republic. It was subsequently occupied by Philip of Macedon, who allowed the Athenian troops to return home without ransom.—When Cassander ascended the throne, he founded a new city on the neck of the peninsula of Pallene; thither he transferred the inhabitants of several neighbouring towns, and, among others, those of Potidæa, and the remnant of the population of Olynthus. Cassandrea is said to have surpassed all the Macedonian cities in opulence and splendour. From Procopius we learn that it fell a prey to the barbarian Huns, who left scarcely a vestige of it remaining. (*Bell. Pers.*, 2, 4.—*De Ædif.*, 4, 3.—*Cramer's Anc. Greece*, vol. 1, p. 244, *seqq.*)

Potrius. Vid. Pinarius.

POTNIÆ, a city of Boeotia, about ten stadia to the southwest of Thebes. It had a sacred grove dedicated to Ceres and Proserpina. (*Xen., Hist. Gr.*, 5, 451.) It was here that Glaucus was said to have been torn in pieces by his infuriated mares. (*Strabo*, 409.—*Virg., Georg.*, 3, 267.) The site of this place, already in ruins when Pausanias wrote, corresponds nearly with that occupied by the village of *Taki*. (*Gell's Itin.*, p. 110.) Strabo informs us, that some authors regarded Potniæ as the Hypothebæ of Homer. (*Il.*, 2, 605.)

PRÆNESTE, now *Palustrina*, an ancient city of Latium, southeast of Rome. Strabo makes the intervening distance 25 miles (200 stadia); but the Itineraries give, more correctly, 23 miles. Its citadel is described by Strabo as remarkable for its strength of position. It stood on the brow of a lofty hill which overhung the city, and was cut off from the prolongation of the chain by a narrow slip of inferior elevation. The origin of Præneste, like that of many of the ancient towns in Italy, is fabulous. According to some, it was founded by Cæculus, the son of Vulcan (*Virg., Æn.*, 7, 678); while others ascribe it to a chief of the name of Prænestus, grandson of Ulysses and Circe. (*Zenodot., Troezen., ap. Steph. Byz.*) Strabo, how-

ever, tells us more plainly that it claimed a Greek origin, and had been named formerly *Πολιστοῦρα* (238). Pliny (8, 5) also observes that it was once called *Stephane*. We may infer from Dionysius (1, 31) that Præneste was afterward colonized by Alba. It shared the fate of the other Latin towns, in becoming subject to Rome, upon the failure of the attempts made in common to assist the family of Tarquin. (*Liv.*, 2, 19.) Subsequently we find the Prænestini oftener uniting with the Volsci and other enemies in their attacks on Rome, than remaining firm in their allegiance to that power. (*Liv.*, 6, 27.) They were defeated, however, by T. Quinctius Cincinnatus, near the river Allia, and eight of their towns and castles fell into the victor's hands, when they thought proper to submit. (*Id.*, 6, 29.) Again they revolted, and were again conquered by Camillus. (*Id.*, 8, 13.)—The strength of Præneste rendered it a place of too great importance to be overlooked by the contending parties of Sylla and Marius. It was induced to join the cause of the latter by Cinna, and, during the short success which that faction obtained, was its strongest hold and support. But, on the return of Sylla from the war against Mithradates, Præneste had soon reason to repent the part it had taken. The younger Marius, defeated by that victorious commander, was soon obliged to take refuge within its walls; and, when all attempts on the part of his confederates failed in raising the siege, he preferred to die by the sword of one of his own soldiers than fall into the hands of his adversaries. Præneste was compelled to yield to the victors, who did not fail to satisfy their thirst of vengeance by a bloody massacre of the unfortunate inhabitants, and the entire plunder of their town, which finally was sold by auction. (*Appian, Bell. Civ.*, 1, 94.—*Plut., Vit. Syll.—Flor.*, 3, 21.) It survived, however, these disasters, and, as it would seem, gathered strength from a colony of those very troops which had been so instrumental in hastening its downfall. Even Sylla himself, as if to make some atonement for his cruelty, employed himself in repairing and embellishing one of its public edifices, the famous temple of Fortune, a goddess whose protection he specially acknowledged. Præneste was again threatened in the tumult excited by the seditious Catiline; but, as he himself boasts, was saved by the vigilance and foresight of Cicero. (*Cat.*, 1, 3.) In the wars of Antony and Octavianus, it was occupied by Fulvia, wife of the former, and became the chief hold of that party. But it does not appear to have suffered much in the contests.—But the pride and boast of Præneste was the temple of Fortune, which has already been alluded to. Both historians and poets make mention of its celebrity, as well as of the magnificence of its structure. Cicero, in his treatise on Divination (2, 41), alludes more than once to the antiquity of the oracle, known by the name of the *Prænestina sortes*; and relates, that when the celebrated Carneades came to Rome and visited Præneste, he was heard to declare that he had never seen a more fortunate Fortune than the goddess of that city. From this anecdote, it is evident that this temple was much more ancient than the time of Sylla, who has been erroneously supposed by some to have erected it. The veneration in which this temple was held is also apparent from the privilege which it enjoyed of affording an asylum to criminals and fugitives. (*Polyb.*, 6, 11.) Sylla, however, certainly beautified the edifice; for Pliny says, the first mosaic pavement (*lithostrata*) introduced into Italy, was made by order of that general for the temple of Fortune at Præneste. (*Plin.*, 36, 25.)—Whether the famous *Barberini* pavement, which undoubtedly was taken from the ruins of this building, be the same as that of Sylla, is very doubtful. Suetonius tells us that Augustus often made excursions from Rome to Præneste, but generally employed two days in journeying thither. (*Aug.*, 37.)—

Among the productions of the territory of Praeneste, none are so often remarked as its walnuts. (*Cat., R. R.*, 8.) Hence the Praenestini are sometimes nicknamed *Nuculae*, especially by Cicero, who quotes Lucilius as his authority for so doing. (*De Orat.*, 2, 262.) But Festus accounts for the name in another manner; he says, the Praenestini were so called from their countrymen having subsisted on walnuts when besieged by Hannibal in Casilinum, the garrison of which they formed, in the second Punic war. (*Liv.*, 23, 17.—*L.*, 19.) It may be observed, that the Praenestini appear to have had some peculiarities of idioms which distinguished them from their neighbours. This is seen from Festus (s. v. *Tammodo*).—*Plautus, Truc.*, 3, 2.—*Quintil., Inst. Or.*, 1, 5.—*Cramer's Anc. Italy*, vol. 2, p. 66, *seqq.*)

PRAETORIA, or **AUGUSTA PRAETORIA**, a city of Cisalpine Gaul, in the territory of the Salassi. It was built on the site occupied by the camp of Terentius Varro, when that commander was sent by Augustus to repress the plundering movements of the Salassi and to seize upon their country. Augustus honoured the rising colony by giving it the name of Augusta Praetoria. (*Strabo*, 205.) It is now known as *Aosta*, which gives its name to the fine valley in which it lies, and where several remains of the ancient city are still to be seen. According to Pliny (8, 10), Augusta Praetoria was reckoned the extreme point of Italy to the north. (*Cramer's Anc. Italy*, vol. 1, p. 50.)

PRATINAS, a native of Phlius, contemporary with Æschylus, and a dramatic poet of considerable talent. He once obtained a tragic victory. But the manifest pre-eminence of the youthful Æschylus probably deterred the Phliasian from continuing to cultivate the graver form of the art, and led him to contrive a novel and mixed kind of play. Borrowing from tragedy its external form and mythological materials, Pratinas added a chorus of Satyrs, with their lively songs, gestures, and movements. This new composition was called the *Satyrical Drama*, of which he must therefore be regarded as the inventor. (*Suid.*, s. v. *Πρατίνης*.—*Canab., Sat. Poet.*, p. 122, *seqq.*) Pratinas, according to Suidas, exhibited fifty dramas, of which thirty-two were satyrical. On one occasion, when he was acting, his wooden stage gave away, and, in consequence of that accident, the Athenians built a stone theatre. The Phliasians seem to have taken great delight in the dramatic performances of their countryman (*Schneider, de Orig. Trag.*, p. 90), and, according to Pausanias (2, 13), erected a monument in their market-place in honour of "Aristias, the son of Pratinas, who, with his father, excelled all except Æschylus in writing satyrical dramas." Pratinas wrote also *Hyporchemes*. (*Athenaeus*, 14, p. 617, c.—*Theatre of the Greeks*, p. 61, 4th ed.)

PRAXAGORAS, an Athenian, who flourished about 345 A.D. At the age of nineteen, he published a *History of the Kings of Attica*, and, three years after, the *Life of Constantine*, in which he speaks favourably of that prince, a circumstance which would show that Praxagoras was not a very bigoted pagan. He wrote also a *Life of Alexander the Great*. His works are lost. (*Schöll, Hist. Lit. Gr.*, vol. 6, p. 335.)

PRAXITELES, a statuary and sculptor of the greatest eminence, who flourished together with Euphranor, about Olympiad 104, B.C. 364. The city of his birth is uncertain. Cedrenus (*Annal.*, 265) notices him as a native of Cnidus; but this is evidently a mistake, arising perhaps from the previous mention of the statue of Venus at Cnidus. Meyer (*ad Winck. Op.*, 6, 2, 162) contends that he was a native of Andros, and adduces in support of this opinion an epigram of Damagetos. (*Anthol. Pal.*, 7, 355.) But no one who peruses the piece in question, free from the influence of preconceived opinion, can view it as establishing this conclusion. The writer of the lines speaks,

indeed, of some Praxiteles of Andros, but the name Praxiteles was exceedingly common among the Greeks. The most probable opinion is, that Praxiteles was a native of Paros. (*Sillig, Dict. Art.*, p. 107.)—In praising Praxiteles as an original inventor, as the discoverer of a new style, writers very generally have mistaken the influence exercised by his genius upon the progress and character of sculpture. Finding the highest sublimity in the more masculine graces of the art already reached; perceiving, also, that the taste of his age tended thitherward, he resolved to woo extensively the milder and gentler beauties of style. In this pursuit he attained to eminent success. None ever more happily succeeded in uniting softness with force, or elegance and refinement with simplicity: his grace never degenerates into the affected, nor his delicacy into the artificial. He caught the delightful medium between the stern majesty which awes, and the beauty which merely seduces; between the external allurements of form, and the colder, but loftier charm of intellectuality. Over his compositions he has thrown an expression spiritual at once and sensual; a voluptuousness and modesty which touch the most insensible, yet startle not the most retiring. The works that remain of this master, either in originals or in repetitions—the *Faun*; the *Thespian Cupid*, in the museum of the Capitol; the *Apollo with a lizard*, one of the most beautiful, as well as difficult, specimens of antiquity—abundantly justify this character. Of the works that have utterly perished, the nude and draped, or *Coan* and *Cnidian Venus* of Praxiteles, fixed each a standard which subsequent invention dared scarcely to alter. Indeed, he appears to have been the first, perhaps the sole master, who attained to the true ideal on this subject, in the perfect union of yielding feminine grace with the dignity of intellectual expression. The *Venus of Cnidus*, in her representative the Medicean, still enchants the world. (*Memes, History of the Fine Arts*, p. 63.) An enumeration of the works of Praxiteles may be found in *Sillig (Dict. Art.*, p. 108, *seqq.*). For some remarks relative to the *Cnidian Venus*, consult the article *Cnidus*; and for the story of the *Cupid*, *vid. Phryne*.

PRIAMIDES, a patronymic applied to Paris, as being son of Priam. It is also given to Hector, Deiphobus, and all the other children of the Trojan monarch. (*Ovid, Her.—Virg., Æn.*, 3, 295, &c.)

PRIAMUS, the last king of Troy, was son of Laomedon. When Hercules took the city of Troy (*vid. Laomedon*), Priam was in the number of his prisoners; but his sister, Hesiione, redeemed him from captivity, and he exchanged his original name of Podarces for that of *Priam*, which signifies *bought* or *ransomed*. (*Vid. Hesiione*, towards the close of that article, and also *Podarces*.) He was placed on his father's throne by Hercules, and employed himself with well-directed diligence in repairing, fortifying, and embellishing the city of Troy. He had married, by his father's orders, Ariaba, whom now he divorced for Hecuba, the daughter of Dymas the Phrygian (*Il.*, 16, 718), or, according to others, of Cisseus. (*Eurip., Hec.*, 8.) Hecuba bore him nineteen children (*Il.*, 24, 496), of whom the chief were, Hector, Paris or Alexander, Deiphobus, Helenus, Troilus, Polites, Polydorus, Cassandra, Creusa, and Polyxena. After he had reigned for some time in the greatest prosperity, Priam expressed a desire to recover his sister Hesiione, whom Hercules had carried into Greece, and married to Telamon, his friend. To carry this plan into execution, Priam manned a fleet, of which he gave the command to his son Paris, with orders to bring back Hesiione. Paris, to whom the goddess of Beauty had promised the fairest woman in the world (*vid. Paris*), neglected, in some measure, his father's injunctions, and, as if to make reprisals upon the Greeks, he carried away Helen, the wife of Menelaus, king of Sparta, during the absence of

her husband. This violation of hospitality kindled the flames of war. All the suitors of Helen, at the request of Menelaüs (*vid.* Menelaüs), assembled to avenge the abduction of his spouse, and the combined armament set sail for Troy. Priam might have averted the impending blow by the restoration of Helen; but this he refused to do when the ambassadors of the Greeks came to him for that purpose. Troy was accordingly beleaguered, and frequent skirmishes took place, in which the success was various. The siege was continued for ten successive years, and Priam had the misfortune to see the greater part of his sons fall in defence of their native city. Hector, the eldest of these, was the only one upon whom now the Trojans looked for protection and support; but he, too, fell a sacrifice to his own courage, and was slain by Achilles. The father thereupon resolved to go in person to the Grecian camp, and ransom the body of the bravest of his children. The gods interested themselves in his behalf, and Mercury was directed to guide the aged monarch in safety amid the dangers of the way, and conduct him to the tent of Achilles. The meeting of Priam and Achilles was solemn and affecting. The conqueror paid to the Trojan monarch that attention and reverence which was due to his dignity, his years, and his misfortunes; and Priam, in a suppliant manner, addressed the prince whose hands had robbed him of the greatest and best of his sons. Achilles was moved by his tears and entreaties. He restored Hector, and permitted Priam a truce of 12 days for the funeral of his son. Some time after, Troy was betrayed into the hands of the Greeks by Antenor and Æneas, and Priam was slain by Neoptolemus, the son of Achilles, at the foot of the altar of Jupiter Herceus, at which that prince had killed the wounded Polites, one of the sons of Priam, who, after the example of his father and mother, had fled thither for protection during the burning of the city. (*Hom., Il., 24, 139, seqq.—Virg., Æn., 2, 507, &c.—Horat., Od., 10, 14.—Hygin., fab., 110.—Q. Smyrn., 15, 226.*)

PRIAPUS, I. a deity introduced at a comparatively late period into the Grecian mythology. He was a rural god, worshipped by the people of Lampsacus, a city on the Hellespont famous for its vineyards. Priapus was not, as is supposed, from the employment usually assigned him by the Romans after they had adopted his worship, merely the god of gardens, but of fruitfulness in general. "This god," says Pausanias, "is honoured elsewhere by those who keep sheep and goats, or stocks of bees, calling him the son of Bacchus and Venus." (*Pausan., 9, 31.*) Fishermen also made offerings to him, as the deity presiding over the fisheries (*Anthol., 6, 33, 190, 192*); and in the Anthology, Priapus of the haven (*Αἰνεῖται*) is introduced, giving a pleasing description of the spring, and inviting the mariners to put to sea. It was fabled that Priapus was the son of Venus by Bacchus, whom she met on his return from his Indian expedition at the Lampæcene town Aparnis. Owing to the malignity of Juno, he was born so deformed that his mother was struck with horror and renounced (*ἀρνεῖται*) him. (*Schol. ad Apoll. Rhod., 1, 932.*) Others said that he was the son of Bacchus by Chione, or a Naiad (*Schol. ad Theocr., 1, 21*); others, that he had a long-eared father, Pan or a satyr, perhaps, or it may be his own sacred beast, the ass. (*Afran., ap. Macrob., Sat., 6, 6.—Ovid., Fast., 1, 391.—Id. ib., 6, 345*); others gave him Mercury or Adonis (*Hygin., fab., 160.—Eudocia, 24*), or even Jove himself for a sire. (*Eudocia, 345.*)—Priapus, like the other rural gods, is of a ruddy complexion. His cloak is filled with all kinds of fruits; he has a scythe in his hand, and usually a horn of plenty. (*Keightley's Mythology, p. 236.*) Knight takes a more philosophical view of the character and attributes of this deity. According to him, Priapus, like Osiris, is a type of the great generating or productive

principle of the universe. In this universal character he is celebrated by the Greek poets under the title of Love or Attraction, the first principle of Animation; the father of gods and men; and the regulator and disposer of all things. (*Aristoph., Av., 993, ed. Brunck.—Parmenid., ap. Stob., c. 12.—Orph., Hymn., 5, 5.*) He is said to pervade the universe with the motion of his wings, bringing pure light; and thence to be called the splendid, the self-illuminated, the ruling Priapus (*Orph., Hymn., 5, 5*); light being considered, in this primitive philosophy, as the great nutritive principle of all things. (*Soph., Oed. Tyr., 1437.*) Wings are attributed to him as the emblems of spontaneous motion; and he is said to have sprung from the egg of night, because the egg was the ancient symbol of organic matter in its inert state. (*Inquiry, &c., § 23.—Class. Journ., vol. 22, p. 12.*)—The same writer considers the name Priapus as equivalent to *Briapus* (*ΒΡΙΑΠΟΤΕ*), i. e., "Clamorous," from the ancient custom of attaching bells to statues and figures of this deity; the ringing of bells and clatter of metals being almost universally employed as a means of consecration, and a charm against the destroying and inert powers. (*Class. Journ., vol. 26, p. 48.*) Schwenck makes Priapus identical with the Sun, the great source of life and fecundity; and taking *ἄρτα*, "father," as a cognate term, derives *Πρίαπος* from *Βρίαρος* (*βρί*, intensive, and *αρος*), "the mighty father," i. e., the great parent of being. (*Andeutung., p. 217.*)—II. A town of Mysia, not far from Lampæcus, which had a harbour on the Propontis. It derived its name from the god Priapus, who was worshipped here with peculiar honours; and to this place he is said to have retired when driven away from Lampæcus. The modern name is *Karaboa*. (*Plin., 5, 31.—Mela, 1, 19.*)

PRIENE, a city of Caria, north of the mouth of the Mæander, and at the foot of Mount Mycale. It was not properly a maritime place, and both Strabo and Ptolemy remove it some distance inland. Yet Herodotus speaks of the vessels which it furnished for the Ionian fleet (6, 8), and Scylax assigns it two harbours (37). One of these was probably choked up at a later period by the alterations which the Mæander has made along this coast. Priene was an Ionian colony (*Pausan., 7, 2*), and formed one of the twelve confederate cities of the Ionian league; it lay, however, according to Herodotus and all subsequent writers, in Caria. (*Herod., 1, 142.*) It was the native place of Bias, one of the seven sages of Greece. The ancient city would seem to have existed as late as A.D. 1290. (*Pachymeres, vol. 1, p. 320.*) The modern village of *Samsun-Kalesi* now occupies its site. (*Mannert, Geogr., vol. 6, pt. 3, p. 264.*)

PRIECIANUS, one of the most celebrated grammarians of antiquity, surnamed *Cæsariensis*, either from having been born in Cæsarea in Palestine, or from having there principally taught his art. He passed a part of his life at Constantinople, during the reign of the Emperor Justinian; as appears, not only from the title of the 13th chapter of the Orthography of Cassiodorus, his contemporary, but also from a Hamburg manuscript bearing the following inscription: "*Prieciani ars Grammatica viri eloquentissimi, grammatici Cæsariensis; scripsi ego Theodorus Dionysii V. D. memorialis sacri scripti, epistolarum et adjector V. M. quæstoris in urbe Roma Constantinopolitana die Cal. Oct. indictione quinta, Olibrio viro clarissimo Cos.*" This Olibrius was sole consul in 526, the year in which the manuscript was written, the copyist of which calls himself the disciple of Priecian. (*Fabr., Bibl. Lat., vol. 3, p. 398, ed. Ernesti.*) Priecian is the author of the most complete grammar that has come down to us from the ancients. It is entitled "*Commentariorum grammaticorum libri, xviii.*" or "*De octo partibus orationis earundemque constructione,*" and is addressed to Julian, a man of consular and patrician rank.

The first sixteen books, which are commonly styled "the Great Priscian," treat of the eight parts of speech; the last two, generally called "the Little Priscian," are occupied with the Syntax. (Putsch., p. 592.) This is not, however, the only grammatical work of Priscian; we have also from him treatises on accents; on the declension of nouns; on comic metres; on numbers, rules, and measures ("De figuris et nominibus numerorum, et de normis ac ponderibus"), &c. He is probably, too, the author of three poems, erroneously ascribed to Rhamnius Fannius. One of these is a version of the Itinerary of Dionysius of Charax, the second is on weights and measures, and the third on the stars. The first of these poems, entitled *Periegesis à Dionysio, or De situ orbis terræ*, is an imitation rather than strict version of the Greek original, and consists of 1087 verses. Priscian follows, in general, the author's train of ideas; but he makes, at the same time, certain alterations which he deems necessary, especially in substituting Christian ideas for what related in the original to the worship of the heathen gods. To the description of places he adds various remarkable particulars, generally obtained from Solinus. The object being the instruction of the young, to whom he wished to present a general summary of geography, he writes in a very clear and simple style, without even venturing on any flight of poetry. The poem on *weights and measures* is incomplete; we have only 163 verses. In the first 55, the author treats briefly of weights, probably because he had already discussed this branch of his subject more fully in his prose work already mentioned. He enters, however, into very full details respecting the measures of liquids and fruits; to which the rest of the poem is entirely devoted. The third poem of Priscian's contains no more than 300 verses; it is a dry nomenclature of the stars and planets, and is entitled "*Epitome phænomenon*," or "*De Sideribus*." These three poems are given in the fifth volume of Wernsdorff's *Poeta Latini Minores*, and the third also in Barmann's *Anthology* (vol. 2, p. 333). The grammatical works of Priscian are given by Putschius among the *Grammatici Latini*, 1605. The latest edition of the *Grammatical Commentaries* is that of Krehl, *Lips.*, 1819, 2 vols. 8vo; and of the minor works, that of Lindemann, *Leigd. Bat.*, 1818. (Schöll, *Hist. Lit. Rom.*, vol. 3, p. 113, 329. — Bähr, *Gesch. Röm. Lit.*, p. 541.)

PRIVERNUM, a city of Latium, in the territory of the Volsci; the ancient name of which is but partially lost in that of the modern *Piperno*, which marks its situation. Virgil makes it the birthplace of Camilla (*Æn.*, 11, 539). We have the authority of the same poet (*l. c.*) for ascribing it to the Volsci; but Strabo (231) would seem to consider the Privernates as a distinct people from the Volsci, for he particularizes them among the petty nations conquered by the Romans and incorporated in Latium. The same geographer elsewhere points out the situation of Privernum between the Latin and Applan Ways. (Strabo, 237.) This apparently insignificant place, trusting, as it would seem, to its natural strength and remote situation, presumed to brave the vengeance of Rome by making incursions on the neighbouring colonies of Setia and Norba. (*Liv.*, 7, 15.) A consul was immediately despatched to chastise the offenders, and in the submission of the town obtained the honour of a triumph. The Privernates again, however, renewed their hostile depredations; and the offence was repeated so often, that it was found necessary to demolish their walls and remove their senate to Rome. An assembly was held in that city, and a debate ensued on the punishment to be inflicted on the inhabitants of Privernum. A deputy of the conquered town being asked what penalty their rebellious conduct deserved, boldly replied, "Such punishment as they merit who claim their free-

dom." The Romans had the generosity and good sense to be pleased with this spirited reply; and, instead of executing farther severity, they admitted the Privernates to the rights of Roman citizens. (*Liv.*, 8, 1, *seqq.* — *Val. Max.*, 6, 2.) Festus, however, mentions it among the *prefecturae*, or those towns in which the prætor at Rome administered justice by deputy. Frontinus classes Privernum among the military colonies. (Cramer's *Anc. Italy*, vol. 2, p. 109, *seqq.*)

PROBUS, I. M. AURELIUS SEVERUS, a native of Sirmium in Pannonia. Having been left early an orphan by his father Maximus, who died a tribune in Egypt, and having opened a road to distinction by his sword, he was long regarded as the man upon whom the election to the empire was, at one time, likely to fall. Aurelian, when appointing him to the command of the tenth, his own legion, which had been that of Claudius, says in his letters, that, "by a sort of prerogative of good fortune, it had been always commanded by men who were one day to be princes." Tacitus had recommended Probus to the senate as a fitter person than himself for their sovereign; and, when acquainting Probus with the circumstances of his own election, wrote to him, "You know, however, that the weight of the commonwealth rests rather upon your shoulders, and the senate knows it too." When the tribunes, on the usurpation of Florianus, harangued their divisions in different parts of the camp, they confined themselves, on a concerted plan, to describing what the qualities of an emperor should be, without directly naming Probus; but the cohorts everywhere, as by a unanimous impulse, broke out into acclamations, "Probus Augustus, the gods preserve thee!" Snatching a purple robe from the statue of a neighbouring temple, they threw it over the shoulders of Probus, and hurried him along to a tribunal of turf, which had been hastily raised, that he might deliver to them his inaugural harangue. On the receipt of the despatches by the senate, one of their number, Manlius, whose turn it was to speak, enlarged upon the victories of Probus over the Franks and Alemanni, the Sarmatians and Goths, the Parthians and Persians; on his respectable life; his clemency and justice, in which he resembled Trajan; but he was interrupted by shouts of "all, all," in attestation of their unanimous assent. Though the laws had not consolidated, the grace of Probus confirmed the privileges which Tacitus had granted to the senate, and the right of appointing proconsuls, bearing appeals from the courts, and ratifying the constitutions or edicts of the emperor. The Franks and Burgundians having overrun Gaul, Probus marched to repel their invasion. In the several battles fought 400,000 of the barbarians fell, 70 cities opened their gates, the spoil which had been taken was restored, contributions were furnished of corn, of cattle, of horses, and of sheep; 16,000 Germans were draughted into the legions of Rome, and nine princes offered their hostages and their homage. Having recovered Gaul, he carried his arms into the countries beyond the Adriatic; forced the Getæ to submit to his arms or court his alliance; overcame the Sarmatæ; liberated Isauria from the oppression of Palfurius, a famous robber, who was slain; obtained by his arms peace from the Persians; subdued the Blemmyæ, a people inhabiting the borders of Egypt and Æthiopia; rescued Coptos and Ptolemais from the barbarian yoke; reduced Saturninus, Proculus, and Bonosus, the former of whom had usurped the sovereignty in Egypt, and the two latter in Gaul; and, after various battles, vanquished the Vandals, many of whom he had transplanted to the Roman soil, and who had broken their pledge of fidelity. Groups of all nations preceded his triumphal car. Amid the transplanted trees that formed a forest in the amphitheatre, thousands of stags, wild boars, and goats were turned loose as prizes for the most dexterous of the people; three hun-

dred bears were exposed to the archers; and a hundred lions, transfixed by the javelins of the hunters, lay stretched between Iesurian robbers and Blemmyan captives; of the latter tradition tells us, perhaps from some peculiarity in their armour, that they were headless, and that their eyes and mouths were seated in their breasts.—It was the favourite maxim of Probus, after he had secured peace by his victories, that in a short time soldiers would be unnecessary. With the wisdom of a statesman and the policy of a general, he employed them, during the intervals of war, in the construction of bridges and aqueducts, and in the planting of Mount Alma, at Sirmium, with vines. The draining of a marsh, at the latter place, which was the place of his birth, proved fatal to him. The soldiers, impatient of their labours, aggravated by a hot sun, rose in mutiny, and, pursuing their emperor into an iron turret, which he had erected for the more convenient inspection of the workmen, put him to death, in the 50th year of his age, after a reign of six years and four months, A.D. 282. The deed was no sooner executed than they repented. They raised a monument to his memory, and inscribed on the marble, "Probus, emperor, a man of real probity, the conqueror of the barbarians and the usurpers." A weapon or a piece of armour was the sole share which Probus could be prevailed upon to receive of the booty of the field. On the soldiers pressing upon him an Alan horse, which was said to run a hundred miles in a day, he said, "it was fitter for a runaway soldier than for a fighting one." The simplicity of his manners strikingly contrasted with the pride and spirit of his bearing as a Roman general. An embassy from the Persians entered his camp with a pompous retinue, bearing presents to the Emperor of Rome. They found him seated on the grass at the hour of his repast, hard pease and coarse bacon forming his only viands. Looking up at the astonished and half-incredulous envoy, he spoke lightly of their presents, saying "that all their king possessed was already his, and that he should come for the rest whenever he chose." Then, removing the cap which he wore, and exposing the crown of his head, he added, "Tell your master that, if he does not submit to Rome, I will make his kingdom as bare as this head is bald." The threat was believed, and the submission was tendered. (*Vopisc., Vit. Prob.—Zosim., 1, 64, seqq.—Elton's Roman Emperors, p. 181.*)—II. *Æmilius*, a grammarian in the age of Theodosius. The lives of excellent commanders, written by Cornelius Nepos, have been falsely attributed to him by some authors. (*Vid. Nepos.*)

Proclus, a king of Alba, after his father Aventinus. He was father of Amulius and Numitor. (*Liv., 1, 3.—Ovid, Met., 14, 622.—Virg., Æn., 6, 767.*)

Prochyta, an island off the coast of Campania, and adjacent to *Ænaria*. It is now *Procida*. (*Virg., Æn., 9, 714.—Sil. Ital., 8, 542.*) The poet last quoted makes Prochyta to have been placed on the giant Mimas, as Inarime was on Iapetus or Typhæus (12, 147).

Procles, a son of Aristodemus and Argia, and twin-brother of Eurysthene. (*Vid. Eurysthene.*)

Proclidae, the descendants of Procles, who sat on the throne of Sparta together with the Eurystheneids. (*Vid. Eurysthene.*)

Proclus, a celebrated philosopher of the New-Platonic sect, born at Constantinople A.D. 412. He spent his ardent and enthusiastic youth at Xanthus, in Lycia, a city devoted to Apollo and Minerva, where his parents resided; and from this circumstance he was called "the Lycian." From Xanthus he removed to Alexandria, where he attended the lectures of Olympiodorus, a celebrated Pythagorean. From Alexandria he went to Athens, and became the disciple of the Platonist Syrianus, and of Asclepiogenia, daughter of Plutarch. At the age of twenty-eight he wrote

his *Commentary on the Timæus of Plato*, which is generally regarded as a masterpiece of erudition. Syrianus designated him as his successor, and from this circumstance he obtained the surname of *Diadochus* (*Διάδοχος*, "successor"). Proclus threw himself blindly into the mystic theology of the day, and was initiated into the arcana of all the Oriental sects. He united an imaginative temper to great learning, but was unable to balance his acquirements by any weight of understanding. He looked upon the Orphic Hymns and Chaldean Oracles, which he had diligently studied, as divine revelations, and capable of becoming instrumental to philosophy by means of an allegorical exposition; whereby, also, he endeavoured to make Plato and Aristotle agree. He called himself the last link of the Hermæic chain, that is, the last of men consecrated by Hermes, in whom, by perpetual tradition, was preserved the occult knowledge of the mysteries. (*Martini, Vita Procli, p. 53, seqq.—Id. ibid., p. 76.*) He elevated faith above science, as forming a closer bond of union with Good and Unity. (*Theolog. Plat., 1, 25, 29.*) His sketch of philosophy contains a commentary on the doctrines of Plotinus, and an attempt to establish this point, that there is but one real cause and principle of all things, and that this principle is Unity, which produces all things in one uniform order, by triads. His obscure system was founded on an imperfect analysis and synthesis of the properties of Being, of which it admitted three grand divisions, Existence, Life, and Reason, or *Noûs*. All these he derived from Unity, and made them the source of three other triads. He distinguished the Divinities (making these also descend from Unity and give birth to triads) into Intelligible and Intelligent, Supernatural and Natural; attributed a supernatural efficacy to the name of the Supreme Being; and, like his predecessors, exalted Theurgy above Philosophy. Proclus also attacked the Christian religion, being principally offended by the doctrine of the creation of the world. In his three treatises on Providence, Fate, and Evil, he states with great ability his notion that the latter does not spring from Matter, but from the limitation of power, and labours to reconcile the system of Plotinus with the conclusions of sound reason. Proclus died A.D. 485, with a reputation for wisdom and even for miraculous powers approaching adoration, leaving behind him a crowd of followers. (*Tennemann, Manual of Philosophy, p. 200, seqq., Johnson's transl.*)—The best edition of the entire works of this philosopher is that of Cousin, 1820–27, Paris, 6 vols. 8vo. We have of Proclus, 1. A work on the *Theology of Plato* (*Εἰς τὴν Πλάτωνος Θεολογίαν*), in six books. It was published in 1618, fol., from the Hamburg press.—2. *Theological Institutes* (*Στοιχειώσις Θεολογική*), the best edition of which is that of Creuzer, *Frankf.*, 1823, 8vo.—3. A work *On Motion* (*Περὶ κινήσεως*), also entitled *Στοιχειώσις φυσική* ("Physical Institutes"), the best edition of which is that of Wells, *Basil.*, 1545, 8vo.—4. A *Commentary on the Works and Days of Hesiod* (*Ἑρμηνεία εἰς τὰ Ἡσίοδου Ἔργα καὶ Ἡμέρας*), appended as scholia to some of the editions of Hesiod. 5. A *Grammatical Chrestomathy* (*Χρηστομάθεια γραμματική*), in two books. It is a sort of treatise on style, extracted and derived from the ancient grammarians, and its principal object is to point out the different kinds of poetry, and the writers who have distinguished themselves in the same. We have only fragments of this work remaining, which lead us to regret very deeply the loss of the other portions. These fragments are of three kinds: (a) Notices extracted from the Chrestomathy by Photius, and preserved in his Bibliotheca. (β) A Life of Homer, which owes its preservation to its having been placed by some copyists at the head of certain MSS. of the Iliad. (γ) Arguments of many of the minor epic poems, ap-

pertaining to the mythic and Trojan cycles, now lost.

—6. *Eighteen Arguments against the Christians* (*Ἐντεῖκα μὲν κατὰ Χριστιανῶν*). In this work Proclus attempts to prove the eternity of the world, that favourite thesis of Platonism. The treatise would probably have been lost, had not Johannes Philoponus written a refutation, in which he has literally inserted the work which he attacks.—7. *A Commentary on the Timæus of Plato* (*Εἰς τὸν τοῦ Πλάτωνος Τίμαιον ἐκπονήματα*), in five books. As these five books contain no more than one third of the dialogue, it is possible that this work may not have reached us entire. It is regarded as the best of the productions of Proclus, and has, moreover, the accidental merit of having preserved for us the work of Timæus of Locri, because, viewing it as the source whence Plato derived his materials, he placed it at the head of his commentary.—

8. *A Commentary on the First Alcibiades of Plato* (*Εἰς τὸν Πλάτωνος πρῶτον Ἀλκιβιάδην*). The best edition is that of Creuzer, *Francf.*, 1820, 8vo.—9. *Commentary on the Republic of Plato* (*Εἰς τὴν Πλάτωνος πολιτείαν*), &c. (Schöll, *Hist. Lit. Gr.*, vol. 7, p. 104, *seqq.*)—Proclus was also the author of six hymns, one to the Sun, another to the Muses, two to Venus, one to Hecate and Janus, and one to Minerva. They belong properly to the same class with the Orphic hymns. The latest edition of the Hymns is that of Boissonade, *Paris*, 1824, 32mo.

PROCONA. *Vid.* Philomela.

PROCONNĒSUS (or the Isle of Stags), an island and city of Asia Minor to the northeast of Cyzicus. It is now *Marmara*, whence the modern name of the Propontis is derived (Sea of Marmara). Proconnesus was much celebrated for its marble quarries, which supplied most of the public buildings in Cyzicus with their materials. (*Strabo*, 588.) The marble was white, with black streaks intermixed. (*Blasius, Caryoph. de Marm. Antiq.*) Ariæteas, who wrote a poem on the Arimaspians, was a native of the city. (*Herod.*, 4, 14.—*Strab.*, 588.)

PROCORIUS, one of the most celebrated historians of the Eastern empire. He was born at Cæsarea in Palestine, and exercised at Constantinople the profession of rhetorician and sophist. It has been disputed whether he was a Christian or not. The indifference and silence with which he passes over the religious disputes that agitated the Church in his day have caused him to be suspected of paganism, but it is more than probable that he regarded these miserable quarrels as unworthy to occupy a place in a political history. Justin the elder assigned him to Belisarius as his secretary and counsellor, with the charge of accompanying this general in his several expeditions. This nomination took place a short time previous to A.D. 527, the year when Justin died. Belisarius, whom he had, in consequence of this appointment, followed in his campaign in Africa against the Vandals, sent him to Syracuse, on some business relative to the army. In 556 he employed him usefully in his campaign against the Goths in Italy. Subsequently to 559 he was named a senator, and about 562 prefect of Constantinople, a place which Justinian afterward took from him. He died at an advanced age.—In his *History of his own times* (*Τὸν καθ' αὐτὸν ἱστορίων βιβλία δατώ*), in eight books, of which the first four bear the title of *Persica*, and the others that of *Gothica*, Procopius describes the wars of the Byzantine Empire with the Persians, the Vandals, the Moors, and the Goths, adding to the narrative, from time to time, an account of contemporaneous events. According to two modern Oriental scholars, Procopius derived his materials for an account of Persia and Armenia from the Armenian work of the Bishop Puzunt Poedus, who was born at Constantinople, of Greek parents, and who wrote a history of Armenia in six books, of which the last four have reached us. (*Cha-*

han de Ciribied, and *F. Martin*.—*Recherches sur l'Hist. ancienne de l'Asie*, *Paris*, 1806, 8vo, p. 294.)

Procopius is the author of a work entitled *Anecdota*, or secret history, in which Justinian and his Empress Theodora are represented in the most odious light. Procopius assigns as a reason for writing this last work, that in his history he could not speak of persons and things as he wished. He was the author of a third work, "On the edifices erected by the Emperor Justinian." As an eyewitness of many events which he describes, Procopius is entitled to great attention. He writes like one free from all the prejudices of his age; when, however, he makes mention of the emperor and his court, he appears entitled only to that degree of credit which is due to one who writes under the constraint and eye of his prince. The works of Procopius form part of the collection of the Byzantine historians. (Schöll, vol. 6, p. 349, *seqq.*)

PROCRUSTES, a famous robber of Attica, killed by Theseus near the Cephissus. He compelled travellers to lie down on a couch, and, if their length exceeded that of the couch, he lopped off as much of their limbs as would suffice to make the length equal. If they were shorter than the couch, he stretched them to the requisite length. Theseus proceeded against and slew him. According to Plutarch, his true name was Damastes, and Procrustes was only a surname. (*Plut., Vit. Thest.*, 11.) Pausanias, on the other hand, makes it to have been Polyphemus. (*Pausan.*, 1, 38.)

PROCULIUS, a Roman knight, and the intimate friend of Augustus, who held him in such high esteem as to entertain thoughts at one time of making him his son-in-law. He is celebrated by Horace for his fraternal affection towards his brothers L. Licinius and M. Terentius. They had lost their estates for siding with the party of Pompey, and Proculus thereupon generously shared his own with them. He was the individual sent by Augustus to Cleopatra to endeavour to bring her alive into his presence. He destroyed himself when suffering under a severe malady. (*Horat., Od.*, 2, 2, 5.—*Plin.*, 36, 24.)

PROCULUS, I. JULIUS, a Roman, who, after the death of Romulus, declared that he had seen him in appearance more than human, and that he had ordered him to bid the Romans offer him sacrifices under the name of Quirinus, and to rest assured that Rome was destined by the gods to become the capital of the world. (*Plut., Vit. Rom.—Liv.*, 1, 16.)—II. A Roman elegiac poet, mentioned by Ovid as an imitator of Callimachus. (*Ep. ex Pont.*, 4, 16, 33.)—III. A Roman lawyer mentioned in the Pandects. He is supposed by some to have been the same with the Proculus of whom Tacitus speaks as pretorian præfect in the reign of Otho. (*Tacit., Hist.*, 1, 87.) He gave name to the legal party termed *Proculiani*. (*Dig.*, lib. 1, tit. 2, leg. 2.)

PROCYON, a constellation, so called from its rising just before the dog-star (*Προκύων*, from *πρό*, "before," "in front of," and *κύων*, "a dog"); whence its Latin name of *Antecanis* or *Ante-Canem*. (Compare Cicero, *N. D.*, 2, 44.—*Plin.*, 18, 28, and the remarks of Ideler on the last-cited authority.—*Sternnamen*, p. 283.)

PRODĪCUS, a sophist and rhetorician of Iulis in the island of Ceos, contemporary with Democritus and Gorgias of Leontini, and a disciple of Protagoras. He flourished in the 86th Olympiad, and had, among other disciples, Socrates, Euripides, Theramenes, and Isocrates. His countrymen, after bestowing upon him several public employments, had sent him, it seems, as ambassador to Athens, and he was so well received here as to be induced to open a school of rhetoric. Plato, who makes frequent mention of him, and even with applause, but not without sometimes employing irony, insinuates, that a desire of gain

prompted Prodicus to open this school, and, indeed, he amassed considerable wealth by his lectures. Philostratus also declares that Prodicus was fond of money. He used to go from one city to another displaying his eloquence, and, though he did it in a mercenary way, he nevertheless had great honours paid to him in Thebes, and still greater in Lacedæmon. His charge to a pupil was fifty drachmæ. The style of Prodicus must have been very eloquent, since such numbers flocked to hear him, although he had a disagreeable voice. (*Philostr., Vit. Soph.*) It is related that Xenophon, when a prisoner in Bœotia, being desirous of hearing Prodicus, procured the requisite bail, and went and gratified his curiosity. (*Philostr., l. c.*) Few pieces have been oftener referred to than that in which Prodicus narrated what is termed "The Choice of Hercules." The original is lost; but we have the substance of it in the *Memorabilia* of Xenophon (2, 1, 21). Prodicus was at last put to death by the Athenians, on the charge of corrupting their youth. Sextus Empiricus ranks him among the atheists, and Cicero remarks that some of his doctrines were subversive of all religion. (*Cic., N. D., 1, ad fin.—Bayle, Dict., s. v.*)

PROTIDES, the daughters of Prætus, king of Argolis, were three in number, Lysippe, Iphinoë, and Iphianassa. They were seized with insanity for contemning, according to one account, the rites of Bacchus. (*Apollod., 2, 2.—Eustath. ad Od., 15, p. 1746.*) Another legend made them to have been thus punished for casting ridicule on Juno and her temple. (*Schol. ad Od., 15, 235.*) While under the influence of their phrensy, the Protides roamed over the plains, the woods, the wastes of Argolis and Arcadia, fancying themselves changed into cows. (*Virg., Eclog., 5, 48.—Serv., ad loc.*) Prætus thereupon applied to Melampus to cure his daughters; but the soothsayer, who was the first that exercised the art of medicine, demanded beforehand, as a recompense, one third of the kingdom. Prætus refused. Thereupon the madness of the maidens increased, and even extended to the other women, who killed their children, abandoned their dwellings, and fled to the wilds. The reluctance of Prætus was now overcome, and he offered to comply with the terms of Melampus; but the soothsayer would not now employ his art without another third of the realm being given to his brother Bias. Prætus, fearing that delay would only make him advance farther in his demand, consented, and Melampus set about the cure. He took a number of the ablest young men of the place, and made them, with shouts and a certain inspired kind of dance, chase the maidens from the mountains to Sicyon. In the chase, Iphinoë, the eldest of the Protides, died; but the others were restored to sanity; and Prætus gave them in marriage to Melampus and his brother Bias. (*Keightley's Mythology, p. 413.*) A fragment of Hesiod, cited by Eustathius (*l. c.*), describes the complaint of the Protides as a species of leprosy, a malady often followed by insanity. The cure appears to have been effected by the cutaneous transpiration brought about by the violent exercise to which the daughters of Prætus were subjected, and also to their having been made to bathe after this in the waters of the Anigrus, which were long after this famous for their medical virtues in healing the leprosy. (*Strabo, 533.—Sprengel, Hist. de la Med., vol. 1, p. 95, seq.*)

PACRUS, a king of Argos, son of Abas and Ocalea. He was twin brother to Acrisius, with whom he quarrelled even before their birth. This dissension between the two brothers increased with their years. After their father's death, they both tried to obtain the kingdom of Argos; but the claims of Acrisius prevailed, and Prætus left Peloponnesus, and retired to the court of Jobates, king of Lycia, where he married Stenobœa, called by some Antea or Antiope. He af-

terward returned to Argolis, and, by means of his father-in-law, he made himself master of Thyrtius. Stenobœa had accompanied her husband to Greece, and she became by him mother of the Protides, and of a son called Megapenthes, who, after his father's death, succeeded on the throne of Thyrtius. (*Vid. Stenobœa.—Apollod., 2, 2.*)

PROMÆTHÆUS, a son of Iapetus, by Clymene, one of the Oceanides. He was brother of Epimetheus, Mænæstus, and Atlas, and was fabled to have surpassed all mankind in sagacity. In Prometheus and Epimetheus are personified the intellectual vigour and weakness of man. In this myth, however, there is great confusion, for its original sense seems to have been lost very early, and Prometheus to have been viewed as a Titan, and the creator or instructor of men. In Homer there is no allusion whatever to Prometheus. Hesiod, however, says, that when the gods and men had a controversy at Mecone, Prometheus took an ox, and, dividing it, put the flesh and entrails in the hide, and, wrapping the bones up in the inside fat, desired Jupiter to take which he would. The god, though aware of the deceit, selected the bones and fat, and in revenge he withheld fire from man. But Prometheus again deceived him, and, stealing the fire in a hollow staff (*ῥάβδῳ*, *ferula*), brought it and gave it to man. Jupiter then sent Pandora on earth, to deceive man to his ruin, and he bound Prometheus with chains to a pillar, and sent an eagle to prey without ceasing on his liver, which grew every night as much as it had lost in the day. After a long interval of time, however (according to some, thirty thousand years), Hercules slew the eagle and freed the sufferer. (*Blomf., Gloss. ad Æsch., P. V., 94.*)—In this narrative there is a combination of a local myth of Sicyon (anciently called Mecone) with a doctrine of a much higher nature. The former legend was manifestly devised to account for the custom at Sicyon, as at Sparta, of offering to the gods in sacrifice the bones of the victim wrapped in the caul, instead of some of the choicest parts of the flesh as elsewhere. (*Welcker, Tril., 78.—Voss., Myth. Br., vol. 2, p. 353, seqq.*) The latter myth may be, perhaps, thus explained. The first men lived in a state of bliss on the abundant productions of the earth. The spring was perpetual, and the cold was unfelt, and they therefore needed not fire, which Jupiter, in kindness, withheld from them. But the inquisitive and inventive genius (i. e., Prometheus) introduced fire, and the arts which result from it, and man henceforth became a prey to care and anxiety, the love of gain, and other evil passions which torment him, and which are personified in the eagle that fed on the inconsumable liver of Prometheus. (*Müller, Proleg., p. 122.—Petronius, ap. Fulgent., 2, 9.*) In a word, we have here a Grecian myth of the fall of man, which we shall find carried out in that of Pandora. (*Vid. Pandora.*)—The simple narrative of Hesiod was, as usual, expanded by later writers, and Mount Caucasus was fixed upon as the place of Prometheus' punishment. The pragmatists also explained the myth after their own fashion. Prometheus was, they say, a king of the Scythians, and his country was wasted by a river named *Eagle* (*Ἀετός*), whose inundations when he was unable to prevent, his subjects laid him in chains. But Hercules, coming thither, opened a passage for the Eagle into the sea, and thus freed the captive monarch. (*Apoll. Rhod., 2, 1248.*)—The name of Prometheus led to his being viewed as the bestower of all knowledge on mankind. (*Æsch., Prom. Vincit., 442, seq.—Id. ib., 505, seq.*) A philosophical myth, in Plato, says that the gods formed man and other animals of clay and fire within the earth, and then committed to Prometheus and his brother the task of distributing powers and qualities to them. Epimetheus prayed to be allowed to make the distribution. Prometheus assented; but, when he

came to survey the work, he found that the silly Epimetheus had abundantly furnished the inferior animals, while man was left naked and helpless. As the day for their emerging from the earth was at hand, Prometheus was at a loss what to do. At length, as the only remedy, he stole fire, and with it the artist-skill of Minerva and Vulcan, and gave it to man. He was also regarded as the creator of the human race. Another legend said, that all mankind having perished in Deucalion's flood, Jupiter directed Prometheus and Minerva to make images of clay, on which he caused the winds to blow, and thus gave them life. (*Etym. Mag., et Steph. Byz., s. v. Ἰκόνιον.*) A third said, that Prometheus had formed a man of clay, and Minerva, beholding it, offered him her aid in procuring anything in heaven that might contribute to its perfection. Prometheus said, that he could not tell what there might be in heaven suitable for his purpose, unless he could go thither and judge for himself. The goddess then bore him to heaven in her sevenfold shield, and there, seeing everything animated by the celestial heat, he secretly applied his *ferula* to the wheel of the sun's chariot, and thus stole some of the fire, which he then applied to the breast of his man, and thus animated him. Jupiter, to punish Prometheus, bound him, and appointed a vulture to prey upon his liver, and the incensed gods sent ferals and other diseases among men. (*Apollod., 1, 7, 1.—Ovid, Met., 1, 82.—Horat., Od., 1, 3, 29, seq.—Serv. ad Virg., Eclog., 6, 42.*)—On the story of Prometheus has been founded the following very pretty fable: When Prometheus had stolen fire from heaven for the good of mankind, they were so ungrateful as to betray him to Jupiter. For their treachery, they got in reward a remedy against the evils of old age; but, not duly considering the value of the gift, instead of carrying it themselves, they put it on the back of an ass, and let him trot on before them. It was summer-time, and the ass, quite overcome by thirst, went up to a fountain to drink; but a snake forbade all approach. The ass, ready to faint, most earnestly implored relief. The cunning snake, who knew the value of the burden which the ass bore, demanded it as the price of access to the fount. The ass was forced to comply, and the snake obtained possession of the gift of Jupiter, but with it, as a punishment of his art, he got the thirst of the ass. Hence it is that the snake, by casting his skin annually, renews his youth, while man is borne down by the weight of the evils of old age. The malignant snakes, moreover, when they have an opportunity, communicate their thirst to mankind by biting them. (*Ælian, Nat. An., 6, 51.—Nicander, Ther., 340, seq.—Schol., ad loc.*)—The wife of Prometheus was Pandora (*Hesiod, ep. Schol. ad Apoll. Rhod., 3, 1086*), or Clymene (*Schol. ad Od., 10, 2*), or Hesione (*Æsch., Prom. Vinct., 560*), or Asia (*Herod., 4, 45*). His only child was Deucalion. (*Keightley's Mythology, p. 288, seq.*)—Rosenmüller sees in the fable of Prometheus a resemblance to the scripture account of the fall. (*Rosenm., ad Gen., 3, 7—Schütz, Excurs. 1, ad Prom. Vinct.—Buttmann, Mythologus, vol. 1, p. 60.*) Others carry this theory still farther, and in the combined fables of Prometheus, Epimetheus, and Pandora, discover an analogy, not only to the fall of Adam, but also to the promise of a Redeemer. (Compare *Horné's Introduction, vol. 1, p. 163, Am. ed.*) Nay, some of the early fathers even proceeded to the length of tracing a resemblance between Prometheus and our Saviour. (*Schütz, Excurs., ubi supra.*) Another solution of this myth refers it to the overthrow of some early religious system in Greece. Tzetzes, in his scholia on Lycophron (v. 1191), relates, that Ophion, and Eurynome, daughter of Oceanus, reigned over the gods previous to Saturn and Rhea. Saturn overthrew Ophion, and Rhea overcame Eurynome in wrestling,

and they buried them both to Tartarus. Prometheus conquered by Jove is thought to be a tradition of a similar nature; and an ancient monument at Athens, at the entrance of a temple of Minerva, in the Academia, fully testified, if we believe the scholiast to Sophocles (*Ed. Col., 57*), the priority of the Titan Prometheus to the Hæmic Vulcan. Prometheus and Vulcan were there represented, and the former, as the first and eldest of the two, held a sceptre in his hand (*ὁ πρῶτος Ἰπποκλῆς, πρῶτος καὶ πρεσβύτερος, ἐν δεξιᾷ ἐκκλῆτος ἔχων, ὁ δὲ Ἡφαίστος σῆκος καὶ δεινέρος*). Compare *Constant, de la Religion, vol. 2, p. 216*. Kruse adopts the same opinion, and makes the contest in question to have taken place between the Pelægi on Olympus (the fabled seat of Jove), and some primitive race occupying the region of Mount Othrys, the latter of whom were conquered, and compelled to wander from their previous settlements towards the mountains of Cæcæsus. (*Kruse, Hellas, vol. 1, p. 471.*)

PROMARINUS, an ancient Greek poet, a native of Athens, and the reputed preceptor of Homer. (*Diod. Sic., 3, 68.—Fabric., Bibl. Gr., vol. 1, p. 27.*)

PROMUSA, a surname of Juno, because she presided over marriages. (*Vid. Juno.*)

PROPERTIUS, Sextus Aurelius, a celebrated Roman elegiac poet, born in Umbria on the confines of Etruria. Seven towns of the Umbrian territory disputed with each other the honour of being the birthplace of Propertius. From the poet's own account, Mevania (the modern *Bevagna*) appears to prefer the strongest claims on this head (4, 1, 121). The time of Propertius' birth has also been made a subject of controversy, being placed by some writers as early as 696 A.U.C., and by others as late as 705. From the import of eight lines in the fourth book of his elegies (4, 1, 123), which refer to himself, the year of his birth may be most safely placed between these periods, and no great error will probably be committed if it be fixed in the year 700. In these verses we are told that his father died prematurely, while Propertius was yet young, and that his inheritance, about the same time, was divided among the soldiery.—Propertius was descended of an equestrian family of considerable possessions. But, his father having espoused the side of the consul Lucius Antonius, brother of the triumvir, in the dissensions that arose with Octavius, he was made prisoner on the capture of Perugia, and slain at the altar erected to the memory of Julius Cæsar. About these statements there exists, however, a great deal of doubt. While Propertius was yet in his boyhood, the chief part of his inheritance, like that of Tibullus, was divided, as we have seen, among the soldiers of the triumvir. With the view of re-establishing his fortune, he went to Rome in early life, and there commenced those studies which might qualify him to shine as a patron in the Forum. He soon, however, relinquished this pursuit, and devoted himself entirely to the Muses. His early proficiency in poetry, his learning and agreeable manners, procured for him the friendship of Gallus, of the poet Ponticus Bassus, and of Ovid, who frequently attended the private recital of his elegies. These productions appear to have been written about the year 730. In the second, third, and fourth books, our poet gives Octavius Cæsar the name of Augustus, which was first bestowed on him in 727. In the third book he alludes to the death of Marcellus, who died in 730. Farther, in the last elegy of the second book, he speaks of Virgil as still alive, and of his *Æneid* as a work which was in progress, and of which the highest expectations had been formed. Now Virgil commenced his *Æneid* in 724, and had made considerable progress in 730, in which year he read three books of it to Augustus and his sister Octavia. Virgil survived till the year 734, and the *Æneid* was published immediately after his death.—The first appearance of the elegies attracted the notice of Maecenas, who as-

signed Propertius a house in his own gardens on the Esquiline Hill. He also procured for him the patronage of Velcatius Tullus, who was consul with Augustus in the year 721, and became, after the death of Mæcenas, the general protector of learning and the arts. It appears that the patrons of those days teased their dependant poets with pressing solicitations to accompany them on military expeditions and embassies. An invitation of this sort from Tullus, requesting Propertius to attend him to Egypt and Asia Minor, seems to have been declined (lib. 1, el. 6). But it would appear that he at length undertook a journey to Athens, probably as a follower of Mæcenas, when he attended Augustus in his progress through Greece (3, 21). Little farther is known concerning the events of his life, and even the precise period of his death is uncertain. He was alive in 736, when the emperor promulgated a law concerning marriage, in which severe penalties were imposed on celibacy. His death is generally placed about the year 740, when he had not exceeded the age of 40. But there seems no sufficient proof that he died earlier than 760, at which time Ovid, during his banishment, wrote an elegy, where he speaks of him as deceased.—The whole life of Propertius was devoted to female attachments. He was first enticed, in early youth, by Lycinna, an artful slave; but subsequently Cynthia became the more permanent object of his affections. The lady whom he has celebrated under this name was the daughter of the poet Hostius, and her real name was Hostia (3, 13). This fascinating object of his rulling and permanent attachment had received an education equal to that of the most distinguished Roman ladies of the day. She was skilled in music, poetry, and every other accomplishment calculated to make an impression on a youthful and susceptible mind. But with all these advantages, she shared no small portion of the artifice and extravagance which characterized the domestic manners of the Roman fair in the age of Augustus. Hence our poet was the constant sport of the varying humours of his Cynthia. But, notwithstanding occasional jealousies and estrangements of affection, this female, until her death (which happened when the poet was about thirty years of age), continued to be his reigning passion, and the chief theme of his elegies.—These productions, which are nearly one hundred in number, are divided into four books. The first book is almost exclusively devoted to the celebration of the poet's love for Cynthia. In the second and third books, also, she is still his principal theme, but his strain becomes moral and didactic. He now declaims against the extravagance of his age; against that love of pomp and luxury, which, in his time, dishonoured the Roman fair, and which he beautifully contrasts with the simple manners of a distant period, concluding with a pathetic prediction of the fall of Rome, accelerated by its own overgrown wealth, and the pernicious thirst of gold. The elegies of the fourth book, which were not made public till after the death of the poet, are entirely of a different description from those by which they are preceded. They are chiefly heroic and didactic, comprehending the praises of Augustus, and long narrations drawn from Roman fable and Italian antiquities.—In point of general composition, the elegies of Propertius are almost perfect. He flourished at a period and in a capital in which style had attained its greatest purity. He lived in the society of Gallus, Ovid, and Mæcenas, and under the sway of a prince whose greatest boast was the protection of learning and genius. The patronage and society he enjoyed communicated to his writings a degree of taste and politeness, which they might not have attained had he lived at an earlier period, or at a distance from the court of Augustus. Even a slight acquaintance with his works may convince us that he was an extensive reader, and his learning had supplied him with

such numerous topics of allusion and illustration, that it seduced him into what has justly been considered as his chief fault. Whatever is pleasing or natural in his elegies, he destroys by mixing up with it history and fable; and it is in this injudicious and ill-timed pedantry that, pervading, as it does, almost all the elegies of Propertius, renders them often fatiguing, perplexing, and obscure. The adoption of this style of writing must, in a great measure, be attributed to Propertius' study and imitation of the Greek authors. None of the Latin poets had so sedulously studied the Alexandrian writers, or so closely formed on them their style and sentiments. The great objects of his imitation were Callimachus and Philetas, the latter the preceptor of Ptolemy Philadelphus.—In this respect Propertius is totally different from Tibullus, with whom he has been so frequently compared. The writings of Tibullus breathe a native freshness, a simplicity and purity which are remarkably contrasted with the profusion of obscure mythological fables by which the elegies of Propertius are entangled and darkened. In consequence of this learned imitation of the Greeks, there is an appearance of labour and display in most of the elegies of Propertius, and he has always the air of what has been called an ambitious writer. Tibullus is a poet, and in love; his successor is more of an author. The love of Propertius partook more of temperament and less of sentiment than the passion of Tibullus. Propertius often thought what he should write; Tibullus always wrote what he thought.—Before closing this article, we may remark, that one peculiarity distinguishes the versification of Propertius from that of all the other Latin poets; his pentameters often terminate in a polysyllable, while those of Tibullus and Ovid end almost always in a word of two syllables, forming at one time an iambus, at another a pyrrhic. Critics are not agreed whether this is the result of accident or design on the part of Propertius. It is certain, however, that the plan pursued by Tibullus and Ovid is far more conducive to harmony. (*Devellop's Roman Literature*, vol. 3, p. 316, *segg.*—*Schöll, Hist. Lit. Rom.*, vol. 1, p. 334, *segg.*)—The best editions of Propertius are, that of Brouckhusius, *Amst.*, 1727, 4to; that of Vulpia, *Patav.*, 1755, 2 vols. 4to; that of Burmann, *Traj. ad Rhen.*, 1780, 4to; that of Lachmann, *Leips.*, 1816, 8vo; and that forming part of the collection of Lemaire, *Paris*, 1833, 8vo.

PROPONTIS, a name given by the Greeks to that minor basin which lies between the *Ægean* and *Euxine*, and communicates with those seas by means of two narrow straits, the Hellespont and Bosphorus. Herodotus estimates its breadth at 500 stadia, and its length at 1400. (*Herod.*, 4, 85.) Modern navigators reckon about 120 miles from one strait to another; while its greatest breadth, from the European to the Asiatic coast, does not exceed 40 miles. It received its ancient name from the circumstance of its lying in front of, or before the Pontus Euxinus (*πρὸ Πόντου*). The modern appellation is the Sea of *Marmara*, from the modern name of the island Proconnesus. (*Mela*, 1, 19.—*Cramer's Asia Minor*, vol. 1, p. 34.) As regards the probable formation of the Propontis, *vid. Mediteranean Mare*, and *Cyanæ*.

PROSERPINA, a daughter of Ceres by Jupiter, called by the Greeks *Persephone* (*Περσεφόνη*). The legend connected with her will be found under the article Ceres.—Proserpina, like Diana, presents the double idea of the creative and destroying power, and hence she is styled, in one of the Orphic Hymns (29, 15), *ζῶη καὶ θάνατος μύθη θνητοῖς πολυμήθεος*. On the same association of ideas was founded the curious belief which ranked Venus among the *Parce* or *Fates*. (Compare *Pausan.*, 1, 19.—*Herm. and Cramer, Briefe über Homer*, &c., p. 38.) Wilford endeavours to prove that the name *Proserpina* (*Περσεφόνη*) is of Sanscrit origin. But this, like many other of his Ori-

ental etymologies, is remembered only to be condemned. (*Asiatic Researches*, vol. 5, p. 298.) On the supposition that Proserpina was regarded as the daughter of Mother Earth, and a personification of the corn, her name will signify *Food-shower* (from *πέπω*, *πέπω*, "to feed," and *παύω*, *παύω*, "to show."—*Völcker, Myth. der Iap.*, p. 201, seq.) Regarded, however, as the queen of the monarch of Erebus, the appellation will mean *Light-destroyer*, the first part of the name being akin to *πῶρ*, "fire," and to the *Pers* in *Perse* and *Perseus*. (*Schwcnck. Andeut.*, p. 247.) The common explanation of the term is *Death-bearer*, from *πέπω*, "to bear," and *φθός*, "destruction," "death." The *Perasphatta* of the Dramatists seems to be only a corruption of *Persephone*, and the same remark may be made of the Latin *Proserpina*. Vossius is right in condemning the etymology given by Arnobius: "*Dicitur quod sala in lucem proserpant, cognominatam esse Proserpinam.*" (*Arnob.*, 3, p. 119.) According to Knight, Proserpina was in reality the personification of the heat or fire supposed to pervade the earth, which was held to be at once the cause and effect of fertility and destruction, as being at once the cause and effect of fermentation, from which both proceed. (*Knight's Inquiry*, 117.—*Class. Journ.*, vol. 25, p. 39.)

ΠΡΟΤΑΓΟΡΑΣ, a Greek philosopher, a native of Abdera, and disciple of Democritus. In his youth, his poverty obliged him to perform the servile offices of a porter; and he was frequently employed in carrying logs of wood from the neighbouring fields of Abdera. It happened, that as he was going on briskly one day towards the city under one of these loads, he was met by Democritus, who was particularly struck with the neatness and regularity of the bundle. Desiring him to stop and rest himself, Democritus examined more closely the structure of the load, and found that it was put together with mathematical exactness. On this he invited the youth to follow him, and, taking him to his own house, maintained him at his own expense and taught him philosophy. Protagoras afterward acquired reputation at Athens, among the sophists, for his eloquence, and among the philosophers for his wisdom. His public lectures were much frequented, and he had many disciples, from whom he received the most liberal rewards, so that, as Plato relates, he became exceedingly rich. At length, however, he brought upon himself the displeasure of the Athenian state, by teaching doctrines favourable to impiety. His writings were ordered to be diligently collected by the common crier, and burned in the market-place, and he himself was banished from Attica. He wrote many pieces upon logic, metaphysics, ethics, and politics, none of which are at present extant. After having lived many years in Epirus, he was lost by sea on his voyage from that country to Sicily. The tenets of Protagoras, as far as they have been discovered, appear to have leaned towards scepticism. (*Enfield's History of Philosophy*, vol. 1, p. 432, seq.)

ΠΡΟΤΕΣΙΛΑΟΣ, a king of part of Thessaly, son of Iphiclus, originally called Iolans, grandson of Phylacus, and brother to Alcimede, the mother of Jason. He married Laodamia, the daughter of Acastus, and, some time after, departed with the rest of the Greeks for the Trojan war. He was the first of the Greeks who set foot on the Trojan shore, and was killed as soon as he had leaped from his ship. Homer has not mentioned the person who slew him. His wife Laodamia destroyed herself when she heard of his death. (*Vid. Laodamia.*) Protesilaus has received the patronymic of *Phylacides*, either because he was descended from Phylacus, or because he was a native of Phylace. (*Hom.*, *Il.*, 2, 698.—*Ovid. Met.*, 12, *fab.*, 1.—*Her.*, 13.—*Propert.*, 1, 19.—*Hygin.*, *fab.*, 103.)

ΠΡΩΤΕΥΣ, a sea-deity, son of Oceanus and Tethys, or, according to some, of Neptune and Phœnice. In the fourth book of the *Odyssey* Homer introduces this

sea-god. He styles him, like Nereus and Phorcys, a *Sea-elder*, and gives him the power of foretelling the future. (*Od.*, 4, 384; 5, 561.) He calls him *Ægyptian*, and the servant of Neptune (*Od.*, 5, 386), and says that his task was keeping the seals or seacalves. (*Od.*, 5, 411.) When Menelaus was wind-bound at the island of Pharos, off the coast of Egypt, and he and his crew were suffering from want of food, Eratothea, the daughter of Proteus, accosted him, and, bringing sealskins, directed him to disguise himself and three of his companions in them; and when Proteus, at noon, should come up out of the sea and go to sleep amid his herds, to seize and hold him till he disclosed some means of relief from their present distress. Menelaus obeyed the nymph; and Proteus came up and counted his herds, and then lay down to rest. The hero immediately seized him, and the god turned himself into a lion, a serpent, a pard, a boar, water, and a tree. At length, finding he could not escape, he resumed his own form, and revealed to Menelaus the remedy for his distress. He at the same time informed him of the situation of his friends, and particularly notices his having seen Ulysses in the island of Calypso—a clear proof that his own abode was not confined to the coast of Egypt. Homer does not name the parent of this marine deity, and there is no mention of him in the Theogony. Apollodorus makes him the son of Neptune, and Euripides would seem to make Nereus his sire. (*Apollod.*, 2, 5, 9.—*Eurip.*, *Hel.*, 15.) Those who embraced the theory of representing the gods as having been originally mere men, said that Proteus was a king of Egypt; and the Egyptian priests told how he detained Helen when Paris was driven to Egypt, and gave him an image or phantom in her stead, and then restored her to Menelaus. (*Keightley's Mythology*, p. 246, seq.) The name of this deity, signifying *First* (πρῶτος, *πρῶτος*), has induced Creuzer to consider him as representing the various forms and shapes assumed by the primitive matter (ἡ ἐκὴν πρῶτόγονος), the substance itself remaining always the same. (*Symbolik*, vol. 1, p. 425.)

ΠΡΩΤΟΓΕΝΗΣ, a very eminent painter and statuary, one of the contemporaries of Apelles. He appears, however, to have survived the latter artist, inasmuch as he was still living in Olymp. 119, when Rhodes was besieged by Demetrius. Meyer (*Hist. Art.*, 1, 180) conjectures, with considerable probability, that he was born about Olymp. 104. Protagenes was a native of Caunus, a Carian city, subject to the Rhodians. Suidas alone makes him to have been born at Xanthus in Lycia. His early efforts were made amid the pressure of very contracted means. Who his master was is unknown; and necessity for a long time compelled him to employ his abilities on subjects altogether unworthy of them. Compelled to paint ornaments on vessels in order to secure a livelihood, he passed fifty years of his life without the gifts of fortune, and without any marked reputation. His talents and perseverance at length triumphed over every obstacle; and possibly the generous aid of Apelles may have contributed to hasten this result; for the latter, on perceiving that the paintings of Protagenes were neither sought after nor held in much estimation by the Rhodians, is said to have purchased some himself at the high price of fifty talents, and to have openly declared that he intended to sell them again for his own productions. This friendly stratagem opened at length the eyes of his contemporaries, and Protagenes rose rapidly in fame. Pliny tells a very pleasing story of Apelles and Protagenes. The former having come to Rhodes, where Protagenes was residing, paid a visit to the artist, but not finding him at home, obtained permission, from a domestic in waiting, to enter the *atelier* of the painter. Finding here a piece of canvass ready on the frame for the artist's pencil, he drew upon it a line (according to some, a figure in outline) with

wonderful precision, and then retired without disclosing his name. Protopogenes, on returning home, and discovering what had been done, exclaimed that Apelles alone could have executed such a sketch. Still, however, he drew another himself, a line more perfect than that of Apelles, and left directions with his domestic, that, when the stranger should call again, he should be shown what had been done by him. Apelles came accordingly, and perceiving that his line had been excelled by Protopogenes, drew a third one still more perfect than the other two, and cutting both. Protopogenes now confessed himself vanquished; he ran to the barber, sought for Apelles, and the two artists became the warmest friends. (Consult, as regards the question whether the story refers to a mere number of separate lines having been drawn on this occasion, or to entire outlines, the remarks of Quatremere de Quincy, *Mém. de l'Institut*, vol. 7.—*Journ. des Sav.*, Avril, 1823, p. 219.—*Magasin Encyclop.*, 1808, vol. 4, p. 153, 407.) The canvass containing this famous trial of skill became highly prized, and at a later day was placed in the palace of the Cæsars at Rome. It was destroyed by a conflagration, together with the edifice itself. Protopogenes was employed for seven years in finishing a picture of Iseus, a celebrated huntsman, supposed to have been the son of Apollo, and the founder of Rhodes. During all this time the painter lived only upon lupines and water, thinking that such aliments would leave him greater flights of fancy; but all this did not seem to make him more successful in the perfection of his picture. He was to represent in the piece a dog panting, and with froth at his mouth; but this he never could do with satisfaction to himself; and, when all his labours seemed to be without success, he threw his sponge upon the piece in a fit of anger. Chance alone brought to perfection what the labours of art could not accomplish: the fall of the sponge upon the picture represented the froth at the mouth of the dog in the most perfect and natural manner, and the piece was universally admired. The same story is told of Neleus while engaged in painting a horse; and probably one of these anecdotes has been copied from the other. According to Pliny, Protopogenes painted this picture with four layers of colours, in such a way, that, when one was destroyed by the hand of time, the layer underneath would reproduce the piece in all its original freshness and beauty. The account appears a difficult one to comprehend. Apelles, on seeing this production of the pencil, is said to have broken out into loud expressions of admiration; but what consoled him was the reflection that his own pieces surpassed those of Protopogenes in grace. When Demetrius besieged Rhodes, he refused to set fire to a part of the city, which might have made him master of the whole, because he was informed that this part contained some of the finest productions of the pencil of the artist. Protopogenes himself occupied, during the siege, a house in the suburbs, in the very midst of the enemy's lines; and when Demetrius expressed his astonishment at the feeling of security which the painter displayed, the latter replied, "I know very well that Demetrius is making war upon the Rhodians, not upon the arts." The prince thereupon, for greater safety, posted a guard around his dwelling.—During the reign of Tiberius, sketches and designs of Protopogenes were to be seen at Rome, which were regarded as models of the *beau idéal*. His picture of Iseus was brought from Greece, and placed in the temple of Peace in the Roman capital, where it perished in a conflagration.—Protopogenes was also an excellent modeller, and executed several statues in bronze. Suidas states that he wrote two works, on painting and on figures. (*Plin.*, 35, 10, 36.)—The talents of Protopogenes were not so fertile as those of many artists, a circumstance to be ascribed to his minute and scrupulous care. This is the quality which

Quintilian mentions as his great characteristic; and Petronius likewise observes, that his outlines vied in accuracy with the works of nature themselves. (*Quintil.*, 12, 10.—*Petron.*, Sat., 84.)

PROXENUS, a Boeotian, one of the commanders of the Greek forces in the army of Cyrus the younger. He was put to death with his fellow-commanders by Artaxerxes. Proxenus was the one who induced Xenophon to join in the expedition of Cyrus, and, after the death of Proxenus, Xenophon was chosen to supply his place. (*Anab.*, 1, 1, 11.—*Ibid.*, 2, 6, 1, &c.)

PRUDENTIUS, AURELIUS CLEMENS, a Latin poet, who flourished about A.D. 393. He was born at Calagurris (*Calahorra*), or, according to a less probable opinion, at Comaragusta (*Saragossa*). (*Nic. Anton.*, *Bibl. Vet. Hist.*, 2, 10, p. 218, seqq.—*Middeldorff*, *de Prudentio*, &c., *Wratissl.*, 1823, 4to, p. 3, seqq.) Some particulars of his life are given in the poetical preface, appended to one of his works (*Kathemerinon Liber*), from which we learn, that, according to the custom of his time, he first attended the schools of rhetoric, and then followed the profession of an advocate, in which he appears to have acquired considerable reputation, as he was twice appointed *Prefectus Urbis*, but over what places is not mentioned. He was, after this, elected to a still higher office, but whether military or civil in its nature is uncertain, probably the latter: this was under the Emperor Theodosius. (*Middeldorff*, p. 8, seqq.—*Nic. Anton.*, p. 221.) At last, at the age of fifty-seven (*Pref. ad Cath.*, v. 1, seqq.), he abandoned the world, in order to pass the remainder of his days in devotion. From this period (A.D. 405) to the time of his death (about A.D. 413), he is supposed to have been occupied with the composition of the works that have come down to us. Prudentius is sometimes styled "the first Christian poet;" a title, however, which means but little. In no case can he be compared with the classic writers. He is even decidedly inferior to Claudian and Ausonius. His style is often marked by inaccuracies, and he offends heavily against the laws of metre.—The poem entitled *Apotheosis* is directed against the Patripassians, Sabellians, and other heretics; and we may regard as a continuation of it the other poem "On the Origin of Sin" (*Hamartigenia*, *Ἀμαρτιγένεια*). In this latter production the author refutes the error of the Marcionites and Manichæans, who attributed the origin of evil to an evil principle. The *Psychomachia* (*Ψυχμαχία*) describes the combats between our virtues and vices, of which the heart is the arena. We may also regard as didactic the poem of Prudentius against Symmachus (*contra Symmachii Oratorem libri duo*), relative to the restoration of the altar of Victory. The poet gives the origin of the gods of mythology, and narrates their scandalous histories; and he then proceeds to show, that Rome could never have owed her greatness to such contemptible divinities. The lyric pieces of Prudentius form two collections; one entitled *Kathemerinon Liber*, containing twelve hymns for the different parts of the year and for certain festivals; the other, *De Coronis*, or *Ἐπι ἀρετῶν Liber*, comprising fourteen hymns in honour of as many martyrs. These lyric effusions contain some agreeable and touching passages, and Christian sentiments expressed with great force, but also a great many superstitious ideas. Those of them that are written in elegiac measure are distinguished by facility of versification: as, for example, the hymn in honour of St. Hippolytus. There is also attributed to Prudentius a *Biblical Manual* (*Diptychon seu Enchiridium utriusque Testamenti*), containing an abridgement of Sacred History in forty-nine sections, each section consisting of four verses. It is doubtful, however, whether Prudentius ever wrote it. Some are of opinion that it is the production of a native of Spain, who lived in the fifth century, and who is named Pro-

dentius Ammonius in a Strasburg manuscript. (*Fabris, Comment. ad Post.*, p. 7.—*Leyser, Hist. Post.*, p. 10.)—The best editions of Prudentius are, that of Weitsius, *Hannov.*, 1613, 8vo; that of Cellarius, *Hal.*, 1793, 1739, 8vo; and that of Teellius, *Parma*, 1788, 2 vols. 4to. (*Schöll, Hist. Lit. Rom.*, vol. 3, p. 72, seqq.—*Bähr, Geoch. Röm. Lit.*, vol. 2, p. 41, seqq.)

PRUSA, a city of Bithynia, at the foot of Mount Olympus, and hence called *Prusa ad Olympum* (Προδὸς ἐπὶ τῷ Ὀλύμπῳ). Pliny asserts, without naming his authority, that this town was founded by Hannibal (5, 32). By which expression we are probably to understand that it was built at the instigation of this great general, when he resided at the court of Prusias, from whom the name of the city seems evidently derived. But Strabo, following a still more remote tradition, affirms that it was founded by Prusias, who made war against Crenæa. (*Strab.*, 564.) In Stephanus, who copies Strabo, the latter name is altered to Cyrus (s. v. *Προδὸς*). But it is probable that both readings are faulty, though it is not easy to see what substitution should be made. (Consult the *French Strabo*, vol. 4, lib. 12, p. 82.) Dio Chrysostom, who was a native of Prusa, did not favour the tradition which ascribed to it so early an origin as that authorized by the reading in Strabo. (*Orat.*, 43, p. 585.) Stephanus informs us that Prusa was but a small town. Strabo, however, states that it enjoyed a good government. It continued to flourish under the Roman empire, as may be seen from Pliny the younger (10, 85); but under the Greek emperors it suffered much from the wars carried on against the Turks. (*Nicet. Chron.*, p. 196, D., p. 389, A.) It finally remained in the hands of the descendants of Osman, who made it the capital of their empire, under the corrupted name of *Brusa* or *Broussa*. It is still one of the most flourishing towns possessed by the infidels in Anatolia. (*Brown's Travels*, in *Walpole's Turkey*, vol. 2, p. 108.—*Cramer's Asia Minor*, vol. 1, p. 176.)

PRUSIAS, I. king of Bithynia, son of Zieles, began to reign about B.C. 228, and was still reigning B.C. 190, at the time of the war between the Romans and Antiochus; for Polybius intimates that the Prusias who was solicited by Antiochus had been reigning for some time. (*Polyb.*, 21, 9.) In B.C. 216 Prusias defeated the Gauls in a great battle. (*Polyb.*, 5, 111.) In B.C. 207 he invaded the territories of Attalus I. He was included in the treaty with Philip in B.C. 205. (*Liv.*, 29, 12.) Strabo asserts that it was this, the elder, Prusias with whom Hannibal sought refuge. (*Strab.*, 563.) And the accounts of other writers contain nothing to disprove this testimony. But if the elder Prusias received Hannibal, he was still living at the death of Hannibal in B.C. 183. (*Clinton, Fast. Hell.*, vol. 2, p. 415, seq.)—II. The second of the name appears to have ascended the throne of Bithynia between B.C. 183 and B.C. 179. The two reigns of Prusias I. and Prusias II. occupied a period of about 79 years (B.C. 228–150). Prusias II. married the sister of Perseus, king of Macedon. (*Appian, Bell. Mithrad.*, c. 2.) He was surnamed ὁ Κυνηγός, or *The Hunter*, and was long engaged in war with Attalus, king of Pergamus. He is commonly supposed to have been the monarch who abandoned Hannibal when the latter was sought after by the Romans; though Strabo assigns this to Prusias I. This monarch extended considerably the limits of the Bithynian empire, by the accession of some important towns conceded to him by his ally Philip of Macedon (*Strab.*, 563.—*Liv.*, 32, 34), and several advantages gained over the Byzantines and King Attalus. But the latter was finally able to overcome his antagonist, by stirring up against him his own son Nicomedes, who, after drawing the troops from their allegiance to his

father, caused him to be assassinated. (*Liv., Egypt.*, 50.—*Justin*, 24, 4.—*Clinton, Fast. Hell.*, vol. 2, p. 417.—*Cramer's Asia Minor*, vol. 1, p. 169.)

PSAMMETICHUS, the last king of Egypt, and a member of the Saitic dynasty, the twenty-sixth of the royal lines that ruled in this country. Julius Africanus calls him *Psammacherites*. He was the son and successor of Amasis, and ascended the throne at the very moment that Cambyses was marching against Egypt to dethrone the father. Psammnetus met Cambyses on the frontiers, near the Pelusiac branch of the Nile, with all his forces, Egyptians, Greeks, and Carians, but was totally defeated in a bloody battle. Shutting himself up in Memphis, he was besieged here by Cambyses, and, according to Ctesias, was finally betrayed and taken prisoner. All Egypt thereupon fell under the Persian power, and the reign of Psammnetus ended after a duration of only six months. The greatest outrages were heaped upon the unfortunate monarch and his family; but the firmness with which he endured them all, touched at last even the ferocious Cambyses with compassion. Psammnetus was thereupon retained at court, treated with honour, and finally sent to Susa along with 6000 Egyptian captives. Having been accused, however, subsequently, of attempting to stir up a revolt, he was compelled to drink bull's blood, and ended his days. (*Herod.*, 3, 10, seqq.—*Ctes.*, *Pers.*, 2.—*Bähr, ad Ctes.*, l. c.—*St. Martin*, in *Biogr. Univ.*, vol. 36, p. 177, seq.)

PSAMMETICHUS, the first king of Egypt who opened that country to strangers, and induced the Greeks to come and settle in it. He was the fourth prince of the Saitic dynasty, and the son of Neco or Necho, who had been put to death by the Ethiopians, at that time masters of Egypt. Psammitichus, being quite young at the time of his father's death, had been carried into Syria to avoid a similar fate, and, after the retreat of the conquerors, was recalled to his native country by the inhabitants of the Saitic nome. It would seem that the Ethiopians, on their departure, had left Egypt a prey to trouble and dissension, and that the early princes of the Saitic dynasty, also, had never enjoyed sovereign authority over the whole kingdom. When Psammitichus, therefore, ascended the throne, he was obliged to share his power with eleven other monarchs, and Egypt was thus divided into twelve independent sovereignties. This form of government was like what the Greeks called a *duodecarchy* (δωδεκαρχία). The twelve kings regulated in common, in a general council, all that related to the affairs of the kingdom considered as a whole. This state of things lasted for fifteen years, when it met with a singular termination. An oracle had declared that the whole kingdom would fall to the lot of that one of the twelve monarchs who should one day offer a libation with a brazen cup. It happened, then, one day, that the kings were all sacrificing in common in the temple of Vulcan at Memphis, and that the high priest, who distributed the golden cups for libations, had brought with him, by some accident, only eleven. When it came, therefore, to the turn of Psammitichus, who was the last in order to pour out a libation, he unthinkingly employed for this purpose his brazen helmet. This incident occasioned great disquiet to his colleagues, who thought they saw in it the fulfilment of the oracle. Being unable, however, with any appearance of justice, to punish an unpremeditated act, they contented themselves with banishing him to his own kingdom, which lay on the coast, and with forbidding him to take any part thereafter in the general affairs of the country. Psammitichus, however, retaliated upon them by calling to his aid some Greek mercenaries who had landed on the Egyptian shore, and eventually conquered all his colleagues, and made himself master of the whole of Egypt, B.C. 652. The monarch now recompensed his Greek allies, not only

by paying them the sums of money which he had promised, but also in assigning them lands on the Syrian frontier, where they formed, in fact, a military colony. Psammitichus showed a great partiality for the Greeks on all occasions; and, in a Syrian expedition, he gave them the place of honour on the right, while he assigned the left to the Egyptians. The discontent of the national troops was so great at this, that a large number of the military caste, amounting, it is said, to 240,000 men, left Egypt and retired to Ethiopia. (Consult, on this subject, the learned note of St. Martin, *Biogr. Univ.*, vol. 36, p. 180, *seq.*) So strong was the partiality of Psammitichus for everything Greek, that he caused a number of children to be trained up after the Grecian manner, and with these he formed the caste of interpreters, whom Herodotus found in his day existing in Egypt. Psammitichus also embellished his capital with several beautiful structures, and, among others, with the southern propylæa of the great temple of Vulcan. He carried on a long war in Syria, and his forces are said to have remained 29 years before the city of Azotus. It was during this period, probably, that he arrested by presents the victorious career of the Scythians, who had overrun Asia Minor, and were advancing upon Palestine and Egypt. This event would seem to have happened 626 B.C., or in the 13th year of the reign of the Jewish king Josiah, when the prophet Isaiah announced the approaching irruption of the Scythians into the territories of Israel. Psammitichus died after a reign of 54 years, leaving the crown to his son Neco. —Herodotus relates a very foolish story of Psammitichus, who, it seems, was desirous of ascertaining what nation was the most ancient in the world; or, in other words, what was the primitive language of men. In order to discover this, he took two newly-born children, and, having caused them to be placed in a lonely hut, directed a shepherd to nourish them with the milk of goats, which animals were sent in to them at stated times, and to take care himself never to utter a word in their hearing. The object was to ascertain what words they would first utter of themselves. At length, on one occasion, when the shepherd went in to them as usual, both the children, running up to him, called out *Bekos*. Psammitichus, on being informed of the circumstance, made inquiries about the word, and found that it was the Phrygian term for *bread*. He therefore concluded that the Phrygians were the most ancient of men! The truth is, the cry which the children uttered (supposing the story to be true) was *bek* (with the Greek termination as given by Herodotus, *bek-os*), and the children had learned it from the cry of the goats which suckled them. (*Herod.*, 2, 151, *seqq.* — St. Martin, in *Biogr. Univ.*, vol. 36, p. 178, *seqq.*) — II. A descendant of the preceding, who came to the throne about 400 B.C., as a kind of vassal-king to Persia. (St. Martin, in *Biogr. Univ.*, vol. 36, p. 181.)

PSOPHIS, a very ancient city in the northwestern part of Arcadia. Pausanias places it at the foot of the chain of Erymanthus, from which descended a river of the same name, which flowed near the city, and, after receiving another small stream called Aroanius, joined the Alpheus on the borders of Elis (8, 24). Psophis itself had previously borne the names of Erymanthus and Phegea. At the time of the Social war, it was in the possession of the Eleans, on whose territory it bordered, as well as on that of the Achæans; and, as it was a place of considerable strength, proved a source of great annoyance to the latter people. It was taken by Philip, king of Macedon, then in alliance with the Achæans, and made over by him to the latter people, who garrisoned it with their troops. — The remains of Psophis are to be seen near the Khan of Tripotamia, so called from the junction of three rivers. (*Puquerville*, vol. 5, p. 448. — *Gell, Itinerary of Mo-*

res, p. 122. — *Cramer's Ancient Greece*, vol. 2, p. 323.)

PSYCHE (Ψυχή), a young maiden beloved by Cupid, and of whom the following legend is related by Apuleius: She was the daughter of a king and queen, and the youngest of three sisters. Her beauty was so remarkable that people crowded from all parts to gaze upon her charms, altars were erected to her, and she was worshipped as a second Venus. The Queen of Love was irritated at seeing her own altars neglected and her adorers diminishing. She summoned her son, and ordered him to inspire Psyche with a passion for some vile and abject wretch. The goddess then departed, after having conducted her son to the city where Psyche dwelt, and left him to execute her mandate. Meantime Psyche, though adored by all, was sought as a wife by none. Her sisters, who were far inferior to her in charms, were married, but she remained single, bating that beauty which all admired. Her father consulted the oracle of Apollo, and was ordered to expose her on a rock, whence she would be carried away by a monster. The oracle was obeyed, and Psyche, amid the tears of the people, was placed on a lofty crag. Here, while she sat weeping, a zephyr, sent for the purpose, gently raised and carried her to a charming valley. Overcome by grief, she fell asleep, and, on awakening, beholds a grove with a fountain in the midst of it, and near it a stately palace of most splendid structure. Venturing to enter this palace, she goes over it, lost in admiration of its magnificence; when, suddenly, she hears a voice, telling her that all there is hers, and that her commands will be obeyed. She bathes, sits down to a rich repast, and is regaled with music by invisible performers. At night she retires to bed; an unseen youth addresses her in the softest accents, and she becomes his bride. Her sisters, meanwhile, had come to console their parents for the loss of Psyche, whose invisible spouse informs her of the event, and warns her of the danger likely to arise from it. Moved by the tears of his bride, however, he consents that her sisters should come to the palace. The obedient zephyr conveys them thither. They grow envious of Psyche's happiness, and try to persuade her that her invisible lord is a serpent, who will finally devour her. By their advice she provides herself with a lamp and a razor to destroy the monster. When her husband was asleep, she arose, took her lamp from its place of concealment, and approached the couch: but there she beheld, instead of a dragon, Love himself. Filled with amazement at his beauty, she leaned in rapture over him: a drop of oil fell from the lamp on the shoulder of the god: he awoke and flew away. Psyche caught at him as he rose, and was raised into the air, but fell; and, as she lay, the god reproached her from a cypress for her breach of faith. The abandoned Psyche now roams through the world in search of Cupid, and making many fruitless endeavours to destroy herself. She arrives at the kingdom of her sisters; and, by a false tale of Cupid's love for them, causes them to cast themselves from the rock on which she had been exposed, and through their credulity they perish. She still roams on, persecuted and subjected to numerous trials by Venus. This goddess, bent on her destruction, despatches her to Proserpina with a box, to request some of her beauty. Psyche accomplishes her mission in safety; but, as she is returning, she thinks she may venture to open the box and take a portion for herself. She opens the box, when, instead of beauty, there issues from it a dense, black exhalation, and the imprudent Psyche falls to the ground in a deep slumber from its effects. In this state she is found by Cupid, who had escaped by the window of the chamber where he had been confined by his mother: he awakens her with the point of one of his arrows, reproaches her with her curiosity, and then proceeds to the palace of Jupiter, to interest

him in her favour. Jupiter takes pity on her and endows her with immortality: Venus is reconciled, and the marriage of Psyche with Cupid takes place amid great joy in the skies. The offspring of their union was a child, whom his parents named Pleasure. (*Apuleius, Met.*, 4, 88, *seqq.*—*Op.*, ed. Oudend., vol. 1, p. 300, *seqq.*—*Keightley's Mythology*, p. 148, *seqq.*—Among the various explanations that have been given of this beautiful legend, the following appears the most satisfactory: This fable, it is said, is a representation of the human soul (*ψυχή*). The soul, which is of divine origin, is here below subjected to error in its prison-house, the body. Hence trials and purifications are set before it, that it may become capable of a higher view of things, and of true desire. Two loves meet it: the earthly, a deceiver, who draws it down to earthly things; the heavenly, who directs its view to the original, fair and divine, and who, gaining the victory over his rival, leads off the soul as his bride. (*Hirt, Berlin Akad.*, 1816.—*Creuzer, Symbolik*, vol. 3, p. 573.)

PSYLLI, a people of Libya near the Syrtis, very expert in curing the venomous bite of serpents, which had no fatal effect upon them. They were destroyed by the Nasamones, a neighbouring people. It seems very probable that the Nasamones circulated the idle story respecting the destruction of the Psylli, which Herodotus relates, without, however, giving credit to it. He states that a south wind had dried up all the reservoirs of the Psylli, and that the whole country, as far as the Syrtis, was destitute of water. They resolved, accordingly, after a public consultation, to make an expedition against the south wind; but, having reached the deserts, the south wind overwhelmed them beneath the sands. (*Lacan*, 9, 894, 937.—*Herod.*, 4, 172.—*Pausan.*, 9, 28.)

PSYLLIA, a small territory, forming part of Cappadocia according to Herodotus (1, 76), or, more properly speaking, of Paphlagonia, and in the vicinity of the city of Sinope. Here the first battle took place between Croesus and Cyrus. (*Herod.*, l. c.—*Larcher, Hist. Herod.*, vol. 8, p. 468.)

PTOLEMÆUS, I. surnamed *Soter*, and sometimes *Lagi* (i. e., son of Lagus), king of Egypt, and son of Arsinoë, who, when pregnant by Philip of Macedonia, married Lagus. (*Vid. Lagus.*) Ptolemy was educated in the court of the King of Macedonia. He became one of the friends and associates of Alexander, and, when that monarch invaded Asia, the son of Arsinoë attended him as one of his generals. During the expedition he behaved with uncommon valour; he killed one of the Indian monarchs in single combat, and it was to his prudence and courage that Alexander was indebted for the reduction of the rock Aornus. After the conqueror's death, in the general division of the Macedonian empire, Ptolemy obtained as his share the government of Egypt, with Libya, and part of the neighbouring territories of Arabia. In this appointment the governor soon gained the esteem of the people by acts of kindness, by benevolence and clemency, though he did not assume the title of independent monarch till seventeen years after. He made himself master of Coelosyria, Phœnicia, and the neighbouring coast of Syria; and when he had reduced Jerusalem, he carried above 100,000 prisoners to Egypt, to people the extensive city of Alexandria, which became the capital of his dominions. After he had rendered these prisoners the most attached and faithful of his subjects by his liberality and the grant of various privileges, Ptolemy assumed the title of King of Egypt, and soon after reduced Cyprus under his power. He made war with success against Demetrius and Antigonus, who disputed his right to the provinces of Syria; and from the assistance he gave to the people of Rhodes against their common enemies, he received the name of *Soter*. While he extended his dominions,

Ptolemy was not negligent of the interests of his subjects at home, and established many wise regulations for the improvement of his people, and the cultivation of literature and the arts. He died at the age of eighty-four, having governed Egypt as viceroy for seventeen years, and then ruled over it as monarch for twenty-three years. The date of his death is B.C. 282. (*Clinton, Fast. Hell.*, vol. 1, p. 184.—*Id. ib.*, p. 237.—*Id. ib.*, vol. 2, p. 379.) He was succeeded by his son Ptolemy Philadelphus, who had been his partner on the throne the last two years of his reign. Ptolemy has been commended for his abilities not only as a sovereign, but as a writer; and among the many valuable compositions of antiquity which have been lost, we have to lament a history of the life and expeditions of Alexander the Great by the King of Egypt, greatly admired and valued for elegance and authenticity, and from which Arrian obtained important materials for his work on the same subject.—II. Son of Ptolemy the First, succeeded his father on the Egyptian throne, and was called *Philadelphus* from the affection entertained by him for his sister and wife Arsinoë. He showed himself worthy in every respect to succeed his great father, and, conscious of the advantages which arise from an alliance with powerful nations, he sent ambassadors to Italy to solicit the friendship of the Romans, whose name and military reputation had become universally known for the victories which they had just obtained over Pyrrhus and the Tarentines. But while Ptolemy strengthened himself by alliances with foreign powers, the internal peace of his kingdom was disturbed by the revolt of Magas, his brother, king of Cyrene. The sedition, however, was stopped, though kindled by Antiochus, king of Syria, and the death of the rebellious prince re-established peace for some time in the family of Philadelphus. Antiochus, the Syrian king, married Berenice, the daughter of Ptolemy; and the father, though old and infirm, conducted his daughter to her husband's kingdom, and assisted at the nuptials. Philadelphus died in the sixty-fourth year of his age, two hundred and forty-six years before the Christian era. He left two sons and a daughter by Arsinoë, the daughter of Lysimachus. He had afterward married his sister Arsinoë, whom he loved with uncommon tenderness, and to whose memory he began to erect a celebrated monument. (*Vid. Dinocrates.*) During the whole of his reign, Philadelphus was employed in exciting industry, and in encouraging the liberal arts and useful knowledge among his subjects. The inhabitants of the adjacent countries were allured by promises and presents to increase the number of the Egyptian subjects, and Ptolemy could boast of reigning over numerous well-peopled cities. He gave every possible encouragement to commerce; and by keeping two powerful fleets, one in the Mediterranean, and the other in the Red Sea, he made Egypt the mart of the world. His army consisted of 200,000 foot, 40,000 horse, besides 300 elephants, and 3000 armed chariots. With justice, therefore, he has been called the richest of all the princes and monarchs of his age; and, indeed, the remark is not false, when it is observed that at his death he left in his treasury 750,000 Egyptian talents, a sum equivalent to two hundred millions sterling. His palace was the asylum of learned men, whom he admired and patronised; and by increasing the library which he himself, or, according to others, his father had founded, he showed his taste for learning, and his wish to encourage genius. (*Vid. Alexandria*, and *Alexandrina Schola.*) The whole reign of Philadelphus was 39 years, and from the death of his father 86 years. (*Clinton, Fast. Hell.*, vol. 2, p. 379.)—III. The third of the name, succeeded his father Philadelphus on the Egyptian throne B.C. 245. He early engaged in a war against Antiochus Theos for his unkindness to Berenice, the Egyptian king's sister, whom he had

married with the consent of Philadelphus. With the most rapid success he conquered Syria and Cilicia, and advanced as far as Bactriana and the confines of India; but a sedition at home stopped his progress, and he returned to Egypt loaded with the spoils of conquered nations. Among the immense riches which he brought, he had many statues of the Egyptian gods, which Cambyses had carried away into Persia when he conquered Egypt. These were restored to the temples, and the Egyptians called their sovereign *Euergetes* (or *Benefactor*), in acknowledgment of his attention, beneficence, and religious zeal for the gods of his country. The last years of Ptolemy's reign were passed in peace if we except the refusal of the Jews to pay the tribute of 20 silver talents which their ancestors had always paid to the Egyptian monarchs. *Euergetes* died 221 years before Christ, after a reign of 25 years; and, like his two illustrious predecessors, was the patron of learning.—IV. The fourth, succeeded his father *Euergetes* on the throne of Egypt, and received the surname of *Philopator*, probably from the regard which he manifested for the memory of his father; though, according to some authorities, he destroyed him by poison. He began his reign with acts of the greatest cruelty, and he successively sacrificed to his avarice his own mother, his wife, his sister, and his brother. He received, in derision, the name of *Typhon*, from his evil morals, and that of *Gallus*, because he appeared in the streets of Alexandria with all the gestures of the priests of Cybele. In the midst of his pleasures *Philopator* was called to war against Antiochus, king of Syria, and at the head of a powerful army he soon invaded his enemy's territories, and might have added the kingdom of Syria to Egypt if he had made a prudent use of the victories which attended his arms. In the latter part of his reign, the Romans, whom a dangerous war with Carthage had weakened, but, at the same time, roused to superior activity, renewed, for political reasons, the treaty of alliance which had been made with the Egyptian monarchs. *Philopator* at last, weakened and enervated by intemperance and continued debauchery, died in the 37th year of his age, after a reign of 17 years, 204 years before the Christian era.—V. The fifth, succeeded his father *Philopator* as king of Egypt, though only in the fourth year of his age. During the years of his minority he was under the protection of Sosicius and of Aristomenes, by whose prudent administration Antiochus was dispossessed of the provinces of Coelosyria and Palestine, which he had conquered in war. The Romans also renewed their alliance with him after their victories over Hannibal, and the conclusion of the second Punic war. This flattering embassy induced Aristomenes to offer the care of the patronage of the young monarch to the Romans; but the regent was confirmed in his honourable office, and, by making a treaty of alliance with the people of Achaia, he convinced the Egyptians that he was qualified to wield the sceptre and to govern the nation. But, now that Ptolemy had reached his 14th year, according to the laws and customs of Egypt, the years of his minority had expired. He received the surname of *Epiphanes*, or *Illustrious*, and was crowned at Alexandria with the greatest solemnity, and the faithful Aristomenes resigned into his hands an empire which he had governed with honour to himself and with credit to his sovereign. Young Ptolemy was no sooner delivered from the shackles of a superior, than he betrayed the same vices which had characterized his father. The counsels of Aristomenes were despised, and the minister, who for ten years had governed the kingdom with equity and moderation, was sacrificed to the caprice of the sovereign, who abhorred him for the salutary advice which his own vicious inclinations did not permit him to follow. His cruelties raised seditions among his subjects, but

these were twice quelled by the prudence and the moderation of one Polycrates, the most faithful of his corrupt ministers. In the midst of his extravagance, *Epiphanes* did not forget his alliance with the Romans. Above all others, he showed himself eager to cultivate friendship with a nation from whom he could derive so many advantages, and during their war against Antiochus he offered to assist them with money against a monarch whose daughter, Cleopatra, he had married, but whom he hated on account of the seditions he had raised in the very heart of Egypt. After a reign of 24 years, Ptolemy was poisoned, 180 years before Christ, by his ministers, whom he had threatened to rob of their possessions to carry on a war against Seleucus, king of Syria.—VI. The sixth, succeeded his father *Epiphanes* on the Egyptian throne, and received the surname of *Philometor*, probably by antiphrasis, as account of his hatred against his mother Cleopatra. He was in the sixth year of his age when he ascended the throne, and during his minority the kingdom was governed by his mother, and at her death by a eunuch, who was one of his favourites. He made war against Antiochus *Epiphanes*, king of Syria, to recover the provinces of Palestine and Coelosyria, which were part of the Egyptian dominions, and, after several successes, he fell into the hands of his enemy, who detained him in confinement. During the captivity of *Philometor*, the Egyptians raised to the throne his younger brother Ptolemy *Euergetes*, or *Physcon*, also son of *Epiphanes*; but he was no sooner established in his power than Antiochus turned his arms against Egypt, drove out the usurper, and restored *Philometor* to all his rights and privileges as king of Egypt. This artful behaviour of Antiochus was soon comprehended by *Philometor*; and when he saw that Pelusium, the key of Egypt, had remained in the hands of his Syrian ally, he recalled his brother *Physcon*, and made him partner on the throne, and concerted with him how to repel their common enemy. This union of interest in the two royal brothers incensed Antiochus: he entered Egypt with a large army, but the Romans checked his progress and obliged him to retire. No sooner were they delivered from the impending war, than *Philometor* and *Physcon*, whom the fear of danger had united, began with mutual jealousy to oppose each other's views. *Physcon* was at last banished by the superior power of his brother, and, as he could find no support in Egypt, he immediately repaired to Rome. To excite more effectually the compassion of the Romans, and to gain their assistance, he appeared in the meanest dress, and took his residence in the most obscure corner of the city. He received an audience from the senate, and the Romans settled the dispute between the two royal brothers by making them independent of one another, and giving the government of Libya and Cyrene to *Physcon*, and confirming *Philometor* in the possession of Egypt and the island of Cyprus. These terms of accommodation were gladly accepted; but *Physcon* soon claimed the dominion of Cyprus, and in this he was supported by the Romans, who wished to aggrandize themselves by the diminution of the Egyptian power. *Philometor* refused to give up the island of Cyprus, and, to call away his brother's attention, he fomented the seeds of rebellion in Cyrene. But the death of *Philometor*, 145 years before the Christian era, left *Physcon* master of Egypt and all the dependent provinces.—VII. The seventh Ptolemy, surnamed *Physcon* on account of an abdominal protuberance, produced by his intemperate habits (*vid.* *Physcon*), ascended the throne of Egypt after the death of his brother *Philometor*; and, as he had reigned for some time conjointly with him (*vid.* Ptolemæus VI.), his succession was approved, though the wife and the son of the deceased monarch laid claims to the crown. Cleopatra was supported in her claims by the Jews,

PTOLEMÆUS.

and it was at last agreed that Physcon should marry the queen, and that her son should succeed on the throne at his death. The nuptials were accordingly celebrated, but on that very day the tyrant murdered Cleopatra's son in her arms. He ordered himself to be called *Euergetes*, but the Alexandreans refused to do it, and stigmatized him with the appellation of *Kakergetes*, or *Evil-doer*, a surname which he deserved by his tyranny and oppression. A series of barbarities rendered him odious; but, as no one attempted to rid Egypt of her tyrant, the Alexandreans abandoned their habitations, and fled from a place which continually streamed with the blood of their massacred fellow-citizens. If their migration proved fatal to the commerce and prosperity of Alexandria, it was of the most essential service to the countries where they retired; and the numbers of Egyptians that sought a safe asylum in Greece and Asia, introduced among the inhabitants of those countries the different professions that were practised with success in the capital of Egypt. Physcon endeavoured to repopulate the city which his cruelty had laid desolate; but the fear of sharing the fate of its former inhabitants prevailed more than the promise of riches, rights, and immunities. The king, at last, disgusted with Cleopatra, repudiated her, and married her daughter by Philometor, called also Cleopatra. He still continued to exercise the greatest cruelty upon his subjects; but the prudence and vigilance of his ministers kept the people in tranquillity, till all Egypt revolted when the king had basely murdered all the young men of Alexandria. Without friends or support in Egypt, he fled to Cyprus, and Cleopatra, the divorced queen, ascended the throne. In his banishment Physcon dreaded lest the Alexandreans should also place the crown on the head of his son, by his sister Cleopatra, who was the governor of Cyrene; and under these apprehensions he sent for the young prince, called Memphitis, to Cyprus, and murdered him as soon as he reached the shore. To make the barbarity more complete, he sent the limbs of Memphitis to Cleopatra, and they were received as the queen was going to celebrate her birthday. Soon after this he invaded Egypt with an army, and obtained a victory over the forces of Cleopatra, who, being left without friends or assistance, fled to her eldest daughter Cleopatra, who had married Demetrius, king of Syria. This decisive blow restored Physcon to his throne, where he continued to reign for some time, hated by his subjects and feared by his enemies. He died at Alexandria in the 67th year of his age, after a reign of 29 years, about 116 years before Christ. This prince, notwithstanding his cruel disposition, was a lover of learning, and received from some the appellation of *Philologist*. Aristarchus was his preceptor, and he is said also to have made important additions to the Alexandrian library, as well in original manuscripts as in copies.—VIII. The eighth, surnamed Soter II., succeeded his father Physcon as king of Egypt. He had no sooner ascended the throne than his mother Cleopatra, who reigned conjointly with him, expelled him to Cyprus, and placed the crown on the head of his brother Ptolemy Alexander, her favourite son. Soter, banished from Egypt, became king of Cyprus; and soon after he appeared at the head of a large army, to make war against Alexander Jannæus, king of Judæa, through whose assistance and intrigue he had been expelled by Cleopatra. The Jewish monarch was conquered, and 50,000 of his men were left on the field of battle. Soter, after he had exercised the greatest cruelty upon the Jews, and made vain attempts to recover the kingdom of Egypt, retired to Cyprus till the death of his brother Alexander restored him to his native dominions. Some of the cities of Egypt refused to acknowledge him as their sovereign, and Thebes, for its obstinacy, was closely besieged for three successive years, and from a powerful

PTOLEMÆUS.

and populous city it was reduced to ruins. In the latter part of his reign Soter was called upon to assist the Romans with a navy for the conquest of Athens; but Lucullus, who had been sent to obtain the wanted supply, though received with kingly honours, was dismissed with evasive and unsatisfactory answers, and the monarch refused to part with troops which he deemed necessary to preserve the peace of his kingdom. Soter died 81 years before the Christian era, after a reign of 36 years since the death of his father Physcon, eleven of which he had passed with his mother Cleopatra on the Egyptian throne, eighteen in Cyprus, and seven after his mother's death. This monarch is sometimes called *Lathyrus*, from an excrescence like a vetch (*λάθυρος*) on his nose.—IX. The ninth, called also Alexander Ptolemy I., was raised to the throne by his mother Cleopatra, in preference to his brother, and conjointly with her. Cleopatra expelled, but afterward recalled him; and Alexander, to prevent being expelled a second time, put her to death; for which unnatural action he was himself murdered by one of his subjects.—X. The tenth, or Alexander Ptolemy II., was son of the preceding. He was educated in the island of Cos, and, having fallen into the hands of Mithradates, escaped subsequently to Sylla. He was murdered by his own subjects.—XI. The eleventh, or Alexander Ptolemy III., was king of Egypt after his brother Alexander, the last mentioned. After a peaceful reign he was banished by his subjects, and died at Tyre B.C. 65, leaving his kingdom to the Romans.—XII. The twelfth, the illegitimate son of Soter II., ascended the throne of Egypt at the death of Alexander III. He received the surname of *Auletes*, from the skill with which he played upon the flute. Besides, however, this derogatory title, he had the surnames of *Philopator*, *Philadelphus*, and *Neodionysus* (the New Bacchus or Osiris, these deities being often confounded by the Greeks). His rise showed great marks of prudence and circumspection; and as his predecessor, by his will, had left the kingdom of Egypt to the Romans, Auletes knew that he could not be firmly established on his throne without the approbation of the Roman senate. He was successful in his applications; and Cæsar, who was then consul and in want of money, established his succession, and granted him the alliance of the Romans, after he had received a very large sum. But these measures rendered the monarch unpopular at home; and, when he had suffered the Romans quietly to take possession of Cyprus, the Egyptians revolted, and Auletes was obliged to fly from his kingdom, and seek protection among the most powerful of his allies. His complaints were heard at Rome at first with indifference; and the murder of a hundred noblemen of Alexandria, whom the Egyptians had sent to justify their proceedings before the Roman senate, rendered him unpopular and suspected. Pompey, however, supported his cause, and the senators decreed to re-establish Auletes on his throne; but, as they proceeded slowly in the execution of their plans, the monarch retired from Rome to Ephesus, where he lay concealed for some time in the temple of Diana. During his absence from Alexandria, his daughter Berenice had made herself absolute, and established herself on the throne by a marriage with Archelaus, a priest of Belona's temple at Comana; but she was soon driven from Egypt, when Gabinius, at the head of a Roman army, approached to replace Auletes on his throne. Auletes was no sooner restored to power than he sacrificed to his ambition his daughter Berenice, and behaved with the greatest ingratitude and perfidy to Rabirius, a Roman who had supplied him with money when expelled from his kingdom. Auletes died four years after his restoration, about 51 years before the Christian era. He left two sons and two daughters, and by his will ordered the elder of his sons to marry

the elder of his daughters, and to ascend with her the vacant throne. As these children were young, the dying monarch recommended them to the protection and paternal care of the Romans; and accordingly Pompey the Great was appointed by the senate to be their patron and their guardian. Their reign was as turbulent as that of their predecessors, and it is remarkable for no uncommon events; only we may observe that the young queen was the Cleopatra who soon after became so celebrated.—XIII. The thirteenth, ascended the throne of Egypt conjointly with his sister Cleopatra, whom he had married according to the directions of his father Auletes. (Vid. Cleopatra VII.)—XIV. Apion, king of Cyrene, was the illegitimate son of Ptolemy Physcon. After a reign of twenty years he died; and, as he had no children, he made the Romans heirs of his dominions. The Romans presented his subjects with their independence.—XV. Ceraunus, a son of Ptolemy Soter by Eurydice, the daughter of Antipater. Unable to succeed to the throne of Egypt, Ceraunus fled to the court of Seleucus, where he was received with friendly marks of attention. Seleucus was then king of Macedonia, an empire which he had lately acquired by the death of Lysimachus in a battle in Phrygia; but his reign was short; and Ceraunus perfidiously murdered him, and ascended his throne 280 B.C. The murderer, however, could not be firmly established in Macedonia as long as Arsinoë the widow, and the children of Lysimachus, were alive, and entitled to claim his kingdom as the lawful possession of their father. To remove these obstacles, Ceraunus made offers of marriage to Arsinoë, who was his own sister. The queen at first refused, but the protestations and solemn promises of the usurper at last prevailed upon her to consent. The nuptials, however, were no sooner celebrated than Ceraunus murdered the two young princes, and confirmed his usurpation by rapine and cruelty. But now three powerful princes claimed the kingdom of Macedonia as their own: Antiochus, the son of Seleucus; Antigonus, the son of Demetrius; and Pyrrhus, the king of Epirus. These enemies, however, were soon removed; Ceraunus conquered Antigonus in the field of battle, and stopped the hostilities of his two other rivals by promises and money. He did not long remain inactive: a barbarian army of Gauls claimed a tribute from him, and the monarch immediately marched to meet them in the field. The battle was long and bloody. The Macedonians might have obtained the victory if Ceraunus had shown more prudence. He was thrown down from his elephant, and taken prisoner by the enemy, who immediately tore his body to pieces. Ptolemy had been king of Macedonia only eighteen months. (Justin, 24, &c.—Pausan., 10, 10.—XVI. An illegitimate son of Ptolemy Soter II., or Lathyrus, king of Cyprus, of which he was tyrannically dispossessed by the Romans. Cato was at the head of the forces which were sent against Ptolemy by the senate, and the Roman general proposed to the monarch to retire from the throne, and to pass the rest of his days in the obscure office of high-priest in the temple of Venus at Paphos. This offer was rejected with the indignation which it merited, and the monarch poisoned himself at the approach of the enemy. The treasures found in the island amounted to the enormous sum of £1,356,350 sterling, which were carried to Rome by the conquerors.—XVII. A son of Pyrrhus, king of Epirus, by Antigone, the daughter of Berenice. He was left governor of Epirus when Pyrrhus went to Italy to assist the Tarentines against the Romans, where he presided with great prudence and moderation. He was killed, bravely fighting, in the expedition which Pyrrhus undertook against Sparta and Argos.—XVIII. Claudius, a celebrated astronomer, chronologer, musical writer, and geographer of antiquity, born in Egypt, and who flourished about the

middle of the second century of our era, under the Antonines. During the middle ages, it was generally supposed that he had reigned in Egypt, and the first edition of his *Almagest*, that of Grynæus, 1538, is dedicated to the King of England as the production of a king. This error is thought to have originated with Albumazar, an Arabian of the ninth century, who was led into the mistake by the Arabic name of the astronomer (*Bathalmius*), which, according to Herbelot, means in Arabic "a king of Egypt" (*Bibliotheca Oriental.*, s. v.), just as the ancient monarchs of the land were named *Féraoun* (*Pharaohs*). Ptolemy, however, is styled King of Alexandria almost two centuries before Albumazar, by Isidorus of Seville. (*Originum*, 3, 25.)—Another opinion, not less generally received, but probably just as erroneous as the former, is that which makes Ptolemy to have been born at Pelusium. Suidas and Eudoxia call him a philosopher of Alexandria; but it has been said that this appellation has only been given him on account of his long sojourn in the capital of Egypt. No ancient writer makes mention of his native country, though many manuscripts of the Latin translations of his works, and also the printed editions of these versions, style him *Pheludensis*, which many regard as a corruption for *Pelusiensis*. Ravidel (*Comment. in C. Ptol. Geogr.*, Norimb., 1737, 4to, p. 3) cites the Arab scholiast on the Tetrabiblos, *Ali-Idn-Reidman*, named *Haly*, to prove that Pelusium was the native place of our astronomer. Buttmann, on the other hand, proves the citation of Ravidel to be false. Haly, or his translator, makes no mention whatever of the native place of Ptolemy; he only calls this writer *al-Feludki* (*Pheludianus*), from the surname which the Arabs have given him. It is true, in a biography or preface found at the head of a Latin version of the *Almagest*, made from the Arabic, we read the following: "*Hic autem ortus et educatus fuit in Alexandria majori, terra Egypti. Hujus tamen propago de terra Sem, et de provincia quæ dicitur Pheludia.*" This absurd passage, however, which does not even say that Ptolemy was born out of Alexandria, proves nothing else but the desire of the Arab translator to represent the astronomer as the descendant of an Arabian or a Syrian (*de terra Sem.*—*Museum der Alterthums.*, Wissenschaft, vol. 2, p. 463, seq.).—Theodorus Meliteniotes states that Ptolemy was born at Ptolemaia, or Hermion, in the Thebaid, and that he was contemporary with Antoninus Pius. This writer does not, it is true, cite his authority; yet nothing prevents our admitting the accuracy of his statement, derived, no doubt, from some ancient writer, provided we can reconcile it with the surname *Al Feludi*, which the Arabians have given to Ptolemy. This surname has only thus far been found in the Latin translations: in the Arabic books Ptolemy is sometimes named *Bathalmius*, *al Kaladi* (*Abulpharagii Hist.*, p. 73, l. 5; p. 105, l. 3; p. 128, l. antep.—*Casiri, Biblioth. Arab. Hist.*, vol. 1, p. 348.—*Memoires sur l'Egypte*, p. 389, where an extract is given from *Abderachid el Bakin*, who calls Ptolemy *Barthalmiyou el Qloudy*). *Kaladi* is expressed by Claudius in the Latin versions. The change from *Kaladi* to *Feludi* is extremely simple, since in Arabic the letter K is distinguished from F only by an additional point. Thus *Pheludianus* is merely corrupted from *Claudius*, and ought not to be rendered by *Pelusiensis*. Thus, too, *Bathalmius al Kaladi* is only an Arabic version of *Ἰερογλαῖος ὁ Κλαύδιος*, as Suidas writes the name, the prænomén being mistaken by the Arabian translators for an appellative.—Another point, of more importance, is to ascertain the place where Ptolemy made his observations, because on this depends the degree of precision of which his observations on latitude were susceptible. The astronomer states positively that he made these observations under the parallel of Alexandria; while, on the other hand, there

exists a scholium of Olympiodorus (in *Phed.*, *Plat.*—*Bouilland, Testimonia de Ptolemæo*, p. 205), which informs us that Ptolemy passed 40 years of his life *ἐν πτεροῖς τοῦ Κανόβου* ("in the wings of Canopus"), occupied with astronomical observations, and that he placed columns there on which he caused to be cut the theorems of which he had been the author. An inscription has come down to us which illustrates this remark of Olympiodorus: *Θεῷ Σωτῆρι Κλαύδιος Πτολεμαῖος ἀρχὴς καὶ ὑποθέσεις μαθηματικὰς, κ. τ. λ.*, "*Claudius Ptolemy dedicated to the God, the Preserver, his mathematical principles and theses*," &c. Combining this dedication with the scholium of Olympiodorus, the Abbé Halma states, that he would be inclined to believe the deity alluded to in the inscription to be Canopus, if the inscription did not expressly declare, farther on, that the monument containing it was placed in the city of Canopus (*ἐν Κανόβῳ*), whence he infers that the protecting deity is Serapis, and that Ptolemy made his observations in the side-buildings connected with the temple of this god. He thinks that this position is not in contradiction with the passage in which Ptolemy informs us that he made them under the parallel of Alexandria; for, according to Halma, the city of Alexandria was gradually extended to Canopus, which became a kind of suburbs to it, so that Ptolemy, though residing at Canopus, may nevertheless be said to have observed at Alexandria, or that, observing at Canopus, he had no need of reducing his observations to the parallel of Alexandria, by reason of the trifling difference of latitude. A difficulty here presents itself, of which the Abbé Halma is aware, and which he proposes to remedy by an alteration of the text. If Ptolemy had made his observations in the temple of Serapis at Canopus, Olympiodorus, in place of saying *ἐν πτεροῖς τοῦ Κανόβου*, "*in the wings of (the temple of) Canopus*," would have had *ἐν πτεροῖς τῆς Κανόβου*, "*the side-buildings of (the city of) Canopus*." Halma therefore proposes to substitute the latter reading for the former, or else to regard Canopus as the same divinity with Serapis, and to suppose that Ptolemy observed in the temple of Canopus at Canopus. This reasoning of Halma's has been attacked by Letronne, and ably refuted. The latter shows, that Canopus, situate at the distance of 120 stadia, or more than two and a half geographical miles, northeast of Alexandria, never made part of that capital, since there were several places, such as Nicopolis and Taposiris Parva, between the two cities; that, consequently, the Serapeum, in which Ptolemy observed, could not have belonged to Canopus; and, finally, that Ptolemy knew the difference in latitude between Canopus and Alexandria, and could not confound them together in one point. It is more probable, as Letronne remarks (*Journal des Savans*, 1818, p. 202), that Olympiodorus was mistaken as to the place where Ptolemy observed. It is ascertained that there was a temple of Serapis at Canopus as well as at Alexandria. (*Strabo*, 801.) Olympiodorus, therefore, must have supposed that the word *Serapeum*, in the author from whom he copied his remark, belonged exclusively to the first of these cities, when it referred, in fact, in this particular instance, to Alexandria the capital. The error of Olympiodorus, moreover, is the easier to be explained, from the circumstance of the Serapeum at Canopus having become at one time a celebrated seat of the New-Platonists, and having acquired great distinction on this account among the last apostles of paganism. A commentator on Plato, therefore, would be very ready to suppose that this last asylum of true light, as he believed it, was the place where the great Ptolemy also made his observations and discoveries. — We will now proceed to the works of this distinguished writer. 1. *Μεγάλη Σύνταξις* ("Great Construction"), in thirteen books. This work contains all the astronomical observations of the ancients, such as

those of Aristyllus, Timochares, Meton, Euctemon, and, above all, of Hipparchus. After the example of all his predecessors, excepting Aristarchus, Ptolemy regards the earth as the centre of the universe, and makes the stars to revolve around it. This system was that of all succeeding astronomers until the days of Copernicus. Ptolemy is the inventor of epicycles, as they are called, an erroneous but ingenious system, and the only one that can explain the irregular revolutions of the planets, if we deny the sun to be the centre of our system. He inserted into his work, with additions, the catalogue of the stars made by Hipparchus; the list, however, contains only 1022 stars, divided into 48 constellations. He corrected the theory of the lunar revolutions, by determining the equation in the mean distances between the new and full moon; he reduced to a more regular system the parallax of the moon, though he has, in fact, traced it too large; he determined that of the sun by the size of the shadow which the earth casts on the moon in eclipses; he taught the mode of finding the diameter of the moon, and of calculating lunar and solar eclipses. "Ptolemy," says Delambre, "was not, indeed, a great astronomer, since he observed nothing, or, rather, has transmitted to us no observation on which we can rely with the least confidence; but he was a learned and laborious man, and a distinguished mathematician. He has collected together into one body all the learning that lay scattered in the separate works of his predecessors; though, at the same time, it must be acknowledged, that he might have been more sober in his details, and more communicative respecting certain observations which are now lost to us for ever." The same modern writer, after complaining of the little reliance that can be placed on the calculations of Ptolemy, praises the trigonometrical portion of the *Τετραβιβλος*, and the mathematical theory of eclipses; adding, however, the remark, that here Ptolemy would seem only to have copied from Hipparchus, who had resolved all these problems before him. Indeed, it ought to be borne in mind, as a general remark, that Ptolemy owed a part of his great reputation to the circumstance of the writings of Hipparchus being extremely rare, and having been, soon after Ptolemy's time, completely lost.—An analysis of the *Μεγάλη Σύνταξις* is given by Halma in the preface of his edition. This work of Ptolemy's was commented upon by Theon of Alexandria, Pappus, and Ammonius. Of these commentaries we have remaining only that of Theon, and some notes of Pappus. We have, however, the labours of Nilus (or Nicolaus) Cabasilas, a mathematician of the thirteenth century, on the third book. The *Μεγάλη Σύνταξις* of Ptolemy was translated into Arabic in the 9th century. The Arabians gave it the title of *Tahrir almagesti*, the last word being corrupted from the Greek *μέγιστος* ("the greatest"), and this title is intended to express the admiration with which the work had inspired them. From the Arabic words just given was formed the appellation of *Almagest*, under which name the work is still frequently cited; for the knowledge of this production was brought into Europe by the Arabians, who, during the middle ages, were the sole depositaries of all the sciences. The first Arabic translation was made about 827 A.D., by *Al-Hacer-ben-Jusef* and the Christian *Sergius*. The Caliph *Almamoun* himself also lent his literary aid to the undertaking. The second version is that of *Honain* or *Ishac-ben-Honain*, a Christian physician, who had fled to the court of the Caliph *Motawakl*. It was on these Arabic translations that a Spanish one was made by *Isaac-ben-Sid-el-Haza*. The Emperor *Frederic II.*, a member of that Suabian house under which Germany began to emerge from barbarism, and to enjoy a dawning of national literature before any other of the countries of Europe, directed *Agidius Tebaldinus* to turn this Spanish

version into Latin. Another translation was made from the Arabic text into Latin by *Gerard of Cremona*, an astronomer of the twelfth century, who established himself for some time at Toledo, in order to learn the Arabic language. He did not understand it perfectly, and was therefore unable to translate certain technical terms, which he was consequently compelled to leave in the original language. His classical erudition could not have been very profound, since he was unacquainted with Hipparchus, whom he everywhere calls *Abrachir*, as the Arabic translator had done.—It was not until the fifteenth century that a manuscript of the original Greek was discovered, from which the astronomer, John Müller, better known by the name of Regiomontanus, made his Latin abridgment. About the same period, George of Trebisond made a Latin translation from this original, but a very unfaithful one.—The Alexandrians called the work of Ptolemy which we have just been considering the *Great Astronomer*, *Μέγας Ἀστρονόμος*, in contradistinction to another collection which they called the *Little Astronomer*, *Μικρὸς Ἀστρονόμος*, and which was composed of the works of Theodosius of Tripolis; the *Data*, *Optics*, *Catoptrics*, &c., of Euclid; the works of Autolycus, Aristarchus of Samos, Hypicles, &c.—The best and most useful edition of the *Almagest* is that of Halma, *Paris*, 1813–1828, 2 vols. 4to. It contains a new French version, and notes by Delambre.—2. The second work of Ptolemy, as we have arranged it, is the *Πρόχειροι Κανόνες*. This is a collection of *Manual Tables* intended for makers of almanacs, to facilitate their calculations, and which are often only extracts from the *Almagest*. Halma gave the *editio princeps* of this work in the first volume of his edition of Theon's Commentary, which he published in 1822.—3. *Τετραβιβλος, ἢ Σύνταξις μαθηματικὴ* ("Tetrabiblos, or Mathematical Syntaxis"), in four books, consisting of astronomical predictions. It is commonly cited under the title of *Quadripartitum*. Some critics consider this work as unworthy of Ptolemy, and supposititious. Proclus has made a paraphrase of it. The latest edition is that of Melancthon, *Basil*, 1563, 8vo.—4. *Καρπός* ("Fruit"), that is, one hundred astrological propositions collected from the works of Ptolemy. It is usually cited under the title of *Centum Dicta*. It is published with the *Quadripartitum*.—5. *Φάσεις ὁπλανῶν ἀστέρων καὶ συναγωγὴ ἐπισημασιῶν* ("Appearances of the fixed stars, and a collection of the things indicated by them"). This is a species of almanac, giving the rising and setting of the stars, the prognostics of the principal changes of temperature, &c. The work is intended for all climates; and, to make it answer this end, and prove useful to all the Greeks spread over the surface of the globe, Ptolemy gives the appearance of the stars for five parallels at once, namely, Syene, Lower Egypt, Rhodes, the Hellespont, and the Pontus Euxinus. The best edition is that of Halma, *Paris*, 1820, 4to. It was preceded by the edition of Ideler, *Berol.*, 1819.—6. *Περὶ Ἀναλήμματος* ("Of the Analemma"). The Analemma was a species of sundial, and in this work we have an exposition of the whole gnomonic theory of the Greeks.—7. *Ἱπóθεσις τῶν πλανουμένων* ("Hypothesis of the Planets"). The latest edition is that of Halma, *Paris*, 1820, 4to.—8. *Ἀπλῶς ἐπιφανείας σφαίρας* ("Planisphere"). This work exists only in an Arabic version, by Maslem, and a Latin translation made from this. It is a treatise on what is called stereographic projections. The work is probably one of Hipparchus's. The latest edition is that of Commandinus, from the press of Paulus Manutius, *Venet.*, 1558, 4to.—9. *Ἀρμονικά* ("Elements of Harmony"), in three books. Ptolemy has the merit of having reduced the thirteen or fifteen tones of the ancients to seven. It is generally supposed, also, that he determined the true relations of certain intervals, and thus ren-

dered the diatonic octave more conformable to harmony. Some critics, however, are inclined to ascribe this improvement rather to the New-Pythagorean Didymus, whom Ptolemy has frequently criticised, though he obtained from his writings a large portion of his own work. The best edition is that of Wallis, *Oxon.*, 1682, 4to.—10. *Ὀπτική πραγματεία* ("A treatise on Optics"), cited by Heliodorus of Larissa, and frequently also by the Arabians, but now lost. A Latin translation, from two Arabian MSS., exists in an unedited state in the Royal Library at Paris. It contains, however, only four books of the five which composed the original. In this work Ptolemy gives the most complete idea of astronomic refraction of any writer down to the time of Kepler.—11. *Κανὼν Βασιλείων* ("Canon, or Table, of Kings"), a part, properly, of the *Πρόχειροι Κανόνες*. This table contains fifty-five reigns, twenty of which belong to kings of Babylon subsequent to Nabonassar, ten to kings of Persia, thirteen to kings of Egypt of the line of the Ptolemies, and the remainder to Roman emperors after the time of Augustus. This canon was not prepared with an historical view, but was intended for astronomers, to facilitate the calculation of intervals of time that may have elapsed between different astronomical observations. As, however, the years of each monarch's reign are indicated in it with great exactness, it becomes, consequently, of great value and interest in historical chronology. It must be remarked, at the same time, that all the dates of this canon are given in Egyptian years, an arrangement very well adapted to the object in view, but productive of some inconvenience for chronology. Thus, for example, the reigns of the Babylonian, Persian, and Roman monarchs, calculated according to the method of their respective countries, ought to be in advance of, or behind, the years numbered in Ptolemy's canon, by some days, or even months. In the case of the Roman emperors, the difference, in Ptolemy's time, amounted to forty days, and the variation must have been still more marked as regarded the Babylonian and Persian reigns. The only exact part is that which relates to the line of the Ptolemies. Halma gave the latest edition of this work in 1820, *Paris*, 4to.—12. *Γεωγραφικὴ Ἀφήγησις* ("Geographical Narration," or "System of Geography"). This work is in eight books, and during nearly fourteen centuries was the only known manual of systematic geography. It still remains for us one of the principal sources whence we derive our information respecting the geography of the ancients. Pursuing the plan traced out by Marinus of Tyre, Ptolemy undertook to perfect the labours of that geographer. The map of Marinus and Ptolemy was covered, as it were, with a species of network; the meridians were traced on it for every five degrees; the degrees of latitude were marked by lines running parallel to the equator, and passed through the principal cities, such as Syene, Alexandria, Rhodes, Byzantium, and, consequently, were at unequal distances from each other. In this network were marked the points, the height of which had been taken according to their true latitude; but, in order to determine their longitude, and the positions, also, of other places, which were only known by the geometric distance, it was necessary to fix the length of a degree on one of the great circles of the globe. Marinus and Ptolemy, without themselves measuring any great distances, took the most accurate measurements existing in their day, and gave 500 stadia as the length of a degree. This was one sixth less than the truth, and from this error must necessarily have resulted many faults and erroneous deductions. Ptolemy determined the length, from west to east, of all the known part of the globe, under the parallel of Rhodes, at 72,000 stadia, following geometrical measurements. These 72,000 stadia make, according to his

calculation, 180 degrees; and in this way he believed he had discovered the extent of one half of the globe. The fact, however, is, that he was acquainted with only 125 degrees. His error, consequently, is nearly a third, namely, one sixth by reason of the mistake he commits relative to the measurement of a degree as above mentioned, and about a sixth as the result of errors in geometric distances. With regard to latitudes, a large number of which were based on astronomical determinations, the errors committed by Ptolemy are very unimportant; and the latitude, for example, which he gives to the southern point of Spain is so exact, as to lead us to imagine that observations had been made in this quarter by some of his predecessors.—Strabo had limited to 42 degrees the latitude of the known part of the earth (situate between the 12th and 54th degree of north latitude). Ptolemy, on the other hand, makes 80 degrees, from 16° south latitude to 63° north; and yet he believed that he knew only about a quarter more than the earlier geographers, because these allowed 700 stadia to a degree, which makes nearly 80,000 stadia altogether; whereas Ptolemy, admitting only 500 stadia, found the sum total to be 40,000.—Marinus and Ptolemy derived some information respecting the easternmost parts of Asia from the Itineraries of a Macedonian trader, who had sent his factors on overland journeys from Mesopotamia, along Mount Taurus, through India, and even to the distant capital of the Seres. These journeys must have been prosecuted very soon after the time of Alexander the Great, under the first two monarchs of the dynasty of the Seleucids; since it is not probable that, after the defection of the Bactrians and Parthians, a route remained open through these countries to the traffic of the Greeks. Ptolemy thus could hardly have gained much information respecting these lands from the narratives of overland travellers. The communication by sea, however, between Egypt and India, became frequent in the time of the Ptolemies. Strabo speaks of fleets that sailed for India, and, in the time of Pliny, the coast of the country this side of the Ganges was perfectly well known. The navigators of the West, however, did not go beyond this stream. It was supposed that from this point the shore of Asia bent directly to the north, and joined the eastern extremity of Taurus. At a later period navigators went beyond the mouths of the Ganges, and, to their great astonishment, found that the land redescended towards the south, and formed a large gulf (Bay of Bengal—*Sinus Gangeticus*). They pushed their adventurous career still farther: taking their departure from the southern part of the western peninsula of India, they crossed the gulf in a straight line, and reached the coast of Siam and the peninsula of Malacca; this last they called the Golden Chersonese, a proof of the profitable trade which was there carried on by them. Having doubled the extremity of this second peninsula, they entered on a new gulf (that of Siam—*Magnus Sinus*). From the eastern coast of the Golden Chersonese they passed in a southern direction, and reached a large continent, on the shore of which was situate the city of Kattigara. This country was probably the Isle of Borneo. The discoverer of this country was called Alexander. (*Ptol., Geogr.*, 2, 14.) Ptolemy, who, as well as this adventurer, believed that the coast was a prolongation of that which formed the Gulf of Siam (the coast of *Cambodia*), founded thereon his hypothesis, that the Indian was a mediterranean sea. He supposed that, after Kattigara, the land extended from east to west as far as the southeast coast of Africa, with which it united, forming one common continent—Marinus and Ptolemy were well acquainted with the eastern coast of Africa, and mention is no longer made, in their pages, of the fabulous monsters which the credulity of a previous age had established as the dwellers of

this region. They knew the coast, however, only to the tenth degree of south latitude, that is, to the promontory of Prasum, which is probably the same with the modern Cape *Del Garda*, as his city of Rapta would seem to be *Melinda*. From the promontory of Prasum, Ptolemy makes the African coast bend round to the east for the purpose of joining that of Kattigara. His island of Menuthias, placed by him near Cape Prasum, but which an ancient periplus brings near to Rapta, is *Zanzibar*, or one of the other islands off the coast of Zanguebar. Ptolemy's acquaintance with the eastern coast does not extend beyond the modern *Madagascar*.—After the decline of the commerce of Carthage and Gades, no new discoveries had been made on the western coast of Africa, and hence the knowledge of Ptolemy in this quarter was not extended beyond that of his predecessors; he introduces, however, more of method into the information obtained from Hanno and Scylax.—Ptolemy is the first who indicates the true figure of Spain, Gaul, and the southern part of Albion; but he gives an erroneous description of the northern part of this island, which, according to him, extends towards the east. Ireland, the *Ierne* of Strabo, and the *Juvernica* of Ptolemy, ceases to be situated to the north of Albion, as Eratosthenes and Strabo thought; it is placed by Ptolemy to the west, but its northern point is parallel to the northern extremity of Albion. To the north of this latter island he places the *Orcades*, and a little farther to the north (about 63° N. L.), the *isle of Thule*, the northernmost extremity of the geographical system of Ptolemy. This Thule is probably *Mainland*, situate about 60° N., the same that was seen by the Roman fleet under Agricola, covered with ice and eternal snow. (*Tacit., Vit. Agr.*, c. 10.)—The description which Ptolemy gives of the shores of Germany as far as the Elbe, as well as of Scandinavia, extends no farther than the accounts already given by Pliny and Tacitus. He describes the *Cimbric Chersonese*, and the German coast of the Baltic as far as the *Dvina*, with considerable accuracy, but he is not aware that this sea is a mediterranean one, for his Gulf of *Veneda* is only a part of this sea, from Memel to Dantzic. The question has been asked, By what chance Ptolemy was enabled to obtain more accurate notions respecting those countries than those which Pliny and Tacitus possessed, and that, too, although the principal depôt of amber, the well-known production of the shores of the Baltic, was in the capital of Italy! The answer is, that if the amber was chiefly carried to Rome, the traffic was conducted by merchants from Alexandria, and it was through them that Ptolemy obtained the materials for this portion of his work.—In the last book of his geography, Ptolemy teaches the mode of preparing charts or maps. We here find the first principles of projection; but the book itself has reached us in a very corrupt state through the fault of the copyists. The more modern maps long preserved traces of those of Ptolemy and his successors. The Caspian Sea, for example, retained the form traced for it by Ptolemy as late as the eighteenth century; for a part of the coasts of the Black Sea, and of Africa beyond Egypt, our maps still conform to the general outline of Ptolemy, and the substitution of modern for ancient names is the only difference. Such, at least, is the assertion of Mannert (*Geogr.*, vol. 1, p. 191).—No good complete edition of Ptolemy's Geography has ever appeared. One, however, has recently been commenced in Germany, by Wilberg, of which the first *fasciculus*, containing the first book, has thus far appeared. *Essendie*, 1838, 4to. In 1475, Lichtenstein (*Levilapie*) printed at Cologne, in folio, the Latin translation of this work, made by Angelo, a Florentine scholar of the fifteenth century, or, rather, commenced by Chrysolaras and finished by Angelo. It was revised, for the purposes of this publication, by Vadius and Picar-

duc. The translation of Angelo was reprinted, with corrections made from a manuscript of the Greek text, by Calderino, *Roma*, 1478, fol. Twenty-seven maps accompany this edition, which appears to have been printed by Arnold Pannartz. This is the second work, with a date, that is accompanied with engravings on copper. In 1482, Donis, a German monk, and a good astronomer for his time, gave a new edition to the world, printed by Holl, at Ulm, in folio. It has fewer mistakes in the figures than those which preceded it, but just as many in the names. Several editions followed, but all swarming with errors. The celebrated Pico de Mirandola sent to Eseler, at Strasbourg, a Greek manuscript of Ptolemy's work, by the aid of which that scholar gave a new edition, not in the translation of Angelo, but in another, very literal and somewhat barbarous, by Philesius. Eseler made many changes in this version, and, to justify himself, generally added the Greek term to the Latin. He placed in it 46 maps cut on wood. Brunet calls this edition one of little value; in this he is mistaken. The edition we have just spoken of was reprinted at Strasbourg in 1520, and also in 1522. A new translation, made by the celebrated Pirckheymer, appeared in 1525, from the Strasbourg press, fol. It contains fifty maps cut on wood.—The first Greek edition was that of Erasmus, printed from a manuscript which Theobald Feticch, a physician, had sent him, and which issued from the press of Froben, at Bale, 1533, in 4to. The manuscript was a very good one, but, through the fault of the printer, a great number of errors were allowed to creep in among the figures. Not having a sufficient quantity of the peculiar type or mark which indicated †, he employed in its place the letter ‡, which signifies †. He made use, also, of the same letter on many occasions to designate †. The fraction $\frac{1}{2}$ is marked by $\gamma\theta$, but the manuscript often places the θ above the γ , and in a smaller character. The compositor, not attending to this, contented himself with putting in its place γ alone, which is equivalent to †. The confusion resulting from such a course is apparent, and the only mode to remedy the evil is to have recourse to the Latin editions which appeared previous to 1533. The Bale edition was reprinted by Wechel, at Paris, 1546, 4to.—Michael Servetus (Vilanova) retouched the translation of Pirckheymer, after a manuscript, and published it, with fifty maps cut on wood, at Lyons, in 1530, and again, with corrections and additions, in the same city, in 1541. These two editions of Ptolemy play a conspicuous part in the history of religious fanaticism; Calvin derived from them one of his grounds of accusation against Servetus. He was charged with having added to the description that accompanies the map of Palestine, a passage which contradicts what Moses says respecting the fertility of that country. The interpolated passage does actually exist, but it was added by Phrisius, who took charge of the edition of 1522.—The last impression of the Greek text was in 1618 and 1619, in 2 vols. 4to, from the Amsterdam press, by Bertius. Many faults of the previous editions are corrected in this one, by the aid of a Heidelberg manuscript, but the same errors in the figures still remain, and, to augment the confusion, the editor has placed beside them those of the Latin editions, which often differ widely. The only recent edition of the mathematical part of Ptolemy's Geography is that of Halma, containing only the first book and the latter part of the seventh, with a French version and notes, *Paris*, 1823, 4to. (*Schöll, Hist. Lit. Gr.*, vol. 5, p. 240, *seqq.*—*Id. ibid.*, vol. 5, p. 271.—*Id. ibid.*, vol. 6, p. 312, &c.—*Compt. Delambre, in Biogr. Univ.*, vol. 36, p. 263.)—XIX. A native of Acaloa, who followed the profession of a grammarian at Rome before the time of Herodian, by whom he is cited. He wrote a work on *Synonymes*, *Περὶ διαφορᾶς λέξεων* ("On the difference

of Words"). It is properly the fragment merely of a larger work. Ptolemy was the author also of a Homeric Prooody, a treatise on metres, and a dissertation on Aristarchus's revision of Homer. The fragment on "the Difference of Words" is given by Fabricius, *Bibl. Gr.*, vol. 4, p. 515, of the old edition; vol. 6, p. 117, of the new.—XX. Surnamed Chennus, flourished under the emperors Trajan and Hadrian. Photius has preserved for us some fragments of his work, *Περὶ τῆς εἰς πολυμαθίαν κατῆς ἱστορίας* ("New History of varied Erudition"), in seven books. To give some idea of this compilation, we will mention some of the subjects of which it treats: the death of Proteus; that of Sophocles; that of Hercules; the history of Orseus; the death of Achilles; that of Laius; the history of Tiresias; the death of Adonis; the origin of several epithets given to the heroes of the Iliad, and to other personages of the fabulous times. Ptolemy also wrote a drama entitled the *Sphinx*. He dared even to enter the lists against Homer with a poem in twenty-four books or cantos, entitled *Ἀντίομηρος* ("The Anti-Homer"). Gale has placed the fragments of Ptolemy Chennus in his *Historia Poetica Scriptores*, p. 303, *seqq.*, and to the eighth chapter is prefixed a dissertation on this writer. The fragments are also given in the edition of Conon and Parthenius by Teucher. (*Schöll, Hist. Lit. Gr.*, vol. 5, p. 44.)

PTOLEMAIS, I. a seaport town of Phœnicia. (*Vol. Acc.*)—II. A city on the coast of Cyrenaica in Africa, and the port of Barce. It suffered so severely from want of water, that the inhabitants were obliged to relinquish their dwellings, and disperse themselves about the country in different directions. The attempts of Justinian to obviate this evil proved unavailing. The ruins are called at the present day *Ptolemais*. A description of the remains of this ancient city is given by Captain Beechey and others. (*Modern Traveller*, pt. 50, p. 114, *seqq.*)—III. A city of Egypt, in the northern part of Thebaïs, northeast of Abydos. It rose in importance as the last-mentioned city declined, and eventually rivalled Memphis in size. Ptolemais would seem to have been founded by one of the Ptolemies, or, at all events, re-established by him on the site of some more ancient city, as the Greek name, *Πτολεμαῖς ἡ Ἐφεσίον* (*Ptolemais, the city of Hermes*), would seem to indicate. The city, therefore, was originally consecrated to the Egyptian Hermes. It appears to have received a severe blow to its prosperity, by reason of its resistance to the Emperor Probus. The modern village of *Mensieh* is in the immediate neighbourhood of Ptolemais. (*Mannert, Geogr.*, vol. 10, pt. 1, p. 381, *seqq.*)—IV. Originally a small promontory, on the western coast of the Sinus Arabicus. It was near the inland sea Monotus. A fortified port was established here by Eumenes, a commander of Ptolemy Philadelphus; and the spot was selected on account of the large forest in the vicinity, which furnished valuable naval timber for the fleets of the Ptolemies. In this forest, also, wild elephants abounded; and, as Ptolemy wanted these animals for his armies, a regular hunting establishment was formed here, and the place received from this circumstance its second name of *Θηρῶν*, and also that of *Ἐπιθήρας* (*ἐπὶ θήρας*). In a commercial point of view it was of no great importance, as Arrian merely mentions among its exports tortoise-shell and ivory; but to the ancient astronomers and geographers it was directly the reverse, since they regarded it as the fittest place for measuring a degree, and thus ascertaining the circumference of the globe. The harbour of *Mirza Mombasik*, about 15 geographical miles north of Massus, appears to indicate the ancient Ptolemais. (*Mannert, Geogr.*, vol. 10, pt. 44, *seqq.*)

PUBLICOLA, a surname given to Publius Valerius, according to Dionysius and Plutarch, on account of his

protecting the rights of the people (*populum* and *colo*, *Popicola*, *Publicola*). Niebuhr dissents from this etymology in the following remarks: "We cannot agree with the Greek Dionysius and Plutarch in translating *Publicola* as a compound term by *δημοκόλος*, 'the protector of the people;' but we must recognise therein the old Latin form of the adjective with a superfluous termination, which is sometimes mistaken for a diminutive, sometimes for a compound. It is equivalent to *Publicus*, in the sense of *δημοτικός*. Thus *Scævola* is not the diminutive, but synonymous with *Scævus*, and *Æquiculus* is nothing but *Æguus* or *Æquicus*; *Voluculus* nothing but *Volucus*." (*Roman History*, vol. 1, p. 360, *Walter's trans.*)

PUBLICULA LEX, I. a law proposed by Pubilius the Dictator, A.U.C. 414, ordaining that, before the people gave their votes, the senate should authorize whatever they might determine. (*Levy*, 8, 12.)—II. A law ordaining that the plebeian magistrates should be created at the comitia tributa. (*Levy*, 2, 56.)

PUBLIUS SYRUS, a celebrated composer and actor of mimes. He was a native of Syria, and was brought from Asia to Italy in early youth in the same vessel with his countryman and kinsman Manlius Antiochus, the professor of astrology, and Staberius Eros, the grammarian, who all, by some desert in learning, rose above their original fortune. He received a good education and liberty from his master, in reward for his witticisms and his facetious disposition. He first represented his mimes in the provincial towns of Italy, whence, his fame having spread to Rome, he was summoned to the capital, to assist in those public spectacles which Cæsar offered his countrymen in exchange for their freedom. (*Macrob.*, *Sat.*, 2, 7.) On one occasion he challenged all persons of his own profession to contend with him on the stage; and in this competition he successfully overcame every one of his rivals. By his success in the representation of these popular entertainments, he amassed considerable wealth, and lived with such luxury that he never gave a great supper without having sow's udder at table, a dish which was prohibited by the censors as being too great a luxury even for the table of patricians. (*Plin.*, 8, 51.) Nothing farther is known of his history, except that he was still continuing to perform his mimes with applause at the period of the death of Laberius, which happened ten months after the assassination of Cæsar. (*Chron. Euseb.*, *ad Olymp.*, 184.) We have not the names of any of the mimes of Publius, nor do we precisely know their nature or subject; all that is preserved from them being a number of detached sentiments or maxims, to the amount of 800 or 900, seldom exceeding a single line, but containing reflections of unrivalled force, truth, and beauty, on all the various relations, situations, and feelings of human life. Both the writers and actors of mimes were probably careful to have their memory stored with commonplaces and precepts of morality, in order to introduce them appropriately in their extemporaneous performances. The maxims of Publius were interspersed through his dramas; but, being the only portion of these productions now remaining, they have just the appearance of thoughts or sentiments, like those of Rochefoucauld. His mimes must either have been very numerous, or very thickly loaded with these moral aphorisms. It is also surprising that they seem raised far above the ordinary tone even of regular comedy, and appear for the greater part to be almost stoical maxims. Seneca has remarked, that many of his eloquent verses are fitter for the buskin than the slipper. (*Ep.*, 8.) How such exalted precepts should have been grafted on the lowest farce, and how passages, which would hardly be appropriate in the most serious sentimental comedy, were adapted to the actions or manners of gross and drunken buffoons, is a difficulty which could only be solved had we fortunately received entire a larger portion of these

productions, which seem to have been peculiar to Roman genius. The sentiments of Publius Syrus now appear trite. They have become familiar to mankind, and have been re-echoed by poets and moralists from age to age. All of them are most felicitously expressed, and few of them seem erroneous, while, at the same time, they are perfectly free from the selfish or worldly-minded wisdom of Rochefoucauld or Lord Burleigh. (*Dunlop's Roman Literature*, vol. 1, p. 558, *seqq.*) The sentences of Publius Syrus are appended to many of the editions of Phædrus. The most useful edition of these sentences is perhaps that of Gruter, *Lat. Bæ.*, 1787, 8vo. The latest and most accurate edition, however, is that of Orellius, appended to his edition of Phædrus, *Turici*, 1832, 8vo. It contains, also, thirty sentences never before published. (*Bähr, Gesch. Lit. Röm.*, vol. 1, p. 776.)

PULCHERIA, I. sister of Theodosius the Great, and celebrated for her piety and virtues.—II. A Roman empress, daughter of Arcadius, and sister of Theodosius the younger. She was created Augusta A.D. 414, and shared the imperial power with her brother. After the death of the latter (A.D. 450), she gave her hand to Marcianus. (*Vid.* Marcianus I.) Pulcheria died A.D. 454, and was interred at Ravenna, where her tomb is still to be seen.

PULCRUM PRÆMONITORIUM, the same with *Hermæum Præmonitorium*. (*Vid.* Hermæum.)

PUNICUM BELLUM, the name given to the wars between Rome and Carthage. The Punic wars were three in number. The first took its rise from the affair of the Mamertini, an account of which will be found under the article *Messana*, page 836, col. 1. This was ended by the naval battle fought off the *Ægates Insula*; and it was also memorable for the naval victory of Duilius, the first ever gained by the Romans. (*Vid.* Carthago, § 4.—Duilius.—*Ægates*.) The *Second Punic War* commenced with the affair of Seguntum, and was terminated by the battle of Zama. During its continuance Hannibal carried on his celebrated campaigns against the Romans in Italy. (*Vid.* Carthago, § 4.—Hannibal.—*Metaurus*.—*Zama*.) The *Third Punic War* was the siege and destruction of Carthage itself. (*Vid.* Carthago, § 4.)

PUPIENUS, MARCUS CLAUDIUS MAXIMUS, a man of obscure family, who raised himself by his merit to the highest offices in the Roman armies, and gradually became a prætor, consul, prefect of Rome, and a governor of the provinces. His father was a blacksmith. After the death of the Gordians, Pupienus was elected with Balbinus to the imperial throne, and, to rid the world of the usurpation and tyranny of the Maximini, he immediately marched against these tyrants; but he was soon informed that they had been sacrificed to the fury and resentment of their own soldiers. He prepared, after this, to make war against the Persians, who insulted the majesty of Rome, but was massacred, A.D. 236, by the prætorian guards. Balbinus shared his fate. Pupienus is sometimes called Maximus. In his private character he appeared always grave and serious. He was the constant friend of justice, moderation, and clemency, and no greater encomium can be passed upon his virtues than to say that he was invested with the purple without soliciting it, and that the Roman senate said they had selected him from thousands, because they knew no person more worthy or better qualified to support the dignity of an emperor. (*Capitol. Vit. Maxim.—Id., Vit. Gord.*)

PURIUS, a tragic poet at Rome, contemporary with Cæsar. He was famed for his power in exciting emotion. Hence the scholiast on Horace remarks (*Epist.*, 1, 1, 67), "*Purius, Tragediographus, ita affectus spectantium movit, ut eos fletu compelleret. Inde istum versum fecit*:"

"*Fleunt amici et bene noti mortem meam;
Nam populus in me nunc lacrymans est satis.*"

PURPURANÆ, islands off the coast of Mauritania, so called from the manufacture of purple dye established in them. They answer at the present day to *Madeira* and the adjacent isles. (*Plin.*, 6, 32.)

PUTEOLI, a city of Campania, now *Pozzuoli*, on the coast, and not far from the Lucrine Lake. Its Greek name was *Dicaearchia*; but, when the Romans sent a colony thither, they gave it the name of Puteoli, probably from the number of its wells, or perhaps from the stench which was emitted by the sulphureous and aluminous springs in the neighbourhood. (*Strabo*, 245.—*Plin.*, 31, 2.) Respecting the origin of this place, we learn from *Strabo* that it was at first the harbour of Cumæ. Hence we may fairly regard it as a colony of that city, without calling in the Samians to assist in its foundation, as *Stephanus Byzantinus* reports, and *Hieronymus*. (*Euseb.*, *Chron.*, 2.) The Romans appear to have first directed their attention to this spot in the second Punic war, when *Fabius* the consul was ordered to fortify and garrison the town, which had only been frequented hitherto for commercial purposes. (*Liv.*, 24, 7.) In the following year it was attacked by *Hannibal* without success (*Liv.*, 24, 13), and about this time became a naval station of considerable importance: armies were sent to Puteoli from thence (*Liv.*, 26, 17), and the embassy sent from Carthage, which was to sue for peace at the close of the second Punic war, disembarked here, and proceeded to Rome by land (*Liv.*, 30, 22), as did St. Paul about 250 years afterward. The apostle remained seven days at Puteoli before he set forward on his journey by the Appian Way. (*Acts*, xxviii., 13.) In the time of *Strabo*, this city appears to have been a place of very great commerce, and particularly connected with *Alexandrea*; the imports from that city, which was then the emporium of the East, being much greater than the exports of Italy. (*Strabo*, 793.—*Suet.*, *Aug.*, 98.—*Senec.*, *Ep.*, 77.) The harbour of Puteoli was spacious and of peculiar construction, being formed of vast piles of mortar and sand, which, owing to the strongly cementing properties of the latter material, became very solid and compact masses; and these, being sunk in the sea, afforded secure anchorage for any number of vessels. (*Strab.*, 245.) *Pliny* (35, 13) has remarked this quality of the sand in the neighbourhood of Puteoli, which now goes by the name of *Pozzolana*. The same writer informs us (36, 12), that this harbour possessed also the advantage of a conspicuous lighthouse. The remains which are yet to be seen in the harbour of Puteoli are commonly, but erroneously, considered to be the ruins of *Caligula's* bridge; whereas that emperor is said expressly to have used boats, anchored in a double line, for the construction of the bridge which he threw over from Puteoli to *Baiæ*; these were covered with earth, after the manner of *Xerxes's* famous bridge across the *Hellespont*. Upon the completion of the work, *Caligula* is described as appearing there in great pomp, on horseback or in a chariot, for two days, followed by the prætorian band and a splendid retinue. It is evident, therefore, that this structure was designed for a temporary purpose, and it is farther mentioned that it was begun from the piles of Puteoli. (*Suet.*, *Calig.*, 19.—*Josephus*, *Antiq. Jud.*, 19, 1.)—Puteoli became a Roman colony A.U.C. 558, was recolonized by *Augustus*, and again, for the third time, by *Nero*. (*Tacit.*, *Ann.*, 14, 27.) This place appears to have espoused the cause of *Vespasian* with great zeal, from which circumstance, according to an inscription, it obtained the title of *Colonia Flavia*. The same memorial informs us, that *Antoninus Pius* caused the harbour of Puteoli to be repaired. (*Cramer's Anc. Italy*, vol. 2, p. 163, *seqq.*)

PUTICULI, a place at Rome, in the vicinity of the *Esquiline*. The *Campus Esquilinus* was, in the early days of Rome, without the walls of the city, and a number of pits were dug in it to receive the dead

bodies of the lower orders. These holes were called *puticuli*, from their resemblance to wells, or, more probably, from the stench which issued from them, in consequence of this practice. (*Varro*, *L. L.*, 4, 5.—*Fest.*, s. v. *Putic.*) The *Esquilines* seem to have been considered as unwholesome till this mode of burial was discontinued, which change took place in the reign of *Augustus*, when the gardens of *Mæcenas* were laid out here. (*Hor.*, *Sat.*, 1, 88.—*Id.*, *Ep.*, 5, 100.)

PYDNA, a city of Macedonia, on the western coast of the *Sinus Thermaicus*, above *Dium*. The earliest mention of this town is in *Scylax*, who styles it a Greek city (p. 26), from which it appears at that time to have been independent of the Macedonian princes. *Thucydides* speaks of an attack made upon it by the Athenians before the Peloponnesian war (1, 61). It was afterward taken by *Archelaüs*, king of Macedonia, who removed its site twenty stadia from the sea, as *Diodorus* asserts; but *Thucydides* states, that it had been, long before that period, in the possession of Alexander the son of *Amyntas*, and that *Themistocles* sailed thence on his way to Persia (1, 137). After the death of *Archelaüs*, *Pydna* again fell into the hands of the Athenians; but the circumstances of this change are not known to us. It was afterward taken from them by *Philip*, and given to *Olynthus*. The next fact relative to *Pydna* which is recorded in history, is posterior to the reign of Alexander the Great, whose mother *Olympias* was here besieged by *Cassander*; and, all hopes of relief being cut off by the intrenchment having been made round the town from sea to sea, famine at length compelled *Olympias* to surrender, when she was thrown into prison, and afterward put to death. (*Diod. Sic.*, 19, 61.)—*Pydna* is also famous for the decisive victory gained in its neighbourhood by *Paulus Æmilius* over the Macedonian army under *Perseus*, which put an end to that ancient empire.—The epitomiser of *Strabo* says, that in his time it was called *Kiros* (*Strab.*, 509); as likewise the scholiast to *Demosthenes*; and this name is still attached to the spot at the present day. *Dr. Clarke* observed at *Kiros* a vast tumulus, which he considered, with much probability, as marking the site of the great battle fought in these plains. (*Cramer's Anc. Greece*, vol. 1, p. 214, *seqq.*)

PYGMÆI, a fabulous nation of dwarfs, placed by Aristotle near the sources of the Nile (*Hist. An.*, 8, 12.—*Ælian*, *H. A.*, 2, 1; 3, 13); by *Ctesias*, in India (*Ind.*, 11); and by *Eustathius*, amusingly enough, in England, over against *Thule* (*Evða τὰ Ἰγγλικά*.—*Eustath.*, ad II., 3, 6, p. 372.)—They were of a very diminutive size, being, according to one account, of the height merely of a *πυγμή*, or 20 fingers' breadth (*Eustath.*, l. c.), while others made them three *πυγμάι*, or 27 inches in size. (*Plin.*, 7, 2.) The *Pygmies* are said to have lived under a salubrious sky and amid a perpetual spring, the northern blasts being kept off by lofty mountains. (*Plin.*, l. c.) An annual warfare was waged between them and the cranes (*Hom.*, II., 3, 3); and they are fabled to have advanced to battle against these birds, mounted on the backs of rams and goats, and armed with bows and arrows. They used also a kind of bells or rattles (*κρόταλα*) to scare them away. (*Hecateus*, ap. *Schol.* ad II., 3 6.—*Heyne*, ad loc.—*Plin.*, l. c.) Every spring they came down in warlike array to the seashore, for the purpose of destroying the eggs and young of the cranes, since otherwise they would have been overpowered by the number of their feathered antagonists. (*Hecateus*, ap. *Plin.*, l. c.) Their dwellings were constructed of clay, feathers, and the shells of eggs. Aristotle, however, makes them to have lived in caves, like *Troglodytes*, and to have come out at harvest-time with hatchets to cut down the corn, as if to fell a forest. (*Eustath.*, l. c.)—*Philostratus* relates, that *Hercules* once fell asleep in the deserts of Africa after he had con-

quered Antæus, and that he was suddenly awakened by an attack which had been made upon his body by an army of these Liliputians, who professed to be the avengers of Antæus, since they were his brethren, and earthborn like himself. A simultaneous onset was made upon his head, hands, and feet. Arrows were discharged at him, his hair was ignited, spades were thrust into his eyes, and coverings or doors (*θύραι*) were applied to his mouth and nostrils to prevent respiration. The hero awoke in the midst of the warfare, and was so much pleased with the courage displayed by his tiny foes, that he gathered them all into his lion skin and brought them to Eurystheus. (*Philostr., Icon., 2, 22, p. 817, ed. Morell.*)—The Pygmies of antiquity, like those of more modern times, may be safely regarded as mere creatures of the imagination. We have had them even placed, by popular belief, in our own country. A number of small graves, two or three feet in length, were found in the West, containing fragments of evidently adult bones. The idea of a pigmy race was immediately conceived; but it was unknown to the discoverers, that the Indians, after disinterring their dead, buried them in graves just large enough to hold the bones made up into a small bundle for the convenience of transportation. (*M'Culloch, Researches on America, p. 516.*)—With respect to the Pygmies of ancient fable, it may be remarked, that Homer places them merely in southern lands, without specifying their particular locality; nor does he say a word respecting their diminutive size. (*Heyne, ad Hom., Il., 3, 8.*) Aristotle, as we have already said, assigns them a residence near the sources of the Nile (*Hist. An., 8, 15*), in which he is followed by Ælian (*H. A., 2, 1; 3, 15*) and others. Some agree with Ctesias in making India their native country. Pliny, in one passage, places them also in India (7, 2), but in another in Thrace (4, 2). Others, again, making the cranes to wing their way from the northern regions over the Pontus Euxinus, regard Scythia and Thrace as the Pygmy land.—Many have supposed that the fable of the Pygmies and cranes has a reference to the country of Egypt. As the cranes make their appearance there about the month of November, the time in which the waters are subsided, and devour the corn sown on the lands, the whole fable of the Pygmies may be explained by supposing them to have been none other than the Egyptians, and the term pygmy (*πυγμαίος*) not to refer to any diminutiveness of size, but to the *cubitus* (*πύγμα, πύγχις*) of the Nile's rise. Some scholars suppose the germe of the fable to be found in the remarks of Strabo, respecting the *μικροφύλων τῶν ἐν Αἰθίῳ φερόμενων*. (*Strabo, 820.*) Barrow, in his *Travels to the Cape of Good Hope* (vol. 1, p. 239), endeavours to identify the Bosjesmans of the Cape and the Pygmies of the ancients, but with no great success. Heeren regards the whole Pygmy narrative as fabulous, but assigns it an Indian origin, and makes it to have spread from the East into the countries of the West. (*Ideen, vol. 1, p. 368.*) Malte-Brun inclines in favour of the existence of a pygmy race, from the accounts of modern travellers, who state that they have seen in the remote East small and deformed beings not unlike in appearance to the pygmies of former days, and for the most part only four feet in size. Hence he thinks it not unlikely that a diminutive race, resembling, in some degree, the ancient pygmies, may still be existing among the remote and desert regions of Thibet! (*Malte-Brun, Annales des Voyages, vol. 1, p. 355, seqq.—Bähr, ad Ctes., p. 295.*)

PYGMALION, I. a king of Tyre, son of Belus, and brother to the celebrated Dido. (*Vid. Dido.*)—II. A celebrated statuary of the island of Cyprus. The debauchery of the females of Amathus, to which he was a witness, created in him such an aversion for the fair sex, that he resolved never to marry. The affection which he had denied to the other sex he liberally be-

stowed upon the works of his own hands. He became enamoured of a beautiful statue of ivory which he had made, and, at his earnest request and prayers, according to the mythologists, the goddess of Beauty changed this favourite statue into a woman, whom the artist married, and by whom he had a son called Paphus, who founded the city of that name in Cyprus. (*Ovid, Met., 10, 9.*)—Compare the other version of the legend, as given from the Cyprian fables of Philostephanus, by Clemens of Alexandria (*Protrept., p. 50*), and by Arnobius (*adv. Gent., lib. 6, p. 206*). Consult, also, Philostratus (*Vit. Apollon., 5, 5*) and Meursius (*Cypr., 2*).—

PYLIDES, I. a son of Strophius, king of Phocia, by one of the sisters of Agamemnon. He was educated together with his cousin Orestes, with whom he formed a most intimate friendship, and whom he aided in avenging the murder of Agamemnon by the punishment of Clytemnestra and Ægisthus. He received in marriage the hand of Electra, the sister of Orestes, by whom he had two sons, Medon and Strophius. The friendship of Orestes and Pylades became proverbial. (*Vid. Orestes.*)—II. A celebrated actor in the reign of Augustus, banished by that emperor for pointing with his finger to one of the audience who had hissed him, and thus making him known to all. (*Suet., Vit. Aug., 45.—Macrob., Sat., 2, 7.*)

PYLÆ (Πύλαι), a general name among the Greeks for any narrow pass. The most remarkable were the following. I. Pylæ Albanæ. (*Vid. Caucasus.*)—II. Pylæ Amanicæ, a pass through the range of Mount Amanus, between Cilicia Campestris and Syria. Darius marched through this pass to the battle field of Issus. (*Quint. Curt., 3, 4.—Ptol., 5, 8.—Plin., 5, 27.*)—III. Pylæ Caspiæ. (*Vid. Caspiæ Portæ.*)—IV. Pylæ Caucasæ. (*Vid. Caucasus.*)—V. Pylæ Ciliciæ, a pass of Cilicia, in the range of Mount Taurus, through which flows the river Sarus. (*Plin., 5, 27.—Polyb., 12, 8.*)—VI. Pylæ Sarmatæ. (*Vid. Caucasus, towards the close of that article.*)—VII. Pylæ Syriæ, a pass leading from Cilicia into Syria, and bounded on one side by the sea. (*Xen., Anab., 1, 4.—Arrian, Exp. Alex., 2, 8.*)

PYLOS, I. an ancient city of Elis, about eighty stadia to the east of the city of Elis, and which disputed with two other towns of the same name the honour of being the capital of Nestor's dominions; these were Pylos of Triphylia, and the Messenian Pylos. This somewhat interesting question in Homeric geography will be considered under the head of the last-mentioned city. Pausanias informs us (6, 22) that the Elean city was originally founded by Pylus, son of Cleson, king of Megara; but that, having been destroyed by Hercules, it was afterward restored by the Eleans. (Compare *Xen., Hist. Gr., 7, 4, 16.*) This town was deserted and in ruins when Pausanias made the tour of Elis. We collect from Strabo (339) that Pylos was at the foot of Mount Pholoë, and between the heads of the rivers Peneus and Selleis. This site agrees sufficiently with a spot named *Portes*, where there are vestiges of antiquity, under Mount *Maurobouni*, which must be the Pholoë of the ancients. (*Gell, Itin. of the Morea, p. 30, seq.—Cramer's Anc. Greece, vol. 3, p. 91.*)—II. A city of Elis, in the district of Triphylia, regarded by Strabo, with great probability, as the city of Nestor. (*Vid. Pylos III.*) It is placed by that geographer at a distance of thirty stadia from the coast, and near a small river once called Amathus and Pamisus, but subsequently Mamau and Arcadicus. The epithet of *ἡραδῶεις*, applied by Homer to the Pylæan territory, was referred to the first of these names. (*Strabo, 344.*) Notwithstanding its ancient celebrity, this city is scarcely mentioned in later times. Pausanias, even, does not appear to have been aware of its existence (6, 22). Strabo affirms that on the conquest of Triphylia by the Eleans, they annexed its

territory to the neighbouring town of Lepreum. (*Strab.*, 385.) The vestiges of Pylos are thought by Sir W. Gell to correspond with a *Palais Castra*, situated at *Pischini* or *Piskini*, about two miles from the coast. Near this is a village called *Saxene*, perhaps a corruption of *Arena*. (*Itin. of the Morea*, p. 40.—*Cramer's Anc. Greece*, vol. 3, p. 117.)—III. A city of Messenia, on the western coast, off which lay the island of Sphacteria. It was situated at the foot of Mount *Egaleus*, now *Geranio* or *Agio Elias*. (*Strabo*, 459.) This city was regarded by many as the capital of Nestor's dominions, and, at a later period, was celebrated for the brilliant successes obtained there by the Athenians in the Peloponnesian war. It is necessary, however, to distinguish between the ancient city of Pylos, and the fortress which the Athenian troops under Demosthenes erected on the spot termed Coryphasium by the Lacedæmonians. (*Thucyd.*, 4, 3.) Strabo affirms, that when the town of Pylos was destroyed, part of the inhabitants retired to Coryphasium; but Pausanias makes no distinction between the old and new town, simply stating that Pylos, founded by Pylus, son of Cleon, was situated on the promontory of Coryphasium. To Pylus he has also attributed the foundation of Pylos in Elis, whither that chief retired on his expulsion from Messenia by Neleus and the Thessalian Pelasgi. He adds, that a temple of Minerva Coryphasia was to be seen near the town, as well as the house of Nestor, whose monument was likewise to be seen there. Strabo, on the contrary, has been at considerable pains to prove that the Pylos of Homer was not in Messenia, but in Triphylia. From Homer's description, he observes, it is evident that Nestor's dominions were traversed by the Alpheus; and, from his account of Telemachus' voyage when returning to Ithaca, it is also clear that the Pylos of the *Odyssey* could neither be the Messenian nor Elean city; since the son of Ulysses is made to pass Oruni, Chalcia, Phea, and the coast of Elis, which he could not have done if he had set out from the last-mentioned place; if from the former, the navigation would have been much longer than from the description we are led to suppose, since we must reckon 400 stadia from the Messenian to the Triphylian Pylos only, besides which, we may presume, the poet would in that case have named the Neda, the Acidon, and the intervening rivers and places. Again, from Nestor's account of his battle with the Epeans, he must have been separated from that people by the Alpheus, a statement which cannot be reconciled with the position of the Elean Pylos. If, on the other hand, we suppose him to allude to the Messenian city, it will appear very improbable that Nestor should make an incursion into the country of the Epei, and return from thence with a vast quantity of cattle, which he had to convey such a distance. His pursuit of the enemy as far as Buprasium and the Olenian rock, after their defeat, is equally incompatible with the supposition that he marched from Messenia. In fact, it is not easy to understand how there could have been any communication between the Epeans and the subjects of Nestor, if they had been so far removed from each other. But as all the circumstances mentioned by Homer agree satisfactorily with the situation of the Triphylian city, we are necessarily induced to regard it as the Pylos of Nestor. Such are the chief arguments adduced by Strabo.—According to Thucydides, the Messenian Pylos had two entrances, one on each side of the island of Sphacteria, but of unequal breadth; the narrowest being capable of admitting only two vessels abreast. The harbour itself must have been very capacious for two such considerable fleets as those of Athens and Sparta to engage within it. These characteristics sufficiently indicate the port or bay of *Nesario* as the scene of those most interesting events of the Peloponnesian war which are de-

tailed in the fourth book of Thucydides. A spot named *Pila*, and laid down in Lapie's map as nearly in the centre of the bay, probably answers to the ancient Pylos. (*Cramer's Anc. Greece*, vol. 3, p. 132, seq.)

PYRAMIDES, famous monuments of Egypt, of massive masonry, which, from a square base, rise diminishing to a point or vertex when viewed from below.—The pyramids commence immediately south of *Cairo*, but on the opposite side of the Nile, and extend in an uninterrupted range for many miles in a southerly direction parallel with the banks of the river. The perpendicular height of the first, which is ascribed to Cheops, is 480 feet 9 inches, that is, 43 feet 9 inches higher than St. Peter's at Rome, and 136 feet 9 inches higher than St. Paul's in London. The length of the former base was 764 feet, that of the present base is 746 feet. (*Vyse, Operations at the Pyramids of Gizeh*, vol. 2, p. 109.) The following are the dimensions of the second pyramid: the base, 684 feet; the central line down the front from the apex to the base, 568; the perpendicular, 356; coating from the top to where it ends, 140. These dimensions, being considerably greater than those usually assigned even to the first or largest pyramid, are to be accounted for by their being taken (by Belzoni) from the base as cleared from sand and rubbish, while the measurements of the first pyramid given by others only applied to it as measured from the level of the surrounding sand.—The antiquity of these erections, and the purpose for which they were formed, have furnished matter for much ingenious conjecture and dispute in the absence of certain information. It has been supposed that they were intended for scientific purposes, such as that of establishing the proper length of the cubit, of which they contain, in breadth and height, a certain number of multiples. They were, at all events, constructed on scientific principles, and give evidence of a certain progress in astronomy; for their sides are accurately adapted to the four cardinal points. Whether they were applied to sepulchral uses, and intended as sepulchral monuments, has been doubted; but the doubts have in a great measure been dispelled by the recent discoveries made by means of laborious excavations. The drifting sand had, in the course of ages, collected around their base to a considerable height, and had raised the general surface of the country above the level which it possessed when they were constructed. The entrance to the chambers had also been, in the finishing, shut up with large stones, and built round so as to be uniform with the rest of the exterior. The largest, called the Pyramid of Cheops, had been opened, and some chambers discovered in it, but not so low as the base, till Mr. Davison, British consul at Algiers, explored it in 1763, when accompanying Mr. Wortley Montague to Egypt. He discovered a room before unknown, and descended the three successive wells to a depth of 156 feet. Captain Caviglia, master of a merchant-vessel, afterward pursued the principal oblique passage 200 feet farther down than any former explorer, and found it communicate with the bottom of the well. This circumstance creating a circulation of air, he proceeded 28 feet farther, and found a spacious room 66 feet by 27, but of unequal height, under the centre of the pyramid, supposed by Mr. Salt to have been the place for containing the *mecca* or sarcophagus, though none is found in it. The room is 30 feet above the level of the Nile. The upper chamber, 35½ feet by 17½, and 18½ high, still contains a sarcophagus.—Three chambers, hitherto undiscovered, were exposed and opened, in 1836-7, by Colonel Vyse. The longest, measuring 88 feet 1 inch, by 17 feet 1 inch, has been denominated by him the "Wellington Chamber;" the second (33 feet 9 inches, by 16 feet 8 inches) he named "Nelson's;" and the third (37 feet 4 inches, by 16 feet 4 inches) has been called after

PYRAMIDES.

Lady Arbuthnot, who was present at the time of the discovery. These chambers vary as to height, and the blocks of granite which form the ceiling of the one below serve as the pavement of the one above it. According to Colonel Vyse, these three chambers were chiefly intended as voids in that portion of the pyramid above what is termed the "king's chamber" (the only one that appears to have had any destination), and thereby to lessen the superincumbent mass. (Consult the costly and elaborate work of Colonel Vyse, "*Operations carried on at the Pyramids of Gizeh in 1837*," &c., London, 1840, 2 vols. 4to.—vol. 1, p. 206, 236, 256.)—In the course of the work just alluded to (vol. 2, p. 106), Colonel Vyse has some remarks on the question whether the pyramids were connected in any way with astronomical purposes. It seems that, in six pyramids which have been opened, the principal passage preserves the same inclination of 26° to the horizon, being directed to the polar star. "As it had been supposed," remarks the colonel, "that the inclined passages were intended for astronomical purposes, I mentioned the circumstance to Sir John Herschel, who, with the utmost kindness, entered into various calculations to ascertain the fact. I also informed Sir John of the allusion in the 'Quarterly Review' to Mr. Cavaglia's remarks respecting the polar star, and likewise of its having been seen by Captains Irby and Mangles from the inclined passage in the Great Pyramid, at the period of its culminating, on the night of the 31st of March, 1817. It would appear from the remarks of Sir John, which here follow, that the direction of the passage was determined by the star which was polar at the time that the pyramid was constructed, and that the exact aspect of the building was regulated by it; but it could not have been used for celestial observation. The coincidence of the relative position of a *Draconis* is at all events very remarkable."

1. Sir John Herschel's Observations on the Entrance Passages in the Pyramids of Gizeh.

"Four thousand years ago, the present polar star, *Ursa Minoris*, could by no possibility have been seen at any time in the twenty-four hours through the gallery in the Great Pyramid, on account of the precession of the Equinoxes, which at that time would have displaced every star in the heavens, from its then apparent position on the sphere, by no less a quantity than $56^{\circ} 45'$ of longitude, and would have changed all the relations of the constellations to the diurnal sphere. The supposed date of the pyramid, 2123 years B.C., added to our present date, 1839, form 3962 years (say 4000), and the effect of the precession on the longitudes of the stars in that interval having been to increase them all by the above-named quantity, it will follow that the pole of the heavens, at the erection of the pyramid, must have stood very near to the star *α Draconis*, that is, $2^{\circ} 51' 15''$ from it to the westward, as we should now call it; *α Draconis* was therefore, at that time, the polar star; and as it is comparatively insignificant, and only of the third magnitude, if so much, it can scarcely be supposed that it could have been seen in the daytime even in the climate of Gizeh, or even from so dark a recess as the inclined entrance of the Great Pyramid. A latitude, however, of 30° , and a polar distance of the star in question of $1^{\circ} 51' 15''$, would bring it, at its lower culmination, to an altitude of $27^{\circ} 91'$, and therefore it would have been directly in view of an observer stationed in the descending passage, the opening of which, as seen from a point sixty-three feet within, would, by calculation, subtend an angle of $7^{\circ} 7'$; and even from the bottom, near the sepulchral chamber, would still appear of at least 2° in breadth. In short, speaking as in ordinary parlance, the passage may be said to have been directly pointed at a *Draconis*, at its inferior culmina-

PYRAMIDES.

tion, at which moment its altitude above the horizon of Gizeh (lat. 30°) would have been $27^{\circ} 9'$ —refraction being neglected as too trifling (about $2'$) to affect the question. The present polar star, *Ursa Minoris*, was at this epoch 28° more or less in arc from the then pole of the heavens, and, of course, at its lower culmination, it was only 7° above the horizon of Gizeh." (Vyse, *Operations*, &c., vol. 2, p. 107, seq.)

2. Operations of Belzoni.

Belzoni, after some acute observations on the appearances connected with the second pyramid, or that of Chephrenes, succeeded in opening it. The stones which had constituted the coating (by which the sides of most of the pyramids, which now rise in steps, had been formed into plain and smooth surfaces) lay in a state of compact and ponderous rubbish, presenting a formidable obstruction; but somewhat looser in the centre of the front, showing traces of operations for exploring it in an age posterior to the erection. On the east side of the pyramid he discovered the foundation of a large temple, connected with a portico appearing above ground, which had induced him to explore that part. Between this and the pyramid, from which it was fifty feet distant, a way was cleared through rubbish forty feet in height, and a pavement was found at the bottom, which is supposed to extend quite round the pyramid; but there was no appearance of any entrance. On the north side, notwithstanding the same general appearance presented itself after the rubbish was cleared away, one of the stones, though nicely adapted to its place, was observed to be loose; and when it was removed, a hollow passage was found, evidently forced by some former enterprising explorer, and rendered dangerous by the rubbish which fell from the roof; it was therefore abandoned. Reasoning by analogy from the entrance of the first pyramid, which is to the east of the centre on the north side, he explored in that situation, and found, at a distance of thirty feet, the true entrance. After incredible perseverance and labour, he found numerous passages, all cut out of the solid rock, and a chamber forty-six feet three inches by sixteen feet three inches, and twenty-three feet six inches high. It contained a sarcophagus in a corner, surrounded by large blocks of granite. When opened, after great labour, this was found to contain bones, which mouldered down when touched, and, from specimens afterward examined, turned out to be the bones of an ox. Human bones were also found in the same place. An Arabic inscription, made with charcoal, was on the wall, signifying that "the place had been opened by Mohammed Ahmed, lapicide, attended by the master Othman, and the king Alij Mohammed," supposed to be the Ottoman emperor, Mohammed I., in the beginning of the fifteenth century. It was observed that the rock surrounding the pyramids, on the north and west sides, was on a level with the upper part of the chamber. It is evidently cut away all around, and the stones taken from it were most probably applied to the erection of the pyramid. There are many places in the neighbourhood where the rock has been evidently quarried, so that there is no foundation for the opinion formerly common, and given by Herodotus, that the stones had been brought from the east side of the Nile, which is only probable as applied to the granite brought from Syene. The operations of Belzoni have thrown light on the manner in which the pyramids were constructed, as well as the purposes for which they were intended. That they were meant for sepulchres can hardly admit of a doubt. It is remarkable that no hieroglyphical inscriptions are found in or about the pyramids as in the other tombs; a circumstance which is supposed to indicate the period of their construction to have been prior to the invention of that mode of writing, though some think that the variation may be accounted for by a difference

in the usages of different places and ages. Belzoni, however, says that he found some hieroglyphics on one of the blocks forming a mausoleum to the west of the first pyramid. The first pyramid seems never to have been coated, as there is not the slightest mark of any covering. The second pyramid showed that the coating had been executed from the summit downward, as it appeared that it had not, in this instance, been finished to the bottom.

3. Who were the labourers employed on the Pyramids?

A very curious inquiry now remains as to the labourers employed in erecting these stupendous structures, and the following remarks on this subject, though they may not be acceded to in their full extent, will yet, it is conceived, not prove unacceptable. They are from *Calmet's Dictionary* (vol. 3, p. 217, seq.). On the supposition that they were native Egyptians, Voltaire has founded an argument in proof of the slavery of that people; but that they were really natives is a point which admits of considerable doubt. The uniform practice of the ancient Oriental nations seems to have been, to employ captive foreigners in erecting laborious and painful works, and Diodorus (1, 2) expressly asserts this of the Egyptian Sesostris. Is it improbable to suppose that one at least, if not all, of the structures in question, were the work of the Israelites? Bondage is expressly attributed to them in the sacred writings; and that the Israelites did not make brick only, but performed other labours, may be inferred from *Exodus*, 9, 8, 10. Moses took "ashes of the furnace," no doubt that which was tendered him by his people. So *Psalms* 81, 6, "I removed his shoulder from the burden, and his hands were delivered from the mortar-basket," not pots, as in our translation; and with this rendering agree the Septuagint, Vulgate, Symmachus, and others. Added to this, we have the positive testimony of Josephus that the Israelites were employed on the Pyramids. The space of time allotted for the erection of these immense masses coincides with what is usually assigned to the slavery of the Israelites. Israel is understood to have been in Egypt 215 years, of which Joseph ruled seventy years; nor was it till long after his death that a "new king arose who knew not Joseph." If we allow about forty years for the extent of the generation which succeeded Joseph, added to his seventy, there remain about 105 years to the *Exodus*. According to Herodotus (2, 124, seq.), Egypt, until the reign of Rhampsinitus, was remarkable for its abundance and excellent laws. Cheops, who succeeded this prince, degenerated into extreme profligacy of conduct. He barred the avenues of every temple, and forbade the Egyptians from offering sacrifices. He next proceeded to make them labour servilely for himself by building the first pyramid. Cheops reigned fifty years. His brother Chephrenes succeeded, and adopted a similar course: he reigned fifty-six years. Thus, for the space of 106 years, were the Egyptians exposed to every species of oppression and calamity; not having, during all this period, permission even to worship in their temples. The Egyptians had so strong an aversion to the memory of these two monarchs, that they would never mention their names, but always attributed their pyramids to one Philitis, a shepherd who kept his cattle in those parts. We have here very plain traces of a government by a foreign family; and of a worship contrary to that which had been previously established in Egypt, as appears in the prohibition of sacrifices. In its continuance, moreover, of 106 years, it coincides with the bondage of the Israelites. There appears to be something mysterious concealed under the name and mention of the shepherd Philitis. It is clear that the Egyptians did not call the kings, by whose orders the

pyramids were built, by this name in the hearing of Herodotus, since they referred them to their kings Cheops and Chephrenes. It would seem, moreover, that the shepherd Philitis had formerly, and at other times, customarily fed his cattle elsewhere. The following, then, may be regarded as the meaning of the passage in question: they attributed the labour of constructing the pyramids to a shepherd who came from Philistia, but who, at that time, fed his cattle in the land of Egypt; implying that they more readily told the appellation of the workman (the son of Israel, the shepherd, *Gen.*, 47, 5) employed in the building, than of the kings by whose commands they were built. They seem to have pursued the same course in the days of Diodorus, who remarks (1, 2), "They admit that these works are superior to all which are seen in Egypt, not only by the immensity of their mass and by their prodigious cost, but still more by the beauty of their construction; and the workmen, who have rendered them so perfect, are much more estimable than the kings who paid their cost; for the former have hereby given a proof of their genius and skill, whereas the kings contributed only the riches left them by their ancestors, or extorted from their subjects." They say the first was erected by Armaus; the second by Ammoris; the third by Inaron." In the common Greek text we read Ἀμασις for the second name, but the best critics decide in favour of Ἀμμορις. If we make a slight change also in the first name, and, instead of Armaus (Ἀρμασις), read Aramæus (Ἀραμαιοῖς), the result will be a curious one. On comparing the names a Mousis and in Aron with the Hebrew description of Moses and Aaron, we find that the proper appellation is the same, as near as pronunciation by natives of different countries could bring it: a Mousis, or ha Mousis, is hu Mousch in Hebrew; and in Aron, or hin Aron, is written hu Aaron, which certainly, when two vowels came together, took a consonant between them, being spoken as if written hun Aaron. This testimony, therefore, agrees with the supposition that the Israelites were employed on the pyramids; first under the appellation of the Syrian or Aramæus (the very title given to Jacob, *Deut.*, 26, 5, "An Aramite ready to perish," &c.), and afterward under the names of the two most famous leaders of that nation, Moses and Aaron. (*Calmet's Dictionary*, l. c.)

4. Various etymologies of the word Pyramid (Πυραμῖς).

Some derive the name Pyramid (*Pyramis*, Πυραμῖς) from πυρός, "wheat," on the supposition that they were meant for granaries! (*Steph. Byz.*, s. v. — *Etymol. Mag.*, s. v.) It is surprising that this silly derivation should have been approved of by Vossius. Another class of etymologists deduce the term from the Greek word πῦρ, "fire," in allusion to the flame-shaped appearance of the structure, as it tapers to a point. (*Etymol. Mag.*, s. v. — *Sylburg.*, ad loc. — *Schol. ad Horat.*, *Od.*, 3, 30, 2. — *Amm. Marcell.*, 22, 15.) These and other derivations proceed upon the supposition that the word pyramid is of Greek origin, than which nothing can be more erroneous. (*Jablonski*, *Voc. Egypt.* — *Opusc.*, vol. 1, p. 221.) Some, taking the passage of Pliny for their guide, where he explains the term obeliscus by "radius Solis," and, regarding the obelisk as a species of pyramid, deduce the latter word from the Coptic Pi-ra-mu-e, which they make to signify "a ray of the sun." (*Jablonski*, p. 222.) Wilkins thinks that pyramis comes from the Coptic Poura misi, equivalent to "regia generatio," the pyramids being so called, according to him, because they served as places of sepulture for lines of kings. Jablonski, however, well observes, that Poura (or Pouro) misi can signify nothing else but "descended from kings." Finally, De Sacy, the late eminent Oriental scholar of France, favours us with the

following. He makes $\epsilon\varsigma$, in the word $\Pi\upsilon\rho\alpha\iota\varsigma$, a mere Greek termination. $\Pi\iota$ is then the Egyptian article, for which the Greeks wrote $\Pi\upsilon$, in their wish to deduce the term from $\pi\epsilon\rho$, "fire." The syllable $\rho\alpha\iota$ he refers to the root $\rho\alpha\mu$, which, according to him, had in the Egyptian tongue the meaning of separating, or setting anything apart from common use. $\Pi\upsilon\rho\alpha\iota\varsigma$, therefore, will denote a sacred place or edifice, set apart for some religious purpose. (*De Sacy, Observations sur l'origine du nom donné par les Grecs et les Arabes aux Pyramides d'Égypte.—Te Water, ad Jablonsk., Voc. Egypt., p. 224.*)

Pyramus, I. a youth of Babylon. (*Vid. Thisbe.*)—II. A river of Cilicia Campestris, rising in Mount Taurus, and falling into the Sinus Iseicus. It is now the *Geikoon*. This river forces its way, by a deep and narrow channel, through the barrier of Taurus; and such was the quantity of soil which it carried down, that an oracle affirmed that one day it would reach the sacred isle of Cyprus. (*Strab.*, 536.) This, however, has not taken place; but a remarkable change has occurred with respect to the course of this river, which now finds its way into the sea, twenty-three miles more to the east, in the Gulf of Scanderoon. (*Cramer's Asia Minor*, vol. 2, p. 351.)

Pyreneæ, a well-known range of mountains, separating Gallia from Hispania. The name was commonly supposed to be derived from the Greek term $\pi\epsilon\rho$, "fire," and various explanations were attempted to be given of this etymology. According to some, these mountains had once been devastated by fire, an opinion which Posidonius deemed not improbable. (*Diod. Sic.*, 5, 35.—*Strab.*, 146.—*Lucr.*, 5, 12, 42.) The true derivation, however, is evidently the Celtic *Pyren* or *Pyrn*, "a high mountain," and from this same may in like manner be deduced the name of Mount *Brenner* in the Tyrol; that of *Pyern*, in upper Austria, that of *Fernor*, in the Tyrol, and many others. (*Adelung, Mithradates*, vol. 2, p. 67.)—The range of the Pyrenees is about 294 miles in length. These mountains are steep, difficult of access, and only passable at five places: 1st, From *Languedoc* to *Catalonia*; 2d, from *Comminge* into *Aragon*; 3d, at *Tarafa*; 4th, at *Maya* and *Pampeluna*, in *Navarre*; and 5th, at *Sebastians*, in *Biscay*, which is the easiest of all. (*Polyb.*, 3, 34, *seqq.*—*Mela*, 2, 5.—*Plin.*, 3, 3.)

Pyrgotélus, a celebrated engraver on gems in the age of Alexander the Great. He had the exclusive privilege of engraving the conqueror, as *Lysippus* was the only sculptor who was permitted to make statues of him. Two gems carved by this artist are said to be extant (*Bracci, Memorie*, tab. 98, 99); but *Winckelmann* has, by many powerful arguments, proved them to be spurious. (*Op.*, 6, 1, p. 107, *seqq.*)

Pyrrha, I. a daughter of *Epimetheus* and *Pandora*, and wife of *Deucalion*. (*Vid. Deucalion.*)—II. A promontory of *Thessaly*, on the western coast of the *Sinus Pagasæus*, and a short distance below *Demetrias*. It is now *Cape Ankistri*.—III. A rock, with another in its vicinity named *Deucalion*, near the promontory mentioned in the preceding paragraph. (*Strabo*, 435.)

Pyrrho, a celebrated Greek philosopher, a native of *Elea*. In his youth he practised the art of painting; but, either through disinclination, or because his mind aspired to higher pursuits, he passed over from the school of painting to that of philosophy. He studied and admired the writings of *Democritus*, and had, as his first preceptor, *Bryson*, the son of *Silpo*, a disciple of *Clinomachus*. After this he became a disciple of *Anaxarchus*, who was contemporary with *Alexander*, and he accompanied his master, in the train of *Alexander*, into *Asia*. Here he conversed with the *Brahmans* and *Gymnosophists*, imbibing from their doctrine whatever might seem favourable to his natural disposition towards doubting: a disposition which

was cherished by his master, who had formerly been a disciple of a sceptical philosopher, *Metrodorus* of *Chios*. Every advance which *Pyrrho* made in the study of philosophy involving him in fresh uncertainty, he left the school of the *Dogmatists* (so those philosophers were called who professed to be possessed of a certain knowledge), and established a new school, in which he taught that every object of human knowledge is involved in uncertainty, so that it is impossible ever to arrive at the knowledge of truth. (*Diog. Laert.*, 58, *seqq.*) It is related of this philosopher that he acted upon his own principles, and carried his scepticism to so ridiculous an extreme, that his friends were obliged to accompany him wherever he went, that he might not be run over by carriages or fall down precipices. If this was true, it was not without reason that he was ranked among those whose intellects were disturbed by intense study. But, if we pay any attention to the respect with which he is mentioned by ancient writers, or give any credit to the general history of his life, we must conclude these reports to have been calumnies invented by the *Dogmatists*, whom he opposed. He spent a great part of his life in solitude, and always preserved a settled composure of countenance, undisturbed by fear, or joy, or grief. He endured bodily pain with great fortitude, and in the midst of dangers discovered no signs of apprehension. In disputation he was celebrated for the subtlety of his arguments and the perspicuity of his language. *Epicurus*, though no friend to scepticism, was an admirer of *Pyrrho*, because he recommended and practised that self-command which produces undisturbed tranquillity, the great end, in the judgment of *Epicurus*, of all physical and moral science. So highly was *Pyrrho* esteemed by his countrymen, that they honoured him with the office of chief priest, and, out of respect to him, passed a decree, by which all philosophers were indulged with immunity from public taxes. He was a great admirer of the poets, particularly of *Homer*, and frequently repeated passages from his poems. Could such a man be so foolishly enslaved by an absurd system as to need a guide to keep him out of danger? *Pyrrho* flourished about B.C. 340, and died about the ninetieth year of his age, probably about B.C. 228. After his death, the Athenians honoured his memory with a statue, and a monument to him was erected in his own country. (*Enfield, History of Philosophy*, vol. 1, p. 482.)

Pyrrhus, I. a son of *Achilles* and *Deidamia*, the daughter of King *Lycomedes*, who received this name from the yellowness of his hair. He was also called *Neoptolemus*, or *new warrior*, because he came to the Trojan war in the last years of the celebrated siege of the capital of *Troas*. He was brought up, and remained at the court of his maternal grandfather until after his father's death. The Greeks, then, according to an oracle, which had declared that *Troy* could not be taken unless one of the descendants of *Æacus* were among the besiegers, despatched *Ulysses* and *Phoenix* to *Scyros* for the young prince. He had no sooner arrived before *Troy*, than, having paid a visit to the tomb of *Achilles*, he was appointed to accompany *Ulysses* in his expedition to *Lemnos*, for the purpose of prevailing on *Philoctetes* to repair with the arrows of *Hercules* to the scene of action. *Pyrrhus* greatly signalized himself during the siege, and was the first, according to some accounts, that entered the wooden horse. He was not inferior to his father in cruel and vindictive feelings. After breaking down the gates of *Priam's* palace, he pursued the unhappy monarch to the altar of *Jupiter*, and there, according to some accounts, he slaughtered him; while, according to others, he dragged him by the hair to the tomb of *Achilles*, where he sacrificed him to the manes of his father. *Pyrrhus* is also among the number of those to whom the precipitation of the young *Astyanax* from the summit of a

PYRRHUS.

tower is attributed; and it was he that immolated Polyxena to his father's shade. In the division of the captives after the termination of the war, Andromache, the widow of Hector, and Helenus, the brother of the latter, were assigned to Pyrrhus. After some time had elapsed, he gave up Andromache to Helenus, and sought and obtained the hand of Hermione, daughter of Menelaus and Helen; but he was slain for this by Orestes, son of Agamemnon. (*Eurip., Androm.*, 1244, *seqq.*—*Virg., Æn.*, 3, 319, *seqq.*—*Heyne, Excurs.*, 12, *ad Æn.*, 3.)—II. A king of Epirus, descended from Achilles on the mother's side. He was saved when an infant, by the fidelity of his servants, from the pursuits of the enemies of his father, who had been banished from his kingdom, and he was carried to the court of Glaucias, king of Illyricum, who educated him with great tenderness. Cassander, king of Macedonia, wished to despatch him; but Glaucias not only refused to deliver him up into the hands of his enemy, but he even went with an army, and placed him on the throne of Epirus, though only twelve years of age. About five years after, the absence of Pyrrhus to attend the nuptials of one of the daughters of Glaucias raised new commotions. The monarch was expelled from his throne by Neoptolemus, who had usurped it after the death of *Æacides*; and being still without resources, he applied to his brother-in-law Demetrius for assistance. He accompanied Demetrius at the battle of Ipsus, and fought there with all the prudence and intrepidity of an experienced general. He afterward passed into Egypt, where, by his marriage with Antigone, the daughter of Berenice, he soon obtained a sufficient force to attempt the recovery of his throne. He was successful in the undertaking; but, to remove all causes of quarrel, he took the usurper to share with him the royalty, and some time after he put him to death, under pretence that he had attempted to poison him. In the subsequent years of his reign Pyrrhus engaged in the quarrels which disturbed the peace of the Macedonian monarchy. He marched against Demetrius, and gave the Macedonian soldiers fresh proofs of his valour and activity. By dissimulation he ingratiated himself in the minds of his enemy's subjects; and when Demetrius laboured under a momentary illness, Pyrrhus made an attempt upon the crown of Macedonia, which, if not then successful, soon after rendered him master of the kingdom. This he shared with Lysimachus for seven months, till the jealousy of the Macedonians and the ambition of his colleague obliged him to retire. Pyrrhus was meditating new conquests, when the Tarentines invited him to Italy to assist them against the encroaching power of Rome. He gladly accepted the invitation, but his passage across the Adriatic proved nearly fatal, and he reached the shores of Italy after the loss of the greatest part of his troops in a storm. At his entrance into Tarentum, B.C. 280, he began to reform the manners of the inhabitants, and, by introducing the strictest discipline among their troops, to accustom them to bear fatigue and to despise dangers. In the first battle which he fought with the Romans he obtained the victory; but for this he was more particularly indebted to his elephants, whose bulk and uncommon appearance astonished the Romans; and terrified their cavalry. The number of the slain was equal on both sides, and the conqueror said that another such victory would ruin him. He also sent Cineas, his chief minister, to Rome, and, though victorious, he sued for peace. These offers of peace were refused; and when Pyrrhus questioned Cineas about the manners and the character of the Romans, the sagacious minister replied that their senate was a venerable assembly of kings, and that to fight against them was to attack another Hydra. A second battle was soon after fought near Asculum, but the slaughter was so great, and the valour so conspicuous on both sides, that the Romans and their en-

PYRRHUS.

emies reciprocally claimed the victory as their own. Pyrrhus still continued the war in favour of the Tarentines, when he was invited into Sicily by the inhabitants, who laboured under the yoke of Carthage and the cruelty of their own petty tyrants. His fondness for novelty soon determined him to quit Italy. He left a garrison at Tarentum, and crossed over to Sicily, where he obtained two victories over the Carthaginians, and took many of their towns. He was for a while successful, and formed the project of invading Africa; but his popularity soon vanished. His troops became insolent, and he behaved with haughtiness, and showed himself oppressive, so that his return to Italy was deemed a fortunate event for all Sicily. He had no sooner arrived at Tarentum than he renewed hostilities with the Romans with great acrimony; but when his army of 80,000 men had been defeated by 20,000 of the enemy under Curius, he left Italy with precipitation, B.C. 274, ashamed of the enterprise, and mortified by the victories which had been obtained over one of the descendants of Achilles. In Epirus he began to repair his military character by attacking Antigonus, who was then on the Macedonian throne. He gained some advantages over his enemy, and was at last restored to the throne of Macedonia. He afterward marched against Sparta at the request of Cleonymus; but, when all his vigorous operations were insufficient to take the capital of Laconia, he retired to Argos, where the treachery of Aristeus invited him. The Argives desired him to retire, and not to interfere in the affairs of their republic, which were confounded by the ambition of two of their nobles. He complied with their wishes; but in the night he marched his forces into the town, and might have made himself master of the place had he not retarded his progress by entering it with his elephants. The combat that ensued was obstinate and bloody; and the monarch, to fight with more boldness, and to encounter dangers with more facility, exchanged his dress. He was attacked by one of the enemy; but, as he was going to run him through in his own defence, the mother of the Argive, who saw her son's danger from the top of a house, threw down a tile, and brought Pyrrhus to the ground. His head was cut off and carried to Antigonus, who gave his remains a magnificent funeral, and presented his ashes to his son Helenus, 272 years before the Christian era.—In person Pyrrhus was athletic and commanding, and his strength and power of bearing the severest fatigue were such as called forth the admiration of all who knew him. The turn and character of his mind corresponded with such powers of body; and he seemed to be formed for war as much by his spirit of enterprise and resolution, as by his skill in the use of arms and the power of enduring privations. His patience was not merely the endurance of physical evils; it was a moral quality of much higher value, which showed that he had not naturally an arbitrary and tyrannical disposition; and it was admirably exemplified in the calmness with which he bore the reproofs of Cineas, and the pleasure he took in listening to the rough and homely truths uttered by Fabricius. His admiration of the Romans arose as much from his veneration for their probity as from astonishment at their resoluteness; and though his policy sometimes partook of the tortuous character of the Greek and Asiatic courts, in action he was always magnanimous. This great quality showed itself even in his domestic intercourse with his friends, and checked that ardour and quickness, which, without it, would have made him a tyrant as well as a conqueror. The whole of his history shows that he was misled by passions not sufficiently controlled, but that his understanding was powerful, quick, and acute. His rapidity, indeed, in projecting and executing, hurried him into an excess, and he seldom allowed himself time enough for deliberation and judgment: hence it was that he might be

said to deserve the sarcastic remark of Antigonus, who compared him to a gambler, "who makes many good throws, but never seems to know when he has the best of the game." (*Plut., Vit. Pyrrh.—Encyclop. Metro-pol., div. 2, vol. 1, p. 667.*)

PYTHAGORAS, a celebrated philosopher of Samos. Great uncertainty exists as to the year when he was born. Some, as, for example, La Nauze and Freret, make it to have been the first year of the 43d Olympiad. Bentley is in favour of the fourth year of the same Olympiad, Meiner contends for the second of the 49th, Dodwell for the fourth of the 52d. There is a difference of sixty-three years between the extremes of these dates. Some authors assert that all which can be stated with any degree of certainty is, that seventy-five or eighty-five years of the life of Pythagoras (for even the duration of his life is a subject of controversy) fall within the one hundred and forty-two years that elapsed between A.C. 608 and A.C. 466. Visconti gives the preference to Eusebius, who, in fixing the death of Pythagoras in the 496th year B.C., expresses his doubts respecting the advanced age to which the philosopher is said to have attained. By his mother's side he is said to have been connected with one of the oldest families in the island. But his father, Mnearchus, was generally believed to have been a foreigner, and not of purely Greek origin, though it was disputed whether he was a Phœnician, or belonged to the Tyrrhenian Pelasgians of Lemnos or Imbros, and to a branch, therefore, of the Pelasgian race. If we dismiss the tales of Iamblichus concerning the early wisdom, gravity, and temperance of Pythagoras, which are said to have been such as to have filled all men with admiration, to have commanded respect and reverence from gray hairs, and even to have led many to assert that he was the son of God (*Iamb., Vit. Pyth., n. 6*), we meet with no other credible particulars of his childhood and early education, but that he was first instructed in his own country by Crophilus, and afterward by Pherecydes in the island of Scyros. (*Thirlwall's Greece, vol. 2, p. 140, in notes.*) When he had paid the honours to his preceptor, for whom he appears to have entertained a high respect, he returned to Samos, and again studied under the direction of his first master. Much is said by Iamblichus and other later biographers of Pythagoras's early journey into Ionia, and his visits to Thales and Anaximander; but we find no ancient account of his journey, nor any traces of its effects on his doctrine, which differs essentially from that of the Ionic school. On his way to Egypt, Iamblichus asserts that he visited Phœnicia, and conversed with the descendants of Mochoa and other priests of that country, and was initiated into their peculiar mysteries. And it may seem not entirely improbable that he might wish to be farther acquainted with the Phœnician philosophy, of which he had doubtless heard a general report from his father, who was probably of Phœnician origin. But it is certainly a fiction of the Alexandrian school that Pythagoras received his doctrines of numbers from the Phœnicians, for their knowledge of numbers extended no farther than to the practical science of arithmetic. In Egypt, Pythagoras was introduced, by the recommendation of Polycrates, tyrant of Samos, to Amasis, king of Egypt, a great patron of learned men, particularly those of Greece, that he might the more easily obtain access to the colleges of the priests. The king himself could scarcely, with all his authority, prevail upon the priests to admit a stranger to the knowledge of their sacred mysteries. The college of Heliopolis, to whom the king's instructions were sent, referred Pythagoras to the college of Memphis, as of greater antiquity; from Memphis he was dismissed, under the same pretence, to Thebes. The Theban priests, not daring to reject the royal mandate, yet loth to comply with it, prescribed Pythagoras many severe and trou-

blesome preliminary ceremonies, among which was that of circumcision, hoping thereby to discourage him from prosecuting his design. Pythagoras, however, executed all their injunctions with such wonderful patience and perseverance, that he obtained their entire confidence, and was instructed in their most recondite doctrine. He passed twenty-two years in Egypt. During this time he made himself perfectly master of the three kinds of writing which were used in that country, the epistolary, the hieroglyphic, and the symbolical; and, having obtained access to their most learned men, in every celebrated college of priests, he became intimately conversant with their ancient records, and gained an accurate knowledge of their doctrines concerning the origin of things, with their astronomy and geometry, and, in short, with Egyptian learning in its whole extent. To his stay in Egypt he was most likely indebted, not so much for any positive knowledge or definite opinion, as for hints which roused his curiosity, and impressions which decided the bias of his mind. In the science of the Egyptians he perhaps found little to borrow; but in their political and religious institutions he saw a mighty engine, such as he might wish to wield for nobler purposes. Many writers who flourished after the commencement of the Christian era, both pagan and Christian, have related that Pythagoras, immediately after he left Egypt, visited the Persian and Chaldean Magi, and travelled so far into the East as to converse with the Indian Gymnosophists. The occasion of this journey is thus related by Iamblichus: "After spending twenty-two years in Egypt, he was conveyed by the victorious army of Cambyses, among a numerous train of captives, to Babylon, where he made himself perfectly acquainted with the learning and philosophy of the East; and, after the expiration of twelve years, when he was in the sixtieth year of his age, he returned to Samos." Cicero, Eusebius, Lactantius, and Valerius Maximus, though they say nothing of the captivity, agree that he visited the Persian Magi. Some have even maintained that in this journey he attended upon the instructions of the celebrated Zoroaster; while others, who have placed the life of Zoroaster in an earlier period than that of Pythagoras, have asserted that the latter conversed with certain Jewish priests, who were at that time in captivity at Babylon, and by this means become intimately acquainted with the Jewish laws and customs. After all, however, there is great reason to suspect the truth of the whole narrative of Pythagoras's journey into the East; for the relation is encumbered with inextricable chronological difficulties. The whole proof of the reality of this expedition rests either upon the evidence of certain Alexandrian Platonists, who were desirous of exalting as much as possible the reputation of those ancient philosophers to whom they looked back as the first oracles of wisdom; or upon that of certain Jewish and Christian writers, who were willing to credit every tale which might seem to render it probable that the Pythagorean doctrine was derived from the Oriental philosophers, and ultimately from the Hebrew Scriptures. It seems, therefore, on the whole, most reasonable to look upon the story of his eastern journey as a mere fiction, and to conclude that Pythagoras never passed over from Egypt to the East, but returned thence immediately to Samos. Pythagoras, on his return to his native island, was desirous that his fellow-citizens should reap the benefit of his travels and studies, and for this purpose attempted to institute a school for their instruction in the elements of science, but chose to adopt the Egyptian mode of teaching, and communicate his doctrines under a symbolical form. His attempt was unsuccessful. He then visited in succession Delos, Crete, Sparta, Elis (being present at the Olympic games celebrated in the latter district), and finally Phlius in Achaia, the residence of Leon, king

of the Phliasiens. Here he first assumed the appellation of *philosopher*. Cicero ascribes the invention of this term to Pythagoras. If this be correct, Pythagoras probably did not intend, as has been commonly imagined, to deprecate the reputation for wisdom, but to profess himself devoted to the pursuit of it. The well-known story, which explains the origin of the name, suggests an entirely false notion of his view of life, so far as it implies that he regarded contemplation as the highest end of human existence. The story is as follows: It seems that Leon, charmed with the ingenuity and eloquence with which he discoursed on various topics, asked him in what art he principally excelled, to which Pythagoras replied, that he did not profess himself master of any art, but that he was a *philosopher*. Leon, struck with the novelty of the term, asked Pythagoras who were philosophers, and wherein they differed from other men. Pythagoras replied that, as in the public games, while some are contending for glory, and others are buying and selling in pursuit of gain, there is always a third class, who attend merely as spectators; so in human life, amid the various characters of men, there is a select number who, despising all other pursuits, assiduously apply themselves to the study of nature and the search after wisdom; these, added Pythagoras, are the persons whom I denominate philosophers.—Pythagoras is generally believed to have found Polycrates ruling at Samos, on his return from his travels, and his aversion to the tyrant's government was sometimes assigned as the motive which led him finally to quit his native island. If there were any foundation for this story, it must probably be sought, not in any personal enmity between him and Polycrates—who is said to have furnished him with letters of recommendation to Amasis—but in his conviction that the power of Polycrates would oppose insuperable objections to his designs. For it seems certain that, before he set out for the West, he had already conceived the idea to which he dedicated the remainder of his life, and only sought for a fit place and a favourable opportunity for carrying it into effect. We, however, find intimations, that he did not leave Samos until he had acquired some celebrity among the Asiatic Greeks; by the introduction of certain mystic rites, which Herodotus represents as closely allied to the Egyptian, and to those which were celebrated in Greece under the name of Orpheus as their reputed founder. But as we cannot believe that the establishment of a new form of religion was an object that Pythagoras ever proposed to himself apart from his political views, we could only regard these mysteries, supposing the fact ascertained, in the light of an essay or an experiment, by which he sounded the disposition or the capability of his countrymen for the reception of other more practical doctrines. The fame of his travels, his wisdom, and sanctity had probably gone before him into Greece, where he appears to have stayed some time, partly, perhaps, to enlarge his knowledge, and partly to heighten his reputation. It was no doubt for the former purpose that he visited Crete and Sparta, where he found a model of government and discipline more congenial to his habits of thinking than he could have met with anywhere else but in Egypt or India. If, as is highly probable, he stopped on the same journey at Olympia and at Delphi, it was, perhaps, less from either curiosity or devotion, than from the desire of obtaining the sanction of the oracles, and of forming a useful connexion with their ministers. Thus we are told that he was indebted for many of his ethical dogmas to Themistoclea of Delphi, probably the priestess. The legends about his appearing at Olympia—where he is said to have shown a thigh, like the shoulder of Pelops, of gold or of ivory, and to have fascinated an eagle as it flew over his head—may very well be connected with this journey, and would indicate that he was looked upon

as a person partaking of a superhuman nature, and as an especial favourite of Heaven. How far he excited or encouraged such a delusion, is in all cases very difficult to determine; but it seems unquestionable that he did not rely solely on his genuine merits and acquirements, but put forward marvellous pretensions, which he must have been conscious had no real ground, and which, we must suspect, were calculated to attract the veneration of the credulous. The most famous of these was the claim he laid to the privilege—conferred on him, as he asserted, by the god Hermes—of preserving a distinct remembrance of many states of existence which his soul had passed through; an imposture attested by his contemporary Xenophanes, who, as his character in this respect stands much higher than that of Pythagoras, appears to have treated it in his elegies with deserved ridicule. (*Diag. Laert.*, 8, 36.)—What were the precise motives which induced him finally to fix his residence among the Italian Greeks, and particularly at Crotona, is only matter for conjecture. The peculiar salubrity of the air of this place, its aristocratical government, a state of manners which, though falling far short of his idea, was advantageously contrasted with the luxury of Sybaris, might suffice to determine his choice, even if there were no other circumstances in its condition which opened a prospect of successful exertion. In fact, however, the state of parties in Crotona, at the time when he arrived there, seems to have been singularly favourable to the undertaking which he meditated. Causes of discord were at work there, as in most of the neighbouring cities, very similar to those which produced the struggle between the patricians and plebeians at Rome. There was a body, called a senate, composed of a thousand members, and probably representing the descendants of the more ancient settlers, invested with large and irresponsible authority, and enjoying privileges which had begun to excite discontent among the people. The power of the oligarchy was still preponderant, but apparently not so secure as to render all assistance superfluous. The arrival of a stranger outwardly neutral, who engaged the veneration of the multitude by his priestly character, and by the rumour of his supernatural endowments, and who was willing to throw all his influence into the scale of the government, on condition of exercising some control over its measures, was an event which could not but be hailed with great joy by the privileged class. And, accordingly, Pythagoras seems to have found the utmost readiness in the senate of Crotona to favour his designs. The real nature of these designs, and of the means by which he endeavoured to carry them into execution, is a question which has exercised the sagacity of many inquirers, and has been variously solved, according to the higher degree of importance which Pythagoras has been supposed to have attached to religion, or to philosophy, or to government. But it seems clear that his object was not exclusively, or even predominantly religious, or philosophical, or political, and that none of the objects stood in the relation of an end to the other two as its means. On the other hand, we cannot be satisfied with the opinion of a modern author, that the aim of Pythagoras was to exhibit the ideal of a Dorian state. (*Müller, Dorians*, 3, 9, 15.) This is, perhaps, in one sense more, and in another less, than he really attempted, and the opinion seems to affect the character of the Dorians rather than the views of Pythagoras. His leading thought appears to have been, that the state and the individual ought, each in its way, to reflect the image of that order and harmony by which he believed the universe to be sustained and regulated. He did not frame a constitution or a code of laws; nor does he appear ever to have assumed any public office. He instituted a society—an order we might now call it—of which he became the lead-

er. It was composed of young men carefully selected from the noblest families, not only of Crotona, but of other Italiot cities. Their number amounted, or was confined, to three hundred; and if he expected by their co-operation to exercise a sway firmer and more lasting than that of a lawgiver or a magistrate, first over Crotona, and, in the end, over all the Italiot cities, his project, though new and bold, ought not to be pronounced visionary or extravagant. This celebrated society, then, was at once a philosophical school, a religious brotherhood, and a political association; and all these characters appear to have been inseparably united in the founder's mind. The ambition of Pythagoras was, assuredly, truly lofty and noble. He aimed at establishing a dominion which he believed to be that of wisdom and virtue, a rational supremacy of minds, enlightened by philosophy and purified by religion, and of characters fitted to maintain an ascendancy over others by habits of self-command. At first Pythagoras obtained unbounded influence over all classes at Crotona, and effected a general reformation in the habits of the people; while in other Italian cities he gained such a footing as enabled him either to counteract revolutionary movements, or to restore aristocratical government where it had given way to tyranny or democracy.—After the celebrated battle in which the people of Crotona defeated the Sybarites, and after which they destroyed the city of the latter, the senate of Crotona and the Pythagorean associates seem to have been so elated by this success as to have fancied that it was the triumph of their cause, and that they alone were to reap its fruits. When the question arose as to the distribution of the spoil and of the conquered land, they insisted on retaining the whole in the name of the state, and refused to concede any share to those who had earned it all by their toil and blood. The commonalty were, of course, irritated by the attempt. Their fury was directed against the society, chiefly, it is said, by Cylon, a noble and wealthy man, who is believed to have been rejected by Pythagoras when he sought to be admitted among his followers. A turn-out took place, in which the populace set fire to Mile's house, where the Pythagoreans were assembled. Many perished, and the rest only found safety in exile. It is not clear whether Pythagoras himself was at Crotona during this commotion; the general belief seems to have been that he died, not long after, at Metapontum. The rising at Crotona appears to have been followed by similar scenes in several other Italian cities, as at Caulonia, Locri, and Tarentum, which would prove the extensive ramifications of the order, and that it everywhere disclosed the same political character. Many of the fugitives took refuge in Greece, but confusion and bloodshed continued to prevail for many years in the cities which had been the seats of the society. Tranquillity was at length restored by the mediation of the Achæans of the mother country, and sixty of the exiles returned to their homes. But their presence seems to have given rise to fresh troubles, perhaps through their opposition to the democratical institutions which Crotona and other cities adopted from Achæa: and at a later period we find some celebrated Pythagoreans in Greece, who had been driven out of Italy by their political adversaries, while others remained there, and endeavoured, with partial success, to revive the ancient influence of the order. (*Thirlwall's Greece*, vol. 2, p. 145, seq.—*Ritter's History of Philosophy*, vol. 1, p. 327.)—Many tales are related of Pythagoras which carry with them their own refutation. That, by speaking a word, he tamed a Daupian bear, which had laid waste the country; that he prevented an ox from eating beans by whispering in its ear; that he was on the same day present, and discoursed in public, at Metapontum in Italy, and at Tauromenium in Sicily; that he pre-

dicted earthquakes, storms, and other future events; and that a river, as he passed over it with his friends, cried out, "Hail, Pythagoras," are wonders which would require much clearer and better evidence to gain them credit than the testimony of Apollonius, Porphyry, and Iamblichus, or even of Laertius and Pliny. It appears upon the face of the history of this philosopher, that he owed much of his celebrity and authority to seeking to excite the veneration of the credulous. His whole manner of life, as far as it is known, confirms this opinion. Clothed in a long white robe, with a flowing beard, and, as some relate, with a golden crown on his head, he preserved among the people, and in the presence of his disciples, a commanding gravity and majesty of aspect. He made use of music to promote the tranquillity of his mind, frequently singing for this purpose hymns of Thales, Hesiod, and Homer. He had such an entire command over himself, that he was never seen to express in his countenance grief, joy, or anger. He refrained from animal food, and confined himself to a frugal vegetable diet. By this artificial demeanour, Pythagoras passed himself off upon the vulgar as a being of an order superior to the common condition of humanity, and persuaded them that he had received his doctrine from heaven. Pythagoras married Theano of Crotona, or, as some relate, of Crete, by whom he had two sons, Telauges and Mnesearchus, who, after his death, took charge of his school.—Whether Pythagoras left behind him any writings is a point much disputed. Diogenes Laertius enumerates many pieces which appeared under his name, and Iamblichus and Pliny increase the list. But Plutarch, Josephus, Lucian, and others, confess that there were no genuine works of Pythagoras extant; and from the pains which Pythagoras took to confine his doctrine to his own school during his life, it appears highly probable that he never committed his philosophical system to writing, and that those pieces to which his name was early affixed were written by some of his followers, according to the tenets which they had learned in his school. Among the pieces attributed to Pythagoras, no one is more famous than the *Golden Verses* (*Χρυσὰ ἑνν*), which Hierocles has illustrated with a commentary. It is generally agreed that they were not written by Pythagoras; and perhaps they are to be ascribed to Epicharmus or Empedocles. (*Stanley, Hist. Phil.*, p. 301.—*Fabric., Bibl. Gr.*, vol. 1, p. 794.—*Brucker, Hist. Phil.*, vol. 1, p. 1109.) They may be considered as a brief summary of his popular doctrines.—The method of instruction adopted by Pythagoras was twofold, exoteric and esoteric, or public and private. This distinction he had seen introduced with great advantage by the Egyptian priests, who found it admirably adapted to strengthen their authority and increase their emolument. He therefore determined, as far as circumstances would admit, to form his school upon the Egyptian model. For the general benefit of the people he held public assemblies, in which he delivered discourses in praise of virtue and against vice; and in these he gave particular instructions, in different classes, to husbands and wives, parents and children, and others who filled the several relations of society. The auditors who attended these public lectures did not properly belong to his school, but continued to follow their usual mode of living. Besides these, he had a select body of disciples, whom he called his companions and friends, who submitted to a peculiar plan of discipline, and were admitted by a long course of instruction into all the mysteries of his esoteric doctrine. Before any one could be admitted into this fraternity, Pythagoras examined his features and external appearance; inquired in what manner he had been accustomed to behave towards his parents and friends; remarked his manner of conversing, laughing, and keeping silence; and observed what passions he was most

PYTHAGORAS.

inclined to indulge, with what kind of company he chose to associate, how he passed his leisure moments, and what incidents appeared to excite in him the strongest emotions of joy and sorrow. From these and other circumstances, Pythagoras formed an accurate judgment of the qualifications of the candidate; and he admitted no one into his society till he was fully persuaded of his capacity of becoming a true philosopher. Upon the first probationary admission, the fortitude and self-command of the candidate was put to the trial by a long course of severe abstinence and rigorous exercise. The injunction of silence has already been alluded to. This silence, or *ἔρεσθαι*, as it was termed, is not to be confounded with that sacred reserve with which all the disciples of Pythagoras were bound, upon oath, to receive the doctrines of their master, that they might, from no inducement whatsoever, suffer them to pass beyond the limits of their sect. Pythagoras, like all other philosophers, had his *exoteric*, or public, and his *esoteric*, or private, doctrines. The restraint which he put upon the words of his pupils, by enjoining silence for so long a time, was certainly, in one point of view, a very judicious expedient, as it restrained impertinent curiosity, and prevented every inconvenience of contradiction. Accordingly, we find that his disciples silenced all doubts, and refuted all objections, by appealing to his authority. *Αὐτὸς ἔφα, ἵπτε dixit* ("he himself," i. e., the master, "said so"), decided every dispute. Nor was this preparatory discipline deemed sufficiently severe without adding, during the years of initiation, an entire prohibition of seeing their master, or hearing his lectures except from behind a curtain. And even this privilege was too great to be commonly allowed; for in this stage of tuition they were usually instructed by some inferior preceptor, who barely recited the doctrine of Pythagoras, without assigning the reasonings or demonstrations on which they were founded, and required the obedient pupil to receive them as unquestionable truths upon their master's word. Those who had sufficient perseverance to pass these several steps of probation were at last admitted among the *Esoterics*, and allowed to see and hear Pythagoras behind the curtain. But if it happened that any one, through impatience of such rigid discipline, chose to withdraw from the society before the expiration of the term of trial, he was dismissed with a share of the common stock, the double of that which he had advanced; a tomb was erected for him as for a dead man; and he was to be, as such, forgotten by the brethren as if he had been actually dead. It was the peculiar privilege of the *Esoterics* to receive a full explanation of the whole doctrine of Pythagoras, which to others was delivered in brief precepts and dogmas under the concealment of symbols. They were also permitted to take minutes of their master's lectures in writing, and to propose questions and offer remarks upon every subject of discourse. These disciples were particularly distinguished by the appellation of the *Pythagoreans*; they were also called the *Mathematicians*, from the studies upon which they entered immediately after their initiation. After they had made a sufficient progress in geometrical science, they were conducted to the study of nature, the investigation of primary principles, and the knowledge of God. Those who pursued these sublime speculations were called *Theorists*; and such as more particularly devoted themselves to theology were styled *θεωστικοί, religious*. Others, according to their respective abilities and inclinations, were engaged in the study of morals, economics, and policy; and were afterward employed in managing the affairs of the fraternity, or sent into the cities of Greece to instruct them in the principles of government, or assist them in the institution of laws. The brethren of the Pythagorean college at Crotona, who were about 600 in

PYTHAGORAS.

number, lived together, as in one family, with their wives and children, in a public building called *ἄνακτορον*, the common auditory. The whole business of the society was conducted with the most perfect regularity. Every day was begun with a distinct deliberation upon the manner in which it should be spent, and concluded with a careful retrospect of the events which had occurred, and the business which had been transacted. They rose before the sun, that they might pay him homage; after which they repeated select verses from Homer and other poets, and made use of music, both vocal and instrumental, to enliven their spirits, and fit them for the duties of the day. They then employed several hours in the study of science. These were succeeded by an interval of leisure, which was commonly spent in a solitary walk for the purpose of contemplation. The next portion of the day was allotted to conversation. The hour immediately before dinner was filled up with various kinds of athletic exercises. Their dinner consisted chiefly of bread, honey, and water; for, after they were perfectly initiated, they wholly denied themselves the use of wine. The remainder of the day was devoted to civil and domestic affairs, conversation, bathing, and religious ceremonies. The *Exoteric* disciples of Pythagoras were taught after the Egyptian manner, by images and symbols, which must have been exceedingly obscure to those who were not initiated into the mysteries of the school. And they who were admitted to this privilege were trained, from their first admission, to observe inviolable silence with respect to the recondite doctrines of their master. That the wisdom of Pythagoras might not pass into the ears of the vulgar, they committed it chiefly to memory; and where they found it necessary to make use of writing, they were careful not to suffer their minutes to pass beyond the limits of the school. After the dissolution of their assembly by Cylon's faction, Lysis and Archippus thought it necessary, in order to preserve the Pythagorean doctrine from total oblivion, to reduce it to a systematic summary; at the same time, however, strongly enjoining their children to preserve these memoirs secret, and to transmit them in confidence to posterity. From this time books began to multiply among the followers of Pythagoras, till at length, in the time of Plato, Philolaus exposed the Pythagorean records to sale, and Archytas of Tarentum gave Plato a copy of his commentaries upon the aphorisms and precepts of his master. It is sufficiently evident, from this account of the manner in which Pythagoras taught his followers, that the sources of information concerning his doctrine must be very uncertain. Instructions designedly concealed under the veil of symbols, and chiefly transmitted by oral tradition, must always have been liable to misrepresentation. Of the imperfect records of the Pythagorean philosophy left by Lysis, Archytas, and others, nothing has escaped the wreck of time, except, perhaps, sundry fragments collected by the diligence of Stobæus, concerning the authenticity of which there are some grounds for suspicion; and which, if admitted as genuine, will only exhibit an imperfect view of the moral and political doctrine of Pythagoras under the disguise of symbolical and enigmatical language. The strict injunction of secrecy, which was given by oath to the initiated Pythagoreans, has effectually prevented any original records of their doctrine concerning nature and God from passing down to posterity. We are entirely to rely for information on this head, and, indeed, concerning the whole doctrine of Pythagoras, upon Plato and his followers. Plato himself, while he enriched his system with stores from the magazine of Pythagoras, accommodated the Pythagorean doctrines, as he did also those of his master Socrates, to his own system, and thus gave an imperfect, and, we may suppose, in many particulars, a false representation of the doctrines of the Samian philosopher.

It was further corrupted by the followers of Plato, even in the Old Academy, and afterward in the Alexandrian school. The latter, especially, made no scruple of obtruding their own dogmas upon the world, under the sanction of Pythagoras or any other ancient sage, and were chiefly employed in attempting to reconcile, or, rather, confound the doctrines of the ancient philosophers with later systems.—If the unconnected and doubtful records which remain can enable us to form any judgment upon this subject, the following may perhaps be considered as a faint delineation of the Pythagorean philosophy: The end of philosophy is to free the mind from those encumbrances which hinder its progress towards perfection, and to raise it to the contemplation of immutable truth, and the knowledge of divine and spiritual objects. This effect must be produced by easy steps, lest the mind, hitherto conversant only with sensible things, should revolt at the change. The first step towards wisdom is the study of mathematics, a science which contemplates objects that lie in the middle way, being corporeal and incorporeal beings, and, as it were, on the confines of both, and which most advantageously inures the mind to contemplation.—The most probable explanation of the Pythagorean doctrine of numbers is, that they are used as symbolical or emblematical representations of the first principles and forms of nature, and particularly of those eternal and immutable essences to which Plato afterward gave the appellation of Ideas. Not being able, or not choosing, to explain in simple language the abstract notions of principles and forms, Pythagoras seems to have made use of numbers, as geometers make use of diagrams, to assist the conceptions of scholars. More particularly, conceiving some analogy between numbers and the intelligent forms which subsist in the Divine Mind, he made the former a symbol of the latter. As numbers proceed from unity, or the Monad, as a simple root, whence they branch out into various combinations, and assume new properties in their progress, so he conceived the different forms of nature to recede, at different distances, from their common source, the pure and simple essence of Deity, and at every degree of distance to assume certain properties in some measure analogous to those of numbers; and hence he concluded that the origin of things, their emanation from the first being, and their subsequent progression through various orders, if not capable of a perfectly clear explanation, might, however, be illustrated by symbols and resemblances borrowed from numbers. According to some writers, the Pythagorean Monad denotes the active principle in nature, or God; the Dual, the passive principle, or matter; the Triad, the world formed by the union of the two former; and the Tetractys, the perfection of nature. The Tetractys, or quadrata, according to the Pythagoreans, was the root of the eternally flowing nature. (*Carm., Aur., 47.*—*Iamblich., Vit. Pythag., 162.*) What they understood by the grand Tetractys, whether the sum of the first four numbers, that is, ten; or the sum of the first four odd and the first four even, that is, thirty-six, is unimportant; for the essential is not the symbol, but what the symbol represented. (*Plut., de Is. et Os., 76.*—*Id., de Anim. Procr., 30.*—*Ritter, Hist. of Philos., vol. 1, p. 363.*) Next to numbers, music had the chief place in the preparatory exercise of the Pythagorean school, by means of which the mind was to be raised above the dominion of passion, and inured to contemplation. Pythagoras considered music not only as an art to be judged of by the ear, but as a science to be reduced to mathematical principles and proportions. The musical chords are said to have been discovered by him in the following manner: As he was one day reflecting on this subject, happening to pass by a smith's forge where several men were successively striking with their hammers a

piece of heated iron upon an anvil, he remarked that all the sounds produced by their strokes were harmonious except one. The sounds which he observed to be chords were the octave, the fifth, and the third; but that sound which he perceived to lie between the third and the fifth he found to be discordant. Going into the workshop, he observed that the diversity of sounds arose, not from the forms of the hammers, nor from the force with which they were struck, nor from the position of the iron, but merely from the difference of weight in the hammers. Taking, therefore, the exact weight of the several hammers, he went home, and suspended four strings of the same substance, length, and thickness, and twisted in the same degree, and hung a weight at the lower end of each, respectively, equal to the weight of the hammers; upon striking the strings, he found that the musical chords of the strings corresponded with those of the hammers. Hence it is said that he proceeded to form a musical scale, and to construct stringed instruments. His scale was, after his death, engraved on brass, and preserved in the temple of Juno at Samos. Pythagoras conceived that the celestial spheres in which the planets move, striking upon the ether through which they pass, must produce a sound, and that this sound must vary according to the diversity of their magnitude, velocity, and relative distance. Taking it for granted that everything respecting the heavenly bodies is adjusted with perfect regularity, he farther imagined that all the circumstances necessary to render the sounds produced by their motions harmonious, were fixed in such exact proportions, that the most perfect harmony was produced by their revolutions. This fanciful doctrine respecting the music of the spheres gave rise to the names which Pythagoras applied to musical tones. The last note in the musical octave he called *Hypate* (*ὑπάτη*), because he supposed the sphere of Saturn, the highest planet, to give the deepest tone; and the highest note he called *Neate* (*νέατη*), from the sphere of the moon, which, being the lowest or nearest the earth, he imagined produced the shrillest sound. In like manner of the rest. It was said of Pythagoras by his followers, who hesitated at no assertion, however improbable, which might seem to exalt their master's fame, that he was the only mortal so far favoured by the gods as to have been permitted to hear the celestial music of the spheres. Besides arithmetic and music, Pythagoras cultivated geometry, which he had learned in Egypt; but he greatly improved it by investigating new theorems, and by digesting its principles, in an order more perfectly systematical than had before been done. Several Grecians, about the time of Pythagoras, applied themselves to mathematical learning, particularly Thales in Ionia. But Pythagoras seems to have done more than any other philosopher of this period towards reducing geometry to a regular science. His definition of a point is a monad or unity with position. He taught that a geometrical point corresponds to unity in arithmetic; a line to two, a superficies to three, a solid to four. Of the geometrical theorems ascribed to him, the following are the principal: That the interior angles of every triangle are together equal to two right angles; that the only polygons which will fill up the whole space about a given point are the equilateral triangle, the square, and the hexagon; the first to be taken six times, the second four times, and the third three times; and that, in rectangular triangles, the square of the side which subtends the right angle is equal to the sum of the squares of the sides that contain the right angle. Upon the invention of this latter proposition (*Euclid, 1, 47*), Plutarch says that Pythagoras offered an ox, or, others, an hecatomb to the gods. But this story is thought by Cicero inconsistent with the institutions of Pythagoras, which, as he supposes, did not admit of animal sacrifices.—Pythagoras inferred the stature of

Hercules from the length of the Olympic course, which measured six hundred of his feet. Observing how much shorter a course six hundred times the length of an ordinary sized man was than the Olympic course, he inferred, by the law of proportion, the length of Hercules' foot; whence the usual proportion of the length of the foot to the height of a man enabled him to determine the problem.—On Astronomy, the doctrine of Pythagoras, or, at least, of the ancient Pythagoreans, was as follows: The term Heaven either denotes the sphere of the fixed stars, or the whole space between the fixed stars and the moon, or the whole world, including both the celestial sphere and the earth. There are ten celestial spheres, nine of which are visible to us; namely, that of the fixed stars, those of the seven planets, and those of the earth. The tenth is the Antichthon, or an invisible sphere opposite to the earth, which is necessary to complete the harmony of nature, as the Decad is the completion of the numerical harmony. Fire holds the middle place in the universe; or in the midst of the four elements is placed the fiery globe of unity; the earth is not without motion, nor situated in the centre of the spheres, but is one of those planets which make their revolutions about the sphere of fire. The distance of the several celestial spheres from the earth corresponds to the proportion of notes in a musical scale. The moon and other planetary globes are habitable. The earth is a globe, which admits of Antipodes. From several of these particulars respecting the astronomical doctrine of Pythagoras, it has been inferred that he was possessed of the true idea of the solar system, which was revived by Copernicus, and fully established by Newton. With respect to God, Pythagoras appears to have taught, that he is the universal mind, diffused through all things, the source of all animal life, the proper and intrinsic cause of all motion, in substance similar to light, in nature like truth, the first principle of the universe, incapable of pain, invisible, incorruptible, and only to be comprehended by the mind. Cicero also remarks, that Pythagoras conceived God to be a soul pervading all nature, of which every human soul is a portion, which is nothing more than the modern system of Pantheism. The doctrine of the Pythagoreans respecting the nature of brute animals, and *μετεμψύχωσις*, the *Transmigration of Souls*, was the foundation of their abstinence from animal food, and of the exclusion of animal sacrifices from their religious ceremonies. This doctrine Pythagoras probably learned in Egypt, where it was commonly taught. Nor is there any sufficient reason for understanding it, as some have done, symbolically.—We will end this article with a few specimens of his *Symbols*, which, though they were at first made use of for the purpose of concealment, and though their meaning has always been religiously kept secret by the Pythagoreans themselves, have awakened much curiosity, and given occasion to many ingenious conjectures, which, however, unless they were more satisfactory, it would answer no purpose to repeat. Among the Symbols of Pythagoras, recited by Iamblichus and others, are the following: Adore the sound of the whispering wind. Stir not the fire with a sword. Turn aside from an edged tool. Pass not over a balance. Setting out on a journey, turn not back, for the Furies will return with you. Breed nothing that has crooked talons. Receive not a swallow into your house. Look not in a mirror by the light of a candle. At a sacrifice pare not your nails. Eat not the heart or brain. Taste not that which has fallen from the table. Break not bread. Sleep not at noon. When it thunders, touch the earth. Pluck not a crown. Roast not that which has been boiled. Sail not on the ground. Plant not a palm. Breed a cock, but do not sacrifice it, for it is sacred to the sun and moon. Plant melons in thy garden, but eat them not. Ab-

stain from beans.—The precept prohibiting the use of beans is one of those mysteries which the ancient Pythagoreans never disclosed, and which modern ingenuity has in vain attempted to discover. Its meaning was probably rather dietetic than physical or moral. The prohibition from beans was an Egyptian custom, according to Herodotus (2, 87). Aristoxenus, on the other hand, says that Pythagoras recommended beans before all other food. (*Aul. Gell.*, 4, 4.) The abstinence from fish is another resemblance to Egyptian customs; but the tradition on this point is not very extensive, and rests on fables. On abstinence from flesh there is a variety of traditions. (*Eudox.*, *ep. Porph.*, V. P., 7.—*Iamb.*, V. P., 85, 108.—*Diag. Laert.*, 8, 20.) It is safest to follow Aristotle, according to whom, the Pythagoreans only abstained from particular kinds of fish. (*Aul. Gell.*, l.c.—*Diag. Laert.*, 8, 19.) The statement of Aristoxenus, that they only abstained from the ploughing ox and the wether, evidently on account of their usefulness, appears to be a later version. (*Diag. Laert.*, 8, 20.—Compare *Athenaeus*, 10, p. 418.) Pythagorean precepts of more value are these. Above all things govern your tongue. Engrave not the image of God in a ring. Quit not your station without the command of your general. (*Engel's History of Philosophy*, vol. 1, p. 365, *seqq.*—*Ritter, Hist. Philos.*, vol. 1, p. 326, *seqq.*)

ΠΥΘΗΑΣ, a native of Massilia (*Marseille*). His era is uncertain; some writers place him under the reign of Ptolemy Philadelphus, but Bougainville (*Mém. de l'Acad. des Ins.*, vol. 19, p. 148) has undertaken to show that he was anterior to Aristotle. Pytheas is numbered among the Greek geographical writers. He made many important discoveries in a voyage which he undertook to the north of Europe, and was the first geographer who could call astronomical knowledge to his aid. Leaving the harbour of Massilia, and sailing from cape to cape, he coasted along all the eastern shore of Spain, passed the Straits of Gibraltar, navigated the coasts of Lusitania, Aquitania, and Armonica, entered the English Channel, followed the eastern shore of Britain, and, on reaching its northern extremity, advanced six days' sail farther to the north, until he reached a country which the inhabitants called Thule, and where the length of the Solstitial day was 24 hours, which corresponds to 66° 30' N. L., or modern Iceland. D'Anville (*Mém. de l'Acad.*, &c., vol. 37, p. 436) maintains that Pytheas did not go farther than the *Shetland Isles*. Schœning, on the other hand, makes the Thule of this navigator to be a country of Norway, which still bears the name of *Thule* or *Thulemark*. In a second voyage, Pytheas passed through the English Channel into the German Ocean, and thence into the Baltic, where he reached the mouth of a river which he calls the Tenais, but which is, perhaps, the Vistula or Rodan. In this vicinity the amber of commerce was obtained. Pytheas wrote in Greek two works, one entitled "*A Description of the Ocean*," of which Geminus Rhodius makes mention (*Elem. Astron.*, c. 6.—*Uranolog. Petas.*, p. 22, *ed. Paris*, 1630), and the other a "*Periplus*" or "*Periplus of the Earth*," mentioned by Marcianus, the scholiast on Apollonius Rhodius. The little that we know of these two productions is obtained from the pages of Strabo and Pliny, but it is so altered and disguised as to be almost unintelligible. Pytheas has been generally regarded as very mendacious in his narratives. His memory, however, has been successfully vindicated by several modern writers. (*Bougainville, loc. cit.*—*Schœning, Abhandlung in Allg. Weltgesch.*, Halle, vol. 31.—*Adelung, Aelteste Geschichte der Deutschen*, Leipz., 1806, 8vo.—*Mannert, Geogr.*, vol. 1, p. 73, *seqq.*—*Schöll, Hist. Lit. Gr.*, vol. 2, p. 198.)

ΠΥΘΙΑ, I. the priestess of Apollo at Delphi. (*Vid*

Delphi, and Oraculum.)—II. Games celebrated in honour of Apollo at Delphi. They were first instituted, according to the fabulous opinion, by Apollo himself, in commemoration of the victory which he had obtained over the serpent Python, from which they received their name; but their origin seems, in fact, to have been a Panegyris (Πανηγυρίς), or Festival Communion, in connexion with the Delphic oracle. With this the Delphians combined games for the purposes of amusement, which originally consisted of a contest between singers in praise of the Delphian god. This assembly was, in its more important capacity, denominated the Amphictyonic council, and was charged with the superintendence of the games. (*Wachsmuth, Gr. Ant.*, vol. 1, p. 163, *Eng. transl.*)—The Pythian games were, at their first institution, only celebrated once in nine years, but afterward every fifth year. The crown was of bay.—For an account of the exercises in the public games of the Greeks, consult the article Olympia. (*Potter, Gr. Ant.*, 2, 23.)

PYTHIUS, I. a Syracusan, who defrauded Canius, a Roman knight, to whom he had sold his gardens, &c. (*Cic., de Off.*, 3, 14.)—II. A surname of Apollo, which he received for his having conquered the serpent Python, or because he was worshipped at Delphi; called also Pytho. (*Vid. Pytho.*)

PYTHO, the ancient name of the town of Delphi, which it was said to have received ἀπὸ τοῦ πύθοντος, because the serpent which Apollo killed rotted there. A better derivation, however, is from πύθωμαι, "to inquire," with reference to the oracle that was consulted here. The difference of quantity (Πύθω, πύθωμαι) does not appear to form a material objection, although Passow thinks otherwise. (*Gr. D. Handb.*, s. v. Πύθω)

PYTHON, a celebrated serpent sprung from the mud and stagnated waters which remained on the surface of the earth after the deluge of Deucalion. This monster abode in the vicinity of Delphi, and destroyed the people and cattle of the surrounding country. Apollo, on coming to Delphi, slew the serpent with his arrows; and as it lay expiring, the exulting victor cried, "Now rot (πύθου) there on the man-feeding earth;" and hence, says the legend, the place and oracle received the appellation of Pytho. (*Vid. Pytho.*) The Pythian games were fabled to have been established in commemoration of this victory. (*Vid. Pythia.*)—Dodwell supposes that the true explanation of the allegorical fiction relating to Apollo and Python is, that the serpent was the river Cephissus, which, after the deluge of Deucalion had overflowed the plains, surrounded Parnassus with its serpentine involutions, and was reduced by the rays of the sun within its due limits. (*Dodwell's Tour*, vol. 1, p. 180.) It is more probable, however, that the fable was one of Oriental origin, and was carried from that quarter of the world to Greece. (*Vid. remarks under the article Apollo.*)

Q.

QUADI, a German nation on the southeastern borders of the country, in what is now Moravia. They were connected with the Marcomanni, and, along with them, waged war against the Romans. The Emperor Marcus Antoninus proceeded against them in person and repressed their incursions, but they soon after renewed hostilities with increased vigour. Their name disappears from history about the fifth century. Their territory was bounded on the south by the Danube, on the east by the river Gran and the Jazyges, on the north by the Carpathes and Sudetes, and on the west by the Marcomanni. (*Tac., Germ.*, 42, *seqq.*—*Id.*, *Ann.*, 2, 63.—*Dio Cass.*, 71, 8, *seqq.*—*Amm. Marcell.*, 17, 12.—*Id.*, 29, 6.—*Wilhelm, Germanien*, &c., p. 223, *seqq.*—*Reichard, Germanien*, p. 146, *seqq.*—*Wersebe, über die Völker des alten Deutschlands*, p. 173, *seqq.*)

QUADRIFRONS or QUADRICEPS, a surname of Janus, because he was sometimes represented with four faces. (*Vid. remarks under the article Janus.*)

QUINDECIMVIRI, an order of priests whom Tarquin the Proud appointed to take care of the Sibylline books. They were originally two, but afterward the number was increased to ten, to whom Sylla added five more, whence their name. (*Vid. Decemviri and Duumviri.*)

QUINQUATRIA, a festival in honour of Minerva at Rome, at first for one day, but afterward for five (*quinque*), whence the name. The beginning of the celebration was the 19th of March. On the days of the celebration, scholars obtained holiday, and it was usual for them to offer prayers to Minerva for learning and wisdom; and on their return to school, to present their master with a gift, which received the name of *Minerval*. (*Ovid, Fast.*, 3, 810.—*Aul. Gell.*, 2, 21.)

QUINTILIANUS, MARCUS FABIVS, an eminent Roman rhetorician, born at Calagurris, a city of Hispania Tarraconensis, A.D. 42.—The orthography of the name varies in different editions. Gibson was the first that gave the form *Quintilianus*, in which he has been followed by several; but as this form is only found in a single inscription and on a single coin, the other mode of expressing the name has become well established. (Compare *Spalding, Pref. ad Quintil.*, p. xxiii., *seqq.*)—Quintilian was still young when his father, after the death of Nero, conveyed him to Rome, and this circumstance appears to be the cause why some editors have believed that he was born in this last-mentioned city. The father of Quintilian was a professor of rhetoric, and the son, devoting himself to the same pursuits, opened a school under Vespasian. He was the first rhetorician that received a regular salary from the imperial treasury, and his emoluments amounted to 100,000 sesterces. Flavia Domitilla, niece of Domitian, and Pliny the younger, were among the number of his pupils. He obtained the distinction of the laticlave, or senatorian dress, and under Domitian he was nominated consul. After having lost his wife and two sons, he united himself by a second marriage to a daughter of the rhetorician Tutilius, by whom he had a daughter who espoused Nonius Celer, governor of Spain. He had professed rhetoric for the space of twenty years, when he retired from active life, and composed, between 92 and 94 A.D., his *Institutes of the Orator*. The year of his death is unknown: it was subsequent, however, to 118 A.D. There exist, under the name of Quintilian, nineteen declamations of some length, and forty-five minor ones. They are incorrectly, however, ascribed to him, and are rather the productions of a much later age, and of several writers. Gerard Vossius (*de Rhet. nat. et. const.*, p. 108) thinks that they were written by Postumus the younger, one of those ephemeral emperors called in Roman history the thirty tyrants. Some manuscripts give M. Florus as their author, a personage entirely unknown.—The work by which Quintilian has immortalized his name is entitled *De Institutione Oratoria*, or, rather, *Institutiones Oratoria*. It is in twelve books, and dedicated to Marcellus Victorinus. This work is not merely a complete treatise on the rhetorical art; it embraces a plan of study for the orator, from the first elements of grammar. Quintilian here states the results of long experience and deep reflection. He gives signal proofs in it of an excellent judgment, of a refined critical spirit, of a pure taste, and of extensive and varied reading. This work is preferable to all that we have from Cicero respecting the theory of eloquence. Quintilian has profited by the precepts of this great master, but he does not stop where the other stops: he adds to his labours the observations which a long course of practical experience had suggested. He has formed his style upon that of Cicero,

and he writes with an elegance which would entitle him to a rank by the side of the purest models of the Augustine age, if certain obscure expressions and some specimens of affected phraseology did not betray the writer of a later age. His tenth book, where he speaks of the Greek and Roman authors of the higher class, is one of the most instructive, and of great importance in relation to the history of ancient literature. Time has preserved for us only two manuscripts of the Institutes of Quintilian. One, which is complete, was found, at the period of the council of Constance, in a tower of the Abbey of St. Gall, by the celebrated Poggio of Florence; he made a copy of this, which is now in England. Nearly at the same time Leonard Aretin discovered a second manuscript in Italy, but very defective. From these two original ones are derived all the other manuscripts of Quintilian. It is not known what has become of the manuscript of St. Gall.—With regard to the dialogue *De Claris Oratoribus*, commonly ascribed to Quintilian, some remarks will be offered under the article Tacitus.—The best editions of Quintilian are, that of Burmann, *Lugd. Bat.*, 1720, 3 vols. 4to; that of Capponier, *Paris*, 1725, fol.; that of Gesner, *Götting.*, 1766, 4to; and particularly that of Spalding, *Lips.*, 1798–1834, 6 vols. 8vo, the fifth volume of which contains supplementary annotations by Zumpt, and the sixth a Lexicon and Indexes by Bonelli. The edition of Quintilian forming part of Lemaire's collection is a reprint, for the most part, of Spalding's. (*Schöll, Hist. Lit. Rom.*, vol. 2, p. 398, seq.—*Bähr, Gesch. Röm. Lit.*, p. 401, seq.—*Fuhrmann, Rom. Lit.*, vol. 2, p. 168, seq.)

QUINTUS CURTIUS RUFINUS, a Latin historical writer, with regard to whose era great uncertainty prevails. No ancient writer makes mention of him; the first who speak of him are John of Salisbury and Pierre de Bleis, who lived in the 12th century. Curtius himself furnishes no information respecting his own condition and origin, if we except one passage in which he speaks of an event which happened in his times (10, 9). He mentions this event, however, in such obscure terms, that the commentators are all at variance respecting the period when he flourished. Some, as, for example, Pithou and Bongars, place him in the Augustan age. Others, as Ausonius Popma and Perizonius, under Tiberius. Others, as Justus Lipsius and Brissot, under Claudius. Others, as Freinsheim, Rutgers, Vossius, and many other editors, under Vespasian. Some, following the example of Pontanus, make him to have flourished under Trajan. Count Bagnolo (*Della gente Curzia e dell' età di Q. Curzio*, &c., Bologna, 1741, 8vo), and one of the latest editors of Curtius, Cunse, whose edition appeared at Helmstadt in 1795, 8vo, have adduced some specious arguments for fixing the period of this writer under Constantine the Great. Finally, Barth brings him down as low as the first Theodosius.—The history of Quintus Curtius is entitled *De rebus gestis Alexandri Magni* ("Of the exploits of Alexander the Great"). It was divided originally into ten books, but the first two, the end of the fifth, and the beginning of the sixth are lost. Freinsheim has written a supplement to the work, so as to complete what is thus defective, and has succeeded in bringing together a learned collection of facts from the different historians who have made mention of the operations of Alexander.—The work of Quintus Curtius is rather to be termed a romance than an historical composition. It is the production of a rhetorician who sacrifices truth to the desire of brilliancy of expression, and to a love of the marvellous. The harangues which he puts into the mouths of his heroes are mere scholastic declamations, without any regard to the characters of those who are to utter them. As a critical historian Quintus is very far below mediocrity. He is only su-

pericially acquainted with the good historians of Alexander, and appears to have given the preference to those Greek writers who had distorted by fable the true history of the Macedonian monarch, such as Clitarchus and Hegesippus. His compilation is made without any judgment; he gives himself no trouble to reconcile the contradictions which exist among the authors whom he follows, nor does he at all concern himself about testing the truth of their narratives. It would seem, moreover, that his knowledge of Greek is very slight. So ignorant is he in the military art, that it is difficult to understand his accounts of battles and sieges; and oftentimes it is but too apparent that he does not understand himself what he copies mechanically from others. In geography and astronomy his ignorance is equally great. He confounds Mount Taurus with Caucasus, and makes the Caspian and Hyrcanian seas two different sheets of water. He observes no chronological order, and does not mention either the years or the seasons in which the events of which he treats took place. If, however, Quintus Curtius be refused the name of an historian, we cannot deny his claim to being considered an amusing and interesting writer. His diction is pure and elegant. Some of his harangues are master-pieces of their kind. He is rich in beautiful descriptions. His style is too ornamented, and sometimes declamatory; oftener, however, he happily imitates his model, Livy. In the beginning of the sixteenth century, an impostor, named Hugo Rugerius or Ruggieri, a native of Rhegio, published a pretended collection of the letters of Quintus Curtius, divided into five books, and supposed to contain not only letters written by the historian himself, but others also from various distinguished individuals. The fabrication, however, was so clumsily executed, that no one was imposed upon. The best editions of Quintus Curtius are, that of Snakenburg, *Lugd. Bat.*, 1724, 4to; that of Schmieder, *Götting.*, 1804, 2 vols. 8vo; and that of Lemaire, *Paris*, 1822–24, 3 vols. 8vo. (*Schöll, Hist. Lit. Rom.*, vol. 2, p. 383, seq.—*Bähr, Gesch. Röm. Lit.*, vol. 1, p. 441, seq.)—IL (or Cointus) Calaber, a Greek poet, a native of Smyrna, but surnamed *Calaber* from the circumstance of the Cardinal Bessarion's having found a manuscript of his work in a convent of Calabria, in Lower Italy; and thus a distinguished scholar, a native of Greece, only became acquainted with one of the poets of his nation, because chance had conducted him to the convent of St. Nicholas, in the city of Otranto. Quintus (or Cointus) lived probably about the beginning of the sixth century. He is the author of a poem in fourteen cantos, entitled Παράλειπόμενα Ὀμήρου ("Things omitted by Homer"). It is a continuation of the Iliad down to the destruction of Troy, or, rather, an historical composition in verse, interspersed with mythological fictions, and adorned with abundant imagery. Vicious in its arrangement, because no unity either of action or of interest prevails in it, this production is, at the same time, not without merit as regards its ornaments and diction. The imitation of Homer is everywhere apparent; but it shows itself only in details, and the author did not possess the art of varying his descriptions of combats, in which his model shows himself so superior. He offends, also, in too frequent an introduction of deities into the combats of the two contending parties, and their intervention is frequently as uncalled for as their departure is unexpected. Notwithstanding these defects, however, the poem of Quintus appears so far superior to the other productions of the age in which he is supposed to have lived, that many critics have regarded these *Paralipomena* as a kind of enlargement or amplification of the Little Iliad of Lesches, which is lost. Others have viewed it as a cento of various passages borrowed from the cyclic poems.—Another poem, ascribed to Quintus, is found in MS. in the library of St. Marc, and in that of

the king of Bavaria at Munich. It is on the twelve labours of Hercules.—The best editions of Quintus Calaber are, that of Rhodomannus, *Hano.*, 1604, 8vo; that of De Pauw, *Lugd. Bat.*, 1784, 8vo; and that of Tychoen, *Argent.*, 1807, 8vo. The last, however, has never been completed. (*Schöll, Hist. Lit. Gr.*, vol. 6, p. 91, *seqq.*)

QUIRINĀLIS, a hill at Rome, added to the city by Servius Tullius. (*Liv.*, l. 44.) Numa, indeed, had a house upon this mountain, but it was not considered a part of the city until enclosed within the Tullian wall. The temple of Romulus Quirinus, from which it derived its name, was built by Numa, but afterward reconstructed with greater magnificence by Papirius Cursor, the dictator. (*Liv.*, 10, 46.) Some vestiges of this edifice are said to exist in the gardens of the Jesuits, close to the church of *S. Andrea, a Monte Cavallo*. The expression *Monte Cavallo* is a corruption from *Mons Caballus*, a name applied to the Quirinal at a later day from two marble horses placed there. The Quirinal is the only one of the Seven Hills at the present day that is populous. It is covered with noble palaces, churches, streets, and fountains. (*Rome in the Nineteenth Century*, vol. 1, p. 206, *Am. ed.*)

QUIRINA, I. a surname of Mars among the Romans. This name was also given to Romulus after his translation to the skies. (*Ovid, Fast.*, 2, 475.)—II. A surname of the god Janus. (*Vid. remarks under the article Janus.*)

QUIRUS, (*Vid. remarks under the article Roma*, page 1172, col. 2.)

R.

RABIRIUS, I. C. a Roman knight contemporary with Julius Caesar. The latter had, on one or two occasions, expressed with some ostentation his attachment to the party of Marius, and he now attempted to vindicate the memory of L. Saturninus, who, having been for a long time the associate of Marius, was afterward opposed by him as the reluctant instrument of the senate, and, having been taken by him in actual rebellion, had been murdered by the armed citizens, who broke into his place of confinement. Caesar, it is said (*Sueton., Vit. Jul.*, 13), instigated Labienus, at this time one of the tribunes, and afterward distinguished as one of Caesar's lieutenants in Gaul, to accuse Rabirius, then advanced in years, as the perpetrator of this murder. The cause was first tried before L. Caesar and C. Caesar (*Dio Cass.*, 37, 42), who were appointed by lot to act as special commissioners in this case, by virtue of the prætor's order; and the accused was arraigned according to the old law of murder, by which, if he had been found guilty, he would have been condemned to be hanged. But this mode of proceeding was stopped by Rabirius appealing to the people, or by the interference of Cicero as consul, as his speech seems to imply (*pro Rab.*, c. 4, *seq.*), and his procuring the removal of the cause before another tribunal. The people, however, it is said, were likely to condemn the accused, when Q. Metellus Celer, one of the prætors, obliged the meeting to break up, by tearing down the ensign which was always flying on the Janiculum while the people were assembled, and without which, according to ancient custom, they could not lawfully continue their deliberations. In this manner Rabirius escaped; for Labienus or his instigators did not think proper to bring forward the business again; whether despairing of again finding the people equally disposed to condemn the accused, or whether the progress of the conspiracy of Catiline began now to turn men's attention more entirely to a different subject. (*Dio Cass.*, 37, 42.—*Cic., Or. pro Rab.*)—II. C. Postumus, a Roman knight, son of C. Curius, and adopted son of the preceding. He became implicated in the affair of Gabinus and Ptolemy Auletes. Gabinus had been

accused and condemned for receiving a very large sum of money (10,000 talents) for restoring the Egyptian king. His estate, however, did not yield, when sold, sufficient to reimburse this sum, and Rabirius therefore, who was concerned in the affair, was sued for the balance (*causa de residuis*). Rabirius, it seems, had advised Gabinus to undertake the restoration of the king, and accompanied him into Egypt. Here he was employed to solicit the payment of the money, and lived at Alexandria for that purpose, in the king's service, as the public receiver of his taxes. Cicero's defence of Gabinus and Rabirius, especially the former, excited great surprise, as Gabinus had ever been his most vehement enemy. It was occasioned, however, by Pompey's influence. Rabirius was acquitted. (*Cic., pro Rab. Post.*, c. 8, 12.—*Val. Max.*, 4, 2.—III. A Roman epic poet, who flourished during the Augustan age. Velleius Paterculus names him immediately after Homer (2, 26), but Quintilian speaks of him in a much more moderate tone. (*Inst. Or.*, 10, 1.) The grammarians have preserved for us some verses of one of his poems. Its subject was the battle of Actium. (*Schöll, Hist. Lit. Rom.*, vol. 1, p. 221.)

RAMNES or RAMNENSES, one of the three centuries instituted by Romulus. (*Vid. Roma.*)

RAMPAINTRUS, an Egyptian monarch, of whom Herodotus relates the following legend. "After this, they said, Rampainitus descended alive into those places which the Grecians call Hades; where, playing at dice with Ceres, he sometimes won, and at other times lost; that, at his return, he brought with him as a present a napkin of gold" (2, 122). Szathmari applies it to the years of plenty and scarceness which happened under Pharaoh. Creuzer, however, refers it to the great principles, pervading all nature, of decay and restoration. (*Symbolik*, vol. 4, p. 231.)

RAUDII CAMPI, plains about ten miles to the northwest of Mediolanum, in Cisalpine Gaul, which were rendered memorable by the bloody defeat of the Cimbræ by Marius. (*Flor.*, 3, 3.—*Vell. Paters.*, 2, 12.—*Oros.*, 5, 16.) The spot, however, on which the battle took place, seems very uncertain, as no author except Plutarch mentions the situations of these plains. He describes them as lying in the vicinity of Verocelle (*Vit. Mar.*); but even this designation is very general. The Cimbræ are represented as having entered Italy by the Tridentine Alps or the Tyrol; and we farther learn, that, after beating back the consul Catulus on the Athesis or *Adige*, they forced the passage of that river, by which time Marius having come up with considerable re-enforcements, a battle took place in the plains of which we are speaking. (*Walckenaer, sur la situation des Raudii Campi.*—*Mem. de l'Acad. des Inscri.*, &c., vol. 6, p. 360.) The small place called *Rho* is thought by D'Anville to preserve some traces of the ancient appellation. (*Cramer's Anc. Italy*, vol. 1, p. 52.)

RAVENNA, an important city of Cisalpine Gaul, situate on the coast, a short distance below the Spinetic mouth of the Padus or *Po*. It laid claim to an origin of remote antiquity; for Strabo (214) reports it to have been founded by some Thessalians; but they subsequently abandoned it to the Umbri, being unable to resist the aggressions of the Tyrrheni, or Tuscan. When Pliny says it was a colony of the Sabines, he perhaps alludes to an old tradition, which considered that people as descended from the Umbri. (*Plin.*, 3, 18.) Strabo informs us, that Ravenna was situated in the midst of marshes, and built entirely on wooden piles. A communication was established between the different parts of the town by means of bridges and boats. (Compare *Sil. Ital.*, 8, 602.—*Marzial*, 13, 18, &c.) But, as Strabo observes, the noxious air arising from the stagnant waters was so purified by the tide, that Ravenna was considered by the Romans a very healthy place; in proof of which, they sent glad-

lators there to be trained and exercised. The vine grew in the marshes with the greatest luxuriance, but perished in the course of four or five years. (*Strabo*, 218.—*Plin.*, 14, 2.) Water was scarce at this place, and hence Martial observes that he would rather have a cistern of water at Ravenna than a vineyard, since he could sell the water for a much higher price than the wine. (*Ep.*, 3, 56.) The same writer sportively alludes to his having been imposed upon by a tavern-keeper at Ravenna: on his calling for a glass of water, he received one of wine!—We are not informed at what period Ravenna received a Roman colony (*Strab.*, 217); but it is not improbable, from a passage in Cicero (*Orat. pro Balb.*, 22), that this event took place under the consulship of Cn. Pompeius Strabo. Ravenna became the great naval station of the Romans on the Adriatic, in the latter times of the republic, a measure which seems to have originated with Pompey the Great. It was from Ravenna that Cæsar held a parley with the senate, when on the point of invading Italy. (*Bell. Civ.*, 1, 5.) It was from this city, also, that he set forward on that march which brought him to the Rubicon, and involved his country and the world in civil war. (*Appian, Bell. Civ.*, 2, 11.)—It is well observed by Gibbon (*Misc. Works*, vol. 2, p. 179), that "Cæsar had, for good reasons, fixed his quarters at Ravenna. He wished to obtain possession of Picenum, a rich and populous country, and thus deprive Pompey of the resources he might have found in a province extremely devoted to his family, and from which that general might have made legions spring up by merely striking the ground with his foot. He wished to turn the capital with his army. Had he attempted to march straight to Rome, Pompey would have made himself master of the difficult passes, and stopped his progress, and Italy would have become the theatre of war. But, by marching towards Ariminum, Ancona, and Corfinium, he made it seem to be his design to cut off the retreat of his enemies, and his boldness threw them into such consternation, that they hastened to embark at Brundisium. Lastly, he wished to make sure of Ariminum. This important place was distant from the Rubicon eighteen miles by the Æmilian road, and only eleven by that of Ravenna. Cæsar could send forward bodies of troops under twenty different pretences; but the moment he passed it, his designs were unmasked. Ariminum was therefore to be surprised by a forced march."—The old port of Ravenna was situated at the mouth of the river Bedesis (*il Ronco*). But Augustus caused a new one to be constructed at the entrance of the little river Candianus into the sea, and about three miles from Ravenna. He established a communication between this harbour and a branch of the *Po*, by means of a canal which was called Fossa Augusti; and he also made a causeway to connect the port and city, which obtained the name of Via Cesaris. As the new harbour, from thenceforth, became the usual station for the fleet, it received the distinguishing appellation of Portus Classis, a name which still subsists in that of a well-known monastery near the modern town of Ravenna. Ravenna continued to flourish as a naval station long after the reign of Augustus. (*Suet.*, *Aug.*, 49.—*Tacit.*, *Ann.*, 4, 5.—*Id.*, *Hist.*, 2, 100.—*Ptol.*, p. 63.—*Zosim.*, 5, 28.)—Honorius made this city the place of his residence both before and after Alaric had captured and burned Rome. When Odoacer made the conquest of Italy, he resided at Ravenna, and sustained here a siege of three years, at the termination of which he was taken and slain by Theodoric. This latter monarch fixed the seat of his empire here, and greatly adorned and embellished the place. Here also resided the exarch or governor appointed by the Emperor of the East when Italy was in possession of the Lombards. In the time of the Romans it was seated on a kind of bay. The mud

thrown up by the tide has formed a tract of land, which is cultivated, and on which the city itself has been enlarged towards the sea. The air is insalubrious, but has been somewhat amended by conveying along the sides of the city the rivers *Mentone* and *Ronco*, which carry off the fetid water from the marshy grounds. (*Cramer's Anc. Italy*, vol. 1, p. 94, seq.)

RAUJACI, a people of Belgic Gaul, on the Upper Rhine, northeast of the Sequani. Their capital was Augusta Rauracorum, now *Augst*. (*Cæs.*, *B. G.*, 4, 17.)

REATE, an old Sabine town on the river Velinus, a branch of the Nar. Its modern name is *Rieti*. In the antiquity of its origin this place was equalled by few of the cities of Italy, since, at the most remote period to which the records of that country extend, it is reported to have been the first seat of the Umbri, who are regarded by some as the Aborigines of Italy. (*Zenod.*, *Troez.*, ap. *Dion. Hal.*, 2, 49.—*Id.*, 1, 14.) It was here, likewise, that the Arcadian Pelasgi probably fixed their abode, and, by intermixing with the earlier natives, gave rise to those numerous tribes, known to the Greeks by the name of Opici, and subsequently to the Romans under the various appellations of Latins, Oscans, and Campanians; these subsequently drove the Siculi from the plains, and occupied in their stead the shores of the Tyrrhenian sea. If we may credit Silius Italicus, Reate derived its name from Rhea, the Latin Cybele (8, 417). From Cicero (*in Cat.*, 3) we learn that it was only a *prefectura* in his time; from Suetonius, on the other hand, we collect that it was a municipal town. (*Vesp.*, 1.) Reate was particularly celebrated for its excellent breed of mules (*Strab.*, 238), and still more so for that of its asses, which sometimes brought the enormous price of 60,000 sesterii, about £484 sterling. (*Varro, R. R.*, 2, 1.—*Plin.*, 8, 43.)—The valley of the Velinus, in which this city was situated, was so delightful as to merit the appellation of Tempe (*Cic.*, *Ep. ad Att.*, 4, 15); and from their dewy freshness, its meadows obtained the name of *Rosei Campi*. (*Varro, R. R.*, 1, 7.—*Plin.*, 17, 4.) According to Holstenius (*ad Steph. Byz.*, p. 110), they still bear the name of *le Rose*. (*Cramer's Anc. Italy*, vol. 1, p. 414, seqq.)

REDONENSIS, a Gallic nation in the interior of Lugdunensis Tertia, north of the Namnetes, and the mouth of the Liger or *Loire*. Their capital was Condate, afterward Redones, now *Rennes*. (*Cæs.*, *B. G.*, 7, 76.—*Plin.*, 4, 18.)

REGILLÆ or REGILLON, a Sabine town near Eretum, which latter place was north of Nomentum and northwest of Tibur. Regillum is only known as the birthplace of Atta Clausus, who, under the name of Appius Claudius, became the founder of the Claudian family at Rome. (*Liv.*, 2, 16.—*Dion. Hal.*, 5, 40.)

REGILLUS, a small lake of Latium, northwest of Præneste, and southeast of Gabii. It was the scene of a great battle between the Romans and Latins, after the expulsion of Tarquin, in which the latter were totally defeated. (*Dion. Hal.*, 6, 18.)—The lake Regillus is thought to be *il Laghetto della Colonna*, near the small town of that name. (*Cic.*, *N. D.*, 2.—*Plin.*, 33, 6.—*Val. Max.*, 1, 8.—*Florus*, 4, 2.)

REGIUM LEPIDUM or FORUM LEPIDI, a city of Cisalpine Gaul, between Parma and Mutina. In Cicero we find it sometimes under the name of Regium Lepidi (*Ep. ad Fam.*, 12, 5), or simply Regium (11, 9). This place probably owed its origin to M. Æmilius Lepidus, who constructed the Æmilian road, on which it stood; but when or from what cause it took the name of Regium is unknown. It is farther noticed in history as having witnessed the death of the elder Brutus by order of Pompey, to whom he had surrendered himself. (*Liv.*, *Epit.*, 90.—*Val. Max.*, 6, 8.—*Oros.*, 5, 23.)

REGULUS, M. ATTILIUS, a consul during the first

Punic war. He reduced Brundisium, and, in his second consulship, took 64, and sunk 80, galleys of the Carthaginian fleet off Ecnomus, on the coast of Sicily. After this victory, Regulus and his colleague Manlius sailed to Africa, and seized on Clupea, a place situate to the east of Carthage, not far from the Hermean promontory, which they made their place of arms. Manlius was recalled, but Regulus was left to prosecute the war; and so rapid was his success, that he made himself master of about 200 places on the coast, in the number of which was Tunetum or Tunis. The Carthaginians sued for peace, but Regulus would grant them none, except on conditions that could not be endured. His rapid success had rendered him haughty and intractable, and now it made him rash and imprudent. A Lacedæmonian leader, named Xanthippus, arrived at Carthage with a re-enforcement of Greek troops, and soon changed the aspect of affairs. Observing to the Carthaginians that their overthrows were entirely owing to their having fought on ground, where their cavalry, in which alone they were superior to the Romans, had not room to act, he promised to repair this mistake, and accordingly posted his forces in a plain, where the elephants and Carthaginian horse might be of service. Regulus followed him, imagining himself invincible; but he was defeated and taken prisoner, along with 500 of his countrymen. After being kept some years in prison, he was sent to Rome to propose an exchange of prisoners, having been first compelled to bind himself by an oath that he would return in case he proved unsuccessful. When he came to Rome, he strongly dissuaded his countrymen against an exchange of prisoners, arguing that such an example would be of fatal consequence to the republic: that citizens who had so basely surrendered their arms to the enemy were unworthy of the least compassion and incapable of serving their country: that, with regard to himself, he was so far advanced in years, that his death ought to be considered as a matter of no importance; whereas they had in their hands several Carthaginian generals, in the flower of their age, and capable of doing their country great services for many years. It was with difficulty the senate complied with so generous and unexampled a counsel. The illustrious exile therefore left Rome, in order to return to Carthage, unmoved by the sorrow of his friends, or the tears of his wife and children; and was treated on his return, according to the ordinary account, with the utmost degree of cruelty, the Carthaginians having heard that their offer had been rejected entirely through the opposition of Regulus. They imprisoned him for a long while in a gloomy dungeon, whence, after cutting off his eyelids, they brought him suddenly into the sun, when its beams darted their strongest heat. They next put him into a kind of chest full of nails, the points of which did not allow him a moment's ease day or night. Lastly, after having been long tormented by being kept continually awake in this dreadful torture, his merciless enemies nailed him to a cross, their usual punishment, and left him to die on it. In retaliation for this cruelty, the senate at Rome are said to have delivered two captives into the hands of the widow of Regulus, to do with them what she pleased; but that her cruelty towards them was so great, that the senate themselves were compelled at length to interfere.—Such is a general outline of the story of Regulus. The question respecting its truth or falsehood has given rise to considerable discussion. Palmerius first started an objection to the common narrative (*Exercit. in Auct. Græc.*, p. 151, *seqq.*), and, as well from the silence of Polybius on this point as from a fragment of Diodorus Siculus (lib. 24, p. 273, *seqq.*, ed. Vales; vol. 2, p. 566, ed. Wesseling; vol. 9, p. 524, ed. Bip.), ingeniously conjectured that Regulus was never sent from Carthage to Rome; that he was not the victim of tortures, but died of a disease during

his captivity; and that the whole story respecting his punishment was invented by the Roman writers, or else by the wife of Regulus, in order to palliate the cruelty of which the latter had been guilty towards the Carthaginian captives delivered into her hands. This same opinion has been embraced by many subsequent writers. (Compare Gesner, in *Chrestom.*, Cic., p. 547.—Wesseling, ad *Diod.*, l. c.—Jani, ad *Horat.*, *Od.*, 3, 5, 49.—Lefeb., ad *Sil. Ital.*, 6, 539.—Totand, *Collection of several pieces*, Lond., 1726, vol. 2, p. 28.—*Foreign Review*, vol. 1, p. 305.—Bötticher, *Geschichte der Carthager*, p. 205, &c.—Beaufort, *sur l'incertitude de l'Histoire Romaine*, 1738, 8vo, *sub fin.*—Rooss, *De Supplicis quibus Regulus Carthagine traditus interfectus*.—*Magazin für öffentl. Schulen*, Bremen, 1791, vol. 2, pt. 1, p. 50, *seqq.*) The arguments in favour of this opinion are strong, and we might almost say decisive. In the first place, the Roman writers are all at variance among themselves respecting the nature of the punishment supposed to have been inflicted on Regulus. Cicero (*De Fin.*, 2, 20.—*Ibid.*, 5, 27.—*Pis.*, c. 19.—*De Off.*, 3, 27), Seneca (*De Prov.*, c. 3), Valerius Maximus (9, 2, *ext.* 1), Tuditano and Tubero (*ap. Aul. Gell.*, 6, 4), Silius Italicus (6, 539, *seqq.*), Aurelius Victor (c. 40), and Zonaras (*Ann.*, vol. 2), make Regulus to have had his eyelids cut off, and to have died of want of sleep and of hunger. Seneca (*loc. cit.*, *Epist.*, at 98), Silius Italicus (2, 343, *seqq.*), and Florus (2, 2), speak also of the cross as an instrument of his sufferings. And, finally, Seneca (*De Prov.*, c. 3.—*De tranq. an.*, c. 15.—*Epist.*, 67), Cicero (*Pis.*, 19), Valerius Maximus (9, 2, *ext.* 1), Aurelius Victor and Zonaras (*l.*, *cc.*), Silius Italicus (6, 539, *seqq.*), Orosius (4, 8), Augustin (*De Civ. Dei*, 1, 15), Appian (*De Reb. Puv.*, c. 4.—*Exc.*, 2, *ex.* lib. 5.—*De Reb. Sic.*, vol. 1, p. 93, ed. Schæneigh.), tell of a narrow box or barrel, full of nails, in which he was confined; and, being compelled to stand continually, perished at last with exhaustion. This discrepancy, therefore, gives the whole story much the appearance of a popular fable, owing its origin to, and heightened in many of its features by, national feeling.—Another argument against the authenticity of the narrative in question is derived from the total silence of Polybius, who treats fully, in his history, of the events of the first Punic war, respecting not merely the punishment of Regulus, but even his coming to Rome and his return to Carthage.—A third and still stronger argument is deduced from the language of Diodorus Siculus, who makes the widow of Regulus to have been urged to punish the captives in her hands from the persuasion that her husband had died the victim of *carelessness and neglect* on the part of the Carthaginians (*νομίσασα δὲ ἀμέλειαν αὐτὸν ἐκλελειπέναι τὸ σῶν, frag.*, lib. 24; vol. 9, p. 344, ed. Bip.). The natural inference from such language is, that the husband had not been treated with sufficient care while labouring under some malady, and that this neglect caused his death; it is impossible to derive from the words of the text any meaning favourable to the idea of positive and actual punishment.—The captives in the hands of the widow of Regulus were two in number, Bostar and Hamilcar, and they had been delivered up to her, it is said, to pacify her complaints, and as hostages for the safety of Regulus. For five days they were kept without food: Bostar died of hunger and grief, and Hamilcar was then shut up with the dead body for five days longer, a scanty allowance of food being at the same time given him. The stench from the corpse and other circumstances caused the affair to become known, and the sons of Regulus narrowly escaped being condemned to death by the people. Hamilcar was taken away from his cruel keeper, and carefully attended until his restoration to health. (*Diod. Sic., frag.*, lib. 24, vol. 9, p. 346, ed. Bip.) Would the Roman senate and

people have acted thus, had the story of Regulus and his cruel sufferings been true! If any, notwithstanding what has been here adduced, are inclined to favour the other side of the question, they will find some plausible arguments in its support in Rupert's edition of *Silius Italicus* (*Ad Arg.*, lib. 6).

REMI, a people of Gallia Belgica, southwest of the Treveri, and southeast of the Veromandri. Their capital was Durocortorum, now *Rheims*. (*Cæs.*, *B. G.*, 2, 3, 5.—*Tac.*, *Hist.*, 4, 67.—*Plin.*, 4, 17.)

REMUS, the brother of Romulus, exposed together with him by the cruelty of his grandfather. (*Vid.* *Romulus*.)

RESANA, a city on the river Chaboras, in northern Mesopotamia. (*Steph. Byz.*, s. v. *Ῥέσινα*.) Its site was afterward occupied by Theodosiopolis (*Chron.*, *Edessen.*, p. 339), which must not be confounded with another city of the same name in northern Armenia. The modern name of Resana is *Ras-el-aim*. (*Niebuhr*, vol. 2, p. 394.)

RHA (*Pá*), a large river, now the *Volga*. No writer, prior to Ptolemy, mentions either its name or course. The appellation occurs, it is true, in our editions of Mela (3, 5), but it is a mere interpolation. The true reading in Mela is, "*E Cerauniis montibus uno alveo descendit, duobus exit in Caspium* [Rha] *Arazes Tauri latere demissus*." The word Rha, which we have enclosed in brackets, does not belong to the text.—Ptolemy's acquaintance with this river was so accurate, that he knew not only its mouth, but its western bending towards the Tanais, its double sources (the *Volga* and the *Kama*), the point of their union, and the course of some streams flowing from the mountains on the east into the *Volga*. All this knowledge of the Rha was obtained from the caravan traders, except, perhaps, a small portion made known to the world by the Roman conquests in this quarter. Subsequent writers never lost sight of this river. Agathemerus (2, 30) reckons it among the larger sized rivers, and calls it, probably by a corrupt name, *Rhos* (*Ῥός*). Ammianus Marcellinus (32, 8) speaks of a plant growing on its banks of great use in medicine. Every one will see that he alludes to the rhubarb (*Rha barbarum*) of pharmacy. The plant, it is true, did not, in fact, grow here, but was brought to this quarter by the caravan trade. As the Romans, however, received their supplies of it from this part of the world, they associated with it the name of the river, and thus the appellation arose. The name Rha appears to be an appellative term, having affinity with *Rheas* or *Rekas*, which, in the Sarmatian or Slavonian language, signifies a river; and from the Russian denomination of *Velika Reka*, or *Great River*, appears to be formed the name of *Volga*. In the Byzantine and other writers of the middle ages, this stream is called *Atel* or *Etel*, a term, in many northern languages, signifying great or illustrious. (Compare the German *add.*) The approximation of the Tanais to this river, before it changes its course to the Palus Mæotis, is the occasion of the erroneous opinion of some authors, that it is only an emanation of the Rha taking a different route. (*Mannert*, *Geogr.*, vol. 4, p. 341.)

RHACOTIS, the name of a maritime place in Egypt, on the site of which Alexandria was subsequently erected. (*Strabo*, 792.—*Mannert*, *Geogr.*, vol. 10, pt. 1, p. 619.)

RHADAMANTHUS, a son of Jupiter and Europa, and brother to Minos and Sarpedon. These three brethren fell into discord, says the legend, on account of a youth named Miletus, the son of Apollo, or of Jupiter. The youth testifying most esteem for Sarpedon, Minos drove them out of Crete, their native island. Miletus, going to Caria, built a town there, which he named from himself. Sarpedon went to Lycia, where he aided Cilix against the people of that country, and obtained the sovereignty of a part of it. Rhadamanthus

passed into the Cyclades, where he ruled with justice and equity. Having committed an accidental homicide, he retired subsequently to Boeotia, where he married Alcmena, the mother of Hercules. According to Homer (*Od.*, 4, 184), Rhadamanthus was placed on the Elysian plain, among the heroes to whom Jupiter allotted that blissful abode. Pindar (*Ol.*, 2, 127) seems to make him a sovereign or judge in the island of the blessed. Latin poets place him with Minos and Æacus in the lower world, where their office is to judge the dead. (*Keightley's Mythology*, p. 455, *seq.*)

RHÆTII, the inhabitants of Rhætia. (*Vid.* *Rhætia*.)

RHÆTIA, a country of Europe, which occupied a part of the Alps, and was situate to the north of Italy and east of Helvetia. It is not easy to ascertain its limits to the north, but we may say that it was bounded in that quarter by Vindelicia, and, in general, that it corresponded to the country of the *Grisons*, and to the cantons of *Uri*, *Glaris*, &c., as far as the *Lake of Constance*: it extended also over the *Tyrol*. This country was called western Illyricum, and was subjected to the Romans by Drusus, in the reign of Augustus. Soon afterward Vindelicia was reduced by Tiberius, so that the Roman possessions extended to the Danube. This double conquest formed a province called Rhætia, comprehending Vindelicia, without obliterating altogether the distinction. But in the multiplication that Dioclesian, and some other emperors after him, made of the provinces, Rhætia was divided into two, under the names of *Prima* and *Secunda*; a circumstance which caused Rhætia Proper and Vindelicia to reassume their primitive distinctions. (*Virg.*, *G.*, 2, 96.—*Plin.*, 3, 20; 14, 2, &c.—*Hor.*, *Od.*, 4, 4, 14.)

RHAMNUS, a town of Attica, situate on the coast, sixty stadia northeast of Marathon. (*Pausan.*, 1, 32.—*Strabo*, 399.) It was so named from the plant rhamnus (*thornbush*), which grew there in abundance. This demus belonged to the tribe *Æantia*, and was much celebrated in antiquity for the worship of Nemesis, hence styled *Rhamnusia virgo*. (For an account of her temple and statue, *vid.* *Nemesis*.) Scylax speaks of Rhamnus as being fortified. (*Periplus*, p. 21.) It was the birthplace of the orator Antiphon. A modern traveller, who has accurately explored the site of this ancient town, informs us that it now bears the name of *Vrao Castro*. The ruins of the temple of Nemesis lie at the head of a narrow glen which leads to the principal gate of the town. The building must have been inferior in size to those Doric temples which still remain in Attica. Its fall seems to have been occasioned by some violent shock of an earthquake, the columns being more disjointed and broken than in any other ruin of the kind. (*Raikes's Journal*, in *Walpole's Memoirs*, vol. 1, p. 307.—*Cramer's Anc. Greece*, vol. 2, p. 389, *seqq.*)

RHAMPSINITUS. *Vid.* *Rampsinitus*.

RHAMES or **RAMSES**, a powerful king of Egypt, the same with **RAMSES VI.**, the famed *Sesostris*. (*Vid.* *Sesostris*.)

RHARIUS CAMPUS, a part of the Thriasian plain, in Attica, near Eleusis. It was in this plain that Ceres was said to have first sown corn. (*Pausan.*, 1, 38.) Dodwell observes, that the soil, though arid, still produces abundant harvests (vol. 1, p. 588).

RHEA, I. a daughter of Coelus and Terra, who married Saturn, by whom she had Vesta, Ceres, Juno, Pluto, Neptune, &c. Her husband, however, devaloured them all as soon as born, as he had succeeded to the throne with the solemn promise that he would raise no male children, or, according to others, because he had been informed by an oracle that one of his sons would dethrone him. To stop the cruelty of her husband, Rhea consulted her parents, and was advised to impose upon him. Accordingly, when she brought forth, the child was immediately concealed,

and Saturn devoured a stone which his wife had given him as her own child. The fears of Saturn were soon proved to be well founded. A year after, the child, whose name was Jupiter, became so strong and powerful, that he drove his father from his throne. (*Vid. Saturnus.*)—II. or Rhea Silvia, the mother of Romulus and Remus. (*Vid. Ilia.*)

Ῥήγιον, one of the most celebrated and flourishing cities of Magna Græcia, at the extremity of Italy, in the territory of the Brutii, and in a southeastern direction from Messina on the opposite coast of Sicily. This city is known to have been founded nearly 700 years B.C., by a party of Zancleans from Sicily, together with some Chalcidians from Eubœa, and Messenians from the Peloponnesus. (*Antioch. Syrac., Strab., 267.—Herac., Pont. fragm., 25.—Pausan., 4, 23.*) It may, however, lay claim to a still more remote origin, if it be true, as Cato affirmed, that it was once in the possession of the Aurunci. (*Ap. Val. Prob. ed. et. Pragm. Hist.*) According to Æschylus, as quoted by Strabo, the name of Rhegium was supposed to refer to the great catastrophe which had once separated Italy from Sicily (*ἀπ' οὗ οἱ Ῥήγιον κικλήσκοντες*.—Compare *Virg., Æn., 3, 414*). That geographer suggests as his own opinion, that this term was derived from the Latin word *Regium*; and thus considers it as only expressive of the importance and dignity of the town to which it was attached. (*Strab., 267.*) It appears, however, from the more ancient coins of Rhegium, that the original name of the place was **RECION**. In these the epigraph is **REC. RECI. RECI-NOS**, in characters partaking more of the Oscan than of the Greek form. Those of a more recent date are decidedly Greek, **ΡΗΓΙΝΩΝ**, being inscribed on them. (*Sestini, Mon. Vet., p. 18.*)—We may collect from different passages, that the constitution of Rhegium was at first an oligarchy under the superior direction of a chief, who was always chosen from a Messenian family. (*Heyne, Opusc. Acad., vol. 2, p. 270.—Sainte-Croix, sur la Législ. de la Grande Grèce, Mem. des Acad. des Inscri., vol. 42, p. 312.*) Charondas, the celebrated lawgiver of Catana in Sicily, is said also to have given laws to the Rhegians. (*Herac. Pont., l. c.—Ælian, V. H., 3, 17.—Aristot., Polit., 2, 10.*) This form of government lasted nearly 200 years, until Anaxilaus, the second of that name, usurped the sole authority, and became tyrant of Rhegium about 496 B.C. (*Strabo, l. c.—Aristot., Polit., 5, 12.*) Under this prince, who, though aspiring and ambitious, appears to have been possessed of considerable talents and many good qualities (*Justin, 4, 2*), the prosperity of Rhegium, far from declining, reached its highest elevation. Anaxilaus having succeeded in making himself master of Messina, in conjunction with a party of Samians, who had quitted their country, which was then threatened with the Persian yoke (*Herod., 6, 23.—Thucyd., 6, 5*), confided the sovereignty of that important town to his son Cleophron. (*Schol. ad Pind., Pyth., 2, 34.*) His views were next directed against the Locrians; and it is probable that here also he would have been successful, having already obtained a decided advantage over them in the field, and having proceeded, farther, to lay siege to their town (*Justin, 21, 3*), when he was compelled to withdraw his forces by the influence of Hiero, king of Syracuse, whose enmity he was unwilling to incur. (*Schol. ad Pind., l. c.*) Anaxilaus reigned eighteen years, and, on his death, intrusted the sovereignty to Mictus, his minister and chief counsellor, until his sons should arrive at a proper age to undertake the management of affairs. He held the power until the young princes had attained this age, and then resigning it to them, retired to Tegea. About six years after his resignation, the Rhegians succeeded in recovering their liberty, and freeing themselves from the tyrannical government of the sons of Anaxilaus. The city,

however, remained long a prey to adverse factions, and it was not till it had undergone various changes and revolutions in its internal administration that it obtained at last a moderate and stable form of government. (*Thucyd., 4, 1.—Justin, 4, 3.*) The connexion which subsisted between Rhegium and the Chalcidian colonies in Sicily, induced Rhegium to take part with the Athenians in their first hostilities against the Syracusans and Locrians; the latter, indeed, proved their constant enemies, and sought to injure them by every means in their power. (*Thucyd., 4, 24.*) In the great Sicilian expedition the Rhegians observed a strict neutrality; for, though the Athenian fleet was long moored in their roads, and its commanders employed all their arts of persuasion to prevail upon them to join their cause, they remained firm in their determination. (*Thucyd., 6, 44.*) The same policy seems to have directed their counsels at the time that Dionysius the elder was meditating the subjection of Sicily and Magna Græcia. They constantly opposed the designs of that tyrant; and, had the other states of Magna Græcia displayed the same energy, the ambitious views of this artful prince would have been completely frustrated; but, after the defeat experienced by their forces on the Elleporus, they offered no farther resistance; and Rhegium being thus left unsupported, was compelled, after a gallant defence of nearly a year, to yield to the Sicilian forces. The few inhabitants who escaped from famine and the sword were removed to Sicily, and the place was given up to pillage and destruction. Some years after, it was, however, partly restored by the younger Dionysius, who gave it the name of Phœbia. (*Strabo, 268.*) During the war with Pyrrhus, this city was seized by a body of Campanians, who had been stationed there as a garrison by the Romans, and was, in consequence, exposed to all the licentiousness and rapacity of those mercenary troops. The Roman senate at length freed the unfortunate citizens from their persecutors, and consigned the latter to the fate which they so justly merited. (*Strabo, l. c.—Polyb., 1, 7.—Liv., Epit., 13 et 15.*)—The city of Rhegium sustained great injury at a later period from the repeated shocks of an earthquake, which occurred not long before the Social war, or 90 B.C. It was, in consequence, nearly deserted when Augustus, after having conquered Sextus Pompeius, established there a considerable body of veteran soldiers for his fleet; and Strabo affirms, that in his day this colony was in a flourishing state. (*Strab., 269.*) Hence also the appellation of *Julium*, which later authors have applied to designate this town. (*Ptol., p. 62.*) Few cities of Magna Græcia could boast of having given birth to so many distinguished characters as Rhegium, whether statesmen, philosophers, men of literature, or artists of celebrity. Among the first were many followers of Pythagoras, who are enumerated by Iamblichus in his life of that philosopher. Theagènes, Hippias, Lycus, surnamed Buters, and Glaucus, were historians of note; Ibycus, Cleomenes, and Lycus, the adoptive father of Lycophron, were poets, whose works were well known in Greece. Clearchus and Pythagoras are spoken of as statues of great reputation; the latter, indeed, is said to have even excelled the famous Myron. (*Plin., 35, 8.—Pausan., 6, 4.*) The modern name of the place is *Reggio*. (*Cramer's Anc. Italy, vol. 2, p. 427.*)

Ῥήνεια, a small island near Delos; so near, in fact, that Polyerates of Samos is said to have dedicated it to Apollo, connecting it to the latter island by means of a chain. (*Thucyd., 3, 104.*) Strabo says the distance which separates them is four stadia. (*Strabo, 490.—Herod., 3, 96.—Plin., 4, 12.*) Its other names were Caladussa and Artemis. According to modern maps, Rhenea, which is larger than Delos, is also called *Sâli*. (*Cramer's Anc. Greece, vol. 3, p. 401.*)

RHENUS, I. a celebrated river of Europe, rising in the Lepontine Alps, a little to the east of Mount *St. Gothard*, in the country of the *Grisons*. It passes through *Lacus Brigantinus*, or the *Lake of Constance*, and afterward through *Lacus Acronius*, or the *Lake of Zell*, and continues to run nearly west until it reaches *Basilia* or *Bâle*. Here it takes a northern direction, and becomes the boundary between *Gallia* and *Germania*, and afterward between the latter and *Belgium*. At *Schenck*, or *Schenken Schans*, the *Rhenus* sends off its left-hand branch, the *Vahalis* or *Waal*, which flows west, and joins the *Mosa* or *Meuse*. After parting with the *Vahalis*, the *Rhenus* flows on a few miles farther to the north, and then divides into two streams, of which the one to the right hand had the name of *Flevo*, or *Flevus*, or *Flevum*, now the *Yssel*, and the other that of *Helium*, now the *Leck*. The latter joins the *Meuse* above *Rotterdam*. The *Yssel* was originally unconnected with the *Rhine*, but was joined to it by the canal of *Drusus*. Before it reached the sea, it traversed a small lake called *Flevo*, which, by the increase of waters it received through the *Yssel* from the *Rhine*, became in time expanded, and forms now the *Zuyder Zee*. (*Vid. Flevo*.) The whole course of the *Rhine* is 900 miles, of which 630 are navigable from *Bâle* to the sea. The *Rhine* was long a barrier between the *Romans* and *Germans*; it was first crossed by *Julius Caesar*.—The word *Rhein*, which signifies a "current" or "stream," appears to be of Celtic or ancient German origin. (*Cas.*, *B. G.*, 4, 20.—*Tac.*, *Germ.*, 1, 28, 29.—*Id.*, *Ann.*, 2, 6.—*Id.*, *Hist.*, 2, 28.—*Mela*, 2, 5.—*Id.*, 3, 2.—*Plin.*, 4, 15.)—II. A small river of *Cisalpine Gaul*, rising in the northern part of *Etruria*, and falling into the *Padus* or *Po*. It is now the *Reno*, and is celebrated in history for the meeting of the second triumvirate, which took place A.U.C. 709, in an island formed by its stream. *Appian* seems to place the island in the *Lavinium*; but his testimony ought not to stand against the authority of *Plutarch* (*Vit. Cic. et Ant.*), *Dio Cassius* (46, 55), and *Suetonius* (*Vit. Aug.*, c. 96), who all agree in placing the scene of the event close to *Bononia* or *Bologna*. The spot which witnessed this famous meeting is probably that which is now known by the name of *Crocetta del Trebbio*, where there is an island in the *Rheno*, about half a mile long and one third broad, and about two miles to the west of *Bologna*. (*Cramer's Anc. Italy*, vol. 1, p. 88.)

RHEUS, a king of *Thrace*, son of the *Strymon* and the muse *Terpsichore*, who marched, at a late period of the *Trojan war*, to the aid of *Priam*, with a numerous army. His arrival was expected with great impatience, as an ancient oracle had declared that *Troy* should never be taken if the horses of *Rheus* drank the waters of the *Xanthus*, and fed upon the grass of the *Trojan plains*. This oracle was well known to the *Greeks*, and therefore two of their best generals, *Diomedes* and *Ulysses*, were commissioned by the rest to intercept the *Thracian prince*. The *Greeks* entered his camp in the night, slew him, and carried away his horses to their camp. (*Apollod.*, 1, 3.—*Virg.*, *Æn.*, 1, 473.—*Ovid.*, *Met.*, 13, 98.)

RHIANUS, a Greek poet, a native of *Bena* in *Crete*, who flourished about 230 B.C. He was originally a slave in a school of exercise. *Rhianus* wrote an *Heracleid*, *Thessalica*, *Messenica*, *Achaica*, and *Eliaca*. Of all these poems we have only about thirty-three lines remaining. The titles of his productions appear to indicate, that if, like *Cherilus* of *Samos*, he gave history an epic form, his choice, nevertheless, fell on subjects which lost themselves in remote antiquity, or which, like the *Messenian war*, were almost as much within the domain of imagination as of history.—The fragments of *Rhianus* are contained in the collections of *Winterton*, *Brunck*, *Gaisford*, and *Boissonade*.

Ten epigrams of his also remain, which are given in the *Anthology*. (*Scholl, Hist. Lit. Gr.*, vol. 3, p. 123.)

RHINOCOLŪRA, a town on the coast of the *Mediterranean*; assigned at one time to *Egypt*, at another to *Syria*, and lying on the confines of both. It was an important commercial place, and the great mart for the *Arabian trade*. The modern *El Arish* occupies its site. It derives its name, according to *Strabo*, from the circumstance of offenders being sent thither as to a place of exile, after having been first deprived of their noses (*ῥίς*, the nose, and *κόλλω*, to mutilate), a custom said to have been practised by one of the *Ethiopian invaders of Egypt*. (*Strab.*, 780.) The story is evidently untrue; and the name would appear to be, not of *Greek*, but *Egyptian* origin. *Diodorus Siculus* (1, 60) says that this town was destitute of all the conveniences of life; that its water was bitter and obnoxious; and that it was surrounded with salt marshes. It was in the vicinity of this place that the *Israelites* were nourished with quails. (*Liv.*, 45, 11.—*Plin.*, 5, 13.—*Itin. Ant.*, 151.—*Hierocl.*, p. 726.)

RHION, or, as the *Latins* write the word, *RHIUM*, a promontory of *Achaia*, opposite *Antirrhium* in *Ætolia*. The strait is seven stadia across. The castle of the *Morea* occupies the site of this place at the present day. (*Itin. of Morea*, p. 6.—*Chandler's Travels*, vol. 2, ch. 72.) *Strabo* makes the strait only five stadia, but he seems to identify *Rhium* with *Drepanum*. (*Strab.*, 335.—*Vid. remarks under Antirrhium*.)

RHIFRÆTI, mountains in the north of *Europe*, near the sources of the *Tanis*, according to *Ptolemy*. What he designates, however, as such, do not, in reality, exist there. If he marks a chain of mountains more to the north, actual observation affords nothing corresponding, except it be the chain which separates *Russia* from *Siberia*. (*Plin.*, 4, 12.—*Lucan.*, 3, 273; 3, 382; 4, 418.—*Virg.*, *G.*, 1, 240; 4, 518.)

RHODINUS or **RHONÆ**, a large and rapid river of *Europe*, rising among the *Lepontine Alps*, not more than two leagues south of the sources of the *Rhine*. It passes through the *Lacus Lemanus*, or *Lake of Geneva*, five leagues below which it disappears between two rocks for a considerable way, rises again, flows with great rapidity in a southern direction, and discharges itself by three mouths into the *Sinus Gallicus*, or *Gulf of Lyons*, in the *Mediterranean*. The largest of these mouths was, in the days of *Pliny*, called *Massilioticum*; the other two were much less, and had the common name of *Libyæ*, although each was also known by a distinct appellation. *Hispaniense Ostium* denoted the western or the one next to *Hispania*, and *Metapinum* that in the middle. The course of the *Rhone* is about 400 miles, during which it falls 5400 feet. In *Strabo's* time it was navigable some distance up; but its mouths are now so full of rocks, brought down from the mountains by its impetuous current, that no ship can enter them. The upward navigation in smaller vessels can only, on account of the rapid current, be performed by draught or steam. This river is largest in summer, and is at its greatest height soon after the longest day. This is most probably occasioned by the heat of the sun melting part of the snow on the *Alps* during the summer months. For some remarks on the origin of the name *Rhodanus*, *vid. Eridanus*. (*Mela*, 2, 5; 3, 3.—*Ovid.*, *Met.*, 2, 258.—*Sil. Ital.*, 3, 447.—*Cas.*, *B. G.*, 1, 1.—*Plin.*, 3, 4.—*Lucan.*, 1, 433; 6, 475.)

RHODŒN, a mountain range of *Thrace*, forming, in a great degree, its western boundary, and evidently identical with the *Scomius* of *Thucydides* (2, 96). *Herodotus* gives it the appellation of *Rhodope*, and asserts that the *Thracian river Eceus* (now *Ister*) rises in this mountain (4, 49), while *Thucydides* makes it flow from *Scomius*. Again, *Herodotus* has placed *Rhodope* in the vicinity of the *Bisalta*, who were cer-

tainly much to the south of the sources of the Styx. But all this is easily explained, when we take into consideration the vague manner in which these writers employ the various names of this great chain. Virgil has several times mentioned Rhodope as a mountain of Thrace. (*Georg.*, 3, 461; *ibid.*, 4, 461. —*Eclog.*, 6, 80.) Theocritus classes it among the highest summits of the ancient world (7, 77. —*Cramer's Anc. Greece*, vol. 1, p. 372).

RHODOPIS or RHODŌPE, a celebrated hetærist of antiquity, a native of Thrace. She was contemporary with Æsop, the fabulist, and was a slave under the same roof with him at Samos. Xanthus, a Samian, afterward took her to Egypt, where she was purchased and manumitted by Charaxus of Mytilene, the brother of Sappho, who became deeply enamoured of her. (*Herod.*, 2, 134. —*Strab.*, 808.) She settled, after her manumission, at Naucratis, in Egypt; and, according to one account, a pyramid was erected in honour of her by some of the governors of the adjacent nomee, at their common expense. (*Diod. Sic.*, 1, 64. —*Strabo*, l. c.) Ælian relates, that as Rhodopis was bathing on one occasion, an eagle, having flown down, seized upon one of her sandals, and, having conveyed it through the air to Memphis, dropped it into the bosom of Psammitichus, who was dispensing justice at the time. The monarch, having admired the beauty and elegant shape of the sandal, and being struck also by the singular mode in which he had become possessed of it, caused inquiry to be made for the owner throughout the land of Egypt; and when he discovered that the sandal belonged to Rhodopis, he made her his queen. (*Ælian*, V. H., 13, 33. —*Strab.*, l. c.) According to this version of the story, the pyramid was erected to her after death, as a royal tomb. —Herodotus, in arguing against the supposition that the pyramid in question was the tomb of Rhodopis, makes her to have lived under Amasis (2, 134). Now, as there was an interval of forty-five years between the death of Psammitichus and the accession of Amasis, Perizonius is no doubt right in thinking that there were two hetæristes named Rhodopis, one who became the queen of Psammitichus, and the other the fellow-slave of Æsop, in the time of Amasis. The latter will be the one whom Sappho calls Doricha, and of whom her brother Charaxus was enamoured. (*Perizon.*, ad *Æl.*, l. c. —*Bayle*, *Dict.*, s. v. *Rhodope*.) Achilles Tatius states, that there was near Tyre a small island which the Tyrians called the tomb of Rhodope. This, however, may be the mere fiction of the writer. (*Achill. Tat.*, de *Clit.* et *Leuc. am.*, 2, 17.)

RHŌDŌS ('Ρόδος), a celebrated island in the Mediterranean Sea, lying southwest of the coast of Caria, and being about forty-three miles distant from the mainland. It is longer from north to south than from east to west. Strabo gives its circuit 900 stadia (*Strabo*, 651), but Pliny 130 miles, or, according to another measurement, 103. (*Pliny*, 5, 28.) According to Sonnini, its greatest length is about twelve leagues, and its breadth six, while its circumference is commonly estimated at forty-four leagues. Its form is nearly triangular, whence it obtained the name of Tri-næria. According to Strabo, it was originally called Ophiusæa ('Οφιοῦσα) and Stadia, and subsequently Telchinis. Its latest name, Rhodus, was derived, according to Diodorus Siculus (5, 55), from Rhodus, a daughter of Neptune and Halia. Others, however, have sought for the origin of this appellation in the Greek ῥόδον, signifying a rose, with which species of flower the island is said to abound; and, in confirmation of this etymology, it has been alleged that the figure of a rose is given on the reverse of many Rhodian coins still extant. (*Rasche*, *Lex. Rei. Num.*, vol. 7, p. 1027. —*Bayer*, *Diis. de Nummo Rhodio*, p. 492. —*Compare Schol. ad Pind., Olymp.*, 7, 24.) Ritter, however, maintains, that the flower here mistaken

for a rose is none other than the lotus, and he seeks from this to connect the early religious system of Rhodes with the most ancient worship of the East. (*Vorhalle*, p. 338.) Bochart, of course, is in favour of a Phœnician etymology, and, availing himself of one of the ancient names of the island mentioned above, namely, Ophiussa or "Snake Island," given to it on account of the numerous serpents it contained when first inhabited, says that the Phœnicians also called it *Snake Island*, which in their language was *Gezirath-Rhod*. From this last word, which signifies "a snake," the Greeks, he thinks, formed the name *Pódor* (Rhodes). The same scholar derives the appellation *Stadia* from the Hebrew or Phœnician *Tsadia*, "desolate." (*Geogr. Sacr.*, 1, 7, c. 369, *seqq.*) —In addition to the earlier names cited above from Strabo, it may not be amiss to mention the following as given by Pliny (5, 31), namely, *Asteria*, *Æthrea*, *Corymbia*, *Pœsæa*, *Atabyria*, *Macris*, and *Oloessa*. —As this island lay on the dividing line between the Ægean and the eastern part of the Mediterranean, it became, at a very early period, a stopping-place for navigators, as well for the Phœnician mariners in their voyages to Greece, as for the Greeks in their route to the farther coast of Asia. Hence, too, it became very speedily inhabited. As its first settlers, we find the Telchines mentioned, who are styled "sons of Thalassa" (*ἱὸι Θαλάσσης*), i. e., "of the sea," in allusion, evidently, to their having come from foreign parts. (*Diod. Sic.*, 5, 55. —*Strabo*, 654.) They were said to have migrated originally from Crete to Cyprus, and from the latter island to Rhodes. They brought with them the art of working iron and copper; they were the first, also, to form statues of the gods, and they were, in addition to this, powerful enchanters, who could summon at pleasure clouds, rain, hail, and snow, and could assume various forms. (*Diod. Sic.* et *Strabo*, l. cc.) In all this we recognise the wonder produced among a barbarous race of men, by a race of strangers possessed of the elements of useful knowledge, and taught by experience to prognosticate the variations of the atmosphere (*Vid. Telchines*). Tradition goes on to state, that Neptune, who had now attained to manhood, became the father of six sons and one daughter by Halia, the sister of the Telchines. This daughter's name was Rhodus, and hence, according to the legend, was derived the name of the island. The Telchines subsequently, made aware, by their skill in divination, of an approaching deluge, left, nearly all of them, the island, and were scattered over various countries. Some of their number, however, remained, and, when the deluge came, fled to the higher grounds, where they saved themselves. It was here that the Sun beheld Rhodus, and became captivated by her beauty. He checked the inundation, called the island after her name, and became by her the father of the Heliads, seven in number, and of one daughter, called Electryone. The Heliads are said to have been well skilled in the sciences, to have invented astrology, to have taught the art of navigation, and to have divided the day into hours. From one of their number the Egyptians obtained a knowledge of astrology. (*Diod. Sic.*, 5, 57.) The island of Rhodes remained from henceforth consecrated to the sun; and, according to Pliny (2, 62), it continued ever after a favourite boast on the part of the Rhodians, that not a day passed during which their island was not illumined, for an hour at least, by the solar rays. The eldest of the Heliads was succeeded in the government of the island by his three sons, Lindus, Ialysus, and Camirus, who each founded a city, and called it after his name. About this period, Danaüs, flying from Egypt, came to Rhodes, with his daughters, and built a temple to Minerva; and, not long after, Cadmus, with his Phœnicians, also came, being in quest of his sister Europa. From these and other mythological legends, it will ap-

appear very plainly that the earliest known inhabitants of Rhodes were not Greeks, but persons from the neighbouring mainland. The Greeks came in at a later period, and drove the earlier settlers into the interior of the island: hence we find all the cities on the coast with Grecian forms of constitution, and Strabo expressly styles the inhabitants as of Dorian origin. (*Strab.*, 653.)—All that we have thus far related coincides with the period prior to the Trojan war, except the migration of the Greeks, which took place in the course of the century next after the fall of Troy. It was long before the Rhodians attracted the notice of the rest of the Greeks, and before their commercial operations raised them to any consequence. They fell under the power of Persia, and in the war between this power and the Greeks, and in those between Sparta and Athens, it always sided with the conquering party, though without adding any remarkable weight to the scale. The execution of a plan subsequently conceived first laid the foundation of the political importance of Rhodes. The three cities of Lindus, Ialysus, and Camirus came to the conclusion, towards the close of the Peloponnesian war, of uniting together and forming one common city. This city, situate in the northern quarter of the island, took the name of Rhodes, and continued ever after the capital. The three older cities, which had united in its erection, did not actually cease to exist from this period, though a large portion of their inhabitants migrated to the new city. The inhabitants of the new capital were oligarchically governed when under Lacedæmonian supremacy; democratically when under Athenian; but the state flourished under both. When Rhodes combined with Chios and Byzantium in revolt against the Athenians, the democracy seems to have been still maintained; but after the termination of that war it was overthrown by an insurrection of the wealthy few and their adherents, assisted by Mausolus, the king of Caria. Under its new government, Rhodes continued to increase in trade and shipping; from which it may be inferred that the administration was not inattentive to the wishes and interests of the people; for maritime power always strengthened the popular party, and a jealous and arbitrary oligarchy would therefore have discouraged rather than favoured the growth of the navy. We are told, indeed, in one fragment of a contemporary historian (Theopompus, quoted by Athenæus), that there was a time when all power was in the hands of a small knot of profligate men, who supported each other in every outrage which their fierce passions or brutal caprices could prompt. But, whatever chances may have enabled a small faction to exercise for a while so hateful a tyranny, it must have quickly fallen, and the government have reverted to the great body of citizens having certain qualifications of birth and property. In the ordinary state of the Rhodian aristocracy, its conduct was moderate and upright; so we are told by ancient writers, and their testimony is confirmed by the prosperity of the commonwealth, and by its continual increase in commercial wealth and naval power. When all the Grecian seas were swarming with pirates, the Rhodians alone for the common good undertook and effected their suppression. They were highly respected by Alexander, though he kept a garrison in their city, which, on receiving the news of his death, they immediately expelled. As the Macedonian supremacy appears to have been generally favourable to oligarchy, notwithstanding the patronage which Alexander, in the outset of his career, found it expedient to bestow on the democratical interest in Asia Minor, it is possible that this change was accompanied with an increase of power in the great body of the people. The Rhodians stood aloof from the quarrels of the chiefs who divided the empire of Alexander, and kept friendship with them all, thus enjoying peace when every other state was at

war. This could not last for ever. Their habits and interests especially inclined them to close connexion with Ptolemy and Egypt; and though they avoided giving any just cause of offence to Antigonus, his violent spirit would be satisfied with nothing short of unqualified support. This being refused, he commissioned officers to seize the Rhodian traders bound for Egypt; and when the execution of the order was resisted, he prepared an armament against the island. The Rhodians endeavoured to pacify him by compliments and submissions; but, finding him inexorable, they made ready for defence.—In the year which followed the attack of Antigonus on Egypt (B.C. 304), Demetrius laid siege to Rhodes. The Rhodians sent to solicit aid of Ptolemy, Lysimachus, and Cassander, and took measures to increase to the utmost their military force, and to unite the hearts and quicken the zeal of all who were in the city. Strangers and foreign residents were invited to join in the defence, but all unserviceable persons were sent away. It was voted that slaves, who fought with courage and fidelity, should be purchased from their masters, emancipated, and made citizens; that every citizen who fell in battle should have a public funeral; that his surviving parents should be supported, and his children educated by the state; that marriage portions should be given to his daughters, and a suit of armour publicly presented at the feast of Bacchus to each of his sons on coming of age. The rich men freely gave their money, the poor their labour, the artificers their skill; all strove to surpass each other in zeal and execution. The besieging army was numerous and disciplined, well supplied and well appointed, and provided with every variety of warlike engines which the science of the age and the mechanical genius of the commander could furnish. Assaults were made by land and sea, in various fashions and with various success; but no decisive advantage could be gained over the resolute and active defenders of the city, who not only kept the walls, but made several vigorous sallies, in some of which they succeeded in destroying many ships and engines of the besiegers. Demetrius at length gave up the hope of successfully attacking them from the sea, and turned all his attention to his operations on the side towards the land. The Rhodians, taking advantage of this to employ their ships in distant cruises, made prizes of many vessels belonging to Antigonus, and intercepted some convoys which were coming to the enemy's camp. Meantime the siege was pressed by land, and the walls were shaken in many places, all which the Rhodians made good by new defences built within; and just as they were beginning to be discouraged by the power and perseverance of their adversary, their confidence was renewed by the arrival of an Egyptian fleet, with supplies in great abundance.—The siege was protracted for a year. A second fleet was sent by Ptolemy, which brought large supplies, and a considerable re-enforcement of troops. Ambassadors came from Athens and from many other Grecian states, to entreat that Demetrius would be reconciled with the Rhodians. He yielded so far as to grant a suspension of arms and commence a negotiation; but the terms could not be agreed on, and the war was renewed. He then attempted a surprise by night. Under cover of the darkness, a chosen body of soldiers entered the town through a breach which had been made; and the rest of the army supported them at daybreak by a general assault on the walls. But the Rhodians were cool and firm. All who were defending the ramparts remained at their posts, and made them good against the enemies without; while the rest of the citizens, with the auxiliaries from Egypt, went against those within the city. In the violent contest which ensued, the townsmen were victorious, and few of the storming party escaped out of their hands.—Letters now came from Antigonus, directing

ais son to make peace with the Rhodians on what conditions he could; and Demetrius accordingly wished for an accommodation on any terms that would save his credit. The Rhodians were no less anxious for peace; and the more so, as Ptolemy had written to them, promising farther aid in case of need, but advising them to put an end to the war on any reasonable conditions. Peace was soon concluded on the terms that the Rhodians should be independent, and should retain all their revenues; but that they should assist Antigonus in all his wars, excepting against Ptolemy, and should give one hundred hostages in pledge of fidelity to their engagements. Thus released from danger, the Rhodians proceeded to fulfil their promises, and reward those who had served them well. Fit honours were bestowed upon the bravest combatants among the free inhabitants, and freedom, with citizenship, given to such of the slaves as had deserved it. Statues were erected to Ptolemy, Lysimachus, and Cassander, all of whom had assisted them largely with provisions. To Ptolemy, whose benefits had been by far the most conspicuous, more extravagant honours were assigned. The oracle of Ammon was consulted, to learn whether the Rhodians might not be allowed to worship him as a god; and, permission being given, a temple was actually erected in his honour. Such instances had already occurred in the case of Alexander, and in that of Antigonus and Demetrius at Athens; but it must be remembered that such a practice would not bear, in Grecian eyes, the same unnatural and impious character which it does in ours, since the step was easy from hero-worship, which had long formed an important part of their religion, to the adoration of distinguished men, even while alive (*Hist. of Greece*, p. 161, *seqq.*—*Libr. Us. Knowl.*)—After mingling more or less in the various collisions which ensued between the successors of Alexander and their respective descendants, Rhodes sided with the Romans, and became a valuable auxiliary to the rising power. In return for the important services thus rendered, it received from its new friends the territories of Lycia and Caria; but suspicion and distrust eventually arose, the Rhodians were deprived of their possessions in Asia, and at last, in the reign of Vespasian, of their freedom, and with it of the right they had so long enjoyed of being governed by their own laws. A new province was formed, consisting of the islands near the coast, of which Rhodes was the capital, and the island henceforth became an integral part of the Roman empire, and shared in its various vicissitudes. In a later age, it fell into the hands of the knights of St. John, after they had lost possession of Palestine, A.D. 1309. In 1480 they repelled an attack of the Turks, but in 1522 were compelled to surrender the island to Soliman II. The population is differently estimated: Savary makes it 36,500, of which about one third are Greeks, with an archbishop. The capital, *Rhodes*, has a population of about 6000 Turks. The suburb, *Neochorio*, is inhabited by 3000 Greeks, who are not permitted to reside within the city. The town is surrounded with three walls and a double ditch, and is considered by the Turks as impregnable. It has two fine harbours, separated only by a mole.—Rhodes was celebrated for its Colossus, an account of which will be found elsewhere. (*Vid. Colossus*.) Its maritime laws were also in high repute, and were adopted as the basis of marine law on all the coasts of the Mediterranean. Their main principles are still interwoven into the maritime codes of modern times. The legislative enactments at Rhodes respecting the condition of the poorer classes were also very remarkable. The government, though far from being a democracy, had a special regard for the poor. They received an allowance of corn from the public stores; and the rich were taxed for their support. There were likewise certain works and offices which they were

called upon by law to undertake, on receiving a certain fixed salary. (*Strab.*, 653.) Rhodes produced many distinguished characters in philosophy and literature: among these may be mentioned Panætius (whom Cicero has so much followed in the Offices), Stratocles, Andronicus, Eudemus, and Hieronymus. Posidonius the Stoic resided for a long time in this island, and gave lectures in rhetoric and philosophy. The poet Pisander, author of the *Heracleid*, as well as Simmias and Aristides, are likewise found in the list of the Rhodian literati.—The serene sky of the island, its soft climate, fertile soil, and fine fruits, are still praised by modern travellers. "Rhodes," observes Dr. Clarke, "is a truly delightful spot: the air of the place is healthy, and its gardens are filled with delicious fruit. Here, as in Cos, every gale is scented with the most powerful fragrance, which is wafted from groves of orange and citron trees. Numberless aromatic herbs exhale at the same time such profuse odour, that the whole atmosphere seems to be impregnated with a spicy perfume. The present inhabitants of the island confirm the ancient history of its climate; maintaining that hardly a day passes throughout the year in which the sun is not visible. The winds are liable to little variation: they are north or northwest during almost every month."—(*Travels*, vol. 3, p. 278, *Lond. ed.*—Compare *Turner's Tour in the Levant*, vol. 3, p. 10.)
RHÆCUS, I. one of the Centaurs, slain by Atalanta. (*Apollod.*, 3, 9, 2.)—II. One of the giants, slain by Bacchus under the form of a lion, in the conflict between the giants and the gods. (*Horat.*, *Od.*, 2, 19, 23.) The Greek form most in use is *Poikos*, but, as Bentley remarks, the Latin writers in general prefer the form *Rhæcus*. (Compare *Heyne*, *ad Apollod.*, 3, 9, 2.)

RHÆTEUM, a promontory of Troas, on the shore of the Hellespont, in a northeastern direction nearly from Sigæum. On the sloping side of it the body of Ajax was buried, and a tumulus still remains on the spot. (*Mela*, 1, 18.—*Plin.*, 5, 30.—*Liv.*, 37, 37.) Between this promontory and that of Sigæum was the position of the Grecian camp. (Consult *Rennell*, *Topography of Troy*, p. 70.) According to Leake, *Palæo Kastro*, near the Turkish village of *Il-ghelmes*, marks the probable site of Rhæteum. (*Tour*, p. 275.)

RHOSUS, a city of Syria, the southernmost one in the district of Pieria, fifteen miles from Seleucia, and lying on the Sinus Issicus. It was northwest of Antiochia. When Pliny speaks of it as lying near the Syrian Pass, he must be understood as speaking of the southern pass, not the northern one on the confines of Syria. (*Plin.*, 5, 22.—*Cic.*, *Ep. ad Att.*, 6, 1.)

RHOXALANI, a Sarmatian race to the north of the Palus Mæotis. From the testimony adduced by Malte-Brun and others, there is no reason to doubt that the appellation of *Russians* is derived from that of the Rhoxalani or Rhoxani. This derivation is neither difficult nor improbable. The *z*, it is supposed, was substituted by the Greeks for the *ss* or *th* of the barbarians. In the Doric and Æolic dialects, that character was expressed by the simple *s*. Hence, from *Rhozani* to *Rhossani*, *Rossani*, *Rosi* (the proper orthography requires the *o*, not the *u*, in the first syllable), the transition is natural and easy. A manuscript of Jomandes, in the Ambrosian Library at Milan, has *Rossomannorum* instead of *Rhozolannorum*, a reading which confirms the identity of sound between the *z* and the *ss*. The addition by that historian of the Gothic termination *mann* to the primitive word will surprise no one. In the time of Strabo, the Rhoxalani were settled on the vast plains near the source of the Tanais and Borysthenes. Appian tells us that they were warlike and powerful; and we learn from other writers of at least equal weight, that, having joined their arms to those of a neighbouring nation, they frequently attacked the Roman confines near the Dan-

ube and the Carpathian Mountains; that in A.D. 68 they surprised Mœsia; in 166 carried on war against the Marcomanni, and in 270 were numbered among the enemies over whom Aurelian triumphed. During the first three centuries they occupied the southern parts of Poland, Red Russia, and Kiovia, the very seats possessed by the Russians of the ninth century. Jornandes assigns them the same region; and the anonymous geographer of Ravenna fixes them in Lithuania and the neighbouring countries. These authorities are to us decisive that the *Rhoxalani* and the *Russians* are the same people; but, if any doubt remained, it would be removed by the concurrent testimony of the native chronicles, the Polish traditions, the Byzantine historians, and the Icelandic sagas, all of which are unanimous in applying the term *Russian* to the inhabitants of the countries formerly possessed by the *Rhoxalani*. Hence, as they were the most celebrated of the original tribes, that term, by synecdoche, became generic. (*Foreign Quarterly Review*, No. 5, p. 151, *seqq.*)

RUTHENI or *RUTHENI*, a people of Gallia Aquitania, in Narbonensis Prima. The territory was situate on either side of the Tarnis or *Tarna*. Segodunum, now *Rodez*, was their chief town. (*Cæs.*, B. G., 1, 7.—*Plin.*, 4, 19.)

RYNDACUS, a river of Asia Minor, rising in Mount Temnus, on the northern borders of Phrygia. Pliny states, that the Rhyndacus was formerly called Lycus, and took its source in the lake Antynia, near Miletopolis; that it received the Mæcetus and other rivers, and separated the province of Asia from Bithynia. (*Plin.*, 5, 32.) His account, though quite at variance with that of Strabo, is confirmed by other writers, and especially by modern geographers, so that he alone is to be followed. (*Cramer's Asia Minor*, vol. 1, p. 50.)

RIGODULUM, a town of Gallia Belgica, in the territory of the Treveri, and northeast of Augusta Treverorum. It lay on the river Mosella, and answers to the modern *Reol*. (*Tac.*, *Hist.*, 4, 71.)

ROBIGO or *ROBIGIA*, a deity of the Romans, worshipped to avert mildew. The Robigalia were celebrated on the 25th of April, just before the Floralia. (*Ovid*, *Fast.*, 4, 911.—*Pliny*, 18, 2.—*Tertull.* *ad Gent.*, 16, 25.)

RÔMA, the celebrated capital of Italy and of the Roman empire, situate on the Tiber, below the junction of that river with the Anio. The history of the imperial city is identified with that of the empire itself, and may be found scattered under various heads throughout the present volume. A much more interesting subject of inquiry is that which relates to the authenticity of the earlier Roman history, as it has been handed down to us by the Romans themselves. The researches of modern scholars have here produced the most surprising results, and especially those of the celebrated Niebuhr. In what may be called, however, the work of demolition, even Niebuhr himself appears to have had several predecessors. The sceptical temper of Bayle did not suffer him to acquiesce in a narrative so open to a reasonable incredulity as the early history of Rome. Beaufort's treatise on the "Uncertainty of the Roman History," though it did not go to the bottom of the matter, was sufficiently convincing to all persons who were not unwilling to be convinced. His views are often false; but his arguments utterly destroyed the credit of the received stories. Hooke endeavoured to refute him; but all that he could make out was a general presumption that Beaufort pushed his case too far, when he considered the history of the republic down to the destruction of the city by the Gauls as uncertain as the history of the kings. To this modification of Beaufort's conclusions even Niebuhr assents. Ferguson showed the conviction which Beaufort's treatise had worked in his mind, by passing very rapidly over all the period anterior to the second

Punic war, and commencing his more circumstantial narrative of the Roman history only at the point where its events had begun to be noted by contemporary annalists. Bayle and Beaufort were popular writers, and their remarks produced a wide and general effect. At a somewhat earlier period, Perizonius, a scholar of an acute and comprehensive mind, had criticised the Roman History with great freedom and originality in his "*Animadversiones Historicae*;" but the consequence of his outstripping his age was, that his disquisitions remained in obscurity. Bayle and Beaufort take no notice of him; and his inquiries were unknown even to Niebuhr when he published his history (note 678, vol. 1). Perizonius anticipated Niebuhr in his perception of the poetical origin of the history of the early ages of Rome, and pointed out the evidence for the existence among the Romans of popular songs in praise of the heroes of old time. That Niebuhr should have perceived this truth in an age in which scholars are accustomed to comprehend a wide range of objects and to form independent judgments, is not extraordinary; especially after Wolf's prolegomena to Homer had given birth to a new school of criticism in all that relates to the early literature of nations. But that Perizonius should have discovered it at a time when learned men had scarcely ceased to receive with unquestioning faith everything that was written in Latin or Greek, gives a high notion of the originality and strength of his conceptions. Niebuhr, therefore, in showing the early history of Rome to be unworthy of credit, has only followed a path already open, or, rather, already beaten. He has done more, however, than those who have preceded him, by resolving the vulgar narrative into its elements, and showing how it acquired its present shape. He has thus examined the whole subject thoroughly, and made it impossible for any one ever to revive the old belief. Still, however, though we may now safely withhold our assent from a large portion of what used to pass current as the early history of Rome, we must take care not to carry this scepticism so far as to reject, by one sweeping sentence of condemnation, every portion that has come down to us on this head. Even allowing a considerable degree of doubt and uncertainty to pervade the first records of the Roman history, from the alleged foundation of the city to its capture by the Gauls, for that is a point which Livy himself does not scruple to concede (8, 1), we must yet regard even this dubious period as luminous and authentic, when compared with the times which preceded the foundation of Rome. Few sober-minded critics, indeed, will be disposed to indulge in scepticism, so far as to imagine that everything which relates to the kings of Rome is fictitious and apocryphal. It appears to us that there are certain facts recorded in the early history of that city, which rest on too undisputed a basis, too universal a consent of authorities to be easily set aside. Where these are borne out by the succeeding and indubitable parts of the history, and exhibit a connected account of the growth and progress of the constitution of this great city, surely it would be injudicious to reject them, except in the case of evident contradiction or striking improbability. Great uncertainty exists, no doubt, on many points; but, after all, it is more in matters of detail than of real importance, and especially in the relation of those petty events and circumstances with which Livy and Dionysius have, perhaps, without due discrimination, endeavoured to dress up the meager chroniclers who preceded them, and to infuse some spirit into the dry records of the pontifical volumes. Let us retrench, if it must be so, the gaudy decorations and fanciful ornaments with which these historians have embellished their work, but let us not, at the same time, overthrow the whole fabric. We may prune what is exuberant or decayed, and weed what is rank and unprofitable; but we must beware,

in the process, of encroaching upon what is sound, or rooting out what is wholesome and nutritious. Let it be granted that the rape of the Sabine women is a fiction, it may still be true that the Sabines became, at one time, an element in the population of Rome. Though it be uncertain, with respect to the Horatii and Curiatii, which belonged to Rome and which to Alba, we may still believe that the latter city sank beneath its more powerful rival. The elder Tarquin's reign does not cease to be an historical fact, because we hear an absurd story of an eagle uncovering his head on his arrival at the gates of Rome. The constitution said to have been formed by Servius Tullius may have been the result of longer experience and more practical wisdom than falls to the lot of a single reign; but it was such a constitution as Rome did receive, and which it was afterward enabled to bring to a state of greater perfection than any ancient form of government that we are acquainted with. Suppose the story of Lucretia false, we cannot deny that monarchy was abolished at Rome, and made way for consular authority about the time that Livy pretends, though that historian may be wrong in giving Valerius Publicola, and not Horatius Barbatus, as a colleague to Brutus. (*Polyb.*, 2, 23.) The valour of Horatius Cocles, and the fortitude of Mutius Scævola, may be left to the admiration of schoolboys; but the siege of Rome by Porsenna is no idle tale invented for their amusement, though it should be proved that the consequences of that event were not so honourable to the Romans as Livy has chosen to represent them. (*Tacit.*, 3, 72.—*Plin.*, 34, 14.) It is a disputed point whether two or five tribunes of the people were elected at first; but does that doubt invalidate the fact of the secession to the Mons Sacer? Cancel three fourths of the Roman victories and triumphs over the Æqui and Volsci, will it be less true that the former were nearly destroyed, the latter completely subjugated? Say it was gold, and not the valour of her dictator and his troops, which delivered Rome from the Gauls; she may surely boast of having lived to revenge herself on the barbarian foe, and of having, by a hundred triumphs, blotted out the stain of that transaction, and of the shameful rout on the banks of the Allia. In short, though we may sometimes pause when reading the early annals of Rome, and hesitate what judgment to form on many of the events which they record, there are landmarks enough to prevent us from straying far from our course, and to lead us on safely to the terra firma of her history. But we have not the same assistance for tracing our way, nor the same guarantees to certify us that we are treading in the right path, when we come to explore the truth of the accounts on which the origin of Rome, and the actions of its reputed founder, must mainly depend for their credibility. On the contrary, after reading all that Plutarch has said in the opening of his life of Romulus, and all that Dionysius has collected on the subject, it is impossible not to feel convinced that the received story of the foundation of Rome rests on very questionable grounds. Here it is not merely the more undisguised appearance of fiction, or the greater frequency of the marvellous, which is calculated to awaken suspicion; but it is the inconsistency and improbability of the whole, as an attempt to explain the first rise and progress of unquestionably the most interesting city of antiquity, which ought to startle the mind and revolt the judgment of the philosopher and the critic. It is not also because these tales are to be traced to a Greek source that we would reject them; for we are inclined to think that the early Greek historians who made the antiquities of Italy their study, and they form a numerous class, were better informed about what they wrote, and more trustworthy, than perhaps they are generally allowed to be. The objection rather lies against the particular authority on whose testimony they seem entirely to rest for support. Dio-

cles of Paparethus, an author mentioned by no one else, is said by Plutarch, in his Life of Romulus, to have been the first to accredit the received accounts of the circumstances relative to the origin of Rome; and it was upon his authority that Fabius Pictor, the earliest Roman historian, brought them into repute with his countrymen. Now, unless we are informed what peculiar sources of information were open to this obscure writer, which were not possessed by the other early historians of his nation, to whom the name of Romulus seems to have been known, there can be no reason why we should give him the preference. It will not be enough to say that the approval of Fabius is a sufficient testimony in his favour; for, as his account of the birth of their founder was most flattering to the vanity of the Romans, their partiality towards him would be easily accounted for, and, by a natural consequence, would tend to lower rather than raise our opinion of his credibility. But the most solid objection which can be urged against the popular account of the foundation of Rome by Romulus, is chiefly grounded on the inconsistency of the circumstances under which that city is said to have commenced its political career, with the character and condition which is ascribed to it immediately after. If it be true that Romulus was surrounded by so much state and dignity, and possessed not only the insignia of royalty, but also a force such as no despicable city could display, since we are told that he could bring into the field formidable armies, then we may assert confidently that Rome did not date its beginning from a motley assemblage of lawless depredators and runaway slaves, and that its first walls held within their circuit something more than the lowly huts of shepherds, or the rude palace of a village king. Nor were there traditions wanting to give strength to such an hypothesis, by ascribing to this great city an existence anterior to that which it had afterward as a colony of Alba. (*Cramer's Anc. Italy*, vol. 1, p. 347, seqq.)—But let us now proceed to the question respecting the real origin of Rome.

1. Origin of Rome.

When we inquire into the real origin of the city of Rome, we meet with a tradition which carries it back to the age of the Pelasgians. (*Plut.*, *Vit. Rom. inst.*) The Pelasgic origin of Rome is implied in the legend of the settlement of the Arcadian Evander on the Palatine Mount. The religion and the language of Rome sanction this belief. The same opinion was probably held, at least by the earliest of the many writers who, according to Dionysius, supposed it to be a Tyrrhenian city. (*Dion. Hal.*, 1, 29.) If any by this expression meant that it was Etruscan, we may oppose to this the well-grounded opinion that the Etrurian sway was not extended so far south as the lower part of the Tiber till about the close of the second century of Rome. We have, however, express testimony that Rome was a Siculian town. Varro informs us, that the old annals reported that the Siculi were sprung from Rome (*L. L.*, 4, 10); and the legend of Antiochus has been preserved, which derived the appellation of the Siceli in Enotria and Sicily from a mythic chief Sicelus, who fled from Rome, and was entertained by Morges, king of Enotria. (*Dion. Hal.*, 1, 73.) It is scarcely necessary to observe, that Sicelus is a personification of the nation, and that we have here a record of its original seat, and of its subsequent migration. The considerations which tend to show that the Siceli or Siculi were a Pelasgian tribe, will be found under another article. (*Vid. Siculi*.) The Siceli fled from the Opici; and the Pelasgians of Latium were overpowered by the Caeci, who were probably an Opican or Oscan tribe. Whether Rome fell into the hands of the conquerors we cannot be certain, but it is very probable. It is thus we must interpret

the legend preserved by Plutarch, that Romus, king of the Latins, expelled the Tyrrhenians. (*Plut., Vit. Rom.*) Such a conquest would give rise to the tradition that Rome was founded as a colony from Alba Palatium, the settlement on the Palatine Hill, probably took its name from Palatium, a town of the Oscan Aborigines, on the declivity of the Apennines. (*Dion. Hal., 1, 14.*)

2. Original site, and subsequent growth of Rome.

All traditions agree, that the original site of Rome was on the Palatine, whether they ascribe its foundation to Evander or to Romulus. The steepness of the sides of the hill would be its natural defence; and on one quarter it was still farther strengthened by a swamp which lay between the hill and river, which was afterward drained and called the Velabrum. In the course of time dwellings sprung up around the foot of the hill; but the Palatine must still have remained the citadel of the growing town; just as at Athens that which was the original-city (πόλις) became eventually the Acropolis (ἀκρόπολις). These suburbs were enclosed with a line, probably a rude fortification, which the learning of Tacitus enabled him to trace, and which he calls the *pomarium* of Romulus. (*Ann., 12, 24.*) It ran under three sides of the hill: the fourth side was occupied by the swamp just mentioned, where it was neither needful nor possible to carry a wall. The ancient city comprised within this outline, or, possibly, only the city on the summit of the hill, was called by Roman antiquaries the "Square Rome" (*Roma Quadrata*.—*Ennius, ap. Fest., s. v. Quadrata Roma*.—*Plut., Vit. Rom.*—*Dio Cass., fragm.*—*Dion. Hal., 1, 88.*) There is reason to suppose, that some at least of the adjacent hills were the seat of similar settlements. The legend of the twin brothers, Romulus and Remus, appears to have arisen from the proximity to Rome of a kindred town called Remoria, either on the Aventine, or on an eminence somewhat more distant towards the sea. (*Dion. Hal., 1, 85.*—*Niebuhr, Rom. Hist., vol. 1, note 618.*)—The first enlargement of Rome seems to have been effected by the addition of the Cælian Hill, which, as we shall presently show, was probably occupied by a different tribe from the people of the Palatine. Dionysius speaks of Romulus as holding both the Palatine and the Cælian Mount (2, 50). The next addition to the city was the Esquiline Hill. The festival of Septimontium preserved the memory of a time when Rome included only Palatium, with its adjacent regions, Velis, Cermalus, and Fagatal; the Cælian Hill; and Oppius and Cispus, the two summits of the Esquiline. (*Festus, s. v. Septimontium*.—*Niebuhr, vol. 1, p. 382.*) The Capitoline, Quirinal, and Viminal Hills were not yet comprehended in the *pomœrium*: the Aventine was always excluded from the hallowed boundary, even when it was substantially a part of the city. Thus we see that the notion that Rome was built on seven hills, was fitted originally to circumstances different from those to which it was afterward applied.—The Quirinal and Capitoline Hills seem to have been the seat of a Sabine settlement, distinct from the Rome on the Palatine, and in early times even hostile to it. The most poetical incident in the legend of Romulus, the rape of the Sabine virgins, involves an historical meaning. It appears to refer to a time when the Romans did not possess the right of intermarriage with some neighbouring Sabine states, and sought to extort it by force of arms. (*Niebuhr, vol. 1, p. 286.*) By the right of intermarriage (*connubium*) is meant the mutual recognition, that the children of parents, citizens of the two states, were entitled to the full rank of citizens in the state of their father. This right among the ancient states of both Greece and Italy was established only by express treaty. A citizen might live

with a foreign woman as his wife; but, unless the intermarriage were sanctioned by public compact, his children lost their paternal rank. Niebuhr has observed, that even the poetic legend did not regard Rome as a genuine and lawful colony from Alba; otherwise it would, from the very beginning, have enjoyed the right of intermarriage with the mother city and the other Latin towns; and there would have been no inconsistency in the story of the want of women (vol. 1, note 628).—In the narrative of the war with the Latins, Livy calls Tatius only king of the Sabines; but when he mentions that, at the close of the war, the Sabine appellation Quintus was extended to the people of Romulus, he derives it from Cures. (*Liv., 1, 10, 13.*) Dionysius has followed the Annalists, who expressly specified Cures as the seat of the kingdom of Tatius. Strabo adopted the same tradition. Now, when we consider the exceedingly narrow limits within which all the other incidents of the early Roman traditions are confined, and even the historical events of the first years of the republic, after the kingly dominion of the city was reduced, it seems very unlikely that Rome, in its infancy, could have come into collision with Cures, which was distant from it more than twenty miles. Moreover, nothing is told of the war before the seizure of the Capitoline Hill. This is the point from which all the attacks of the Sabines proceed. Again, after the termination of the war, we hear nothing of the return of Tatius to Cures. He apparently deserts his old dominion, and establishes himself and his Sabines on the Capitoline and Quirinal Hills. (*Dion. Hal., 2, 46, 50.*) The senate of the people of Romulus and Tatius met in conference in the valley between the Palatine and Capitoline Hills; and as the Palatine was the proper seat of the one, so the Capitoline must have been that of the other. Cures vanishes from our sight; and though the union of the Romans with the Sabine people, with whom they had warred, endured unbroken, there is no trace of their possessing a wider territory than the district immediately adjacent to the hills of Rome.—These considerations are sufficient to expose the inconsistency of the vulgar legend: but the testimony to the incorporation of a part of the Sabines with the Roman people is far too strong to be set aside. The most probable supposition is, as has been before stated, that the Sabines, who in the early period of their national existence extended themselves down the left bank of the Tiber, had advanced even to the neighbourhood of Rome, and had established a settlement on the Quirinal and Capitoline Hills. Of this town the Capitoline must have been the citadel. It was likewise the seat of its religious worship: for the pontifical books recorded, that, before the building of the Capitol, its site was occupied by shrines and fanes consecrated by Tatius. (*Liv., 1, 55.*) Tatius we can scarcely regard as a more certainly historical personage than Romulus, though the story of his death at Lavinium has an historical aspect. He is only the personification of the tribe of the Titenses or Tities, who are said to have taken their name from him. But his people had a real existence. The name of their town has been lost: their own name was undoubtedly Quirites. This people lived in close neighbourhood with the Romans on the Palatine; but they were of different, and even hostile races, and no intercourse subsisted between them. Between two petty states, so situated in immediate neighbourhood, it is not at all improbable that women may have been a cause of contention. We can gather from the traditions that war took place between them, which ended at last in a compact, by which not only the right of intermarriage, and a community of all other rights, were granted, but the two nations were combined into one. We can even trace the stages of their union. It appears at first to have been a federal union. Each

people had its own king and its own senate; and they only met to confer upon matters of common interest. Afterward one king was acknowledged as the common chief of the united people: the two senates became one body, and consulted for the welfare of the whole state: the national names of Romans and Quirites were extended indifferently to both divisions of the citizens; and they were no longer distinguished as nations, but only as tribes of the same people, under the denomination of Ramnes and Titientes.

3. Early Roman Tribes.

We are told that the people of Rome were divided into three tribes; and, besides the Ramnes and Titientes, a third tribe appears, who are called Luceres. That they were looked upon as an important element in the state, is manifest from the legend that Roma was the daughter of Italus and Luceria. As the distinction of the two former tribes arose from the difference of their national origin, so we may conclude that the Luceres were a people of a third race, and united either by confederacy or subjection with the other two. The origin of the Titientes is distinctly marked: they were Sabines. That of the first tribe, the Ramnes, the genuine Romans of the Palatine, is not so clear; but it seems probable that they belonged to the Opican stock of the Latins. From these circumstances we might reasonably conjecture that the third tribe, the Luceres, were the remains of a people of the Pelasgian race. They are always enumerated in the third place, as the Ramnes are in the first, which accords well with the idea that they were a conquered and subject class. But there is evidence that points more directly to this conclusion. Though the origin of the Luceres was accounted uncertain by the Roman historians, so that Livy does not venture to assign a cause for their name (*Liv.*, 1, 13), yet it was generally supposed to be derived from the Etruscan Lucumo, who had fought with Romulus against Tatius. (*Varro, L. L.*, 4, 9.—*Cic., Repub.*, 2, 8.—*Propert.*, 4, 1, 29.) Now "Lucumo" was only a title mistaken for a proper name, so that nothing could be derived from it, even if the incidents of the legend were received as historical facts. Moreover, the Etruscans, in the infancy of Rome, had not penetrated so far to the south. But the story becomes clear, if we admit that we have here the customary confusion between the Etruscans and Tyrrhenians, and that the allies of the Ramnes of the Palatine were a Tyrrhenian or Pelasgian people, a portion of the old inhabitants of Latium. Dionysius adds a circumstance to the legend which confirms this hypothesis. He says that Lucumo brought his Tyrrhenians from the city Solonium (2, 37). No such city is known to have existed; but the level tract on the seacoast south of the Tiber, lying between Rome on the one hand, and Laurentum and Lavinium on the other, was called the Solonian plain. This region Dionysius probably found mentioned in some annals: this would assuredly be the seat of Pelasgian Latins; and in this very direction we are expressly told that the early dominion of Rome extended most widely. (*Niebuhr*, vol. 1, note 789.) The Tyrrhenian or Pelasgian origin of the Luceres may be deduced yet more clearly from the legend which described their leader as Lucerus, king of Ardea. (*Festus, s. v. Lucereses.*) If we inquire for the town or chief settlement of the Luceres, we shall find reason to conjecture that it was upon the Caelian Hill. We have seen that, according to one tradition, Romulus was supposed to possess the Palatine and the Caelian, while Tatius and his Quirites held the Quirinal and the Capitoline. (*Dion. Hal.*, 2, 50.) As the latter hills were the seat of the second tribe, the Titientes; and the Palatine of the Ramnes, the first and genuine Romans, it seems reasonable to conclude that the Caelian was the site of the third and subject

tribe, the Luceres. Moreover, there is a tradition, though a confused one, that the Caelian took its name from a Tyrrhenian or Tuscan chief, Caelius or Cales, an auxiliary of Romulus; in short, the Lucumo from whom the Luceres were supposed to deduce their appellation. (*Dion. Hal.*, 2, 38.—*Varro, L. L.*, 4, 8, 9.—*Festus, s. v. Caelius Mona*.—*Tac., Ann.*, 4, 65.)

4. Of Patricians and Clients; and of the Plebeian Order.

Among the original population of the city, those who could show a noble or free ancestry constituted the Patrician Order, the term *Patricii* being equivalent to *ingenui* (*Liv.*, 10, 8.—*Cicinius, ep. Fest.*, s. v. *Patricios*); and to them alone belonged a share in the government of the state. The rest of the people were subject to the king and to the body of the Patricians: and each man, with his household, was attached, under the appellation of Client, to the head of some Patrician family, whom he was bound to serve, and from whom he looked for protection and help. It has already been stated, that after the Sabine war and the union of the people of Romulus and Tatius, the citizens were distributed into three tribes, to which were given the names of Ramnes, Titientes, and Luceres; these three primitive tribes were subdivided into thirty *curiæ*, ten in each tribe. In the national assembly the people were called together in their *curiæ*: the votes of the householders in each *curia* were taken in the separate *curiæ*; and the votes of the greater number of the thirty *curiæ* determined the business before the assembly. This assembly was called the *Comitia Curiata*. Besides this popular assembly, there was a select and perpetual council, called the senate. At its first institution it was composed of a hundred chief men of the Patrician order. Ten of these were of higher rank than the rest; and to one, the chief of all, was intrusted the care of the city whenever the king should be absent in war. After the completion of the union with the people of Tatius, the senate was doubled by the addition of a hundred Sabines; and the first Tarquinius added a third hundred to the ancient number. The senators admitted by Tarquinius were called "Fathers of the Less Houses or Kins" (*Patres Minorum Gentium*); and the old senators, "Fathers of the Greater Houses or Kins" (*Patres Majorum Gentium*). Such is a correct, although imperfect outline of the forms of the primitive constitution.—The leading feature in this outline is the position that the original population of Rome was composed only of the Patrician order and their Clients. Upon this statement all our authorities are agreed, either by express assertion or implied consent. But this statement is generally accompanied by another, arising from a false conception, which has obscured and embarrassed the whole course of early Roman history. The Clients are supposed to have been the same with the Plebeians. They are conceived to have been called Plebeians as a body, in opposition to the Patrician body, but Clients individually, in relation to their particular patrons. Such, at least, is the explicit statement of Dionysius, and of Plutarch, who has followed his authority; and this view of the matter has been adopted without question by modern writers. This, however, is a positive error. The Plebe, or Commonalty, was of more recent origin; and the Plebeians, in their civil rights, held a middle place between the ruling Patricians and their dependant clients. One proof of this, and perhaps the strongest that can be adduced, is drawn from the nature of the *Comitia Curiata*. This great national council was the most important of all the institutions connected with the *curiæ*. At its first origin, and as long as it continued to have a real existence, it was composed exclusively of the Patrician order. (*Dion. Hal.*, 2, 21.) It cannot be thought strange that the Clients, an inferior order of men, personally

dependant on individuals of the Patrician body, should not appear in the supreme council of the state. The great distinction which demands our attention is this, that the Plebeians were still more certainly excluded from it. Even when the Plebeian state had grown up to such magnitude and importance that it had its peculiar magistrates, and was become a chief element in the constitution of the commonwealth, even then the *Comitia Curiata* were exclusively Patrician, and the Plebeians had no part in them. The fact was, that the distribution of the people into tribes and *curiæ*, and the still farther division into *Gentes*, or Houses, had respect only to the original stock of the nation; and this original stock kept itself distinct from the body of *new citizens*, which was added by conquest, or sprung up insensibly from other causes. The *Clients*, inasmuch as they were attached to individual Patricians, were attached to the *Gentes*; and so may be considered, in this sense, as included in the greater divisions of *curiæ* and tribes; although it is manifest that they could not appear as members of the *curiæ*, when these were called together as the component parts of the sovereign popular assembly. But the Plebeians grew up as a separate body by the side of the original Patrician citizens, and were never incorporated in their peculiar divisions. They were not members of the *Gentes*, or of the *curiæ*, or of the three tribes; consequently they had no share in the *Comitia Curiata*; and this assembly, in which resided the supreme power of the state, was, as we have already said, exclusively Patrician. It is needless to insist upon the importance of this distinction to a right view of the constitution, and of its successive changes; and, indeed, to a right notion of the whole internal history, which, for more than two centuries, is made up of the struggles of the Patrician and Plebeian orders. Yet this distinction was overlooked by all the writers on Roman history; and they suffered themselves to be misled by the superficial theory of Dionysius, who represented the government of Rome as thoroughly democratical from the very foundation of the city, and conceived the public assembly to be composed of the whole male population of the state, with the exception of household slaves.

5. Of the Patrician *Gentes* or Houses.

The Patrician citizens of Rome were all comprehended in certain bodies which were called *Gentes* (Kins or Houses). The word *Kin* would be the most exact translation of *Gens*; but as this word is nearly obsolete, except in particular phrases, and as the translators of Niebuhr have rendered *Gens* by *House*, the latter term is now generally adopted. (*Philol. Museum*, No 2, p. 348.) The members of the same *Gens* were called *Gentiles*. In each house were contained several distinct families. It is probable that these families were originally single households; but where their numbers increased, they became families in the wider acceptation of the term. From the etymology of the term *Gens*, it is evident that a connexion by birth and kindred was held to subsist among all the members of the same house. The name of the house seems always to have been derived from some mythic hero; and in the popular belief, the hero from whom the house was named was regarded as a common ancestor. Thus the Julian house was regarded as the progeny of Iulus, the son of Æneas (*Dion. Hal.*, 1, 70. — *Virg.*, *Æn.*, 6, 789); and the Valerian house was derived from Volesus, a Sabine warrior, and companion of Tatius. (*Dion. Hal.*, 2, 46.) Even those whose superior information enabled them to reject these fabulous genealogies, adhered to the notion of an original connexion by birth; and a fictitious and conventional kindred was acknowledged by the members of the same house. In describing this kindred of the *Gentiles* as fictitious and conventional, we do

not mean to assert that in no case did such a connexion really exist. No doubt what were called Houses were first formed by natural consanguinity. But it is probable that these natural alliances had suggested an artificial arrangement, and that families not akin to one another had been distributed into houses by some legislative power. This will appear certain, if we shall be convinced of the existence of the precise numerical divisions which will be explained presently. If it be true that originally each *curia* contained ten *gentes*, and each *gens* ten householders, it is obvious that this exact division must have been made arbitrarily. A precisely similar division existed among the ancient Athenians. The *Eupatridæ*, a body which corresponds to the Patrician order at Rome, were divided into four *Phylæ*, which correspond to the three Roman tribes; each *Phylæ* into three *Phratræ*, which correspond to the *Curie*; and each *Phratræ* into thirty *Geneæ* or Houses; so that the total number of Houses was three hundred and sixty. The Athenian Houses were distinguished by names of a patronymic form, which were derived from some hero or mythic ancestor. But, notwithstanding this fictitious kindred, and though all the terms which expressed the relation were derived etymologically from the notion of connexion by birth, the authorities from which we draw our precise knowledge of the institution directly and pointedly deny the reality of such a connexion, and ascribe the origin of the *Geneæ* to an arbitrary division. (*Pollux*, 8, 9, 111. — *Harpocration*, s. v. *γενήτρας*. — *Niebuhr*, vol. 1, note 795.) The great bond of union among the members of a House was a participation in its common religious rites. It seems that each House had its peculiar solemnities, which were performed at a stated time and place. There can be no doubt that, at a fitting age, the children of the *Gens* were admitted to these solemnities, and publicly recognised as members of it; just as in Attica, at the feast of *Apaturia*, Athenian citizens of the pure blood were admitted and registered in their hereditary *Phratræ*.—We have spoken of the *Gentes* as pertaining only to the Patricians. This is affirmed upon direct testimony. (*Liv.*, 10, 8. — *Niebuhr*, vol. 1, p. 316, note 821.) But, in making this statement, we must bear in mind that constructions of a similar nature existed among the Plebeians, which had their origin when the subject and municipal towns were independent states. The Gentile connexions of the Plebeians were older than their character as Roman citizens. Thus, the *Cæcili*, though Plebeians at Rome, were Patricians of *Præneste*, and claimed as the ancestor of their house *Cæculus*, the son of *Vulcan*. The distinction between the Patrician and Plebeian Houses was, in the first place, that every Patrician was a member of a House, while, among the Plebeians, comparatively but few families could claim the honours of hereditary nobility; and, in the second place, that the Patrician Houses were constituent elements of the Roman state. Their existence affected the constitution of the great councils of the nation, the *Comitia Curiata* and the senate, and their internal laws and usages were part of the common law of the Roman people; while of the Plebeian Houses the state took no cognizance.—The nature of the Roman *Gentes* may be illustrated in some points by the analogy of the *Gælic* clans. All who belonged to the *Gens* or to the *Clan* bore a common name. But as the clan contained not only the freemen or gentlemen of the clan, the *Duinnsealls*, who were the companions of the chief and the warriors of the clan, but also their dependants, to whom was left their scanty tillage and the keeping of the cattle, and who, if ever they were called to follow the warlike array of the clan, were imperfectly armed, and placed in the hindmost ranks; so the Roman *Gens* consisted of the freeborn Patricians and of their *Clients*. And our theory, that, notwithstanding the conventional

kindred of the *Gentiles*, the *Gentes* were really, in many cases, composed of families which had no national consanguinity, but had been arbitrarily arranged in them, will appear less strange when we remember that not only the *Disinhwasats*, but the meanest followers of a Highland clan, claim kindred with their chief, although, in many cases, it may be shown, by the strictest historical evidence, that the chief and his blood relations are of an entirely different race from the rest of the clan. The clansmen are Gaels or Celts, while the chief is not unfrequently of Norman descent. (*Malden's Roman History*, p. 123, *seqq.*)

ROMULUS, a patronymic given to the Roman people from Romulus, their first king, and the founder of the city. (*Virg., Æn.*, 8, 638.)

ROMULUS, according to the old poetic legend, was the son of Mars and Ilia or Rea Silvia, daughter of Numitor, and was born at the same birth with Remus. Amulius, who had usurped the throne of Alba, in defiance of the right of his elder brother Numitor, ordered the infants to be thrown into the Tiber, and their mother to be buried alive, the doom of a vestal virgin who violated her vow of chastity. The river happened at that time to have overflowed its banks, so that the two infants were not carried into the middle of the stream, but drifted along the margin, till the basket which contained them became entangled in the roots of a wild vine at the foot of the Palatine Hill. At this time a she-wolf, coming down to the river to drink, suckled the infants, and carried them to her den among the thickets hard by. Here they were found by Faustulus, the king's herdsman, who took them home to his wife Laurentia, by whom they were carefully nursed, and named Romulus and Remus. The two youths grew up, employed in the labours, the sports, and the perils of the pastoral occupation of their foster-father. But, like the two sons of Cymbeline, their royal blood could not be quite concealed. Their superior mien, courage, and abilities soon acquired for them a decided superiority over their young compeers, and they became leaders of the youthful herdsmen in their contests with robbers or with rivals. Having quarrelled with the herdsmen of Numitor, whose flocks were accustomed to graze on the neighbouring hill Aventine, Remus fell into an ambuscade, and was dragged before Numitor to be punished. While Numitor, struck with the noble bearing of the youth, and influenced by the secret stirrings of nature within, was hesitating what punishment to inflict, Romulus, accompanied by Faustulus, hastened to the rescue of Remus. On their arrival at Alba, the secret of their origin was discovered, and a plan was speedily organized for the expulsion of Amulius, and the restoration of their grandfather Numitor to his throne. This was soon accomplished; but the twin-brothers felt little disposition to remain in a subordinate position at Alba, after the enjoyment of the rude liberty and power to which they had been accustomed among their native hills. They therefore requested from their grandfather permission to build a city on the banks of the Tiber, where their lives had been so miraculously preserved. Scarcely had this permission been granted, when a contest arose between the two brothers respecting the site, the name, and the sovereignty of the city which they were about to found. Romulus wished it to be built on the Palatine Hill, and to be called by his name; Remus preferred the Aventine, and his own name. To terminate their dispute amicably, they agreed to refer it to the decision of the gods by augury. Romulus took his station on the Palatine Hill, Remus on the Aventine. At sunrise Remus saw six vultures, and immediately after Romulus saw twelve. The superiority was adjudged to Romulus, because he had seen the greater number; against which decision Remus remonstrated indignantly, on the ground that he had first received an omen. Romulus then proceeded to mark out the boundaries for

the wall of the intended city. This was done by a plough with a brazen ploughshare, drawn by a bull and a heifer, and so directed that the furrow should fall inward. The plough was lifted and carried over the spaces intended to be left for gates; and in this manner a square space was marked out, including the Palatine Hill, and a small portion of the land at its base, termed *Roma Quadrata*. This took place on the 21st April, on the day of the festival of Pales, the goddess of shepherds. While the wall was beginning to rise above the surface, Remus, whose mind was still rankling with his discomfiture, leaped over it, scornfully saying, "Shall such a wall as that keep your city?" Immediately Romulus, or, as others say, Celer, who had charge of erecting that part of the wall, struck him dead to the ground with the implement which he held in his hand, exclaiming, "So perish whosoever shall hereafter overleap these ramparts." By this event Romulus was left the sole sovereign of the city; yet he felt deep remorse at his brother's fate, buried him honourably, and, when he sat to administer justice, placed an empty seat by his side, with a sceptre and crown, as if acknowledging the right of his brother to the possession of equal power. To augment as speedily as possible the number of his subjects, Romulus set apart, in his new city, a place of refuge, to which any man might flee, and be there protected from his pursuers. By this device the population increased rapidly in males, but there was a great deficiency in females; for the adjoining states, regarding the followers of Romulus as little better than a horde of brigands, refused to sanction intermarriages. But the schemes of Romulus were not to be so frustrated. In honour of the god Consus, he proclaimed games, to which he invited the neighbouring states. Great numbers came, accompanied by their families; and, at an appointed signal, the Roman youth, rushing suddenly into the midst of the spectators, snatched up the unmarried women in their arms, and carried them off by force. This outrage was immediately resented, and Romulus found himself involved in a war with all the neighbouring states. Fortunately for Rome, though those states had sustained a common injury, they did not unite their forces in the common cause. They fought singly, and were each in turn defeated; Cæcina, Crustumium, and Antemnæ fell successively before the Roman arms. Romulus slew with his own hands Acron, king of Cæcina, and bore off his spoils, dedicating them, as *spolia opima*, to Jupiter Feretrius. The third part of the lands of the conquered towns was seized by the victors; and such of the people of these towns as were willing to remove to Rome were received as free citizens. In the mean time, the Sabines, to avenge the insult which they had sustained, had collected together forces under Titus Tatius, king of the Quirites. The Romans were unable to meet so strong an army in the field, and withdrew within their walls. They had previously placed their flocks in what they thought a place of safety, on the Capitoline Hill, which, strong as it was by nature, they had still farther secured by additional fortifications. Tarpeia, the daughter of the commander of that fortress, having fallen into the hands of the Sabines, agreed to betray the access to the hill for the ornaments they wore upon their arms. At their approach she opened the gate, and, as they entered, they crushed her to death beneath their shields. From her the cliff of the Capitoline Hill was called the Tarpeian Rock. The attempt of the Romans to regain this place of strength brought on a general engagement. The combat was long and doubtful. At one time the Romans were almost driven into the city, which the Sabines were on the point of entering along with them, when fresh courage was infused into the fugitives in consequence of Romulus vowing a temple to Jupiter Stator, and by a stream of water which rushed out of the temple of

Janus, and swept away the Sabines from the gate. The bloody struggle was renewed during several successive days, with various fortune and great mutual slaughter. At length, the Sabine women who had been carried away, and who were now reconciled to their fate, rushed with loud outcries between the combatants, imploring their husbands and their fathers to spare on each side those who were now equally dear. Both parties paused; a conference began, a peace was concluded, and a treaty framed, by which the two nations were united into one, and Romulus and Tatius became the joint sovereigns of the united people. But, though united, each nation continued to be governed by its own king and senate. During the double sway of Romulus and Tatius, a war was undertaken against the Latin town of Cameria, which was reduced and made a Roman colony, and its people were admitted into the Roman state, as had been done with those whom Romulus previously subdued. Tatius was soon afterward slain by the people of Laurentum, because he had refused to do them justice against his kinsmen, who had violated the laws of nations by insulting their ambassadors. The death of Tatius left Romulus sole monarch of Rome. He was soon engaged in a war with Fidene, a Tuscan settlement on the banks of the Tiber. This people he likewise overcame, and placed in the city a Roman colony. This war, extending the Roman frontier, led to a hostile collision with Veii, in which he was also successful, and deprived Veii, at that time one of the most powerful cities of Etruria, of a large portion of its territories, though he found that the city itself was too strong to be taken. The reign of Romulus now drew near its close. One day, while holding a military muster or review of his army, on a plain near the Lake Capra, the sky was suddenly overcast with thick darkness, and a dreadful tempest of thunder and lightning arose. The people fled in dismay; and, when the storm abated, Romulus, over whose head it had raged most fiercely, was nowhere to be seen. A rumour was circulated, that, during the tempest, he had been carried to heaven by his father, the god Mars. This opinion was speedily confirmed by the report of Julius Proculus, who declared that, as he was returning by night from Alba to Rome, Romulus appeared unto him in a form of more than mortal majesty, and bade him go and tell the Romans that Rome was destined by the gods to be the chief city of the earth; that human power should never be able to withstand her people; and that he himself would be their guardian god Quirinus. (*Plut., Vit. Rom.—Liv., 1, 4, seqq.—Dion. Hal., &c.*)—So terminates what may be termed the legend of Romulus, the founder and first king of Rome. That such an individual never existed is now very generally allowed, and, of course, the whole narrative is entirely fabulous. As to Romulus were ascribed all those civil and military institutions of the Romans which were handed down by immemorial tradition; those customs of the nation to which no definite origin could be assigned; so to Numa were attributed all the ordinances and establishments of the national religion. As the idea of the ancient polity was embodied under the name of Romulus, so was the idea of the national religion under the name of Numa. The whole story of Romulus, from the violation of his vestal mother by Mars, till the end of his life, when he is borne away in clouds and darkness by his divine parent, is essentially poetical. In this, as in other cases, the poetical and imaginative form of the tradition is also the most ancient and genuine; and the variations, by which it is reduced into something physically possible, are the falsifications of later writers, who could not understand that, in popular legends, the marvellous circumstances are not the only parts which are not historically true, and that, by the substitution of commonplace incidents, they were spoiling a good poem without making a good history.

Romulus, the founder of Rome, is merely the Roman people personified as an individual. It was the fashion in ancient tradition to represent races and nations as sprung from an ancestor, or composed of the followers of a leader, whose name they continued to bear; while, in reality, the name of the fictitious chief was derived from the name of the people; and the transactions of the nation were not unfrequently described as the exploits of the simple hero. (*Hetherington's History of Rome, p. 4, seqq.—Malden's Hist. Rome, p. 123, seqq.*)

ROMULUS SILVIUS, I. a king of Alba.—II. Momylius Augustulus, the last of the emperors of the western empire of Rome. (*Vid. Augustulus.*)

ROMUS, a king of the Latins, who expelled the Tyrrhenians from the city afterward called, from him, Roma. (*Plut., Vit. Rom.*)—Consult remarks under the article Roma, page 1172, col. 1.)

ROSCIA LEX, *de Theatris*, by L. Roscius Otho, the tribune, A.U.C. 685. (*Vid. Otho II.*)

ROSCILIVM, a fortified port on the coast of Bruttium, below Sybaris. It is now *Rossano*. The haven of the Thurians, by name Roscia, was nearer the sea, at the mouth of a small river. (*Itin. Ant.—Procop., Rer. Goth., 3.—Cramer's Anc. Italy, vol. 2, p. 387.*)

ROSCIUS, I. Q., a Roman actor, from his surname Gallus supposed to have been a native of Gaul, north of the Po, although educated in the vicinity of Lanuvium and Aricia. He was so celebrated on the stage that his name has become, in modern times, a usual term to designate an actor of extraordinary excellence. Cicero, in his work on Divination (1, 36), makes his brother Quintus say that the young Roscius was found one night in his cradle enveloped in the folds of a serpent; that his father, having consulted the auspices respecting this prodigy, they told him that his child would attain great celebrity. Quintus adds, that a certain Praxiteles had represented this in sculpture, and that the poet Archias had celebrated it in a song. Roscius had some defect in his eyes, and is therefore said to have been the first Roman actor who used the Greek mask; the performers, before this, using only caps or beavers, and having their faces daubed and disguised with the lees of wine, as at the commencement of the dramatic art in Greece. And yet, as appears from the following passage of Cicero, the mask was not invariably worn even by Roscius: "All," says Cicero, "depends upon the face, and all the power of the face is centred in the eyes. Of this our old men are the best judges, for they were not lavish of their applause even to Roscius in a mask." (*De Orat., 3, 59.*) Valerius Maximus (8, 7) states, that Roscius studied with the greatest care the most trifling gesture which he was to make in public; and Cicero relates, that though the house of this comedian was a kind of school where good actors were formed, yet Roscius declared that he never had a pupil with whom he was completely satisfied. If Plutarch be correctly informed, Cicero himself studied under this great actor; he was certainly his friend and admirer. Macrobius (*Sat., 2, 10*) informs us, that Cicero and Roscius sometimes tried which of the two could express a thought more forcibly, the one by his words, or the other by his gestures, and that these exercises gave Roscius so high an opinion of his art, that he wrote a work, in which he made a comparison between it and eloquence. The same author mentions that Sylla, the dictator, to testify his admiration, sent the actor a gold ring, a symbol of equestrian rank. His daily profits were 1000 denarii (nearly one hundred and eighty dollars). According to Pliny, his annual gains were about twenty thousand dollars. Roscius died about 62 B.C.; for, in Cicero's defence of Archias, which was delivered A.U. 693, the death of Roscius is alluded to as a recent event. (*Horat., Epist., 2, 1, 82.—Plut., Vit. Cic.—Dunlop's Rom. Lit., vol. 1, p. 591.*)—II.

RUBICON, a native of Ameria, defended by Cicero in the first public or criminal trial in which that orator spoke. The father of Roscius had two mortal enemies, of his own name and district. During the proscriptions of Sylla, he was assassinated one evening while returning home from supper; and on the pretence that he was in the list of the proscribed, his estate was purchased for a mere nominal price by Chrysogonus, a favourite slave, to whom Sylla had given freedom, and whom he had permitted to buy the property of Roscius as a forfeiture. Part of the valuable lands thus acquired was made over by Chrysogonus to the Roscii. These new proprietors, in order to secure themselves in the possession, hired one Erucius, an informer and prosecutor by profession, to charge the son with the murder of his father, and they, at the same time, suborned witnesses, in order to convict him of the parricide. Cicero succeeded in obtaining his acquittal, and was highly applauded by the whole city for his courage in espousing a cause so well calculated to give offence to Sylla, then in the height of his power. The oration delivered on this occasion is still extant, and must not be confounded with another that has also come down to us in defence of the tragedian Roscius, and which involved merely a question of civil right. (*Cic., pro Rosc. Amer.*)—III. **Otho**. (*Vid. Otho II.*)

ROTHOMAGUS, a city of Gallia Lugdunensis, at a later period the capital of Lugdunensis Secunda. Now *Rouen*. (*Ptol.*)

ROXANA, a Bactrian female, remarkable for her beauty. She was the daughter of Oxyartes, commander of the Sogdian rock for Darius; and, on the reduction of this stronghold by Alexander, became the wife of the conqueror. At the death of the monarch she was enceinte, and was subsequently delivered of a son, who received the name of Alexander Ægus, and who was acknowledged as king along with Philip Aridæus. Roxana having become jealous of the authority of Statira, the other wife of Alexander, destroyed her by the aid of Perdicas; but she herself was afterward shut up in Amphipolis, and put to death by Cassander. (*Plut., Vit. Alex.—Quint. Curt., 8, 4.—Id., 10, 6.—Justin., 12, 16, &c.*)

ROXOLANI. *Vid. Rhoxolani.*

RUBRAS PROMONTORIUM, a promontory mentioned by Pytheas (*Phin., 4, 13*), and supposed by many to be the same with the *Norih Cape*, but shown by Mannert to correspond rather to the northern extremity of *Curland*. (*Geogr., vol. 3, p. 300, seqq.*)

RUBI, a town of Apulia, between Canusium and Butuntum, now *Ruvo*. The inhabitants were called *Rubustini* and *Rubitini*. (*Phin., 3, 11*.) It is also referred to by Horace and Frontinus. (*Horat., Sat., 1, 5, 94.—Frontin., de Col.*) For an account of some interesting discoveries made near *Ruvo*, consult Romanelli (*vol. 2, p. 172.—Cramer's Ancient Italy, vol. 2, p. 299*).

RUBICON, a small stream of Italy, falling into the Adriatic a little to the north of Ariminum, and forming, in part, the northern boundary of Italia Propria. It was on this last account that it was forbidden the Roman generals to pass the Rubicon with an armed force, under the most dreadful imprecations; for in violating this injunction they would enter on the immediate territory of the republic, and would be, in effect, declaring war upon their country. Cæsar crossed this stream with his army at the commencement of the civil war, and harangued his troops at Ariminum. When Augustus subsequently included Gallia Cisalpina within the limits of Italy, the Rubicon sank in importance; and in modern times it is difficult to ascertain the position of the true stream. D'Anville makes it correspond with a current which, formed of three brooks, is called at its mouth *Fiumesino*. A formal papal decree, however, issued in 1756, decided in favour of the

Lusa; but popular tradition designates the *Pisatello* as the true stream, and this river best suits the account we have of the situation of the Rubicon. (*Mannert, Geogr., vol. 2, pt. 1, p. 243, seqq.—Appian, Bell. Civ., 2, 135.—Suet., Cas., 30.—Plut., Vit. Cas. et Pomp.—Cic., Phil., 6, 8.—Strab., 227.—Plin., 3, 15.*)

RUBICO, a goddess. (*Vid. Robigo.*)

RUSO or **RUVSON**, a river of Sarmatia, now the *Windau* according to Wilhelm (*Germanien, und seine Bewohner, Weimar, 1823*); but, according to Gosselin, the *Niemen*.

RUDIA, I. a city of Italy, in the territory of the Calabris, in Iapygia, and below Brundisium. It was rendered famous by being the birthplace of Ennius. (*Sil. Ital., 12, 393.—Horat., Od., 4, 8, 20.—Ovid, A. A., 3, 409.—Strabo, 281.*) The more proper form of the name is Rhodia, the appellation being one of Greek origin. According to an antiquarian writer, the remains of Rhodia, still known by the name of *Ruge*, were to be seen close to those of the town of Lupat; he also states, that these towns were so near to each other that they might be said to form but one. (*Ant. de Ferar. de sit. Iapyg., p. 77.—Compare D'Anville, Anal. Geogr. de l'Italie, p. 230.—Cramer's Anc. Italy, vol. 2, p. 308.*)—II. A town of Apulia, in Italy, placed in the Tabula Theodosiana between Canusium and Rubi. It is sometimes called, for distinction's sake, *Rudis* (or *Rhudis*) *Peucetia*, as it lay in the district of Peucetia; the other *Rudis* being styled *Rudis Calabris*. Romanelli places the site of this town at *Andria* (*vol. 2, p. 170.—Phin., 3, 11.—Mela, 2, 4.—Cramer's Ancient Italy, vol. 2, p. 299.*)

RUFINUS, I. minister of state to the Emperors Theodosius and Arcadius, and a native of Gaul. He was naturally vindictive and cruel, and is supposed to have stimulated Theodosius to the dreadful massacre of Thessalonica. After the death of this monarch, he succeeded, in fact, to absolute authority over the Eastern empire in the reign of Arcadius. He soon, however, fell beneath the power of Stilicho, general under Honorius in the Western empire, and was put to death by the army. He is said to have aspired to the supreme authority.—II. A Latin poet, supposed to have flourished about the sixth century. Crugius published a small poem, which he attributed to Rufinus, on the fable of Pasiphaë, which he found in an old manuscript. This poem is composed of verses written in all the different measures employed by Horace, and is, therefore, sometimes prefixed to editions of the latter poet. It is regarded by many as the production of some grammarian, and, probably, of the same Rufinus, a treatise on metres by whom still remains, as well as a small poem, in thirty-two verses, on Love. (*Burmman, Anthol. Lat., vol. 1, p. 513, 663.—Schöll, Hist. Lit. Rom., vol. 3, p. 99.*)—III. A grammarian of Antioch, alluded to in the previous article. Besides the works there mentioned, he wrote also a commentary on the metres of Terence.—IV. An ecclesiastical writer, a native of Concordia, a place near Aquileia. By some he is called Toranius. He was the friend of St. Jerome, with whom, however, he had at one time a quarrel on points of doctrine. His death occurred A.D. 408. Rufinus translated, from Greek into Latin, Josephus, and the Ecclesiastical History of Eusebius, &c.; besides which, he left some treatises in defence of Origen, and on other subjects. His works were printed at Paris in 1580.

RUGI, a people of Germany, on the coast of the Sinus Codanus, between the Viadrus or *Oder* and the Vistula, and situate to the west of the Gothones. They were in possession of the isle of Rugia (now *Rügen*), where the goddess Hertha was worshipped with peculiar reverence. Ptolemy gives Rhugium as their capital. At a subsequent period they founded a new kingdom on the northern side of the Danube, named after them *Rugiland*, in Austria and Upper Hungary,

which was overthrown by Odoacer. (*Tac., Germ.*, 43.—*Jour. Gt.*, 50, 57.)

RUPILIUS, a native of Præneste, surnamed *Rex*, who, having been proscribed by Octavianus, then a triumvir, fled to the army of Rutus, and became a fellow-soldier of Horace. Jealous, however, of the military advancement which the latter had obtained, Rupilius reproached him with the meanness of his origin, and Horace therefore retaliates in the seventh Satire of the first book, where a description is given of a suit between this Rupilius and a certain Persius, tried before Marcus Brutus, at that time governor of Asia Minor. (Compare *Gesner, ad loc.*—*Dunlop's Roman Literature*, vol. 3, p. 251.)

RUTENI, a people of Celtic Gaul, whose territory answered to the modern *Rouergue*. Their chief city was Segodunum, now *Rhodes*. (*Cæs., B. G.*, 1, 45.—*Id. ib.*, 7, 7, &c.)

RUTILIUS, I. Lupus, a rhetorician, a treatise of whose, in two books, *de Figuris Sententiarum et Elocutionis*, still remains. The period when he flourished is uncertain. A false reading in Quintilian (3, 1, 21) has given rise to the belief that he was contemporary with this writer; but Ruhnken has shown that, in this passage of Quintilian, we must read *Tutillus* for *Rutilius*, and that Rutilius was anterior to Celsus, who lived under Augustus and Tiberius. The work of Rutilius already alluded to is extracted and translated from a work by a certain Gorgias, a Greek writer contemporary with him, and not to be confounded with the celebrated Gorgias of Leontini. The best edition is that of Ruhnken, *Lugd. Bat.*, 1768, 8vo, republished by Frotscher, *Lips.*, 1831, 8vo.—II. Numatianus, a native of Gaul, born either at Tolosa (*Toulouse*) or Pictavi (*Poitiers*), and who flourished at the close of the fourth and commencement of the fifth centuries of our era. We have an imperfect poem of his remaining, entitled *Itinerarium*, or *De Reditu*. It is written in elegiac verse, and, from the elegance of its diction, the variety and beauty of its images, and the tone of feeling which pervades it, assigns its author a distinguished rank among the later Roman poets. Rutilius had been compelled to make a journey from Rome into Gaul, for the purpose of visiting his estates in the latter country, which had been ravaged by the barbarians, and the *Itinerary* is intended to express the route which he took along the coast of the Mediterranean. Rutilius is supposed by some to have been prefect at Rome when that city was taken by Alaric, A.D. 410. He was not a Christian, as appears from several passages of his poem, though the heavy complaints made by him against the Jewish race ought not, as some editors have imagined, to be extended to the Christians. We have remaining of this poem the first book, and sixty-eight lines of the second; and perhaps the particle *potius*, in the first line of the first book, would indicate that the commencement of this book was also lost. The remains of the poetry of Rutilius are given by Burmann and Wernsdorff, in their respective editions of the *Poeta Latini Minores*. There are also separate editions.

RUTULI, a people of Latium, along the coast below the mouth of the Tiber. They were a small community, who, though perhaps originally distinct from the Latins, became subsequently so much a part of that nation that they do not require a separate notice. Their capital was Ardea, and Turnus was their prince, according to the fable of the *Æneid*, when the Trojans arrived in Italy. (*Vid. Ardea, Latium, Turnus.*)

RUTUPIÆ (called also *Ritupæ*, *Portus Ritupis*, and *Portus Ritupius*), a harbour on the coast of Britain, famed for its excellent oysters. It is generally considered as corresponding to *Richborough*, though D'Anville is in favour of *Wandrich*. (Compare *Bede*, 1, 1, "*Rutubi, nunc corrupte Replacostir.*") Rutu-

piæ was the port to which the Romans commonly came, from the opposite coast of Gaul, the harbour on this latter side, whence they usually started, being Gesoriacum. Thus the *Itinerarium Maritimum* (p. 496) says, "*A portu Gesoriacensi ad portum Ritupium Stadia CCCCL*" (46 geographical miles). It is on this account that the name of the Ritupian harbour frequently occurs in the later writers. The *Itin. Ant.* (p. 463) gives the same statement as the *Itin. Marit.* relative to the passage across. (*Mannert, Geogr.*, vol. 2, pt. 2, p. 160.) As regards the Rutupian oysters, consult Juvenal (4, 141), and the remarks of the commentators, and also Pliny (9, 54; 32, 6).

S.

SABA, the capital of the Sabæi, in Arabia Felix, situate on a rising ground, in the interior of the country, and in a northeastern direction from the harbour of Pudun (*Dejran*). According to Strabo (778), it was also called Mariaba, and in this he is followed by later writers, who, however, give the more correct form Mariaba. It would seem, that Mariaba is a general term for a chief city, and hence we find more than one appearing in the geography of Arabia. According to Mannert, Saba would appear to correspond with the modern *Seada* or *Seade*. (*Geogr.*, vol. 6, pt. 1, p. 66.)

SABACHUS or SABACHON, a king of Æthiopia, who invaded Egypt, and reigned there after the expulsion of King Amasis. After a reign of fifty years he was terrified by a dream, and retired into his own kingdom. Diodorus Siculus states (1, 66), that after the departure of Sabachus, there was an anarchy of two years, which was succeeded by the reign of twelve kings, who, at their joint expense, constructed the labyrinth. (Consult remarks under the article *Psammithus*.) The name of Sabacon, in hieroglyphic characters, has been found amid the ruins of Abydos. (*Bähr, ad Herod.*, 2, 36.)

SABÆI, a people of Arabia Felix, represented by some of the ancient writers, especially the poets, as one of the richest and happiest nations in the world, on account of the valuable products of their land. Another name, viz., that of the Homeritæ (thought to be derived from Himiar, the name of a sovereign, and which signifies the red king), appears in a later age confounded with that of the Sabæans. (*Vid. Saba*.)

SABATE, a town of Etruria, northeast of Caere, and not far from the site of the present *Bracciano*. It was in the immediate vicinity of a lake, called from it the *Lacus Sabatinus*. The town was said to have been swallowed up by the waters of the lake, and it was even asserted, that in calm weather its ruins might still be seen below the surface of the water. (*Sotion, de Mirand. Font.*) Columella notices the fish of the lake, and Frontinus speaks of its water being conveyed by an aqueduct to the capital. (*Columell.*, 8, 16.—*Front., de Aqued.*, 1.—*Cramer's Anc. Italy*, vol. 1, p. 235.)

SABATINI, a people of Campania, who derived their name from the small river Sabatus that flowed through their territory. They are mentioned by Livy (26, 33) among the Campanian tribes that revolted to Hannibal. (*Cramer's Anc. Italy*, vol. 2, p. 247.)

SABĀRUS, a river rising in Campania, and flowing into Samnium, where it joined the Calor, near Beneventum. It is now the *Sabbato*. (*Cramer's Anc. Italy*, vol. 2, p. 247.)

SABAZIUS, a surname of Bacchus, given him, according to some, by the Thracians (*Schol. ad Arist., Vesp.*, v. 9), or, according to others, by the Phrygians. (*Strabo*, 470.—*Schol. ad Aristoph., Av.*, v. 874.—*Schol. ad Lysist.*, v. 398.) De Sacy inclines to the opinion that the root of this appellation may be found in the name of the Arabian city Saba. (*Sainte-Croix*,

Mystères du Paganisme, vol. 2, p. 95, *édit. De Sacy*.)

SABBĀTA or SABBATHA, a city of Arabia Felix, the capital of the Chatramatim. Most commentators on the Periplus, in which mention is made of it, suppose it to be the same with Schibam or Scebam, which Al-Edrisi places in Hadramaut, at four stations, or a hundred miles, from Mareb. (*Vincent's Periplus*, p. 334.) Mannert, however, declares for Mareb (*Geogr.*, vol. 6, pt. 1, p. 83). The modern name Mareb will be a corruption from Mariaba, a name common to many cities of Arabia. This place was the great depot for the incense-trade. (*Vid.* Saba.)

SABELLI. *Vid.* Sabini.

SABINA, JULIA, grand-niece of the Emperor Trajan, and wife of Hadrian, to whom she became united chiefly through the means of the Empress Plotina. She lived unhappily with her husband, partly from her own asperity of temper, and partly, perhaps, from the gross vices of her consort. Hadrian's unkindness to her is said to have been the cause of her death. (*Vid.* Hadrianus.)

SABINI, a people of Italy, whose territory lay to the northeast of Rome. The Sabines appear to be generally considered as one of the most ancient indigenous tribes of Italy, and one of the few who preserved their race pure and unmixed. (*Strabo*, 238.) We are not to expect, however, that fiction should have been more sparing of its ornaments in setting forth their origin, than in the case of other nations far less interesting and less celebrated. Dionysius of Halicarnassus, among other traditions respecting the Sabines, mentions one which supposes them to have been a colony of the Lacedæmonians about the time of Lycurgus (2, 49), an absurd fable which has been eagerly caught up by the Latin poets and mythologists. (*Sil. Ital.*, 15, 545.—*Ovid, Fast.*, 1, 260.—*Hygin, ap. Serv. ad Æn.*, 8, 638.) Their name, according to Cato, was derived from the god Sabus, an aboriginal deity, supposed to be the same as the god invoked by the Latins in the expression *Medius Fidius*. (*Cramer's Anc. Italy*, vol. 1, p. 297.)—The Romans, observes Niebuhr, have no common national name for the Sabines, and the tribes which are supposed to have issued from them: the latter, whether Marsians and Pelignians, or Samnites and Lucanians, they term Sabellians. That these tribes called themselves Savini or Sabini is nearly certain, from the inscription on the Samnite denarius coined in the Social war; at least as to the Samnites, whose name is in every form manifestly, and in the Greek *Σαυίται* directly, derived from Savini: but the usage of a people whose writings have perished, like everything that is extinct in fact, has lost its rights. I think myself at liberty to employ the term Sabellians for the whole race; since the tribes which were so named by the Romans are far more important than the Sabines, and it would clearly have offended a Latin ear to have called the Samnites Sabines.—When Rome crossed the frontiers of Latium, the Sabellians were the most widely-extended and the greatest people in Italy. The Etruscans had already sunk, as they had seen the nations of earlier greatness sink, the Tyrrhenians, Umbrians, and Aŭsonians. As the Dorians were great in their colonies, the mother-country remaining little; and as it lived in peace, while the tribes it sent forth diffused themselves widely by conquests and settlements, so, according to Cato, was it with the old Sabine nation. Their original home is placed by him about Amitemum, in the highest Apennines of the Abruzzo, where, on Mount Majella, the snow is said never wholly to disappear, and where the mountain-pastures in summer receive the Apulian herds. From this district they issued in very ancient times, long before the Trojan war; and, expelling in one quarter the Aborigines, in another the Umbrians, took possession of the territory which for

three thousand years has borne their name. Out of this the overflowing population migrated to different parts. It was an Italian religious usage, in times of severe pressure from war or pestilence, to vow a sacred spring (*per sacrum*); that is, all the creatures born in the spring: at the end of twenty years the cattle were sacrificed or redeemed, the youth sent out. (*Liv.*, 33, 44.—*Festus, s. v. Mamertini*.—*Dion. Hal.*, 1, 16.) Such a vow the Romans made in the second year of the second Punic war; but only as to their flocks and herds. (*Liv.*, 33, 9.) Such vows, the tradition runs, occasioned the sending out of the Sabine colony: the gods to whom each was dedicated charged sacred animals to guide them on their way. One colony was led by a woodpecker, the bird of Mamers, into Picenum, then peopled by Pelasgians or Liburnians: another multitude by an ox into the land of the Opicans; this became the great Samnite people: a wolf guided the Hirpini. That colonies issued from Samnium is known historically. The Frentani on the Adriatic were Samnites, who emigrated in the course of the second Roman war; Samnites conquered Campania and the country as far as the Silurus; another host, calling themselves Lucanians, subdued and gave name to Lucania.—The Italian national migrations came down like others from the North; and Cato's opinion, that the origin of all the Sabellians was derived from the neighbourhood of Amitemum, admits of no other rational meaning than that the most ancient traditions, whether they may have been Sabine or Umbrian, assigned that district as the habitation of the people that conquered Reate. Dionysius, indeed, seems to have understood Cato as having derived all the Sabines, and, consequently, through them their colonies, from a single village, Testrina, near Amitemum, as it were from a germe; but so extravagant an abuse of genealogy ought not surely to be imputed to Cato's sound understanding. He must have known and remembered how numerous the nation was at the time of its utmost greatness, when it counted perhaps millions of freemen. At Reate, in the Sabina, in the country of the Marsians, they found and subdued or expelled the Aborigines; about Beneventum, Opicans, and probably, therefore, in the land of the Hirpini also. On the left bank of the Tiber they dwelt in the time of the Roman kings, low down, intermingled with the Latins, even south of the Anio, not merely at Collatia and Regillum, but also on two of the Roman hills. Wars with the Sabines form a great part of the contents in the earliest annals of Rome; but with the year 306 they totally cease, which evidently coincides with their diffusion in the south of Italy. Towards this quarter the tide now turned, and the old Sabines on the Tiber became quite insignificant.—Strictness of morals and cheerful contentedness were the peculiar glory of the Sabellian mountaineers, but especially of the Sabines and the four northern cantons: this they preserved long after the ancient virtue had disappeared at Rome from the hearts and the demeanour of men. Most of the Sabellian tribes, and the Sabines themselves, inhabited open hamlets; the Samnites and the members of the northern confederacy dwelt, like the Epirots, around the fortified summits of their hills, where a brave people could defend the approaches even without walls; not that they had no fortified towns, but the number was small.—The Sabellians would have made themselves masters of all Italy, had they formed a united or even a firmly-knit federal state, which should have lastingly appropriated its conquests, holding them in dependence, and securing them by colonies. But, unlike the Romans, the enjoyment of the greatest freedom was what they valued the highest; more than greatness and power, more than the permanent preservation of the state. Hence they did not keep their transplanted tribes attached to the mother-country: they became forthwith foreign, and frequently

hostile to the state they had issued from: while Rome, sending out colonies of small numbers, was sure of their fidelity; and by means of these, and by imparting dependant civil rights, converted a far greater number of subdued enemies into devoted subjects. (*Niebuhr, History of Rome*, vol. 1, p. 71, *seqq.*, *Cambridge translation*.)—In fixing the limits of the Sabine territory, we must not attend so much to those remote times when they reached nearly to the gates of Rome, as to that period in which the boundaries of the different people of Italy were marked out with greater clearness and precision, namely, the reign of Augustus. We shall then find the Sabines separated from Latium by the river Anio; from Etruria by the Tiber, beginning from the point where it receives the former stream, to within a short distance of *Otricoli*. The Nar will form their boundary on the side of Umbria, and the central ridge of the Apennines will be their limit on that of Picenum. To the south and southeast it may be stated generally, that they bordered on the *Æqui* and *Vestini*. From the Tiber to the frontiers of the latter people, the length of the Sabine country, which was its greatest dimensions, might be estimated at 1000 stadia, or 120 miles, its breadth being much less considerable. (*Strabo*, 228.—*Cramer's Ancient Italy*, vol. 1, p. 300.)

SABINUS, Aulus, a Roman poet, the friend and contemporary of Ovid, and to whom the last six of the heroic epistles of that bard are generally ascribed by commentators. These are, Paris to Helen, Helen to Paris, Leander to Hero, Hero to Leander, Acontius to Cydippe, and Cydippe to Acontius. He was the author, also, of several answers to the epistles of Ovid, as *Ulysses* to *Penelope*, *Aeneas* to *Dido*, &c., and likewise of a work on *Days*, which his death prevented him from completing. This last-mentioned production is thought by some to have given Ovid the idea of his *Fæsti*. (*Bähr, Gesch. Röm. Lit.*, vol. 1, p. 291.)

SABIS, I. a river of Gallia Belgica, rising in the territory of the Nervii, and falling into the Mosa (*Maese*) at Namurcum (*Namur*), in the territory of the Aduatci. It is now the *Sambre*. (*Cæs.*, *B. G.*, 2, 16, 19.)—II. A river of Carmania, between the southern promontory of Carmania and the river Andanis. Manert is inclined to identify it with the Anamis, which runs by the city of Hormeza, and falls into the Persian Gulf near the promontory of Armozum. (*Mela*, 3, 8.—*Plin.*, 6, 23.) It is also called the *Saganus*.—III. A river of Cisalpine Gaul, rising in Umbria, and falling into the Adriatic north of the Rubicon. It is now the *Savio*. At its mouth lay the town of *Savis*, now *Torre del Savio*.

SABRITA, a city of Africa, in the Regio Syrtica, west of Cæa and east of the Syrtis Minor. It formed, together with Cæa and Leptis Magna, what was called Tripolis Africana. Justinian fortified it, and it is now *Sabari* or *Tripoli Vecchio*. (*Itin. Anton.*—*Solin.*, c. 27.—*Plin.*, 5, 4.—*Procop.*, *Ædif.*, 6, 4.)

SABRINA, also called *Sabrians*, now the *Severa* in England. (*Ptol.*—*Tac.*, *Ann.*, 12, 81.)

SACÆ, a name given by the Persians to all the more northern nations of Asia, but which, at a subsequent period, designated a particular people, whose territory was bounded on the west by Sogdiana, north and east by Scythia, and south by Bactriana and the chain of Imaus. Their country, therefore, corresponds in some degree to *Little Bucharay* and the adjacent districts. The Sacæ were a wild, uncivilized race, of nomadic habits, without cities, and dwelling in woods and caves. (*Herod.*, 7, 9.—*Mela*, 3, 7.—*Plin.*, 6, 17.—*Arrian.*, *Marcell.*, 23, 6.)—As regards the origin of the name *Sacæ*, which some etymologists deduce from the Persian *Ssagh*, "a dog," and which they suppose to have been used as a term of contempt for a people of different race and religion, consult remarks under the article *Scythia*.

SACRA INSULA, an island in the Tiber, not far from its mouth, formed by the separation of the two branches of that river. It received its name from the circumstance of the snake's having darted on shore here, which the Romans had brought from Epidaurus, supposing it to be *Esculapius*. (*Procop.*, *B. G.*, 1, 26.)

SACRA VIA, a celebrated street of Rome, where a treaty of peace and alliance was fabled to have been made between Romulus and Tatius. It led from the Amphitheatre to the Capitol, by the temple of the Goddess of Peace and the temple of Cæsar. The triumphal processions passed through it to the Capitol. (*Horat.*, *Od.*, 4, 2.—*Sat.*, 1, 9.—*Liv.*, 2, 13.—*Cic.*, *Planc.*, 7.—*Att.*, *Ep.*, 4, 3.)

SACRUM, I. **BELLUM**, a name given to the war carried on against the Phocians, for their sacrilege in relation to the sanctuary at Delphi. (*Vid. Phocis*).—II. Promontorium, a promontory of Spain, now *Cape St. Vincent*, called by Strabo the most westerly part of the earth. It was called *Sacrum* because the ancients believed this to be the place where the sun, at his setting, plunged his chariot into the sea. (*Mela*, 3, 6.—*Plin.*, 4, 23.)—III. Another promontory, on the coast of Lycia, near the Chelidonian Islands, and now *Cape Kelidonia*. This headland obtained great celebrity from its being commonly looked upon as the commencement of the great chain of Taurus, which was accounted to traverse, under various names, the whole continent of Asia. (*Plin.*, 5, 37.) But Strabo observes, that Taurus really began in Caria (*Strab.*, 666); and other geographers even supposed it to commence with Mycale. (*Arrian.*, *Exp. Al.*, 5, 5, 2.) The modern name of the Sacred Promontory comes from the group of the Chelidonian Islands, in its immediate vicinity, to which we have already referred (*Cramer's Asia Minor*, vol. 2, p. 256.)—IV. Another at the southern extremity of Corsica, now *Cape Corso*. (*Ptol.*)

SADYATES, one of the Mermnadsæ, who reigned in Lydia 12 years after his father Gyges. He made war against the Milesians for six years. (*Herod.*, 1, 16.)

SARINIA, I. a river of Spain, between the Iberus and the Pillars of Hercules. According to some, it is now the *Cennis* or *Senia*; Ukert, however, makes it the same with the Udubra of Pliny and the Turulis of Ptolemy. (*Mela*, 3, 6.)—II. A city of Spain (*Hispantia Tarraconensis*), in the territory of the Cætestani, and situate on a height, just below the river Sucro or *Xucar*. It was a municipium, and had received a Roman colony, from which latter circumstance it took the name of *Augusta*. *Sarabia* was famed for its linen manufacture. (*Plin.*, 19, 2.—*Cæll.*, 12.—*Id.*, 20, 14.—*Sil. Ital.*, 3, 373.) The Arabians changed the name to *Xatifa*. (*Marca, Hist.*, 2, 6, p. 118.—*Laborde, Itin.*, vol. 1, p. 226.) Since the commencement of the present century, however, its more usual appellation is *S. Philippe*. (*Mannert, Geogr.*, vol. 1, p. 425.—*Ukert, Geogr.*, vol. 2, p. 465.)

SARINIS. *Vid. Sangaris*.

SAGRA or **SAGRAS**, a river of Magna Græcia, in the territory of the Brutii, falling into the Sinus Tarentinus, a short distance above the Zephyrian promontory. It was on the banks of the *Sagras* that the memorable overthrow of the Crotoniats took place, when they were defeated by a force of 10,000 Locrians, with a small body of Rhegiens. So extraordinary a result did this appear, that it gave rise to the proverbial expression, ἀλθιότρεπα τὸν ἐνὶ Σάγρα. Among other marvellous circumstances connected with this event, it was reported that the issue of the battle was known at Olympia the very day on which it was fought. (*Strab.*, 261.—*Cicero*, *N. D.*, 2, 2.—*Justin*, 20, 2.) Geographers differ much as to the modern river which corresponds with this celebrated stream; but, if Romanelli is correct in affirming that the mountain from which the *Alaro* takes its source is still called

Sagra, we can have no difficulty in recognising that river as the ancient *Sagras*; more especially as its situation accords perfectly with the topography of Strabo. (*Cramer's Anc. Italy*, vol. 2, p. 402.)

SAGUNTUM or *SAGUNTUS*, a city of Hispania Tarraconensis, north of Valentia, and some distance below the mouth of the Iberus. It was situated on a rising ground, about 1000 paces from the shore; Polybius (3, 17) says seven stadia, Pliny (3, 4) three miles. This place was said to have been founded by a colony from Zacynthus (*Ζάκυνθος*, *Σάγουντος*, *Saguntus*), intermingled with Rutulians from Ardea. (*Liv.*, 21, 7, 14.—*Sil. Ital.*, 1, 291, &c.) It became at an early period the ally of the Romans (*Polyb.*, 3, 30), and was besieged and taken by Hannibal previous to his march upon Italy. The siege lasted eight months, and, being an infraction of the treaty with the Romans, led at once to the second Punic war. Hannibal's object was to prevent the Romans retaining so important a place of arms, and so powerful an ally in a country from which he was about to depart. The desperate valour of the citizens, who chose to perish with all their effects rather than fall into the enemy's hands, deprived the conqueror of a great part of his anticipated spoils; the booty, however, which he saved from this wreck, enabled him, by his liberality, to gain the affection of his army, and to provide for the execution of his design against Italy. (*Liv.*, 21, 9.—*Mela*, 2, 6.—*Diod. Sic.*, *Eclog.*, 25, 5.—*Sil. Ital.*, 13, 673.) Eight years after it was restored by the Romans. (*Liv.*, 24, 42.—*Plin.*, 3, 5.) Saguntum was famous for the cups manufactured there. (*Plin.*, 35, 12.—*Martial*, 4, 46, &c.) The modern *Muriedro* (a corruption of *Muri veteres*) marks the ancient city. (*Mannert, Geogr.*, vol. 1, p. 423.—*Ukert, Geogr.*, vol. 2, p. 415.)

Sais, a city of Egypt, situate in the Delta, between the Sebennytic and Canopic arms of the Nile, and nearly due west from the city of Sebennytus. It was not, indeed, the largest, but certainly the most famous and important city in its day of all those in the Delta of Egypt. This pre-eminence it owed, on the one hand, to the yearly festival celebrated here in honour of Neith, the Egyptian Minerva, to which a large concourse of spectators was accustomed to flock (*Herod.*, 2, 59); and, on the other, to the circumstance of its being the native city, the capital, and the burying-place of the last dynasty of the Pharaohs. (*Herod.*, 2, 169.) For the purpose of embellishing it, King Amasis built a splendid portico to the temple of Neith in this city, far surpassing all others, according to Herodotus, in circumference and elevation, as well as in the dimensions and quality of the stones: he also adorned the building with colossal statues, and the immense figures of Androepinx. Herodotus likewise informs us, that a large block of stone, intended for a shrine, was brought hither from Elephantis. Two thousand men were employed three whole years in its transportation. The exterior length of the stone was twenty-one cubits, its breadth fourteen, and its height eight. The inside was eighteen cubits and twenty-eight digits in length, twelve cubits in breadth, and five in height. This remarkable edifice was placed by the entrance of the temple, it being found impossible, it would seem, to drag it within, although Herodotus assigns a different reason (2, 175).—When Egypt had fallen under the Persian power, Memphis became the new capital, and Sais was neglected. It did not, however, fall as low as the other cities of the Delta. Strabo, even in his days, acknowledges it to have been the chief city of Lower Egypt; he speaks also of a temple of Neith, and of the tomb of Psammitichus. In another passage, he remarks, that somewhat to the south of this city was a very sacred temple of Osiris, in which, according to tradition, that deity was buried. (*Strab.*, 802.) Sais was also famous for its festival of lamps.

The modern *Sa*, with its ruins, marks the site of the ancient *Sais*.—This city must not be confounded with another more easterly, *Sais*, commonly called *Tanis*. (*Mannert, Geogr.*, vol. 10, pt. 1, p. 561, *seqq.*)

SALAMIS, I. a daughter of the river Asopos by Metheone. Neptune became enamoured of her, and carried her to an island of the *Ægean*, which afterward bore her name, and where she gave birth to a son called Cenchreus. (*Diod. Sic.*, 4, 72.—Compare the remarks of Siebelis, *ad Pausan.*, 1, 35, 2.)—II. An island in the Sinus Saronicus, opposite Eleusis and the coast of Attica, and said to have derived its name from Salamis, mentioned in the preceding article. It was also anciently called Scyrus and Cychrea, from the heroes Scyrus and Cychreus, and Pityussa from its abounding in firs. (*Strab.*, 393.) It had been already celebrated in the earliest period of Grecian history from the colony of the *Æscidae*, who settled there before the siege of Troy. (*Strab.*, l. c.) The possession of Salamis, as we learn from Strabo, was once obstinately contested by the Athenians and Megareans; and he affirms that both parties interpolated Homer, in order to prove from his poems that it had belonged to them. Having been occupied by Athens, it revolted to Megara, but was again conquered by Solon, or, according to some, by Pisistratus. (*Plutarch, Vit. Solon.*) From this period it appears to have been always subject to the Athenians. On the invasion of Xerxes, they were induced to remove thither with their families; in consequence of a prediction of the oracle, which pointed out this island as the scene of the defeat of their enemies (*Herodotus*, 8, 56); and, soon after, by the advice of Themistocles, the whole of the naval force of Greece was assembled in the Bay of Salamis. Meanwhile, the Persian fleet stationed at Phalerum held a council, in which it was determined to attack the Greeks, who were said to be planning their flight to the Isthmus. The Persian fleet accordingly were ordered to surround the island during the night, with a view of preventing their escape. In the morning, the Grecian galleys moved on to the attack, the *Æginetans* leading the van, seconded by the Athenians, who were opposed to the Phœnician ships, while the Peloponnesian squadron was engaged with the Ionians. The Persians were completely defeated, and retired in the greatest disorder to Phalerum; notwithstanding which, Xerxes is said to have made demonstrations of an intention to renew the action, and with that intent to have given orders for joining the island of Salamis to the continent by a mole. The following night, however, the whole of his fleet abandoned the coast of Attica, and withdrew to the Hellespont. (*Herod.*, 8, 83.) A trophy was erected to commemorate this splendid victory on the isle of Salamis, near the temple of Diana, and opposite to Cynosura, where the strait is narrowest. Here it was seen by Pausanias (1, 30), and some of its vestiges were observed by Sir W. Gell, who reports that it consisted of a column on a circular base. (*Itin.*, p. 303.) Strabo informs us that the island contained two cities; the more ancient of the two, which was situated on the southern side, and opposite to *Ægina*, was deserted in his time. The other stood in a bay, formed by a neck of land which advanced towards Attica. (*Strabo*, 393.) Both were called by the same name with the island. Pausanias remarks, that the city of Salamis was destroyed by the Athenians, in consequence of its having surrendered to the Macedonians when the former people were at war with Cassander; there still remained, however, some ruins of the agora, and a temple dedicated to Ajax. Chandler states that the walls may still be traced, and appear to have been about four miles in circumference (vol. 2, ch. 46.—Compare *Gell, Itin.*, p. 303).—Salamis, according to the Greek geographers, measured seventy or eighty stadia in length, or between nine and ten miles. Its

present name is *Coloursi*, which is that also of the principal town. (*Cramer's Anc. Greece*, vol. 2, p. 364, *segg.*)—III. A city in the island of Cyprus, situated about the middle of the eastern side. It was founded by Teucer, son of Telamon, and called by him after Salamis, his native place, from which he had been banished by his father. (*Horat.*, 1, 7, 21.) This city was the largest, strongest, and most important one in the island. (*Diod. Sic.*, 14, 98.—*Id.*, 16, 42.) Its harbour was secure, and protected against every wind, and sufficiently large to contain an entire fleet. (*Scylax*, p. 41.—*Diod.*, 20, 21.) The monarchs of Salamis exercised a leading influence in the affairs of the island, and the conquest of this place involved the fate of Cyprus at large. (*Diod.*, l. c.—*Id.*, 12, 3.) Under the Roman dominion the entire eastern part of the island was attached to the jurisdiction of Salamis. The insurrection of the Jews in Trajan's reign brought with it the ruin of a great portion of the city (*Euseb. Chron.*, ann. 19, *Traj.*—*Oros.*, 7, 12); it did not, however, cause the entire downfall of Salamis, as it is still mentioned after this period by Ptolemy and in the Peutinger Table. In the reign of Constantine, however, an earthquake and inundation of the sea completed the downfall of the place, and a large portion of the inhabitants were buried beneath its ruins. (*Cedrenus*, ad ann. 29, *Constant. Mag.*—*Malala, Chron.*, l. xii., *Sub. Constantio Chlora.*) Constantius restored it, made it the capital of the whole island, and called it, from his own name, Constantia. (*Hierocles*, p. 706.) A few remains of this city still exist. (*Po-cocke*, 2, p. 313.—*Mannert, Geogr.*, vol. 6, pt. 1, p. 572, *segg.*)

SALAPĪA, a city of Apulia, near the coast, above the river Aufidius, and between that river and the Salapina Palus. According to Strabo, it was the emporium of Arpi: without such authority, however, we should have fixed upon Sipontum as answering that purpose better, from its greater proximity. (*Strab.*, 282.) This town laid claim to a Grecian origin. The Rhodians, who early distinguished themselves by a spirit of enterprise in navigation, asserted, that, among other distant colonies, they had founded, in conjunction with some Coans, a city named Salpia, on the Daunian coast. This account of Strabo's (654) seems confirmed by Vitruvius, who attributes the foundation of this settlement to a Rhodian chief named Elpias (1, 4.—Compare *Meurs. in Rhod.*, 1, 18). It is probable, however, that Salapia was at first dependant upon the more powerful city of Arpi, and, like that city, it subsequently lost much of the peculiar character which belonged to the Greek colonies from its intercourse with the natives. We do not hear of Salapia in Roman history till the second Punic war, when it is represented as falling into the hands of the Carthaginians, after the battle of Cannæ (*Liv.*, 24, 20); but, not long after, it was delivered up to Marcellus by the party which favoured the Roman interest, together with the garrison which Hannibal had placed there. (*Livy*, 26, 28.) The Carthaginian general seems to have felt the loss of this town severely; and it was probably the desire of revenge which prompted him, after the death and defeat of Marcellus, to adopt the stratagem of sending letters, sealed with that commander's ring, to the magistrates of the town, in order to obtain admission with his troops. The Salapitani, however, being warned of his design, the attempt proved abortive. (*Liv.*, 27, 28.—*App.*, *Han.*, 51.) The proximity of Salapia to the lake or marsh already mentioned, is said to have proved so injurious to the health of the inhabitants, that some years after these events they removed nearer the coast, where they built a new town, with the assistance of M. Hostilius, a Roman prætor, who caused a communication to be opened between the lake and the sea. Considerable remains of both towns are still standing, at some dis-

tance from each other, under the name of *Salpi*, which confirms this account of Vitruvius (1, 4.—Compare *Cicero, de Leg. Agr.*, 2.—*Plin.*, 3, 11.—*Cramer's Anc. Italy*, vol. 2, p. 284).

SALASSI, a people of Gallia Cisalpina, in the north-western angle of that country, and at the foot of the Alps. The main part of their territory lay chiefly, however, in a long valley, which reached to the summits of the Graian and Pennine Alps, the *Little* and *Great St. Bernard*. The passages over these mountains into Gaul were too important an object for the Romans not to make them anxious to secure them by the conquest of the Salassi. But these hardy mountaineers, though attacked as early as 609 U.C., held out for a long time, and were not finally subdued till the reign of Augustus. Such was the difficult nature of their country, that they could easily intercept all communication through the valleys by occupying the heights. Strabo represents them as carrying on a sort of predatory warfare, during which they seized and ransomed some distinguished Romans, and even ventured to plunder the baggage and military chest of Julius Cæsar. Augustus caused their country at last to be occupied permanently by a large force under Terentius Varro. A large number of the Salassi perished in this last war, and the rest, to the number of 36,000, were sold and reduced to slavery. (*Strabo*, 205.—*Dio Cass.*, 1, 53.—*Oros.*, 5, 4.—*Liv., Epit.*, 53.) A city was built on the ground occupied by Varro's camp, and Augustus honoured the rising colony by giving it the name of Augusta Pretoria, now *Aosta*. (*Cramer's Anc. Italy*, vol. 1, p. 49, *segg.*)

SALENTINI, a people of Italy, in the territory of Messapia. They cannot be distinguished with accuracy from the Calabri, as we find the former appellation used by several writers in a very extensive sense, and applied, not only to the greater part of Messapia or Iapygia, but even to districts entirely removed from it. Strabo himself confesses the difficulty of assigning any exact limits to these two people; and he contents himself with observing, that the country of the Salentini lay properly around the Iapygian promontory. (*Strab.*, 277, 381.) It was asserted that they were a colony of Cretans, who, under the conduct of Idomeneus their king, had arrived thither in their wanderings after the capture of Troy. (*Virg. Æn.*, 3, 400.) The Romans, under pretence of their having assisted Pyrrhus in his expedition into Italy, soon after invaded the territory of this insignificant people, and had no difficulty in taking the few towns which they possessed. (*Florus*, 1, 20.—*Liv., Epit.*, 15.) The Salentini subsequently revolted, during the second Punic war, but they were again reduced by the consul Claudius Nero. (*Liv.*, 27, 36.)—It is probable that they derived their name from a town called Salentia, the existence of which is, however, only attested by Stephanus Byzantinus, who calls it a Messapian city (*s. v. Σαλεντία*).—The Salentinian promontory is the same with the Iapygian. (*Cramer's Ancient Italy*, vol. 2, p. 813.)

SALERNUM, a city of Campania, southeast of Neapolis, and near the shore of the Sinus Pæstanus. It was said to have been built by the Romans as a check upon the Picentini. It was not, therefore, like the modern town of *Salerno*, close to the sea, but on the height above, where considerable remains have been observed. (*Cluv., Ital. Antiq.*, vol. 2, p. 1189.—*Romanelli*, vol. 3, p. 612.) According to Livy, Salernum became a Roman colony seven years after the conclusion of the second Punic war (34, 45.—*Yell. Patern.*, 1, 14).—Horace tells us, that the air of Salernum was recommended to him by his physician for a complaint in his eyes. (*Cramer's Anc. Italy*, vol. 2, p. 214, *segg.*)

SALŪI, I. a college of priests at Rome, instituted in honour of Mars, and appointed by Numa to take care

of the sacred shields called *Ancilia*, B.C. 709. (Vid. *Ancile*.) They were twelve in number. Their chief was called *præsul*, who seems to have gone foremost in the procession; their principal musician, *ates*; and he who admitted new members, *magister*. Their number was afterward doubled by Tullus Hostilius, after he had obtained a victory over the Fidenates, in consequence of a vow which he had made to Mars. The Salii were all of patrician families, and the office was very honourable. The 1st of March was the day in which the Salii observed their festival in honour of Mars. They were generally dressed in a short scarlet tunic, of which only the edges were seen; they wore a large purple-coloured belt above the waist, which was fastened with brass buckles. They had on their heads round bonnets with two corners standing up, in their right hand they carried a small rod, and in their left a small buckler, one of the *ancilia*, or shields of Mars. Lucan says that it hung from the neck. In the observation of their solemnity, they first offered sacrifices, and afterward went through the streets dancing in measured motions, sometimes all together, or at other times separately, while musical instruments were playing before them. Hence their name of Salii, from their moving along in solemn dance (*Salii a saltando*). They placed their body in different attitudes, and struck with their rods the shields which they held in their hands. They also sung hymns in honour of the gods, particularly of Mars, Juno, Venus, and Minerva, and they were accompanied in the chorus by a certain number of virgins, habited like themselves, and called *Saliae*. We have in Varro a few fragments of the Salian hymns, which, even in the time of that writer, were scarcely intelligible. Thus, for example,

"*Divum exta cante, Divum Deo supplice cante,*"

i. e., *Deorum exta canite, Deorum Deo (Jano) suppliciter canite*; and also the following:

"*omnia
dapatilia comisse jani cusiones
duonus ceruses diovus janusque venit,*"

i. e., *Omnia dapaalia comedisse Jani Curiones. Bonus creator Divus Janusque venit*.—Their feasts and entertainments were uncommonly sumptuous, whence *dapes saliares* is proverbially applied to such repasts as are most splendid and costly. (*Liv.*, 1, 20.—*Varro*, *L. L.*, 4, 15.—*Ovid*, *Fast.*, 3, 387).—II. A German tribe of Frankish origin, whose original seat is not clearly ascertained. Wiarde makes it between the Silva Carbonaria (part of the forest of *Ardennes*) and the River Ligeris (*Lys*, in *Brabant*); Wersebe, however, in the vicinity of the Sala or *Saale*. They first made their appearance on the Insula Batavorum, where they were conquered by Julian; afterward in the territory of the Chamavi, by the Mosa or *Meuse*. Mannert seeks to identify them with the Cherusci. (*Amm. Marcell.*, 17, 8, *seqq.*—*Zosim.*, 3, 6.)

SALLUSTIUS, CRISPUS, a celebrated Latin historian, born at Amiternum, in the territory of the Sabines, in the year of Rome 668. He received his education in the latter city, and in his early youth appears to have been desirous to devote himself to literary pursuits. But it was not easy for one residing in the capital to escape the contagious desire of military or political distinction. He obtained the situation of quaestor, which entitled him to a seat in the senate, at the age of twenty-seven; and about six years afterward he was elected tribune of the commons. While in this office he attached himself to the fortunes of Cæsar, and, along with one of his colleagues, conducted the prosecution against Milo for the murder of Clodius. In the year of the city 704, he was excluded from the senate on the pretext of immoral conduct, but more probably from the violence of the patrician party, to which he was opposed. Aulus Gellius, on the au-

thority of Varro's treatise, *Pius aut de Pace*, informs us that he incurred this disgrace in consequence of an intrigue with Fausta, the wife of Milo, who caused him to be scourged by his slaves. (*N. A.*, 17, 18.) It has been doubted, however, by modern critics, whether it was the historian Sallust who was thus punished, or his nephew Crispus Sallustius, to whom Horace has addressed the second ode of the second book. It seems, indeed, unlikely that, in so corrupt an age, an amour with a woman of Fausta's abandoned character should have been the real cause of his expulsion from the senate. After undergoing this ignominy, which, for the present, baffled all his hopes of preferment, he quitted Rome, and joined his patron, Cæsar, in Gaul. He continued to follow the fortunes of that commander, and, in particular, bore a share in the expedition to Africa, where the scattered remains of Pompey's party had united. That region being finally subdued, Sallust was left by Cæsar as prætor of Numidia; and about the same time married Terentia, the divorced wife of Cicero. He remained only a year in his government, but during that period enriched himself by despoiling the province. On his return to Rome he was accused by the Numidians, whom he had plundered, but escaped with impunity by means of the protection of Cæsar, and was quietly permitted to betake himself to a luxurious retirement with his ill-gotten wealth. He chose for his favourite retreats a villa at Tibur, which had belonged to Cæsar, and a magnificent palace, which he built in the suburbs of Rome, surrounded by delightful pleasure-grounds, afterward well known and celebrated by the name of the Gardens of Sallust. In these gardens, or his villa at Tibur, Sallust passed the concluding years of his life, dividing his time between literary avocations and the society of his friends; among whom he numbered Lucullus, Messala, and Cornelius Nepos.—Such being his friends and studies, it seems highly improbable that he indulged in that excessive libertinism which has been attributed to him, on the erroneous supposition that he was the Sallust mentioned by Horace in the first book of his Satires. The subject of Sallust's character is one which has excited some investigation and interest, and on which very different opinions have been formed. That he was a man of loose morals is evident; and it cannot be denied that he rapaciously plundered his province, like most Roman governors of the day. But it seems doubtful if he was that monster of iniquity he has been sometimes represented. He was extremely unfortunate in the first permanent notice taken of his character by his contemporaries. The decided enemy of Pompey and his faction, he had said of that celebrated chief, in his general history, that he was a man "*oris probi, animo inserecundo*." Lentulus, the freedman of Pompey, avenged his master, by the most virulent abuse of his enemy (*Suetonius*, *de Illustr. Gramm.*, 15), in a work which should rather be regarded as a frantic satire than an historical document. Of the injustice which he has done to the life of the historian, we may, in some degree, judge from what he says of him as an author. He calls him, as we farther learn from Suetonius, "*Nebulonem vita scriptisque monstrosam; præterea priscorum Caloniæque ineruditissimum furem*." The life of Sallust, by Asconius Pedianus, which was written in the age of Augustus, and might have acted, at the present day, as a corrective or palliative of the unfavourable impression produced by this injurious libel, has unfortunately perished; and the next work on the subject now extant is a professed rhetorical declamation against the character of Sallust, which was given to the world in the name of Cicero, but was not written till long after the death of that orator, and is now generally assigned by critics to a rhetorician in the reign of Claudius, called Porcius Latro. The calumnies invented or exaggerated by Lentulus, and propagated in the scholastic theme

of Pontius Latro, have been adopted by Le Clerc, professor of Hebrew at Amsterdam, and by Professor Meisner, of Prague, in their respective accounts of the life of Sallust. His character has received more justice from the prefatory memoir and notes of De Brosses, his French translator, and from the researches of Wieland in Germany.—From what is known of Fabius Pictor and his immediate successors, it must be apparent that the art of historic composition at Rome was in the lowest state, and that Sallust had no model to imitate among the writers of his own country. He therefore naturally resorted to the productions of the Greek historians. The native exuberance and loquacious familiarity of Herodotus were not adapted to his taste; and simplicity, such as that of Xenophon, is, of all things, the most difficult to attain; he therefore chiefly emulated Thucydides, and attempted to transplant into his own language the vigour and conciseness of the Greek historian; but the strict imitation with which he followed him has gone far to lessen the effect of his own original genius.—The first work of Sallust was the *Conspiracy of Catiline*. There exists, however, some doubt as to the precise period of its composition. The general opinion is, that it was written immediately after the author went out of office as tribune of the commons, that is, A.U.C. 703. And the composition of the *Jugurthine War*, as well as of his general history, is fixed by Le Clerc between that period and his appointment to the prætorship of Numidia. But others have supposed that they were all written during the space which intervened between his return from Numidia in 709, and his death, which happened in 718, four years previous to the battle of Actium. It is maintained by the supporters of this last idea, that he was too much engaged in political tumults previous to his administration of Numidia to have leisure for so important compositions; that, in the introduction to *Catiline's Conspiracy*, he talks of himself as withdrawn from public affairs, and refutes accusations of his voluptuous life, which were only applicable to this period; and that, while instituting the comparison between Cæsar and Cato, he speaks of the existence and competition of these celebrated opponents as things that had passed over.—“*Sed mea memoria, ingenti virtute, discretis moribus, fuere viri duo, Marcus Cato et Caius Cæsar.*” On this passage, too, Gibbon, in particular, argues, that such a flatterer and party tool as Sallust would not, during the life of Cæsar, have put Cato so much on a level with him in the comparison. De Brosses argues with Le Clerc in thinking that the *Conspiracy of Catiline* at least must have been written immediately after 703; as he would not, after his marriage with Terentia, have commemorated the disgrace of her sister, who, it seems, was the vestal virgin whose intrigue with Catiline is recorded by Sallust. But, whatever may be the case as to *Catiline's Conspiracy*, it is quite clear that the *Jugurthine War* was written subsequently to the author's residence in Numidia, which evidently suggested to him this theme, and afforded him the means of collecting the information necessary for completing his work.—The subjects chosen by Sallust form two of the most important and prominent topics in the history of Rome. The periods, indeed, which he describes were painful, but they were interesting. Full of conspiracies, usurpations, and civil wars, they chiefly exhibit the mutual rage and iniquity of imbibed factions, furious struggles between the patricians and plebeians, open corruption in the senate, venality in the courts of justice, and rapine in the provinces. This state of things, so forcibly painted by Sallust, produced the conspiracy, and, in some degree, the character of Catiline. But it was the oppressive debts of individuals, the temper of Sylla's soldiers, and the absence of Pompey with his army, which gave a possibility, and even a prospect,

of success to a plot which affected the vital existence of the commonwealth; and which, although arrested in its commencement, was one of those violent shocks which hasten the fall of a state.—The History of the *Jugurthine War*, if not so imposing or menacing to the vital interests or immediate safety of Rome, exhibits a more extensive field of action, and a greater theatre of war. No prince, except Mithradates, gave so much employment to the arms of the Romans. In the course of no war in which they had ever been engaged, not even the second Carthaginian war, were the people more desponding, and in none were they more elated with ultimate success. Nothing can be more interesting than the accounts of the vicissitudes of this contest. The endless resources and hair-breadth escapes of Jugurtha; his levity; his fickle and faithless disposition, contrasted with the perseverance and prudence of the Roman commander Metellus, are all described in a manner the most vivid and picturesque.—Sallust had attained the age of twenty-two when the conspiracy of Catiline broke out, and was an eyewitness of the whole proceedings. He had, therefore, sufficient opportunity of recording with accuracy and truth the progress and termination of the conspiracy. Sallust has certainly acquired the praise of a veracious historian, and we do not know that he has been detected in falsifying any fact within the sphere of his knowledge. Indeed, there are few historical compositions of which the truth can be proved on such evidence as the conspiracy of Catiline. The facts detailed in the orations of Cicero, though differing in some minute particulars, coincide in everything of importance, and highly contribute to illustrate and verify the work of our historian. But Sallust lived too near the period of which he treated, and was too much engaged in the political tumults of the day, to give a faithful account, unbiassed by animosity or predilection; he could not have raised himself above all hopes, and fears, and prejudices, and therefore could not, in all their extent, have fulfilled the duties of an impartial writer. A contemporary historian of such turbulent times would be apt to exaggerate through adulation, or conceal through fear; to instil the precepts, not of the philosopher, but the partisan; and colour facts into harmony with his own system of patriotism or friendship. An obsequious follower of Cæsar, he has been accused of a want of candour in vanishing over the views of his patron; yet it is hard to believe that Cæsar was deeply engaged in the conspiracy of Catiline, or that a person of his prudence should have leagued with such rash associates, or followed so desperate an adventurer. But the chief objection urged against his impartiality is the feeble and apparently reluctant commendation bestowed on Cicero, who is now acknowledged to have been the principal actor in detecting and frustrating the conspiracy. Though fond of displaying his talents in drawing characters, he exercises none of it on Cicero, whom he merely terms “*homo egregius et optumus consul*,” which was but cold applause for one who had saved the commonwealth. It is true, that, in the early part of the history, praise, though sparingly bestowed, is not absolutely withheld. The election of Cicero to the consulship is fairly attributed to the high opinion entertained of his talents and capacity, which overcame the disadvantages of obscure birth. The mode adopted of gaining over one of the accomplices, and for fixing his own wavering and disaffected colleague, the dexterity manifested in seizing the Allobrogian deputies with the letters, and the irresistible effect produced by confronting them with the conspirators, are attributed exclusively to Cicero. It is in the conclusion of the business that the historian withholds from him his due share of applause, and contrives to eclipse him by always interposing the character of Cato, though it could not be unknown to any witness

of those transactions that Cato himself and other senators publicly hailed the consul as the father of his country; and that a public thanksgiving to the gods was decreed in his name, for having preserved the city from conflagration, and the citizens from massacre. This omission, which may have originated partly in enmity, and partly in disgust at the ill-disguised vanity of the consul, has in all times been regarded as the chief defect, and even stain, in the history of the Catilinarian Conspiracy.—Although not an eyewitness of the war with Jugurtha, Sallust's situation as prætor of Numidia, which suggested the composition, was favourable to the authority of the work, by affording opportunity of collecting materials, and procuring information. He examined into the different accounts, written as well as traditionary, concerning the history of Africa, particularly the documents preserved in the archives of King Hiempsal, which he caused to be translated for his own use, and which proved peculiarly serviceable in the detailed account which he has given of the inhabitants of Africa. In this history he has been accused of showing an undue partiality towards the character of Marius; and of giving, for the sake of his favourite leader, an unfair account of the massacre at Vacca. But he appears to do even more than ample justice to Metellus, since he represents the war as almost finished by him previous to the arrival of Marius, though it was, in fact, far from being concluded.—Sallust evidently regarded a fine style as one of the chief merits of an historical work. The style on which he took so much pains was carefully formed on that of Thucydides, whose manner of writing was, in a great measure, original, and, till the time of Sallust, peculiar to himself. The Roman has wonderfully succeeded in imitating the vigour and conciseness of the Greek historian, and infusing into his composition something of that dignified austerity which distinguishes the work of his great model; but when we say that Sallust has imitated the conciseness of Thucydides, we mean the rapid and compressed manner in which his narrative is conducted; in short, brevity of idea rather than of language. For Thucydides, although he brings forward only the principal idea, and discards what is collateral, yet frequently employs long and involved periods. Sallust, on the other hand, is abrupt and sententious, and is generally considered as having carried this sort of brevity to a vicious excess. The use of copulatives, either for the purposes of connecting his sentences with each other, or uniting the clauses of the same sentence, is in a great measure rejected. This produces a monotonous effect, and a total want of that flow and variety which is the principal charm of the historic period. Seneca accordingly (*Epist.*, 114) talks of the "*Amputata sententia, et verba ante expectatum cadentia*," which the practice of Sallust had succeeded in rendering fashionable. It was, perhaps, partly in imitation of Thucydides that Sallust introduced into his history a number of words almost considered as obsolete, and which were selected from the works of the older authors of Rome, particularly Cato the censor. It is on this point he has been chiefly attacked by Pollio, in his letters to Plancus. He has also been taxed with the opposite vice, of coining new words, and introducing Greek idioms; but the severity of judgment which led him to imitate the ancient and austere dignity of style, made him reject those sparkling ornaments of composition which were beginning to infect the Roman taste, in consequence of the increasing popularity of the rhetorical schools of declamation, and the more frequent intercourse with Asia. On the whole, in the style of Sallust, there is too much appearance of study, and a want of that graceful ease, which is generally the effect of art, but in which art is nowhere discovered.—Of all the departments of history, the delineation of character is the most trying to the temper and impartiality of the

writer, more especially when he has been contemporary with the individuals he portrays, and in some degree engaged in the transactions he records. Five or six of the characters drawn by Sallust have in all ages been regarded as master-pieces. He has seized the delicate shades, as well as the prominent features, and thrown over them the most lively and appropriate colouring. Those of the two principal actors in his tragic histories are forcibly given, and prepare us for the incidents which follow. The portrait drawn of Catiline conveys a lively notion of his mind and person, while the parallel drawn between Cato and Cæsar is one of the most celebrated passages in the history of the conspiracy. Of both these famed opponents we are presented with favourable likenesses. Their defects are thrown into the shade; and the bright qualities of each different species by which they were distinguished, are contrasted for the purpose of showing the various qualities by which men arrive at eminence. The introductory sketch of the genius and manners of Jugurtha is no less able and spirited than the character of Catiline. The portraits of the other principal characters who figured in the Jugurthine war are also well brought out. That of Marius, in particular, is happily touched. His insatiable ambition is artfully disguised under the mask of patriotism; his cupidity and avarice are concealed under that of martial simplicity and hardihood; but, though we know, from his subsequent career, the hypocrisy of his pretensions, the character of Marius is presented to us in a more favourable light than that in which it can be viewed on a survey of his whole life. We see the blunt and gallant soldier, and not that savage whose innate cruelty of soul was first about to burst forth for the destruction of his countrymen. In drawing the portrait of Sylla, the memorable rival of Marius, the historian represents him also such as he appeared at that period, not such as he afterward proved himself to be. We behold him with pleasure as an accomplished and subtle commander, eloquent in speech and versatile in resources; but there is no trace of the cold-blooded assassin, the tyrant, and usurper.—History, in its original state, was confined to narrative; the reader being left to form his own reflections on the deeds or events recorded. The historic art, however, conveys not complete satisfaction, unless these actions be connected with their causes—the political springs or private passions in which they originated. It is the business, therefore, of the historian, to apply the conclusions of the politician in explaining the causes and effects of the transactions he relates. These transactions the author must receive from authentic monuments or records, but the remarks deduced from them must be the offspring of his own ingenuity. The reflections with which Sallust introduces his narrative, and those he draws from it, are so just and numerous, that he has by some been considered the father of philosophic history. It must always, however, be remembered, that the proper subject of history is the detail of national transactions; that whatever forms not a part of the narrative is episodic, and therefore improper, if it be too long, and do not grow naturally out of the subject. Now some of the political and moral digressions of Sallust are neither very immediately connected with his subject nor very obviously suggested by the narration. The discursive nature and inordinate length of the introduction to his histories have been strongly objected to. The first four sections of Catiline's Conspiracy have indeed little relation to the topic. They might as well have been prefixed to any other history, and much better to a moral or philosophic treatise. In fact, a considerable part of them, decanting on the fleeting nature of wealth and beauty, and all such adventitious possessions, are borrowed from the second oration of Isocrates. Perhaps the eight following sections are also disproportioned to the

length of the history; but the preliminary essay they contain on the degradation of Roman manners and decline of virtue, is not an unsuitable introduction to the conspiracy, as it was this corruption of morals which gave birth to it, and bestowed on it a chance of success. The preface to the Jugurthine War has much less relation to the subject which it is intended to introduce. The author discourses at large on his favourite topic, the superiority of mental endowments over corporeal advantages, and the beauty of virtue and genius. He contrasts a life of listless indolence with one of honourable activity; and finally descants on the task of the historian as a suitable exercise for the highest faculties of the mind. Besides the Conspiracy of Catiline and the Jugurthine War, which have been preserved entire, and from which our estimate of the merits of Sallust must be chiefly formed, he was the author of a civil and military history of the republic, in five books, entitled *Historia rerum in Republica Romana Gestarum*. This work was the mature fruit of the genius of Sallust, having been the last he composed, and is inscribed to Lucullus, the son of the celebrated commander of that name. It included, properly speaking, only a period of thirteen years, extending from the resignation of the dictatorship by Sylla till the promulgation of the Manilian Law, by which Pompey was invested with authority equal to that which Sylla had relinquished; and obtained, with unlimited power in the East, the command of the army destined to act against Mithradates. This period, though short, comprehends some of the most interesting and luminous points which appear in the Roman annals. During this interval, and almost at the same moment, the republic was attacked in the East by the most powerful and enterprising of the monarchs with whom it had yet waged war; in the West by one of the most skillful of its own generals; and in the bosom of Italy by its gladiators and slaves. The work was also introduced by two discourses, the one presenting a picture of the government and manners of the Romans, from the origin of their city to the commencement of the civil wars; the other containing a general view of the dissensions of Marius and Sylla; so that the whole book may be considered as connecting the termination of the Jugurthine War and the breaking out of Catiline's conspiracy. The loss of this valuable production is the more to be regretted, as all the accounts of Roman history which have been written are defective during the interesting period it comprehended. Nearly seven hundred fragments belonging to it have been amassed, from scholiasts and grammarians, by De Brosses, the French translator of Sallust; but they are so short and unconnected that they merely serve as landmarks, from which we may conjecture what subjects were treated of and what events recorded. The only parts of the history which have been preserved in any degree entire, are four orations and two letters. The first is an oration pronounced against Sylla by the turbulent M. Æmilius Lepidus, who, as is well known, being desirous, at the expiration of his year, to be appointed a second time consul, excited for that purpose a civil war, and rendered himself master of great part of Italy. His speech, which was preparatory to these designs, was delivered after Sylla had abdicated the dictatorship, but was still supposed to retain great influence at Rome. He is accordingly treated as being still the tyrant of the state; and the people are exhorted to throw off the yoke completely, and to follow the speaker to the bold assertion of their liberties. The second oration is that of Lucius Philippus, which is an invective against the treasonable attempt of Lepidus, and was calculated to rouse the people from the apathy with which they beheld proceedings that were likely to terminate in the total subversion of the government. The third harangue was delivered by the

tribune Licinius. It was an effort of that demagogue to depress the patrician and raise the tribunitian power; for which purpose he alternately flatters the people and reviles the senate. The oration of Marcus Cotta is unquestionably a fine one. He addressed it to the people, during the period of his consulship, in order to calm their minds and allay their resentment at the bad success of public affairs; which, without any blame on his part, had lately, in many respects, been conducted to an unprosperous issue. Of the two letters which are extant, the one is from Pompey to the senate, complaining in very strong terms of the deficiency in the supplies for the army which he commanded in Spain against Sertorius; the other is supposed to be addressed from Mithradates to Arsaces, king of Parthia, and to be written when the affairs of the former monarch were proceeding unsuccessfully. It exhorts him, nevertheless, with great eloquence and power of argument, to join him in an alliance against the Romans: for this purpose, it places in a strong point of view their unprincipled policy and ambitious desire of universal empire: all which could not, without this device of an imaginary letter by a foe, have been so well urged by a national historian. It concludes with showing the extreme danger which the Parthians would incur from the hostility of the Romans, should they succeed in finally subjugating Pontus and Armenia. The only other fragment of any length, is the description of a splendid entertainment given to Metellus on his return, after a year's absence from his government of Parthian Spain. It appears, from several other fragments, that Sallust had introduced, on occasion of the Mithradatic war, a geographical account of the shores and countries bordering on the Euxine, in the same manner as he enters into a topographical description of Africa in his history of the Jugurthine War. This part of his work has been much applauded by ancient writers for exactness and liveliness, and is frequently referred to, as the highest authority, by Strabo, Pomponius Mela, and other geographers. Besides his historical works, there exist two political discourses, concerning the administration of the government, in the form of letters to Julius Cæsar, which have generally, though not on sufficient grounds, been attributed to the pen of Sallust. The best editions of Sallust are, that of Curtius, *Lips.*, 1742, 4to; that of Havercamp, *Amst.*, 1742, 4to, 2 vols.; that of Burnouf, *Paris*, 1821, 8vo; that of Gerlach, *Basil.*, 1823, *seqq.*, 3 vols. 4to; and that of Frotscher, *Lips.*, 1823-30, 2 vols. 8vo. (*Dunlop's Roman Literature*, vol. 2, p. 143, *seqq.*)

SALMÁCIS, a fountain near Halicarnassus in Caria, which was fabled to render effeminate all who drank of its waters. It was here that Hermaphroditus, according to the poets, underwent his strange metamorphosis. The fountain was situate at the foot of a rock, and on the summit of this rock was a very strong castle, which a Persian garrison long held against Alexander. (*Arrian, Esp. Al.*, 1, 24.)

SALMANTICA, a city of Hispania, in the northeastern angle of Lusitania. It is very probably the same with the Elmantica of Polybius (3, 14) and the Hermandica of Livy (21, 5), which Hannibal took in his expedition against the Vaccei. It is now *Salamanca*. (*Mannert*, vol. 1, p. 348.)

SALMÔNE, a city of Elis, of great antiquity, northwest of Olmypia. It is said to have been founded by Salmoneus. (*Apollod.*, 1, 9, 7.—*Strabo*, 356.)

SALMONEUS, a king of Elis, son of Æolus and Enarete, who married Alcidece, by whom he had Tyro. He wished to be called a god, and to receive divine honours from his subjects; and, therefore, to imitate the thunder, he used to drive his chariot over a brazen bridge, and darted burning torches on every side, as if to imitate the lightning. This impiety provoked Jupiter. Salmoneus was struck with a thun-

derbolt, and placed in the infernal regions near his brother Sisypheus.—Consult, in explanation of this legend, the article Elicius, p. 467, col. 1, near the end. (*Hom.*, *Od.*, 11, 235.—*Apollod.*, 1, 9.—*Hygin.*, *fab.*, 60.—*Virg.*, *Æn.*, 6, 5, 85.)

SALMYDESSUS (Σαλμυδεσσός), or, as the later Greek and the Latin writers give the name, Halmydessus (Ἁλμυδεσσός), a city of Thrace, on the coast of the Euxine, below the promontory of Thynias. The name properly belonged to the entire range of coast from the Thynian promontory to the mouth of the Bosporus. And it was this portion of the coast in particular that obtained for the Euxine its earlier name of *Azenos*, or "inhospitable." The shore was rendered dangerous by shallows and marshes; and when any vessels, either through want of skill or the violence of the wind, became entangled among these, the Thracian inhabitants poured down upon them, plundered the cargoes, and made the inhabitants slaves. In their eagerness to obtain the booty, quarrels often arose among the petty tribes in this quarter, and hence came eventually the singular custom of marking out the shore with stones, as so many limits within which each were to plunder. (*Xen.*, *Anab.*, 7, 6.) Strabo names the *Asæ* as the inhabitants of this region, whose territory reached to the north as far as Apollonia. The Thyni, no doubt, are included under this name. The republic of Byzantium put an end to this system of plunder.—The modern *Midjeh* answers to the ancient city of Salmydessus. (*Mela*, 2, 2.—*Plin.*, 4, 11.—*Diod. Sic.*, 14, 38.—*Mannert*, *Geogr.*, vol. 7, p. 149.)

SALŌN, now *Salona*, the principal harbour of Dalmatia, and always considered as an important post by the Romans after their conquest of that country. Pliny styles it a colony (3, 23), which is confirmed by various inscriptions. (*Gruter.*, *Thes.*, 32, 12.) The name is sometimes written *Salona* and *Salome*. (*Cæs.*, *B. G.*, 3, 9.—*Hirt.*, *B. Alex.*, 43.) It was not the native place of the Emperor Dioclesian, as is commonly supposed. That monarch was born at Diocles, in its vicinity; and to this quarter he retired after he had abdicated the imperial power. Here he built a splendid palace, the ruins of which are still to be seen at *Spalatro*, about three miles from *Salona*. (*Weeseling*, *ad. Itin. Anton.*, p. 270.—*Adam's Antiquities of Spalatro*.—*Cramer's Anc. Greece*, vol. 1, p. 36.)

SALVIANUS, a native of Colonia Agrippina (*Cologne*), one of the early fathers of the Christian Church. He led a religious life at Massilia during the greater part of the 5th century, and died in that city. Salvian was the author of several works on devotional subjects, of which there are yet extant a treatise "on the Providence of God" (*De gubernatione Dei*, &c.), in eight books; another in four books, written "Against avarice, especially in priests and clerical persons;" and nine pastoral letters. His works, as far as they remain, were collected and printed together, in two volumes 8vo, by Baluzius, *Paris*, 1663.

SALŪS, a people of Gaul, extending from the *Rhône*, along the southern bank of the *Druentia* or *Durance*, almost to the Alps. They were powerful opponents to the Greeks of Massilia. (*Liv.*, 5, 34.)

SAMĀRA, a river of Gaul, now called the *Somme*. The name of this stream in intermediate geography was *Samina* or *Samena*, corrupted into *Somona*; whence the modern appellation. (*Vid. Samarobriua*.)

SAMARIYA, a city and country of Palestine, famous in sacred history. The district of Samaria lay to the north of Judæa. The origin of the Samaritan nation was as follows: In the reign of Rehoboam, a division was made of the people of Israel into two distinct kingdoms. One of these kingdoms, called Judah, consisted of such as adhered to Rehoboam and the house of David, comprising the two tribes of Judah and Benjamin; the other ten tribes retained the an-

cient name of Israelites under Jeroboam. The capital of the state of these latter was Samaria, which was also the name of their country. The Samaritans and the people of Judæa were lasting and bitter enemies. The former deviated in several respects from the strictness of the Mosaic law, though afterward the religion of the two nations became more closely assimilated; and, in the time of Alexander, the Samaritans obtained leave of that conqueror to build a temple on Mount Gerizim, near the city of Samaria, in imitation of the temple at Jerusalem, where they practised the same forms of worship. Among the people of Judæa, the name of Samaritan was a term of bitter reproach, and disgraceful in a high degree. The city of Samaria was situate on Mount Sameron, and was the residence of the kings of Israel, from Omri its founder to the overthrow of the kingdom. It was razed to the ground by Hyrcanus, but rebuilt by Herod, who completed the work begun by Gabinias, procurator of Syria. Herod called it Sebaste, in honour of Augustus. (1 *Kings*, 16, 24.—*Ibid.*, 17, 6.—*Ibid.*, 22, 62.—2 *Kings*, 17, 6.—*Jerem.*, 23, 13.—*Jos.*, *Ant.*, 8, 7.—*Id. ibid.*, 13, 15.—*Id. ibid.*, 15, 11.—*Bell. Jud.*, 1, 6.)

SAMAROBRIYA, a town of Gaul, now *Amiens*, the capital of the Ambiani. Its name appears to mean "the city on the Samara," since it lay on this river, and since the termination *briva* in Celtic is thought to have had, among its other meanings, that of "city" or "place." (*Vid. Mesembria*.) Some, less correctly, make it signify "the bridge" or "passage of the Samara," as, for example, Lemaire, in his Geographical Index to Cæsar. (*Ann. Marcell.*, 15, 27.—*Cæs.*, *B. G.*, 5, 24; 45, 51.)

SAME, the only town in the island of Cephallenia noticed by Homer, from which we may infer that it was the most ancient and considerable. (*Od.*, 2, 249.) It was maintained by Apollodorus, that the poet used the word *Samos* to designate the island, and *Same* the town. It is certain, however, that in another passage (*Od.*, 14, 123), the latter name is applied to the island. (*Strabo*, 453.) When Cephallenia submitted to the Romans, *Same*, with other towns, gave hostages; but having afterward revolted, it sustained a vigorous siege for four months. At length the citadel *Cyatis* being taken, the inhabitants retired into their larger fortress; but surrendered the following day, when they were all reduced to slavery. (*Liv.*, 38, 28, *seqq.*) Strabo reports that some vestiges of this town remained in his day on the eastern side of the island. (*Strabo*, 455.) This spot retains the name of *Samo*, which is also that of the bay at the extremity of which it is situated. It exhibits still very extensive walls and excavations among its ruins, which have afforded various specimens of ancient ornaments, medals, vases, and fragments of statues. (*Holland's Travels*, vol. 1, p. 55.—*Dodwell*, vol. 1, p. 75.—*Cramer's Anc. Greece*, vol. 2, p. 52.)

SAMNITES, a people of Italy, whose territory was bounded on the north by the *Peligni* and *Frentani*; to the west it bordered on the extremity of *Latium* and on *Campania*, being separated from the latter province by the *Vulturinus*, *Mons Callicula*, and the chain of *Mount Tifata*. To the south a prolongation of the same ridge divided the *Samnites* from the *Picentini* and *Lucani*. To the east they were contiguous to *Apulia*, from the river *Tiferno* to the source of the *Aufidus*. It is usual with geographers to regard the ancient *Samnites* as divided into three tribes, the *Caraceni*, *Pentri*, and *Hirpini*; to which others have added the *Caudini* and *Frentani*; but the former classification seems to rest on better authority.—Whatever difference of opinion may prevail among the writers of antiquity respecting the origin of other Italian tribes, they seem agreed in ascribing that of the *Samnite* nation to the *Sabines*. (Consult remarks under the article *Sabini*.) The *Samnites*, like the *Romans*, were an

ambitious and rising nation, rendered confident by their successes over the Tuscan and the Oscan of Campania; and formidable not only from their own resources, but also from the ties of consanguinity which connected them with the Frentani, Vestini, Peligni, and other hardy tribes of Central Italy. The rich and fertile territory of Campania was then the nominal object of the contest which ensued, but in reality they fought for the dominion of Italy, and consequently that of the world; which was at stake so long as the issue of the war was doubtful. Livy seems to have formed a just idea of the importance of that struggle, and the fierce obstinacy with which it was carried on, when he pauses in the midst of his narrative, in order to point out the unwearied constancy with which the Samnites, though so often defeated, renewed their efforts, if not for empire, at least for freedom and independence (10, 82). But when that historian recounts an endless succession of reverses sustained by this nation, attended with losses which must have quickly drained a far greater population, it is impossible to avoid suspecting him of considerable exaggeration and repetition; especially as several campaigns are mentioned without a single distinct fact or topographical mark to give reality and an appearance of truth to the narrative. Nor is Livy always careful to point out the danger which not unfrequently threatened Rome on the part of these formidable adversaries. It is true that he relates with great beauty and force of description the disaster which befell the Roman arms at the defiles of Caudium; but has he been equally explicit in laying before his readers the consequences of that event, which not only opened to the victorious Samnites the gates of several Volscian cities, but exposed a great portion of Latium to be ravaged by their troops, and brought them nearly to the gates of Rome! (*Liv.*, 9, 12.—Compare *Strabo*, 232, 249.) In fact, though often attacked in their own territory, we as often find the Samnite legions opposed to their inveterate foes in Apulia, in the territories of the Volsci and Hernici, and even in those of the Umbrians and Etruscans. (*Liv.*, 10.) Admirably trained and disciplined, they executed the orders of their commanders with the greatest alacrity and promptitude; and such was the warlike spirit of the whole population, that they not unfrequently brought into the field 80,000 foot and 8000 horses. (*Strabo*, 259.) A victory over such a foe might well deserve the honours of a triumph; and when the Romans had at length, by repeated successes, established their superiority, they could then justly lay claim to the title of the first troops in the world. But though the Samnites were often overmatched and finally crushed by the superior conduct and power of the Romans, it is evident that the spirit of independence still breathed strong in their hearts, and waited but for an opportunity to display itself. Thus, when Pyrrhus raised his standard in the plains of Apulia, the Samnite bands swelled his ranks, and seemed rather to strengthen the forces of that prince than to derive assistance from his army. Nor did they neglect the occasion which presented itself, on the appearance of Hannibal in their country, for shaking off the Roman yoke, but voluntarily offered to join him in the field against the common enemy. (*Liv.*, 23, 42.) Rome had already triumphed over Carthage, Macedon, and Antiochus, and was regarded as mistress of the world, when a greater danger than any she had before encountered threatened her dominion in Italy, and shook the very seat of her power. This was the breaking out of the Social war, which afforded the most convincing proof that the Samnite people were not yet conquered, in that bloody contest which, in the space of a few years, is said to have occasioned the loss of 300,000 lives. (*Vell. Pat.*, 2, 15.) This people formed the chief strength and nerve of the coalition: such was their determined enmity against the Romans,

that they even invited Mithradates, king of Pontus, to join his forces to those of the confederates in Italy. (*Diod., Excerpt.*, 37.) Even though deserted by their allies and left to their own resources, they still continued in arms till the fortune of Sylla and the Romans prevailed, and they ceased to exist as a nation. It was not till he had achieved the total destruction of the last Samnite army, at the very gates of Rome, that Sylla at length felt assured of permanent success, and ventured to assume the title of Felix. His fear of the Samnite name, however, led him farther to persecute that unhappy people, thousands of whom were butchered at his command, and the rest proscribed and banished. He was said, indeed, to have declared, that Rome would enjoy no rest so long as a number of Samnites could be collected together. (*Strabo*, 249.—*Flor.*, 3, 21.—*Vell. Pat.*, 2, 26.—*Liv., Epit.*, 88.—*Plut., Vit. Syll.*—*Cramer's Anc. Italy*, vol. 2, p. 221, *seqq.*)

SAMNIVM, I. a region of Italy, inhabited by the Samnites. (*Vid. Samnites.*)—II. A city of Samnium. It was long a matter of great doubt with antiquaries and geographers, whether we could admit the existence of a city called Samnium in the province of the same name, as the evidence of this fact rested only on an obscure passage of Florus (1, 16), and the still more uncertain testimony of Paulus Diaconus. (*Re. Lang.*, 2, 30.) But it seemed to acquire additional confirmation from an inscription discovered in the tomb of the Scipios, in which the name of Samnium occurs as that of a town taken by Scipio Barbatus; nor can farther evidence be required on this point, after the proofs adduced by Romanelli from old ecclesiastical chronicles, which speak of a town named Samnia or Samne, on the site now called *Cerre*, near the source of the Vulturinus. (*Cramer's Anc. Italy*, vol. 2, p. 227.)

SAMMONIVM or SALMONE, as we find it written in the Acts of the Apostles (27, 7), a promontory of Crete, forming the extreme point of the island towards the coast. (*Dionys. Perieg.*, 109.) Strabo says it faces the Isle of Rhodes and Egypt; but his assertion that it is nearly in the same latitude with the Promontory of Sunium is erroneous (*Strab.*, 474), since, according to the best maps, Cape *Salomone*, by which name it is now distinguished, is more than two degrees to the east of the Attic headland. Mannert has endeavoured to prove that Cape *Sidero* or *Sunia*, as it is sometimes called, is the Sammonium of the ancients; but his reasons are certainly not conclusive. The very fact, indeed, of the Periplos allowing 120 stadia from the Dionysiades Insule to the Sammonian Promontory is decisive against him; as that distance agrees perfectly with Cape *Salomone*, whereas Cape *Sidero* is only fifty stadia at most from those islands. (*Cramer's Anc. Greece*, vol. 3, p. 371.—*Mannert, Geogr.*, vol. 8, p. 706.)

SAMOS, an island of the *Ægean*, lying off the lower part of the coast of Ionia, and nearly opposite the Troglitan Promontory. The intervening strait was not more than seven stadia in the narrowest part. (*Strab.*, 637.) The first inhabitants were Carians and Leleges, whose king Anceus, according to the poet *Asius*, cited by Pausanias, married Samia, daughter of the Meander. The first Ionian colony came into the island from Epidaurus, having been expelled from the latter quarter by the Argives. The leader of this colony was Procles, a descendant of Ion. Under his son Leogoras, the settlement was invaded by the Ephesians, under the pretext that Leogoras had aided with the Carians against Ephesus. The colony being expelled from Samos, retired for a time to *Anae* in Caria, whence they again invaded the island, and finally expelled the Ephesians. Samos is early distinguished in the maritime annals of Greece, from the naval ascendancy it acquired in the time of Polycrates. (*Vid.*

Polycrates.) After the death of this ruler, the government was held for some time by Mæandrius, his secretary; but he was expelled by the troops of Darius, who placed on the throne Syloson, the brother of Polycrates, on account of some service he had rendered him in Egypt, when as yet he was but a private person. (*Herod.*, 3, 140.) Strabo reports, that the yoke of this new tyrant pressed more heavily on the Samians than that of Polycrates, and that, in consequence, the island became nearly deserted; whence arose the proverb, *Ἐκπρὶ Συλοσόντος ἐρύχοντο*. (*Strab.*, 638. —Compare *Heraklid.*, *Pont.*, p. 211.) From Herodotus, however, we learn, that the Samians took an active part in the Ionian revolt, and furnished sixty ships to the fleet assembled at Lade; but, by the intrigues of Æces, son of Syloson, who had been deposed by Aristagoras, and consequently favoured the Persian arms, the greater part of their squadron deserted the confederacy in the battle that ensued, and thus contributed greatly to the defeat of the allies. (*Herod.*, 6, 8, *seqq.*) On learning the result of the battle, many of the Samians determined to quit the island rather than submit to the Persian yoke, or that of a tyrant imposed by them. They accordingly embarked on board their ships, and sailed for Sicily, where they first occupied Calacte, and soon after, with the assistance of Anaxilas, tyrant of Rhegium, the important town and harbour of Zancle. Æces was replaced on the throne of Samos, and, out of consideration for his services, the town and its temples were spared. After the battle of Salamis, the Samians secretly sent a deputation to the Greek fleet stationed at Delos, to urge them to liberate Ionia, they being at that time governed by a tyrant named Theemestor, appointed by the Persian king. (*Herod.*, 9, 90.) In consequence of this invitation, Leotychidas, the Spartan commander, advanced with his fleet to the coast of Ionia, and gained the important victory of Mycale. The Samians having regained their independence, joined, together with the other Ionian states, the Grecian confederacy, and with them passed under the protection, or, rather, the dominion of Athens. The latter power, however, having attempted to change the constitution of the island to a democracy, had nearly been expelled by the oligarchical party, aided by Pisesthnes, satrap of Sardis. Being overpowered, however, finally by the overwhelming force brought against them by the Athenians under Pericles, the Samians were compelled to destroy their fortifications, give up their ships, deliver hostages, and pay the expense of the war by instalments. This occurred a few years before the breaking out of the Peloponnesian war. (*Thucyd.*, 1, 116, *seqq.*) After this we hear little of Samos till the end of the Sicilian expedition, when the maritime war was transferred to the Ionian coast and islands. At this time Samos became the great point d'appui of the Athenian fleet, which was stationed there for the defence of the colonies and subject states; and there is little doubt that the power of Athens was alone preserved at this time by means of that island. We learn from Polybius (5, 35, 11), that, after the death of Alexander, Samos became for a time subject to the kings of Egypt. Subsequently it fell into the hands of Antiochus, and, on his defeat, into those of the Romans. It lost the last shadow of republican freedom under the Emperor Vespasian, A.C. 70.—The temple and worship of Juno contributed not a little to the fame and affluence of Samos. Pausanias asserts that this edifice was of very great antiquity; this, he says, was apparent from the statue of the goddess, which was of wood, and the work of Smilis, an artist contemporary with Dædalus. (*Pausan.*, 7, 4.—*Callim.*, *Epigr.*, ap. *Euseb.*, *Præp. Evang.*, 3, 8.—*Clem. Alex.*, *Protr.*, p. 30.) In Strabo's time, this temple was adorned with a profusion of the finest works of art, especially paintings, both in the nave of the building and

the several chapels adjoining. The outside was equally decorated with beautiful statues by the most celebrated sculptors. Besides this great temple, Herodotus describes two other works of the Samians which were most worthy of admiration: one was a tunnel carried through a mountain for the length of seven stadia, for the purpose of conveying water to the city from a distant fountain. Another was a mole, made to add security to the harbour; its depth was twenty fathoms, and its length more than two stadia. (*Herod.*, 3, 60.)—The circuit of this celebrated island, which retains its ancient name, is 600 stadia, according to Strabo. Agathemerus reckons 630. Pliny, however, 87 miles, which make upward of 700 stadia. (*Plin.*, 5, 31.) It yielded almost every kind of produce, with the exception of wine, in such abundance, that a proverbial expression, used by Menander, was applied to it, *πέρεϊ καὶ ὀπλίτων γάλα*. (*Strab.*, 637.)—The city of Samos was situate exactly opposite the Trogilian Promontory and Mount Mycale. The port was secure and convenient for ships, and the town, for the most part, stood in a plain, rising gradually from the sea towards a hill situate at some distance from it. The citadel, built by Polycrates, was called Astypalea. (*Steph. Byz.*, s. v. Ἀστυπάλαια.—*Cramer's Asia Minor*, vol. 1, p. 402, *seqq.*) Dr. Clarke has the following remarks concerning this island: "As we sailed to the northward of the island of Patmos, we were surprised to see Samos so distinctly in view. It is hardly possible that the relative situation of Samos and Patmos can be accurately laid down in D'Anville's, or any more recent chart; for, keeping up to windward, we found ourselves to be so close under Samos, that we had a clear view both of the island and of the town. This island, the most conspicuous object, not only of the Ionian Sea, but of all the Ægean, is less visited, and, of course, less known than any other; it is one of the largest and most considerable of them all; and so near to the mainland, that it has been affirmed persons upon the opposite coasts may hear each other speak. Its surprising elevation and relative position with regard to the lower islands of *Pworni* and *Nicaria* make it a landmark all over the Archipelago. According to Constantine Porphyrogenitus, any very lofty place was called Samos. The name of *Karabörü* was anciently given to that terrible rock which forms the cape and precipice upon its western side, as collecting the clouds and generating thunder." (*Travels*, vol. 6, p. 67, *Lond. ed.*)

ΣΑΜΟΣΑΤΑ (Τὸ Σαμόσατα, but in Arrianus Marcellinus, 14, 8, *Samosata*, -α), a city of Syria, the capital of the province of Commagene, and the residence of a petty dynasty. (*Amm. Marcell.*, 18, 4.) It was not only a strong city itself, but had also a strong citadel, and in its neighbourhood was one of the ordinary passages of the Euphrates, on the western bank of which river Samosata was situated. Samosata was the birthplace of Lucian. The modern name is *Somaisath* or *Seempsat*. (*Abulfeda*, *Tab. Syr.*, p. 244.—*Mannert*, *Geogr.*, vol. 6, pt. 1, p. 491.)

ΣΑΜΟΘΡΑΚΟΣ, an island in the Ægean, off the coast of Thrace. According to Pliny (4, 12), it lay opposite to the mouth of the Hebrus, and was twenty-eight miles from the coast of Thrace, and sixty-two from Thasos. The same authority makes it thirty-two miles in circuit. Though insignificant in itself, considerable celebrity attaches to it from the mysteries of Cybele and her Corybantes, which are said by some to have originated there, and to have been disseminated thence over Asia Minor and different parts of Greece.—It was said that Dardanus, the son of Jupiter and Electra, who was the imputed founder of Troy, had long dwelt in Samothrace before he passed over into Asia; and it is affirmed, that he first introduced into his new kingdom the mysteries practised in the island from which he had migrated (*Strabo*, 331),

and which, by some writers, was from that circumstance named Dardania. (*Callim., ap. Plin., 4, 12.*) Samothrace was also famous for the worship of the Cabiri, with which these mysteries were intimately connected. (*Vid. Cabiri.*)—Various are the names which this island is said to have borne at different periods. It was called Dardania, as we have already seen; also Electris, Melite, Lencosia (*Strabo, 472.—Schol. in Apoll. Rhod., 1, 917*), and was said to have been named Samothrace (Thracian Samos) by a colony from the Ionian Samos, though Strabo conceives this assertion to have been an invention of the Samians. He deduces the name either from the word *Σάμος*, which implies an elevated spot, or from the Sail, a Thracian people, who at an early period were in possession of the island. (*Strabo, 457.*) Homer, in his frequent allusion to it, sometimes calls it simply Samos (*Il., 24, 78.—Il., 24, 753*); at other times the Thracian Samos. (*Il., 13, 12.*)—The Samothracians joined the Persian fleet in the expedition of Xerxes; and one of their vessels distinguished itself in the battle of Salamis. (*Herod., 8, 90.*) Perseus, after the battle of Pydna, took refuge in Samothrace, and was there seized by the Romans when preparing to escape from Demetrius, a small harbour near one of the promontories of the island. On this occasion, Livy asserts that the chief magistrate of Samothrace was dignified with the title of king (45, 6). Stephenus Byzantinus informs us there was a town of the same name with the island. This island was reduced, in the reign of Vespasian, along with the other isles of the *Ægean*, to the form of a province. It is now *Samothraki*. (*Cramer's Anc. Greece, vol. 1, p. 335.*)

SANA, a town of Macedonia, on the Sinus Singitizus, and situated on a neck of land connecting Athos with the continent. On the opposite side was Acanthus, and between the two places was cut the canal of Xerxes. (*Vid. Acanthus.*)

SANCHONIATHON, a Phœnician author, who, if the fragments of his works that have reached us be genuine, and if such a person ever existed, must be regarded as the most ancient writer of whom we have any knowledge after Moses. His father's name was Thabion, and he himself was chief hierophant of the Phœnicians. According to some, he was a native of Berytus, but Athenæus (3, 37) and Suidas make him a Tyrian. As to the period when he flourished, all is uncertain. Some accounts carry him back to the era of Semiramis, others assign him to the period of the Trojan war. St. Martin, however, endeavours to prove that he was a contemporary of Gideon, the judge of Israel, and flourished during the fourteenth century before the Christian era. (*Biographie Univ., vol. 40, p. 305, seqq.*) The titles of the three principal works of this writer are as follows: 1. *Περὶ τῆς Ἑρμῆος φυσιολογίας* ("Of the Physical System of Hermes").—2. *Αἰγυπτιακὴ Θεολογία* ("Egyptian Theology").—3. *Φοινικικὴ* ("Phœnician History"), cited also under other titles, one of which is *Φοινικῶν Θεολογία* ("Theology of the Phœnicians").—All these works were written in Phœnician, and the preceding are their titles in Greek. The history was translated into the Greek language by Herennius Philo, a native of Byblus, who lived in the second century of our era. It is from this translation that we obtain all the fragments of Sanchoniathon that have reached our times. Philo had divided his translation into nine books, of which Porphyry made use in his diatribe against the Christians. It is from the fourth book of this last work that Eusebius took, for an end directly opposite to this, the passages that have come down to us. (*Præp. Evæng., 1, p. 31.*) And thus we have these documents relative to the mythology and history of the Phœnicians from the fourth hand.—St. Martin and others are inclined to the opinion that the three works mentioned above as having been written by Sanchoniathon, were

only so many parts of one main production. According to Porphyry, the Phœnician history of Sanchoniathon was divided into eight books, while we learn, on the other hand, from Eusebius, that the version of Philo consisted of nine. Hence it has been supposed that the Greek translator had united two works, and that thus the treatise on the physical system of Hermes, or that on Egyptian theology, became a kind of introduction to the Phœnician History, and increased the number of books in the latter by one. And it has been farther supposed that the two titles of "Egyptian Theology" and "Physical System of Hermes" belonged both to one and the same work. (Compare *Bechart, Geogr. Sacra., 2, 17.*)—The long interval of time between Sanchoniathon and his translator renders it extremely probable that the latter must often have erred in rendering into Greek the ideas of his Phœnician original; and we may suppose, too, that occasionally Philo may have been tempted to substitute some of his own. And yet, at the same time, the fragments of Sanchoniathon contain so many things evidently of Oriental origin, that it is extremely difficult to believe they were forged by Philo. A difference of opinion, however, ever has existed, and will continue to exist on this head. Grotius and other writers highly extol the fragments in question, on account of the agreement which they discover between them and the books of the Old Testament. Cumberland and Meiners, on the other hand, only see in them an attempt to prop up the religious system of the Phœnicians and Egyptians, and discover in them no other principle but those of the Porch concealed under Phœnician names. (Cumberland, *Sanchoniathon's Phœnician Hist., Lond., 1720, 8vo.*—Meiners' *Hist. Doctrinae de Vero Deo, vol. 1, p. 63.*—Schöll, *Hist. Lit. Græc., vol. 4, p. 115.*)—In 1836 a work appeared in Germany with the following title: "*Sanchoniathon's Urgeschichte der Phönizier in einem Auszuge aus der wieder aufgefundenen Handschrift von Philos vollständiger Uebersetzung. Nebst Bemerkungen von Fr. Wagenfeld. Mit einem Vorworte vom Dr. G. F. Grotefend, Hannover, 1836*" (Sanchoniathon's early History of the Phœnicians, condensed from the lately-found manuscript of Philo's complete translation of that work. With annotations by Fr. Wagenfeld, and a preface by Dr. G. F. Grotefend). This was followed, in 1837, by another work, purporting to be the Greek version of Philo itself, with a Latin translation by Wagenfeld: "*Sanchoniathonis Historiarum Phœnicia libros novem, Græce versus a Philone Byblio, editi, Latinaque versione donavit F. Wagenfeld, Brema, 1837.*"—The whole is a mere forgery, very clumsily executed; and the imposture has been very ably exposed in the 87th and 89th numbers of the Foreign Quarterly Review.

SANCUS, a deity of the Sabines, according to some, identical with Hercules. The name is said to have signified "heaven" in the Sabine tongue. (*Lyd., de Mens., p. 107 ed. Schow., p. 250 ed. Ræther.*) Sancus at first view would seem to have some connexion in form with the Sandafus of Cilicia and the Sandon of Lydia. Another name for this deity was Semo, which recalls the Sem or Som of Egypt. (*Cruizer's Symbolik, par Guignaut, vol. 3, p. 493.*)

SANDALIOTIS, a name given to Sardinia from its resemblance to a sandal. (*Vid. Ichnusa.*)

SANDROCOTTUS, an Indian of mean origin, who, having on one occasion been guilty of insolent conduct towards Alexander, was ordered by that monarch to be seized and put to death. He escaped, however, by a rapid flight, and at length dropped down completely exhausted. As he slept on the ground, a lion of immense size came up to him, licked the perspiration from his face, and, having awakened him, fawned upon and then left him. The singular tameness of the animal appeared preternatural to Sandrocottus, and was con-

stroed by him into an omen of future success. Having collected, therefore, a band of robbers, and having roused the people of India to a change of affairs, he finally attained to sovereign power, and made himself master of a part of the country which had been previously in the hands of Seleucus. It is said, that, while waging war, and before coming to the throne, a wild elephant of very large size approached him on one occasion, and with the greatest docility suffered him to mount on its back, and used after this to bear him into the fight. (*Justin*, 16, 4.) The Sandroctatus of the Greeks is thought to be the same with the Chandragupta of the Hindu writers. And Chandragupta (i. e., "saved the moon") is regarded by many as a mere epithet or surname of the Hindu monarch Vischarada. (*De Marles, Hist. de l'Inde*, vol. 3, p. 235.—*Id. ib.*, vol. 1, p. 429.)

SANGARIUS, a river of Asia Minor, rising near a place called Sangia (*Σαγγία*), in Mount Adoreus, a branch of Mount Dindymus, in Galatia, and falling into the Euxine on the coast of Bithynia. Its source was 150 stadia from Pessinus. According to Strabo (543), it formed the true eastern boundary of Bithynia, and his account coincides in this with that of the earlier writers. (*Scylax*, p. 34.—*Apoll. Rhod.*, 2, 724.) The Bithynian kings, however, gradually extended their dominions farther to the east, and the Romans gave the country a still farther enlargement on this side. This river is called Sangaris by Constantine Porphyrogenitus (1, 6), and Sagaris by Ovid (*ep. s. Pont.*, 4, 10). The modern name is the *Sakaria*. (*Mannert's Geogr.*, vol. 6, pt. 3, p. 607.)

SANNYKLON, an Athenian comic poet, contemporary with Aristophanes. Little is known of him. One of his plays, entitled *Δανάη* (*Danaë*), in which he burlesqued a verse of the *Orestes* of Euripides (*Schol. ad Aristoph., Ran.*, p. 142.—*Schol. ad Eurip., Orest.*, 279), appears to have been acted about 407 B.C. (*Clinton, Fast. Hellen.*, p. 81.) Another comedy of his, entitled *Ἑλῶς* ("Laughter"), is also mentioned. (*Clinton, Fast. Hellen.*, p. 91.—*Bentley's Phalaris*, vol. 1, p. 261, *ad. Dyce*.)

SANTONES, a people of Gallia Aquitania, north of the mouth of the Garumna, on the coast. Their capital was Mediolanum Santonum, now *Saintes*. (*Plin.*, 4, 19.—*Cæs.*, B. G., 1, 10.—*Id. ibid.*, 3, 11.)

SARIS, a river of Cisalpine Gaul, rising in Umbria, and falling into the Adriatic below Ravenna. It is now the *Savio* or *Alpe*. It was also called *Isapis*. (*Plin.*, 3, 15.—*Sil. Ital.*, 8, 449.—*Lucan.*, 2, 405.)

SAPOR, I. a king of Persia, who succeeded his father, Artaxerxes, about the 288th year of the Christian era. Naturally fierce and ambitious, Sapor wished to increase his paternal dominions by conquest; and, as the indolence of the emperors of Rome seemed favourable to his views, he laid waste the provinces of Mesopotamia, Syria, and Cilicia; and he might have become master of all Asia if Odenatus had not stopped his progress. If Gordian attempted to repel him, his efforts were weak, and Philip, who succeeded him on the imperial throne, bought the peace of Sapor with money. Valerian, who was afterward invested with the purple, marched against the Persian monarch, but was defeated and taken prisoner. Odenatus no sooner heard that the Roman emperor was a captive in the hands of Sapor, than he attempted to release him by force of arms. The forces of Persia were cut to pieces, the wives and treasures of the monarch fell into the hands of the conqueror, and Odenatus penetrated, with little opposition, into the very heart of the kingdom. Sapor, soon after this defeat, was assassinated by his subjects, A.D. 273, after a reign of 32 years. He was succeeded by his son, called Hormisdas.—II. The second of that name, succeeded his father Hormisdas on the throne of Persia. He was as great as his ancestor of the same name, and by under-

taking a war against the Romans, he attempted to enlarge his dominions, and to add the provinces on the west of the Euphrates to his empire. Julian marched against him, but fell by a mortal wound. Jovian, who succeeded Julian, made peace with Sapor; but the monarch, always restless and indefatigable, renewed hostilities, invaded Armenia, and defeated the Emperor Valens. Sapor died A.D. 380, after a reign of 70 years, in which he had often been the sport of fortune. He was succeeded by Artaxerxes, and Artaxerxes by Sapor III., a prince who died after a reign of five years, A.D. 389, in the age of Theodosius the Great.

SAPPHO, I., a celebrated poetess, a native of Mytilene in the island of Lesbos, and nearly contemporaneous with her countryman Alcæus, although she must have been younger, since she was still alive in 568 B.C. About 596 B.C. she sailed from Mytilene in order to take refuge in Sicily. (*Marm. Par.*, *ep.* 36.) The cause of her flight appears to have been a political one, and she must at that time have been in the bloom of her life. At a much later period she produced the ode mentioned by Herodotus (2, 135), in which she reproaches her brother Charaxus for having purchased Rhodopis, and for having been induced by his love to emancipate her. (*Müller, Hist. Grec. Litt.*, p. 173.) Of all the females that ever cultivated the poetic art, Sappho was certainly the most eminent, and ancient Greece fully testified its high sense of her powers by bestowing on her the appellation of the "Tenth Muse." How great, indeed, was Sappho's fame among the Greeks, and how rapidly it spread throughout Greece itself, may be seen in the history of Solon, who was contemporary with the Lesbian poetess. Hearing his nephew recite one of her poems, he is said to have exclaimed that he would not willingly die till he had learned it by heart. (*Stobæus, Serm.*, 29, 28.) Indeed, the whole voice of antiquity has declared that the poetry of Sappho was unrivalled in grace and sweetness. This decision has been confirmed by posterity, though we have only a few verses remaining of her poetic effusions; for these are of a high character, and stamped with the true impress of genius.—The history of Sappho is involved in great uncertainty. It is known that, as we have already stated, she was born at Mytilene, in the island of Lesbos; but if we subject to a rigorous criticism the opinion so generally received in relation to her amorous propensities, and the misfortunes attendant upon these, we will come to the conclusion that the story of her passion for Phaon and its tragical consequences is a mere fiction. It is certain that Sappho, in her odes, made frequent mention of a youth, to whom she gave her whole heart, while he requited her passion with cold indifference. But there is no trace whatever of her having named the object of her passion, or sought to win his favour by her beautiful verses. The pretended name of this youth, Phaon, although frequently mentioned in the Attic comedies, appears not to have occurred in the poetry of Sappho. If Phaon had been named in her verses, the opinion could not have arisen that it was the courtesan Sappho, and not the poetess, who was in love with Phaon. (*Athenæus*, 13, p. 596, c.) Moreover, the marvellous stories of the beauty of Phaon have manifestly been borrowed from the myth of Adonis. (*Müller, Hist. Gr. Lit.*, p. 174.) According to the ordinary account, Sappho, despised by Phaon, took the leap from the Leucadian rock, in the hope of finding a cure for the pangs of unrequited love. But even this is rather a poetical image than a real event in the life of Sappho. The Leucadian leap was a religious rite, belonging to the expiatory festivals of Apollo, which were celebrated in this as in other parts of Greece. At appointed times, criminals, selected as expiatory victims, were thrown from the high overhanging rock into the sea: they were, however, sometimes caught at the bottom, and,

if saved, were sent away from Leucadia. (Concerning the connexion of this custom with the worship of Apollo, see *Müller's Dorians*, b. 1, ch. 11, § 10.) This custom was applied in various ways by the poets of the time to the description of lovers. Stesichorus, in his poetical novel named *Calyce*, spoke of the love of a virtuous maiden for a youth who despised her passion; and, in despair, she threw herself from the Leucadian rock. The effect of the leap in the story of Sappho (namely, the curing her of her intolerable passion) must, therefore, have been unknown to Stesichorus. Some years later, Anacreon says in an ode, "Again casting myself from the Leucadian rock, I plunged into the gray sea, drunk with love" (*ap. Hephaest.*, p. 130). The poet can scarcely, by these words, be supposed to say that he cures himself of a vehement passion, but rather means to describe the delicious intoxication of violent love. The story of Sappho's leap probably originated in some poetical images and relations of this kind; a similar story is told of Venus in regard to her lament for Adonis. (*Ptol., Hephaest.*, *ap. Phot., cod.*, 191.—*ed. Bekk.*, vol. 1, p. 153.) Nevertheless, it is not unlikely that the leap from the Leucadian rock may really have been made, in ancient times, by desperate and frantic persons. Another proof of the fictitious character of the story is, that it leaves the principal point in uncertainty, namely, whether Sappho survived the leap or perished in it. (*Müller, Hist. Gr. Lit.*, p. 175.)—It appears that Sappho became united in marriage to an individual named Cercolas, and the fruit of this union was a daughter, named Cleis (*Κλεις*), who is mentioned by the poetess in one of her fragments. Having lost her husband, Sappho turned her attention to literary pursuits, and inspired many of the Lesbian females with a taste for similar occupations. She composed lyric pieces, of which she left nine books, *elegies, hymns, &c.* The admiration which these productions excited was universal: her contemporaries carried it to the highest pitch of enthusiasm, and saw in her a superior being: the Lesbians placed her image on their coins, as that of a divinity.—Sappho had assembled around her a number of young females, natives of Lesbos, whom she instructed in music and poetry. They revered her as their benefactress, and her attachment to them was of the most affectionate description. This intimacy was made a pretext by the licentious spirit of later ages for the most dishonourable calumnies. An expression in Horace ("*mascula Sappho*," *Ep.*, 1, 19, 28) has been thought to countenance this charge, but its meaning has been grossly misunderstood; and, what is still more to the purpose, it would appear that the illustrious poetess has been ignorantly confounded with a dissolute female of the same name, a native of Lesbos, though not of Mytilene. (*Vid. Sappho II.*) Indeed, as the Abbé Bartholémy has remarked, the accounts that have reached us respecting the licentious character of Sappho, have come only from writers long subsequent to the age in which she lived. Sappho, the favoured of the Muses, was, as we have just endeavoured to show, never enamoured of Phaon, nor did she ever make the leap of Leucadia. Indeed, the severity with which Sappho censured her brother Charaxus for his love for the courtesan Rhodopis, enables us to form some judgment of the principles by which she guided her own conduct. For although, at the time when she wrote this ode to him, the fire of youthful passion had been quenched within her breast, yet she never could have reproached her brother with his love for a courtesan, if she had herself been a courtesan in her youth; and Charaxus might have retaliated upon her with additional strength. Besides, we may plainly discern the feeling of unimpeached honour due to a freeborn and well-educated maiden, in the verses which refer to the relation of Alceus and Sappho. Alceus testifies that the attractions and loveliness of

Sappho did not derogate from her moral worth, when he calls her "violet-crowned, pure, sweetly-smiling Sappho." (*Alceus, fragm.*, 38, *ed. Blomf.*)—Sappho's misfortunes arose not, therefore, from disappointed love; they had, on the contrary, a political origin, and terminated in exile. It is probable that, being drawn into a conspiracy against Pittacus, tyrant of Mytilene, by the persuasions of Alcæus, she was banished from Lesbos along with that poet and his partisans. (*Merm., Oxon.*, *cp.* 37.) She retired, as we have already remarked, to Sicily.—We know nothing farther of the life of Sappho. Her productions, which gained for her so exalted a reputation, are almost equally unknown. All that has reached us consists of, 1. A beautiful Ode to Venus, in the Sapphic measure, preserved by Dionysius of Halicarnassus.—2. A second ode, in the same measure, still more beautiful, descriptive of the tumultuous emotions of love, and preserved in part by Longinus.—3. Various fragments, all unfortunately very short, found in Aristotle, Plutarch, Athenæus, Stobæus, Hephæstion, Macrobius, Eustathius, and others.—4. Three epigrams.—Sappho also composed hymns to the gods, in which she invoked them to come from their favourite abodes in different countries; but there is little information extant respecting their contents.—The poems of Sappho are little susceptible of division into distinct classes. Hence the ancient critics divided them into books, merely according to the metre, the first containing the odes in the Sapphic measure, for the poetess enriched the melody of the language by a lyric measure of the most harmonious character, called after her own name; a measure which Catullus and Horace afterward introduced with so much success into the Latin tongue.—The best text of Sappho is that given by Blomfield, in the *Museum Criticum* (vol. 1, p. 3, *segg.*). The best and fullest edition, however, is that of Nene, *Berol.*, 1827, 4to. (*Schöll, Hist. Lit. Gr.*, vol. 1, p. 205.—*Müller, Hist. Lit. Gr.*, p. 172.—*Barnes, Vit. Anacr.*, p. 29.—*Bayle, Dict.*, s. v. *Sappho*.)—II. A native of Eresus, in the island of Lesbos, for a long time confounded with Sappho of Mytilene. The distinction between the two has only been recently drawn, and the memory of the celebrated poetess has at last been freed from the dishonourable imputations which had been so long attached to it. An ancient medal, brought from Greece in 1822, presents, along with the name ΣΑΠΦΩ (*Sappho*), a female head, with the letters ΕΡΕΩΙ (*Eresus*), the allusion being to the Lesbian city of Eresus, where the medal was struck. (Consult *De Hautcroche, Notice sur la courtisane Sappho d'Eresus, Paris*, 1822.) This settles the question as to there having been two Sapphos, both natives of the same island. The period when this second Sappho flourished is far from being easy to determine. That she was a female of some celebrity appears evident from the inhabitants of Eresus having stamped her image on their coins; but, unfortunately, we have only a few words, scattered here and there in ancient authors, relative to this namesake of the Mytilenean Sappho. The first of these authors is the historian Nymphis, cited by Athenæus (18, p. 596, c.), who speaks of Sappho, a courtesan of Eresus, as having been enamoured of Phaon (*Καὶ ἡ τῆς Ἐρέσου δέ τις ἑταῖρα Σαρφώ, τοῦ καλοῦ Φάωνος ἐρασθεῖσα, περιόδοτος ἦν, ὡς φησι Νύμφης ἐν Περιήλῳ Ἀσίας*).—The second authority is *Ælian* (*Var. Hist.*, 12, 19), who remarks, "I learn, too, that there was also another Sappho in the island of Lesbos, a courtesan, not a poetess" (*Περὶ θάνομαι δέ, ὅτι καὶ ἑτέρα ἐν τῇ Λέσβῳ ἐγένετο Σαρφώ, ἑταῖρα, οὐ ποιήτρια*).—A third authority is Suidas, who distinguishes between Sappho the poetess, and Sappho who was enamoured of Phaon, and who leaped from Leucate; only by some negligence or other he makes the poetess a native of Eresus, and the other of Mytilene. The fact of the existence of two Sapphos

being thus proved by the testimony of three authors, it remains to examine which of the two was the one that loved Phaon, and leaped in despair from the promontory of Leucate. Herodotus, the oldest author that makes mention of Sappho, only knew the native of Mytilene. He is silent respecting her love for Phaon, and, considering the discurative nature of his history, he no doubt would have mentioned it had the circumstance been true. Hermesianax, a piece of whose on the loves of poets is quoted by Athenæus (13, p. 598, *seqq.*), speaks of Sappho's attachment for Anacreon, but is silent respecting Phaon, when, in fact, her fatal passion for the latter, and particularly its sad catastrophe, suited so well the spirit of his piece, that he could not have avoided mentioning them had they been true. In an epigram by Antipater of Sidon (*Ep.*, 70.—*Jacobs's Anthologia Gr.*, vol. 2, p. 25), relative to the death of Sappho, that poet is not only silent respecting her tragical end at Leucate, but, according to him, she fell in the course of nature, and her tomb was in her native island. In the Bibliotheca of Photius, to which we have already referred (vol. 1, p. 153, *ed. Bekker*), an extract is given from a work of Ptolemy, son of Hephestion, in which is detailed a kind of history of the leaps from Leucate. It is remarkable that no mention is made, in this account of the fate of Sappho, although many instances are cited of those who had made the hazardous experiment. All these negative authorities would seem to more than counterbalance the testimony of Ovid, who, in one of his *Heroides*, confounds the female who was enamoured of Phaon with the lyric poetess.—According to Strabo (453), Menander made Sappho to have been the first that ever took the leap. (*Menandri, Reliq.*, *ed. Meineke*, p. 105.) Now Menander lived in the fourth century before our era, and the existence of the Sappho, therefore, who threw herself from the rock of Leucate, may be traced up as far at least as three centuries prior to the Christian era. It does not, however, go back as far as the fifth century, since Herodotus, who flourished at that period, makes no mention of the tragic end of the Mytilenian poetess: the natural inference, therefore, is, that Sappho of Mytilene did not leap from the promontory of Leucate, and that Sappho of Eresus, who did, was not born when Herodotus wrote his history.—Visconti has the merit of having been the first modern writer who suspected that the episode of Phaon and the catastrophe at Leucate belonged rather to the second than the first Sappho. (*Iconogr. Græca*, vol. 1, p. 81, *seqq.*) His suspicions would have been changed into certainty if he could have foreseen the discovery of the ancient medal, brought to light after his decease, and which so fully establishes the existence of a second Sappho, a native of Eresus. (*Biogr. Univ.*, vol. 40, p. 398.—Compare the remarks of Welcker, *Sappho von einem herrschenden vorurtheil befreit*, Göt., 1816, 8vo.)

SARACENI, or, more correctly, ARRACENI, a name first belonging to a people in Arabia Felix, and derived most probably from that of the town Arra. The application of the name Saraceni to all the Arabians, and thence to all Mohammedans, is of comparatively recent origin. Ammianus Marcellinus employs the term in question as having been used by others before him. (*Ammianus Marcell.*, 14, 4; 22, 15; 23, 6; 24, 2.)

SARDANAPÁLUS, the last king of Assyria, infamous for his luxury and voluptuousness. The greatest part of his time was spent in the company of his wives and favourites, and the monarch generally appeared in the midst of them disguised in the habit of a female, and spinning wool for his amusement. This effeminacy irritated his officers; Belesis and Arraces conspired against him, and collected a numerous force to dethrone him. Sardanapalus quitted for a while his

voluptuous retreat, and appeared at the head of his armies. The rebels were defeated in three successive battles; but at last Sardanapalus was beaten and besieged in the city of Ninus for two years. When all appeared lost, he burned himself in his palace, with his eunuchs, concubines, and all his treasures, and the empire of Assyria was divided among the conspirators. This event happened B.C. 820, according to Eusebius; though Justin and others, with less probability, place it 80 years earlier. (*Herod.*, 2, 150.—*Cic.*, *Tusc.*, 5, 35.)

SARDI, the inhabitants of Sardinia. (*Vid.* Sardinia.)

SARDES. *Vid.* Sardis.

SARDICA or SERDICA, and also ULPIA SARDICA, a city belonging originally to Thrace, but subsequently included within the limits of Dacia Ripensis, and made the capital of this province. It was situated in a fertile plain, through which flowed the river Cæcus. The Emperor Maximian was born in its vicinity, and it is known in the annals of the Church from a council having been held within its walls. Attila destroyed the city, but it was rebuilt, and the name changed by the Bulgarians to *Triaditsa*, under which appellation it still exists. (*Eutrop.*, 9, 22.—*Nicetas*, 3.)

SARDINIA, an island in the Mediterranean, south of Corsica and west of Italy. The oldest Greek form for the name was *Σαρδία*, undeclined, but of the feminine gender, which the Latins converted into *Sardinia*. Herodotus writes *τὴ Σαρδία*; Scylax and Scymnus give no inflections of the word; and Diodorus, in most instances, follows the original usage. (*Herod.*, 1, 170.—*Id.*, 5, 106.—*Scylax*, p. 2.—*Scymn.*, ch. v., 204.—*Diod.*, 4, 29, 82, &c.) At a later period the form began to be gradually declined, and hence we have *Σαρδῖνα* in Polybius, though he gives *Σαρδία* (from which others have the genitive *Σαρδιῶν*) as the form of the nominative. Strabo writes *Σαρδία*, gen. *Σαρδιῶνος*. The inhabitants were called *Sardoi* (*Σαρδοί*) and *Sardonii* (*Σαρδόνιοι*); the Romans named them *Sardi*, rarely *Sardinienenses*.—Scylax gives the distance between Sardinia and the mainland as one and a half days' sail, or 750 stadia; this, however, is too small, and Artemidorus is more correct when he makes it 1200 stadia. (*Scylax*, p. 2.—*Strabo*, 223.) That the island can be seen on a clear day from the coast of Italy, we learn from Strabo, and also from modern travellers. The area of Sardinia is given at the present day at 9200 miles, and the number of the inhabitants is estimated at about 4,000,000.—The Greeks compared the shape of this island to that of the human foot, and hence the appellation of *Ichnusa* that was sometimes given to it (*Ἰχνοῦσα*—*ἰχνοῦς*, *vestigium*). Others, from its resemblance to the lower part of the sandal, term it *Sandaliotis*. (*Vid.* *Ichnusa*, and compare the remark of Pliny, 3, 7, "*Sardiniam Timæus Sandaliotim appellavit ab effigie soleæ, Myrsilus Ichnusam a similitudine vestigii.*")—Sardinia may be called a mountainous island, a chain of mountains running through it from north to south, though nearer to the eastern than the western coast. From the northern part of this chain another rises, which proceeds from east to west, and which separates the island, as it were, into two parts, from the present *Capo Comino* to *Capo Malargin*. This cross range is called by Ptolemy *Μαυρόβρυκα ὄρη* (*Insani Montes*—"The Mad Mountains"). The mountains of Sardinia exercise a very important influence on the character of its coast, on the temperature, and on the productiveness of the island. The numerous side ranges, running down to the very coast, form spacious bays, and, on the southern and western shores, safe harbours. On the east side of the island, however, the cliffs are high and steep, and scarcely afford anywhere a safe anchoring place; while gusts of wind frequently blow with very sudden and great fury

SARDINIA.

from the interior of the mountain ranges, and do great damage to vessels along these shores. Hence probably the appellation of "*Insani Montes*," and hence, too, the language of Claudian (*Bell. Gildon.*, v. 512), "*Insanos infamat navita montes*." Along the whole range, therefore, of the eastern coast, although so conveniently situated for intercourse with Italy, the ancients had but one harbour, Olbia, and that far to the north; and in modern days, too, no place of any importance is found along this part of Sardinia. The mountain atmosphere was healthy, but the rugged nature of the ranges and the wild character of the inhabitants forbade any attempts at cultivation. In the western and southern parts, on the other hand, the soil was fertile and well cultivated, but the climate very unhealthy. Thus Mela remarks (2, 7), "*ut secunda ita pars pestilens insula*." The noxious effects of the climate were still more sensibly felt by strangers than by natives. Hence, whenever the Romans wished to designate a particularly unhealthy region, they named Sardinia; and so greatly did they dread the effects of its climate, that they never ventured to keep a standing force in it for any length of time. (*Cic.*, *ep. ad Quint.*, *fratrem*, 2, 3.—*Strabo*, 225.) The principal causes of this unhealthiness were the pools of stagnant water in the hollows of the island, and the want of northerly winds. These winds were kept off, as Pausanias believed (10, 17), by the mountains of Corsica and even of Italy. The *Insani Montes* also contributed their share in producing this. (*Claudian.*, *Bell. Gildonic.*, v. 512, *seqq.*)—The fertility of the island is attested by all the ancient writers; neither was it infested by any snakes, nor by any beasts of prey. Rome obtained her supplies of grain not only from Sicily, but also from Sardinia; large quantities of salt, too, as in modern times, were manufactured on the western and southern coasts. The ancient writers speak of mines, and Solinus (c. 11) of silver ones: the names of various places in the island indicate a mining country, as *Metalla*, *Insula Plumberia*, &c.; and Ptolemy makes mention of several mineral springs and baths. Two products of the island, however, deserve particular notice. One of these is its wool. Numerous herds of cattle were reared in the island, as might be expected among a people who paid little attention to, and derived little subsistence from agriculture. (*Diod.*, 5, 15.) It must be remarked, however, that the animals chiefly killed for food were of a mongrel kind, begotten between a sheep and a goat, and called *musmones*. (*Plin.*, 8, 49.—*Pausan.*, 10, 17.) They were covered with a long and coarse hair, and their skins served for the common clothing of the mountaineers, whom Livy hence styles *Pelliti*. In winter they wore the hair inward. (*Ælian.*, *H. A.*, 16, 34.) In war they had small bucklers covered with these skins. They were named from this attire *Mastrucati*; and the *Mastrucati Latrunculi* were often very dangerous antagonists for the Romans. The other remarkable product of Sardinia was a species of wild parsley (*apiastrum*), called by Solinus *herba Sardonica*. It grew very abundantly around springs and wet places. Whoever ate of it died, apparently laughing; in other words, the nerves became contracted, and the lips of the sufferer assumed the appearance of an involuntary and painful laugh. Hence the expression *Sardonicus risus*. (*Pausan.*, 10, 17.—*Solin.*, c. 11.—*Plin.*, 20, 11.) It must be remarked, however, that the phrase *μειδῶντα Σαρδόνιον* occurs also in Homer (*Od.*, 20, 302), and that other explanations besides the one just mentioned are given by Eustathius.—Whence Sardinia received its first inhabitants we are not informed by any ancient writer. They speak, indeed, of settlements made at various times in the island, but the new-comers always found a rude race of inhabitants already in possession. The first that migrated to Sardinia were said to have been

SARDINIA.

the Etrurians and Tyrrhenians, under Phorcy, a son of Neptune: these settled on the eastern coast. (*Servius*, *ad Virg.*, *Æn.*, 5, 829.) At a subsequent period, Sardus, a son of Hercules, led a colony thither. He introduced among the rude inhabitants, who were accustomed to dwell in caves, the first rudiments of civilization; taught them agriculture, and was their earliest lawgiver. In gratitude to him, they called the island after his name, Sardinia; sent, at a later period, his statue to Delphi, and worshipped him as a god under the appellation of *Sardus pater*, whence arose the forms *Sardipater* and *Sardopater*. (*Serv.* *ad Virg.*, *Æn.*, 8, 564.) After the Libyans came a colony of Iberians under Norax, from Bætica. He settled in the southern part of the island, and founded the city of Nora, which he called after his own name. Tradition also makes Aristæus, the father of Actæon, to have come to Sardinia with some Grecian followers after the death of his son. (*Sil. Ital.*, 12, 368.) He was the first to plant trees, and to teach the inhabitants how to make oil and cheese.—As regards the Grecian settlements in this island, it may be remarked, that, though the date of their first coming cannot be ascertained, it would appear, however, to have taken place at a very early period. The first of these colonies was that led by Iolaus. He brought with him many of the Thespiads or sons of Hercules, together with a considerable number of Attic families. The inhabitants of the part conquered by him were called from him *Iolai*, and even at the present day a part of the territory of *Cagliari* is styled *Euradoria* & *Iola*. (*Diod. Sic.*, 4, 24, &c.—*Id.*, 5, 15.) The fertility of Sardinia soon invited over numerous Grecian settlers; and various petty republics were established, independent of each other. All of these engaged with activity in agriculture and commerce, and all rendered divine honours to Sardus, Aristæus, and Iolaus. Traces of Grecian customs and attire are said still to remain. (*Hörschmann*, *Geschichte der Sardinien*, p. 7.) The Carthaginians would seem to have obtained a footing in Sardinia at a very early period, as the situation of the island in a commercial point of view was too important to be neglected. Its fertility, moreover, made it one of their granaries, and they used every means in their power to promote agricultural labours. Sardinia fell into the hands of the Romans 237 B.C., in the interval between the first and second Punic wars. Its new masters could only, as the Carthaginians had done before them, obtain possession, for a long period, of the shores of the island. The inhabitants of the interior defended themselves successfully for nearly 100 years. Indeed, it may be said that Sardinia was never completely subdued by the Roman arms (*Strabo*, 225), and the predatory movements of the mountaineers still occasioned trouble in the days of the emperors. (*Tac.*, *Ann.*, 2, 85.) In the fifth century it fell into the hands of the Vandals. (*Procop.*, *Bell. Vand.*, 2, 13.) The interior of the island, even at the present day, exhibits an astonishing degree of barbarism: the peasants are still dressed in leather or skins, and the mountains are still infested by banditti.—The present island of Sardinia presents many monuments that recall the successive sway of its several conquerors. The most remarkable, however, of these, are the very ancient structures called *Nurages* or *Nuraghes*, which have exercised the sagacity of various travellers. The number of these monuments is about 600. Those which are entire are 50 feet high, with a diameter of 90 feet at the base, and terminating at the summit in a cone. They are built on little hills, in a plain, of different sorts of stone, and, in some cases, are surrounded by a wall. The blocks of stone are of large size, and put together without cement. Some nuraghes are flanked by cones, to the number of from three to seven, which are grouped around the principal cone; they form a kind of casemates. The encompassing

wall is surmounted with a parapet. Each nuraghe is divided into three chambers or stories, the communication to which is effected by a kind of spiral ascent in the side wall. (*Mimant, Histoire de Sardaigne, Paris, 1825.—De la Marmora, Voyage en Sardaigne, Paris, 1826.—Petit Radet, Notices sur les Nuraghes de la Sardaigne, Paris, 1826.*) The author last cited regards the *nuraghes* as of Cyclopien or Pelægic origin, and carries back the period of their construction to the 15th century before the Christian era. (*Mananert, Geogr.*, vol. 9, pt. 2, p. 468.—*Balbi, Abrégé de Géographie*, p. 294.)

SARDIS or **SARDES** (the Ionic forms of the name are *αἰ Σάρδις* and *Σάρδις*, the ordinary Greek form is *αἰ Σάρδεϋς*), a city of Lydia, the ancient capital of the monarchs of the country. It was situate at the foot of Mount Tmolus, on the river Pactolus, which ran through the place; and on one of the elevations of the mountain, comprehended within the circuit of the city, was the site of a strong citadel. According to Herodotus (1, 84), a concubine of Mæles, king of Lydia, had brought forth a young lion, and the monarch was informed by the Telmessian diviners, that if this animal were carried by him quite round the works of the city, Sardis should be for ever impregnable. The young lion was brought to every other part of the place except the steep side of the citadel which faced Mount Tmolus, this latter part being neglected as altogether insuperable and inaccessible; and yet by this very part it was subsequently taken. This legend, combined with the statement of Joannes Lydus (*de Mens.*, p. 42), that Sardis was an old Lydian word denoting "the Year," has led Creuzer to give an astronomical turn to the whole tradition. (*Creuzer und Hermann, Briefe*, p. 106, in *notis*.)—Sardis was said to have been destroyed by the Cimmerians during their inroad into Asia (*Strabo*, 627), but to have been soon after rebuilt and strongly fortified: it is to this latter period, no doubt, that the legend above mentioned refers. As the capital of Cræsus, king of Lydia, it is frequently mentioned in Herodotus, and the historian relates the manner in which it fell into the hands of Cyrus, the citadel having been surprised on the very side that was deemed inaccessible. The city retained its size and importance under the Persian dominion. Herodotus (7, 31) names it, by way of distinction, "the city of the Lydians" (*τὴν Ἀσίων τὴν πόλιν*), and it became the seat of the Persian satraps, as it had been of the Lydian kings. The fortifications, however, must have been destroyed by its new masters, since otherwise the Greeks could not have so easily penetrated into the place in the expedition which preceded the Persian war. From the account of Herodotus (5, 100), the citadel alone would appear to have remained. And yet, with all its greatness, Sardis could not have been in these early times a well-built city; at least the greater part of the houses would seem to have been constructed of reeds, according to the account of Herodotus, and even those which were built with bricks were roofed with reeds. One of these, on this occasion, was set on fire by a soldier, and immediately the flame spread from house to house, and consumed the whole city. The temple of Cybele also suffered in the conflagration, and it was this circumstance that gave Xerxes a pretext for destroying the temples of Greece.—The city and acropolis surrendered, at a later day, on the approach of Alexander after the battle of the Granicus. He encamped by the river Hermus, which was 20 stadia, or two miles and a half, distant. He went up to the acropolis, which was then fortified by a triple wall, and gave orders to have erected in it a temple and altar to Jupiter Olympus, on the site of the royal palace of the Lydian monarchs. The place, on account of its importance, was confided to Pausanias, one of his most trusty generals. (*Arrian, Exp. Alex.*, 1, 18.) After Alexander's death,

we find Sardis to be the residence of Achæus, the governor, under the Syrian kings, of the whole Asiatic peninsula. (*Polyb.*, 577.) It was taken, after a long siege, by Antiochus (*Polyb.*, 7, 15.—*Id.*, 8, 23), and again laid waste. At a subsequent period we find Sardis in the hands of the Romans, who, in accordance, probably, with a general rule pursued by them in Asia Minor, dismantled the citadel; at least, neither Strabo nor any writer after him makes mention of the castle of Sardis. The city sank, after this, into a place of inferior importance, and its principal trade was transferred to Smyrna and Ephesus. The Romans, however, made it the seat of a *convencus juridicus* for the northeastern part of Lydia, and its size still remained considerable. (*Strabo*, 625—*πόλις μεγάλη*.) In the reign of the Emperor Tiberius, Sardis, along with eleven other of the principal cities of Lower Asia, was destroyed by an earthquake. The calamity, according to Tacitus (2, 47), happened in the night, and was, for that reason, the more disastrous. Hills are said to have sunk, and valleys to have risen to mountains. The emperor made liberal grants to the ruined cities; and Sardis was indebted for its restoration to his munificence. Its inhabitants were exempted from all taxes for five years; and received a supply of one hundred thousand great sesterces.—Sardis is remarkable in the annals of Christianity as having been one of the seven churches of Asia.—The Turks made themselves masters of Sardis in the eleventh century, but soon lost it again. In the fourteenth century, however, it again fell into their hands, together with its citadel. Timur subsequently took both, and by him the place was probably destroyed for the last time. A miserable village called *Sart* is now found on the site of this once famous city. For an account of the present condition of the place, and of the antiquities in its neighbourhood, consult *Arundell's Seven Churches of Asia*, p. 176, *seqq.*—*Milner, History of the Seven Churches of Asia*, p. 303, *seqq.*—*Leake's Tour*, p. 265, 342.

SARDUS, a son of Hercules, who led a colony to Sardinia, and gave it his name. (*Vid. Sardinia.*)

SAREPTA or **ZAREPHATH**, now *Serfend*, a city on the shore of the Mediterranean, between Tyre and Sidon. It was the scene of one of the miracles of Elijah. (*1 Kings*, 17, 9.)

SARMATIA, an extensive country, bounded, according to Mela (3, 4), on the west by the river Vistula, and extending from the Sinus Codanus or *Baltic Sea*, to the Tanais or *Don*. Ptolemy, on the other hand, makes it reach from the Vistula to the Rha or *Volga*, and to be separated by the river Tanais into two great divisions: 1. *Sarmatia Europæa*, the boundaries of which tract of country were, the Vistula on the west, Mount Carpathus and the river Tyras (or *Dniester*) on the south, the Palus Mæotis on the east, and the Sinus Codanus on the north. It corresponded to what is now part of *Russia, Poland, Lithuania, Prussia, Little Tartary, &c.*—2. *Sarmatia Asiatica*. This country reached from the Tanais to the mouth of the Rha, and from the northernmost point of Caucasus to unknown regions in the north. It corresponded, therefore, to *Astrakhan, Orenburg, &c.*—Ptolemy banished from his map of Europe the name of Scythia; but we must not suppose that he regarded all the nations between the Tanais and Vistula as Sarmatians. On the contrary, he expressly calls the Alani, whom he places between the Borythenes and Tanais, a Scythian race.—The greater part of the Sarmatic nations, in the strictest sense of this name, were confounded together under the name of *Hamaxobii*, a term which alludes to their living, like the Scythians, in wagons (*Malic-Brun, Hist. de la Geogr.*, vol. 1, p. 126, *seqq.* *Brussels ed.*)

SARNUS, a river of Campania, now the *Sarno*, falling into the sea about a mile from Pompeii. Accord

ing to Strabo, it formed the harbour of that town, which was also common to the inland cities of Nola, Acerra, and Nuceria. The same writer adds, that it was navigable for the space of eighteen miles; a circumstance which will scarcely be found applicable to the present stream; whence we should be led to conclude that a considerable change has taken place in its course. (*Strabo*, 247.) The Pelasgi, who occupied this coast at an early period, are said to have derived the name of Sarrastes from this river. (*Cramer's Anc. Italy*, vol. 2, p. 180.)

SARON, a king of Trozene, unusually fond of hunting. He was drowned in the sea while pursuing a stag which had taken to the water, and divine honours were paid him after death. According to one account, he gave name to the Sinus Saronicus. Saron built a temple to Diana at Trozene, and instituted festivals in honour of her, called from himself Saronia. (*Pausan.*, 2, 30.—*Mela*, 2, 3.)

SARONICUS SINUS, now the *Gulf of Engia*, a bay of the *Egean Sea*, lying to the southwest of Attica, and northeast of Argolis, and commencing between the promontories of Sunium and Scytleum. Some suppose that this part of the sea received its name from Saron, who was drowned there, or from a small river which discharged itself on the coast. Pliny, however, makes the name to have come from the forests of oak which at one time covered the shores of the gulf, the term *σαρωνίς*, in early Greek, signifying "an oak." (*Pliny*, 4, 9.—Compare *Schol. ad Callim.*, *H. in Jov.*, 22.)

SARFEDON, I. a son of Jupiter by Europa, the daughter of Agenor. He was driven from Crete by his brother Minos (*vid. Rhadamanthus*), and thereupon retired to Lycia, where he aided Cilix against the people of that country, and obtained the sovereignty of a part of it. Jupiter is said to have bestowed upon him a life of treble duration. (*Apollod.*, 3, 1, 2.—*Heyne*, *ad loc.*)—II. A son of Jupiter and Laodamia the daughter of Bellerophon. He was king of Lycia, and leader with Glaucus of the Lycian auxiliaries of Priam. The character of Sarpedon is represented as the most faultless and amiable in the *Iliad*. He was by birth superior to all the chiefs of either side, and his valour was not unworthy of his descent. The account of his conflict with Patroclus; the concern of Jupiter at his perilous situation; the deliberation of the god whether he should avert the hostile decrees of fate; and the subsequent description of his death, are among the most striking of all the episodes of the *Iliad*. (*Hom.*, *Il.*, 16, 419, *seqq.*)—III. A promontory of the same name in Cilicia, beyond which Antiochus was not permitted to sail by a treaty of peace which he had made with the Romans. (*Livy*, 38, 38.—*Mela*, 1, 13.)

SARRA, the earlier Latin name for the city of Tyre. The Oriental form was *Tsar* or *Sor*, for which the Carthaginians said *Tsar* or *Sar*, and the Romans, receiving the term from those, converted it into *Sarra*, whence they also formed the adjective *Sarranus*, equivalent to "Tyrian." (*Virg.*, *Georg.*, 2, 508.—*Scaliger*, *ad Paul. Diac.*, s. v. *Sarra*.) Servius erroneously deduces the appellation from *Sar*, which, according to him, is the Phœnician name for the *murex*, or shellfish that yielded the purple. (*Serv.* *ad Virg.*, l. c.) The Greek name *Τύρος* proceeds probably from an Aramaic pronunciation, *Tor*. (*Gesenius*, *Hebr. Lex.*, vol. 2, p. 672, *ed. Leo*.)

SARRASTES, a people of Campania on the Sarnus. (*Virg.*, *Æn.*, 7, 738.—*Vid. remarks under the article Sarnus*, at the end.)

SARRĀNA, a city of Umbria, in the northern part of the country and on the left bank of the Sapis, towards its source. It still retains its name. This city was the birthplace of Plautus, the comic writer, a circumstance to which he alludes in his *Mostellaria* (3, 2). Sarnus must have been once a place of note, as it

gave its name to a numerous Umbrian tribe. (*Polyb.*, 2, 24.) From ancient inscriptions we may collect that it was a municipal town. (*Cramer's Anc. Italy*, vol. 1, p. 237.)

SATICŪLA, a town of Samnium, the site of which has not been precisely determined. It seems, however, evident from Livy (23, 14), that we must seek for it among the mountains south of the Vulturinus and on the borders of Campania. It is supposed to correspond to the modern *Agata dei Goti*. (*Cramer's Anc. Italy*, vol. 2, p. 237.)

SATURNIUM, a town in the Tarentine territory, frequently alluded to by the ancient writers. It was famed for the fertility of the surrounding country and for its breed of horses. (*Horat.*, *Sat.*, 1, 6, 59.)

SATURNALIA, a festival in honour of Saturn, and the most remarkable one in the whole Roman year. It was celebrated in December, and at first lasted but one day (the 19th); it was then extended to three, and subsequently, by order of Caligula and Claudius, to seven. (*Macrob.*, *Sat.*, 1, 10.) The utmost liberty prevailed during its continuance: all was mirth and festivity; friends made presents to each other; schools were closed; the senate did not sit; no war was proclaimed; no criminal executed; slaves were permitted to jest with their masters, and were even waited on at table by them. This last circumstance probably was founded on the original equality of master and slave, the latter having been, in the early times of Rome, usually a captive taken in the war or an insolvent debtor, and, consequently, originally the equal of his master. (*Dion. Hal.*, 4, 24.—*Niebuhr*, *Hist. Rom.*, vol. 1, p. 319.) According to some, the Saturnalia were emblematic of the freedom enjoyed in the golden age, when Saturn ruled over Italy. (*Keightley's Mythology*, p. 524.)

SATURNIA, I. a name given to Italy, because Saturn was fabled to have reigned there during the golden age. (*Virg.*, *G.*, 2, 173.)—II. A name given to Juno, as being the daughter of Saturn.—III. An ancient city of Etruria, whose ruins may be seen near the source of the Albina, and which is mentioned by Dionysius of Halicarnassus (1, 21) as formerly occupied by the Pelasgi. According to Pliny (3, 5), its more ancient name was Aurnia. Aurnia received a colony from Rome, A.U.C. 569. (*Liv.*, 39, 55.)

SATURNINUS, I. L. Apuleius, a tribune of the commons, who, in A.U.C. 654, B.C. 100, united with Marius against the patricians, excited a sedition at Rome, intimidated the senate, caused several popular laws to be passed, and exercised a sort of usurped and tyrannical power for the space of three years. At length breaking out into open rebellion, and seizing, with his adherents, upon the Capitol, he was besieged there by Marius, who was now compelled, as consul, to act against him. Saturninus and his adherents eventually surrendered themselves to Marius, upon his promising to save their lives; but the people fell upon and destroyed them. (*Plut.*, *Vit. Mar.*—*Flor.*, 3, 16.)—II. P. Sempronius, a general of Valerian, proclaimed emperor in Egypt by his troops after he had rendered himself celebrated by his victories over the barbarians. His integrity, his complaisance and affability, had gained him the affection of the people; but his fondness of ancient discipline provoked his soldiers, who wantonly murdered him in the 43d year of his age, A.D. 262.—III. Sextus Julian, a Gaul, intimate with Aurelian. The emperor esteemed him greatly, not only for his private virtues, but for his abilities as a general, and for the victories which he had obtained in different parts of the empire. He was saluted emperor at Alexandria, and compelled by the clamorous army to accept of the purple, which he had rejected with disdain and horror. Probus, who was then emperor, marched his forces against him, and besieged him in Alpanee, where he destroyed himself.

when unable to make head against his powerful adversary.—IV. Pompeius, a writer in the reign of Trajan. He was greatly esteemed by Pliny the younger, who speaks of him with great warmth and approbation as an historian, a poet, and an orator. Pliny always consulted the opinion of Saturninus before he published his compositions. (*Plin., Epist.*, 1, 8.—*Id.*, 1, 16.)

SATURNUS (called by the Greeks *Κρόνος*), a son of Cœlus or Uranus, and Terra, or the goddess of the earth. Terra bore to Uranus a mighty progeny, the Titans, six males and six females. The youngest of the former was Saturn. These children were hated by their father, who, as soon as they were born, thrust them out of his sight into a cavern of Earth. (*Völcker, Myth. der Iap.*, 233.—Compare *Apollod.*, 1, 1, 3.) Earth, grieved at this unnatural conduct, produced "the substance of hoary steel," and, forming from it a sickle, roused her children, the Titans, to rebellion against their father; but fear seized on them all except Saturn, who, lying in wait with the sickle with which his mother had armed him, mutilated his unsuspecting father. The drops which fell on the earth from the wound gave birth to the Erinyes, the Giants, and the Melian nymphs. (*Hes., Theog.*, 155, seqq.)—After this, Saturn obtained his father's kingdom, with the consent of his brethren, provided he did not bring up any male children. Pursuant to this agreement, Saturn always devoured his sons as soon as born, because, as some observe, he dreaded from them a retaliation of his unkindness to his father, till his wife Rhea, unwilling to see her children perish, concealed from her husband the birth of Jupiter, Neptune, and Pluto, and, instead of the children, she gave him large stones, which he immediately swallowed, without perceiving the deceit. The other Titans having been informed that Saturn had concealed his male children, made war against him, dethroned and imprisoned him with Rhea; and Jupiter, who was secretly educated in Crete, was no sooner grown up, than he flew to deliver his father, and to place him on his throne. Saturn, unmindful of his son's kindness, conspired against him; but Jupiter banished him from his throne, and the father fled for safety into Italy, where the country retained the name of *Latium*, as being the place of his concealment (from *latens*, "to lie concealed"). Janus, who was then King of Italy, received Saturn with marks of attention. He made him his partner on the throne; and the King of Heaven employed himself in civilizing the barbarous manners of the people of Italy, and in teaching them agriculture, and the useful and liberal arts. His reign there was so mild and popular, so beneficent and virtuous, that mankind have called it the *golden age*, to intimate the happiness and tranquillity which the earth then enjoyed. Saturn was father of Chiron, the centaur, by Philyra, whom he previously changed into a mare, to avoid the observation of Rhea.—Hesiod, in his didactic poem, says that Saturn ruled over the Isles of the Blessed, at the end of the earth, by the "deep-odding ocean" (*Op. et D.*, 167, seqq.); and Pindar gives a luxuriant description of this blissful abode, where the departed heroes of Greece dwelt beneath the mild rule of Saturn and his assessor Rhadamanthus. (*Ol.*, 2, 123, seqq.) At a later period, it was fabled that Saturn lay asleep, guarded by Briareus, in a desert island near Britannia, in the Western Ocean. (*Plut., de Defect. Orac.*, 13.—*Id.*, *de Fac. in Orb. Lun.*, 26.—*Procop., Bell. Goth.*, 4, 20.—Compare *Tzetz. ad Lycophr.*, 1204.) Saturn was in after times confounded with the grim deity Moloch, to whom the Tyrians and Carthaginians offered their children in sacrifice. The slight analogy of this practice with the legend of Saturn's devouring his children, may have sufficed for the Greeks to infer an identity of their ancient deity with the object of Phœnician worship. It was not improbably the circumstance of both gods being armed with a sickle,

which led to the inference of the *Κρόνος* of the Greeks being the same with the Saturnus of the Latins. (*Bullmann, Mythologus*, vol. 2, p. 28, seqq.) The fabled flight of this last from Olympus to Hesperia or Italy, and his there establishing the golden age, may have been indebted for its origin to the legend of the reign of Kronus over the Islands of the Blessed in the western stream of Ocean. There were no temples of Kronus in Greece; but there was a chapel of Kronus and Rhea at Athens (*Pausan.*, 1, 18, 7), and sacrifices were made to him on the Kronian Hill at Olympia. (*Pausan.*, 6, 20, 1.) The Athenians, moreover, had a festival in his honour, named the Kronia, which was celebrated on the twelfth day of the month Hecatombæon, or at the end of July, and which, as described, strongly resembles the Italian Saturnalia. (*Demosth., Timocr.*, p. 708.—*Philoc., ap. Macrob., Sat.*, 1, 10.)—The only epithet given to Kronus by the elder poets is *crooked-counselled* (*ἀγκυλομήτης*). Nonnus (25, 234) calls him *broad-bearded* (*εὐρυβέειος*). (*Keightley's Mythology*, p. 68, seqq.)—Among the Romans, in the sacrifices the priest always performed the ceremony with his head uncovered, which was unusual at other solemnities. The god is generally represented as an old man bent through age and infirmity. He holds a scythe in his right hand, with a serpent which bites its own tail, which is an emblem of time and of the revolution of the year. In his left hand he has a child, which he raises up as if instantly to devour it. Tatius, king of the Sabines, is fabled to have first built a temple to Saturn on the Capitoline Hill; a second was afterward added by Tullus Hostilius, and a third by the first consuls. On his statues were generally hung fetters, in commemoration of the chains he had worn when imprisoned by Jupiter. From this circumstance, all slaves that obtained their liberty generally dedicated their fetters to him. During the celebration of the Saturnalia, the chains were taken from the statues, to intimate the freedom and independence which mankind enjoyed during the golden age. At Rome the treasury was in his temple, intimating, it is said, that agriculture is the source of wealth. (*Plut., Quæst. Rom.*, 42.) The *Nundinae*, or market days, were also sacred to this god. (*Aul. Gell.*, 13, 22.—*Livy*, 8, 1.—*Id.*, 45, 83.)—Bochart considers Saturn to have been the same with Noah; and so well convinced of this is he, as to remark, "*Neam esse Saturnum tam multa docent, ut vix sit dubitandi locus.*" (*Geogr. Sacr.*, 1, 1.) This school of mythology, however, has long ago been succeeded by one of a more rational nature. According to others, Saturn was the same with Time, the Greek words which stand for Saturn and Time differing only in one letter (*Κρόνος*, Saturn, *χρόνος*, time); and on this account Saturn is represented as devouring his children, and casting them up again, as Time devours and consumes all things which it has produced, which at length revive again, and are, as it were, renewed: or else days, months, and years are the children of Time, which he constantly devours and produces anew. Niebuhr regards Saturn and Ops as the god and goddess of the earth, its vivifying and its receptively-productive powers. (*Rom. Hist.*, vol. 1, p. 66, *Cambr. transl.*) Creuzer makes Saturn the great god of nature, in many respects assimilated to Janus. He is the god who suffices for himself, the god who is satisfied with his own comprehensive powers. (*Symbolik, par Guignaut*, vol. 3, p. 499.) Hence the derivation of the name from the Latin *Satur*, "full," "satisfied."

SATYR, demigods of the country, whose origin is unknown. They are represented like men, but with the feet and the legs of goats, short horns on the head, and the whole body covered with thick hair. The Romans called them indiscriminately *Fæsti*, *Pænes*, and *Sibæni*.—Hesiod is the first who mentions the Satyrs; he says that they, the Curetes, and the mount

ain-nymphs, were the offspring of the five daughters of the union of Hecateus with the daughter of Phoroneus (*ap. Strab.*, 471). The Laconian term for a Satyr was Tityrus (*Schol. ad Theocr.*, 7, 72), which also signified the buck-goat, or the ram that led the flock. (*Schol. ad Theocr.*, 3, 2.) Æschylus calls a Satyr a buck-goat (ῥάγος.—*Fragm.*, *ap. Plut.*, *de Cap.*, 2).—The Satyrs were associated with Bacchus, and they formed the chorus of the species of drama which derived its name from them. It has been supposed that they were indebted for their deification to the festivals of this deity, and that they were originally merely the rustics who formed the chorus, and danced at them in their goatskin dresses. (*Welcker, Nachtr. zur Tril.*, p. 211, *seq.*—*Keightley's Mythology*, p. 233, *seq.*)

SAUROMĀTÆ, a people called *Sarmata* by the Latins. (*Vid. Sarmatia*.)

SAVUS, a river of Pannonia, rising in the Alpes Carnice, and flowing into the Danube at Singidunum. It forms near its mouth the southeastern boundary of Pannonia, and is now the *Sau* or *Saava*. (*Plin.*, 3, 18.—*Appian*, *Ill.*, 22.) The Danube, after its junction with the Savus, took the name of Ister. (*Vid. Danubius*.)

SAXŌNES, a people of Germany, whose original seats appear to have been on the neck of the Cimbric Chersonese, from the mouth of the Elbe to the Sinus Codanus and the river Chalusus (or *Trave*), corresponding to modern *Holstein*. They appeared for the first time in history about the beginning of the fourth century, as the chief tribe among the Ingevenes. In the eighth century we find them in possession of a large part of Germany. A portion of the northwestern Saxons, in the fifth century, in connexion with the Angli, conquered England.—For some remarks on the etymology of the name of Saxones, *vid.* the article *Scythia*.

SCÆA (*scil.* *Porta*).—Σκαία, *scil.* πύλη), one of the gates of Troy. It received its name from σκαίος, "left," as it was on the left side of the city, facing the sea and the Grecian camp. (*Vid. Troja*.)

SCÆVA, I. a centurion in Cæsar's army, who behaved with great courage at Dyrrhachium. (*Cæs.*, *B. C.*, 3, 53.—*Sueton.*, *Vit. Jul.*, 68.—*Val. Max.*, 3, 2.)—II. Memor, a Latin poet in the reign of Titus and Domitian.—III. A friend of Horace, to whom the poet addressed *Ep.* 1, 17.

SCÆVOLA, the surname of the most celebrated branch of the house of the Mucii, and said to have been derived from that individual of the line who acted with so much heroic firmness in the presence of Porcenna. (*Vid. Porcenna*.) The most distinguished of the name were the following: I. Caius Mucius Scævola. (*Vid. Porcenna*.)—II. Quintus Mucius Scævola, was prætor in 216 B.C. The next year he received Sardinia as a province. He died 209 B.C., while holding the office of "*Decemvir sacris faciundis*."—III. Publius Mucius Scævola, the younger son of the preceding, was quæstor 188 B.C., tribune of the commons 183 B.C., prætor urbanus 179 B.C., and finally consul with M. Æmilius Lepidus, 175 B.C. In conjunction with his colleague, he carried on the war successfully in Cisalpine Gaul, especially against the Ligurians, and obtained the honours of a three days' thanksgiving and a triumph. This last circumstance is confirmed by the Capitoline fragments, and also by some consular medals.—IV. P. Mucius Scævola, elder son of the preceding, and a celebrated jurist. He was conspicuous also as a defender of the good old-Roman virtues and manners against the corruption and license which had been introduced into Italy from abroad. In 141 B.C. he was tribune of the commons, and accused the prætor L. Tubulus of bribery on a certain trial where he had presided. Tubulus anticipated his sentence by going into exile. As ædile (133 B.C.) Scævola restored the temple of Hercules, which had fallen in ruins to the ground. In 131 B.C. he was prætor urbanus;

and soon after consul. He obtained Italy for his province.—V. Publius Mucius Scævola, son of the preceding, was at first tribune of the commons, then prætor, and at last pontifex maximus. He was particularly conspicuous as an opponent of the Gracchi. Having obtained the province of Asia, he distinguished himself so much in that government by his probity and justice, that the Asiatics celebrated a festival in his honour.—VI. Quintus Mucius Scævola, more commonly called by the Roman jurists Quintus Mucius, enjoyed a distinguished reputation as a lawyer. He collected together the opinions of previous lawyers, and he also gave a better order to the civil code. Mucius is the earliest jurist mentioned in the Pandects. He was Cicero's legal instructor.—VII. Cervidius Scævola, one of the most eminent jurists of later times. He is ranked by Modestinus after Paulus and Alphanus. (*Arnold, de Vitis Scævolarum*, ed. Arnzen, Ultræj., 1767.)

SCALĀBIA, a city of Lusitania, north of the Tagus, called by Ptolemy Scalabisus. It formed the third Conventus Juridicus of the province, and its jurisdiction probably took in all the country that lay to the north of the river. As a Roman colony it took the name of Præsidium Julium. It answers to the modern *Santarem*, a corruption for *St. Irene*. (*Plin.*, 4, 22.—*Itin. Ant.*, p. 420.)

SCALDIS, a river of Gallia Belgica Secunda, rising in the territory of the Atrebatæ, and falling into the Mosa or *Meuse*. It is now the *Schelde*. (*Cæs.*, *B. C.*, 6, 37.—*Plin.*, 4, 13.)

SCAMANDER, a river near Troy, rising in Mount Ida, and, after receiving the Simois, falling into the Hellespont near the promontory of Sigeum. According to Homer, it was called Xanthus by the gods and Scamander by men. The name Xanthus would seem to refer to the colour of its waters (Ξανθός, "yellow"). The modern name of the Scamander is the river of *Bounarbachi*. (*Vid. Troja*.—*Cramer's Asia Minor*, vol. 1, p. 97.)

SCANDINAVIA, a name given by the ancients to that tract of territory which contains the modern *Norway*, *Sweden*, *Denmark*, *Lapland*, *Finland*, &c. The ancients had a very imperfect knowledge of Scandinavia, believing it to be totally encompassed by the sea, or even composed of many islands. The manner in which these islands, of the name of Scandim, are represented in the chart prepared from Ptolemy, has no relation to the real state of the country. The southern extremity, however, and of which the Danish isles of *Iceland*, *Funen*, &c., make a part, recall, in the name of *Skany* or *Scane*, the memory of its ancient denomination. Tacitus, without naming Scandinavia, speaks of this country as being environed by the ocean, which forms spacious gulfs, embracing islands of great extent; he ascribes it to Suevia, and places two nations thereon. What he reports of the Suiones, in having a marine, appears remarkable when we recollect that the ancient laws concerning navigation had their origin in Wisby, in the isle of Gothland. (*Germa.*, 44, *seqq.*) The country to which Tacitus conducts us retains the name of Sueonia in the writers of the middle ages, speaking precisely of Sweden. The other nation, the Sitones, whose sovereignty was in the hands of a woman, may have been Norway. According to Pliny, the only part of Scandinavia which was known was occupied by the Hilleviones, a numerous nation. (*D'Anville*, vol. 1, p. 122, *seqq.*)

SCAPTĒSYLĒ or SCAPTE-HYLE (Σκαπτὴ ἔλη), which latter is the more correct form, a place on the coast of Thrace, over against the island of Thasos. It was celebrated for its gold-mines, which, according to Herodotus, belonged to the Thracians, and produced annually eighty talents. In these mines Thucydides the historian had some property, as he informs us (4, 104). The author of his life states that he resided there after

his banishment, and employed himself in arranging the materials for his history. (*Marcellin. Vit. Thucyd.*, p. 10, ed. Bip.—*Plut. de Exil.*, p. 605.)

SCARDUS or SCORDUS, a ridge of lofty mountains, forming the natural boundary of Illyria on the side of Macedonia. It was connected on the north with the great chain extending from the head of the Adriatic to the Euxine, and so well known in ancient times under the names of Orbelus, Rhodope, and Hæmus; while to the south its prolongation assumed the appellation of Pindus. The Turks and Servians call the range of Scardus *Tchar Dagh*. (*Cramer's Anc. Gr.*, vol. 1, p. 79, *seqq.*)

SCAURUS, I. M. ÆMILIVS, a Roman consul, who distinguished himself by his eloquence at the bar, and by his successes in Spain in the capacity of commander. He was sent against Jugurtha, and was, some time after, accused of suffering himself to be bribed by the Numidian prince. According to Sallust, this nobleman tarnished the lustre of his splendid talents by avarice and other degrading passions; while Cicero, on the contrary, speaks of him in the highest terms in various parts of his writings. Sallust's known dislike to the nobility may account, in some degree, for this discrepancy. Scaurus wrote a work in three books, recording the principal occurrences and transactions of his own life, which Cicero commends, and considers equal to Xenophon's *Life of Cyrus*. Scaurus conquered the Ligurians, and in his censorship he built the Mævian bridge at Rome, and began to pave the road which, from him, was called the Æmilian. His son, of the same name, made himself known by the large theatre he built during his ædileship. This theatre, which could contain 30,000 spectators, was supported by 360 columns of marble, 38 feet in height, and adorned with 3000 brazen statues. This celebrated edifice, according to Pliny, proved more fatal to the manners and the simplicity of the Romans than the proscriptions and wars of Sylla had done to the inhabitants of the city. (*Cic., Brut.*, 29.—*Val. Max.*, 4, 4.—*Plin.*, 34, 7; 36, 2.)—II. A Roman of consular dignity. When the Cimbri invaded Italy, the son of Scaurus behaved with great cowardice, upon which the father sternly ordered him never to appear again in the field of battle. The severity of the father's reproof induced the son to destroy himself.

SCELERATUS, I. CAMPUS, a plain at Rome near the Colline gate, where the vestal Minucia was buried alive when convicted of unchastity, and where a similar punishment was afterward accustomed to be inflicted on other similarly offending vestals. (*Liv.*, 8, 14.)—II. One of the gates of Rome was called *Scelerata*, because the 300 Fabii who were killed at the river Cremera had passed through it when they went to attack the enemy. It was before named *Carmenalis*.—III. There was also a street at Rome which received the name of the *Sceleratus Vicus*, because there Tullia had ordered her charioteer to drive over the body of her father, Servius Tullius. (*Liv.*, 1, 48.—*Ovid. Ib.*, 365.)

SCERNA or SCENUS, a river of Hibernia, now the Shannon. (*Oros.*, 1, 2.)

SCENÆ, I. a city of Mesopotamia, on the borders of Babylonia. (*Strabo*, 748.)—II. Mandra, a city of Middle Egypt, the seat of a bishopric, between Aphroditopolis and Babylon. (*Itin. Ant.*, p. 163, 169.)—III. Veteranorum, a village in Lower Egypt, on the east side of the Nile, between Heliopolis and Vicus Judæorum. (*Itin. Ant.*, p. 169.)

SCENTÆ, I. a nomadic tribe in Arabia Felix. (*Plin.*, 5, 11, 24.)—II. A nomadic tribe in Ethiopia. (*Plin.*, 6, 26); according to Strabo, in Mesopotamia.

SCEPSIS, a city of Troas, situate beyond the river Cæbren, near the highest part of Ida. It was founded by the Milesians; though Demetrius, a native of the place, assigns its origin to the son of Hector, and As-

canus the son of Æneas. The city was a strong one, and possessed a strong citadel; and, at a later period, was the seat of a particular dynasty of Dardan origin, which acknowledged, however, the Persian supremacy. (*Xen., Hist. Gr.*, lib. 3, p. 285, ed. *Steph.*) Antigonus, at a later period, transferred its inhabitants to his new city of Alexandria; they returned, however, under Lysimachus, and founded another city, to the north of the older Scepsis, which latter place from thenceforth took the name of Palæa Scepsis. The old city was afterward again inhabited; the new one, however, long survived it, and is supposed to answer to the modern *Eskiupski*. (*Strabo*, 607.—*Plin.*, 5, 30.)—Strabo relates that the library of Aristotle, left by him to Theophrastus, fell, together with that of the latter, into the hands of Neleus, a scholar of Theophrastus. Neleus left his books to his descendants, illiterate persons, who kept them locked up and neglected; and, when Attalus of Pergemus was seeking to enlarge his library, they hid them under ground, where they were much injured by the damp and by worms. They were at last sold for a large sum to Apellicon of Teos. (*Strabo*, 609.) The whole subject is discussed by Brandis in the *Rheinisches Museum* (No. 1, p. 236, *seqq.*)

SCHEDIA, a considerable village of Egypt, on the western side of the Canopic arm of the Nile, and the place where duties were levied on exports and imports. (*Strabo*, 800.) According to Reichard, its site is now occupied by *Dejdedje*.

SCHERÏA, an ancient name of Corcyra. (*Pausan.*, 2, 5.—*Plin.*, 4, 12.)

SCIATHOS, an island off the coast of Thessaly, about four miles to the east of the Magnesian promontory. It is nearly fifteen miles in circuit. (*Plin.*, 4, 12.) The island once possessed a town of some size, which was destroyed by Philip, the son of Demetrius, to prevent its falling into the hands of Attalus and the Romans. (*Liv.*, 31, 28.—*Id.*, 44, 13.—*Strab.*, 436.) According to Scymnus (v. 582), its first settlers were Pelasgi from Thrace, who were succeeded by some Chalcidians from Eubœa. It produced good wine. (*Athen.*, 1, 51.)—The modern name is *Sciatho*. (*Cramer's Anc. Greece*, vol. 1, p. 451.)

SCILLUS, a town of Elis, below the Alpheus, and not far from the coast. Xenophon places it on the road leading from Lacedæmon to Olympia, about 20 stadia from the temple of Jupiter Olympus. The place is rendered interesting from Xenophon's having fixed his abode there during his exile. The town itself had been destroyed by the Eleans, in consequence of its uniting against them in the war with Pisa. But the territory being afterward wrested from Elis by the Lacedæmonians, they made it over to Xenophon, when that celebrated Athenian was banished by his fellow-citizens for having served in the army of the younger Cyrus. (*Pausan.*, 5, 6.) Xenophon has himself given us, in the *Anabasis*, an interesting account of his residence at Scillus, where he erected a temple to Diana Ephesia, in performance of a vow made during the famous retreat which he so ably conducted. (*Anab.*, 5, 3, 7.) Pausanias, who visited the ruins of Scillus, states that the tomb of Xenophon was pointed out to him, and over it his statue of Pentelic marble. He adds, that when the Eleans recovered Scillus, they brought Xenophon to trial for having accepted the estate at the hands of the Spartans, but that he was acquitted, and allowed to reside there without molestation (5, 6.—*Cramer's Anc. Greece*, vol. 3, p. 112.)

SCINTS, a cruel robber, who tied men to the boughs of trees which he had forcibly brought together, and which he afterward allowed to fly back, so that their limbs were torn in an instant from their body. (*Ovid. Met.*, 7, 440.)

SCIPIDÆ, a name applied by Virgil to the two Scipios, Africanus Major and Minor. (*Æn.*, 6, 843.)

Scipio, a celebrated family at Rome, whose name is identified with some of the most splendid triumphs of the Roman arms. They were a branch of the Cornelian House, and are said to have derived their family appellation from the Latin term *scipio*, "a staff," because one of their number, Cornelius, had guided his blind father, and been to him as a staff; or, as Macrobius expresses it, "*Non aliter dicti Scipiones; nisi quod Cornelius, qui cognominem patrem luminibus carentem pro baculo regebat, Scipio cognominatus, nomen ex cognomine posteris dedit.*" (*Sat.*, 1, 6.)—The most eminent of the name were, I. P. Cornelius Scipio, who served, B.C. 393, under the dictator Camillus, and distinguished himself at the taking of Veii. In 392 B.C. he was chosen military tribune with consular power, and, in conjunction with his colleague Coesus, ravaged the territory of the Falisci, and compelled them to sue for peace.—II. P. Cornelius Scipio, son of the preceding, was curule ædile 363 B.C.—III. P. Cornelius Scipio, son of the preceding, was master of the horse to the dictator Camillus, 346 B.C.—IV. P. Cornelius Scipio, son of the preceding, was dictator 305 B.C.; having been appointed such, not so much with a view to any warlike operations, as for the purpose of holding the consular comitia, the two consuls being absent in the field.—V. L. Cornelius Scipio, son of the preceding, was chosen *interrex* on the refusal of the dictator Manlius to hold the election for consuls under the Licinian law. He softened down the irritated feelings of the commons by procuring the election of C. Marcius Rutilius, a plebeian, to the consulship. He obtained the consulship himself 348 B.C., but, being prevented by severe illness from conducting the war against the Gauls, he transferred the command to his plebeian colleague, M. Popilius Lenas.—VI. L. Cornelius Scipio Barbatus, grandson of the preceding, was consul 298 B.C. He fought a bloody but indecisive battle with the Etrurians, near Volaterra. The enemy, however, having abandoned their camp in the night-season, the consul laid waste the adjacent country with fire and sword. He also reduced Samnium and Lucania. His tomb was discovered in 1780, containing an epitaph in very early Latin, commemorating the events of his life and his many virtues. (*Dunlop's Rom. Lit.*, vol. 1, p. 52, *seq.*)—VII. Cn. Cornelius Scipio Asina, so called from his having brought into the forum, on the back of a she-ass (*asina*), the money for a piece of ground which he had purchased, or, according to another account, his daughter's marriage-portion, in order to display it before the eyes of suitors. He was the son of the preceding. In 260 B.C. he superintended, with Duilius the consul, the building of the first Roman fleet, and subsequently sailed with 17 ships, in advance of the main fleet, to Messina in Sicily. He was taken, however, by a Carthaginian squadron, and carried to Africa. Having been at length released from confinement in Carthage, he returned home and obtained the consulship; and he now avenged his former disgrace by taking many places in Sicily, and particularly Panormus. He conquered also great part of Sardinia and Corsica. He was father to Publius and Cneus Scipio. Publius, in the beginning of the second Punic war, was sent with an army to Spain to oppose Hannibal; but, when he heard that his enemy had passed over into Italy, he attempted, by his quick marches and secret evolutions, to stop his progress. He was conquered by Hannibal near the Ticinus, where he would have lost his life had not his son, afterward surnamed Africanus, courageously defended him. He again passed into Spain, where he obtained some memorable victories over the Carthaginians and the inhabitants of the country. His brother Cneus shared the supreme command with him, but their great confidence proved their ruin. They separated their armies, and soon after Publius was at-

tacked by the two Hasdrubals and Mago, who commanded the Carthaginian armies. The forces of Publius were too few to resist with success the three Carthaginian generals. The Romans were cut to pieces, and their commander was left on the field of battle. No sooner had the enemy obtained this victory, than they immediately marched to meet Cneus Scipio, whom the revolt of 30,000 Celtiberians had weakened and alarmed. The general, who was already apprised of his brother's death, secured an eminence, where he was soon surrounded on all sides. After desperate acts of valour he was left among the slain, or, according to some, he fled into a tower, where he was burned with some of his friends by the victorious enemy.—VIII. Publius Cornelius, surnamed *Africanus*, was son of Publius Scipio, who was killed in Spain. He first distinguished himself at the battle of Ticinus, where he saved his father's life. The battle of Cannæ, which proved so fatal to the Roman arms, did not dishearten the young Scipio; and he no sooner heard that some of his countrymen wished in despair to abandon Italy, than, sword in hand, he obliged them to swear eternal fidelity to Rome, and to promise to put to immediate death the first person who attempted to retire from his country. In his twenty-first year Scipio was made ædile. Not long after this, the Romans heard of the defeat and death of the two Scipios in Spain, and immediately young Scipio was appointed to avenge the death of his father and of his uncle, and to vindicate the military honour of the republic. It was soon known how able he was to be at the head of an army. The various nations of Spain were conquered, and in four years the Carthaginians were completely driven out. The whole province became tributary to Rome; New Carthage submitted in one day; and in a battle 54,000 of the enemy were left dead on the field. After these signal victories, Scipio was recalled to Rome, which still trembled in continual dread of Hannibal, who was at her gates. The conqueror of the Carthaginians in Spain was looked upon as a proper general to encounter Hannibal in Italy; but Scipio opposed the measures which his countrymen wished to pursue, and he declared in the senate that if Hannibal was to be conquered, he must be conquered in Africa. These bold measures were immediately adopted, though opposed by the age and experience of the great Fabius, and Scipio was empowered to conduct the war on the coast of Africa. With the dignity of consul he embarked for Carthage. Success attended his arms; his conquests were here as rapid as in Spain. The Carthaginian armies were routed, the camp of the crafty Asdrubal was set on fire during the night, and his troops totally defeated in a drawn battle. These repeated losses alarmed Carthage. Hannibal, who was victorious at the gates of Rome, was instantly recalled to defend the walls of his country, and the two greatest generals of the age met each other in the field. Terms of accommodation were proposed; but in the parley which the two commanders had together, nothing satisfactory was offered; and, while the one enlarged on the vicissitudes of human affairs, the other wished to dictate like a conqueror, and recommended the decision of the controversy to the sword. This celebrated battle was fought near Zama, and both generals displayed their military knowledge in drawing up their armies and in choosing their ground. Their courage and intrepidity were not less conspicuous in charging the enemy. A thousand acts of valour were performed on both sides; and though the Carthaginians fought in their own defence, and the Romans for fame and glory, yet the conqueror of Italy was vanquished. About 20,000 Carthaginians were slain, and the same number made prisoners of war, B.C. 202. Only 2000 of the Romans were killed. This battle was decisive: the Carthaginians sued for peace, which Scipio at last granted on the most severe

and humiliating terms. The conqueror after this returned to Rome, where he was received with the most unbounded applause, honoured with a triumph, and dignified with the appellation of *Africanus*. Here he enjoyed for some time the tranquillity and the honours which his exploits merited; but in him also, as in other great men, fortune showed herself inconstant. Scipio offended the populace in wishing to distinguish the senators from the rest of the people at the public exhibitions; and when he canvassed for the consulship for two of his friends, Scipio Nasica and Caius Lælius, he had the mortification to see his application slighted, and the honours which he claimed bestowed on a man of no character, and recommended neither by abilities nor meritorious actions. He retired from Rome no longer to be a spectator of the ingratitude of his countrymen, and in the capacity of lieutenant he accompanied his brother against Antiochus, king of Syria. In this expedition his arms were attended with his usual success, and the Asiatic monarch submitted to the conditions which the conquerors dictated. At his return to Rome Africanus found the malevolence of his enemies still unabated. Cato, his inveterate rival, seemed bent on his ruin; and he urged on the Petilii, two tribunes of the commons, to move in the senate that Africanus should be cited to give an account of all the money he had received from Antiochus, together with such spoil as was taken in that war. As soon as the Petilii had preferred their charge in the senate, Scipio arose, and, taking a roll of papers out of his bosom, which had been drawn up by his brother, he said, "In this is contained an accurate statement of all you wish to know; in it you will find a particular account both of the money and plunder received from Antiochus."—"Read it aloud," was the cry of the tribunes, "and afterward let it be deposited in the treasury." "That I will not do," said Scipio; "nor will I so insult myself;" and, without saying a word more, he tore it in pieces in the presence of all. It is not improbable that this tearing of his accounts furnished his enemies with the chief advantage they subsequently had against him. Not long after this, a tribune of the name of Nævius cited Scipio to answer before the people to the same charges as those which the Petilii had brought forward, and to other additional ones of a similar purport. The first day was spent in hearing the different charges. On the second day the tribunes took their seats at a very early hour. The accused soon after arrived, with a numerous train of friends and clients; and, passing through the midst of the assembly to the rostra, ascended without the least emotion, and, with that air of dignity and confidence which conscious innocence and superior virtue alone are able to inspire, addressed the assembly as follows: "On this day, tribunes of the people, and you, Romans, I conquered Hannibal and the Carthaginians. Is it becoming to spend a day like this in wrangling and contention? Let us not then, I beseech you, be ungrateful to the gods, but let us leave this man here, and go to the Capitol, to thank them for the many favours they have vouchsafed us." These words had the desired effect. The tribes and all the assembly followed Scipio; the court was deserted, and the tribunes were left alone in the seat of judgment. Yet, when this memorable day was past and forgotten, Africanus was a third time summoned to appear; but he had fled before the impending storm, and retired to his country-house at Liternum. The accusation was therefore stopped, and the accusers silenced, when Græchus, one of the tribunes, formerly distinguished for his opposition to Scipio, rose to defend him, and declared in the assembly that it reflected the highest disgrace on the Roman people that the conqueror of Hannibal should become the sport of the populace, and be exposed to the malice and envy of disappointed ambition. Some time after, Scipio died in the place

of his retreat, about 184 years before Christ, in the 57th year of his age; and so strong was his sense of the ingratitude of his countrymen, that he directed his remains to be interred at Liternum, not to be conveyed to Rome. (*Vid. Liternum*.)—Notwithstanding all the displeasure and rancorous feeling that existed among certain individuals at Rome, the day on which the news of Scipio's death was known proved a day of general sorrow: for the very men who refused to pay him, when alive, the appropriate and usual honours, could not help mingling their tears with those of the people at large. Livy says he saw at Liternum the monument which was erected to him, and the statue which had stood on the top of it lying on the ground, where it had been blown down by a storm (38, 56). Pliny writes, that in his time was to be seen a myrtle of an extraordinary size growing at Liternum, underneath which was a cave, wherein, it was said, a dragon watched the soul of that great man. There were also to be seen some olive-trees planted by his own hand. (*Plin.*, 16, 43.) All these inconsiderable objects seem to show how much the idea of greatness is attached to every circumstance connected in the most distant manner with illustrious men; and the reason is, that each inspires interest, and, in spite of us, claims some degree of attention.—No character has been celebrated with more cordial praises than that of the elder Africanus. Besides the many rare gifts of nature that Scipio had above all others, there was in him also, as the old writer of his life words it, "a certain princely grace and majesty. Furthermore, he was marvellous gentle and courteous unto them that came to him, and had an eloquent tongue, and a passing gift to win every man. He was very grave in his gesture and behaviour, and ever wore long hair. In fine, he was a truly noble captain, worthy of all commendation, and excelled in all virtues, which did so delight his mind that he was wont to say that he was never less idle than when at leisure, nor less alone than when alone." (*Cic., Off.*, 3, 1.)—In all Scipio's campaigns, Lælius was his chief assistant, and the man in whom he placed the greatest confidence. But the friendship subsisting between them was not more conspicuous than that which connected afterward the son of the one with the grandson of the other. Whether Lælius cheered the hours of Scipio's retirement is not distinctly marked in history by any writer. The poet Ennius is known to have been held in such esteem by him, that he ordered the statue of his learned friend to be placed on his sepulchre by his own, and the remains of the poet to be deposited in the same tomb. (*Plin.*, 7, 30.—*Ovid, A. A.*, 3, 409.) As an instance of Scipio's continence, ancient authors state that the conqueror of Spain refused to see a beautiful princess that had fallen into his hands after the taking of New Carthage, and that he not only restored her inviolate to her parents, but also added large presents for the person to whom she was betrothed. (*Berwick's Life of Scipio Africanus*, p. 140, *seqq.*)—IX. Lucius Cornelius Scipio, surnamed *Asiaticus*, accompanied his brother Africanus in his expedition into Spain and Africa. He was rewarded with the consulship A.U.C. 563, for his service to the state, and was empowered to attack Antiochus, king of Syria, who had declared war against the Romans. Lucius was accompanied in this campaign by his brother Africanus; and by his own valour and the counsels of the conqueror of Hannibal, he soon routed the enemy, and in a battle near the city of Sardes he killed 50,000 foot and 4000 horse. Peace was soon after settled by the submission of Antiochus, and the conqueror, at his return home, obtained a triumph and the surname of *Asiaticus*. He did not, however, long enjoy his prosperity. Cato, after the death of Africanus, turned his rancour against Asiaticus, and the two Petilii, his devoted adherents, presented a petition to the people, in which

they prayed that an inquiry might be made for the purpose of ascertaining what money had been received from Antiochus and from his allies. The petition was instantly received, and Asiaticus, charged with having suffered himself to be corrupted by Antiochus, was summoned to appear before the tribunal of Terentius Culeo, who was on this occasion created prætor. The judge, who was an inveterate enemy to the family of the Scipios, soon found Asiaticus, with his two lieutenants and his questor, guilty of having received, the first 6000 pounds' weight of gold and 480 pounds' weight of silver, and the others nearly an equal sum, from the monarch against whom, in the name of the Roman people, they were enjoined to make war. They were condemned to pay large fines; but, while the others gave security, Scipio declared that he had accounted to the public for all the money which he had brought from Asia, and therefore that he was innocent. Notwithstanding this grave protestation, the officers of justice were ordered to convey him to prison; but, while they were in the actual discharge of their duty, Sempronius Gracchus, one of the tribunes, interfered, and declared, "that he should make no objection to their raising the money out of his effects, but that he would never suffer a Roman general to be dragged to the common prison, wherein the leaders of the enemy, that were taken in battle by him, had been confined." When the entire property of Lucius Scipio was seized and valued, it was found inadequate to the payment of the sum demanded; and what redounded to his honour was, that, among all his effects, there was not found the trace of the smallest article that could be considered Asiatic. His friends and relations, indignant at the treatment he had received, came and offered to make compensation for his loss; but he refused to accept of anything except what was barely necessary for subsistence. Whatever was needful, says Livy, for domestic use, was purchased at the sale of his property by his nearest relations; and the public hatred now recoiled on all who were concerned in the prosecution. (*Livy*, 38, 60.) Some time after he was appointed to settle the disputes between Eumenes and Seleucus; and, at his return, the Romans, ashamed of their severity towards him, rewarded his merit with such uncommon liberality, that Asiaticus was enabled to celebrate games, in honour of his victory over Antiochus, for ten successive days at his own expense.—X. P. Cornelius Scipio Nasica was son of Cneus Scipio, and cousin to Scipio Africanus. He was refused the consulship, though supported by the interest and the fame of the conqueror of Hannibal; but he afterward obtained it, and in that honourable office conquered the Boii, and gained a triumph. He was also successful in an expedition which he undertook in Spain. When the statue of Cybele was brought to Rome from Phrygia, the Roman senate delegated one of their body, who was the most remarkable for the purity of his manners and the innocence of his life, to go and meet the goddess in the harbour of Ostia. Nasica was the object of their choice, and, as such, he was enjoined to bring the statue of the goddess to Rome with the greatest pomp and solemnity. Nasica also distinguished himself by the active part he took in confuting the accusations laid against the two Scipios, Africanus and Asiaticus. There was also another of the same name, who distinguished himself by his enmity against the Gracchi, to whom he was nearly related.—(*Paterc.*, 2, 1, &c.—*Flor.*, 2, 15.—*Liv.*, 29, 14, &c.)—XI. Publius Æmilianus, son of Paulus Æmilius, the conqueror of Perseus, was adopted by the son of Scipio Africanus, being already a relation of the Scipio family, since Africanus had married his aunt. He received the same surname as his grandfather, and was called *Africanus the Younger* on account of his victories over Carthage. Æmilianus first appeared in the Ro-

man armies under his father, and afterward distinguished himself as a legionary tribune in the Spanish provinces, where he killed a Spaniard of gigantic stature, and obtained a mural crown at the siege of Intercatia. He passed into Africa to visit King Masinissa, the ally of Rome, and he was the spectator of a long and bloody battle which was fought between that monarch and the Carthaginians. (*Vid. Masinissa.*) Some time after Æmilianus was made ædile, and next appointed consul, though under the age required for that important office. The surname which he had received from his grandfather he was destined lawfully to claim as his own. He was empowered to finish the war with Carthage; and as he was permitted by the senate to choose his colleague, he took with him his friend Lælius, whose father of the same name had formerly enjoyed the confidence and shared the victories of the first Africanus. The siege of Carthage was already begun, but the operations of the Romans were not continued with vigour. Scipio had no sooner appeared before the walls of the enemy than every communication with the land was cut off, and that they might not have the command of the sea, a stupendous mole was thrown across the harbour with immense labour and expense. This, which might have disheartened the most active enemy, rendered the Carthaginians more eager in the cause of freedom and independence; all the inhabitants, without distinction of rank, age, or sex, employed themselves without cessation to dig another harbour, and to build and equip another fleet. In a short time, in spite of the vigilance and activity of Æmilianus, the Romans were astonished to see another harbour formed, and fifty gallees suddenly issued under sail, ready for the engagement. This unexpected fleet, by immediately attacking the Roman ships, might have gained the victory; but the delay of the Carthaginians proved fatal to their cause, and the enemy had sufficient time to prepare themselves. Scipio soon got the possession of a small eminence in the harbour, and, by the success of his subsequent operations, he broke open one of the gates of the city and entered the streets, where he made his way by fire and sword. The surrender of above 50,000 men was followed by a reduction of the citadel, and the total submission of Carthage, B.C. 147. The captive city was set on fire; and, though Scipio was obliged to demolish its very walls to obey the orders of the Romans, yet he wept bitterly over the melancholy and tragical scene; and, in bewailing the miseries of Carthage, he expressed his fears lest Rome, in her turn, in some future age, should exhibit such a dreadful conflagration. The return of Æmilianus to Rome was that of another conqueror of Hannibal, and, like him, he was honoured with a magnificent triumph, and received the surname of *Africanus*. He was not long left in the enjoyment of his glory before he was called to obtain fresh honours. He was chosen consul a second time, and appointed to finish the war which the Romans had hitherto carried on without success against Numantia. The fall of Numantia was more glorious for Scipio than that of the capital of Africa. From his conquests in Spain Æmilianus was honoured with a second triumph, and with the surname of *Numantinus*. Yet his popularity was short-lived; and, by telling the people that the murder of their favourite, his brother-in-law Gracchus, was lawful, since he was turbulent and inimical to the peace of the republic, Scipio incurred the displeasure of the tribunes, and was received with hisses by the assembled people. His authority for a moment quelled their turbulence, when he reproached them for their cowardice, and exclaimed, *Factions wretches! do you think that your clamours can intimidate me? me, whom the fury of your enemies never daunted? Is this the gratitude that you owe to my father Paulus, who conquered Macedonia, and to me?*

Without my family you were slaves. Is this the respect you owe to your deliverers? Is this your affection? This firmness silenced the murmurs of the assembly; and, some time after, Scipio retired from the clamours of Rome to Caieta, where, with his friend Lælius, he passed the rest of his time in innocent pleasures and amusement, in diversions which had pleased them when children; and these two eminent men were often seen on the seashore picking up light pebbles, and throwing them on the smooth surface of the waters. Though fond of retirement and literary ease, Scipio often interested himself in the affairs of state. His enemies accused him of aspiring to the dictatorship, and the clamours were most loud against him when he had opposed the Sempronian law, and declared himself the patron of the inhabitants of the provinces of Italy. This active part of Scipio was seen with pleasure by the friends of the republic; and not only the senate, but also the citizens, the Latins, and the neighbouring states, conducted their illustrious friend and patron to his house. It seemed almost the universal wish that the troubles might be quieted by the election of Scipio to the dictatorship, and many presumed that that honour would be on the morrow conferred upon him. In this, however, the expectations of Rome were frustrated: Scipio was found dead in his bed, to the astonishment of all; and those who inquired for the causes of this sudden death, perceived violent marks on his neck, and concluded that he had been strangled, B.C. 128. This assassination, as it was then generally believed, was committed by the triumvirs, Papirius Carbo, C. Gracchus, and Fulvius Flaccus, who supported the Sempronian law, and by his wife Sempronius, who is charged with introducing the murderers into his room. No inquiries were made after the authors of his death. Gracchus was the favourite of the mob, and the only atonement which the populace made for the death of Scipio was to attend his funeral, and to show their concern by their loud lamentations. Æmilianus, like his grandfather, was fond of literature, and he is said to have saved from the flames of Carthage many valuable compositions, written by Phœnician and Punic authors. In the midst of his greatness he died poor; and his nephew, Q. Fabius Maximus, who inherited his estate, scarce found in his house thirty-two pounds' weight of silver and two and a half of gold. His liberality to his brother and to his sisters deserves the greatest commendations; and, indeed, no higher encomium can be passed upon his character, private as well as public, than the words of his rival Metellus, who told his sons, at the death of Scipio, to go and attend the funeral of the greatest man that ever lived or should live in Rome.—XII. Q. Metellus Scipio, adopted son of Quintus Cæcilius Metellus. His previous name was P. Cornelius Scipio Nasica. Metellus Scipio was consul with Pompey, his son-in-law, towards the close of the year 62 B.C., the latter having been sole consul previously. Metellus and Pompey re-established the consulship, which had been completely prostrated by Clodius; and the former was afterward sent into Syria as proconsul, having sided, of course, with Pompey against Cæsar. After the battle of Pharsalia he passed into Africa to Juba, assembled a body of troops there along with that prince and Cato, and finally engaged with Cæsar in the battle of Thapsus, but was totally defeated, 46 B.C. Having endeavoured to escape to the coast of Spain, and being driven back by stress of weather to the African shore, his vessels were overpowered by the fleet of P. Silius, and he, to avoid falling into the hands of Cæsar, destroyed himself. (*Appian, Bell. Civ.*, 2, 100.—*Auct., Bell. Afric.*, 96.)

SCIRON, a celebrated thief in Attica, who plundered the inhabitants of the country, and threw them down from the highest rocks into the sea, after he had obliged

them to wait upon him and to wash his feet. Theseus attacked him, and treated him in the way that he himself was accustomed to treat travellers. According to Ovid, the earth, as well as the sea, refused to receive the bones of Sciron, which remained for some time suspended in the air, till they were changed into large rocks, called *Scironides Petrae*, or *Scironia Saxa*. (*Vid. Scironides Petrae*.) (*Ovid, Met.*, 7, 444.—*Mela*, 2, 13.—*Plin.*, 2, 47.—*Seneca, N. Q.*, 5, 17.)

SCIRONIDES PETRÆ or SCIRONIA SAXA, a celebrated pass or defile on the southern coast of Megaris, said to have been the haunt of the robber Sciron until he was destroyed by Theseus. (*Eurip., Hippot.*, 979.—*Ovid, Met.*, 7, 444.) This narrow pass was situated, as we learn from Strabo (391), between Megara and Cromomyon, a small maritime town belonging to Corinth. The road followed the shore for the space of several miles, and was shut in on the land side by a lofty mountain, while towards the sea it was lined by dangerous precipices. Pausanias reports (1, 44), that it was rendered more accessible by the Emperor Hadrian, so that two carriages could pass each other. According to modern travellers, the Scironian Way, now called *Kaki Scala*, is difficult and rugged, and only frequented by passengers. The precipices are two hours from Megara and six from Corinth. (*Chandler*, vol. 2, c. 44.—*Dodwell*, vol. 2, p. 182.—*Walpole's Collection*, vol. 1, p. 332.)

SCODRA, a city of Illyria, the capital of Gentius, situate between the rivers Clausula and Barabana. From the position here given to Scodra, which is that assigned by Livy (44, 31), the site of the place does not precisely correspond to that of *Scutari*. Scodra was a place of great strength, and might easily have defended itself against the Romans in their war with Gentius; but, instead of offering any resistance, it surrendered on the first approach of the enemy's forces. Polybius calls it Scorda. (*Excerpt.*, 28, 7.) In the division of the territories of Gentius, Scodra retained its distinction as capital of the Labæates. (*Cramer's Anc. Greece*, vol. 1, p. 41.)

SCOMBRUS, a mountain range of Thrace, near Rhodope, and, together with the latter, forming part of the same great central chain. Thucydides calls the name Scominus (2, 96), but Aristotle Scombrus. (*Meteorol.*, 1, 13.)

SCOPAS, a celebrated architect and sculptor, born in the island of Paros, and who appears to have flourished chiefly between Olymp. 97 and 107 (B.C. 392 and 352). It was his fortune to be employed as one of the four artists who were engaged by Artemisia, queen of Caria, in erecting and adorning the Mausoleum, that splendid monument to the memory of her husband Mausolus. Scopas was employed also to contribute one of the columns to the temple of Diana at Ephesus, and the one which he executed was regarded as the most beautiful of all. He seems, indeed, to have been scarcely, if at all, inferior to Polyclitus or Myron. His statues were numerous; among the most remarkable of them were, the images of Venus, Pothus, and Phæthon. Many of his compositions were among the noblest ornaments of Rome in the days of Pliny. An Apollo of his workmanship stood on the Palatine Mount. A Vesta seated, with two female attendants reclining on the ground, adorned the Servilian gardens. His statues also of Neptune, of Thetis, and of Achilles, of the Nereids riding on the mightiest monsters of the deep, were highly prized, and placed in the chapel of Cneius Domitius in the Flaminian circus. A colossal image of Mars, and an exquisite statue of Venus, were also greatly admired at Rome, and the latter was preferred to a similar statue by Praxiteles, which has been thought to have furnished the original idea of the Venus de Medicis. (*Sillig, Dict. Art.*, s. v.—*Strab.*, 604.—*Pausan.*, 8, 45, 4.—*Plin.*, 36, 5, 4.)

SCORDIACI, a numerous and powerful tribe of Illyria, in the interior of the country, and reaching as far as the Danube. Strabo divides them into the greater and the less, and places the former between the Noaras or *Gurck*, and the river Margus. The latter adjoined the Triballi and Mysi of Thrace. The Scordiaci having successively subdued the nations around them, extended their dominion from the borders of Thrace to the Adriatic. They were, however, in their turn conquered by the Romans, though not without numerous struggles and much bloodshed. Though Strabo classes the Scordiaci with the Illyrian nations, he seems also to acknowledge them as of Gallic origin: they were probably of the same race as the Tauriaci and Carni, both Celtic people. (*Strab.*, 313.—*Id.*, 318.—*Flor.*, 3, 4.—*Liv.*, *Epit.*, 68.—*Cramer's Anc. Greece*, vol. 1, p. 46.)

SCOTI, the ancient inhabitants of Scotland. It is generally conceded that the earliest inhabitants of Caledonia were of Celtic origin. According to Scottish traditions, the Scoti came from Spain, and were one people with the Silures, who occupied what now answers to Wales. They first possessed themselves of Ireland, which from them received the name of Scotia, and for some time retained the appellation. They afterward passed over into what was called from them *Scotland*. (*Ammian. Marcell.*, 20, 1.—*Id.*, 26, 4.—*Id.*, 27, 8.—*Beda, Hist. Eccles.*, 1, 1.—*Adelung, Mithradates*, vol. 2, p. 84.—*Mannert, Geogr.*, vol. 1, pt. 2, p. 92, *seqq.*)

SCRIBONIA, a daughter of Scribonius, who married Augustus after he had divorced Claudia. He had by her a daughter, the celebrated Julia. Scribonia was some time after repudiated that Augustus might marry Livia. She had been married twice before she became the wife of the emperor. (*Suet.*, *Vit. Aug.*, 62.)

SCRIBONIUS, I. L. Libo, a Roman historian, author of *Annals* cited by Cicero (*Ep. ad Att.*, 13, 31).—II. Largus Designianus, a physician, born at Rome, or in the island of Sicily. In A.D. 49 he accompanied the Emperor Claudius on his expedition into Britain. He was a physician of the Eclectic school, and wrote a treatise *De Compositione medicamentorum*. As this work is written in very inferior Latin, some critics have supposed that it was originally composed in Greek, and afterward translated into Latin. Scribonius has copied from Nicander, and has also derived many absurd and superstitious remedies from other medical writers. The best edition of this work is that of Rhodius, *Patav.*, 1655, 4to.

SCUTENNA, a river of Cisalpine Gaul, rising on the northern confines of Etruria, and flowing from the east of Mutina into the Padus. It is now the *Pasero*. (*Strab.*, 218.—*Liv.*, 41, 12.)

SCYLACIUM, a Greek city, on the coast of the Bruttii, in a southwest direction from Crotona, and communicating its name to the adjacent gulf (Sinus Scylacine). According to Strabo, it was colonized by the Athenians under Mnestheus; but he neither mentions the time, nor the circumstances which led to its establishment. (*Strab.*, 361.) Servius, however, observes, that these Athenians were returning from Africa (*ad Æn.*, 3, 552). At a later period it received a Roman colony. (*Vell. Patern.*, 1, 15.) Scylacium was the birthplace of Cassiodorus. It is now *Squillace*. The epithet *navifragum* is applied by Virgil to this place. (*Æn.*, 3, 553.) Heyne considers the appellation to allude to the rocky and dangerous shore in its vicinity, or else to the frequent storms which prevailed in this quarter, between Tria Promontoria Iapygum and Co-cinthus. (*Heyne, ad Virg., l. c.*—*Cramer's Anc. Italy*, vol. 2, p. 398.)

SCYLAX, a celebrated geographer and mathematician of Caryanda in Caria. He is noticed by Herodotus in a passage where the latter speaks of various discoveries made in Asia by Darius, son of Hystaspes,

and tells of Scylax of Caryanda being sent by that monarch, along with others, to ascertain where the Indus entered the sea. He makes them to have reached the Indus, sailed down the river to the sea, and then, continuing their voyage on the sea towards the west, to have reached, in the 30th month, the place from which the Phœnician king despatched the Phœnicians to circumnavigate Africa. (*Herod.*, 4, 44.) Suidas gives a brief account of Scylax, in which he has evidently confounded different persons of the same name: "Scylax of Caryanda, a mathematician and musician, wrote a periplus of the coast beyond the Pillars of Hercules, a book respecting Heraclides, king of Mylassa, a description of the circuit of the earth, and an answer to Polybius's history." The periplus, which still remains, bearing the name of Scylax, is a brief survey of the countries along the shores of the Mediterranean and Euxine, of the western coast of Europe, together with part of the western coast of Africa, surveyed by Hanno, as far as the island of Carne. It concludes with an account of the passages across the sea, from Greece to Asia, and an enumeration of 20 important islands in the order of their magnitude. A question has been raised as to the date of the periplus of Scylax. The subject has been discussed by Niebuhr, in his historical and philological tracts. (*Kleine historische und philologische Schriften*, p. 105, *seqq.*) Having first stated the opinions of former critics, and rejected the argument derived from the omission of the city of Rhodes (which was founded 408 B.C.), on account of the corruption of the text, Niebuhr remarks that the proofs of its date are partly positive and partly negative, viz., derived either from the notice of or a silence respecting certain towns. By positive arguments, it is shown that this work was written after, by negative that it was written before, a certain date. The uncertain interval being thus narrowed by different historical proof, Niebuhr determines that this periplus was written about 360 B.C. (*Foreign Review*, vol. 4, p. 193.) Letronne has subsequently written on the same subject (*Journal des Savans, Fevr. Avr. et Mai, 1826*), and has pronounced the periplus of Scylax a compilation, in which the materials of different writers and times have been made use of. In this opinion Müller coincides. (*Etrusker*, vol. 1, p. 169.) Clinton (*Fasti Hellenici*, pt. 2, p. 564) thinks that Suidas confounded him with the more ancient Scylax, who wrote, according to him, after Polybius, B.C. 146, and he considers the opinion of Vossius most probable, that the extant work is an epitome of the ancient Scylax. This periplus has reached us in a corrupted state. The best editions of Scylax are, that of Hudson, in the *Geographi Græci Minores*; and that of Gail, in his edition of the same writers, *Paris*, 1826, vol. 1, p. 151, *seqq.*

SCYLLA, I. a daughter of Nisus, king of Megara, who became enamoured of Minos as that monarch besieged her father's capital. (*Vid. Nisus*).—II. A fearful monster, of whom mention is made in the *Odyssey*. Having escaped the Sirens, and shunned the Wandering Rocks, which Circe had told him lay beyond the mead of these songsters, Ulysses came to the terrific Scylla and Charybdis, between which, the goddess had informed him, his course lay. She said (*Od.*, 12, 73, *seqq.*) he would come to two lofty cliffs opposite each other, between which he must pass. One of these cliffs towers to such a height that its summit is for ever enveloped in clouds, and no man, even if he had twenty hands and as many feet, could ascend it. In the middle of this cliff, she says, is a cave facing the west, but so high that a man in a ship passing under it could not shoot up to it with a bow. In this den dwells Scylla (*Büch*), whose voice sounds like that of a young whelp; she has twelve feet and six long necks, with a terrific head, and three rows of close-set teeth on each. Evermore she stretches out

these necks and catches the porpoises, seadogs, and other large animals of the sea which swim by, and out of every ship that passes each month takes a man. The opposite rock, the goddess informs him, is much lower, for a man could shoot over it. A wild fig-tree grows on it, stretching its branches down to the water; but beneath, "divine Charybdis" three times each day absorbs and regorges the dark water. It is much more dangerous, she adds, to pass Charybdis than Scylla. As Ulysses sailed by, Scylla took six of his crew; and when, after he had lost his ship and companions, he was carried by wind and wave, as he floated on a part of the wreck between the monsters, the mast by which he supported himself was sucked in by Charybdis, and he held by the wild fig-tree till it was thrown out again, when he resumed his voyage.—Such is the earliest account we have of these monsters, in which, indeed, it may be doubted if Charybdis is to be regarded as an animate being. The ancients, who were so anxious to localize all the wonders of Homer, made the Straits of Messina the abode of Scylla and Charybdis. The whole fable has been explained by Spallanzani, according to whom Scylla is a lofty rock on the Calabrian shore, with some caverns at the bottom, which, by the agitation of the waves, emit sounds resembling the barking of dogs. The only danger is when the current and wind are in opposition, so that vessels are impelled towards the rock. Charybdis is not a whirlpool or involving vortex, but a spot where the waves are greatly agitated by pointed rocks, and the depth does not exceed 500 feet. (*Spallanz., 3, p. 99.*)—In Homer the mother of Scylla is named Crataeis (*Od., 12, 124*), but her sire is not spoken of. Stesichorus called her mother Lamia (*Eudocia, 377*); Hesiod said she was the daughter of Phorbas and Hecate (*Schol. ad Apoll. Rhod., 4, 828*); Arceilaus said, of Phorcyas and Hecate (*Schol. ad Od., 12, 85*); others asserted that Triton was her sire. (*Eudocia, 377.*) Later poets feigned that Scylla was once a beautiful maiden, who was fond of associating with the Nereids. The seagod Glaucus beheld and fell in love with her, and, being rejected, applied to Circe to exercise her magic arts in his favour. Circe wished him to transfer his affections to herself; and, filled with rage at his refusal, she infected with noxious juices the water in which Scylla was wont to bathe, and thus transformed her into a monster. (*Ovid, Met., 14, 1, seqq.—Hygin., fab., 199.*) According to another account, the change in Scylla's form was effected by Amphitrite, in consequence of her intimacy with Neptune. (*Tzetx. ad Lycophr., 660.*) Charybdis was said to have been a woman who stole the oxen of Hercules, and who was, in consequence, struck with thunder by Jupiter, and turned into a whirlpool. (*Serv. ad Æn., 3, 420.—Keighley's Mythology, p. 371, seqq.*)

SCYLLÆUM, a promontory of Argolis, opposite the Attic promontory of Sunium, and said to have derived its name from Scylla, the daughter of Nisus. It formed, together with the promontory of Sunium, the entrance of the Saronic Gulf, and closed, also, the Bay of Hermione. (*Strab., 378.*)

SEYMNUS, a Greek geographer, a native of Chios, who flourished about 80 B.C., during the reign of Nicomedes II., king of Bithynia. He dedicated to this monarch his work entitled *Periegesis* (Περιήγησις), or *Description of the World*, written in Greek Iambics. We have remaining of this the first 741 lines, and fragments of 236 others, which together form, according to the critics, not more than a fourth part of the entire work. Seymnus informs the monarch that he has collected and abridged, for his use, all the information he found scattered among various writers respecting the establishment of colonies, the founding of cities, &c. He proposes to give, first, an account of all that is clear and well ascertained in geographical knowledge; while he promises to treat, in

a separate part of the work, of what is obscure, in order that Nicomedes may thus have a concise outline of the geography of the day. This work, which has little merit as a poem, is somewhat more valuable as a geographical treatise; the information it gives respecting the establishment of the Greek colonies is particularly useful; but in some other respects it is not very accurate. This production, together with the fragments (which we owe to the labours of Holstenius), may be found in the minor Greek geographers, of Hudson, Gail, &c.

SCYRIAS, a name applied to Deidamia as a native of Scyros. (*Ovid, A., 1, 682.*)

SCYROS, an island of the Ægean Sea, northeast of Euboea, and now called *Scyro*. Thucydides informs us that its first inhabitants were Dolopians, who were afterward expelled by the Athenians (1, 98). It is to this early period that we must assign the adventures of Achilles and the birth of Neoptolemus. (*Strabo, 437.*) Here Theseus was said to have terminated his existence, by having fallen, or been pushed down a precipice. (*Lycophr., 1324.*) Scyros, according to Strabo, was also celebrated for its breed of goats and its quarries of varied marble, which vied with those of Carystus and Synnada. In the geographer's time it was in great request at Rome for public edifices and other ornamental purposes. (*Strab., 437.—Plin., 36, 26.—Cramer's Anc. Greeca, vol. 1, p. 453.*)

SCYTHIA, the inhabitants of Scythia. (*Vid. Scythia.*)

SCYTHIA, a general name given by the ancient Greeks and Romans to a large portion of Asia, and divided by them into *Scythia intra* and *extra Imaum*, that is, on either side of Mount Imaus. The Scythians have been considered by some writers as the same people with the Gomerians, and as being the descendants of Gomer, the eldest son of Japhet. Their name is derived by some from the Teutonic *scheten* or *schuten*, or the Gothic *skjuta*, all signifying "to shoot," this nation being very expert with the bow. (Compare *Jamieson's Hermes Scythicus*, p. 6.) Others make it equivalent to the Latin *potatores*; others, again, derive it from *shakhaa*, "a quiver;" while a fourth class deduce the term from the Persian *Shagh*, "a dog," and suppose it to have been applied by way of contempt. This last opinion, however, to say nothing of the others, is decidedly erroneous, since the dog was held in high estimation among the Persians, and ranked among the good animals of Ormuzd. (*Plut., de Isid. et Osir., p. 369, F., p. 514, Wytt.*) It was a symbol also of faith, and especially of the hope of an immortal existence, and holds a conspicuous place, therefore, on sepulchral monuments. (Compare *Crenzer, Symbolik*, vol. 1, p. 752.) Sir William Jones likewise indulges in some speculations on this subject (*Asiatic Researches*, vol. 2, p. 401), as well as Ritter in his *Brücke* (vol. 2, p. 729). Von Hammer, however, appears to furnish the most ingenious explanation. According to this learned Orientalist, the writers of the East, and, more particularly, the work entitled *Schahnameh*, refer what the Greeks tell us concerning the incursion of the Scærs, to the Turks and *Ssakaib*, as they are styled; and even the very festival which the Greeks term τὰ Σάκρια is found in the ancient Persian calendar as a day set apart to commemorate a victory gained over the Turks. Hence Von Hammer proposes to read Τούργους for Αὐοργίους in the text of Herodotus (7, 64). These Turks are the same, according to the German scholar, with the Turanians, and with the *Ssakaib* of the *Schahnameh*; and this name *Ssakaib*, from *Ssakaib* or *Skoklob*, presents a remarkable coincidence with what Herodotus states respecting the Scythians (4, 6), that they call themselves *Σκολόροι*. As in Herodotus, therefore, the Scærs and Amyrgii are said to be the same, so in the *Schahnameh* the Turks and the *Ssakaib* are identical. This same term *Ssakaib* will

furnish also the root of the name *Slavi*; and if the theory of another writer be admitted, the Saxones will be descended from the Sacs. (Compare *Bähr, ad Ctes.*, p. 97.)—The earliest detailed account of the Scythian race is given by Herodotus, who states, as has already been remarked, that they called themselves by the general name of *Scoloti* (Σκολότοι). The appellation of *Scythians* (Σκύθαι) originated with the Greeks along the Euxine. Their primitive seats were in the vicinity of the Caspian; but, being driven from these by the Massagetsæ, they migrated to the countries around the Tanais and north of the Euxine, and the head settlement of the race, according to Herodotus, was now between the Tanais and Borysthenes. Only a few tribes attended to agricultural pursuits and had fixed abodes; the greater part were of nomadic habits, and roamed about in their wagons, which served them for abodes. These last subsisted on the produce of their flocks and herds. Herodotus divides them into *Royal Scythians* (Βασιλῆες Σκύθαι), the *Nomadic Scythians* (Νομάδες), and the *Agricultural* (Γεωργοί). Besides these, there were other tribes living to the west of the Borysthenes, and separated from the main body of the race, such as the *Callipodæ* and *Alazones*. Until the time of Ptolemy, but little was known respecting the Scythians except what had been obtained from the narrative of Herodotus. In the days of Ptolemy, Scythia, as known to Herodotus, had changed its name to that of *Sarmatia* (compare *Plin.*, 4, 12), and the northern part of Asia above the Sacs and beyond Sogdiana, with an indefinite extent towards the east, was now denominated Scythia. The range of Mount Imaus was considered as dividing this extensive region into two parts, and hence arose the two divisions of *Scythia intra Imaum* and *Scythia extra Imaum*, or Scythia within and without the range of Imaus. The former of these, *Scythia intra Imaum*, had the following limits assigned to it: on the north, unknown lands; on the east, Imaus; on the south, the Sacs, Sogdiana, and Margiana, as far as the mouth of the Oxus, and the Caspian Sea to the mouth of the Rha; on the west, Asiatic Sarmatia. *Scythia extra Imaum* had the following boundaries: on the north, unknown lands; on the west, Imaus; on the south, a part of India; and on the east, Serica.—The Scythians made several irruptions into the more southern provinces of Asia, especially B.C. 624, when they remained in possession of Asia Minor for 28 years.

SCYTHOPOLIS, a city of Judæa, belonging to the half tribe of Manasseh, on the west of and near to the Jordan. Its Hebrew name was *Bethsan*, *Bethshean*, or *Bethshan*. It was called Scythopolis, or the city of the Scythians, as the Septuagint has it (Σκυθῶν πόλις.—*Judæe*, 1, 27), from its having been taken possession of by a body of Scythians in their invasion of Asia Minor and Syria. It is now *Bysan* or *Baisan*. (*Plin.*, 5, 18.—*Ammian. Marcell.*, 19, 27.—*Joseph.*, *Ant.*, 5, 1.—*Id. ibid.*, 12, 12.—*Id.*, *Bell. Jud.*, 3, 4.)

SEBASTE, I. *vid.* Samaria.—II. The name was common to several cities, as it was in honour of Augustus. *Sebaste* (Σεβαστή, *sc. πόλις*) is the Greek form for *Augusta, sc. urbs*.

SEBENNÏTUS, a town of the Delta in Egypt, north of Busiris, and the capital of the Sebennytic nome. The modern *Semenud* corresponds to its site. (*Plin.*, 5, 18.)

SEBÏRUS, a small river of Campania, now the *Mad-dalona*, falling into the Bay of Naples, whence the epithet *Sebetis*, given to one of the nymphs who frequented its borders, and became mother of Cebalus by Telon. (*Virg.*, *Æn.*, 7, 734.)

SEBÏTANI, a people of Spain, supposed to have been the same with the Edetani. (*Virg.*, *Edetani*.)

SEBÏNI, a nation of Gaul on the south bank of the Rhodanus, to the east of Lacus Lemanus. They opposed Hannibal near the very summit of the Alps,

when he crossed these lofty mountains to invade Italy. Their capital was afterward called *civitas Sedunorum*, now *Sion*. They appear to have sent out numerous colonies, in quest, no doubt, of a milder climate. Hence we find tribes of this name in various places. (*Cæs.*, B. G., 3.)

SEDESI, a German nation on the northeast bank of the Rhenus. They are named in conjunction with the Marcomanni, and are supposed to have been situate between the *Danube*, the *Rhine*, and the *Necker* (*Nicer*).

SEGESIA, a town of Sicily. (*Virg.*, *Ægea*.)

SEGI, a people, with a town of the same name, in Belgic Gaul. A small town, called *Signei*, points out the place which they once inhabited. (*Cæs.*, B. G., 6.)

SEGOBIA, the capital of the Celtiberi, in Hispania Tarraconensis, southwest of *Cæsaraugusta*. According to Reichard, it is now *Priego*; but the actual position is much disputed. (Compare *Ukert, Geogr.*, vol. 2, p. 459.)

SEGOVIA or SEGVNTIA, I. a town of Hispania Tarraconensis, in the territory of the Celtiberi, and to the west of *Cæsaraugusta*.—II. A city of the Arevaci, in Hispania Tarraconensis, now *Sigüenza*. (*Itin. Ant.*, 436, 438.)

SEGOVIA, a city of Hispania Tarraconensis, in the farthest part of the territory of the Arevaci, towards the southwest. It is now *Segovia*. (*Plin.*, 3, 4.)

SEJANUS, ÆLIUS, a native of Vulsinii, in Etruria, and prime minister to the Emperor Tiberius. His father was Seius Strabo, a Roman knight, commander of the prætorian guard in the reign of Augustus. His mother was descended from the Junian family. Sejanus was at first one of the train of Caius Cæsar, but he afterward gained so great an ascendancy over Tiberius, that the emperor, who was naturally of a suspicious temper, was free and open with him, and while he distrusted others, he communicated his greatest secrets to this fawning favourite. For eight years did this unprincipled man retain an undivided influence over the mind of the emperor; and during that period he contrived to procure the death or banishment of almost every person who might have checked his progress to the possession of imperial power, which was the object of his treacherous ambition. The death of Drusus, the son of Tiberius, was effected by him and the adulterous Livilla (*vid.* Drusus II.); to him also is attributed the death of the two eldest sons of Germanicus, and the banishment of their mother, the celebrated Agrippina. The younger son, Caligula, escaped, in all probability, in consequence of his almost constant residence with the army. But the master-stroke of policy by which Sejanus strove to secure his object, was his persuading the emperor to remove from the cares and dangers of Rome, and to indulge his passions in a retirement where he would have none around him but the depraved ministers of his vices. Tiberius accordingly retired to Caprea, where he abandoned himself to the most disgusting and unnatural indulgences, leaving Sejanus at Rome, in possession of all but the name of imperial power. To this base and bloody favourite the senate displayed the most degrading servility; the people gave him honours second only to those of the emperor; and the sceptre itself seemed on the point of passing into his grasp. Already were his statues set up by the Romans in their dwellings, in public places, and in temples, along with those of the reigning family, when Tiberius, in an interval of sobriety (he was now almost always intoxicated), either of himself perceived the pass to which matters had come, or was made aware of the real views of Sejanus by his own suit for the hand of an imperial princess, the adulterous widow of Drusus; or finally, as Josephus states, was informed of his plans by a billet from Antonia, the widow of the emperor's brother. The whole demeanour and management of Tiberius, when he had formed the re-

olition of destroying the man who had hitherto been his all-intrusted confidant and all-powerful minister, is admirably described by Dio Cassius. After a singular course of dissembling, by which he withheld his victim from proceeding to extremities, he sent Macro with full powers to arrest Sejanus, put him to death, and take his place. The decree of arrest was accordingly read in the senate; Sejanus was enticed into the senate-house, by the pretext that Macro was the bearer of a letter, by virtue of which the minister was to receive the dignity of tribune; and, being instantly condemned, was dragged through the streets, and put to death with the utmost ignominy, by those who, a few hours before, had followed him with acclamations. The execution of Sejanus was followed by that of his innocent children, relations, and even distant connexions. The numerous persons crowded into the prisons as friends of Sejanus were, without any judicial proceeding, massacred *en masse*, and even their bodies were subjected to indignities. (*Suet.*, *Vit. Tib.*—*Tacit.*, *Ann.*, 4, 1, *seqq.*—*Id. ib.*, 5.—*Dio Cass.*, 68, 9, *seqq.*)

SELENIUS. *Vid.* Argyra II.

SELÈNE, the sister of Helios, and the same with Luna or the Moon. According to another view of the subject, she was the daughter of Helios, the latter being regarded as the source of light. (*Eurip.*, *Phæn.*, 178; *seqq.*—*Nonnus*, 44, 191.) A third view makes her the mother by him of the four Seasons. (*Quint. Smyrn.*, 10, 334, *seq.*) In one of the Homeric hymns Selene is called the daughter of Pallas, son of Megamedes. It was said that Selene was enamoured of Endymion, on whom Jupiter had bestowed the boon of perpetual youth, but united with perpetual sleep; and that she used to descend to him every night, on the summit of Mount Latmus, the place of his repose. She bore to Jupiter a daughter named Pandia; and Hecate (*Dew*) was also the offspring of the King of Heaven and the Goddess of the Moon. (*Hom. Hymn.*, 32, 15.—*Alcman*, *ap. Phil.*, *Quæst. Nat.*, 24.) In explanation of this last legend it may be remarked, that the moon was naturally, though incorrectly, regarded as the cause of dew; and nothing, therefore, was more obvious than to say that the dew was the progeny of the moon and sky personified after the usual manner of the Greeks.—The name Selene (*Σελήνη*) is plainly derived from *σελας*, brightness, and is one of the large family of words of which *ēla* or *ēlē* (*Helle*, *Germ.*), may be regarded as the root. (*Keightley's Mythology*, p. 61, *seq.*)

SELEUCIA, I. a famous city of Asia, built by Seleucus, one of Alexander's generals, and situate on the western bank of the Tigris, about forty-five miles north of ancient Babylon. It was the capital of the Macedonian conquests in Upper Asia, and is said to have been the first and principal cause of the destruction of Babylon. Pliny reports (6, 26) that the intention of Seleucus was to raise, in opposition to Babylon, a Greek city with the privilege of being free. Many ages after the fall of the Macedonian empire, Seleucia retained the genuine characteristics of a Grecian colony, arts, military virtue, and the love of freedom. Its population consisted of 600,000 citizens, governed by a senate of 300 nobles. The rise of Ctesiphon, however, in its immediate vicinity, proved injurious to Seleucia; but it was fated to receive its death-blow from the hands of the Romans. The inhabitants had ever shown themselves friendly to the latter people, and had yielded them very effectual aid in their expeditions against the Parthians; and yet a general of the Emperor Trajan's plundered and set fire to the place. The cause of this severe treatment is unknown: it may have been that the inhabitants, accustomed to self-government, were restless under the yoke of their new allies. (*Dio Cass.*, 68, 30.) The sudden death, however, of Trajan, and the rapid de-

parture of his army, prevented at this time the total destruction of the city. That fate befell it under Verus, the colleague of Marcus Aurelius. A general of his, notwithstanding a friendly reception from the inhabitants, destroyed the city under the pretext of its having violated its faith. (*Eutrop.*, 8, 5.—*Capitolin.*, *Verus*, c. 8.—*Dio Cass.*, 71, 2.) Some idea of the size of the place in its best days may be formed from the circumstance that even at this period 400,000 prisoners were taken. (*Oros.*, 8, 15.) The ruins of Seleucia, and those of Ctesiphon on the opposite side of the river, are called by the Arabs at the present day *Al Modain* (El Madeien), or "the two cities." (*Mannert, Geogr.*, vol. 5, p. 397, *seqq.*, part 2.)—II. A city of Susiana, in the territory of the Elymæi. According to Strabo, it was subsequently called Solycæ (*Σολύκαι*), and lay on the river Hedyphion. (*Strabo*, 744.—*Plin.*, 6, 27.)—III. A city of Cilicia Trachea, a short distance to the north of the mouth of the Calycadnus. It was founded by Seleucus Nicator, and is sometimes called, for distinction's sake, Seleucia Trachea. (*Steph. Byz.*, s. v.—*Anm. Marcell.*, 14, 2.)—IV. A city in the northwestern part of Pisidia, south of Amblada. It was sometimes called *Seleucia Ferrea*, and *ad Taurum*. (*Hierocl.*, p. 673.)—V. A city on the coast of Pamphylia, west of Side, and coinciding probably with the Syllon of Scylax.—VI. A city of Apamene, not far from the city of Apamea. It was sometimes called *Seleucia ad Belum*. (*Pliny*, 5, 23.—*Hierocles*, p. 712.)—VII. A city of Syria, on the seacoast, near the mouth of the Orontes, and southwest of Antioch. It was called Seleucia Pieria, from Mount Pierus in its vicinity, and was founded by Seleucus. The city was strongly fortified, and had a large and secure harbour. Browne identifies Seleucia with *Suadea*, the port of Antioch, about four hours distant from it. Others give the modern name as *Kepse*. (*Strabo*, 751.—*Polyb.*, 5, 59.—*Mela*, 1, 12.—*Pliny*, 6, 18.)

SELEUCIDÆ, a surname given to the dynasty of Seleucus, comprising the monarchs who reigned over Syria from B.C. 312 to B.C. 66. The first of these dates gives the commencement of the reign of Seleucus Nicator, the founder of the dynasty. The last date gives the time when Pompey reduced Syria under the Roman sway. Some compute the era of the Seleucidæ from B.C. 301, the date of the battle of Ipsus. (Consult *Vaillant, Seleucidarum Imperium, Horag.*, 1732.—*Reineccius, Familia Seleucidarum, Wittenb.*, 1571.—*Clinton, Fast. Hell.*, vol. 2, p. 306, *seqq.*)

SELEUCIS, a division of Syria, which received its name from Seleucus, the founder of the Syrian empire, after the death of Alexander the Great. It was called *Tetrapolis* from the four cities it contained, called also sister cities; Seleucia, Antioch, Laodicea, and Apamea.

SELEUCUS, I. surnamed *Nicator*, or "the Conqueror," was the son of Antiochus, a general of Philip's. He served from early youth under Alexander, accompanied him to Asia, and there had commonly the command of the elephants. After the death of that monarch he was appointed to the command of the cavalry, and, on the second division of the provinces, received the government of Babylonia. He was at first on friendly terms with Antigonus, and acknowledged his authority; but the latter having taken offence at some slight provocation, Seleucus fled to Ptolemy in Egypt. Returning with an army which he had collected from various quarters, Seleucus recovered the possession of Babylon, which had, after his departure, fallen into the hands of Antigonus; and the citizens of the place themselves, by whom his mild government had made him much beloved, aided him in effecting this (B.C. 312). Nicanor and Evagoras, the governors of Media and Persia, immediately took up arms in behalf of

Antigonus, the latter himself and his son Demetrius being too far distant to act in person. But Seleucus, having planted an ambuscade, surprised the hostile camp in the night, and gained a complete victory. From the recovery of Babylon by Seleucus, the historians of all nations, except the Chaldeans alone, date the era of the Seleucids, or dynasty of Seleucus, in Upper Asia. A temporary absence of Seleucus in Media, where he was prosecuting his conquests, left Babylon at the mercy of the enemy, and Demetrius, by rapid marches, was enabled to regain possession of it; but his subsequent departure, and the return of Seleucus, soon restored things to their former condition. Seleucus now carried his victorious arms into Persia, Bactria, Hyrcania, and many other countries of Upper Asia, and, on account of the rapidity of his conquests, assumed the title of *Nicator*, and with it that of king, in imitation of the other successful generals of Alexander. Having united subsequently with Ptolemy, Cassander, and Lysimachus against Antigonus, and the latter having lost his life in the defeat at Ipsus, the kingdom of Syria, Armenia, Mesopotamia, Catalonia, and a part of Asia Minor, were added to the possessions of Seleucus, and he became the greatest and most powerful of all the generals of Alexander. He now built Antiochia, calling it after the name of his father, and made it the capital of his dominions. Many other cities, too, were erected in other quarters. The great power of Seleucus having caused at first uneasiness, and afterward having given rise to a confederacy against him, this monarch sought to draw Demetrius to his side, by giving him in marriage his daughter Stratonice, and intrusting him with an army. But jealousy towards his son-in-law soon induced Seleucus to deprive him of his new command, and hold him in confinement until his death. Seleucus after this took up arms against Lysimachus, at the urgent entreaties of the friends of Agathocles, son of Lysimachus, whom the father had put to death on a false charge brought against him by his stepmother. His real motive, however, was the removal of a dangerous neighbour; and in this he was completely successful; for, having invaded Asia Minor, he defeated and slew Lysimachus in the battle of Compedion (B.C. 281). Ptolemy Soter had died above a year before this battle took place, and Seleucus now remained alone of all the Macedonian captains, the fellow-soldiers and friends of Alexander. He became ardently desirous of revisiting Macedonia, and reigning in a country where he had first drawn breath; but his schemes were frustrated by assassination. As he was on his march to Macedon, he was murdered by Ptolemy Ceraunus, the expatriated prince of Egypt, who wished to obtain for himself the Macedonian throne; and he thus fell B.C. 280, in the 73d year of his age, and the 32d of his reign.—II. The second of the name, surnamed *Callinicus*, succeeded his father Antiochus Theos on the throne of Syria. He attempted to make war against Ptolemy, king of Egypt, but his fleet was shipwrecked in a violent storm, and his armies soon after conquered by his enemy. He was at last taken prisoner by the Parthians, and retained by them ten years, until the period of his death, which was occasioned by a fall from his horse in hunting, B.C. 236.—III. The third, succeeded his father Seleucus II., while the latter was in captivity. He was surnamed *Ceraunus* ("thunderbolt"), an ostentatious and unmerited title, as he was a very weak, timid, and irresolute monarch. He was murdered by two of his officers after a reign of three years, B.C. 223, and his brother Antiochus, though only fifteen years old, ascended the throne, and rendered himself so celebrated that he acquired the name of the Great.—IV. The fourth, succeeded his father Antiochus the Great on the throne of Syria. He was surnamed *Philopator*, or, according to Josephus, *Soter*. His empire had

been weakened by the Romans when he became a monarch, and the yearly tribute of a thousand talents to these victorious enemies concurred in lessening his power and consequence among nations. Seleucus was poisoned after a reign of twelve years, B.C. 175. His son Demetrius had been sent to Rome, there to receive his education, and he became a prince of great abilities.—V. The fifth, succeeded his father Demetrius Nicator on the throne of Syria, in the twentieth year of his age. He was put to death in the first year of his reign by Cleopatra, his mother, who had also sacrificed her husband to her ambition. He is not reckoned by many historians in the number of the Syrian monarchs.—VI. The sixth, one of the Seleucids, son of Antiochus Gryphus, killed his uncle Antiochus Cyzicenus, who wished to obtain the crown of Syria. He was some time after banished from his kingdom by Antiochus Pius, son of Cyzicenus, and fled to Cilicia, where he was burned in a palace by the inhabitants, B.C. 93.—VII. A prince of Syria, to whom the Egyptians offered the crown of which they had robbed Auletes. Seleucus accepted it, but he soon disgusted his subjects, and received the surname of *Cyphosactes*, for his meanness and avarice. He was at last murdered by Berenice, whom he had married.

SELGE, the largest and most powerful of the cities of Pisidia, situate north of the Eurymedon. It is said by some of the ancient writers to have been founded by a Lacedæmonian colony. (*Strabo*, 570.—*Dionys. Perieg.*, v. 860.—*Steph. Byz.*, s. v.—*Polyb.*, 5, 76.) The probability, however, is, that this was a mere supposition, grounded upon the valour of the inhabitants, since, independent of the difficulty of establishing a colony in an inland and mountainous country, amid rude and savage tribes, we find Arrian expressly styling the inhabitants of Selge *Barbarians*, when making mention of an embassy sent by them to Alexander. (*Exp. Alex.*, 1, 28, 1.) In a later age, however, we find the people of Selge laying open claim to the honour of a Spartan origin, and even adding to their medals the name of Lacedæmon.—The city was large, and the inhabitants very warlike. They could bring into the field, according to Strabo, an army of 20,000 men (*Strabo*, 570), and they maintained their independence for a long period against the petty princes in the vicinity. To the Romans they subsequently paid a stipulated sum for permission to live under their old republican institutions; but under the weak emperors after the time of the Antonines they rendered little more than a mere nominal obedience. At a later period we read of its effectually resisting an army of the Goths. (*Zosimus*, 5, 15.) Mr. Fellows describes some splendid ruins, which he considers to be those of Selge. (*Asia Minor*, p. 172, seq.)

SELINUS (*-untis*.—*Σελινούσιος*), I. a large and flourishing city of Sicily, situate on the southern shore of the western part of the island, and in a south-west direction from Lilybæum. It was founded, according to Thucydides (6, 4), by a Doric colony from Megara or Hybla, on the eastern coast of Sicily, a hundred years after the establishment of the parent city, which latter event took place about the eighteenth Olympiad. (Compare, however, the remarks of Mannert, *Geogr.*, vol. 9, pt. 2, p. 370.)—Selinus soon became a rich and powerful city, in consequence of the fertile territory in which it was situated, and was engaged in almost continual wars with the neighbouring city of *Ægesta* or *Segeste*. The weakness of the latter place induced its inhabitants to call in the aid of Carthage, which power gladly availed itself of an opportunity of meddling in the affairs of the island. A powerful Carthaginian army was accordingly sent, and Selinus, notwithstanding the brave resistance of its inhabitants, was taken, plundered, and in a great measure destroyed. (*Diod. Sic.*, 13, 42.—*Id.*,

13, 57.) About 16,000 men fell in the siege or during the slaughter that followed the taking of the place, 5000 were led away to Carthage into slavery, 2000 fled to Agrigentum, and many wandered about the adjacent country. Selinus would seem, from this account, to have been a city of more than 30,000 inhabitants.—The Carthaginians afterward allowed the fugitives to return to their ruined city, and again inhabit it. (*Diod.*, 13, 59.) A short time before his death, Dionysius the elder, of Syracuse, made himself master of Selinus and the adjacent places, but they all, not long after, reverted to their former possessors. The Carthaginians at last, during the first Punic war, feeling the difficulty of maintaining this post, transferred the few remaining inhabitants to Lilybæum, and Selinus was destroyed. (*Diod. Sic.*, 24, 1.—*Mannert, Geogr.*, vol. 9, pt. 2, p. 370, *seqq.*) A description of the ruins of Selinus may be found in Hoare's *Classical Tour*, vol. 2, p. 78, *seqq.* The ruins exist near what is called *Torre di Polluce*, and, according to Sir R. Hoare, their modern appellation is *Pilieri del Castel Vetrano*.—II. A city of Cilicia Trachea, the most westerly place in that province with the exception of Laertes, and situated on the coast. Its site was on a rock surrounded by the sea, at the mouth of the river Selinus. The Emperor Trajan died here; and from him the place took the new name of Trajanopolis. (*Strabo*, 681.—*Liv.*, 33, 20.) The modern name is *Selenti*.—Its territory was called *Selentia*. (*Mannert, Geogr.*, vol. 6, pt. 2, p. 85.)

SELLASIA, a town of Laconia, northeast of Sparta, and commanding one of the principal passes in the country. It was situate near the confluence of the Œnus and Gongylus, in a valley confined between two mountains, named Evas and Olympus. (*Polyb.*, 2, 6.) It commanded the only road by which an army could enter Laconia from the north, and was, therefore, a position of great importance for the defence of the capital. Thus, when Epaminondas made his attack on Sparta, his first object, after forcing the passes which led from Arcadia into the enemy's country, was to march directly upon Sellasia with all his troops. (*Xen., Hist. Gr.*, 5, 5, 17.) Cleomenes, tyrant of Sparta, was attacked in this strong position by Antigonus Doson, and totally defeated after an obstinate conflict. (*Polyb.*, 2, 66, *seqq.*)—No modern traveller appears to have explored the site of Sellasia. (*Cramer's Anc. Greece*, vol. 3, p. 221.)

SELLÆIS, a river of Elis, in the Peloponnesus, rising in Mount Pholoë, and falling into the sea below the Peneus. Near its mouth stood the town of Ephyre. (*Strabo*, 337.)

SELYMBRIA, a city of Thrace, founded by the Megarensians at a still earlier period than Byzantium. (*Scymn.*, c. 714.—*Scylax*, p. 28.—*Herodot.*, 6, 33.) The name of its founder, the leader of the colony, was Selys (Σήλως), at least Strabo explains the name by Σήλως πόλις ("the city of Selys"), the term *polis* being the Thracian word for "a city." It became a flourishing city, of considerable strength, and for a long time defended itself against the inroads of the Thracians, and the attempts of Philip of Macedon. It fell at last, however, into the hands of this monarch. It sank in importance after this event.—With the common people in the Doric dialect, the form *Salambría* was used. The writers of the middle ages give *Selybria*, from which comes the modern *Selivria*. The city changed its name at a late period to that of Eudoxiopolis, in honour of the wife of the Emperor Arcadius. (*Mannert, Geogr.*, vol. 7, p. 173, *seqq.*)

SEMÉTIS, a daughter of Cadmus by Hermione, the daughter of Mars and Venus. (*Vid. Bacchus*.)

SEMITRANIS, a celebrated queen of Assyria, daughter of the goddess Derceto by a young Assyrian. She was exposed in a desert, but her life was preserved by doves for one whole year, till Simmas, one of the

shepherds of Ninus, found her and brought her up as his own child. Semiramis, when grown up, married Menones, the governor of Nineveh, and was present at the siege of Bactra, where, by her advice and directions, she hastened the king's operations and took the city. The monarch, having seen and become enamoured of Semiramis, asked her of her husband, and offered him his daughter Sosana instead; but Menones, who tenderly loved his wife, refused, and, when Ninus had added threats to entreaties, he hung himself. No sooner was Menones dead than Semiramis married Ninus, by whom she had a son called Ninysas. Not long after this Ninus died, and Semiramis became sole ruler of Assyria. Another account, however, makes her to have put Ninus to death. According to this latter statement, Semiramis, having secured the co-operation of the chief men of the state by gifts and promises, solicited the king to put the sovereign power in her hands for five days. He yielded to her request, and all the provinces of the empire were commanded to obey Semiramis. These orders were executed but too exactly for the unfortunate Ninus, who was put to death, says this account, either immediately, or after some years' imprisonment. Semiramis, on attaining to sovereign power, resolved to immortalize her name, and with this view commenced the building of the great city of Babylon, in which work she is said to have employed two millions of men; who were collected out of all the provinces of her vast empire. She visited every part of her dominions, and left everywhere monuments of her greatness. To render the roads passable and communication easy, she hollowed mountains and filled up valleys, and water was conveyed, at a great expense, by large and convenient aqueducts to barren deserts and unfruitful plains. She was not less distinguished for military talents, and reduced many neighbouring and also distant nations under her sway. India, in particular, felt the power of her arms. At length, being plotted against by her son Ninysas, and recalling to mind a response which she had received some time before from the oracle of Ammon, she voluntarily abdicated in favour of her son, and immediately disappeared from the eyes of men. Some said that she was changed into a dove, and that several birds of this species having alighted upon the palace, she flew away along with them. Hence, according to the legend, the dove was held sacred by the Assyrians. Semiramis is said to have lived 62 years, and to have reigned 42 years. (*Diod. Sic.*, 2, 4, *seqq.*—*Val. Max.*, 9, 3.—*Herod.*, 1, 185.—*Mela*, 1, 3.—*Patere.*, 1, 6.—*Justin*, 1, 1, &c.—*Propert.*, 3, 11, 21.)—For an account of Semiramis altogether different from the received one, consult the work of Ciriabied and Martin, *Recherches Curieuses sur l'Histoire Ancienne*, cap. 17, p. 176, *seqq.*—The legend of Semiramis serves to connect together the Assyrian and Syrian mythologies. That she was an historical personage seems extremely doubtful, inasmuch as all that is related of her wears so evidently the garb of fiction. There appears, indeed, a very striking resemblance between the account given of Semiramis and the Hindu fable of Mahadevi and Parvati as detailed in the Puranas, and both narratives have probably emanated from the same source. The very name, too, would seem to favour this idea, for Semiramis becomes in Sanscrit *Sami-Ramasi* or *Iai*, "que Sami arborum colit." Others, however, give a different etymology, and make the term *Semiramis* denote "a wild dove" (*columbam feram montanamque*), and a third class regard it as equivalent to "the mother of doves" (*Semir* or *Somir*, the Syriac for "a dove," and *Amis*). The worship of doves among the Syrians and Assyrians is well known, and appears to lie at the base of the whole fable. (Consult *Voss*, *Idol.*, 1, 23.—*Crauser*, *Symbolik*, vol. 2, p. 70, *seqq.*—*Von Hammer*, *Fundgruben des Orients*,

vol. 1, p. 309.—*Id.*, ed Schirin., vol. 1, p. 36, n. 4.—*Dalberg*, ad *Scheik Mohammed, Fanie Dabistan*, p. 110, seqq.—*Bähr*, ad *Ctes.*, p. 415.)—Regarded as a matter of authentic history, the narrative of Semiramis presents many chronological difficulties. This is fully apparent in the discrepancy that exists among various writers relative to the era of her reign. Thus, for example, if we adopt the traditions which Ctesias, Diodorus Siculus, Justin, Eusebius, and Georgius Syncellus have followed as their guides, Semiramis will have been anterior to Augustus at least eighteen centuries; while, on the other hand, Larcher makes her to have been the wife of Nabonassar, and to have exercised sovereign sway during the latter years of that prince's reign, when he was prevented from ruling by a severe malady. (*Larcher, Hist. d'Herod.—Chronol.*, vol. 7, p. 171.)

SEMNONES, called by Strabo Σέμνονες, by Ptolemy Σέμνονες, by Velleius Paterculus Senones, and by Tacitus Semnones. They were a German nation, and, according to Velleius Paterculus (2, 106), the Albis or Elbe separated their territories from those of the Hermunduri; while, from Ptolemy's account, they would seem to have inhabited what is now *Brandenburg*. They originally formed a part of the kingdom of Maroboduus, but afterward separated from it along with the Langobardi. Mannert is of opinion that the name of Semnones was given by the German tribes, not to a single nation, but to all the nations in the vicinity of the Elbe, from whom the more southern Germans were descended. (*Geogr.*, vol. 3, p. 334.) The Semnones must not be confounded with the Senones, a Celtic race who settled on the coast of Umbria. (*Vid.* Senones.)

SEMNONES, an inferior class of divinities, such as Priapus, Silenus, the Fauns, &c. They were called Semones (i. e., *semi-homines*) from their holding a middle kind of rank between gods and men. Certain deified heroes were also included under this appellation. (*Ovid, Fast.*, 6, 213.)

SEMPRONIA, I. a Roman matron, daughter of Scipio Africanus the elder, and mother of the two Gracchi. (*Vid.* Cornelia III.)—II. A sister of the Gracchi, and wife of the younger Scipio Africanus. She was suspected of having been privy, along with Carbo, Gracchus, and Flaccus, to the murder of her husband.—The name of Sempronia was common to the females of the families of the Sempronii, Scipios, and Gracchi.

SEMPRONIA LEX, I. *de Magistratibus*, by C. Sempronius Gracchus, the tribune, A.U.C. 630, ordained that no person who had been legally deprived of a magistracy for misdemeanor should be capable of bearing an office again. This law was afterward repealed by the author.—II. Another, *de Civitate*, by the same, A.U.C. 630. It ordained that no capital judgment should be passed over a Roman citizen without the order of the people.—III. Another, *de Comitibus*, by the same, A.U.C. 635. It ordained that, in giving their votes, the centuries should be chosen by lot, and not give it according to the order of their classes.—IV. Another, *de Provinciis*, by the same, A.U.C. 630. It enacted that the senators should appoint provinces for the consuls every year before their election.—V. Another, called *agraria prima*, by T. Sempronius Gracchus, the tribune, A.U.C. 630. (*Vid.* Agraria Leges.)—VI. Another, called *agraria altera*, by the same. It required that all the ready money which was found in the treasury of Attalus, king of Pergamus, who had left the Romans his heirs, should be divided among the poorer citizens of Rome, to supply them with all the various instruments requisite in husbandry, and that the lands of that monarch should be farmed out by the Roman censors, and the money drawn from thence should be divided among the people.—VII. Another, *de Civitate Italica danda*, by the same, that the freedom of the state should be given to all the

Italians.—VIII. Another, called *Frumentaria*, by C. Sempronius Gracchus. It required that corn should be distributed among the people, so much to every individual, for every *modius* (or peck) of which it was required that they should only pay the trifling sum of a *semissis* and a *triens*.—IX. Another, *de Usura*, by M. Sempronius, the tribune, A.U.C. 560, long before the time of the Gracchi. It ordained that, in lending money to the Latins and the allies of Rome, the Roman laws should be observed as well as among the citizens. The object of this law was to check the fraud of usurers, who lent their money in the name of the allies at higher interest than what was allowed at Rome.—X. Another, *de Judicibus*, by C. Sempronius Gracchus, A.U.C. 630. It required that the right of judging, which had been assigned to the senatorial order, should be transferred from them to the Roman knights.—XI. Another, *Militaris*, by the same, A.U.C. 630. It enacted that the soldiers should be clothed at the public expense, without any diminution of their usual pay. It also ordered that no person should be obliged to serve in the army before the age of seventeen. (*Plut.*, *Vit. Grac.*)

SEMPRONIUS, the father of the Gracchi. (*Vid.* Gracchus.)

SENA, I. Julia, a city of Etruria, to the east of Volaterræ. The designation Julia implies a colony founded by Julius or Augustus Cæsar. It is mentioned by Tacitus (*Hist.*, 4, 45) and Pliny (3, 5). The modern name is *Sienna*.—II. A city of Umbria in Italy, on the seacoast, northwest of Ancona, and near the mouth of the river Misus. It was a settlement made by the Galli Senones, after their irruption into Italy, A.U.C. 396. The Romans colonized it after they had expelled, or, rather, exterminated the Senones, A.U.C. 471 (*Polyb.*, 2, 19), but, according to Livy (*Epit.*, 11), some years before that date. During the civil war between Sylla and Marius, Sena, which sided with the latter, was taken and sacked by Pompey. (*Appian, Civ. Bell.*, 1, 88.) The modern name is *Senigaglia*. (*Cramer's Anc. Italy*, vol. 1, p. 258.)

SENÆCA, I. M. ANNÆUS, a rhetorician and orator, born at Corduba, in Spain, of equestrian family, about 58 B.C. He came to Rome, where he contracted an intimate friendship with Porcius Latro, and where he taught rhetoric and oratory until his fifty-second year. He then returned to his native city, and married Helvia, a female distinguished for her beauty and talents, who made him the father of three sons, L. Annæus Seneca, the philosopher; M. Annæus Novatus, who, having been adopted by Junius Gallio, took the name of Junius Annæus Gallio, and was, as proprætor of Achaia, the judge of St. Paul (*Acts*, 18, 12); and Annæus Mela, the father of the poet Lucan. After the birth of his three sons, Seneca went back to Rome, and there passed the remainder of his life. We have two works of this writer remaining, one entitled *Susoriarum liber i.*, the other *Controversiarum libri x.* Each of these contains passages from discourses which had been pronounced on various occasions, and from debates which had taken place in the schools, in his presence, between the most celebrated rhetoricians. The subjects of these were fictitious causes or questions, proposed for discussion by the professors, such as the following: "Shall Alexander embark on the ocean?"—"Shall the three hundred Spartans at Thermopylæ, after being abandoned by the other Greeks, betake themselves to flight?"—"Shall Cicero apologize to Marc Antony?"—"Shall Cicero consent to burn his works, if Antony insists upon the sacrifice?" &c.—Seneca addressed these works to his sons. We discover in them some fine thoughts, and some traits of eloquence; but they are filled, at the same time, with subtle refinements and frigid declamation. We see plain indications of a declining taste. Neither of these productions is complete. They have been often

printed along with the works of Seneca the philosopher, and the best of the editions thus given is that of Heinaius, *Amst.*, 1620, 8vo. A separate edition appeared from the Bipont press in 1783, 8vo; and in 1831, from the Paris press, by Bouillet, forming part of the collection of Lemaire. From some researches of Niebuhr, he would seem to have been the author also of a history. (*Niebuhr, ad Cic., Liv. et Seneca, fragm.*, p. 104, *Rom.*, 1820.)—II. L., A celebrated Roman writer, son of M. Anneus Seneca, the rhetorician, and Helvia, born at Corduba, in the second or third year of the Christian era. He was still very young when his father removed to Rome, where the son received his education. The oratorical profession became his choice when he attained to years of maturity, and he plead in several causes before the public tribunals. The frantic Caligula, who was jealous of every species of talents, sought to destroy him, but spared his life, it is said, when it was represented to him that Seneca's health was feeble, and that he would, in all probability, be only short lived. He afterward attained to the questorship. In the first year of the reign of Claudius, Messalina, who hated him, had Seneca implicated in the accusation of adultery which was brought against the paramours of Julia, daughter of Germanicus, and caused him to be banished to the island of Corsica, where he passed eight years of seclusion. Agrippina, the second wife of Claudius, recalled him from banishment, and appointed him tutor to Nero, in conjunction with Burrhus. The latter was the young prince's instructor in military science, and endeavoured to communicate his own sedateness and gravity of manners. Elegant accomplishments, taste for the arts, and polite address were Seneca's province. Among other tutorial employment, he composed Nero's speeches. The first, a funeral oration for Claudius, was unfortunate in its effect, according to Tacitus. (*Ann.*, 13, 3.) Nero's next harangue, probably also written by Seneca, though Tacitus does not say so, gave universal satisfaction. It was delivered on his first appearance in the senate, and promised a reign of moderation. Dio Cassius says that this address was ordered to be engraven on a pillar of solid silver, and to be publicly read every year when the consuls entered on their office.—Seneca soon obtained an exclusive influence over his pupil, and engaged Anneus Serenus, who stood high in his esteem and friendship, to assist him in the means, not very creditable, of preserving his ascendancy, by supplying Nero with a mistress, and persecuting his patroness Agrippina, whose indignation rose above all restraint. Tacitus puts into her mouth a few emphatic words, said to have been uttered in the emperor's hearing. They have been finely imitated and expanded by Racine, in his tragedy of *Britannicus*; and Gray, in his short fragment of Agrippina, has done little more than translate Racine. Agrippina regained a temporary influence, and succeeded in punishing some of her accusers and rewarding her friends. Among the promotions obtained by her was that of Balbillus to the province of Egypt. It seems strange that a person so highly spoken of by Seneca should have been patronised by Agrippina at this juncture.—It was not till Suillius had too justly upbraided, but, at the same time, coarsely reviled Seneca, that the latter incurred any large portion of popular censure. Among the grounds on which Suillius attacked him were those of usury, avarice, and rapacity. That he was avaricious is beyond all question; but his practices must have been exorbitant to justify so violent an invective as that recorded by Tacitus, and where Suillius charges him with having amassed 300,000,000 sesterces. (*Ann.*, 13, 42.) The only historical authority on which Seneca's memory is loaded with the charge of usury, is that of Dio, who says that the philosopher had placed very large sums out at interest in Britain, and that his

voracious and unrelenting demands of payment had been the cause of insurrections among the Britons. But Dio's veracity has been suspected on some occasions; and as for the colour given to the imputation by the passage quoted from Tacitus, it must be remembered that it occurs as proceeding from the mouth of an enraged enemy. These imputed faults could scarcely escape a hint from Juvenal, although he had made use of him before as a contrast to Nero, and seems generally favourable to his character.—Seneca's share in the death inflicted on Agrippina by her son, and a strong suspicion that he drew up the palliative account of it, bears still harder on his fame. The savage mode of the assassination, and the meanness of the posthumous honours paid to her, a circumstance of infinitely more importance than modern ideas attach to it, as affecting the future happiness and condition of the departed spirit, reflect incredible disgrace on all concerned. Retribution soon overtook these unworthy compliances with the will of a wicked master. Nero, to whom, in the usual descent from bad to worse, the slightest infusion of virtue was an offence, listened to evil counsellors, and with complacency allowed the most respectable of his adherents to be traduced, and among them, in particular, Seneca. He was charged with having exorbitant wealth, above the condition of a private citizen, and yet, with unappeasable avarice, grasping after more: his rage for popularity was represented as no less violent; he was accused of courting the affections of the people, and, by the grandeur of his villas and the beauty of his gardens, hoping to vie with imperial splendour. In matters of taste and genius, too, and especially in poetic composition, he had the hardihood to become the rival of his imperial master. The skill of the prince, moreover, in the management of chariots, was reported to be with him a matter of raillery. (*Ann.*, 14, 52.) There is too much reason to believe that his numerous villas, his extensive gardens and great riches, whetted the edge of these accusations. His speech to the emperor, in which he offers to resign all his wealth and power, and asks permission to retire, is a fine specimen of apologetic eloquence. His admissions confirm Dio's account of his immoderate riches; but the historian probably exaggerates when he imputes the insurrection in Britain to his exactions. From this time he avoided the court, and lived an abstemious life in constant danger. His works, however, show that he was more useful in retirement than while filling high offices. He devoted himself to philosophy, natural and moral. Nero now sought his destruction; and Piso's conspiracy, to which he was supposed to be a party, gave an opportunity. (*Tac., Ann.*, 15, 60, *seqq.*) His death took place in the following manner: Sylvanus the tribune, by order of Nero, surrounded Seneca's magnificent villa, near Rome, with a troop of soldiers, and then sent in a centurion to acquaint him with the emperor's orders, that he should put himself to death. On the receipt of this command, he opened the veins of his arms and legs, and then was put into a hot bath: this was found ineffectual; at his time of life, says Tacitus, the blood was slow and languid. The decay of nature, and the impoverishing diet to which he had used himself, left him in a feeble condition. He ordered the vessels of his legs and joints to be punctured. After that operation he began to labour with excruciating pains. Least his sufferings should overpower the constancy of his wife, or the sight of her afflictions prove too much for his sensibility, he persuaded her to retire into another room. He called for his secretaries, and, as life was ebbing away, dictated his final discourse. Fatigued at last with pain, worn out, and exhausted, he requested his friend Statius Annæus, whose fidelity and medical skill he had often experienced, to administer a draught of hemlock. The potion was swallowed, but without any immediate

effect. He then desired to be placed in a warm bath, and, the vapour soon overpowering him, there breathed his last. Seneca's wife was permitted to live.—Juvenal bestows high commendation on Seneca, and other ancient authors as well as Juvenal, who was a diligent reader of Seneca's works, have been lavish of their praises. Martial takes many occasions of mentioning him with some commendatory epithet. Why did St. Jerome saint him? The reason is thus explained by Dr. Ireland, in a communication to Mr. Gifford while translating Juvenal.—“The writer to whom you refer seems to have used the term without much consideration. In Jerome's time, it was applied to Christians at large, as the general distinction from the pagans. Indeed, it was given to those who had not yet received baptism, but who looked forward to it, and were therefore called candidates for the faith. It could be only a charitable extension of this term that led Jerome to place Seneca among the *sancti*; for he still calls him a stoic philosopher. The case is, that in the time of St. Jerome certain letters were extant, which were said to have passed between Seneca and St. Paul. In one of these the former had expressed a wish, that he were to the Romans what Paul was to the Christians. This Jerome seems to have interpreted as an evangelical sentiment. He therefore placed Seneca among the ecclesiastical writers and saints; in other words, he presumptively styled him a Christian, though not born of Christian parents.”—The sketch of Seneca's life here given, when checked by the authorities, will not warrant his being ranked in any respect with the first Christian worthies. His early career was confessedly irregular and licentious. This, if sincerely repented of, might be forgiven. But his conduct after his recall, making allowance for the calumny and wholesale libel of the times, was, to speak of it in measured and negative terms, not altogether commendable. That his philosophical professions had some occasional influence on his imperial pupil; that they did a little towards stemming the torrent of profligacy with the people for a time, we are willing and desirous to concede: but that the practice of the preacher too frequently counteracted the tendency of his preaching, it would be uncandid to deny. Of the later political delinquencies he was unquestionably innocent. With respect to Piso's conspiracy, it was the current report at Rome, that the conspirators, after having employed Piso to get rid of Nero, meant to destroy Piso himself, and raise Seneca to the vacant throne; but the conception of such a scheme could have been nothing short of madness. Seneca was at the time old and infirm; and his tamperings in conduct with the virtue which he rigidly taught, and with the self-denial he stoically enforced in his writings as what the wise man could undeniably exemplify, had rendered him too unpopular to make the tenure of the empire safe in his hands for the shortest period of time. In respect of this charge he was shamefully treated. But his personal biography, on the whole, has an unfortunate tendency. Whatever may be thought of his excellences or defects as a writer, or of the caricature and priggishness of the Stoic sect, he was in his writings an earnest, a highly-pretending, and apparently a sincere advocate of ascetic severity. When the professions of such persons are belied by their lives and conduct, the interests of society cannot fail to suffer. If his ministry was corrupt, his behaviour under Nero's frown was not magnanimous. It is true, he did not abandon his literary pursuits; but his resignation was lip-deep; and his exaggerated affectation of sickness under infirmity, his anxiety about diet and fear of poison, show that his fine reasoning and great calmness when doomed to die, his excellent discourses and ostentation of firmness, had more of theatrical exhibition than of natural and self-possessed reality. His calling for the

particular poison (hemlock) which was given to criminals at Athens, shows that philosophical ostentation adhered to him even in the agonies of death; for he had thus expressed himself in one of his letters; “*citula magnum Socratem fecit: Catoni gladium assertorem libertatis extorque, magnam partem detraxeris gloria.*” (Ep. 13.)—His character and love of Stoical paradox are admirably delineated by Massinger, who had considered him well; and, though the quaintness and studied point of his manner had rendered him almost indiscriminately acceptable to the readers and writers of that period, the shrewd old dramatist had thoroughly appreciated him where he was weak as well as where he was strong.—It remains that we consider Seneca as a philosopher and an author. He was the principal ornament of Stoicism in his day, and a valuable instructor of mankind. If, when commanded to die, neither he nor his nephew Lucan maintained to the utmost the dignity of philosophy, the infirmity of human nature may plead as the excuse. Some little vanity may appear on the scene of Seneca's dissolution; but there was nothing cowardly and nothing inconsistent. As a writer, he was exactly made of that stuff which invites to controversy. To say that his style is faulty is to say no more than that he lived after the Augustan age. But perhaps our admiration of pure style, and our desire, by constant contemplation, to impregnate our own with the same spirit, makes us too exclusive. We shall lose much that is instructive and valuable if we determine to read nothing which is not perfectly written. Tacitus and Juvenal, as well as Seneca and Lucan, are beyond the pale of best Latinity. Yet who would relinquish the possession of either. Mr. Hodgson thinks that Quintilian's character of Seneca is nothing short of absolute condemnation. He asks why he should have been so scrupulous in omitting Seneca's name, while he examined every different style of eloquence, if he intended to attack him at the close of his discussion. The spirited and poetical annotator of Juvenal is right in his estimate of Seneca to a certain extent; but surely he bears a little hard on Quintilian, as he avers that the great critic does on his client. In various passages Quintilian will be found to bestow no faint praise upon Seneca. Suetonius, in his Caligula, gives the contradictory opinions of the emperor and the public rather than his own. The decision of Aulus Gellius is unfavourable, but his verdict is comparatively of little importance, though the anecdotes in his miscellany pleasantly fill up many an hiatus in the small talk of classical literature. (*Malkin's Classical Disquisitions*, p. 286, *seqq.*)—The works of Seneca that have come down to us are the following: 1. *De Ira*, “On Anger,” in three books. Lipsius concludes, from a passage of this treatise, that it was composed in the time of Caligula; whence it would follow that this is the earliest of the productions of Seneca, since it is ascertained with sufficient certainty that all the others were composed under Claudius and Nero. The inference drawn by Lipsius, however, has been disputed. The work itself is well written, and contains some good reasoning, blended, however, with some exaggeration as regards the principles of the porch.—2. *De Consolatione, ad Helviam matrem*, “On Consolation, addressed to his mother Helvia.” Seneca addressed this work to his mother during his banishment to Corsica; to console her not only under the misfortune that had befallen her in his sentence, but under all that had ever been experienced by her. It is well written, and is that one of his works which inspires the reader with most esteem for the moral character of the author.—3. *De Consolatione, ad Polybium*, “On Consolation, addressed to Polybius.” This piece was written, according to the generally-received opinion, during the third year of Seneca's banishment, to a freedman of Claudius named Polybius, who had lately lost a broth-

er, a young man of great promise. It contains some fine passages, but is unworthy of coming from the pen of Seneca, on account of the gross flattery with which it abounds. Diderot, in his *Essay on the Life of Seneca*, has attacked the authenticity of the work, and Ruhkopf, one of the latest editors of Seneca, has followed in the same path.—4. *De Consolatione, ad Marciam*. Another consolatory epistle to a friend who had lost her son. It is a touching and eloquent piece, and was written under Claudius, after the return of Seneca from exile.—5. *De Providentia, sive quare bonis viris mala accidunt, cum sit Providentia*, "On Providence, or why, if there be a superintending Providence, evils happen to the good?" It is not a general dissertation on Providence, but merely an attempt to justify Providence, and refute the cavils and murmurs of the discontented. The piece ends with recommending suicide to the unfortunate as their last refuge! It was written under the reign of Nero, and forms part of a complete treatise on ethics, of which Seneca speaks in his letters.—6. *De Animi tranquillitate*, "On Serenity of Mind." This work, written soon after the return of Seneca to Rome, has not the usual form of his productions. It is preceded by a letter of Annæus Serenus, in which that friend depicts to Seneca the disquietude, and disgust of life, which torment him, and requests his advice. Seneca replies, and shows the mode in which this mental malady may be combated.—7. *De Constantia sapientis, sive quod in sapientem non cadit injuria*, "Of the firmness of the sage, or proof that the wise man can suffer no injury." This work is based on the principles and paradoxes of the porch. It is addressed to Annæus Serenus.—8. *De Clementia*, "On Clemency." Addressed to Nero. It was in three books, and was composed during the second year of the prince's reign. The subject is rather the mild administration of government. A great part of the second, and the third book, are lost.—The diction in this work is simpler and nobler than in the other works of Seneca.—9. *De Brevitate vite*, "On the shortness of life." Addressed to Paulinus, the father, or else the brother of Seneca's second wife, and who filled the station of *Prefectus Annonæ*. Seneca recommends him to renounce his public employments in a spirit directly contrary to that in which he urges Serenus to engage in public affairs. These contradictions sometimes occur in the works of Seneca.—10. *De Vita Beata*, "On a Happy Life." Addressed to Gallio, the brother of Seneca.—11. *De Otio aut recessu sapientis*, "On the Leisure or Retirement of the Sage." The first twenty-seven chapters are wanting. Some critics believe that it formed part of the preceding.—12. *De Beneficiis*, "On Benefits." In seven books. Seneca treats, in this fine work, of the manner of conferring benefits, and the duty of him who receives them, and collaterally of gratitude and ingratitude. It was written at the close of Seneca's life, when he had retired from the court of Nero to the solitude of his villa.—13. One hundred and twenty-four letters, addressed to Lucilius Junior. Though Seneca has given to these pieces an epistolary form, they are rather moral treatises on various subjects. We find in them many excellent maxims, and a real treasure of practical philosophy. They were written during the later years of Seneca, after his retirement from court.—14. *Ἀποκολοκύνθωσις*, "The Metamorphosis into a Gourd." A Varroian Satire, directed against the Emperor Claudius. It is unworthy a philosopher like Seneca, and in very bad taste.—15. *Naturalium Questionum libri vii.*, "Seven books of Questions on Nature." Independently of the importance of the subjects discussed, the work has the accidental merit of making us acquainted with the point to which the ancients carried their scientific researches without the aid of instruments. In some

cases it will be found that they have anticipated modern discoveries. "The theory of earthquakes," says Humboldt, "as given by Seneca, contains the germs of all that has been stated in our own times concerning the action of elastic vapours enclosed in the interior of the globe." (*Voyage aux contrées équinoxiales*, vol. 1, p. 313, ed. 4to.)—We have also, in the early editions, *fourteen letters of Seneca to St. Paul*, or of the apostle to the philosopher, which were at one time received as genuine, but are now regarded as spurious. And yet St. Jerome and St. Augustine cite them, without expressing the least doubt as to their authenticity. It may be remarked, moreover, that an old tradition in the church makes an intimate friendship to have subsisted between St. Paul and Seneca. This tradition can scarcely be regarded as mere fable, and derives considerable support from the singular resemblance that has been found to exist between many passages from the writings of these distinguished men. (Consult Schöll, *Hist. Lit. Rom.*, vol. 2, p. 446, seq.) Neither is there anything improbable in this tradition as regards the time. The apostle is supposed to have arrived in Rome in the spring of 61 A.D. The prætorian prefect allowed him to occupy a separate dwelling, with a soldier for a guard. This prefect was Burrhus, the friend of Seneca; and the latter, it is very natural to suppose, heard of the new-comer through him. Seneca, indeed, may have received some information respecting the apostle at an earlier period; for the propator of Achaia, before whom St. Paul was brought at Corinth, was Seneca's own brother, who, having passed by adoption into another family, had taken the name of Junius Annæus Gallio. The Roman governor could hardly fail to make some mention of the apostle in his letters home.—There are also some tragedies ascribed to Seneca. Quintilian supposes that the *Medea* is his composition; while, according to others, the *Troades* and the *Hippolytus* were also written by him, and the *Agamemnon*, *Hercules Furens*, *Thyestes*, and *Hercules in Æta*, were composed by his father. Lipsius has imagined that the *Medea*, which he regards as the best of these tragedies, was written by Seneca the philosopher, and that the rest were the productions of another of the same name, who lived in the time of Trajan. Most critics, following the first part of the hypothesis of Lipsius, assign the *Medea* to Seneca, but they likewise ascribe to him the *Hippolytus*, *Agamemnon*, and *Troades*; and some of them give this latter piece the preference to the *Medea*. The remaining tragedies they consider to be the productions of various writers, appended to the tragedies of Seneca by editors or copyists. As to these compositions, it is hardly possible to find a really good tragedy among them. All, even the *Medea*, are defective in plan and in the management of the piece; they are all barren of action and full of declamation. We find in them, it is true, occasional bold thoughts, and expressions approaching the sublime, but they are often misplaced. They are modelled after the Greek tragedies, but are very far from being good copies, and are generally fatiguing by reason of the exaggeration and emphatic tone which reign throughout. The best editions of Seneca are, that of Lipsius, *Antv.*, 1652, fol. (the best of his five); that *cum notis variorum*, printed at Amsterdam, 1672, 3 vols. 8vo; that of Ruhkopf, *Lips.*, 1797–1811, 5 vols. 8vo; of the philosophical works, that of Bouillet, *Paris*, 1827–30, 5 vols. 8vo, forming part of the collection of Lemaire. The best editions of the tragedies separately are, that of Gronovius, *Lugd. Bat.*, 1661, 8vo; that of Baden, *Lips.*, 1821, 8vo, 2 vols.; and that of Pierrot, *Paris*, 1829–32, 3 vols. 8vo, forming part of Lemaire's collection.

SENONES, I. a nation of Gallia Transalpina, who, under the conduct of Brennus, invaded Italy and pillaged

aged Rome. They afterward settled in Umbria, on the coast of the Adriatic. After some years of conflict with the Romans they were expelled, or rather exterminated, A.U.C. 471. (*Polyb.*, 2, 19.) Livy, however, makes the date of this event some years earlier. (*Liv.*, *Epit.*, 11.)—II. A people of Germany. (*Vid.* Semnones.)

SERPTIMIUS I. or TITUS SERPTIMIUS, a Roman knight, intimate with Horace, and to whom the latter addressed one of his Odes (2, 6). He appears, from the words of Horace on another occasion (*Epist.*, 1, 3, 9, *seqq.*), to have been a votary of the Muses; and, according to one of the scholiasts, he composed lyric pieces and tragedies. None of his productions have reached us.—II. Aulus Septimius Severus, a Roman poet, who flourished under Vespasian. He was highly esteemed for his lyric talents, but none of his pieces have reached us. One of his poems was entitled *Opuscula Ruralia* or *Opuscula Ruris*, consisting of several books; another was called *Faliscæ*, in which he sang the praises of his villa among the Falisci. The metre of this poem was peculiar in its kind, each line being composed of three dactyls and a pyrrhic. Wernsdorff ascribes to him the *Moretum*, a poem commonly assigned to Virgil. (*Burm.*, *ad Anthol. Lat.*, lib. 1, ep. 27.—*Wernsdorff*, *Poet. Lat. Min.*, vol. 2, p. 247, *seqq.*)—III. Q. Septimius, the translator of the work of Dictys Cretensis into Latin, and who lived in the time of the Emperor Dioclesian. (*Vid.* Dictys I.)

SEQUANA (called by Ptolemy *Σεκούαβα*), a river of Gallia Transalpina, rising in the territory of the Ædui, and flowing by Lutetia or Paris into the Atlantic. It is now the *Seine*. (*Cæs.*, *B. G.*, 1, 1.—*Id.* *ib.*, 8, 87.)

SEQUANI, a people of Gallia Transalpina, whose territory lay to the east of that of the Ædui and Lingones, and was separated from them by the Arar; while it was parted from that of the Helvetii by the range of Mount Jura. Their country answers to the modern *Département du Doubs et du Jura*. (*Cæs.*, *B. G.*, 1, 9.—*Id.* *ib.*, 6, 12, &c.)

SERAPÉUM or SERAPION, I. a name given to the temples of Serapis in Egypt, of which there were a great number. (*Creuzer*, *Dionysius*, p. 181.)—II. A celebrated temple of Serapis in Alexandria, and one of the two temples in which the famous library was deposited. (*Vid.* Serapis, and Alexandria.)—III. Another temple of Serapis in Egypt, situate to the south of Heroöpolis. A settlement grew up around it; and the place was also famous for being the middle point in the road from north to south. (*Mannert*, *Geogr.*, vol. 10, pt. 1, p. 486.)—IV. A temple of Serapis at Rome, on the Capitoline Hill, erected by Caracalla. (*Vid.* Serapis.)

SERAPION. *Vid.* Serapeum.

SERAPION, I. a physician of Alexandria, the successor of Philinus, in what was called the Empiric school (i. e., the school of observation and experience.) In consequence of the great extension which he gave to this system, he is regarded by some as its inventor. (*Cels.*, *Præf.*, p. 3.) Mead believes that he was a disciple of Erasistratus, from his having found the name of Serapion on a medal discovered at Smyrna; but this opinion is untenable. (*Sprengel*, *Hist. de la Méd.*, vol. 1, p. 483, *seqq.*)—II. An epigrammatic poet, a native of Alexandria, who lived in the time of Trajan. One of his epigrams is preserved in the *Anthology*. (*Jacobs*, *Catal. Poet. Epig.*, s. v.)—III. An Alexandrian rhetorician. (*Suid.*, *ed. Kust.*, vol. 3, p. 284.)—IV. A philosophical poet of Alexandria. (*Plut.*, *Op.*, vol. 2, p. 396, *D. F.*)

SERAPIS or SARAPIS, a celebrated Egyptian deity. There would appear to have been two of the name, an earlier and a later one. I. The earlier Serapis, we are assured by Plutarch, was none other than Osiris himself. (*Plut.*, *de Sid.*, c. 28.) Diodorus Sicu-

lus makes the same declaration (1, 2); and in a hymn of Marianus Capella we find both these names assigned to one god: "*Te Serapim Nilus, Memphis veneratur Osirim.*" (*Hymn. ad Sol.*) The same inference may be drawn from the connexion of the name of Serapis with that of Isis. He is frequently mentioned by ancient authors as the consort of this goddess, which shows that they regarded Serapis as another title of Osiris. Diogenes Laertius, Clemens of Alexandria (*Strom.*, 5, p. 45), and Macrobius (*Sat.*, 1, 20), to whom we might add many other authors, speak of Isis and Serapis as the great divinities of the Egyptians. Yet the same authors make some distinction between Osiris and Serapis. Thus, Plutarch asserts that Serapis was Osiris after he had changed his nature, or after he had passed into the subterranean world; and it is apparently in conformity with this idea that Diodorus calls him the Egyptian Pluto. (*Cuper.*, *Harpocr.*, p. 85.) Jablonski, after having regarded Osiris as simply the orb of the sun, obtains an easy explanation of the nature and distinction of Serapis. The latter, according to this author, represented the sun in the winter months, after he had passed the autumnal equinox, and had reached the latter days of his career; or the solar Osiris, after he had entered upon the period of his decrepitude in the month of Athyr. Osiris then descended to the shades, and it was at this era that he became Serapis. (*Priehard*, *Analysis of Egyptian Mythology*, p. 89, *seqq.*)

—II. Another and later Egyptian deity, whose statue and worship were brought from Sinope to Alexandria, during the reign of Ptolemy Soter. A curious passage in Tacitus (*Hist.*, 4, 83) gives us the legend connected with this singular affair. The worship of this Serapis had not been confined to Sinope, but had spread along the coasts of the Euxine, and the deity was regarded by mariners in this quarter as the patron of maritime traffic. His fame had even travelled eastward, and a temple anciently raised to him in Babylon was repaired and adorned by Alexander. Ptolemy's object in bringing the worship of this divinity into Egypt appears to have been, that the blind superstitions directed in that country against a seafaring life might be counteracted by other superstitions of a more useful tendency. In what way his worship was blended with that of the earlier Serapis we are unable to say. Possibly there were some general points of resemblance in the attributes of the two deities, and some accidental similarity in name. Be this as it may, however, the worship of the latter Serapis soon merged in itself that of the earlier Osiris, and Jupiter-Serapis became the great divinity of Alexandria. (*Compare Creuzer*, *Dionysius*, p. 183, *seqq.*)

SERBŌNIS, a lake between Egypt and Palestine, and near Mount Casius. Pliny makes it to have been 150 miles long. Strabo assigns it 200 stadia of length and 50 of breadth. It had communicated with the Mediterranean by an opening which was filled up in the time of Strabo. The fable makes Typhon to have lain at the bottom of this lake or morass, and the Egyptians called its opening the *breathing-place of Typhon*. The place has taken the name of *Sebakei-Bardoil*, from a king of Jerusalem of that name, who died at Rhinocolura on his return from an expedition into Egypt.

SERES, a nation of Asia. Isaac Vossius, in his commentary on Pomponius Mela (*ad Pomp. Mel.*, 2, 27), observes, that whoever doubts the identity of the Seres, mentioned by the ancient writers, with the modern Chinese, may as well doubt whether the sun which now shines be the same with that which formerly imparted light: "*Sinenses hodiernos antiquorum Seres esse qui dubitat, is quoque dubitet licet idem nunc alique olim sol luxerit.*" An eminent geographer of more recent times, M. Malte-Brun (*System of Geography*, vol. 2, p. 462.—Compare the note of the English trans-

lators), has ventured, however, in opposition to an opinion so positively expressed, to consider Serica, or the country of the Sere, as including merely the western parts of *Thibet*, *Serinagur*, *Cashmere*, *Little Thibet*, and perhaps a small portion of *Little Buckharia*. On the other hand, an English writer, Mr. Murray, in a paper inserted in the Transactions of the Royal Society of Edinburgh (vol. 8, p. 171), maintains, in accordance with Vossius, the perfect identity of the Sere with the natives of China. This latter production we have never had the opportunity of perusing. It is said, however, to be extremely interesting and satisfactory, and to be based in part upon the narrative of Ptolemy the geographer, and in part upon various discoveries made by modern travellers in the mountainous regions of Asia which lie immediately north of India. This subject has likewise been discussed in some of the numbers of the Classical Journal (vol. 1, p. 53; 3, p. 395; 6, p. 204; 7, p. 32).—As Ptolemy is our chief authority in settling this long-agitated question, his statement is entitled to the first notice, although he is far from being the earliest writer who makes mention of the Sere. According to this geographer (*Ptol., Geogr., ed. Eras.*, p. 26, *seqq.*), it appears that the agents of a Macedonian merchant, on their way from Hierapolis to Sera, crossed the rivers Euphrates and Tigris, entered Assyria, and advanced to Ecbatana, the capital of Media; then passing through the Pylæ Caspiæ, and the chief cities of Parthia, Hyrcania, and Margiana, on the north of Persia, they arrived at Bactra; thence they proceeded to the mountainous country of the Comedes, and reached a place in Scythia called *Λαίβινος πύργος*, the *Stone-Castle* or *Tower of Stone*; from this spot to Sera, the capital of Serica, they were travelling during the space of seven months. What is meant by the *Stone-Castle* seems never to have been satisfactorily explained until very recently. Dr. Hager, in his Numismatical History of the Chinese (*Description des Médailles Chinoises du Cabinet Impérial de France, précédé d'un Essai du Numismatique Chinoise: par J. Hager.*—Compare *Class. Jour.*, vol. 1, p. 64), considers the *Stone-Castle* to have been the same with the *Tashkend* of modern times, and the principal city of eastern *Turkistan*. This, indeed, he demonstrates, not only from geographical coincidences, but from the obvious etymology of its Tartar name; *Tash* signifying “a stone,” and *kend* “a castle,” “tower,” or “fortress.” And in this etymology he is confirmed by parallel instances given by Du Halde, in his description of China, by the Oriental geography of Ebn Haukal, and other works. The route of the caravans, after leaving the *Stone-Castle* and proceeding farther to the east, is involved in difficulty and obscurity. Ptolemy's only source of information respecting this part of their journey seems to have been the verbal statements of the traders themselves. They informed him that the time occupied by this part of the undertaking was seven months, and that the direction along which they proceeded inclined from east a little to the south. Marinus, the geographer, as quoted by Ptolemy, computes these seven months' travel at 38,200 stadia; Ptolemy, however, taking into consideration the slow progress which the caravans must necessarily make in passing over mountains more or less covered with snow, and in stopping at various places on the route, diminishes this distance by one half, and makes the space traversed during these seven months to have been about 18,100 stadia, or 1709 geographical miles. It appears unnecessary here to enter into the computation of latitude and longitude as made by the Greek geographer. (*Ptol., Geogr., ed. Eras.*, p. 113, *et seqq.*) The computation of Mannert, however, is followed. This writer observes, that the diminution is incorrectly printed in the edition of Erasmus: (“In der Erasmiischen griechischen Ausgabe ist diese Verkleinerung unrichtig ausgedrückt.”) Suffice it to

say, that, to one who examines the text with care and attention, the Sera of Ptolemy will appear, if not actually to coincide with, at least to have been in the immediate vicinity of, *Singan*, the chief city of the modern province of *Shen-si* in China. (*Mannert, Geogr.*, vol. 4, p. 505.)—Let us now compare, for a moment, with what we have thus far stated, the account given of Serica by Ptolemy himself. (*Ptolem., Geogr.*, p. 414.) ‘Ἡ Σηρικὴ περιβάλλεται, ἀπὸ μὲν δύσεως τῇ ἐκ τῶν Ἰμασῶν ὄρους Σκυθίᾳ. Ἀπὸ δὲ ἀρκτῶν, ἀγνώστῳ γῆ· ὁμοίως δὲ καὶ ἀπ’ ἀνατολῶν ἀγνώστῳ γῆ. Ἀπὸ δὲ μεσημβρίας τῇ τε λοιπῇ μέρει τῆς ἐκτὸς Γάγγον Ἰνδικῆς καὶ ἐπὶ Σίνας. “Serica is bounded on the west by Scythia beyond Imaus (*Scythia extra Imaum*); on the north by unknown land, as well as on the east; on the south by the remaining portion of India beyond the Ganges, and also by the Sinae.” The geographer then proceeds to state (*ibid.*): ‘Ὅρη δὲ διέζουσιν Σηρικὴν, τὰ τε καλούμενα Ἀννίβα, καὶ τὸν Αἰβάκιον τὸ ἀνατολικὸν μέρος, καὶ τὰ καλούμενα Ἀσμίρατα ὄρη, καὶ τὸν Κασίον τὸ ἀνατολικὸν μέρος, καὶ τὸ Θάγονρον ὄρος, ἐπὶ δὲ τὸν Ἡμοδὸν καὶ Σηρικῶν καλουμένων τὸ ἀνατολικὸν μέρος, καὶ τὸ καλούμενον Ὀττορόκορρας. “Mountains intersect Serica; namely, the range which is called Anniba, and the eastern part of the Auxakian chain, together with those that are denominated Asmireta, the eastern part of the Casian range, Mount Thaguron, the eastern part of the Montes Emodi and the Seric chain as they are styled, and what is called Ottorokorras.” The continuation of the Auxakian chain is in the Russian province of *Irkutsk*; the Asmiretan Mountains are those which form the northern boundary of the desert of *Cobi*; the Casian range extends from the country of the Chochotes for the most part along the Chinese wall towards the north-east; Mount Thaguron is the southern part of the Mongolian Mountains, which stretch from the *Hoang-ho* towards the north; the eastern part of the Montes Emodi is the chain which stretches from Northern Thibet towards the southern part of the Chinese province of *Shen-si*, while Ottorokorras is its continuation, traversing the province of *Shen-si*, and giving rise to numerous tributaries of the *Hoang-ho*. (*Mannert, Geogr.*, vol. 4, p. 495.) The geographer next proceeds to describe the rivers of Serica. According to him, two streams in particular flow through the greater part of the country of the Sere (*Διὰρρέουσι δὲ δύο μάλιστα ποταμοὶ τὸ πλὴν τῆς Σηρικῆς*), the *Echardes* (*Οἰχάρδης*) and the *Bautisus* (*Βαυτίσος*). (The Erasmus edition of Ptolemy calls this river *Bavris*.) The former of these springs from three sources: one among the Auxakian Mountains under the 51st parallel of latitude; a second farther to the southeast, among the Asmiretan Mountains, under the parallel of 47½; and the third much farther to the west, among the Casian Mountains, under the 44th parallel. The *Echardes*, from this description of it, appears to be no other than the modern *Selanga*. The *Bautisus*, the second river which is mentioned, rises in the Casian chain, on the borders of Serica, to the southwest of one of the sources of the *Echardes*, under the 43d parallel, runs towards the southeast to the Montes Emodi, for the distance of about four degrees, and here receives a second arm. This last branch rises among the Montes Emodi under the 37th parallel. (*Charte des Ptolemaeus*, appended to *Ukert's Geogr.*) From this map it will appear that the 51st parallel nearly coincides with the mouth of the Boryathenes, and the 43d nearly with that of Byzantium. The parallel of 37 is one degree north of that of Rhodes by the same map. Eight degrees eastward of the spot where these two arms unite, the *Bautisus* receives a third branch, which rises among the range of Ottorokorras. It would be difficult for one at the present day, who had to describe, from mere oral statements, the *Hoang-ho* in the earlier part of its course, to do it more accu-

SERES.

rately than Ptolemy has done; for that the Baitiense and Hoang-ho are one and the same river hardly admits of a doubt. Its northern arm, the *Olan-Muzen*, rises in the country of the Chochotes, or Calmucks of Hoho-Nor, among the mountains which bound the desert of Cobi, and to the northeast of it rises the *Et-sinâ*, which must therefore be one of the sources of the *Œcharde*. The *Hoang-ho* takes its course towards the southeast, in order to unite with its southern arm, the *Hara-Muzen*, which rises in the southern chain of mountains between China and Thibet, and directs its course to the northeast. After this, the united streams take a high northerly direction, crossing the great wall, and then, bending to the south, pass once more the great wall, and re-enter China proper. Of the northern part of their course Ptolemy makes no mention, for a very natural reason, because it passes far beyond the ancient caravan routes. They make their appearance again near the site of the ancient capital of *Serica*, where Ptolemy again mentions them, and where he places the third tributary, probably the *Hori-ho*. From all that has been said, it follows, as an irresistible consequence, that the *Serica* of antiquity comprehends the eastern portion of the country of the *Chochotes*, the Chinese province of *Shen-si* and also *Mogul Tartary* from the northern confines of China as far as the southern limits of Siberia. (*Mannert, ubi supra.*)—D'Anville, it is true, gives in his map of the ancient world a somewhat different view of this quarter. But D'Anville erred in placing too much reliance on the false representations given by Mercator to the rivers of *Serica*, in his maps illustrating the geography of Ptolemy. Still, the authority of the French geographer is valuable as far as it goes, since he so far makes *Serica* a portion of China as to consider *Sera*, its metropolis, identical with *Kantscheon* in the modern province of *Sheh-si*. (*D'Anville, Géogr. Anc. abreg.*, vol. 2, p. 326.—*Id.*, *Recherches Géogr. et Historiques sur la Serique des Anciens*.—*Mémoires de l'Académie des Inscriptions*, vol. 32, p. 573, et seqq.) In pointing out the land of *Serica*, Ptolemy (*Ptolem.*, *Geogr.*—Compare *Mannert, ubi supra*, vol. 4, p. 506) makes mention also of two other caravan routes, a northern and a southern one. The former of these commenced at the city of *Tanais*, situate at the mouth of the river of the same name (the modern *Don*), and ran onward to the farthest east. It was by means of this route that Ptolemy obtained his information respecting what are now the *Volga* and *Jeik*, of which nothing was known before his time by the Greeks. He learned also the existence of the mountainous chains along the southern confines of Siberia, and was enabled to give a tolerably correct account of their situation and direction. He even pushed his inquiries as far as the *Issedones*, the most remote people to the east. All this information he obtained from the traders. No Greek seems ever to have undertaken this long and perilous journey. Unacquainted with the manners and language of the various predatory tribes which roamed along this vast tract of country, the attempt would have exposed themselves to certain destruction, and their merchandise to the cupidity of the savage Nomades. The traders, therefore, of whom mention has just been made, must have belonged to some one of the native tribes in this quarter, perhaps to the same Kirghiz Tartars who at the present day carry on the Russia inland traffic with the countries to the south. In this way, and in this alone, can we satisfactorily account for the knowledge possessed by the Greeks of the countries mentioned above, and, at the same time, for the very loose and general nature of their information. The most eastern people with whom the caravan route had communication appear to have been the *Issedones*. They would seem to have been identical with the *Issedones* of Herodotus, whom that historian names as the most remote nation of the northeast (*lib. 4, c. 13*

SERES.

and 37). If an opinion may be ventured respecting them, it would be that they coincide with the modern *Kalkas* of Mongolia in Chinese Tartary. (*Mannert, ubi supra.*) Ptolemy, in one part of his work, considers this nation as a part of *Serica*, inasmuch as they were under the sway of the *Seres*. In his eighth book, however, he calls them a Scythian race, and even their capital bore the name of *Ἰσσηδών Σερδική* among the Greeks. (*Ptolem., Geogr.*—Compare *Mannert, ubi supra.*) These *Issedones* had cities of their own, and were, of course, some degrees removed from the barbarism of the Nomadic state. Their cities must also have been well known, since Ptolemy gives us the longest day of two of them. This nation appears to have formed the link of communication between the caravan traders and the country of the *Seres*, a circumstance which arose from their being in subjection to the *Seres*, all immediate access to whom was debared the merchant. Two cities close to the borders of China seem to have been the marts of this traffic: *Ἰσσηδών Σερδική*, so called from its having among its inhabitants *Seres* as well as *Issedones*, and *Δροσάχη*, farther to the southeast. It is curious to compare with what has just been stated a passage from Ammianus Marcellinus, in which he makes mention of the *Seres*. According to this writer (*Ammianus Marcellinus*, 23, 6, p. 299, ed. Ernesti), a high, circular, and continuous wall surrounds the land of the *Seres*. "*In orbis speciem conserta celorum aggerum summmitatibus ambiunt Seras.*" Is not this a description of the great wall of China which encloses the country of the north? When this writer speaks of the western side of *Serica*, and of the route of the caravans beyond the Stone Castle, he makes no mention whatever of any wall, which in reality does not exist on this side, but only on the north.—The second (*Mannert, ubi supra*, vol. 4, p. 511.—*Ptol., Geogr.*, 1, 17) of the routes alluded to above proceeded from *Palimbothra*, the modern *Pala* on the Ganges, in a northeast direction through Thibet, and from thence along the southern arm of the *Baitisus* or *Hoang-ho*, in an eastern direction to *Sera*. This is precisely the same route which the Jesuits Gruebner and D'Orville took in the seventeenth century. (*Thevenot, Divers Voyages*, fol., vol. 2.) It is, moreover, the oldest and most frequented. By it the people of India obtained the silk and other productions of China, concealing, at the same time, from the natives of the west, the true quarter whence these commodities were brought. The Europeans received the silk of which they were in quest from the hands of the Indians, and, in answer to their inquiries respecting the country which produced it, they only received statements that were calculated to lead them astray. The truth, however, could not remain long concealed, and accordingly we find even Ptolemy in possession of the true account. The natives of India informed him that *Serica* and the city of *Sera* lay to the north of the *Sinns*; that there was another route to this quarter besides the one by the Stone Castle; and that this route was through India by the way of *Palimbothra*. (*Mannert, ubi supra.*) From this last-mentioned city the route in question led through India, until, having proceeded eight degrees north of *Palimbothra*, it passed over the high mountains in Northern Thibet. Here was situate the city of *Sola*, having on its left the range of *Imaus*, and on its right the eastern portion of the chain denominated *Montes Emodi*, and which formed the boundary between India and *Serica*. Farther on to the northeast was a city named *Chaurana*, and then the way proceeded along the southern arm of the *Baitisus*, passing by the city of *Orosana*. The route then led to the city of *Ottorokorra*, the capital of a people named *Ottorokorra*, from whom the easternmost portion of the *Montes Emodi* received the appellation of *Ottorokorra*. We now stand on ground with which, it is curious to observe, the Greeks

seem to have had some acquaintance long before the time of Ptolemy. In the earlier fables and traditions of the West, mention is made of a people named Attacori, dwelling in a valley which was always warmed by the genial rays of the sun, and protected by encircling mountains from the rude blasts of the north, a people closely assimilated in the peculiarities of their situation to the fabled Hyperboreans. (Compare *Plin.*, 6, 17, who quotes an earlier author, Amometus.)—After leaving the Ottorokorra, the route led by Solona, in a northeast direction, to the city of Sera.—Kosmas Indicopleustes (*Kosmas Indicopl., Montfaucon, N. Coll. Patr.*, 2, 137, D., et seqq.) states, that the Brahmins informed him, that if a line were drawn from the country of the Sime (Tiver(a) through Persia into the Roman world, so as to strike Byzantium, it would divide the earth into two equal parts. From this account also, loose as it is, we may obtain very satisfactory data for the position of Serica, which in the days of Kosmas was confounded with the land of the Sime, both of them being known merely as the country of silk.—Among modern writers, the author of the "Decline and Fall of the Roman Empire" is decidedly in favour of identifying the Seres with the people of China (*Gibbon, Decline and Fall of the R. E.*, c. 40), and his extensive and accurate learning is sufficiently well known. But the most conclusive authority on the subject is to be found in the pages of one of the first Oriental scholars of the present day. (*Klaproth, Tableaux Historiques de l'Asie, depuis la monarchie de Cyrus jusqu'à nos jours.*, p. 58.) "Il n'y a plus de doute," observes this writer, "que les Seres des anciens ne soient les Chinois. D'après les auteurs Grecs, le mot *σιρ* designe et le ver à soie et les habitants de la Sérique ou les Sères; or, ce fait démontre, que le nom de ces derniers leur venait de la marchandise précieuse que les peuples de l'Occident allaient chercher chez eux. En Arménien, l'insecte qui produit la soie s'appelle *chéram*, nom qui ressemble assez au *σιρ* des Grecs. Il est naturel de croire que ces deux mots avaient été empruntés à des peuples plus Orientaux. C'est ce que les langues Mogole et Mandchoue nous donnent la facilité de démontrer. Il en résultera que le nom de la soie, chez les anciens, est véritablement originaire de la partie Orientale de l'Asie. La soie s'appelle *sirkek* chez les Mogols, et *sirghé* chez les Mandchoux. Ces deux nations habitaient au nord et au nord-est de la Chine. Est-il presumable qu'elles eussent reçu ces dénominations des peuples Occidentaux? D'un autre côté, le mot Chinois *see* ou *szu*, qui désigne la soie, montre de la ressemblance avec *sirghé* ou *sirkek*, et avec le *σιρ* des Grecs. Cette analogie frappera d'autant plus quand on saura que, dans la langue mandarine, le *r* ne se prononce pas, tandis que cette finale se trouvait vraisemblablement dans les anciens dialectes de la Chine. Mais le mot *serén* *str*, qui désigne la soie, est tout à fait identique avec le *σιρ* des Grecs, qui devait se prononcer aussi *str*. La soie a donc donné son nom au peuple qui la fabriquait et qui l'envoyait dans l'Occident, et les Seres sont évidemment les Chinois, quoi qu'en puissent dire les géographes, qui ne savent employer que le compas pour chercher l'emplacement des nations." Previous to the appearance of the work from which the above extract is made, its author had already published a conjecture on the name of the Seres in one of the periodicals of the day. It is to this last that M. Abel-Rémusat, another distinguished Orientalist, alludes in the following remarks (*Mélanges Asiatiques*, vol. 1, p. 390), confirming, at the same time, the opinion of Klaproth. Ce que l'article consacré à la Chine offre de plus remarquable, c'est l'observation sur l'origine du nom de Sérique, cherché par M. Klaproth, dans le nom même de la soie, *see*, en Chinois, qui vraisemblablement, dit-il, a pu être, dans d'autres dialectes du nord de la Chine, changé en *sir*. M. Klaproth, ayant

déjà publié cette conjecture (*Journal Asiatique*, vol. 2, p. 243), j'ai eu l'occasion d'y joindre l'indication d'un fait qui me paraît propre à la changer en certitude: c'est qu'en effet, dans un vocabulaire coréen, qui fait partie de l'Encyclopédie Japonaise, la soie est désignée par le nom de *Sirou* (prononcez Sir), qui est tout-à-fait identique avec le *σιρ* (prononcez Sir) des écrivains Grecs. It has been asserted, from a very respectable quarter (*Documents relative to the Manufacturing of Silk*, laid before the Congress of the United States of America by the secretary of state, 1823), that the Seres were originally a people of China, driven into the territories of Little Buckharia by the invasions of the Huns. It is difficult to conceive whence the data could have been obtained for this singular hypothesis, except from the pages of Gibbon or De Guignes. In the former of these writers (*Gibbon, Decline and Fall of the R. E.*, c. 26), it is asserted, as a mere hypothesis, without any authority whatever, that "the ancient, perhaps the original, seat of the Huns was an extensive, though dry and barren, tract of country immediately on the north side of the great wall." Of De Guignes, on the other hand, it may with truth be said, in the words of Klaproth (*Tableaux Historiques*, p. 242): "Malgré la facilité que l'érudition de cet écrivain célèbre lui procurait de puiser dans les auteurs Chinois, Arabes et Syriens, il lui manquait une chose essentielle, c'était une idée juste de la parenté des nations de l'Asie. En confondant ensemble les nations Turques, Mongoles, Teungouses, Finnoises et autres, il a manqué son but, de sorte que son ouvrage n'est réellement qu'un magasin immense de matériaux précieux, entassés sans discernement." It seems that De Guignes found, both before and after the Christian era, a powerful Nomadic nation, called *Hiong nou* by the Chinese, which continually infested the territories of their neighbours. They occupied the mountainous country to the north of China. The mere resemblance of names led De Guignes to conclude that these *Hiong nou* were the same people with the Huns. Klaproth, however, has shown most conclusively (*Tableaux Hist.*, p. 101, et seqq.), from the Chinese historians, that the *Hiong nou* were a branch of the Turkish race, who were dispersed by the Chinese near the sources of the Irtysh, about the 91st year of our present era. The remnant of this nation directed their course towards the west, in order to penetrate into Sogdiana, but they could not reach this country, and were compelled to stop in the region to the north of *Khouei than*, or the *Koutché* of modern days. After this they moved towards the northeast, and occupied a part of the Steppe of Kirghiz, where the annals of China cease to make mention of them. And yet De Guignes, without giving the least authority for what he advances, observes: "Ce sont les Huns qui passèrent dans la suite en Europe sous le règne de l'Empereur Valens." It may not be amiss, before leaving this part of the subject, to say a few words in relation to the early history of the Huns, in order to disprove more fully the statement which has led to these remarks. (Compare Klaproth, *ubi supra*.) The most ancient author who makes mention of the Huns is Dionysius Periegetes. This geographer, who wrote probably about A.D. 160, enumerates four nations, which, in the order of this narrative, followed each other, as regarded position, from north to south along the shores of the Caspian, viz., the Scythians, the Huns (*Ὀβρυοί*), the Caspians, and the Albanians. (*Dionysii Periegetis*, v. 730, et *Eustath.*, in loc.) Eratosthenes, cited by Strabo (*Strabo*, ed. Tzsch., vol. 4, p. 456), places these nations in the same order; in place of the Huns, however, he makes mention of the Ouitiens (*Ὀβίτιοι*), who were probably the most eastward tribe of the Huns. Ptolemy (*Ptol., Geogr.*, ed. Erasmus, p. 409, et seqq.), who lived about the middle of the third century, places the Huns (Xou-

vor) between the Bastarnæ and Roxolani, and, consequently, on the two banks of the Borysthenes. The Armenian historians make mention of them under the name of *Hounk*, and assign them, for their place of residence, the country to the north of Caucasus, between the Volga and the Don. For this same reason they call the pass of Derbend *the rampart of the Huns*. In the geography which is incorrectly ascribed to Moses of Khorene, the following passage also occurs: "The Massagets inhabit as far as the Caspian, where is the branch of Mount Caucasus which contains the rampart of Tarpart (Derbend), and a wonderful tower built in the sea: to the north are the Huns, with their city of Varbatchan, and others besides." Moses of Khorene, in his Armenian history, makes mention of the wars which King Tiridates the Great, who reigned from A.D. 259 to A.D. 312, waged against the northern nations who had made an irruption into Armenia. This monarch attacked them in the plains of the Karkeriens, in northern Albania, between Derbend and Terrek, defeated them, slew their prince, and pursued them into the country of the *Hounk* or *Huns*. It were useless, however, to multiply authorities. (Compare *Klaproth*, p. 235.) Sufficient has been said to prove that, in all probability, the original seats of the Huns were in the vicinity of the Caspian. That they were not of the Mongol or Calmuck race, is apparent of itself, if any reliance is to be placed upon the descriptions that are given of their personal deformity by the ancient writers. Scarcely a single feature of the well-known Tartar physiognomy enters into these accounts of them. They were probably the same with the eastern division of the Fins (*Klaproth*, p. 246), and hence the theory which makes them to have dispossessed of their primitive seats the ancient nations of the Seres, errs in placing the original settlements of the Huns too far altogether to the east.—We will now proceed to the more immediate subject of inquiry, the knowledge which the Greeks and Romans possessed in relation to the silk manufacture of antiquity. The first writer who gives any direct information on this head is Aristotle (*Hist. Animal.*, 8, 19). The surprising accuracy of his account, considering his imperfect sources of intelligence, may well demand our attention. The passage is as follows: "Ἐκ δὲ τινος σκώληκος μεγάλου, ὃς ἔχει ὅλον κέρατα καὶ διαφέρει τῶν ἄλλων, γίνεται δὲ πρῶτον μὲν, μεταβαλόντος τοῦ σκώληκος, κάμψη, ἔπειτα βομβύλιος, ἐκ δὲ τούτου νεκύδαλος· ἐν ἧς δὲ μορῇ μεταβάλλει τὰς τὰς μορφὰς πάσας· ἐκ δὲ τούτου τοῦ ζῶον καὶ τὰ βομβύλια ἀναλίσκονται τῶν γυναικῶν τινες ἀναπνιζόμεναι κάπειτα θάβουσιν. Πρώτη δὲ λέγεται θάβειν ἐν Κῷ Παμφίλῃ Λατῶν θυγάτηρ. Athenæus refers to this passage in the following terms: 'Ἰστορεῖ [Ἀριστοτέλης] ὅτι καὶ ἐκ τῆς τῶν φθειρῶν βχέας αἱ κονίδες γεννῶνται, καὶ ὅτι ἐκ τοῦ σκώληκος μεταβάλλοντας γίνεται κάμψη, ἧς βομβυλίδος, ἧς οὐ νεκύδαλος ὀνομαζόμενος.—Dr. Vincent unites these two passages together, making the one supply what is defective in the other, and gives the following translation of them: "There is a worm which issues from [an egg as small as] the nit of lice: it is of a large size, and has [protuberances, bearing the resemblance of] horns, [in which respect] it differs from other worms. The first change which it undergoes is by the conversion of the worm into a caterpillar; it then becomes a grub or chrysalis, and at length a moth. The whole of this transformation is completed in six months. There are women who wind off a thread from this animal, which it spun while it was in the state of a caterpillar; and that is the material from which they afterward form the texture of the web. This invention is attributed to Pamphila, a woman of the isle of Cos, and daughter of Letoïus."—The learned translator then enters into a full examination of this passage of Aristotle, for the purpose of ascertaining whether the silk mentioned in it be the true silk which we have at

the present day, and produced by the true silkworm. He considers a link of the chain to be wanting in the passage under review, inasmuch as the silken thread is not wound off from the animal itself, but from the cocoon. In the next place, the true silkworm is not of large size, but small, at its first appearance and before it becomes a caterpillar. "Neither can it properly be called a worm, as distinguished from the caterpillar. A caterpillar is discriminated from a worm by its small protuberances which serve for legs, and is called κάμψη in Greek, from its bending or undulating motion; these legs of the reptile may be hardly distinguishable at its first production, which may have induced Aristotle to call it a worm. As regards the Coan vestments, no one, after reading the passage cited above, will feel inclined to maintain that they were of cotton. They seem to have been entirely of fine, thin, transparent silk, inferior, however, in softness and splendour to the Oriental. Salmassius and Hoffman furnish an additional reason for the inferiority of the Coan article, which is, that the Coans suffered the aurelia to eat its way out of the cocoon. This ruins the silk for all fine work, for the thread is then obtained by spinning it from a flock; whereas, to have it reeled off continuous, the aurelia must be killed by heat, and the cocoon preserved from perforation." We find no mention made of the Seres, or their peculiar manufacture, in any Greek author for a long period subsequent to the age of Aristotle, unless it be that the fine stuffs of Amorgos (*Böckh, Staatshaushaltung der Athener*, vol. 1, p. 115, and the authorities there cited), which are described as having been almost transparent, and in point of fineness, as well as of price, ranked before those made of Byasus and Carpathus, were similar to those manufactured in the island of Cos.—The Romans appear to have first become acquainted with the name and product of the Seres about the reign of Augustus. Hence, whatever we find on this subject becomes, of course, a matter of common knowledge for both. Virgil appears to be the first Roman writer who makes mention of the Seres. (*Georg.*, 2, 121, *segg.*) Who are meant in this passage by the Æthiopians has been a subject of much more controversy, especially as the geographical situation of the Seres will depend, in a great measure, upon this. "Æthiopians" (*Ἀἰθιοπες*) was a general name among the Greeks for every nation of a dark or swarthy complexion, an effect supposed to be produced by the burning rays of the sun. Their first acquaintance with a race of this description seems to have been derived from Egypt and Phœnicia, in both of which countries they would naturally meet with many accounts of the tribes that occupied the interior of Africa. The name was afterward extended to the dark-brown natives of southern Arabia, who brought their wares to Sidon by the overland trade, and hence it is that Homer makes mention of two Æthiopian races, the western and eastern. (*Odyssey*, 1, v. 23.) The opinion of Aristarchus (*Eustathius*, p. 1386), and other of the Grecian commentators on Homer, which makes the Nile to have been the dividing line between these two races, is too refined for the age of the poet, and implies a more accurate acquaintance with the interior of Africa, and the course of the river of Egypt, than he appears to have possessed. Homer's western Æthiopians are the natives of inland Africa; the eastern, those of southern Arabia, who were thought by the earlier Greeks to dwell in the immediate vicinity of the great source of light. When the army of Xerxes, in a subsequent age, was poured upon Greece, the inhabitants of the latter country, perceiving some dark-coloured nations among the followers of the monarch, applied to them the name of Æthiopians, in perfect conformity with its original import; and hence Herodotus (7, 69 and 70; 3, 94 and 97), in speaking of the forces which served on that expedition, ex-

merates two distinct races, the eastern and western Ethiopians. It is easy to perceive, from his description of the former, and their "long, straight hair," that none other are meant than the people of India. If this deduction be correct, the Seres of Virgil will, of course, be the people of China. As to their *combing fleeces from the leaves of trees*, the allusion is manifestly to silk, which many of the ancients believed to be a sort of down gathered from the leaves of trees. Thus Pliny (*Plin.*, 6, 17), in a subsequent age, remarks, "*Primi sunt hominum qui noscantur Seres, lanicio sylvarum nobiles, perfusam aqua depectentes frondium caniciem.*"—The moment silk became known among the western nations, it was eagerly purchased as an article of luxury, and began to form a conspicuous part of Greek and Roman attire. At that period of growing corruption, it was no wonder that such an invention should be hailed with transport, which, while it supplied the person with a covering, still, like our gauze, exposed every limb to the eye of the beholder in almost perfect nudity. The Emperor Heliogabalus, it is true, in a later age, was the first who disgraced himself by appearing in a dress wholly of silk; yet Seric and Coan vestments are frequently mentioned by the Roman writers either contemporary with, or not long subsequent to, the time of Virgil. (*Tibullus*, 2, 4, 29.—*Id.*, 2, 6, 35.—*Propert.*, 1, 4, 22.—*Id.*, 4, 8, 23.—*Ovid, Am.*, 1, 4, 16.) About the period of which we are speaking, it would appear that Seric vestments found their way to Rome also from foreign nations. Florus (*Florus*, 4, 12, 16) states, that in the reign of Augustus, an embassy from the Seres came to Rome, with presents of precious stones, elephants, and other gifts. Among these last, Seric vestments, or else raw silk, were no doubt included. If we glance at the Greek writers who flourished about this period, we shall be surprised to find Strabo passing over, in almost total silence, both the nation of the Seres as well as their singular manufacture, the more especially as his contemporary, Dionysius Periegetes, makes such full mention of it. Thus we find Dionysius describing the Seres as a nation of the farthest East, who paid no attention to cattle or sheep, but occupied themselves in *combing the variegated flowers* produced from their otherwise neglected land, and in *making vestments of an ingenious and costly kind*, resembling in hue the meadow-flowers, and with which even spiders' webs could not compare as to the fineness of texture. (*Dionysii Periegetis*, v. 752, et seqq.) Eusebius, archbishop of Thessalonica, who flourished about 1160 A.D., and wrote a learned commentary on the work whence this extract is taken, gives a very curious account of the Seres, which would tend still more strongly to confirm the belief that they were identical with the Chinese. He describes them (*Eustath.*, in *Dionys. Perieget.*, p. 239, ed. Oxon.) as an unsocial nation, refusing all intercourse with strangers (*ἀπομονεύει ἀνθρώποις καὶ ἀνομιλῶνται*). They marked the price on the articles which they wished to sell, and, having left them in a particular place, retired. The traders then came, and placed by the side of the goods the amount demanded, or else so much as they were willing to give. Upon this they withdrew in their turn, and the Seres coming back, either took what was offered, or carried away the goods again. We have here the same cautious system of commercial dealing which characterizes the Chinese of our own days, only in a far stricter degree. This peculiarity in the traffic of the Seres is noticed also by Pliny, Pomponius Mela, and Ammianus Marcellinus. (*Plin.*, 6, 17.—*Pomponius Mela*, 3, 7.—*Ammianus Marcellinus*, 23, 6, p. 299, ed. Ernesti.)—But to return to the order of chronology: in the reign of the Emperor Tiberius, according to Tacitus (*Tacit.*, *Annal.*, 2, 38), a law was passed at Rome ordaining that men should not

disgrace themselves by the use of Seric vestments, or, to adopt the strong language of the original, "*ne vestis Serica viros faderet.*" Lapeius, in an *Excursus* on this passage, endeavours to prove that a Seric vestment means one of cotton that grows spontaneously on trees in the country of the Seres, and that *vestis bombycina*, on the other hand, means one of silk. But surely the use of a cotton garment would hardly have called for the interposition of the Roman senate. Besides, Sylvester (*Forcel.*, *Lex Tot. Lat.*, s. v. *Bombyx*), in his remarks on the 2d Satire of Juvenal (v. 66), has conclusively shown that *sericum* means "*silk on the loom*," and *bombyx* "*raw silk*."—At a later period we find Seneca (*Seneca, de Benef.*, 7, 9) exclaiming, "*Video Sericas vestes, si vestes vocandæ sunt, in quibus nihil est quo defendi aut corpus, aut denique pudor possit: quibus sumtis, mulier parum liquido nudam se non esse jurabit. Hæc ingenti summa ab ignotis etiam ad commercium gentibus accersuntur.*" And again, in another portion of his works, we have the following (*Id.*, *Ep.*, 90): "*Posse nos vestitos esse sine commercio Serum.*"—It is in the elder Pliny, however, that we find the strongest authorities on this subject. The passage of Aristotle, which we have cited above, he quotes once (*Plin.*, 11, 26) expressly and once (*Id.*, 6, 20) incidentally. In another (*Id.*, 6, 17) instance, he alludes, in the following expressive words, to the object of the Roman females in adopting this dress: "*ut in publico matrona transtulerat.*" In the preem to the 12th book, he remarks, "*Cædi montes in marmora, vestes ad Seras peti.*" Among many other passages in this author, there is one too long to quote here, which proves conclusively that the Coan vestments were of silk, and the produce of a particular kind of silkworm bred in the island of Cos. Forcellini (*Lex Tot. Lat.*, s. v. *Bombyx*) cites the opinion of Salmasius (Saumaise), who thought that the silkworms of Pliny were the same as those of our own time, and that Pliny had, from want of sufficient information on the subject, quoted an incorrect description of them from some earlier writer.—Quintilian also alludes to the *toga serica* (*Quintilian, Inst. Orat.*, 12, 10), and Juvenal, as may well be imagined, finds this an ample theme for indignant satire. (*Juvenal, Sat.*, 6, v. 260.—*Sat.*, 8, v. 101, and the comments of Rupert.) In Martial, likewise, the allusions to Seric vestments are more than once met with. (*Martial, Epistles*, 11, 28.—*Id. ib.*, 9, 38.) Suetonius (*Suetonius, Vit. Calig.*, c. 52) only once makes mention of Seric garments, and then very slightly, in the case of the Emperor Caligula: "*Sape depictas, gemmatasque indutus pœnulas, manuleatus, et armillatus in publicum processit, aliquando sericatus.*" They are named, also, once in Plutarch (*Plutarch, Conjug. Præcep.*—*Op.*, ed. Reiske, vol. 6, p. 550), but the allusion is a very general one. A young female is admonished not to make use of *τὰ σπικὰ*, which can only be obtained at great expense. Pausanias is the next writer in the order of time who challenges our attention on this subject. He gives a long account of the silkworm, in a very interesting passage, which may be translated as follows: "There is a worm (*ζωφίον*) in their (the Seres') country, which the Greeks call *ser* (*ὡς σῆρα καλοῦσιν Ἕλληνες*), but to which the natives give a different appellation. It is twice as large as the largest-sized beetle, but in other respects resembles the spiders which weave their webs under the trees, and, like them, it has eight feet. The Seres, in summer as well as winter, rear these insects in houses specially adapted to that purpose. They work a very slender thread, which is twined around their feet. They are fed nearly four years on panic (*παρέχοντες σφίσι τροφήν ἐλῆμον*); in the fifth (for they know that they will not live longer) they give them a green reed to eat. This is the animal's favourite food, which it devours until it bursts

SERES.

from repletion. The Seres obtain a quantity of thread from its bowels." What Pausanias adds, however, respecting the situation of Serica, that it is "an island in the recess of the Indian Ocean," probably refers to Ceylon, and is grounded upon the mistaken idea (*Ritter's Vorhalle*, p. 113) that the silk, which formed a chief article of export from that island, was likewise manufactured there. Tertullian (*de Pallio*, c. 3) and Clemens Alexandrinus (*in Padagog.*, 2, 10) also speak of the silkworm, and appear better acquainted with the several changes which it undergoes than Pausanias. The principal points in which they differ from the correct accounts of modern times are, their making the insect in question resemble the spider in the mode of forming its thread, and their assigning a different leaf from that of the mulberry for its food. (*Mémoires de l'Académie des Inscriptions*, vol. 7, p. 342.) Dio Cassius and Herodian both make mention of the Seric manufactures. The former describes the ancient *σερικόν* in the following language (*Dio Cassius*, ed. Reimar, 43, 24, p. 368, l. 26): Τοῦτο δὲ τὸ θάσμα χλωδὸς βαρβάρων ἐστὶν ἔργον, καὶ παρ' ἐκείνων καὶ πρὸς ἡμᾶς, ἐς τροφήν τῶν πάντων γυναικῶν περιττήν. "This species of tissue is a work of barbarian luxury, and has found its way from that distant quarter even unto us, in order to furnish our higher class of females with the materials for excessive extravagance." Herodian speaks of Seric vestments as fitter for females than for men (*Herodian*, ed. Irmisch., 5, 5, 9, vol. 3, p. 144): Τὰ τοιαῦτα καλλωπίσματα οὐκ ἀνδράσιν ἀλλὰ θηλείαις πρέπειν. Vopiscus (*Vit. Aurel.*, c. 45) informs us, "Vestem holosericam neque ipse (Aurelianus) in vestuario suo habuit, neque alteri utendam dedit. Et quum ab eo uxor sua peteret, ut unico pallio blatteo serico uteretur, ille respondit: absit ut auro fila pensentur; libra enim auri tunc libra serici fuit." The extravagant price which is here mentioned, a pound of gold for a pound of silk, may easily be accounted for by the circumstance of the overland trade to Serica being rendered more precarious by the rapid rise of the second Persian Empire. Passing by the several authors who mention the Seric vestments without any accompanying circumstances sufficiently important to merit a quotation, we come to Lampridius, who devotes to infamy the Emperor Heliogabalus (*Lampridius*, *Vit. Heliogab.*, c. 26) for having first dared to appear in a dress wholly of silk. St. Basil (*S. Basil*, in *exam. homil.*, 8) makes a curious application of the knowledge that appears to have been generally diffused, about this period, respecting the transformations of the silkworm, by exhorting the rich, who could not be induced to dispense with garments of silk, to remember, at least, in putting them on, that the worm, of whose substance they were made, is a type of the resurrection. Julius Pollux (c. 384, 31, cap. 17, lib. 7) also alludes to this insect: Σκώληκες εἰσι οἱ βόμβυκες, ἀφ' ὧν τὰ νήματα ἀνύονται, ὡπερ ὁ ἀράχνης· ἐνιοὶ δὲ καὶ τοὺς Σήρας ἀπὸ τοιούτων ἑτέρον ζῶον ἀπορρίπτειν φασὶ τὰ ὑάσματα. Ammianus Marcellinus (*Ammian. Marcell.*, 23, 6) next follows, who gives the following narrative: "They (the Seres) weave a delicate and tender thread, formed from moistened wool, combining it into a kind of fleece by frequently sprinkling with water the pods of the trees; spinning this into inner garments, they manufacture that celebrated silk which anciently composed the dress of the (Roman) nobility, but in my age is the indiscriminate and extravagant clothing of our lower ranks." It is rather surprising to find so much ignorance of the true origin of silk in so late an age, and on the part of a writer otherwise so intelligent. One would imagine that Ammianus was describing the cotton-tree. A distinction appears to have been made, long before this period, between *Bombycinum* and *Sericum*: the former appellation being given to the produce of the Assyrian silkworm

SERES.

and that of Coe, the latter being used to denote the genuine silk, whether the work of an insect or the produce of a plant. Hence we find the distinction observed in St. Jerome (*S. Hieron., de Instit. puella*), "*Spernat Bombycem telas, Serum vellere.*" Next in order is the lexicographer Hesychius (*Hesychius*, s. v. Σήρες), who makes Σήρ to have been the name of the insect whence the silk was obtained, and the silk itself to have been named Ὀλοσήρικον, or, to use his own words, Σήρες, ζῶα νήοντα μετὰ τὸν ἔθρονον ὅθεν ἐρχεται καὶ τὸ Ὀλοσήρικον. And yet, as if to show how very fluctuating was all the knowledge which the ancients possessed on this subject, we find Achilles Tatius, about this same period, speaking of silk as a very fine down, deposited by birds on the leaves of trees, and carefully collected by the Indians. It remains but to add some passages from Isidorus. "*Bombycina est a Bombyce, vermiculo, qui longissima ex se fila generat, quorum textura bombycinum dicitur, conficiturque in insula Co.*—*Serica a Serico dicta, vel quod etiam Seres primi miserunt; holoserica tota serica; tramoserica stamine lineo, trama ex serico; holoporphyra tota ex purpura; byassin candida, confecta ex quodam genere lini grossioris.*" (*Isidorus, de coloribus*, lib. 19, c. 17, p. 1294.) And again, "*Byssum genus est quoddam lini nimium candidi et mollissimi, quod Græci papatem vocant.*—*Sericum dictum, quia id Seres primi miserunt: vermiculi enim ibi nasci perhibentur, a quibus hæc circum arbores fila ducuntur; vermes autem ipsi Græcè βόμβυκες nominantur.*" (*Id., de nominibus Vestium*, c. 22, p. 1299.)—Before concluding we will take the liberty of adding a few remarks in relation to the high price of silk in the ancient world, for which we are indebted to the pen of Dr. Vincent. (*Class. Journ.*, vol. 7, p. 35.) "As late as the time of Aurelian, Vopiscus informs us that silk sold for its weight in gold. The Coan fabric seems never to have reached this extravagant price, but only the pure Oriental silk. The expense of conveyance undoubtedly, and the difficulty of obtaining it, were the immediate causes of this enormous value being assigned to the article. The price seems never to have been depressed until Constantinople became the centre of commerce for the Eastern and Western world; and there the depression advanced till the fifth century, when Ammianus mentions that silk, which had formerly been worn only by the nobility, was then the common dress of the lower orders." The learned writer then puts the question, why Justinian, as Procopius (*Procopius, Goth.*, 4, 17) informs us, should send to China for the true breed, if both the insect and the manufacture were in existence at Coe? The one was a journey of hazard and difficulty, of nearly three thousand miles; the other a pleasant voyage short of four hundred.—He proposes an answer to the question, namely, that the manufacture of Oriental silk had superseded the manufacture at Coe, which could only have happened from the superiority of the material or the manner of its fabrication. "Silk," as he informs us, "had been woven in the Roman empire long before it was fully understood how the material was obtained; for Μέτραφα νήμα Σηρικόν, or silk thread, was an article subject to a duty in the custom-house of Alexandria: and whether the web of Tyre was wrought from this, or whether women reeved out the web, introduced through Media and Assyria, as Pliny asserts, it makes no difference in point of time, but it proves that the commodity was so superior in quality that the manufacture of Coe was driven out of the market."—The learned writer, however, is wrong in censuring D'Anville for supposing that the monks sent by Justinian went only as far as Sirhind in India, and not to China itself. There is every reason to believe that the inhabitants of that part of India which lies between the *Pemjâb* and the river *Jumna* had learned the process of silk manufacture from their

Eastern neighbours. Hence their territory and capital took the name of *Serinde* (Ser-Ind), and even at the present day the name continues to be *Serkend*, or "the land where the Hindus nurture the silkworm." It was to this quarter, very probably, that the monks of Justinian came. Gibbon, however, boldly asserts that these monks were missionaries, who had previously penetrated to China, and resided at Nan-kin. (*Decline and Fall*, ch. 40.)

SERIPHUS, an island of the *Ægean*, south of *Cythrus*, and now *Serpho*. It was celebrated in mythology as the scene of some of the most remarkable adventures of *Perseus*, who changed *Polydectes*, king of the island, and his subjects, into stones, to avenge the wrongs offered to his mother *Danaë*. (*Pind.*, *Pyth.*, 12, 19.) *Strabo* seems to account for this fable from the rocky nature of the island. (*Strab.*, 487.) *Pliny* makes its circuit twelve miles. In *Juvenal's* time state-prisoners were sent there (10, 169). The frogs of this island were said to be mute, but to utter their usual note when carried elsewhere; and hence the proverbial saying, *Βάρπαρος ἐκ Σερίφου* (*Rana Seriphia*), applied to dull and silent persons, who on a sudden became loquacious. (Compare, however, the remarks of *Erasmus*, *Chil.* 1, cent. 5, ad. 31, ed. *Steph.*, p. 166.)

SERRANUS, I. a surname given to *C. Atilius*, from his having been engaged in sowing his field (*serere*, "to sow") when intelligence was brought him of his having been appointed to the dictatorship. (*Plin.*, 18, 4.—*Perizon.*, *Animadv.* *Hist.*, c. 1.—*Leo.*, 3, 26.—*Verg.*, *Æn.*, 6, 844.)—II. A poet in the time of *Nero*, to whom *Sarpe* has ascribed the eclogues that pass under the name of *Calpurnius*. (*Quæst. Philolog.*, c. 2, p. 11, seqq.—*Bähr*, *Gesch. Röm. Lit.*, vol. 1, p. 303.)

SERTORIUS, QUINTUS, a distinguished Roman general, born at *Nursia*. He made his first campaign under *Cæpio*, when the *Cimbri* and *Teutones* broke into Gaul; and he distinguished himself subsequently under *Marius*, when the same enemy made their memorable irruption into Italy. After the termination of this war he was sent as a legionary tribune, under *Didius*, into Spain, and soon gained for himself a high reputation in this country. On his return to Rome he was appointed quaestor for *Cisalpine Gaul*; and the *Marian* war soon after breaking out, and *Sertorius* being employed to levy troops and provide arms, he made himself extremely useful in that capacity, and performed important services for the state. On the ruin of the *Marian* party, to which he himself belonged, *Sertorius* hastened back to Spain, and found no difficulty in resuming possession of that province. As soon as *Sylla* was informed of this act of rebellion, he sent into Spain a considerable army under *Caius Annus*, with orders to crush the insurgent forces. *Sertorius*, compelled to yield to the powerful force thus brought against him, was induced to seek for safety in Africa. Pursued by bad fortune even to the wilds of *Mauritania*, he was reduced to the necessity of again putting to sea; but, being unable to effect a re-landing in Spain, he strengthened his little fleet by the addition of some of the *Cilician* pirates, and made a descent upon the island of *Ebusus* (now *Ivica*), in which *Annus* had placed a small garrison. The lieutenant of *Sylla* made haste to succour this insular colony, and, sailing to *Ebusus* with a strong squadron, was resolved to bring *Sertorius* to battle. A storm prevented the engagement; most of the ships were driven ashore, or swallowed up in the waves; and *Sertorius*, who had with difficulty escaped from the fury of the tempest, bore away with a few small vessels for the Straits of *Gibraltar*, and, landing near the mouth of the *Betis*, refreshed his men on the shores of the *Atlantic Ocean*. It was on this occasion that, fatigued by the vicissitudes of a hard fortune, and filled with

gloomy views of the future, he is said to have listened to the romantic description of certain sailors, who charmed his ears with the delights and peaceful security of a group of happy islands lying scattered at a convenient distance in the Western sea. He would have retired to that fabled paradise, had not the *Cilician* rovers, who preferred a more enterprising life, refused to accompany him, and sailed back to the coast of Africa. *Sertorius* in like manner returned into the Mediterranean, and, having landed in Africa, soon came in contact with *Pacianus*, a lieutenant of *Sylla's*, and, though greatly inferior in number, gained a decisive victory, and took nearly all the opposite army prisoners. The reputation acquired by this victory retrieved the affairs of *Sertorius*. The *Lusitanians*, irritated at the conduct of *Annus*, resolved to throw off the yoke; and, inviting the conqueror of *Pacianus* to assume the command of their army, they took the field against the deputy of *Sylla*, and set the whole power of Rome at defiance. The most brilliant success attended the arms of *Sertorius*. With 2600 men, whom he called Romans (though of these 700 were Africans), and an addition of 4000 light-armed *Lusitanians* and 700 horse, he carried on the war against four Roman generals, who had 120,000 foot, 6000 horse, 3000 archers and slingers, and cities without number under their command. Of the officers opposed to him, he beat *Cotta* at sea, near the modern *Trafalgar*; he defeated *Phidius*, who had the chief command in *Bætica*, and killed 4000 Romans on the banks of the *Betis*. By his quaestor he vanquished *Domitius*, and *Locius Manlius*, proconsul of *Hither Spain*; he likewise slew *Thoranius*, one of the officers sent against him by *Metellus*, and cut off the whole army under his command. Even *Metellus* himself, one of the most experienced and successful generals of the age, was not a match for *Sertorius* in the species of warfare which the *Lusitanians* waged under his direction. Constantly changing his post, and flying from one fastness to another with a small body of active men, he cut off the Romans in every quarter, without allowing them time to make any arrangement for their defence, or even to see the enemy under whose hands their numbers were so rapidly reduced. In short, he combined in his character all the activity and hardness of savage life with the policy and military skill of a Roman general. Nor did *Sertorius* think it enough to fight the battles of the Spaniards; he also undertook to establish among them the habits and advantages of civilization. He taught their soldiers all the more useful parts of Roman tactics; he founded schools for the education of youth; distinguished the meritorious by marks of his approbation; and even introduced among the higher orders the dress of Roman citizens. *Sertorius* possessed unbounded influence over the minds of the natives, as well from the high degree of military talent which he displayed, as from the conviction on the part of the *Lusitanians* that he held secret communion with Heaven. This belief arose principally from the circumstance of his being attended wherever he went by a tame white fawn, which he led the rude natives to believe was a gift from *Diana*, and disclosed to him many important secrets.—The dangerous state of their affairs in Spain induced the Romans to send *Pompey* to the aid of *Metellus*. But this new commander proved in no degree more successful than the old; nay, on one occasion, *Pompey* had the mortification of seeing the city of *Lauron* taken and burned by *Sertorius*, without being able to render it any assistance, though near enough (to use the strong language of an ancient writer) to have warmed his hands at the flame. At last, however, private treachery effected what the arms of open foes had been unable to accomplish. *Perpenna*, one of his officers, who was jealous of his fame and tired of a superior, conspired against him. At a ban-

quest the conspirators began to open their intentions by speaking with freedom and licentiousness in the presence of Sertorius, whose age and character had hitherto claimed deference from others. Perpenna overturned a glass of wine as a signal to the rest, and immediately Antonius, one of his officers, stabbed Sertorius, and the example was followed by all the other conspirators (B.C. 73).—No sooner had Perpenna accomplished his nefarious object, than he announced himself as the successor of Sertorius. But he soon proved as unfit for the duties as he was unworthy of the honour attached to that high office. Pompey, upon hearing that his formidable antagonist was no more, attacked the traitor, whom he easily defeated. He was taken prisoner, and afterward executed as an enemy to his country; and in this way ended a war which at one time threatened the overthrow of the whole fabric of the Roman power in Spain.—Of Sertorius it has justly been remarked, that his great qualities and military talents would have undoubtedly raised him to the first rank among the chiefs of his country, had he been, not the leader of a party, but the commander of a state. With nothing to support him but the resources of his own mind, he created a powerful kingdom among strangers, and defended it for more than ten years against the arms of Rome, although wielded by the ablest generals of his time; and he displayed public and private virtues which would have rendered a people happy under his rule at a less turbulent period. (*Plut., Vit. Sertor.—Vell. Paterc., 2, 30, seqq.—Flor., 3, 21, seqq.*)

SERVILIA LEX, I. *de Pecuniis repetundis*, by C. Servilius, the prætor, A.U.C. 653. It ordained severer penalties than formerly against extortion; and that the defendant should have a second hearing. (*Cic. in Verr., 1, 9.*)—II. Another, *de Judicibus*, by Q. Servilius Cæpio, the consul, A.U.C. 647. It divided the right of judging between the senators and the equites, a privilege which, though originally belonging to the senators, had been taken from them by the Sempronian Law, and given to the equites, who had exercised it, in consequence, for seventeen years. (*Cic., Brut., 43, seq.—Tac., Ann., 12, 60.*)—III. Another, *de Civitate*, by C. Servilius Glaucia, ordained that if a Latin accused a Roman senator so that he was condemned, the accuser should be honoured with the name and the privileges of a Roman citizen.—IV. Another, *Agraria*, by P. Servilius Rullus, the tribune, A.U.C. 690. It ordained that ten commissioners should be created, with absolute power, for five years, over all the revenues of the republic; to buy and sell what lands they saw fit, at what price and from whom they chose; to distribute them at pleasure to the citizens; to settle new colonies wherever they judged proper, and particularly in Campania, &c. But this law was prevented from being passed by the eloquence of Cicero, who was then consul. (*Cic. in Pis., 2.*)

SERVILIUS, I. **PUBLIUS AHALA**, a master of horse to the dictator Cincinnatus. When Mælius refused to appear before the dictator to answer the accusations which were brought against him on suspicion of his aspiring to tyranny, Ahala slew him in the midst of the people whose protection he claimed. Ahala was accused of this murder, and banished; but this sentence was afterward repealed. He was raised to the dictatorship.—II. **PUBLIUS**, a proconsul of Asia during the age of Mithradates. He conquered Isauria, for which service he was surnamed *Isauricus*, and rewarded with a triumph. (*Vid. Isauria.*)—III. **NONIANUS**, a Latin historian, who wrote a history of Rome in the reign of Nero. He is praised by Quintilian (10, 1, 102).

SERVILIUS, I. **TULLIUS**, the sixth king of Rome. The accounts respecting his origin are as obscure as those of any of his predecessors. The most ancient and poetical legend represents him as the son of Ocrisia,

a captive and slave of Tanaquil, the wife of Tarquinius Priscus, by the Lar, or household god. Later legends made him a son of one of the king's clients, and for some time a slave; or the son of a man of rank and power in one of the conquered Latin cities, who being slain in the war, his widow was carried to Rome in her pregnancy, and she and her infant son were protected by Tanaquil. Another account of the origin of Servius has been preserved by a speech of the Emperor Claudius, as given in the Etruscan Annals. This speech was engraved on a brass plate, and was dug up at Lyons about two centuries ago. It is now preserved in that city. It was printed by Brotier at the end of his edition of Tacitus, and has been also published in the Collections of Inscriptions. Claudius begins to recount how often the form of government had been changed, and even the royal dignity bestowed on foreigners. Then he says of Servius Tullius, "According to our Annals, he was the son of the captive Ocrisia; but if we follow the Tuscan, he was the faithful follower of Cæles Vibenna, and shared all his fortunes. At last, quitting Etruria with the remains of the army which had served under Cæles, he went to Rome, and occupied the Cælian Hill, giving it that name after his former commander. He exchanged his Tuscan name, Mastarna, for a Roman one, obtained the kingly power, and employed it to the great advantage of the state." (*Nieb., Rom. Hist., vol. 1, p. 381.*)—All accounts, however, represent him as enjoying the favour of Tarquin and his queen, as having married the daughter of that monarch, and obtaining the throne in a great measure by the judicious management of the latter. It would seem as if Servius had in the very beginning of his reign encountered the opposition of the patricians. He is said not to have allowed any interregnum, or to have permitted the senate to take the lead in his election to the sovereignty; but, as he had already acted as king before the death of Tarquinius was publicly known, to have made a direct application, without any other preliminary process, to the *comitia curiata*, and to have been by them invested with the powers of former kings. The only historical conclusion which can be deduced from these incidental notices is, that a contest had begun between the kings and the patrician body, in which the kings deemed it their soundest policy to diminish the power of the patricians, in order to maintain their own. But as no direct diminution of their power could have been attempted without exciting an immediate insurrection, it was deemed expedient by these kings to raise a counterbalancing power in the state, which, having received its existence from them, might be expected to lend them aid in repressing the exorbitant power of the patrician body, combined with their hereditary privileges. That Servius was a friend of the people, and that the patricians hated and plotted against him, appears from a passage of Festus: "*Patricius Vicus Romæ dictus eo quod ibi patricii habitaverant, jubente Servio Tullio, ut, si quid molirentur adversus ipsum, ex locis superioribus opprimerentur.*" Indeed, it might be indirectly gathered from the statement of Livy (1, 44), that he chose his habitation on the Esquiline, for that was the plebeian quarter. (*Dion. Hal., 4, 13.*) The government of Servius Tullius was, from beginning to end, a sort of revolution. The organic changes ascribed to him can hardly be conceived of, as projected under any but republican institutions. At all events, they seem to have paved the way for the republic. Servius prepared his constitutional innovations by a division of land and of building-ground for habitations to the poor. His constitution, however, had no resemblance to a pure democracy. Property was adopted as the standard for apportioning the public contributions and franchises; and on this principle his famous division into classes was based. When it is considered that out of a hundred and

eighty-nine (or ninety-three) centuries, the first class alone contained eighty, to which must be added the eighteen centuries of *equites*, and that the last class had either only one voice or none at all, it is easy to see that Servius, if in effect he made this arrangement, substituted an aristocracy of wealth for the former patrician preponderance in the *curias*. As in these times the property of land was for the most part in the hands of the patricians, they of course retained preponderance in the new aristocracy likewise. But this was accidental, and soon ceased to be the case.—The warlike undertakings of Servius were principally directed against the Etrurians. He is said to have carried on war, for twenty years, with the citizens of Veii, Cære, Tarquinii, and, lastly, with the collective force of the Etruscans, till all allowed the pre-eminence of Rome and her king.—Servius enlarged the city, so as to bring within its compass the Viminal and Esquiline Hills; he finished the work begun by Tarquinius, by building the walls of the city of hewn stone; and, for the purpose of consolidating more firmly the union of the races of which the nation was composed, he erected the temple of Diana on the Aventine Hill, which was to be the chief abode of the Latin population recently brought to Rome.—The horrible tale of the last Tarquin's accession to the throne might be regarded as incredible, were it not that Italian history in the middle ages affords us many similar examples. The narrative in question is as follows: The two daughters of Servius were married to the two sons of the elder Tarquin. The one murdered her husband Aruns, and her sister, with the aid of the other son of Tarquin, and paved the way to the throne for herself and her new husband by the murder of her father.—The personal existence of Servius Tullius is regarded by many recent writers as involved in considerable doubt. The constitution of the classes and centuries is as real as Magna Charta, or the Bill of Rights, in English history; yet its pretended author seems scarcely a more historical personage than King Arthur. We do not even know with certainty his name or his race; still less can we trust the pretended chronology of the common story. The last three reigns, according to Livy, occupied a space of 107 years; yet the king, who, at the end of this period, is expelled in mature, but not in declining age, is the son of the king who ascends the throne a grown man, in the vigour of life, at the beginning of it: Servius marries the daughter of Tarquinius a short time before he is made king, yet immediately after his accession he is the father of two grown-up daughters, whom he marries to the brothers of his own wife. The sons of Ancus Marcius wait patiently eight-and-thirty years, and then murder Tarquinius to obtain a throne which they had seen him so long quietly occupy. Still, then, we are, in a manner, upon enchanted ground; the unreal and the real are strangely mixed up together; but, although some real elements exist, yet the general picture before us is a mere fantasy: single trees and buildings may be copied from nature, but their grouping is ideal, and they are placed in the midst of fairy palaces and fairy beings, whose originals this earth never witnessed. (*Liv.*, 1, 41, *seqq.*—*Hetherington's History of Rome*, p. 23, *seqq.*—*Arnold's Roman History*, vol. 1, p. 48, *seqq.*)—II. Sulpitius Rufus, an eminent Roman jurist and statesman, descended from an illustrious family. He was contemporary with Cicero, and probably born about a century B.C. He cultivated polite literature from a very early period, especially philosophy and poetry. At an early age he appeared as a pleader at the bar. In consequence of a reproof received from Quintus Mucius, an eminent lawyer, grounded upon his ignorance of the law, he applied himself with great industry to legal studies, and became one of the most eminent lawyers of Rome. Cicero highly commends his legal knowledge. Sulpitius passed through the various civil

offices of the Roman state, and was consul B.C. 51. Caesar made him governor of Achaia after the battle of Pharsalia; but, when that chief was taken off, Sulpitius returned to Rome, and acted with the republican party. He died in the camp of Antony, under the walls of Modena, having been sent on an embassy to that leader from the Roman senate. Cicero, in his 9th Philippic, pleads for a brazen statue to be erected to Sulpitius, which honour was granted by the senate.—III. Honoratus Maurus, a learned grammarian in the age of Arcadius and Honorius. He has left Latin commentaries upon Virgil, still extant. These are, however, considered rather as a collection of ancient remarks and criticisms on the poet than as composed by himself. They contain many valuable notices of the geography and arts of antiquity. These commentaries are found annexed to some of the older editions of Virgil. They are most correctly given in the edition of Virgil by Burmann, *Amst.*, 1748, 4 vols. 4to.

Sesostris, a celebrated king of Egypt, whose era will be considered in the course of the present article. According to the common account, his father ordered all the children in his dominions who were born on the same day with him to be publicly educated, and to pass their youth in the company of his son. This plan succeeded fully, and Sesostris, on attaining to manhood, saw himself surrounded by a number of faithful ministers and active warriors, whose education and intimacy with their prince rendered them inseparably devoted to his interest. When Sesostris, after achieving several brilliant conquests as his father's lieutenant, had succeeded his parent on the throne, he became ambitious of military fame, and, after he had divided his kingdom into 36 different districts or nomes, he marched at the head of a numerous army to make the conquest of the world. Libya, Æthiopia, Arabia, with all the islands of the Red Sea, were conquered, and the victorious monarch marched through Asia, and penetrated farther into the East than the conqueror of Darius. He also invaded Europe, and subdued the Thracians; and, that the fame of his conquests might long survive him, he placed columns and images in the several provinces he had subdued; and, many ages after, inscriptions were still to be seen commemorating his conquests. At his return home the monarch employed his time in encouraging the fine arts, and in improving the revenues of his kingdom. He erected one hundred temples to the gods for the victories he had obtained, and mounds of earth were heaped up in several parts of Egypt, where cities were built for the reception of the inhabitants during the inundations of the Nile. After a long and glorious reign, Sesostris, now grown old and infirm, is said to have destroyed himself. (*Diod. Sic.*, 1, 53, *seqq.*)—Such is the common legend relative to this celebrated king and conqueror: the hero of Champollion's system, as of all early Egyptian history, and, if we are to believe Diodorus, of their poetry, the Sesostris of Herodotus, the Sesoosis of Diodorus, the Sethos of Manetho, the Rhameses the Great of the monuments, he appears at the head of the nineteenth dynasty as the greatest of the Theban kings. Everywhere this mighty monarch stands forth in prominent grandeur. Before and in the temples of the Southern Ipeambul, no less than in Thebes and in the ruins of Memphis, his colossal statues appear stamped, Champollion asserts, with the reality of portraiture. In almost every temple, up to the confines of Æthiopia, his deeds and triumphs are wrought in relief and painting. The greater part of the celebrated obelisks either are inscribed to him or bear his record. That of the Lateran has been long known (from the curious interpretation of it in Ammianus Marcellinus) to belong to a King Rameses; one side of Cleopatra's Needle is occupied with his deeds; and, besides his legends in the ruins of Luxor and Carnac, the immense

edifice on the western side of the river, which corresponds with singular, if not perfect, exactness to the magnificent palace of Osymandyas described by Diodorus, is so covered with his legends as to be named by Champollion, without the least hesitation, the Rhamesseion.—The date of the accession of Sesostria, as the head of the nineteenth dynasty, is of great importance, but, like all such points, involved in much difficulty. M. Champollion Figeac, by an ingenious argument deduced from the celebrated Sothic period of 1460 years, reckoned according to data furnished by Censorinus, and a well-known fragment of Theon of Alexandria, makes out the date of 1473 B.C. Dr. Young assumes 1424. Mr. Mure maintains that it cannot be placed higher than 1410, nor lower than 1400. (*Remarks on the Chronology of the Egyptian Dynasties*, Lond., 1839.) M. Champollion Figeac's argument is unsatisfactory, and chiefly from the uncertainty of fixing the reign of Menophres, which is the basis of the whole system, and which is altogether a gratuitous assumption. It appears, however, that the question may be brought to a short, if not precise, conclusion. The first date which approximates to certainty is the capture of Jerusalem by Sennacherib; the first of the twenty-second dynasty, in the year 721, or, at the earliest, 775 B.C. What, then, was the intervening time between this event and the accession of the nineteenth dynasty? The reigns of the three series, as given by Mr. Mure from the various authorities, stand thus: and first from Eusebius in the Latin text of Jerome:

Nineteenth Dynasty	194
Twentieth " "	178
Twenty-first " "	130
	<hr/> 502
Add date of capture of Jerusalem	971
	<hr/> 1473

Next from Eusebius, according to the Greek text (Synceollus—Scaliger):

Nineteenth Dynasty	202 (194)
Twentieth " "	178
Twenty-first " "	130
	<hr/> 510
Add as before	971
	<hr/> 1481

Next from Eusebius, according to the Armenian text:

Nineteenth Dynasty	194
Twentieth " "	178
Twenty-first " "	130
	<hr/> 496
Add	971
	<hr/> 1467

Next from Africanus (Synceollus):

Nineteenth Dynasty	210 (204)
Twentieth " "	135
Twenty-first " "	130
	<hr/> 475
Add	971
	<hr/> 1446

And, lastly, from the Old Chronicle:

Nineteenth Dynasty	194
Twentieth " "	239
Twenty-first " "	131
	<hr/> 564
Add	971
	<hr/> 1535

The question resolves itself into the relative degrees of weight attached to Africanus, Eusebius, or the Old Chronicle, as to the reign of the Twentieth Dynasty. It should be observed, that there may be five years of error in the date of the capture of Jerusalem, and it is uncertain at what period in the reign of Sennacherib

event took place. M. Champollion Figeac's date, therefore, for different reasons from his own, is as probable as any other.—Ancient history is full of the triumphs of this Egyptian Alexander: was it the echo of native legends, either poetical, or, if historical, embellished by national vanity, or containing substantial truth! The memorable passage in Tacitus is at once the most brief and the fullest statement of the glories of his reign. On the visit of Germanicus to Thebes, the elder of the priests, interpreting the inscriptions in his native language, related to the wondering Roman the forces, the conquests in Africa, Asia, and Europe, and the tribute levied by the Great Rhameses. (*Tacitus*, Ann., 2, 60.)—Let us trace this line of conquest, which appeared so vast, and perhaps romantic, as to have induced those writers who, towards the end of the last century, were for resolving all history, mythology, and religion into astronomy, upon grounds rather more plausible than usual, to consider the great king of Egypt no more than a mythological personification of "the giant that rejoiceth to run his course from one end of Heaven to the other." The first conquest generally attributed to Sesostria is Ethiopia. Some writers, indeed, make him commence with a maritime expedition against Cyprus and Phœnicia; but the most probable account states that, either during his father's life or after his own accession, he led the triumphant banners of Egypt along the whole course of the Nile to the sacred Meroë. He conquered, says Diodorus, the southern Ethiopians, and forced them to pay tribute, ebony, gold, and elephants' teeth. Nowhere do the monuments so strikingly illustrate the history. In the Nubian temples, representations of the victories of this great king line the walls. One at Kalabche has been described with great spirit by Heeren, from Gau's engravings. It represents a naked queen with her children imploring the mercy of the conqueror. Now, though female sovereigns were rarely known in Egypt, in Ethiopia they were common. Even at a late period, the Candace of the Acts will occur to every reader. Besides the queen, there are the spoils at the feet of the conqueror, what seems to be ivory, with golden ingots, and huge logs of ebony. We proceed on our course, first remarking a fact which, if we remember rightly, has escaped the notice of Heeren, that the career of Sesostria is led precisely along the line on which he has traced, with so much ingenuity and research, the road of ancient commerce. It might almost seem that the conqueror followed the track of the caravan or fleet, to plunder or make himself master of the successive centres or emporia of commerce, and of the different countries from which the richest articles of traffic were sent forth. The first step, as stated, was the subjugation of Ethiopia, the next of Africa to the west: of this, it is true, we have but an indifferent voucher, that of a Latin poet, and one, in general, more to be suspected of tumid hyperbole than his brethren, namely, Lucan. (*Venit ad occasum, mundique extrema Sesostria*, 10, 276.) Still, some extensive subjugation of the Libyan tribes may be assumed without much hesitation. The wild animals of the desert are perpetually led in the triumphs of the Egyptians—the antelopes, the apes, the giraffes, and the ostriches.—Arabia, to the older world, was the land of wonder and of wealth. From the Hebrew prophets, who delighted to dwell on "the gifts to be brought from Arabia and Saba," to the latest Greek and Latin poets, the geographer Dionysius and the luxuriant Nonnus, the riches and marvels of the land and people are perpetually displayed. Araby the Blessed, either producing or possessing the carrying trade of those costly spices and incenses which were so prodigally used in Egypt in embalming the dead and worshipping the gods, would naturally be an object of ambition to an Egyptian conqueror. Accordingly, even before the triumphant career of Rham-

see the Great, curious vestiges of Egyptian conquest in the Arabian peninsula have been brought to light, and Arabia (the Red Earth) is described as under the feet of Rameses Meiamoun, in one of those curious representations of his conquests said to line the walls at Medinet-Abou. It was on a height overlooking the narrow strait which divides Africa from Arabia that Sesostria, according to Strabo, erected one of his columns. The wars between the later Abyssinian kings and the sovereigns of Yemen, in the centuries preceding Mohammed, may illustrate these conquests. The hatred or terror of the sea attributed to the later Egyptians was either unknown to or disdained, as the monuments clearly prove, by the great Theban kings; more than one regular naval engagement, as well as descents from invading fleets, being represented in the sculptures. On the Red Sea, Sesostria, according to history, fitted out a navy of four hundred sail; but whither did he or his admirals sail? Did they commit themselves to the trade-winds, and boldly stretch across towards the land of gold and spice? Are some of the hill-forts represented in the sculptures those of India? Did his triumphant arms pass the Ganges? Do the Indian hunches on the cattle, noticed by Mr. Hamilton, confirm the legend so constantly repeated of his conquests in that land of ancient fable? Or, according to the modest account of Herodotus, did they coast cautiously along, and put back when they encountered some formidable shoals? Did they follow the course of the Persian Gulf, assail the rising monarchies of the Assyrians and Medes, or press on to that great kingdom of Bactria, which dimly arises amid the gloom of the earliest ages, the native place of Zoroaster, and the cradle of the Magian religion? Champollion boldly names Assyrians, Medes, and Bactrians as exhibited on the monuments; but the strange and barbarous appellations which he has read, as far as we remember, bear no resemblance to those of any of the Oriental tribes; earlier travellers, however, have observed that the features, costume, and arms of the nations with which the Egyptians join battle are clearly Asiatic; the long, flowing robes, the line of face, the beards, the shields, in many respects are remarkably similar to those on the Babylonian cylinders and the sculptures of Persepolis. "The dominions of Sesostria," our legend proceeds, "spreads over Armenia and Asia Minor. His images were still to be seen in the days of Herodotus, one on the road between Ephesus and Phocæa, and another between Smyrna and Sardis. They were five palms high, armed in the Egyptian and Ethiopian manner, and held a javelin in one hand and a bow in the other; across the breast ran a line, with an inscription: 'This region I conquered by my strength (*lit.* my shoulders).' They were mistaken for statues of Memnon." This universal conqueror spread his dominion into Europe; but Thrace was the limit of his victories. On the eastern shore of the Euxine he left, according to tradition, a part of his army, the ancestors of the circumcised people, the Colchians. But his most formidable enemies were the redoubted Scythians. Pliny and other later writers assert that he was vanquished by them, and fled. But Egyptian pride either disguised or had reason to deny the defeat of her hero. There is a striking story in Herodotus, that when the victorious Darius commanded that his statue should take the place of that of Sesostria, the priests boldly interfered, and asserted the superiority of their monarch, who had achieved what Darius had in vain attempted, the subjugation of the Scythians.—Are we then to dismiss all this long history of triumphs and conquests into the regions of mythic or allegoric legend? Are we to consider it the pure creation or the monstrous exaggeration of national vanity? to resolve it into the audacious mendacity of the priest or the licensed fiction of the bard? *A priori*, there is nothing improbable in

the existence of one or of a line of Egyptian conquerors: Egypt was as likely to send forth "its mighty hunter, whose game was man," as Assyria, Persia, Macedonia, Arabia, or Tartary. On the other hand, we have the uniform testimony of ancient history, ancient tradition, and existing monuments. Egyptian history is reported to us by every ancient author, Herodotus, Diodorus, Manetho, Strabo, and is assuredly deserving of as much credit as the scattered fragments of the Oriental annals, which bear the name of Berosus or Sanchoniathôn, or the traditions preserved by more modern antiquaries. The only history which approximates to this period is that of the Bible, and this we shall presently consider. How far the general tradition may be traced to Egypt as its sole fountain-head, may be doubted; there is some semblance of a connexion with Scythian tradition preserved in Justin and Jornandes; in the former we find the name of a Scythian king contemporary with Sesostria. But the monuments which cover the walls of the Nubian cities, more particularly of Thebes, afford the strongest confirmation to the extensive conquests of one or more of the mighty Pharaohs. These monuments, entirely independent, it must be remembered, of the interpretations of their legends by Champollion, represent battles and sieges, combats by land and sea, in countries apparently not African, against nations which have every character of remote, probably Asiatic races. There are rivers which cannot be the Nile; fortresses which, in their local character, seem totally unlike those of the districts bordering on Egypt.—But how is it that the sacred writings preserve a profound silence on all the invasions, conquests, and triumphs of this Egyptian Alexander, or, if Champollion is to be credited, this race of Alexanders! We must take up the question of the connexion between the sacred and Egyptian history at an earlier period. On this interesting inquiry two writers, M. Coquerel, a Protestant, and M. Greppo, a Roman Catholic divine, have entered with much candour and ingenuity. To what period in the Egyptian history is the Mosaic Exodus to be assigned? This question seems to have been debated, if we may so speak, on the scene of action among the Jewish and Grecian writers in Alexandria. The fact was universally admitted, though the chronology was warmly contested; as to the fact, it may be fearlessly asserted that the Mosaic record, independent of its religious sanction, has generally as high a claim to the character of authenticity and credibility as any ancient document; he who should reject it would not merely expose his own sincerity as a believer in revealed religion, but his judgment as a philosophical historian. Nor can we read the histories of Diodorus, or Tacitus, or the treatise of Josephus against Apion, without clearly seeing that the Egyptian historians, however they might disfigure, no doubt did notice the servitude and the escape of the Israelites from Egypt. But both this and the chronological question were carried on with the blinding feelings of national pride and animosity on each side, and it is far from likely that we should disentangle the web which has thus been unravelled, nor can we expect to receive any direct information on this subject from the monuments. One pious writer has taken alarm at this silence; but surely without much reason, for the monuments almost exclusively belong to Upper Egypt; nor does a proud nation inscribe on its enduring sculptures its losses and calamities; it is the victorious, not the discomfited, monarch whose deeds are hewn in stone.—Both M. Coquerel and M. Greppo adopt the common Usherian date, 1491, for the Exodus. Now, though this date is as *probable* as any other, we cannot think it certain. The great variation of chronologists on this point is well known; nor is any question of biblical criticism more open to fair debate than the authenticity of the text of 1 Kings, 6, 1, the

basis of this calculation. Our authors likewise adopt M. Champollion Figeac's date, 1473, for the accession of Sesostria, and the common term of two hundred and fifteen years for the residence of the Israelites in Egypt. Joseph might thus have been sold under Mœris; Jacob and his family entered Egypt under his successor, Miphre-Thoutmosis, and departed in the third year of Amenophis Rhamses, father of Sesostria. Several curious incidental points make in favour of this system. At a period assigned to the ministry of Joseph, clearly, the native princes were on the throne; the priesthood were in honour and power, particularly those of Phre. The obelisk raised by Mœris Miphra, at Heliopolis, will be remembered: his son likewise bore the title of Miphra. Now Joseph was married to the daughter of Pet-s-phra, the priest of Phre, at On or Heliopolis. At this period, too, the shepherds were recently expelled, and, therefore, an "abomination to the Egyptians," and the land of Goshen was vacant by their expulsion. Diodorus, it may be observed, gives seven generations between Mœris and Sesostria, which, at three for a century, amounts nearly to the date of the residence of the Israelites in Egypt. Towards the close of the period the race of Rhamses ascended the throne; and Rhamses is the name of one of the cities built by the oppressed Israelites. Such are the curious incidental illustrations of this system, the same, we may observe, with that of Usher and Bishop Cumberland; but we must not disassemble the difficulties. The Exodus, according to the dates adopted, took place seventeen years before the death of Amenophis; he, therefore, could not have been the Pharaoh drowned in the Red Sea; a difficulty rendered still more startling by the very interesting description of the sepulchral cave of this Amenophis V. by Champollion, and which seems clearly to intimate that this Pharaoh reposed with his ancestors in the splendid excavation of Biban-el-Malook. Here, however, M. Greppo moves a previous question.—Have we distinct authority in the Hebrew Scriptures for the death of Pharaoh? In the contemporary descriptions it is the host, the chariots, the horsemen of Pharaoh which are swallowed up; and there is no expression that intimates, with any degree of clearness, the death of the monarch; the earliest apparently express authority for the death of the king is a poetic passage in the one hundred and thirty-sixth Psalm (v. 15), which is generally considered to have been written after the captivity, and even this may, perhaps, bear a different construction. There is a second difficulty still more formidable.—The scene of the Mosaic narrative is undoubtedly laid in Lower Egypt, and seems to fix the residence of the kings in some part of the northern region; but it seems equally clear that Thebes was the usual dwelling-place of this Ammonian race of sovereigns. Tradition agrees with the general impression of the narrative; it hovers between Tanis and Memphis, with a manifest predilection for the former. The Tanitic branch of the Nile is said to be that on which Moses was exposed; and the "wonders in the field of Zoan" indicate the same scenes on much higher authority. The LXX. and the Chaldee paraphrast render Zoan by Tanis. We are aware that Champollion will not "bear a rival near the throne" of his magnificent Pharaohs, and other opponents may object the "all Egypt" of the Scriptures. As to the latter objection, it may certainly be questioned whether "all Egypt" included the Thebaid; but if Champollion (were we to suggest the possibility of a collateral dynasty and a second kingdom, at this period, in the northern part of the region) should urge the improbability that conquering sovereigns like Horus, Mandoua, or especially Rhamses Meiamoun, would endure the independence of a part, as it were, of the great Egyptian monarchy, we can only rejoin the frequency with which the great sovereignties of the East

are dismembered by the assertion of independence of some powerful satrap, or the division between the sons on the death of a king. In the twenty-eighth year of Egyptus (the Rhamses Meiamoun of the monuments), says Eusebius, in the *Chronicon* (*Armen. Vers.*), "*Busris in partibus Nili fluvii tyrannidem exercebat, transcurrentesque perigrinos spoliabat.*"—Have any monuments been discovered in Lower Egypt between Mœris and Sesostria? Would not the restriction of the dominions of the latter part of the great Theban dynasty to Upper Egypt, and of their conquests to the south and east, account for Herodotus, who wrote from Memphian authority, making Sesostria the immediate successor of Mœris? Might not the blow inflicted on the Tanite kingdom by the loss of its slave population and its army, enable Sesostria with greater ease to consolidate the whole realm into one mighty monarchy? We are not, however, blind to the objections against this scheme, and rather throw it out for consideration than urge it with the least positiveness. Yet far be it from us to confine the inquisitive reader to a choice between these two hypotheses. He may consult Mr. Faber, who will inform him that the Pharaoh who perished in the Red Sea was one of the shepherd kings. We may turn to Josephus, and find that the shepherds and the Israelites were the same; but by what strange transformation a peaceful minister and his family of seventy persons became a horde of conquering savages and a dynasty of kings, we are at a loss to conceive: Perizonius, however, has ably supported this untenable hypothesis. There is another theory, which we are inclined to suspect was that of Manetho, and, therefore, worthy of consideration; but it is so strangely disfigured in Josephus, that it is difficult to know to whom we are to ascribe the flagrant contradictions. By this account, Amenophis was inserted by Manetho after Sesostria and his son Rhamses, yet he is immediately after represented, either by Manetho or Josephus, as their predecessor; he it was who expelled a second race of leprous shepherds, and his fate was moulded up with a tradition of a great catastrophe connected with religion. This would throw the Exodus a century later (the Jewish date comes as low as 1312), and would be somewhat embarrassing to chronology, but it would settle the question about Sesostria; and the Jews of all ages were more likely to exaggerate than depress the antiquity of their nation.—If, however, according to the general view, we place the Exodus before the accession of Sesostria, in what manner do we account for the silence of the holy books concerning this universal conqueror? M. Coquerel and M. Greppo answer at once, and with apparent probability, that the triumphant armies of the Egyptian marched through Palestine during the forty years which the Israelites passed in the secret and inaccessible desert. Yet a preliminary question may be started—according to the general accounts, Did the Egyptian pass through Palestine? By the line of march which we have drawn out from what seem the best authorities, he certainly did not, excepting possibly on his return, and of his return nothing is said, excepting that he arrived, whether by land or sea is not stated, at Pelusium. We will not urge the words of Justin, that this great conqueror had a strange predilection for remote conquests, and despised those which lay near his own borders; but it is possible that the comparative insignificance of Palestine, or its ready submission, might preserve it from actual invasion, if it did not happen to be on the line of march. It is true that Herodotus sends forth the Egyptian to win his first laurels by the conquest of Cyprus and Phœnicia; but the subjugation of the island clearly denotes a maritime expedition. The conquest of Phœnicia is confirmed by a very singular monument, a bilingual inscription in hieroglyphics and arrow-headed characters, the former of which show the

legend of Rhamees the Great. This has been found at *Nahar-el-kelb*, in Syria, near the ancient Berytus. In fact, while Phœnicia, already perhaps mercantile, might attract an Egyptian conqueror, Palestine, only rich in the fruits of the soil, which Egypt produced in the utmost abundance, was a conquest which might flatter the pride, but would offer no advantage to the sovereign of the Nile. Herodotus, indeed, expressly asserts, that he had seen one of his obscene trophies of victory raised among those nations which submitted without resistance in Syria Palestine. Larcher has already observed on the loose way in which the boundaries of Palestine were known by the Greeks, and has urged the improbability that the magnificent sovereigns of Judæa, David and Solomon, would suffer such a monument of national disgrace to stand; he supposes, therefore, that it might be in the territory of Ascalon. We are somewhat inclined to suspect that many of these pillars might be no more than the symbols of the worship of Beal-Peor. Was Herodotus likely to read a hieroglyphic inscription without the assistance of his friends, the priests of Egypt? Be this as it may, after all, if we can calmly consider the nature of the Jewish history in the Bible, all difficulty, even if we suppose the peaceful submission to the great conqueror, ceases at once. The Book of Judges, in about fourteen chapters, from the third to the sixteenth, contains the history of between three and four centuries. Its object appears to be to relate the successive calamities of the nation, and the deliverances wrought "by men raised by the Lord." But the rapid march of Sesostris through the unresisting territory, as it might exercise no oppression, would demand no deliverance. More particularly, if it took place during one of the periods of servitude, when masters and slaves bowed together beneath the yoke, it would have added nothing to the ignominy or burden of slavery. (*Quarterly Review*, vol. 43, p. 141, *seqq.*)

Sestros, a city of Thrace on the shores of the Hellespont, nearly opposite to Abydos, which lay somewhat to the south. From the situation of Sestos it was always regarded as a most important city, as it commanded in a great measure the narrow channel on which it stood. (*Theopomp., ap. Strab., 591.*) It appears to have been founded at an early period by some *Æolians*. (*Scymnus*, ch. 708.) The story of Hero and Leander, and still more the passage of the vast armament of Xerxes, have rendered Sestos celebrated in ancient history. Sestos is said by Herodotus to have been strongly fortified; and, when besieged by the Greek naval force, after the battle of Mycale, it made an obstinate defence; the inhabitants being reduced to the necessity of eating the thongs which fastened their beds. The barbarians at length abandoned the place, which surrendered to the besiegers. (*Herod., 9, 115.—Thucyd., 1, 89.*) The Athenians, when at the height of their power, justly attached the greatest value to the possession of Sestos, which enabled them to command the active trade of the *Euxine*; hence they were wont to call it the corn-chest of the *Piræus*. (*Aristot., Rhet., 3, 10, 7.*) After the battle of *Ægospotamos*, Sestos recovered its independence with the rest of the *Chersonese*; but the Athenians, many years after, having resolved to recover that fertile province, sent Chares to the Hellespont with a considerable force to attempt its conquest. The *Sestians* were summoned to surrender their town, and, on their refusal, were speedily besieged; after a short resistance the place was taken by assault, when Chares barbarously caused all the male inhabitants capable of bearing arms to be butchered. This severe blow probably caused the ruin of the town, as from this period little mention of it occurs in history. Strabo, however, speaks of Sestos as being a considerable place in his time; he observes, that the current which flowed from the shore near Sestos greatly facilitated the navigation of ves-

sels from thence, the reverse being the case with those sailing from Abydos. (*Strab., 591.—Polyb., 16, 29.*) Mannert says the site of Sestos is now called *Ialonus* (*Geogr., vol. 7, p. 193.—Cramer's Anc. Greece, vol. 1, p. 328.*)

SETHON, a priest of Vulcan, who made himself king of Egypt after the death of Anysis. He was attacked by the Assyrians, and delivered from this powerful enemy by an immense number of rats, which in one night gnawed their bowstrings and thongs, so that on the morrow their arms were found to be useless. From this wonderful circumstance Sethon had a statue which represented him with a rat in his hand, with the inscription of *Whoever fixes his eyes on me, let him be pious.*—"The Babylonian Talmud," observes Pridcaux, "states that the destruction made upon the army of the Assyrians was executed by lightning, and some of the Targums are quoted for saying the same thing; but it seems most likely that it was effected by bringing on them the hot wind which is frequent in those parts, and often, when it lights among a multitude, destroys great numbers of them in a moment, as frequently happens to caravans; and the words of Isaiah, that God would send a blast against Senecherib, denote also the same thing. Herodotus gives us some kind of a disguised account of this deliverance from the Assyrians in a fabulous application of it to the city of Pelusium instead of Jerusalem, and to Sethon the Egyptian instead of Hezekiah." The learned dean then remarks upon the strong confirmation given to the account in Scripture by the statement of Herodotus, and his mentioning the very name of Senecherib. (*Pridcaux's Connexions, vol. 1, p. 23, seqq., ed. 1831.*)

SESSIA, a town of Latium, northeast of Antium and north of Circii. It is now *Sessa*. Its situation on a steep and lofty hill is marked by a verse of Lucilius, preserved by Aulus Gellius (18, 9). The wine of this town was in considerable repute, and Augustus, according to Pliny (14, 6), gave it the preference, as being of all kinds the least calculated to injure the stomach. We may infer from Statius (*Silv., 2, 6*), that it was sometimes poured on the ashes of the wealthy dead. (*Cramer's Anc. Italy, vol. 2, p. 107.*)

SEVERUS, I. LUCIUS SEPTIMIUS, a Roman emperor, born at Leptis in Africa, of an equestrian family. Upon coming to Rome in early life, he received the benefit of a liberal education, and was subsequently raised to the dignity of a senator by the favour of Marcus Aurelius. His youth, it is said, did not escape untainted by the impurities that disgraced the capital; and on one occasion he was tried for a flagrant crime at the tribunal of Didius Julianus, whom he afterward deposed and put to death. Having held the usual offices which qualified a candidate for the consular power, Severus was intrusted with several military appointments of great honour and importance. He served in Africa, in Spain, and in Gaul; and finally obtained one of the most desirable commands in the empire, that, namely, of the legions employed in Pannonia, to defend the banks of the Danube against the incursions of the barbarian tribes who dwelt beyond it. When the news was conveyed to him that Didius Julianus had ascended the imperial throne, rendered vacant by the assassination of Pertinax, he resolved to seize the opportunity which was thereby presented for gratifying the ambition which had long been lurking in his bosom. The memory of Pertinax was dear to the legions of Pannonia, whom he had often led to victory; and Severus lost no time in taking advantage of this reverence and affection for the murdered prince. The ardour of the troops which he addressed on this occasion, led them to salute their chief on the field by the names of emperor and Augustus, and a rapid march soon brought him to Rome. Julianus was put to death by a decree of the senate, Severus ascended the imperial throne, the

Pretorian guards, who had murdered Pertinax and sold the empire to Didius, were disbanded by the new monarch, and a triumphal pageant witnessed the entrance of Severus into the Roman capital. Next followed the overthrows of Niger and Albinus, the two competitors with Severus for the empire (*vid. Niger and Albinus*); and these events were succeeded by the death of many nobles of Gaul and Spain, and also of twenty-nine senators of Rome, who were accused of having been the abettors of Albinus. Meanwhile the Parthians, under Vologeses, availing themselves of the absence of Severus, had overrun Mesopotamia, and besieged Latus, one of his lieutenants, in Nisibis. The emperor resolved to march against them, and it was his intention to establish the power of Rome beyond the Euphrates on a much firmer foundation than it had enjoyed since the days of Trajan. The Parthians retired at his approach: he ascended the Euphrates with his barks, while the army marched along its banks; and having occupied Seleucia and Babylon, and sacked Ctesiphon, he carried off 100,000 inhabitants alive, with the women and treasures of the court. Leading his army, after this, against the Atreii, through the desert of Arabia, his foragers were incessantly cut off by the light cavalry of the Arabs; and after lying before Atra twenty days, and making an ineffectual attempt to storm, he was compelled to raise the siege and retire into Palestine. Hence he made the tour through Egypt, visited Memphis, and explored the Nile. His return to Rome was celebrated by a combat of 400 wild beasts in the amphitheatre, and by the nuptials of his son Bassianus Caracalla with the daughter of Plautianus. (*Vid. Plautianus*.) After a short residence in his capital, a period marked by increased severity on the part of the emperor, and a degree of tyranny rendered the more odious from its being the result of a naturally suspicious temper, Severus took refuge from the dissensions between his two sons, Geta and Caracalla, and from the intrigues of state, in the stirring scenes of a foreign war. He passed over into Britain, accompanied by his sons, with the view of securing the northern boundaries of the Roman province against the incursions of the Caledonians, and of the other barbarous tribes who dwelt between the wastes of Northumberland and the Grampian Mountains. He had hoped, also, that the love of military glory might exalt the ambition of his sons, and chase from their breasts those malignant passions, which at once disturbed his domestic repose, and ever and anon threatened to tear the commonwealth in pieces. His success against the foreign enemy was much more complete than his scheme for restoring fraternal concord. The difficulties which he had to overcome, however, were very great, and must have conquered the resolution of a mind less firm than that of Severus. He was obliged to cut down forests, level mountains, construct bridges over rivers, and form roads through fens and marshes. His triumph, such as it was, was soon disturbed by the restless spirit of the Caledonians, and by the intrigues of his ungrateful son Caracalla. This young prince, after failing in an attempt to excite the soldiers to mutiny, is said to have drawn his own sword against the person of his father. Irritated by such conduct, on the part of his friends as well as of his enemies, Severus allowed himself to fall a prey to the corroding feelings of anger and disappointment. He invited his son to complete his act of meditated parricide; while in respect to the revolted Britons, who had abused his clemency, he expressed, in the words of Homer (*Il.*, 6, 57, *seqq.*), his fixed resolution to exterminate them from the face of the earth. But death soon put an end to his sufferings and to all his plans for revenge. Having returned as far as York (*Eboracum*), he was attacked with a disease which he himself foresaw would, at no distant period, terminate his career; and, in the expectation of this event, he called for both his

sons, whom he once more exhorted to union and mutual affection. He expired at York, A.D. 211, in the sixty-sixth year of his age, having reigned nearly eighteen years.—It is difficult to obtain from the pages of ancient writers a fair or consistent representation of the character of Severus. One of the authors of the Augustan history applies to him an expression which was suggested by the effects which the conduct of the first Roman emperor (Augustus) had upon the fortunes of his country, namely, that it would have been well for the state if he had never been born, or had never died. (*Spartian.*, c. 18.) This remark has in it, perhaps, more point than truth; for, though Severus was no ordinary man, he nevertheless rather followed than directed the general current of events. He considered the Roman world as his property, and had no sooner secured the possession, than he bestowed the utmost care on the cultivation and improvement of so valuable an acquisition. Judicious law, executed with firmness, soon corrected most of the abuses which, since the time of Marcus Aurelius, had infected every department of the state. Yet in his maxims of government he often displayed, not the legislator, but the mere soldier. Harsh, unyielding, and suspicious, although generous to those for whom he had conceived an attachment, it was perhaps fortunate for Rome that the operations of distant warfare engaged his principal thoughts, and employed the greater part of his reign.—His taste for public buildings and magnificent spectacles recommended him very greatly to the Roman people. He also showed himself a patron of literature. The habits of a life spent chiefly in the camp were, no doubt, quite incompatible with any distinguished progress in science or in letters; but his taste, notwithstanding, induced him to spend his hours of leisure in the study of philosophy. He was much devoted, however, to that perversion of natural knowledge which was known by the ancients under the name of magic. Astrology also came in for its share of his attention; and he is said to have been determined in his choice of a second wife by the discovery that a young Syrian lady, whose name was Julia, had been born with a royal nativity.—Severus wrote *Memoirs of his own Life*, in Latin; a work of which Aurelius Victor praises the style not less than the fidelity. But Dio Cassius, who had better means for forming a correct judgment, insinuates that Severus did not, on all occasions, pay the strictest regard to truth, and that, in his attempts to vindicate himself from the charge of cruelty, he laid greater stress on hidden motives and refined views of policy, than on the palpable facts which met the eye of the public. (*Spartian.*, *Vit. Did. Jul.*—*Id.*, *Vit. Pescenn. Nig.*—*Id.*, *Vit. Albin.*—*Id.*, *Vit. Sev.*—*Dio Cass.*, lib. 74, *seq.*—*Herodian.*, 2, 9, 2, &c.)—II. Alexander or Marcus Aurelius Alexander Severus, a native of Syria, and cousin to the Emperor Heliogabalus. *Mæsa*, grandmother of the latter, perceiving his folly and grossly vicious disposition, thought of conciliating the Romans by prevailing upon her dissolute grandson to associate Alexander Severus with himself in the empire. But Heliogabalus becoming afterward jealous of him, and wishing to put him out of the way, spread a false report of Alexander's death, whereupon the prætorians broke out into open mutiny, Heliogabalus was slain, and Alexander Severus succeeded to the empire. The new emperor was of a character diametrically opposite to that of his predecessor. Among the first acts of his sovereignty, he banished all the guilty and abandoned creatures of Heliogabalus, restored the authority of the senate, and chose his counsellors and ministers of state of the best members of that body, and revoked, also, all the persecuting edicts that had been issued by his predecessor against the Christians. This just and merciful procedure is thought to have been adopted by the ad-

vice of his mother Mamma, who maintained an intercourse with some of the most distinguished Christians, among others, the celebrated Origen, and who was, perhaps, herself a convert. But, however desirous of peace, that he might prosecute his schemes of reform, Alexander was soon called to encounter the perils and toils of war. A revolution in the East, which began in the fourth year of his reign, was productive of consequences deeply important to all Asia. Ardesbir Babegan, or Artaxerxes, who pretended to be descended from the imperial race of ancient Persia, raised a rebellion against the Parthian monarchs, the Arsacids. The Parthian dynasty was overturned, and the ancient Persia restored; and with its restoration was renewed its claims to the sovereignty of all Asia, which it had formerly possessed. This claim gave rise to a war against the Romans, and Alexander Severus led his troops into the East, to maintain the imperial sway over the disputed territories. In the army he displayed the high qualities of a warrior, and gained a great victory over the Persians, but was prevented from following up his success in consequence of a pestilence breaking out among his troops. The Persians, however, were willing to renounce hostilities for a time, and the emperor returned to Rome in triumph. Scarcely had Alexander tasted repose from his Persian war, when he received intelligence that the Germans had crossed the Rhine and were invading Gaul. He at once set out to oppose this new enemy, but he encountered another still more formidable. The armies in Gaul had sunk into a great relaxation of the rigid discipline necessary for even their own preservation. Alexander began to restore the ancient military regulations, to enforce discipline, and to reorganize such an army as might be able to keep the barbarians in check. The demoralized soldiery could not endure the change. A conspiracy was formed against him, and the youthful emperor was murdered in his tent, in his 30th year, after a short but glorious reign of thirteen years.—It cannot be denied, that much of what rendered the reign of Alexander Severus truly glorious was owing to the counsels of his mother Mamma. Ulpian, too, the friend of Papinian, the most rigidly upright man of his time, a man more skilled in jurisprudence than any of his contemporaries, was the friend of Alexander, and the only person with whom he was accustomed to converse in strict confidence. This alone may be regarded as the young emperor's highest praise. The character of Alexander presented so many points worthy of praise, that the writer of his life in the Augustan History exhausts all his powers of description in the attempt to do it justice. (*Lamprid., Vit. Alex. Sev.—Dio Cass., lib. 80.—Herodian, 5, 3, 7, seqq.*)—III. Sulpitius, an ecclesiastical historian, who died A.D. 420. The best of his works is his *Historia Sacra*, from the creation of the world to the consulship of Stilicho, the style of which is superior to that of the age in which he lived. The best edition is in 2 vols. 4to, *Patavii*, 1741.—IV. A celebrated architect, employed, with another architect named Celer, in erecting Nero's "Golden House." (*Tacit., Annal., 15, 43.—Vid. Nero.*)

Savo, a ridge of mountains between Norway and Sweden. It assumes various names in different parts of its course; as, the *Langfeld Mountains*, the *Dofrafeld Mountains*, &c. Some suppose the ridge of Savo to have been the Rhipsean Mountains of antiquity. (*Plin., 4, 15.*)

Sextus Aquæ, now Aix, a town of Gallia Narbonensis, and the metropolis of Narbonensis Secunda. It owed its foundation to Sextus Calvius, who, in the first expedition of the Romans into Gaul, reduced the Selluvii or Salyes, in whose territory it was situate. It was founded on account of the warm mineral springs in its neighbourhood. These springs, however, had

already lost their warmth, and much of their efficacy, in the time of Augustus. (*Liv., Epit., 61.—Strabo, 180.*) Marius defeated the Teutones near this place. (*Plut., Vit. Mar.—Florus, 3, 2.*)

SIBYLLÆ, certain females supposed to be inspired by Heaven, who flourished in different parts of the world. According to the received opinion, founded on the authority of Varro, they were ten in number: the first was the *Persian Sibyl*, of whom Nicanor, one of the historians of Alexander the Great, made mention; the second was the *Libyan*, alluded to by Euripides in the prologue of one of his lost plays, the *Lamia*; the third was the *Delphian*, mentioned by Chrysippus in his lost work on Divination; the fourth was the *Cumæan*, in Italy, spoken of by Nævius, and other Latin writers, especially Virgil; the fifth was the *Erythraean*, whom Apollodorus of Erythra claimed as a native of that city, though some made her to have been born in Babylonia. She is said to have predicted to the Greeks, when they were sailing for Troy, that this city was destined to perish, and that Homer would compose falsities in relation to it; the sixth was the *Samian*, of whom Eratosthenes said he found mention in the ancient annals of the Samians; the seventh was of *Cymæ*, in Æolis, and was called *Amalthæa*, *Demophile*, or *Horophile*; the eighth was the *Hellepontine*, born at Marpesus, in the Trojan territory. According to Heracleides Ponticus, she flourished in the time of Cyrus and Solon; the ninth was the *Phrygian*, who gave oracles at Ancyra; the tenth was the *Tiburtine*, at Tibur, in Italy, and was named *Albunea*. (*Varro, ap. Lactant., 1, 6.—August., Civ. D., 18, 23.*) The most celebrated one of the whole number was the *Cumæan*, the poetic fable relative to whom is as follows: Apollo, having become enamoured of her, offered to give her whatever she should ask. The Sibyl demanded to live as many years as she had grains of sand in her hand, but unfortunately forgot to ask for the enjoyment of health and bloom of which she was then in possession. The god granted her request, but she refused, in return, to listen to his suit; and the gift of longevity, therefore, unaccompanied by freshness and beauty, proved a burden rather than a benefit. She had already lived about 700 years when Æneus came to Italy, and, as some have imagined, she had six centuries more to live before her years were as numerous as the grains of sand which she had held in her hand. At the expiration of this period she was to wither quite away, and become converted into a mere voice. (*Ovid, Met., 14, 104.—Serv. ad Virg., Æn., 6, 331.*) This was the Sibyl that accompanied Æneus to the lower world. It was usual with her to write her predictions on leaves, and place them at the entrance of her cave; and it required great caution on the part of those who consulted her to take up these leaves before the wind drove them from their places, and, by mingling them together, broke the connexion, and rendered their meaning unintelligible.—According to a well-known Roman legend, one of the Sibyls came to the palace of Tarquin the Second with nine volumes, which she offered to sell for a very high price. The monarch declined the offer, and she immediately disappeared, and burned three of the volumes. Returning soon after, she asked the same price for the remaining six books; and, when Tarquin again refused to buy them, she burned three more, and still persisted in demanding the same sum of money for the three that were left. This extraordinary behaviour astonished the monarch, and, with the advice of the augurs, he bought the books; upon which the Sibyl immediately disappeared, and was never seen after. These books were preserved with great care, and called the *Sibylline verses*. A college of priests was appointed to have charge of them, and they were consulted with the greatest solemnity when the state seemed to be in danger. When the Capitol

was burned in the troubles of Sylla, the Sibylline verses, which were deposited there, perished in the conflagration; and, to repair the loss which the republic seemed to have sustained, commissioners were immediately sent to different parts of Greece to collect whatever could be found of the inspired writings of the Sibylla.—Thus far the common account. It is generally conceded, however, that what the ancients tell us respecting these prophetesses is all very obscure, fabulous, and full of contradictions. It appears that the name *Sibylla* is properly an appellative term, and denotes "an inspired person;" and the etymology of the word is commonly sought in the *Æolic* or *Doric* *Σῖβς*, for *θεός*, "a god," and *βουλή*, "advice" or "counsel."—As regards the final fate of the Sibylline verses, some uncertainty prevails. It would seem, however, according to the best authorities, that the Emperor Honorius issued an order, A.D. 399, for destroying them; in pursuance of which, Stilicho burned all these prophetic writings, and demolished the temple of Apollo in which they had been deposited. Nevertheless, there are still preserved, in eight books of Greek verse, a collection of oracles pretended to be Sibylline. Dr. Cave, who is well satisfied that this collection is a forgery, supposes that a large part of it was composed in the time of Hadrian, about A.D. 130; that other parts were added in the time of the Antonines, and the whole completed in the reign of Commodus. Dr. Prideaux says that this collection must have been made between A.D. 138 and 167. Some of the Christian fathers, not regarding the imposition, have often cited the books of the Sibylla in favour of the Christian religion; and hence Celsus takes occasion to call the Christians Sibyllists. Dr. Lardner states his conviction that the Sibylline oracles quoted by St. Clement and others of the Greek fathers are the forgeries of some Christian. Bishop Horsley has ably supported the opinion, however, that the Sibylline books contained records of prophecies vouchsafed to nations extraneous to the patriarchal families and the Jewish commonwealth, before the general defection to idolatry. Although the books were at last interpolated, yet, according to the views taken of the subject by the learned bishop, this was too late to throw discredit on the confident appeal made to them by Justin.—The first ancient writer that makes mention of the Sibylline verses appears to have been Heraclitus. (*Cruzer, ad Cic., N. D., 2, 3, p. 221.*) The leading passage, however, in relation to them, is that of Dionysius of Halicarnassus (4, 63). The most ancient Sibylline prophecy that has been preserved for us is that mentioned by Pausanias (10, 9), and which the Athenians applied to the battle of *Ægeopotamos*, because it speaks of a fleet destroyed through the fault of its commanders. Another Sibylline prediction is found in Plutarch (*Vit. Demosth. — Op., ed. Reiske, vol. 4, p. 723*), and which relates to a bloody battle on the banks of the *Thermodon*. The Athenians applied this oracle to the battle of *Chæroneæ*. Plutarch states that there was no river of this name, in his time, near *Chæroneæ*, and he conjectures that a small brook, falling into the *Cephissus*, is here meant, and which his fellow-townsmen called *Alpυν* (*Hæmon*), or "the bloody" brook. Pausanias (9, 19) speaks of a small stream in *Boeotia* called *Thermodon*; but he places it some distance from *Chæroneæ*.—The history of Rome has preserved for us two Sibylline predictions, not, indeed, in their literal form, but yet of a very definite nature. One of these forbade the Romans to extend their sway beyond Mount *Taurus*. Were it well ascertained that this prohibition, with which we are made acquainted by Livy (38, 18), actually formed part of the Sibylline books, it would suffice to show that these books were not composed for the Romans; a prophecy which fixes Mount *Taurus* as the eastern limit of an empire, could only have been made for the monarchs

of *Lydia*. It is almost superfluous, moreover, to remark, that, with regard to Rome, at least, this prediction was contradicted by subsequent events.—The second prophecy preserved for us in Roman history is the one that was applied to the case of *Ptolemy Auletes*. This prince having solicited aid from the senate against his rebellious subjects, the Sibylline books were consulted, and the following answer was found in them: "If a king of Egypt come to ask aid of you, refuse him not your alliance, but give him no troops." The turbulence and faction of the day render it extremely probable that this prediction was a mere forgery. What we have remaining under the title of Sibylline Oracles were evidently fabricated by the pious fraud of the early Christians, ever anxious to discover traces of their faith in pagan mythology. St. Clement of Rome himself is not free from the suspicion of having participated in the falsification, or else of having attached credit too readily to a corrupted text. According to St. Justin, this pontiff had cited, in his Epistle to the Corinthians, the Sibylline predictions, for the purpose of confirming by their means the truths which he was announcing to the pagans. (*Quæst. ad Orthod. Resp. ad quæst., lxxiv.*) A contemporary of St. Clement's, the historian *Josephus*, refers to passages in these same oracles, where allusion is made to the tower of *Babel* (*Antiq. Jud., 1, 5*), a circumstance, by-the-way, which proves the early falsification of these predictions. *Celsus*, in express terms, accused the Christians of forging the Sibylline collection. (*Orig. adv. Cels., lib. 7.*) The fathers of the Church in the second, and still more frequently, those in the third century, refer to passages evidently interpolated, as if they were genuine. (*Thorlacii libri Sibyllistarum, &c., Hafnæ, 1615, 8vo.*)—The Sibylline collection, as it exists at the present day, is composed of eight books. In the first book, the subjects are, the Creation, the Fall, and the Deluge. It is apparent not only that this book is taken from *Genesis*, but also that its author made use of the Greek translation of the *Septuagint*. The subject of the second book is the Last Judgment. In the third Antichrist is announced. The fourth predicts the fall of divers monarchies. The fifth is occupied with the Romans down to *Lucius Verus*. In the sixth the Baptism of our Saviour by St. John is made the subject. The seventh is devoted to the Deluge, and the fall of various States and Monarchies. The eighth relates to the Last Judgment and the Destruction of Rome.—A manuscript discovered by *Maio* in the Ambrosian Library at Milan, contains a fourteenth book, in 384 verses; the books, however, between it and the eighth are lost. This last-mentioned book, the fourteenth, speaks of a destruction of Rome so complete that the traveller will find no traces of the city remaining, and its very name will disappear. The prophetess then goes on to enumerate a long series of princes under whom Rome shall be rebuilt.—The most complete edition of the Sibylline oracles is that of *Gallus*, which appeared at Amsterdam in 1688–9, 2 vols. 4to, to which must be added the 14th book, published by *Maio*, at Milan, 1817, 8vo.—In relation to the Sibylline oracles generally, consult the remarks of *Niebuhr* (*Rom. Hist., vol. 1, p. 441, seqq., Cambridge transl.*).

SICAMBERI or **SYGAMBERI**, a powerful German tribe, whose original seats were around the Rhine, the Sieg, and the Lippe. They were dangerous foes to the Romans, who finally conquered them under the leading of *Drusus*. *Tiberius* transferred a large part of this people to the left or southern bank of the Rhine, where they reappear under the name of *Gugerni*. (*Flor., 43, 12. — Cas., B. G., 4, 16. — Dio Cassius, 54, 32. — Tac., Ann., 2, 26. — Id. ibid., 4, 12.*)

SICANI, an ancient nation of Sicily. (Vid. remarks under the article *Sicilia*.)

SIOANIA, an ancient name of Sicily. (*Vid. Sicilia*.)
STOGA VENERIA, a city of Numidia, on the banks of the river Bagradas, and at some distance from the coast. We are first made acquainted with the existence of this place in the history of the Jugurthine war. (*Sall., Bell. Jug.*, 3, 56.) Pliny styles it a colony (6, 3); and, though no other writer gives it this title, yet, from the way in which it is represented on the Peutinger table, as well as from Ptolemy's having selected it for one of his places of astronomical calculation, we see plainly that it must have been an important city. It received the appellation of *Veneria* from a temple of Venus which it contained, and where, in accordance with a well-known Oriental custom, the young maidens of the place were accustomed to prostitute their persons, and thus obtain a dowry for marriage. (*Val. Max.*, 2, 6.) Bochart and De Brosses derive the name of Sicca from the Punic *Succoth Benoth* ("tabernacula puellarum"), and make *Benoth* ("puella") the origin of the name Venus among the Romans.—Shaw regarded the modern *Kaff* as near the site of the ancient city, having found an inscription there with the *Ordo Siccensium* on it. But Mannert thinks the stone was brought to *Kaff* from some other quarter, a circumstance by no means uncommon in these parts. (*Mannert, Geogr.*, vol. 10, pt. 2, p. 323, seqq.)

SICHERUS. *Vid. Acerbas*.

SICILIA, the largest, most fruitful, and populous island of the Mediterranean, lying to the south of Italy, from which it is separated by the *Fretum Siculum*, the strait or *faro* of *Messina*, which, in the narrowest part, is only two miles wide. Its short distance from the mainland of Italy gave rise to an hypothesis, among the ancient writers, that it once formed part of that country, and was separated from it by a powerful flood. (Compare the authorities cited by *Cluver, Sicil.*, 1, 1.) This theory, however, is a very improbable one, the more particularly as the point where the mountains commence on the island by no means corresponds with the termination of the chain of the Apennines at the promontory of *Leucopetra*, now *Capo dell' armi*, but is many miles to the north. It is more natural to suppose, therefore, that, in the first formation of our globe, the waters, finding a hollow here, poured themselves into it.—The island is a three-cornered one, and this shape obtained for it its earliest name among the Grecian mariners, *Τρινακία* (*Trinakia*, i. e., "three-cornered"). This name, and, consequently, the acquaintance which the Greeks had with the island, must have been of a very early date, since Homer was already acquainted with the "island *Thrinakia*" (*Θρινακίη νῆσος*—*Od.*, 12, 136), with the herds of *Helios* that pastured upon it, and places in its vicinity the wonders of *Scylla* and *Charybdis*, together with the islands which he terms *Plangktia* (*Πλανγκταί*), or "the Wanderers." The later Greek writers, and almost all the Latin authors, make a slight alteration in the name, calling it *Trinacria*, and Pliny (3, 8) translates the term in question by *Triquetra*, a form which frequently appears in the poets. The name *Trinacria* very probably underwent the change just alluded to, in order to favour its derivation from the Greek *τρεις* (*three*), and *ἀκρω* (*a promontory*), in allusion to its three promontories; though, in fact, only one of them, that of *Pachynus* namely, is deserving of the appellation. Homer's name *Θρινακία*, on the other hand, or rather that of *Τρινακία*, is much more appropriate, since the root is *ἀκρί*, "a point."—The island of Sicily is indebted for its existence to a chain of mountains, which commences in the vicinity of the *Fretum Siculum*, runs towards the west, keeping constantly at only a small distance from the northern coast, and terminating on the northwestern coast, near the modern *Capo di St. Vito*. The name of this range is *Montes Nebrodes*. A side chain issues

from it and pursues a southern direction, and out of this *Ætna* rears its lofty head. From the same *Montes Nebrodes* another chain runs through the middle of the island, called *Montes Hæmi* (*Ἡμαίᾶ ὄρη*), and dividing at one time the territories of the *Siculi* from those of the *Sicani*. (*Diod. Sic.*, 4, 84.)—Sicily has no large rivers; the moderate extent of the island, and the mountainous character of the country, preventing this. The only considerable streams are the *Symethus* and the *Himera*. The former of these receives most of the small rivers that flow from the eastern side of the *Hæmean Mountains*: the *Himera* also is swelled by numerous smaller streams in its course through the island.—A country like Sicily, lying between the 36th and 38th parallels of latitude, and, consequently, belonging to the southernmost regions of Europe, and which is well supplied with streams of water from its numerous mountain chains, must, of course, be a fertile one. Such, indeed, was the character of the island throughout all antiquity; and the Romans, while they regarded it as one of the granaries of the capital, placed it, in point of productiveness, by the side of Italy itself, or rather regarded it as a portion of that country. The staple of Sicily was its excellent wheat. The Romans found it growing wild in the extensive fields of *Leontini*, and, when cultivated, it yielded a hundred fold: that which grew in the plains of *Enna* was regarded as decidedly the best. It was natural enough, therefore, in the early inhabitants of the island to regard it as the parent-country of grain; and they had a deity among them whom they considered as the patroness of fertility, and the discoverer of agriculture to man. In this goddess the Greeks recognised their *Ceres*, and they made *Minerva*, *Diana*, and *Proserpina* to have spent their youth here, and the last mentioned of the three to have been carried off by *Plato* from the rich fields of *Enna*.—It has been already remarked, that the Romans regarded Sicily as one of their granaries. They obtained from it, even at an early period, the necessary supplies when their city was suffering from scarcity. King *Hiero II.*, also, frequently bestowed very acceptable presents of grain on these powerful neighbours of his; and how many and extensive demands were made by the Romans in later days on the resources of the island, after it had fallen by right of conquest into their hands, will plainly appear from a passage of *Cicero* (*in Verr.*, 2, 2).—The earliest inhabitants of Sicily, according to the Grecian writers, were the *Cyclopes* and *Læstrygones*. Homer, it seems, had spoken of these giant-races, and subsequent writers could find no more probable place for their abode than an island where the strange phenomenon presented by *Ætna* seemed to point to an equally strange race of inhabitants. Homer, it is true, had not made these two races neighbours to each other, nor had he placed them both in his island of *Thrinakia*; the expounders of his mythology, however, regardless of geographical difficulties, considered the point as accurately settled, and here, therefore, according to them, dwelled the *Cyclopes* and *Læstrygones*. *Thucydides* alone (6, 2), after mentioning the common tradition, honestly confesses that he cannot tell what has become of these giant-races. Other writers, however, were better informed, it seems, and made the *Cyclopes* disappear from view in the bowels of *Ætna*, and amid the caverns of the *Lipari isles*.—From actual inquiry, the Greeks became acquainted with the fact of the existence of two early tribes in this island, the *Sicani* and *Siculi*. They knew, also, that the former of these lived at a much earlier period than the latter; but they were divided in their opinions as to the origin of the more ancient people. The most of them, with *Thucydides* at their head (6, 2), derive the *Sicani* from *Iberia*, and make them to have been driven by the *Ligyes* (*Ligures*) from their original seats in that

country, around the river Sicarnus, to the island which, from them, received the name of Sicania. But, on a more intimate acquaintance with Iberia, the Greeks found no river there of the name of Sicarnus; they therefore conceived it to be identical with the Sicoris, a tributary of the Iberus. No Ligurians, however, ever settled in Spain, and therefore no Sicani could ever have been driven by them from that country. The only solution of this difficulty is, that as the Iberians settled also along the coast of Gaul, the Sicarnus was a river of southern Gaul, which subsequently changed its name, and could not afterward be identified. But another difficulty presents itself. In what way did the Sicani, after being thus expelled, reach the island of Sicily? The nearest and readiest route was by sea; but where could these rude children of nature have obtained a fleet? Did they proceed by land? This path would be, if possible, still more arduous, as they would have to cut their way through various branches of their very conquerors, the Ligures, and then encounter many valiant tribes in central and southern Italy. Virgil seems to have been startled by the difficulties of this hypothesis, since he makes the Sicani inhabitants of Latium, or, rather, with the license of a poet, confounds them with the Siculi. (*Æn.*, 7, 795; 8, 342.) Other writers, however, whom Diodorus Siculus (5, 2) considers most worthy of reliance, declared themselves against this wandering of the Sicani, and made them an indigenous race in Sicily. The chief argument in favour of this position was deduced from the traditions of the people themselves, who laid claim to the title of Autochthones. (*Thucyd.*, 6, 2.) This opinion found a warm supporter in Timæus, as we are informed by Diodorus (5, 6).—To these primitive inhabitants came the Siculi. These were an Italian race from Latium (*vid.* Siculi), and, previously to their settlement in Sicily, they had established themselves, for a time, among the Morgotes, in what is now called Calabria. On their crossing over into the island, the Siculi took possession of the country in the vicinity of Ætna. They met with no opposition at first from the Sicani, for that people had long before been driven away by an eruption from the mountain, and had fled to the western parts of the island. (*Diod.*, 5, 6.) As the Siculi, however, extended themselves to the west, they could not fail eventually of coming in contact with the Sicani. Wars ensued, until they regulated by treaty their respective limits. (*Diod.*, 5, 6.) According to Thucydides, however, the Siculi defeated in battle the Sicani, and drove and confined them to the southern and western parts of the island.—Sicily received accessions also to the number of its inhabitants from other sources. 1. The Cretans; these, according to traditions half historical and half mythological, came to this island along with Minos, when in pursuit of Daedalus. After the death of their king, they settled in the territories of Cocalus, a monarch of the Sicani. They subsequently became blended with the Siculi. 2. The Elymi. According to Thucydides, a number of Trojans escaping to Sicily, and settling in the country bordering on the Sicani, they both together obtained the name of Elymi. 3. The Phœnicians, too, formed settlements around the whole of Sicily, taking in the promontories and little islands adjacent. These settlements were not, however, meant as colonies, but only commercial stations. After, however, the Greeks had come over in great numbers, they abandoned the greater part of their settlements, and drew together the rest, occupying Motya, Solis, and Panormus, near the Elymi, both in reliance on their assistance, and because from this part of Sicily was the shortest passage to Carthage. (*Thucyd.*, 6, 2.) An account of the Grecian settlements is given in Thucydides (6, 3), and they had already attained a flourishing maturity before a new power developed itself and entered the lists with them for

the possession of the island. This was Carthage, and the first serious demonstration was made when Xerxes was prosecuting his invasion of Greece. The Carthaginians, who, as Diodorus asserts, were in league with the Persian monarch, landed with a large army at Panormus, and threatened Himera. The pretext for this movement on the part of Carthage was furnished by a quarrel with Theron, tyrant of Agrigentum; and, according to the usual practice of the Carthaginians, the armament had been strengthened from many barbarous nations, the Tuscan fleet being also joined to it by treaty. But Gelon, monarch of Syracuse, marched to the assistance of Theron, leaving the command of his fleet to his brother Hiero; and Hiero defeated the Carthaginian and Tuscan fleet, while, about the same time, the Carthaginian land force was completely broken at Himera by the united armies of Syracuse and Agragas. It is said by some authors that Gelon's victory took place on the same day with the battle of Salamis. No farther conquest was attempted in Sicily by Carthage for many years after, though she still remained in possession of the old Phœnician settlements, and could therefore make a descent on the island whenever she might again feel inclined. It was not till after the termination of the contest between the Athenians and Syracusans, when the latter, notwithstanding their success, remained greatly enfeebled by the struggle, that Carthage again sought an opportunity of invading the island. This was soon afforded by the disputes between Selinus and Egæta; the Carthaginians landed at Motya, took Selinus, and established themselves over the entire western half of Sicily. They would have spread themselves farther, had it not been for the power of Dionysius of Syracuse; and to this man, with all his tyrannical qualities, the Greeks of Sicily were mainly indebted for their deliverance from the yoke of Carthage. He was often defeated, it is true, but as often found the means of withstanding his opponents anew; until at last it was agreed between the contending parties that the river Himera should form the limit between the Syracusan and Grecian territories on the east, and the Carthaginian dependencies on the west. The peace that ensued was, however, of short duration, and Carthage sought every opportunity of advancing her power, afforded by the internal dissensions of the Greeks, as often as these occurred. From time to time, it is true, there arose at Syracuse men of eminent abilities, such as a Timoleon and an Agathocles, who kept in check the aspiring power of Carthage; yet it was but too apparent that this power was gaining a decided ascendancy, when the Romans, alarmed at the movements of so powerful a neighbour, were induced to interfere (*vid.* Messana), and, after a protracted struggle of twenty-four years, succeeded in making themselves masters of the whole of Sicily. (*vid.* Punicum Bellum.) It must not be supposed, however, that, during these contests of the Carthaginians with the Greeks in the first instance, and afterward of the former with the Romans, the early inhabitants of the country were merely idle spectators. In what relation the Sicani, in the western part of the island, stood to the Greeks, we have no means of ascertaining. When the Carthaginians appeared there they submitted without a struggle; though at times, as Syracusan leaders penetrated into their territories, they assumed a brief attitude of independence. The situation of the Siculi, in the eastern quarter of the island, was different from this. They acknowledged the sway of Gelon, and also of his two brothers; but when, on the expulsion of the latter of these, intestine dissensions arose in Syracuse, an individual of commanding character among the Siculi, by name Duketius, succeeded in forming a union among the petty states of his countrymen, and placed himself at the head of the confederacy. The effort was, however, only short-

lived. After some successes he was compelled to surrender to the Syracusans, who sent him to Corinth in exile. Here, however, he soon raised new forces, returned to Sicily, and, landing on the northern coast, at a point where the Grecian arms had not reached, founded there a city called Calacta. Death frustrated the schemes which he had again formed for the union of the Siculi, and the latter were reduced once more beneath the sway of Syracuse: but they did not long continue in this state of forced obedience. We find them appearing as the enemies of the Syracusans at the time of the Athenian expedition; and also as the allies of the Carthaginians when the latter had begun to establish themselves in the island. Dionysius, however, again reduced them; and Timoleon afterward restored to them their freedom, and they continued for some time subsequently either in the enjoyment of a brief independence, or subject to that power which chanced to have the ascendancy in the island, whether Syracusan or Carthaginian, until the whole of Sicily fell into the hands of the Romans. Under this new power the cities on the coast of the island were seriously injured, both because the Roman policy was not very favourable to commerce, and the conquerors were unwilling that the Greek colonies in Sicily should again become powerful. With some exceptions, however, the Sicilian cities were allowed the enjoyment of their civil rights as far as regarded the form and administration of their governments, and hence the mention so often made by Cicero of a *Senatus Populusque* in many cities of the island. Hence, too, the power they enjoyed of regulating their own coinage. As, however, collisions arose between this conceded power and the magistrates sent to govern them from Rome, we read of a commission of ten individuals, at the head of which was the prætor Publius Rutilius, by whom a permanent form of government was devised, which the Sicilians ever after regarded as their palladium against the tyranny of Roman magistrates. At a later period, Julius Cæsar extended to the whole island the *Jus Latæ*, and, by the last will of the dictator, as Antony pretended, though brought about, in fact, by a large sum of money paid to the latter, all the inhabitants of Sicily were admitted to the rights of Roman citizens. (*Cic., Ep. ad Att.*, 14, 12.) It would seem, however, to have been a personal privilege, and not to have extended to their lands, since we find Augustus establishing in the island the five Roman colonies of Messana, Tauromesium, Catana, Syracuse, and Therma. (*Plin.*, 1, 38.—*Dio Cass.*, 54, 7.) Strabo names also as a Roman colony the city of Panormus. (*Strabo*, 572.—*Mannert, Geogr.*, vol. 9, pt. 2, p. 235, seqq.)—The Romans remained in possession of Sicily until Genseric, king of the Vandals, conquered it in the fifth century of our era. Belisarius, Justinian's general, drove out the Vandals, A.D. 535, and it remained in the hands of the Greek emperors nearly three centuries, when it was taken by the Saracens, A.D. 827. The Normans, who ruled in Naples, conquered Sicily A.D. 1072, and received it from the pope as a papal fief. Roger, a powerful Norman prince, took the title of King of Sicily in 1102, and united the island with the kingdom of Naples, under the name of the Kingdom of the two Sicilies.

SICINIUS, DENTATUS L., a tribune of Rome, celebrated for his valour, and the honours he obtained in the field of battle during the period of 40 years, in which he was engaged in the Roman armies. He was present in 120 battles; obtained 14 civic crowns; 3 mural crowns; 8 crowns of gold; 180 gold chains (*torques*); 160 bracelets (*armilla*); 18 spears (*hasta pueræ*); 25 sets of horse-trappings; and all as the reward of his extraordinary valour and services. He could show the scars of 40 wounds which he had received, all in the breast. (*Val. Max.*, 3, 2, 24.) Dio-

sysius of Halicarnassus, who calls him Siccius, states that he gave great offence subsequently to Appian Claudius, the decemvir, by the freedom of his remarks relative to the incapacity of the Roman leaders who were at that time carrying on war against the enemy; and that Appian, pretending to coincide with him in his views, induced Siccius to go as *legatus* to the Roman camp near Crustumeria. When the brave man had reached the camp of his countrymen, the generals there prevailed upon him to take the command; and then, upon his objecting to the site of their camp, as being in their own territory, not that of the enemy, they begged him to select a new spot for an encampment. A body of their immediate partisans, to the number of 100 men, were sent with him, on his setting out for this purpose, as a guard for his person, who attacked, and, after a valiant resistance on his part, slew him on the route, in accordance with previous instructions, and then brought back word that he had been slain by the enemy. The falsehood, however, was soon discovered, and the army gave Siccius a splendid burial. (*Dion. Hal.*, 11, 37.)

SICÓRIS, a river of Spain, now the *Segre*, rising in the Pyrenees, and running into the Iberus, after flowing by the city of Ilerda. It divided the territories of the Illegets from those of the Lacetani. Some writers regard it as the Sicanus of Thucydides. (*Cæs., B. C.*, 1, 40.—*Plin.*, 3, 3.)

SICULI, an ancient nation, who in very early times dwelt in Latium and about the Tiber, and, indeed, upon the site of Rome itself. All this is confirmed by Latin and Etruscan traditions. (*Dion. Hal.*, 1, 9.—*Id.*, 2, 1.—*Varro, L. L.*, 4, 10.—*Antiochus, ap. Dion. Hal.*, 1, 72.) A part of the town of Tibur bore the name of *Sicclion* (*Sicclum*) in the time of Dionysius (1, 16). The arguments of Niebuhr lead to the conclusion that these Siculi were the Pelagians of Latium. They were eventually driven out by an indigenous race, highlanders of the Apennines, who descended upon them from the mountains, and from the basin of the Nar and Velinus. Moving south after this dislodgment, they eventually crossed over into Sicily, then named Sicania, and gave its new and latest appellation to that island. (*Vid. Sicilia*, and *Roma*.—*Malden's History of Rome*, p. 109.)

SICULUM FRATUM, the straits that separated ancient Italy from Sicily; now the *Straits of Messina*, or *Faro di Messina*. The name was applied in strictness to that part of the strait which lay between the Columna Rhægina on the Italian side, and a similar column or tower on the promontory of Pelorum. The Columna Rhægina marked the termination of the consular road leading to the south of Italy. The most prevalent and the best grounded opinion seems to be that which identifies this spot with the modern *la Cationa*. The Sicilian strait was generally supposed by the ancients to have been formed by a sudden disruption of the island from the mainland. But consult remarks at the commencement of the article *Sicilia*. (*Mela*, 2, 4.—*Plin.*, 3, 5.—*Cramer's Anc. Italy*, vol. 2, p. 427.)

SICYON, a city of Greece, in the territory of Sicyonia, northwest of Corinth. Few cities of Greece could boast of so high antiquity, since it already existed under the names of *Ægialea* and *Mecone* long before the arrival of Pelops in the peninsula. (*Strabo*, 382.—*Pausan.*, 2, 6.—*Hærod., Theog.*, 537.) Homer represents Sicyon as forming part of the kingdom of Mycenæ, with the whole of Achaia. (*Id.*, 2, 572.) Pausanias and other genealogists have handed down to us a long list of the kings of Sicyon, from *Ægiæus*, its founder, to the conquest of the city by the Dorians and Heraclides, from which period it became subject to Argos. (*Pausan.*, 2, 6.—*Euseb., Chron.—Clem. Alex., Strom.*, 1, 321.) Its population was then divided into four tribes, named *Hyllus*, *Pamphyli*, *Dy-*

ments, and *Ægialus*, a classification introduced by the Dorians, and adopted, as we learn from Herodotus (5, 68), by the Argives. How long a connexion subsisted between the two states we are not informed; but it appears that when Clisthenes became tyrant of Sicyon, they were independent of each other, since Herodotus relates that, while at war with Argos, he changed the names of the Sicyonian tribes, which were Dorian, that they might not be the same as those of the adverse city; and in order to ridicule the Sicyonians, the historian adds that he named them afresh, after such animals as pigs and asses; sixty years after his death the former appellations were, however, restored. Sicyon continued under the dominion of tyrants for the space of one hundred years; such being the mildness of their rule, and their observance of the existing laws, that the people gladly beheld the crown thus transmitted from one generation to another. (*Aristot., Polit.*, 5, 12.—*Strab.*, 382.) It appears, however, from Thucydides, that, at the time of the Peloponnesian war, it had been changed to an aristocracy. In that contest, the Sicyonians, from their Dorian origin, naturally espoused the cause of Sparta, and the maritime situation of their country not unfrequently exposed it to the ravages of the naval force of Athens. (*Xen., Hist. Gr.*, 4, 4, 7.) After the battle of Leuctra, we learn from Xenophon that Sicyon once more became subject to a despotic government, of which Euphron, one of its principal citizens, had placed himself at the head, with the assistance of the Argives and Arcadians. (*Xen., Hist. Gr.*, 7, 1, 32.) His reign, however, was not of long duration, he being waylaid at Thebes, whither he went to conciliate the favour of that power, by a party of Sicyonian exiles, and murdered in the very citadel. (*Xen., Hist. Gr.*, 7, 3, 4.)—On the death of Alexander the Great, Sicyon fell into the hands of Alexander, son of Polysperchon; but, on his being assassinated, a tumult ensued, in which the inhabitants of the city attempted to regain their liberty. Such, however, was the courage and firmness displayed by Cratesipolis, his wife, that they were finally overpowered. Not long after this event, Demetrius Poliorcetes made himself master of Sicyon, and, having persuaded the inhabitants to retire to the acropolis, he levelled to the ground all the lower part of the city which connected the citadel with the port. A new tower was then built, to which the name of Demetrius was given. This, as Strabo reports, was placed on a fortified hill dedicated to Ceres, and distant about 12 or 20 stadia from the sea. (*Strab.*, 382.—Compare *Pausan.*, 2, 7.) The change which was thus effected in the situation of this city does not appear to have produced any alteration in the character and political sentiments of the people. For many years after they still continued to be governed by a succession of tyrants, until Aratus united it to the Achaean league. By the great abilities of this its distinguished citizen, Sicyon was raised to a high rank among the other Achaean states, and, being already celebrated as the first school of painting in Greece, continued to flourish under his auspices in the cultivation of all the finest arts; it being said, as Plutarch reports, that the beauty of the ancient style had there alone been preserved pure and uncorrupted. (*Plut., Vit. Arat.*—*Strabo*, 382.—*Plin.*, 35, 12.) Aratus died at an advanced age, after an active and glorious life, not without suspicion of having been poisoned by order of Philip, king of Macedon. He was interred at Sicyon with great pomp, and a splendid monument was erected to him as the deliverer of the city. (*Plut., Vit. Arat.*—*Pausan.*, 2, 8.) After the dissolution of the Achaean league, little is known of Sicyon; it is evident, however, that it existed in the time of Pausanias, from the number of remarkable edifices and monuments which he enumerates within its walls; though he allows that it had greatly suffered from va-

rious calamities, but especially from an earthquake, which nearly reduced it to desolation. The ruins of this once great and flourishing city are still to be seen near the small village of *Basílico*. Dr. Clarke informs us that these remains of ancient magnificence are still considerable, and in some instances exist in such a state of preservation, that it is evident the buildings of the city must either have survived the earthquake to which Pausanias alludes, or have been constructed at some later period. In this number is the theatre, which that traveller considers as the finest and most perfect structure of the kind in all Greece. (*Clarke's Travels*, vol. 6, p. 553, *Lond. ed.*) Sir W. Gell reports, that "*Basílico* is a village of fifty houses, situated in the angle of a little rocky ascent, along which ran the walls of Sicyon. This city was in shape triangular, and placed upon a high flat, overlooking the plain, about an hour from the sea, where is a great tumulus on the shore. On the highest angle of Sicyon was the citadel." (*Itin. of the Morea*, p. 15.—*Dodwell, Tour*, vol. 2, p. 294.—*Cramer's Anc. Greece*, vol. 3, p. 48, *seqq.*)—Sicyonian almonds are mentioned by Athenæus (8, p. 349, c.), and are supposed to have been of a softer shell than ordinary. (*Cassaub., ad loc.*) We read also of the Sicyonian shoes (*Σικυνῶνια*), which were very celebrated, and were worn by the luxurious and effeminate in other countries. (*Athenæus*, 4, p. 155, c.)

SICYONIA, the territory of Sicyon, on the Sinus Corinthiacus, west of Corinthia, and separated from it by the small river Nemea. (*Strabo*, 382.—*Vid. Sicyon.*)

SIDE, I. a city of Pamphylia, west of the river Melas, and lying on the Chelidonian bay. It was founded by the Cumæans of Æolis. (*Scylax, Periplus*, p. 40.—*Strab.*, 667.) Arrian relates, that the Sidetæ, soon after their settlement, forgot the Greek language, and spoke a barbarous tongue peculiar to themselves. It surrendered to Alexander in his march through Pamphylia. (*Arrian, Exp. Alex.*, 1, 26.) Side, many years after, was the scene of a naval engagement between the fleet of Antiochus, commanded by Hannibal, and that of the Rhodians, in which, after a severe contest, the former was defeated. (*Livy*, 37, 23, *seqq.*) When the pirates of Asia Minor had attained to that degree of audacity and power which rendered them so formidable, we learn from Strabo that Side became their principal harbour, as well as the marketplace where they disposed of their prisoners by auction. (*Strabo*, 664.) Side was still a considerable town under the emperors; and, when a division was made of the province into two parts, it became the metropolis of Pamphylia Prima. (*Hierocl.*, p. 682.—*Consil. Const.*, 2, p. 240.) Minerva was the deity principally worshipped here.—An interesting account of the ruins in this place is to be found in Captain Beaufort's valuable work, with an accurate plan. "It stands," observes this writer, "on a low peninsula, and was surrounded by walls. The theatre appears like a lofty acropolis rising from the centre of the town, and is by far the largest and best preserved of any that came under our observation in Asia Minor. The harbour consisted of two small moles, connected with the quay and principal sea-gate. At the extremity of the peninsula were two artificial harbours for larger craft. Both are now almost filled with sand and stones, which have been borne in by the swell." (*Beaufort's Karamania*, p. 146, *seqq.*) Mr. Fellows, however, says, that the ruins of Side are inferior in scale, date, and age to any that he had previously seen. The Greek style is scarcely to be traced in any of the ruins; but the Roman is visible in every part. In few buildings except the theatre are the stones even hewn, the cement being wholly trusted to for their support. "The glowing colours," continues Mr. Fellows, "in which this town is described in the

'Modern Traveller,' as quoted from Captain Beaufort's admirable survey, show how essential it is to know upon what standard a description is formed. It would have given Captain Beaufort much pleasure to have gone inland for a few miles, and to have seen the theatres and towns in perfect preservation as compared with Side, and of so much finer architecture. From the account which he gives, I was led to expect that this would form the climax of the many cities of Asia Minor, but I found its remains among the least interesting." (*Fellows' Journal of an Excursion in Asia Minor* in 1838, p. 203, seq.)—In the middle ages the site of this place bore the name of *Scandelor* or *Candeloro*, but it is now commonly called *Esly Adalia*. (*Cramer's Asia Minor*, vol. 2, p. 283.)—II. A town of Pontus, to the east of the mouth of the Thermodon, and giving name to the adjacent plain (Sidene). The river *Sidin*, which flows at the present day in this same quarter, recalls the ancient name of the town. (*Cramer's Asia Minor*, vol. 1, p. 271.)

SIDICINUM, or, more correctly, Teanum Sidicinum, a town of the Sidicini, in Campania. (*Vid.* Teanum.)—The territory of the Sidicini was situate to the east of that of the Aurunci. They were once apparently an independent people, but included afterward under the common name of Campani. This nation was of Oscan origin, and powerful enough to contend with the neighbouring Samnites, and even to afford employment to a large Roman force. The period of their reduction by the Romans is not mentioned. (*Cramer's Ancient Italy*, vol. 2, p. 193.)

SNOW, in Scripture Tzidon, the oldest and most powerful city of Phœnicia, five geographical miles north of Tyros, on the seacoast. It is supposed to have been founded by Sidon, the eldest son of Canaan, which will carry up its origin to about 2000 years before Christ. (*Gen.*, 10, 15.—*Rosenm. ad Gen.*, l. c.—*Bochart, Geogr. Sacr.*, 4, 36.) But if it was founded by Sidon, his descendants were driven out by a body of Phœnician colonists, most probably, who are supposed either to have given it its name, or to have retained the old one in compliment to their god Siton or Dagon. Justin says that the name Sidon had reference to the abundance of fish in this quarter (*nam piscem Phœnices Sidon vocant*," 68, 3), an opinion in which Bochart concurs, who understands by "Sidon, the eldest son of Canaan," merely the progenitor of the Sidonians and the founder of Sidon, whatever his individual name may have been.—The inhabitants of Sidon appear to have early acquired a pre-eminence in arts, manufactures, and commerce; and from their superior skill in hewing timber (by which must be understood their cutting it out and preparing it for building, as well as the mere act of felling it), Sidonian workmen were hired by Solomon to prepare the wood for the building of his Temple. The Sidonians are said to have been the first manufacturers of glass, and Herodotus speaks of them as excelling in many useful and ingenious arts, giving them the title of *πολυδαίδαλοι*. (*II.*, 23, 742.) Add to this, they were at a very early period distinguished for their commerce and their skill in maritime affairs. The natural result of these advantages to Sidon was a high degree of wealth and prosperity; and, content with the riches which their trade and manufactures brought them, they lived in ease and luxury, trusting the defence of their city and property, like the Tyrians after them, to hired troops; so that to live in ease and security is said in Scripture to live after the manner of the Sidonians. In all these respects, however, Sidon was totally eclipsed by Tyre, at first her colony and afterward her rival. The more enterprising inhabitants of this latter city pushed their commercial dealing to the extremities of the known world; raised their city to a rank in power and opulence before unknown, and converted it into a luxurious metropolis, and the empori-

um of the produce of all nations.—Sidon, however, under her own kings, continued to enjoy a considerable degree of commercial prosperity. From Joshua we learn that Sidon was rich and powerful when the Israelites took possession of Canaan; and St. Jerome states that it fell to the lot of the tribe of Asher. In the year 1015 B.C. Sidon was dependant on Tyre, but in 720 it shook off the yoke, and surrendered to Salmanaazar when he entered Phœnicia. When the Persians became masters of this city in the reign of Cyrus, they permitted the Sidonians to have kings of their own. Sidon was ruined in the year 351 B.C. by Ochus, king of Persia. When the inhabitants saw the enemy in the city, they shut themselves up in their houses with their wives and children, and perished in the flames of the place. According to Diodorus Siculus, those Sidonians who were absent from the city at the time, returned and rebuilt it after the Persian forces were withdrawn. Sidon afterward passed into the hands of the Macedonians, and, lastly, into those of the Romans. After the Roman it fell under the Saracen power, the Seljukian Turks, and the sultan of Egypt; who, in A.D. 1289, that they might never more afford shelter to the Christians, destroyed both it and Tyre. But it again revived, and has ever since been in the possession of the Ottoman Turks. Sidon, at present called *Saïde*, is still a considerable trading town, and the chief mart for Damascus and upper Syria; but the port is nearly choked up with sand. Though presenting an imposing appearance at a distance, as it rises from the water's edge, it is, like all Turkish towns, ill-built and dirty, and full of ruins; having still discoverable without the walls some fragments of columns, and other remains of the ancient city. Mr. Conner makes the number of inhabitants 15,000; of whom 2000 are Christians, chiefly Maronites, and 400 Jews, who have one synagogue. They are chiefly employed in spinning cotton; which, with some silk, and boots and shoes, or slippers, or morocco leather, form their articles of commerce. (*Mansford's Scripture Gazetteer*, p. 438, seqq.)

SIDONIORUM INSULÆ, islands in the Persian Gulf, supposed to be the same with the Sidodona of Arrian. (*Vincent's Commerce of the Ancients*, vol. 1, p. 358.—*Bischoff und Müller, Wörterb. der Geogr.*, p. 916.)

SIDONIUS APOLLINARIUS, a Christian poet and writer. He was a native of Gaul, in which country his father and grandfather had exercised the functions of prætorian prefect, and was born at Lugdunum (*Lyons*) about 438 A.D. He received a very finished education, and was well acquainted with all the sciences known in his time; but poetry was his favourite occupation. He married Papianilla, daughter of the consul Fl. Avitus, who in 455 was named emperor. Sidonius accompanied his father-in-law to Rome, and there pronounced, on the first day of the ensuing year, a poetical panegyric in honour of the new monarch, who recompensed his talent by appointing him senator and prefect of Rome, and raising a statue to him in the library of Trajan's forum. Soon after, Ricimer, that Frank who enjoyed at Rome a much greater power than the emperor himself, deposed Avitus, and named Majorianus in his stead. Sidonius was present in the battle in which his father-in-law lost his life. He then retired to Lyons, and fell with this city into the hands of the conqueror, who treated him so well, that, in the following year, Sidonius pronounced a eulogium on this emperor, and was honoured with the title of count (*comes*). Under the reign of Severus, and during the interregnum which succeeded his death, Sidonius retired once more to Gaul, and settled in the province which afterward bore the name of *Auvergne*. Here he lived for some months on an estate which belonged to his wife. Anthemius having obtained the empire in 467, Sidonius went to Rome, and pronounced a panegyric upon him. The prince, in re-

turn, named him anew prefect of Rome and senator. Although Sidonius was not then a priest, his countrymen, notwithstanding this, chose him, in 472, Bishop of Augustunometum (*Clermont in Auvergne*). After having transferred to his son his honour and his fortune, he entered on the duties of the episcopate, and acquitted himself with zeal and fidelity. When the Visigoths seized upon a portion of Gaul, Sidonius fell into the power of Euric, their king; but, through the protection of Leo, the minister of this barbarian monarch, he was re-established in his bishopric, and discharged the episcopal functions until the day of his death, which appears to have taken place in 484. A French *savant* traces the pedigree of the *Polignac* family to Apollinaris. (*Mangon de la Lande: Essais historiques, &c.*, 1828.—Compare *Revue Française*, 1828, n. 6, p. 303, *seqq.*)—We have remaining of Sidonius a collection of letters in prose; and twenty-four poems, the principal of which are the three panegyrics pronounced as above, and some epithalamia. We see in these the productions of a man of talent, not deficient in imagination and poetic fire, and who knows how to interest and please. Although marked by the vices which characterized the literary efforts of the age, namely, subtle conceits and exaggerated metaphors, he may still be regarded as one of the best of the Christian poets.—The best edition of Sidonius Apollinaris is that of Labbæus (*Labbe*), Paris, 4to, 1652. (*Schöll, Hist. Lit. Rom.*, vol. 3, p. 96, *seqq.*)

SIGA, a city in the western part of Numidia, or what was afterward called Mauritania Cæsariensis. The Itinerary Antoninus makes it three miles distant from the coast, whereas Ptolemy ranks it among the maritime cities. It had a harbour, probably, on the sea, while the city itself stood inland. Siga was an old Tyrian settlement, and is the only one of the many mentioned by Scylax in this quarter that we can fix upon with certainty. A river of the same name ran by it. Syphax, prince of the Massæsyli, selected this city for his residence, having taken it from the Carthaginians. He afterward took up his abode in Cirta. The modern *Ned-Roma*, mentioned by Leo Africanus, is thought to answer to the ancient city. (*Mannert, Geogr.*, vol. 10, pt. 2, p. 427.)

SIGÆUM or SIGÆUM, I. a celebrated promontory of Troas, near the mouth of the Scamander. The modern name is Cape *Jenischehr*, or, as it is more commonly pronounced, Cape *Janissary*. Homer does not mention either the promontory of Sigæum or of Rhœteum. These names rather referred to cities which were built after his time. These two promontories formed the limits on either side of the station of the Grecian fleet. Achilles, Patroclus, and Antilochus were buried on Sigæum, and three large tumuli, or mounds of earth, are supposed to mark at the present day the three tombs; though, from a passage of Homer (*Od.*, 24, 75, *seqq.*), it would seem that one mound or tomb covered the ashes of all three. "We visited," says Dr. Clarke, "the two ancient tumuli called the tombs of Achilles and Patroclus. They are to the northeast of the village of *Yeni-Cher*. A third was discovered by Sir W. Gell near the bridge for passing the *Mender*; so that the three tumuli mentioned by Strabo are yet entire. (*Strabo*, 596.) The largest was opened by order of M. de Choiseul. Many authors bear testimony to the existence of the tomb of Achilles, and to its situation on or by the Sigæan promontory. It is recorded of Alexander the Great, that he anointed the *stêlé* upon it with perfumes, and ran naked around it, according to the custom of honouring the names of a hero. (*Ælian, Var. Hist.*, 12, 7.—*Diod. Sic.*, 17, 17.) Ælian distinguishes the tomb of Achilles from that of Patroclus, by relating that Alexander crowned one, and Hephæstion the other. It will not, therefore, be easy to determine, at the present day, which of the three tombs now standing upon this

promontory was that formerly venerated by the inhabitants of Sigæum for containing the ashes of Achilles.—It should also be observed, that to the south of Sigæum, upon the shore of the Ægean, are yet other tumuli, of equal if not greater size, to which hardly any attention has yet been paid; and these are visible far out at sea." (*Travels*, vol. 3, p. 210, *seqq.*)—II. A town of Troas, on the sloping side of the promontory. It was founded posterior to the siege of Troy by an Æolian colony, headed by Archæanax of Mytilene. He is said to have employed the stones of ancient Ilium in the construction of his town. The Athenians, some years afterward, sent a body of troops there, headed by Phrynon, a victor at the Olympic games, and expelled the Lesbians. This act of aggression led to a war between the two states, which was long waged with alternate success. Pittacus, one of the seven sages, who commanded the Mytilenians, is said to have slain Phrynon, the Athenian leader, in single fight. The poet Alcæus was engaged in one of the actions that took place, and had the misfortune to lose his shield. At length both parties agreed to refer their dispute to Pericles of Corinth, who decided in favour of the Athenians. (*Strab.*, 599.—*Herod.*, 5, 95.—*Diog. Laert.*, 1, 74.) The latter people, or, rather, the Pisistratide, remained then in possession of Sigæum, and Hippia, after being expelled from Athens, is known to have retired there, together with his family. (*Herod.*, 5, 65.) The town of Sigæum no longer existed when Strabo wrote, having been destroyed by the citizens of New Ilium. (*Strab.*, 600.—*Plin.*, 5, 30.—*Cramer's Asia Minor*, vol. 1, p. 109.) The modern *Jeni Schehr* marks the site of the ancient Sigæum. (*Leake's Tour*, p. 276.)

SIGNIA, a city of Latium, southwest of Anagnina. It became a Roman colony as early as the reign of Tarquinius Superbus. At first it was only a military post, which, in process of time, however, became a city. (*Dion. Hal.*, 4, 63.) When Tarquin was dethroned, he sought the assistance of Signia, but the inhabitants remained faithful to Rome. (*Dion. Hal.*, 5, 68.) They appear to have continued in the same sentiments even during the severe trial of the second Punic war; as we find Signia mentioned by Livy among the colonies of that period most distinguished for their steady adherence to the Roman power (27, 10). Signia is noticed by several writers as producing a wine of an astringent nature. (*Strabo*, 237.—*Plin.*, 14, 6.—*Sil. Ital.*, 8, 380.—*Martial*, 13, 116.) It was noted, also, for a particular mode of flooring with bricks, which was called "*opus Signinum*." (*Plin.*, 15, 12.—*Vitruv.*, 8, in *fn.*) The modern *Segni* marks the ancient site. (*Cramer's Anc. It.*, vol. 3, p. 103.)

SILA SILVA, a forest of vast extent, in the country of the Brutii, to the south of Conventia. It consisted chiefly of fir, and was celebrated for the quantity of pitch which it yielded. (*Plin.*, 15, 7.—*Columella*, 12, 20.—*Dioscorides*, 1, 98.) Strabo describes the Sila as occupying an extent of 700 stadia, or eighty-seven miles, from the neighbourhood of Rhegium northward. (*Strab.*, 360.—*Plin.*, 3, 11.) Virgil also alludes to it in a beautiful passage. (*Æn.*, 12, 715.) These immense woods may probably, in ancient times, have furnished the Tyrrhæni with timber for their fleets, as we know they afterward did to the sovereigns of Sicily and to the Athenians. (*Thucyd.*, 6, 90.—*Athen.*, 5, 43.—*Cramer's Anc. Italy*, vol. 2, p. 437.)

SILANUS, the name of a Roman family belonging to the plebeian house of the Junii. The most remarkable of the name were the following: I. Marcus Silanus, served under Scipio in Spain (B.C. 307), and was sent, on one occasion, by that commander with 10,500 men against Mago and the Celtiberians, whom he succeeded in conquering. In the following year he brought to Scipio the auxiliaries from the Spanish prince Colcha, and aided him in gaining the victory

near Bœcula, over the forces of the Carthaginians.—II. Marcus Junius Silanus, was consul B.C. 109 with Q. Cæcilius Metellus. He obtained the command of the forces against the Cimbri, but was so unfortunate as to be more than once defeated, and even to lose his camp. Five years after this, the tribune Domitius brought him to trial for this ill-success, but only two tribes condemned him.—III. D. Junius Silanus, son of the preceding, was consul elect B.C. 63, when Cicero asked him his opinion in the Roman senate as to the punishment to be inflicted on the accomplices of Catiline. He gave his opinion in favour of punishment. In the following year he entered on the consular office with L. Licinius Murena.—IV. M. Junius Silanus, son of the preceding, served first under Cæsar as lieutenant in Gaul, and, after the assassination of that individual, attached himself to the party of Lepidus. This party, however, he afterward left, and joined that of Antony. In consequence of this, he was proscribed and his property confiscated. He afterward, however, was pardoned by Augustus, and, returning to Rome, became at last on such good terms with Augustus, that the latter made him his colleague in the consulship, 25 B.C.—V. Junius Silanus Creticus, was consul A.D. 7, and afterward proconsul of Syria. Tiberius removed him from that province, on account of the friendship subsisting between him and Germanicus.—VI. D. Junius Silanus, was banished by Augustus for adultery with Julia. He obtained his recall under Tiberius, through the intercession of his brother.—VII. M. Junius Silanus, brother of the preceding, was a man of great reputation and influence, on account of his talents as an orator. His daughter Claudia married Caligula, and he himself was afterward sent as governor into Spain. The tyrant, becoming jealous of him, compelled him to destroy himself.—VIII. L. Junius Silanus, prætor A.D. 49, a brave and illustrious individual, stood so high in the favour of the Emperor Claudius that the latter intended to give him his daughter Octavia in marriage. This, however, was prevented by the artful Agrippina, who obtained her hand for her own son Nero. Various false charges were brought against Silanus; he was expelled from the senate, and, in his despair, destroyed himself.—IX. Turpillius, an officer of Metellus in the Jugurthine war. Having been left by that commander at the head of the Roman garrison in Vacca, and having, through want of care, allowed the town to be retaken by the inhabitants, he was tried, and condemned to death. (*Sallust, Bell. Jug.*, 66, 69.) Plutarch, however, makes the accusation to have been a false one, and Turpillius to have been condemned through the agency of Marius. (*Plutarch, Vit. Mar.*)

SILÆUS, I. a river of Lucania, in Italy, dividing that province from Campania. It takes its rise in that part of the Apennines which belonged to the Hirpini; and, after receiving the Tanager, now *Negri*, and the Calor, now *Calore*, it empties into the Gulf of Salerno. The waters of this river are stated by ancient writers to have possessed the property of incrusting, by means of a calcareous deposition, any pieces of wood or twigs which were thrown into them. (*Strabo*, 251. *Plin.*, 2, 106.) This fact is confirmed by Baron Antonini, *della Lucania*, p. 2, disc. 1. The banks of this river were greatly infested by the gadfly. (*Virg., Georg.*, 3, 146, *seqq.*) The modern name of the stream is the *Silaro*. (*Cramer's Ancient Italy*, vol. 2, p. 360.)—II. A river of Cisalpine Gaul, to the east of Bononia, running into the Padusa, or Spinetic branch of the Padus. It is now the *Silaro*. (*Cramer's Ancient Italy*, vol. 1, p. 89.)

SILENTIARIUS, Paulus, a poet in the reign of the Emperor Justinian. He was the primary or chief of the Silentarii at the court of that monarch, whence the second part of his name. The title of Silentarius,

it may be remarked in passing, designates various employments; it is sometimes synonymous with *ὑποπόροχος*, and denotes an officer whose duty it is to preserve quiet in the imperial palace; at other times the Silentarius is a private secretary of the prince.—Paul, the Silentary, has left various poetical productions, which are not without merit. In the Greek Anthology we have about eighty epigrams of his, a portion of which are of an erotic character. They are deficient neither in spirit nor elegance. We perceive that their author was well read in the ancient writers; but it is evident, at the same time, that his verses have not the conciseness so essential to the epigram. The most celebrated of his productions, however, are, his poem on the Pythian Baths in Bithynia (*Ἡλιαῖα ἐκ τῶν ἐν Πυθίῳ θερμῶν*), and his description of the Church of St. Sophia (*Ἐκφρασις τῆς μεγάλης ἐκκλησίας*), which was publicly read at the dedication of that structure, A.D. 562. We have also a third poem, forming, in fact, a supplement to the second, on the pulpit placed in the great aisle of the patriarchal palace (*Ἐκφρασις τοῦ Ἀμβωνος, κ. τ. λ.*). The poem on the Pythian Baths is given in Brunn's *Analecta*, and in the editions of the Anthology. The description of the Church of St. Sophia is given at the end of the history of Johannes Cinnamus, in the edition of Ducange. In 1822, Græffe published a critical edition at Leipzig, in 8vo, to which is added the Description of the Ambon or pulpit. Bekker gave an edition of this last-mentioned poem, from a Heidelberg manuscript, *Berol.*, 1815, 4to. (*Schöll, Hist. Lit. Gr.*, vol. 6, p. 46, 115.)

SILĒNUS, a demigod, who became the nurse, the preceptor, and the attendant of Bacchus. Pindar calls him the Naiad's husband (*fragm. incert.*, 73). Socrates used to compare himself, on account of his baldness, his flat nose, and the quiet sillery in which he was so fond of indulging, to the Sileni born of the divine Naiads. (*Xenophon, Symp.*, 5, 7.—Compare *Ælian*, V. H., 3, 18.) Others said that Silenus was a son of Earth, and sprung from the blood-drops of Uranus. (*Serv. ad Virg., Ecl.*, 6, 13.—*Nonnus*, 14, 97.—*Id.*, 29, 262.) Marsyas is called a Silenus. Like the seagods, Silenus was noted for wisdom. Hence some modern exponents of mythology think that Silenus was merely a river-god, and they derive the name from *ἵλῳ*, *εἰλέω*, to roll, expressive of the motion of the streams. The connexion between Silenus and Bacchus and the Naiades thus becomes easy of explanation; in their opinion, all being deities relating to water or moisture. (*Keightley's Mythology*, p. 234.)—The two legends relative to Midas and Silenus have already been noticed under the former article. (*Vid. Midas*.)—Silenus was represented as old, bald, and flat-nosed, riding on a broad-backed ass, usually intoxicated, and carrying his can (*cantharus*), or tottering along supported by his staff of fennel (*ferula*).—For other views of the legend of Silenus, consult Creuzer (*Symbolik*, vol. 3, p. 207, *seqq.*), Rolfe (*Recherches sur le Culte de Bacchus*, vol. 3, p. 354, *seqq.*), and Welcker (*Nach. zur Tril.*, p. 214, *seqq.*).—According to another account, Midas mixed some wine with the waters of a fountain to which Silenus was accustomed to come, and so inebriated and caught him. He detained him for ten days, and afterward restored him to Bacchus, for which he was rewarded with the power of turning into gold whatever he touched. Some authors assert that Silenus was a philosopher, who accompanied Bacchus in his Indian expedition, and assisted him by the soundness of his counsels. From this circumstance, therefore, he is often introduced speaking, with all the gravity of a philosopher, concerning the formation of the world and the nature of things.—The legend of Silenus is evidently of Oriental origin. (*Symbolik*, vol. 3, p. 207, *seqq.*—Consult also Rolfe, *Recherches sur le Culte de Bacchus*, vol. 3, p. 354, *seqq.*)

SILIUS ITALICUS, C. a Latin poet, born about the 25th year of the Christian era. He has been supposed to have been a native of Italica, in Spain; but his not being claimed as a fellow-countryman by Martial, who has bestowed upon him the highest praises, renders this improbable. Some make him to have been a native of Corfinium, a city of the Peligni, in Italy, which, according to Strabo, was called Italica in the time of the Social war; but Velleius Paterculus informs us that Corfinium merely intended to change its name to Italica, and that the project was never carried into effect. Whether, however, he were a native of Italica in Spain, or of an Italica elsewhere, his surname certainly does not show it; for in that event it would have been *Italicensis*. It is most probable that *Italicus* was a family name; and it may have been given to one of his ancestors, when residing in some province, to show that he was of Italian origin.—Silius Italicus applied himself with great ardour to the study of eloquence and poetry. In the former of these pursuits he took Cicero for his model, and acquired at the bar the reputation of an eminent speaker. In poetry he gave the preference to Virgil. His predilection for these two great writers led him to purchase two estates which had belonged to them, that of Cicero at Tusculum, and that of Virgil near Naples, on which the poet had been interred. Silius often visited the tomb of the latter, and celebrated his birthday annually with great solemnities.—Our poet passed through all the public employments which led to the consulship. He is said also to have insinuated himself into the favour of Nero by following the vile trade of an informer. Pliny the younger, who mentions this fact, which, for the honour of literature, one could wish might be impugned, adds, that if it be true that Silius was thus guilty, he made amends for his fault by a long course of subsequent virtue, and enjoyed at Rome a high degree of consideration. The first consulship of Silius (for it is thought, on no very sufficient grounds, however, that he thrice held this magistracy) was in the famous year 68, when Nero died.—Silius enjoyed the favour of Vitellius and Vespasian: under the latter he was proconsul of Asia. Loaded with honours, and having accumulated an ample fortune, he retired in his old age to Campania, and there passed the rest of his days in the society of the Muses. Attacked, at the age of 75 years, with an incurable malady, he starved himself to death, in the reign of Trajan, A.D. 100.—Silius, through all his life, had a strong attachment for poetry and literature, and devoted to them all the leisure moments which his public employments allowed. It was only, however, in his later years, and during his retreat at Naples, that he formed the serious idea of aiming at a place in the list of poets. He then composed an epic, or, rather, historical poem, in seventeen cantos, the subject of which was the second Punic war. This poem, entitled *Punica*, has come down to our times. It confirms the judgment which Pliny passed upon its author when he said that he wrote with more diligence than genius. (*Ep.* 3, 7, 5.) It appears that Silius was one of those men to whom Nature has granted a certain facility, which makes them succeed in some degree in whatever they undertake, and which, when it is seconded by learning and taste, may, to a certain degree, occupy the place of genius. The subject which he chose for his poem was one that possessed an unusual share of interest to the Romans. Three centuries had passed away since this memorable period, and, though all the details of the war were still well known, because many Greek and Roman historians had recorded them in their respective works, still there remained a wide field for the imagination of the poet, and he might indulge in the fictions and employ all the machinery of which the epic poem was naturally susceptible. Silius disdained not these

means for interesting and pleasing his readers; but, like Lucan, he chose a defective plan, in preferring the historical method, that makes known all the consequences resulting from any event, to the poetic mode, that selects from a series of facts some single circumstance, which it makes the principal action, and towards which, as a common centre, all things ought to tend. Had he transported his readers in the very outset to the later years of the war, he might have taken for his theme Hannibal's attempt to make himself master of Rome; this would have afforded the different parts that are regarded as necessary for an epic action, namely, a commencement, a plot, and a catastrophe. By pursuing a different plan, by preferring to the epopee the march of history, he ought to have seen that he was debarred from the employment of mythological fictions, which are entirely out of place in an historical narrative. And yet, falling into the same error as Lucan, he calls these very fictions to his aid. It is this intermingling of the sober details of history with the flights of mythology that has given birth to a strange and misshapen offspring, to which it would be no easy task to assign its proper appellation. Is it an epic poem? it wants unity. Is it an historical production? its fictions become so many revolting improbabilities, and its machinery is altogether out of place.—Silius drew the subject of his poem from the histories of Livy and Polybius; his poetic ornaments he chiefly borrowed from Virgil; but he does not possess the art of borrowing these last in such way as to conceal their parent source; his imitations, on the contrary, are altogether too palpable. Nor are these imitations limited to Virgil: Silius has pillaged also Lucretius, Horace, Homer, and Hesiod, a circumstance which imparts a disagreeable inequality to his style. Like Valerius, he endeavours to hide his mediocrity under an appearance of erudition and affectation of pomp, which imparts an air of coldness to his composition. To give the character of Silius in a few words, we may say that he possessed a portion of those talents, the union of which forms the great poet; he was versed in historical, geographical, and physical knowledge, which imparts to his poem a character of greater interest in the eyes of antiquarian critics, from the circumstance of its containing various facts omitted by Livy. He chose a subject at once great and interesting; his personages have a character of historic truth, but there is wanting that degree of elevation which true poetry would have bestowed. He is most successful in his description of battles. Silius wants enthusiasm; his style consists of borrowed phrases, which he has not known how to appropriate to himself, or mark, as it were, with the impress of his own zeal. Does he attempt to express anger or tenderness? his coldness freezes the reader.—Whatever may have been the reputation which this poet enjoyed among his contemporaries, he fell soon afterward into neglect; no grammarian cites him, and Sidonius Apollinaris alone names him among the eminent poets. At the revival of letters, the conviction was so strong that the poem was lost, as to inspire the celebrated Petrarch with the idea of supplying its place by his *Africa*, the subject of which production is also the second Punic war. This point, however, is contested among scholars. During the sittings of the council of Constance, Poggio succeeded in finding a manuscript of Silius, probably at the monastery of St. Gall. A copy was made of this, which thus became the original of all those of which the earlier editors made use, until Carrion discovered, about 1576, at Cologne, another manuscript, which he thought might date from the era of Charlemagne. A third, of still more modern date, was found at Oxford. Villebrune, who published, in 1781, an edition of Silius Italicus, which he pretended was the first complete one that had as yet appeared, inserted into the sixteenth book, after the twenty-sev-

enth verse, thirty-three other verses which he said he had found in a MS. at Paris, and which exist, with some slight changes, in the sixth book of Petrarch's Latin poem entitled *Africa*. More recent critics, however, and especially Heyne, in a review written by him on Villebrune's edition, think that the thirty-three verses in question are rather from the pen of Petrarch than from that of Silius.—The best editions of Silius Italicus are, that of Ruperti, *Götting.*, 1795–98, 2 vols. 8vo, and that of Lemaire, *Paris*, 1823, 2 vols. 8vo. The following editions are also valuable: that of Drakenborch, *Traject. ad Rhén.*, 1717, 4to; that of Villebrune, *Paris*, 1781, 8vo; and that of Ernesti, *Lips.*, 1791–92, 2 vols. 8vo. (*Schöll, Hist. Lit. Rom.*, vol. 2, p. 496, *seqq.*—Compare Bähr, *Gesch. Röm. Lit.*, vol. 1, p. 151, *seqq.*)

SILVĀNUS, a deity among the Romans who had the care of fields and cattle (*Virg., Æn.*, 8, 601), and who also presided over boundaries. (*Horat., Epod.*, 2, 22.) Groves were consecrated to him, whence perhaps his name. He was usually represented as old, and bearing a cypress plucked up by the roots (*Virg., Georg.*, 1, 20); and the legend of Apollo and Cyparissus was transferred to him. (*Serv. ad Virg., Georgica*, 1, 20.) The usual offering to Silvanus was milk. (*Horat., Epist.*, 2, 1, 143.)—According to the Agrimensores, every possession should have three Silvani: one domestic, for the possession itself; one *agrestic*, for the herdsman; a third *oriental*, for whom there should be a grove on the boundary. (*Seal. ad Fest., s. v. Marsædis.*) The meaning of this obscure passage probably is, that Silvanus was to be worshipped under three different titles: as protector of the family, for we meet with an inscription *Silvano Larum*; of the cattle, perhaps those on the public pastures; and of the boundaries, that is, of the whole possession. The Mars Silvanus, to whom Cato directs prayer to be made for the health of the oxen, is probably the second (*R. R.*, 80), and the third is the *tutor ænum* of Horace. (*Keightley's Mythology*, p. 536.)

SILURĀS, the people of South Wales in Britain, occupying the counties of *Hersford*, *Monmouth*, *Radnor*, *Brecon*, and *Glamorgan*. Their capital was Ica Silurum, now *Carlton*, on the river Ica or *Uske*, in Glamorganshire. Caractacus was a prince of the Silures. (*Tac., Ann.*, 12, 33.—*Plin.*, 4, 16.)

SIMĒTHUS, a river of Sicily, rising in the Hermean Mountains, and falling into the sea below Catana. It receives a number of small tributaries, and is now the *Giarretta*. (*Thucyd.*, 2, 65.—*Plin.*, 3, 8.)

SIMMIAS, I. a native of Rhodes, who flourished between the 120th and 170th Olympiad. The period when he existed cannot be ascertained with more precision. He published a collection of poems, in four books, entitled *Διάδοχα ποιήματα*. Athenæus cites one of these pieces, entitled *Gorgo*, which appears to have been of an epic character. Simmias is perhaps the inventor of a kind of sport, which we do not find to have existed before him, and which could only have been conceived of at a period when the public taste had become extremely corrupt. It consisted in so arranging verses of different length as to represent an altar, an axe, a pair of wings, &c., the several verses at the same time making one poem. A production of this kind, forming a *Σύμφυγ*, or Pandean pipe, has been often ascribed to Theocritus. It consists of twenty verses, every two of the same size, and each pair less in length than the preceding; thus representing an instrument composed of ten pipes, each shorter than the other. (*Schöll, Hist. Lit. Gr.*, vol. 3, p. 126.) The remains of Simmias are given in the Anthology, and in the Poeta Græci Minores.—II. A Theban philosopher, a disciple of Socrates. He was the author of twenty-three dialogues, which are lost. (*Schöll, Hist. Lit. Gr.*, vol. 2, p. 357.)

SIMŌIS (*-entis*), a river of Troas, which rises in

Mount Ida, and falls into the Xanthus. (Consult remarks on the Topography of Troy, under the article *Troja*.)

SIMON, a shoemaker or currier of Athens, from whom the so-called *σκυτακοὶ δαλῶγοι*, mentioned under the article *Plato*, are supposed to have derived their origin. (*Vid. Plato*, near the conclusion of that article.)

SIMONIDES, I. a poet of Amorgus (one of the Cyclades), who died 490 B.C. He was grandfather to the poet of Ceos, from whom he is distinguished by the title of *ἰαμβογράφος*, "writer of Iambics." We have a fragment of his preserved by Stobæus; it is a satyric piece, remarkable for its simplicity and elegance, and is entitled *περὶ γυναικῶν*, "Of Women." This fragment is given in the collections of Winterton, Brunck, Gaisford, and separately by Koeler, *Gött.*, 1781, 8vo, and Welcker, *Bonn*, 1835, 8vo.—II. A celebrated poet of Ceos, son of Leoprepes, and grandson of the preceding, born at the city of Iulis, 556 B.C., and who lived until B.C. 467. He attained, in fact, to a very advanced age, so as to become a contemporary not only of Pittacus and the Pisistratids, but also of Pausanias, king of Sparta: and he is named as the friend of these illustrious men. He was held in high estimation at the court of Hiero I., king of Syracuse, and acted as a mediator between this prince and Theron, king of Agrigentum, reconciling these two sovereigns at the very moment when the two armies were on the point of contending. Plato calls him a wise man (*De Repub.*, 1, p. 411), and Cicero, in speaking of him, says, "*Non enim poeta suavis, verum etiam cateroquin doctus sapiensque traditur.*" (*N. D.*, 1, 22.) He was the master of Pindar. Simonides is regarded as the first who applied the alternating hexameter and pentameter, or, in other words, the early elegiac measure to mournful and plaintive themes. This measure at first was martial in its character, not plaintive, and Cullinus is said to have been its inventor. Neither was it called *elegy* originally, but *ἔπος*, a general term, subsequently confined to heroic verse. Simonides became so distinguished in elegy (in the later acceptance of the term) that he must be included among the great masters of elegiac song. He is stated to have been victorious at Athens over Æschylus himself, in an elegy in honour of those who fell at Marathon, the Athenians having instituted a contest of the chief poets. The ancient biographer of Æschylus who gives this account, adds, in explanation, that the elegy requires a tenderness of feeling which was foreign to the character of Æschylus. To what degree Simonides possessed this quality, and, in general, how great a master he was of the pathetic, is proved by his celebrated lyric piece, containing the lament of Danaë, and by other remains of his poetry. Probably, also, in the elegies upon those who died at Marathon and Plataea, he did not omit to bewail the death of so many brave men, and to introduce the sorrows of the widows and orphans, which was quite consistent with a lofty, patriotic tone, particularly at the end of the poem. Simonides likewise used the elegy as a plaintive song for the death of individuals; at least the Greek Anthology contains several pieces, of his, which appear not to be entire epigrams, but fragments of longer elegies, lamenting, with heartfelt pathos, the death of persons dear to the poet. Among these are the beautiful and touching verses concerning Gorgo, who, while dying, utters these words to her mother: "*Remain here with my father, and become, with a happier fate, the mother of another daughter, who may tend thee in thy old age.*"—It was Simonides who first gave to the epigram the perfection of which, consistently with its purpose, it was capable. In this respect he was favoured by the circumstances of his time; for, on account of the high consideration which he enjoyed in both Athens and the Peloponnesus, he

was frequently employed by the states which had fought against the Persians, to adorn with inscriptions the tombs of their fallen warriors. The best and most celebrated of these epigrams is the inimitable inscription on the Spartans who died at Thermopylae, and which actually existed on the spot: "*Stranger, tell the Lacedaemonians that we are lying here in obedience to their laws.*" Never was heroic courage expressed with such calm and unadorned grandeur. With the epitaphs are naturally connected the inscriptions on sacred offerings, especially where both refer to the Persian war; the former being the discharge of a debt to the dead, the latter a thanksgiving of the survivors to the gods. Among these, one of the best refers to the battle of Marathon, which, from the neatness and elegance of the expression, loses its chief beauty in a prose translation (*fragm.*, 25, ed. *Gaisf.*).—The form of nearly all the epigrams of Simonides is elegiac. When, however, a name (on account of a short between two long syllables) could not be adapted to the dactylic metre (as *Ἀρχιβατήρ*, *Ἰπποβόκος*), he employed trochaic measures. (*Müller, Hist. Lit. Gr.*, p. 126, *seqq.*)—Simonides became avaricious and mercenary towards the close of his life; and it is mentioned as a subject of dispraise, that he was the first who wrote verses for money. Plutarch relates, that some one having reproached him with his sordid avarice, he returned for answer that age, being deprived of all other sources of enjoyment, the love of money was the only passion left for it to gratify. (*Plut., An seni rei gerenda respubl.*—*Opp.*, ed. *Reiske*, vol. 9, p. 142.)—To Simonides the Greek alphabet is indebted for four of its letters, E, T, H, Q; and to him, also, is attributed the invention of a system of *Mnemonics*, or artificial memory. (Compare *Cic., de Orat.*, 2, 84.—*Plin.*, 7, 24.—*Quintil.*, 11, 2, 11.)—It was Simonides that gave the celebrated answer, when Hiero of Syracuse inquired of him concerning the nature of God. The poet requested one day for deliberating on the subject; and when Hiero repeated his question on the morrow, the poet asked for two days. As he still went on doubling the number of days, and the monarch, lost in wonder, asked him why he did so, "Because, the longer I reflect on the subject, the more obscure does it appear to me to be." (*Cic., N. D.*, 1, 32.)—The remains of the poetry of Simonides are given in the collections of Stephens, Brunet, Gaisford, Boissonade, and others. The latest separate edition is that of *Schneider, Bruns.*, 1835, 8vo. (*Schöll, Hist. Gr. Lit.*, vol. 1, p. 242.—*Id. ib.*, vol. 2, p. 139.—Compare *Bode, Gesch. der Lyrischen Dichtkunst*, vol. 2, p. 122, *seqq.*)—III. A son of the daughter of the preceding. Being also a native of Ceos, he was distinguished from the former by the appellation of the "Younger." He wrote "on Inventions" (*περὶ εὐρημάτων*), and a work in three books on Genealogies. (*Beurette, Mem. de l'Acad. des Inscri.*, &c., vol. 13, p. 257.—*Van Goens, De Simonide Ceo et philosopho, Traj. ad Rhen.*, 1768, 4to.)

SIMPPLICIUS, a native of Cilicia, the clearest and most intelligent of the commentators on Aristotle. His commentaries are extremely valuable, from their containing numerous fragments of the works of previous philosophers. He flourished in the seventh century of our era, and was involved in some disputes with the Christian writers, particularly John Philoponus, on the subject of the eternity of the world. His commentary on the *Manual* or *Enchiridion* of Epictetus is regarded as one of the best moral treatises that has come down to us from antiquity, and proves that Simplicius did not confine himself to the tenets of the Peripatetic school. The works of Aristotle on which we have the commentaries of Simplicius are, the eight books of *Physics*, the *Categories*, the four books of the *Heavens*, and the three of the *Soul*. The best edition of the commentary on Epictetus is that of Schweig-

haeuser, making part of his edition of Epictetus. The commentary on the *Physics* of Aristotle was published at the Aldine press, Ven., 1526, fol., and a Latin version by Lucillus Philaltheus, Ven., 1643, fol. The most correct edition of the commentary on the *Categories* is that printed at Basle, 1551, fol. There is a Latin version by Dorotheus, Ven., 1641, 1660, 1667, fol. The commentary on the treatise *De Caelo* was published at the Aldine press, Ven., 1626, fol. There is a Latin version by Morbeke, printed in 1540, and another by Dorotheus, in 1544, both from the Venice press. The commentary on the treatise *De Anima* was published at the Aldine press in 1527, and a version by Faseolus, made from a more perfect manuscript, in 1543, both at Venice. There is another version by Lungus, which has been often reprinted at Venice. (*Schöll, Hist. Lit. Gr.*, vol. 7, p. 129, *seqq.*)

SIN, I. a people of India, called by Ptolemy the most eastern nation of the world. These Sinae, who dwelt beyond the river Serus, or *Menam*, are supposed to have occupied what is now *Cochin-China*.—II. There was another nation of the same name east of Serica, who were probably settled in *Shen-si*, the most westerly province of China, immediately adjoining the great wall. In this province was a kingdom called *Tsin*, which probably gave name to these Sinae.

SINDI, a people of Asiatic Sarmatia, below the Cimmerian Bosphorus, and opposite the Tauric Chersonese. Their name would seem to indicate an Indian origin, and Ritter has attempted to prove this in his learned work on the earlier history of some of the ancient nations. (*Ritter, Vorhalle*, p. 157, *seqq.*)

SINGARA, a strongly fortified city of Mesopotamia, the southernmost possession of the Romans on the eastern side of that country, from Trajan to Constantine. It is now *Sindschar*. (*Plin.*, 5, 26.—*Ann. Marcell.*, 18, 5.)

SINGUS, a town of Macedonia, in the peninsula of Sithonia, on the lower shore of, and giving name to, the Sinus Singiticus. The modern name of the gulf is that of *Monte Santo*. (*Herod.*, 7, 123.—*Thucyd.*, 5, 18.)

SINON, a Greek, who accompanied his countrymen to the Trojan war. When the Greeks had fabricated the famous wooden horse, Sinon went to Troy, at the instigation of Ulysses, with his hands bound behind his back, and by the most solemn protestations assured Priam that the Greeks were gone from Asia, and that they had been ordered to sacrifice one of their soldiers to render the wind favourable to their return; and that, because the lot had fallen upon him, he had fled away from their camp, not to be cruelly sacrificed. These false assertions were immediately credited by the Trojans, and Sinon advised Priam to bring into his city the wooden horse which the Greeks had left behind them, and to consecrate it to Minerva. His advice was followed, and Sinon, in the night, to complete his perfidy, opened the side of the horse, from which issued a number of armed Greeks, who surprised the Trojans and pillaged their city. (*Dares Phryg.—Hom., Od.*, 8, 492.—*Virg., Æn.*, 2, 79, &c.—*Pausan.*, 10, 26.—*Q. Smyrn.*, 12, &c.)

SINÖPE, I. a daughter of the Asopus by Methone. She was beloved by Apollo, who carried her away to the borders of the Euxine Sea, in Asia Minor, where she gave birth to a son called Syrus. (*Apoll. Rhod.*, 2, 946.—*Schol.*, ad loc.)—II. A city of Paphlagonia, on the eastern coast, and a little below its northern extremity. It was the most important commercial place on the shores of the Euxine, and was founded by a Milesian colony at a very early period, even prior to the rise of the Persian empire. The particular year of its origin, however, is not known: the *Periplus Anon.* (p. 6) says it was at the time when the Cimmerians were ravaging Asia Minor. The leader of the colony was named Autolycus, and he received from the king

inhabitants of the place divine honours. In the mythology of the Greeks he became one of the companions of Jason. Various accounts, too, are given of the origin of the city's name, one of which traces it to Sinope, daughter of the Asopus. (Compare *Apoll. Rhod.*, 2, 948.—*Schol.*, ad loc.—*Plut.*, *Vit. Lucull.*—*Val. Flacc.*, 5, 108.)—The situation of Sinope was extremely well chosen. It was built on the neck of a peninsula; and, as this peninsula was secured from any hostile landing along its outer shores by high cliffs, the city only needed defending on the narrow isthmus connecting it with the mainland, while at the same time it had two convenient harbours, one on either side. The outer part of the peninsula afforded room for spacious suburbs, for gardens and fields, on which the city could easily rely for support in case of any scarcity produced by a siege. (*Polyb.*, 4, 56.—*Strabo*, 545.) Sinope soon increased in wealth and power, and became possessed of a dependant territory which reached as far as the Halys, and which was inhabited by the Leucoeyrii; it became also the parent city of many colonies along the coast. So flourishing a place could not but excite the envy of the people in the interior; and accordingly we find, from scattered hints, that it was occasionally besieged by the neighbouring satraps of Paphlagonia and Cappadocia; and yet at other times, we are informed by Xenophon (*Anab.*, lib. 5 et 6), it stood on a very friendly footing with them. It encountered more danger from the monarchs that arose subsequently to the time of Alexander. Against open attacks from these, however, it was able to make a successful stand (*Polyb.*, 4, 56); but it could not defend itself against a surprise on the part of Pharnaces. (*Strabo*, l. c.) It lost its freedom, but not its commerce and prosperity, and from this time forward became the residence of the monarchs of Pontus, until Lucullus took it from the last Mithradates. It suffered severely on this occasion, and the Roman commander stripped it of many fine statues and valuable works of art. Among the articles carried off on this occasion Strabo makes mention of the sphere of Billarus. From this period Sinope remained subject to the Roman power, and received, according to Strabo and Pliny (*Plin.*, 6, 2), a Roman colony. This colony was settled there in the year of Julius Cæsar's assassination. Strabo found the city in his time well fortified, and adorned with many handsome edifices both public and private. The commerce of the place, indeed, had somewhat declined, having been drawn off partly to Byzantium, and in part to the cities of the Tauric Chersonese. Still the thunny-fisheries in its immediate vicinity continued to afford a very lucrative branch of trade to Sinope. The city, however, had begun to decline in political importance, and we find, not it, but the city of Amasea the capital of the later province of Hellenopontus. In the middle ages Sinope made part of the petty Greek kingdom of Trapezus; and after this it had independent Christian monarchs of its own, who became conspicuous for their naval power and their piracies. (*Abulfeda*, p. 318.) The last of this dynasty surrendered his city and power to Mohammed II. in 1461. The modern *Sinub* is still one of the most important Turkish cities along this coast.—Sinope was the birthplace of the Cynic Diogenes. (*Mannert*, *Geogr.*, vol. 6, pt. 3, p. 11, seqq.)—III. An ancient Greek city of Campania. (*Vid.* *Sinuessa*.)

SINTI, a Thracian community, who appear to have occupied a district on the banks of the Strymon north of the Siropeones. (*Thucyd.*, 2, 98.) Strabo affirms that they once occupied the island of Lemnos, thus identifying them with the Sinties of Homer. (*Il.*, 1, 598.—*Od.*, 8, 294.—*Strab.*, 231.—*Id.*, 457.—*Id.*, 549.—*Schol.* ad *Thucyd.*, 2, 98.—*Gatterer*, *Comment. Soc.*, Gött., a., 1784, vol. 6, p. 63.) Livy informs us that, on the conquest of Macedonia by the

Romans, the Sinti, who then formed part of that empire, were included in the first region, together with the Bialtes; and he expressly states that this part of the region was situated west of the Strymon, that is, on the right bank of that river (45, 29). Ptolemy gives the name of Sintice to the district in question (p. 88.—*Cramer's Ancient Greece*, vol. 1, p. 304).—Etymologists derive the name of the Sinties from the Greek verb *σίνω*, "to hurt" (*σίνωρ*, "an injurer;" *σίνωρ*, "a pirate"), either because they were reputed to have been the inventors of weapons, or from their having been notorious for piracy. Ritter, however, seeks to connect their name, and, consequently, their origin, with that of India. (*Vorhalle*, p. 162.)

SINUSSA, a city of Campania, subsequently of New Latium, on the seacoast, southeast of Minturnæ and the mouth of the Liris. It was said to have been founded on the ruins of Sinope, an ancient Greek city. (*Livy*, 10, 21.—*Pliny*, 3, 5.—*Mela*, 2, 4.) Strabo tells us that Sinuessa stood on the shore of the Sinus Setinus, and derived its name from that circumstance, or, in other words, from the *sinuosity* of the coast (*σίνος γὰρ ὁ κόλπος*.—*Strab.*, 234). The same writer, as well as the Itineraries, informs us that it was traversed by the Appian Way. Horace also confirms this. (*Sat.*, 1, 5, 39, seqq.) Sinuessa was colonized together with Minturnæ, A.U.C. 456 (*Liv.*, 10, 21), and ranked also among the maritime cities of Italy. (*Id.*, 27, 38.—*Polyb.*, 3, 91.) Its territory suffered considerable devastation from Hannibal's troops when opposed to Fabius. Cæsar, in his pursuit of Pompey, halted for a few days at Sinuessa, and wrote from that place a very conciliatory letter to Cicero, which is to be found in the correspondence with Atticus (9, 16).—The epithet of *sepens*, which Silius Italicus applies to this city (8, 529), has reference to some warm sources in its neighbourhood, now called *Bagni*, while Sinuessa itself answers to the rock of *Monte Dragone*. The Aquæ Sinuessanæ are noticed by Livy (22, 14), Tacitus (*Hist.*, 1, 77.—*Ann.*, 12, 66), Plutarch (*Vit. Oth.*), Pliny (31, 2), Martial (6, 42), and others. (*Cramer's Anc. Italy*, vol. 2, p. 133.)

SION, one of the hills on which Jerusalem was built. (*Vid.* *Hierosolyma*.)

SIPHNOΣ, an island in the Ægean Sea, one of the Cyclades, southeast of Seriphus, and northeast of Melos. Herodotus reports that it was colonized by the Ionians (8, 48), and elsewhere speaks of the Siphnians as deriving considerable wealth from their gold and silver mines. In the age of Polycrates their revenue surpassed that of all the other islands, and enabled them to erect a treasury at Delphi equal to those of the most opulent cities; and their own principal buildings were sumptuously decorated with Parian marble. Herodotus states, however, that they afterward sustained a heavy loss from a descent of the Samians, who levied upon the island a contribution of 100 talents (3, 57, seqq.). In Strabo's time it was so poor and insignificant as to give rise to the proverb *Σίφνιον ἐσπράγαλον*, and *Σίφνιος ἄρπαβόν*. (*Strab.*, 44.—*Eustath.*, ad *Dion. Perieg.*, 525.) Pliny makes it twenty-eight miles in circuit (4, 12). Siphnos was famed for its excellent fruit, and its pure and wholesome air. The modern name is *Siphanto*. (*Cramer's Anc. Greece*, vol. 3, p. 405.—*Bondelmonti*, *Ins. Archipel.*, p. 82.)

SIPONTUM, or, as the Greeks write it, Σιπών (gen. *-ώντος*), a city of Apulia, in the district of Daunia, and to the southwest of the promontory of Garganum. It lay on the Sinus Uria. Sipontum was a place of great antiquity, and unquestionably of Greek origin, even though the tradition which ascribes its foundation to Diomedes should be regarded as fabulous. Strabo, who mentions this story, states that the name of this city was derived from the circumstance of

great quantities of cuttle-fish (in Greek *ovria*) being thrown up by the sea on its shore. (*Strab.*, 284.) Little is known of the history of Sipontum before its name appears in the annals of Rome. We are told by Livy that it was occupied by Alexander, king of Epirus, when he was invited into Italy to aid the Tarentines against the Bruttii and Lucani (8, 24). Several years after, that is, A.U.C. 558, the same historian informs us that a colony was sent to Sipontum; but it does not appear to have prospered; for, after the lapse of a few years, it was reported to the senate that the town had fallen into a state of complete desolation, upon which a fresh supply of colonists was sent there (34, 45; 39, 22). Sipontum is said to have been once dependant upon the city of Arpi. In Strabo's time its harbour could still boast of some trade, particularly in corn, which was conveyed from the interior by means of a considerable stream, which formed a lake near its mouth. (*Strab.*, 284.) This river, which Strabo does not name, is probably the Cerbalus of Pliny (3, 11), now *Cervaro*. The ruins of Sipontum are said to exist about two miles to the west of *Manfredonia*, the foundation of which led to the final desertion of Sipontum by its inhabitants, as they were transferred by King Manfred to this modern town, which is known to have risen under his auspices. (*Cramer's Anc. Italy*, vol. 2, p. 279.)

SIPYLUS, I. a mountain in Lydia, rising to the south of Magnesia, and separated by a small valley from the chain of Tmolus to the southeast, and by another from Mount Mastinsia to the south. Sipylus is celebrated in Grecian mythology as the residence of Tantalus and Niobe, and the cradle of Pelops. These princes, though more commonly referred to by classical writers as belonging to Phrygia, must, in reality, have reigned in Lydia if they occupied Sipylus; not the mountain merely, but a city of the same name, situate on its slope. (*Cramer's Asia Minor*, vol. 1, p. 437.) "It was growing dark," observes Mr. Arundell, "or we might have seen, as the traveller by daylight may, the abrupt termination of Mount Sipylus at a considerable distance on the left, behind which lies the town of Magnesia." It is described by Chishull as a stupendous precipice, consisting of a naked mass of stone, and rising perpendicularly almost a furlong high. It was here, too, that Chishull saw "a certain cliff of the rock, representing an exact niche and statue, with the due shape and proportion of a human body." (*Arundell's Asia Minor*, vol. 1, p. 18.) The rock just mentioned as the termination of Sipylus, and also the rock of the Acropolis behind the town of Magnesia, have been supposed to contain some magnetic iron; and the magnet is said to have taken its name from this locality. Mr. Arundell and some friends made experiments in this quarter, to test, as far as it could be done, the truth of the story, and found clear indications of considerable magnetic influence. (*Arundell's Asia Minor*, l. c., in not.)—II. A city of Lydia, situate on the slope of Mount Sipylus. According to traditions preserved in the country, it was swallowed up at an early period by an earthquake, and was plunged into a crater afterward filled by a lake. The existence of this lake, named Sale or Salce, is attested by Pausanias, who reports, that for some time the ruins of the town, which he calls *Idea*, if the word be not corrupt, could be seen at the bottom. (*Pausan.*, 7, 24.—*Siebelis*, ad loc.—*Cramer's Asia Minor*, vol. 1, p. 437.)

SIRÆNES (*Σειρῆνες*), two maidens celebrated in fable, who occupied an island of Ocean, where they sat in a mead close to the seashore, and with their melodious voices so charmed those that were sailing by, that they forgot home and everything relating to it, and abode with these maidens till they perished from the impossibility of taking nourishment, and their bones lay whitening on the strand. As Ulysses

and his companions were on their homeward voyage from *Æma*, they came first to the island of the Sirens. But they passed in safety; for, by the directions of Circe, Ulysses stopped the ears of his companions with wax, and had himself tied to the mast; so that, although, when he heard the song of the Sirens, he made signs to his companions to unbind him, they only secured him the more closely; and thus he listened to the accents of the Sirens, and yet, notwithstanding, escaped. (*Od.*, 12, 52, seqq.)—Hesiod describes the mead of the Sirens as blooming with flowers (*ἀνθεύουσα*), and their voice, he said, stilled the winds. (*Schol. ad Apoll. Rhod.*, 4, 892.—*Schol. ad Od.*, 12, 169.) Their names were said to be Aglaiopheme (*Clear-voice*) and Thelxiepea (*Magic-speech*); and it was feigned that they threw themselves into the sea with vexation at the escape of Ulysses, an oracle having predicted that, as long as they should arrest the attention of all passengers by the sound of their voice, they should live, but no longer. The author of the Orphic Argonautica, however, places them on a rock near the shore of *Ætna*, and makes the song of Orpheus end their enchantment, and cause them to fling themselves into the sea, where they were changed into rocks. (*Orph. Argon.*, 1284, seqq.—Compare *Nonnus*, 13, 312.)—It was afterward fabled that they were the daughters of the river-god Achelous by the muse Terpsichore or Calliope, or by Sterope, daughter of Portæon. (*Apoll. Rhod.*, 4, 895.—*Apollod.*, 1, 3, 4.—*Tzetx. ad Lycophr.*, 712.—*Eudocia*, 373.) Some said that they sprang from the blood which ran from the god of the Achelous when his horn was torn off by Hercules. Sophocles calls them the daughters of Phorcys (*ap. Plut.*, *Sympos.*, 9, 14); and Euripides terms them the children of Earth. (*Hes.*, 168.) Their number was also increased to three, and their names are given with much variety. One was said to play on the lyre, another on the pipes, and the third to sing. (*Tzetx. ad Lycophron*, 712.)—Contrary to the usual process, the mischievous part of the character of the Sirens was afterward left out, and they were regarded as purely musical beings with entrancing voices. Hence Plato, in his Republic (10, p. 617), places one of them on each of the eight celestial spheres, where their voices form what is called the music of the spheres; and when the Lacedæmonians had laid siege to Athens (*Ol.*, 94, 1), Bacchus, it is said, appeared in a dream to their general, Lysander, ordering him to allow the funeral rites of the new Siren to be celebrated, which was at once understood to be Sophocles, then just dead. (*Pausan.*, 1, 21, 1.—*Plin.*, 7, 29.) Eventually, however, the artists laid hold on the Sirens, and furnished them with the feathers, feet, wings, and tails of birds.—The ordinary derivation of the word *Siren* is from *seipa*, "a chain," to signify their attractive power. The Semitic *shtr*, "song," appears, however, more likely to be the true root; and the Sirens may be regarded as one of the wonders told of by the Phœnician mariners. (*Keightley's Mythology*, p. 269, seqq.)

SIRENŪSÆ INSULÆ, three small rocks on the south side of the promontory of Surrentum or Minerva, detached from the island, and celebrated in fable as the islands of the Sirens. (*Strabo*, 22.—*Id.*, 247.—*Meis.*, 2, 4.—*Plin.*, 3, 5.)

SIRIS, a city of Lucania, on the Sinus Tarentinus, at the mouth of a river of the same name, now the *Siana*. It was said to have been founded by a Trojan colony, which was afterward expelled by some Ionians, who migrated from Colophon under the reign of Alyattes, king of Lydia; and who, having taken the town by force, changed its name to that of Policæum. (*Strabo*, 264.) The earliest writer who has mentioned this ancient city is the poet Archilochus, cited by Athenæus (12, 5). He speaks with admiration of the surrounding country, and in a manner which proves that

he was well acquainted with its beauties. In the passage of Athenæus where Archilochus is cited, Athenæus represents the inhabitants of Siris as rivalling in all respects the luxury and affluence of the Sybarites. Siris and Sybaris had reached, about 500 B.C., the summit of their prosperity and opulence. Shortly afterward, according to Justin (20, 2), the former of the two was almost destroyed in a war with Metapontum and Sybaris. When the Tarentines settled at Heraclæa they removed all the Sirites to the new town, of which Siris became the harbour. (*Diod. Sic.*, 12, 36. — *Strabo*, 263.) No vestiges of this ancient colony are now apparent; but it stood probably on the left bank, and at the mouth of the *Sinno*. (*Cramer's Anc. Italy*, vol. 2, p. 352.)

SIRIUS (*Σείριος*), a name given to the dog-star. Homer, though he mentions the dog-star twice, does not employ the term. Hesiod, however, uses the appellation on several occasions (*Op. et D.*, 417, 587, 619. — *Scut. Herc.*, 397.) But then, in the first of these passages, he means by Sirius the sun. Nor is this the only instance of such a usage. In Hesychius, for example, we have, *Σείριος, ὁ ἥλιος, καὶ ὁ τοῦ κυνὸς ἀστήρ*, "Sirius, the sun, and also the dog-star." He then goes on to remark, *Σοφοκλῆς τὸν ἀστῆρα οὕτως κινᾷ: ὁ δὲ Ἀρχιλόχος τὸν ἥλιον, Ἴωνος δὲ πάντα τὰ ἀστῆρα*, "*Sophocles calls the dog-star so; Archilochus the sun; Ibycus, however, all the stars.*" Eratosthenes, moreover (c. 33), observes: "Such stars (as Sirius) astronomers call *Σείριος* (Sirios) διὰ τὴν τῆς φλογὸς κίνησιν, "on account of the tremulous motion of their light." It would seem, therefore, that *σειριος* was originally an appellative, in an adjective form, employed to indicate any bright and sparkling star; but which originally became a proper name for the brightest of the fixed stars. The verb *σειριάζειν*, formed from this, is, according to Proclus, a synonyme of *λάμπειν*, "to shine," "to be bright." (*Ideler, Sternnamen*, p. 239, seqq.)

SIRMIO, a peninsula on the shores of the Lacus Benacus (*Lago di Garda*), now *Sirmione*, and the favourite residence, in former days, of the poet Catullus. (*Catull.*, 31.)

SIRMIMUM, an important city of Pannonia Inferior, on the northern side of the *Saavus* or *Save*, between Ulmi and Bassiana. Under the Roman sway it was the metropolis of Pannonia. The Emperor Probus was born here. The ruins of Sirmium may be seen at the present day near the town of *Mitrovitz*. (*Plin.*, 3, 25. — *Zosim.*, 2, 18. — *Herodian*, 7, 2. — *Amm. Marc.*, 21, 10.)

SISĀPO, a town, or, rather, village of Hispania, in the northern part of Bætica, supposed to answer to *Almaden*, on the southwestern limits of *La Mancha*. The territory around this place not only yielded silver, but excellent cinnabar; and even at the present day large quantities of quicksilver are still obtained from the mines at *Almaden*. The Sisapone of Ptolemy (probably the same with the Cissalonne of Antoninus) was a different place, and lay more to the northwest of the former, among the *Ōretani*. (*Mannert, Geogr.*, vol. 1, p. 316. — *Ukert*, vol. 2, p. 378.)

SISESTUS, L., a Roman historian, the friend of Pomponius Atticus. He wrote a history, from the taking of Rome by the Gauls down to the wars of Sylla, of which some fragments are quoted in different authors. He was considered superior to all the Roman historians that had preceded him, and hence Varro entitled his own treatise on history *Sisenna*. This same writer commented on Plautus. (*Schöll, Hist. Lat. Rom.*, vol. 1, p. 164.)

SISIGAMBS or **SISYGAMBS**, the mother of Darius, the last king of Persia. She was taken prisoner by Alexander the Great, at the battle of Issus, with the rest of the royal family. The conqueror treated her with the greatest kindness and attention, saluted her

with the title of mother, and often granted to her intercession what he had sternly denied to his favourites and ministers. On the death of Alexander, a most touching tribute to his memory was offered by Sisigambis. She who had survived the massacre of her eighty brothers, who had been put to death in one day by Ochus, the loss of all her children, and the entire downfall of her house, now, on the decease of the enemy and conqueror of her line, seated herself on the ground, covered her head with a veil, and, notwithstanding the entreaties of her grandchildren, refused nourishment, until, on the fifth day after, she expired. (*Quint. Curt.*, 3, 3, 22. — *Id.*, 5, 2, 20. — *Id.*, 10, 5, 24. — *Thirlwall's Greece*, vol. 7, p. 117.)

SISYPHUS, I. the son of *Æolus*, was said to have been the founder of Ephyræ, or ancient Corinth. He married Merope, the daughter of Atlas, by whom he had four sons, Glauco, Ornytion, Thersandrus, and Halmus. When Jupiter carried off *Ægina*, the daughter of the *Asopus*, the river-god, in his search, came after her to Corinth. Sisyphus, on his giving him a spring for *Acrocorinthus*, informed him who the ravisher was. The King of the Gods sent Death to punish the informer; but Sisyphus contrived to outwit Death, and even to put fetters on him; and there was great joy among mortals, for no one died. Pluto, however, set Death at liberty, and Sisyphus was given up to him. When dying, he charged his wife to leave his body unburied; and then, complaining to Pluto of her unkindness, he obtained permission to return to the light, to upbraid her with her conduct. But, when he found himself again in his own house, he refused to leave it. Mercury, however, reduced him to obedience; and when he came down, Pluto set him to roll a huge stone up a hill, a never-ending still-beginning toil; for, as soon as it reached the summit, it rolled back again down to the plain. The craft of Sisyphus, of which the following is an instance, was proverbial. Autolycus, the son of Mercury, the celebrated cattle-stealer, who dwelt on Parnassus, used to deface the marks of the cattle which he carried off in such a manner as to render it nearly impossible to identify them. Among others, he drove off those of Sisyphus, and he defaced the marks as usual; but, when Sisyphus came in quest of them, he, to the great surprise of the thief, selected his own beasts out of the herd; for he had marked the initial of his name under their hoof. (The ancient form of the *Σ* was *Ο*, which is of the shape of a horse's hoof.) Autolycus forthwith cultivated the acquaintance of one who had thus proved himself too able for him; and Sisyphus, it is said, seduced or violated his daughter Anticlea (who afterward married Laertes), and thus was the real father of Ulysses. (*Pherecyd.*, ap. *Schol. ad Od.*, 19, 43. — *Schol. ad Il.*, 10, 267. — *Tzet.*, ad *Lycophr.*, 344, &c.) — Homer calls Sisyphus the most crafty of men (*Il.*, 6, 153); Hesiod speaks of him in a similar manner (ap. *Schol. ad Pind.*, *Pyth.*, 4, 252); Ulysses sees him rolling his stone in *Ærebus* (*Od.*, 11, 593). Of the antiquity of this legend, therefore, there can be little doubt. Sisyphus, that is, the *Very-wise*, or perhaps the *Over-wise* (*Σίονφος, quasi Σι-σοφος*, by a common reduplication), seems to have originally belonged to that exalted class of myths in which we find the *Iapetides*, *Ion*, *Tantalus*, and others, where, under the character of persons with significant names, lessons of wisdom, morality, and religion were sensibly impressed on the minds of men. Sisyphus is, then, the representative of the restless desire of knowledge, which aspires to attain a height it is denied man to reach; and, exhausted in the effort, suddenly falls back into the depths of earthly weakness. This is expressed in the fine picture of the *Odyssey*, where every word is significant, and where, we may observe, Sisyphus is spoken of in indefinite terms, and not assigned any earthly locality or parentage. (*Welcker*,

Tril., p. 550.) In the legendary history, however, we find him placed at Corinth, and apparently the representative of the trading spirit of that city. He is, as we have already said, a son of *Æolus*, probably on account of his name (*Αἶολος*, "*cunning*"); or it may be that the crafty trader is the son of the *Windman*, as the wind enables him to import and export his merchandise. He is married to a daughter of the symbol of navigation, *Atlas*, and her name would seem to indicate that he is engaged with men in the active business of life (*Μέποιες*, *mortals*, from *μῆπος*, *death*; *οῦ* being a mere adjectival ending). His children are *Glaucus*, a name of the sea-god; *Ornytion* (*Quick-mover*); *Thersandrus* (*Warm-man*); and *Halmus* (*Seaman*), who apparently denote the fervour and bustle of commerce. (*Keightley's Mythology*, p. 399, *seqq.*—*Welcker, Tril.*, p. 550, *seqq.*—*Völcker, Myth. der Iap.*, p. 118, *not.*)—II. A dwarf of M. Antony. He was of very small stature, under two feet, but extremely shrewd and acute, whence he obtained the name of *Sisyphus*, in allusion to the cunning and dexterous chieftain of fabulous times. (*Horat., Sat.*, 1, 3, 47.—Compare *Heindorf, ad loc.*)

SITHONIA, the central one of the three promontories which lie at the southern extremity of Chalcidice in Macedonia. As Chalcidice was originally a part of Thrace, the term *Sithonia* is often applied by the poets to the latter country; hence the epithet *Sithonis*.—The *Sithonians* are mentioned by more than one writer as a people of Thrace. (*Lycophr.*, 1408, *et Schol., ad loc.*) Elsewhere the same poet alludes obscurely to a people of Italy descended from the *Sithonian giants* (v. 1354).

STRONES, a German tribe in Scandinavia (*Tacitus, Germ.*, 54), separated by the range of Mount Sevo from the *Suiones*. Reichard places them on the southern side of Lake Malar, where the old city of *Si-tuna* or *Sig-tuna* once lay. (*Bischoff und Möller, Wörterb. der Geogr.*, p. 923.)

STRIFUS, P., a Roman knight, a native of Nuceria, and hence called *Nucerinus* by Sallust (*Cat.*, 21). Having been prosecuted a short time before the discovery of Catiline's conspiracy, he fled from a trial, and, being accompanied by a body of followers, betook himself to Africa, where he afterward proved of service to Julius Cæsar, against Scipio and Juba, and received the city of Cirta as his reward. (*Appian, Bell. Civ.*, 4, 55.—*Vid. Cirta.*)

SLAVI, an ancient and powerful tribe in Sarmatia, stretching from the Dniester to the Tanais, and called also by the name of *Autes*. Having united with the *Venedi*, they moved onward towards Germany and the Danube, and became engaged in war with the Franks that dwelt north of the Rhine. In the reign of Justinian they crossed the Danube, invaded Dalmatia, and finally settled in the surrounding territories, especially in what is now called *Slavonia*. As belonging to them were reckoned the *Bohemani* or *Bohemi* (*Bohemians*); the *Maharenses*; the *Sorabi*, between the Elbe and Saale; the *Silesii*, *Poloni*, *Cassubii*, *Rugii*, &c. They did not all live under one common rule, but in separate communities. They are represented as large, strong, and warlike, but very deficient in personal cleanliness. Among the descendants of the Slavonic race may be enumerated the *Russians*, *Poles*, *Bohemians*, *Moravians*, *Carinthians*, &c. (Consult *Helmond, Chron. Slavorum*.—*Karamsin, Histoire de l'Empire de Russie, trad. par St. Thomas, Paris, 1819-26.*—*Foreign Quarterly*, vol. 3, p. 152, *seqq.*)

SMARAGDUS MONS (Σμαράγδος ὄρος), a mountain of Egypt, to the north of Berenice, where emeralds (*smaragdi*) were dug. It appears to have been one of a group of mountains, and the highest of the number; and all of them would seem to have contained more or less of this valuable material. The modern name of this mountain is *Zubara*, and the situation is

twenty-five miles in a straight line from the Red Sea. These mines were formerly visited by Bruce, whose account of them is amply confirmed by the latest travellers. The *Smaragdus Mons* appears to have been a very short distance from the sea; being that called by the Arabs *Madden Uzzumurd*, or the *Mine of Emeralds*. (*Strab.*, 225.—*Plin.*, 37, 5.—*Russell's Egypt*, p. 418.)

SMERDIS, I. a son of Cyrus, put to death by order of his brother Cambyses. The latter, it seems, had become jealous of Smerdis, who had succeeded in partially bending the bow which the *Ichthyophagi* had brought from the King of *Æthiopia*, a feat which no other Persian had been able to accomplish. Cambyses had also subsequently dreamed that a courier had come to him from Persia (he was at this period in Egypt) with the intelligence that Smerdis was seated on his throne, and touched the heavens with his head. This vision having filled him with alarm, lest Smerdis might destroy him in order to seize upon the crown, he despatched Prexaspes, a confidential agent, to Persia, with orders to kill Smerdis, which was accordingly done. According to one account, he led the prince out on a hunt, and then slew him; while others said that he brought him to the borders of the Persian Gulf, and there threw him headlong from a precipice. (*Herod.*, 3, 30.)—II. One of the *Magi*, who strongly resembled Smerdis the brother of Cambyses. As the death of the prince was a state secret, to which, however, some of the *Magi* appear to have been privy, the false Smerdis declared himself king on the death of Cambyses. This usurpation would not, perhaps, have been known, had he not taken too many precautions to conceal it. Otanes, a Persian noble of the first rank, suspecting at last that there was some imposture, from the circumstance of Smerdis never quitting the citadel, and from his never inviting any of the nobility to his presence, discovered the whole affair through his daughter Phædyma. This female had been the wife of Cambyses, and, with the other wives of the late king, had been retained by the usurper. At her father's request, she felt the head of Smerdis while he slept, and discovered that he had no ears. Otanes, on this, was fully convinced that the pretended monarch was no other than the magus Smerdis, he having been deprived of his ears by Cyrus on account of some atrocious conduct. Upon this discovery, the conspiracy ensued which ended with the death of Smerdis, and the elevation of Darius, son of Hystaspes, to the vacant throne. (*Herod.*, 3, 69, *seqq.*) A general massacre of the *Magi* also ensued, which was commemorated by the annual festival called by the Greeks *Magophonia*. (Consult remarks at the beginning of the article *Magi*.)

SMINTHEUS (two syllables), one of the surnames of Apollo. He was worshipped under this name in the city of Chrysa, where he also had a temple called *Sminthium*. The names *Smintheus* and *Sminthium* are said to have been derived from the term *σμήθος*, which in the *Æolic* dialect signifies a *rat*; and Strabo gives the following legend on the subject, from the old poet Callinus. According to him, the *Teucri*, migrating from Crete, were told by an oracle to settle in that place where they should first be attacked by the original inhabitants of the land. Having halted for the night in this place, a large number of field-mice came and gnawed away the leathern straps of their baggage and thongs of their armour. Deeming the oracle fulfilled, they settled on the spot, and raised a temple to Apollo Smintheus. Various other fabulous tales respecting these rats are to be found in Strabo, who observes that there were numerous spots on this coast to which the name of *Sminthia* was attached. The temple itself was called *Sminthium*. (*Strab.*, 604, 612.) The same geographer, however, does not allow, as Scylax does (p. 36), that this edi-

fice, or the Chryse here mentioned, were those to which Homer has alluded, in the commencement of the first book of the *Iliad*, as the abode of Chryse, the priest of Apollo. He places these more to the south, and on the Adramyttian Gulf. (*Strab.*, l. c.)—The best explanation, however, of the whole fable appears to be that which makes the rat to have been in Egypt a type of primitive night. Hence this animal, placed at the feet of Apollo's statue, indicated the victory of day over night; and at a later period it was regarded as an emblem of the prophetic power of the god, which read the events of the future, notwithstanding the darkness that enveloped them. (*Constant, De la Religion*, vol 2, p. 394, *in notis*.)

SMYRNA, a celebrated city of Asia Minor, on the coast of Ionia, and at the head of a bay to which it gave name. The place was said to have derived its name from an Amazon so called, who, having conquered Ephesus, had in the first instance transmitted her appellation to that city. The Ephesians afterward founded the town, to which it has ever since been appropriated; and Strabo, who dwells at length on this point, cites several poets to prove that the name of Smyrna was once applied specifically to a spot near Ephesus, and afterward generally to the whole of its precincts. The same writer affirms that the Ephesian colonists were afterward expelled from Smyrna by the Æolians; but, being aided by the Colophonians, who had received them into their city, they once more returned to Smyrna and retook it. (*Strabo*, 634.) Herodotus differs from Strabo in some particulars: he states that Smyrna originally belonged to the Æolians, who received into the city some Colophonian exiles. These afterward basely requited the hospitality of the inhabitants by shutting the gates upon them while they were without the walls celebrating a festival, and so made themselves masters of the place. (*Pausan.*, 5, 8.) They were besieged by the Æolians, but to no purpose; and at last it was agreed that they should remain in possession of the place upon delivering up to the former inhabitants their private property. (*Herod.*, 1, 149.) Smyrna after this ceased to be an Æolian city, and became a member of the Ionian confederacy. It was subsequently taken and destroyed by Alyattes, king of Lydia, and the inhabitants were scattered among the adjacent villages. (*Herod.*, 1, 16.—*Scylax*, p. 37.) They lived thus for the space of four hundred years, and the city remained during all this time deserted and in ruins, until Antigonus, one of Alexander's generals, charmed with the situation, founded, about twenty stadia from the site of the old, a new city called Smyrna, on the southern shore of the gulf. Lysimachus completed what Antigonus had begun, and the new city became one of the most beautiful in Lower Asia. (*Strabo*, 646.) Another account makes Alexander the founder of this city, and Pliny and Pausanias both adopt this opinion; but it is contradicted by the simple fact that Alexander, in his expedition against Darius, never came to this spot, but passed on rapidly from Sardis to Ephesus. (*Pliny*, 6, 29.—*Pausan.*, 7, 5.)—Smyrna was one of the many places that laid claim to being the birthplace of Homer, and it enjoyed, perhaps, the best title of all to this distinguished honour. In commemoration of the bard, a beautiful square structure was erected, called Homerion, in which his statue was placed. This same name was given to a brass coin, struck at Smyrna in commemoration of the same event. (*Strabo*, l. c.—*Cic.*, *pro Arch.*, c. 8.) The Smyrneans also showed a cave, where it was said that Homer composed his verses. Chandler informs us that he had searched for this cavern, and succeeded in discovering it above the aqueduct of the Meles. It is about four feet wide, the roof formed of a huge rock, cracked and slanting, the sides and bottom sandy. Beyond it is a passage cut, leading into a kind of well.

(*Travels in Asia Minor*, p. 91.)—Under the Roman sway Smyrna still continued a flourishing city, though not, as some have supposed, the capital of the province of Asia. Its schools of eloquence and philosophy were in considerable repute. (*Aristid.*, *in Smyrna*.) The Christian Church flourished also through the zeal and care of Polycarp, its first bishop, who is said to have suffered martyrdom in the stadium of the city, about 166 years after the birth of our Saviour. (*Iren.*, 3, 3, 4, p. 176.) There is also an epistle from Ignatius to the Smyrneans, and another addressed to Polycarp. Smyrna experienced great vicissitudes under the Greek emperors. Having been occupied by Tachas, a Turkish chief, towards the close of the eleventh century, it was nearly destroyed by a Greek fleet, commanded by John Duca. It was, however, restored by the Emperor Comnenus, but suffered again severely from a siege which it sustained against the forces of Tamerlane. Not long after this (A.D. 1083), it fell into the hands of the Turks. The Greeks shortly after obtained possession of it anew, only again to lose it; and, under Mohammed I., the city became finally attached to the Turkish empire. It is now called *Ismir*, and by the Western nations *Smyrna*, and is the great mart of the Levant trade. (*Mannert, Geogr.*, vol. 6, pt. 3, p. 332, *seqq.*—*Cramer's Asia Minor*, vol. 1, p. 337, *seqq.*)

SOCRATES, a celebrated philosopher, born at Alopece, a village near Athens, B.C. 469. His parents were of low rank. His father, Sophroniscus, was a statuary; his mother, Phænarete, a midwife. Sophroniscus brought up his son, contrary to his inclination, in his own manual employment; in which Socrates, though his mind was constantly aspiring after higher objects, was not unskilled. While he was a young man, he is said to have made statues of the habited Graces, which were allowed a place in the citadel of Athens. Upon the death of his father he was left with no other inheritance than the small sum of 80 *minæ* (about 1400 dollars), which, through the dishonesty of a relation, to whom Sophroniscus left the charge of his affairs, he soon lost. This laid him under the necessity of supporting himself by labour, and he continued to practise the art of statuary in Athens; at the same time, however, devoting all the leisure he could command to the study of philosophy. Crito, a wealthy Athenian, remarking the strong propensity to study which this young man discovered, and admiring his ingenious disposition and distinguished abilities, took him under his patronage, and intrusted him with the instruction of his children. The opportunities which Socrates by this means enjoyed of attending the public lectures of the most eminent philosophers, so far increased his thirst after wisdom, that he determined to relinquish his occupation, and every prospect of emolument which that might afford, in order to devote himself entirely to his favourite pursuit. His first preceptor in philosophy was Anaxagoras. After this eminent master of the Ionic school left Athens, Socrates attached himself to Archelaus. Under these instructors he diligently prosecuted the study of nature, in the usual manner of the philosophers of the age, and became well acquainted with their doctrines. Prodicus, the sophist, was his preceptor in eloquence, Evenus in poetry, Theodorus in geometry, and Damo in music. Aspasia, a woman no less celebrated for her intellectual than her personal accomplishments, whose house was frequented by the most celebrated characters of the day, had also some share in the education of Socrates. With these endowments, both natural and acquired, Socrates appeared in Athens under the respectable characters of a good citizen and a true philosopher. Being called upon by his country to take up arms in the long and severe struggle between Athens and Sparta, he signalized himself at the siege of Potidea by both his valour

SOCRATES.

and the hardihood with which he endured fatigue. During the severity of a Thracian winter, while others were clad in furs, he wore only his usual clothing, and walked barefoot upon the ice. In an engagement, in which he saw Alcibiades, whom he accompanied during this expedition, falling down wounded, he advanced to defend him, and saved both him and his arms, and then, with the utmost generosity, entreated the judges to give the prize of valour, although justly his own due, to the young Alcibiades. Several years afterward, Socrates voluntarily entered upon a military expedition against the Boeotians, during which, in an unsuccessful engagement at Delium, he retired with great coolness from the field; when, observing Xenophon lying wounded on the ground, he took him upon his shoulders, and bore him out of the reach of the enemy. Soon afterward he went out a third time, in a military capacity, in the expedition for the purpose of reducing Amphipolis; but this proving unsuccessful, he returned to Athens, and remained there until his death. It was not until Socrates was upward of sixty years of age that he undertook to serve his country in any civil office. At that age he was chosen to represent his own district in the senate of five hundred. In this office, though he at first exposed himself to some degree of ridicule from want of experience in the forms of business, he soon convinced his colleagues that he was superior to them all in wisdom and integrity. While they, intimidated by the clamours of the populace, were willing to put to the vote the illegal proposition relative to the Athenian commanders who had conquered at the Arginusæ, Socrates, as presiding officer for the day, remained unshaken, and declared that he would only act as the law permitted to be done. Under the subsequent tyranny he never ceased to condemn the oppressive and cruel proceedings of the thirty tyrants; and when his boldness provoked their resentment, so that his life was in danger, fearing neither treachery nor violence, he still continued to support, with undaunted firmness, the rights of his fellow-citizens. The tyrants, that they might create some new ground of complaint against Socrates, sent an order to him to apprehend, along with several others, a wealthy citizen of Salamis: the rest executed the commission; but Socrates refused, saying that he would rather himself suffer death than be instrumental in inflicting it unjustly upon another. Observing with regret how much the opinions of the Athenian youth were misled, and their principles and taste corrupted by so-called philosophers, who spent all their time in refined speculations upon nature and the origin of things; and by mischievous sophists, who taught in their schools the arts of false eloquence and deceitful reasoning, Socrates formed the wise and generous design of instituting a new and more useful method of instruction. He therefore assumed the character of a moral philosopher: and, looking upon the whole city of Athens as his school, and all who were disposed to lend their attention as his pupils, he seized every occasion of communicating moral wisdom to his fellow-citizens. He passed his time chiefly in public. It was his custom in the morning to visit the places of public resort, and those set apart for gymnastic exercises; at noon to appear among the crowds in the market-place or courts of law; and to spend the rest of the day in those parts of the city where he would be likely to meet with the largest number of persons. The method of instruction which Socrates chiefly made use of was to propose a series of questions to the person with whom he conversed, in order to lead him to some unforeseen conclusion. He first gained the assent of his respondent to some obvious truths, and then obliged him to admit others, in consequence of their relation or resemblance to those to which he had already assented. Without making use of any direct argument or persuasion, he chose to lead the person he meant to instruct

SOCRATES.

to deduce the truths of which he wished to convince him, as a necessary consequence from his own concessions. He commonly conducted these conferences with such address as to conceal his design, till the respondent had advanced too far to recede. On some occasions he made use of ironical language, that vain men might be caught in their own replies, and be compelled to confess their ignorance. He never assumed the air of a morose and rigid preceptor, but communicated useful instruction with all the ease and pleasantness of polite conversation. Socrates was not less distinguished by his modesty than his wisdom. His discourses betrayed no marks of arrogance or vanity. He professed "to know only this, that he knew nothing." In this declaration, which he frequently repeated, he had no other intention than to convince his hearers of the narrow limits of the human understanding. Nothing was farther from his thoughts than to encourage universal scepticism: on moral subjects he always expressed himself with confidence and decision; but he was desirous of exposing to contempt the arrogance of those pretenders to science who would acknowledge themselves ignorant of nothing.—The moral lessons which Socrates taught, he himself diligently practised; and hence he excelled other philosophers in personal merit no less than in his method of instruction. His conduct was uniformly such as became a teacher of moral wisdom.—Though Socrates was rather unfortunate in his domestic connexion, yet he converted this infelicity into an occasion of exercising his virtues. Xanthippe, concerning whose ill-humour ancient writers relate many amusing tales, was certainly a woman of a high and unmanageable spirit. But Socrates, while he endeavoured to curb the violence of her temper, improved his own. And, after all, indeed, it is very probable that the infirmities of this female have been greatly exaggerated, and that calumny has had some hand in finishing the picture. (*Vid. Xanthippe.*)—We have already alluded to the constant warfare between Socrates and the Sophists. It was this same warfare that brought him, how undeservedly we need hardly say, under the lash of the comic Aristophanes. Not that the poet was in this case guilty either of the foulest motives or of the grossest mistake; but if we suppose, what is in itself much more consistent with the opinions and pursuits of the comic bard, that he observed the philosopher attentively, indeed, but from a distance, which permitted no more than a superficial acquaintance, we are then at no loss to understand how he might have confounded him with a class of men with which he had, in reality, so little in common, and why he singled him out to represent them. He probably first formed his judgment of Socrates by the society in which he usually saw him. Aristophanes, too, might either immediately, or through hearsay, have become acquainted with expressions and arguments of Socrates, apparently contrary to the established religion. And, indeed, it is extremely difficult to determine the precise relation in which the opinions of Socrates stood to the Grecian polytheism. He not only spoke of the gods with reverence, and conformed to the rites of the national worship, but testified his respect for the oracles in a manner which seems to imply that he believed their pretensions to have some just ground. On the other hand, he acknowledged one Supreme Being as the framer and preserver of the universe (*ὁ τὸν ὅλον κόσμον συντάττων τε καὶ συνέχων.*—*Mem.*, 4, 3, 13): used the singular and the plural number indiscriminately concerning the object of his adoration; and when he endeavoured to reclaim one of his friends, who scoffed at sacrifices and divination, it was, according to Xenophon, by an argument drawn exclusively from the works of the one Creator. (*Mem.*, 1, 4.) We are thus tempted to imagine that he treated many points to which the vulgar attached great importance, as matters of indifference, on which it was nei-

ther possible nor very desirable to arrive at any certain conclusion: that he was only careful to exclude from his notion of the gods all attributes which were inconsistent with the moral qualities of the Supreme Being; and that, with this restriction, he considered the popular mythology as so harmless that its language and rites might be innocently adopted.—The motives which induced Aristophanes to bring Socrates on the stage in preference to any other of the sophistical teachers, are much more obvious than the causes through which he was led to confound them together. Socrates, from the time that he abandoned his hereditary art, became one of the most conspicuous and notorious persons in Athens. There was, perhaps, hardly a mechanic who had not, at some time or other, been puzzled or diverted by his questions. (*Mem.*, 1, 2, 37.) His features were so formed by nature, as to serve, with scarcely any exaggeration, for a highly laughable mask. His usual mien and gait were no less remarkably adapted to the comic stage. He was subject to fits of absence, which seem now and then to have involved him in ludicrous mistakes and disasters. Altogether, his exterior was such as might of itself have tempted another poet to find a place for him in a comedy. It would be wrong, however, to suppose, as some have done, that the holding up of Socrates to ridicule in the comedy of the "Clouds" was the prelude, and, in fact, the true cause of his condemnation and death. In the first place, twenty-four years intervened between the first representation of the "Clouds" and the trial of the philosopher; and, besides, Aristophanes was not the only comic poet who traduced him and his disciples on the stage. Eupolis, for example, had charged him with a sleight of hand like that described in the "Clouds" (*Schol. ad Nub.*, 180), and had also introduced Chærophon, in his *Kolákes*, as a parasite of Callias. (*Schol., Plat., Bekker*, p. 331.) The time, in fact, in which Socrates was brought to trial, was one in which great zeal was professed, and some was undoubtedly felt, for the revival of the ancient institutions, civil and religious, under which Athens had attained to her past greatness; and it was to be expected that all who traced the public calamities to the neglect of the old laws and usages should consider Socrates as a dangerous person. But there were also specious reasons, which will presently be mentioned, for connecting him more immediately with the tyranny under which the city had lately groaned. His accusers, however, were neither common sycophants, nor do they appear to have been impelled by purely patriotic motives. This, however, is a point which must always remain involved in great uncertainty. Anytus, who seems to have taken the lead in the prosecution, and probably set it on foot, is said to have been a tanner, and to have acquired great wealth by his trade (*Schol., Plat., Apol. Socr.*, p. 331, *Bekker*); but he was also a man of great political activity and influence, for the Thirty thought him considerable enough to include him in the same decree of banishment with Thrasylus and Alcibiades (*Xen., Hist. Gr.*, 2, 3, 42), and he held the rank of general in the army at Phyle. (*Lysias, Agorat.*, p. 137.) With him were associated two persons much inferior to him in reputation and popularity: a tragic poet named Melitus or Meletus, in whose name the indictment was brought, and who, if we may judge of him from the manner in which he is mentioned by Aristophanes, was not very celebrated or successful in his art. The other associate was one Lycon, who is described as an orator (*Apol.*, p. 24.—Compare *Diog. Laert.*, 2, 38), and who probably furnished all the assistance that could be derived from experience in the proceedings and temper of the law-courts. According to an opinion ascribed to Socrates himself (*Apol.*, p. 23), they were all three instigated by merely personal resentment, which he had innocently provoked by his

personal habits.—The indictment charged Socrates with three distinct offences: with not believing in the gods which the state believed in; with introducing new divinities; and with corrupting the young. The case was one of those in which the prosecutor was allowed to propose the penalty due to the crime (*ἀγὼν τμητός*); Melitus proposed death. Before the cause was tried, Lysias composed a speech in defence of Socrates, and brought it to him for his use. But he declined it as too artificial in its character. Among the works of Plato is an Apology, which purports to be the defence which he really made; and, if this was written by Plato, it probably contains the substance at least of his answer to the charge. The tone is throughout that of a man who does not expect to be acquitted. The first head of the indictment he meets with a direct denial, and observes that he has been calumniously burdened with the physical doctrines of Anaxagoras and other philosophers. But that part which relates to the introduction of new divinities he does not positively contradict; he only gets rid of it by a question which involves his adversary in an apparent absurdity. The charge itself seems to have been insidiously framed, so as to aggravate and distort a fact which was universally notorious, but which was then very little understood, and has continued ever since to give rise to a multitude of conjectures. Socrates, who was accustomed to reflect profoundly on the state of his own mind, had, it seems, gradually become convinced that he was favoured by the gods (who, as he believed, were always willing to communicate such a knowledge of futurity to their worshippers as was necessary to their welfare) with an inward sign, which he describes as a voice, by which, indeed, he was never positively directed, but was often restrained from action. It was by this inward monitor that he professed to have been prohibited from taking a part in public business. In the latter part of his life its warning had been more frequently repeated, and it had consequently become a matter of more general notoriety. There was nothing in such a claim at all inconsistent with any doctrine of the Greek theology. But the language of the indictment was meant to insinuate that in this supernatural voice Socrates pretended to hear some new deity, the object of his peculiar worship.—His answer to the third charge is also somewhat evasive, and seems to show that he did not understand its real drift. Nevertheless, we have the best evidence that it was on this the issue of the trial mainly turned. Æschines, who had often, probably, heard all the particulars of this celebrated cause from his father, asserts that Socrates was put to death because it appeared that he had been the instructor of Critias (*Timarch.*, p. 24); and that the orator neither was mistaken, nor laid too much stress on this fact, seems to be clearly proved by the anxiety which Xenophon shows to vindicate his master on this head. (*Mem.*, 1, 2.) But, at the same time, we learn from him, that the prosecutors did not confine themselves to this example of the evils which had arisen from the teaching of Socrates, and that they made him answerable also for the calamities which Alcibiades had brought upon his country. It was, however, no doubt, the case of Critias that supplied them with their most efficacious appeals to the passions of their hearers. Critias, the bloodthirsty tyrant, the deadly enemy of the people, had once sought the society of Socrates, and had introduced his young cousin and ward, Charmides, to the philosopher's acquaintance. It was true, and probably was not disputed by the accusers of Socrates, that Critias had afterward been entirely alienated from him. But this fact, and many others along with it, were not likely to counteract the impression that he contributed to form the mind and character of Critias. When we consider, too, that Socrates, notwithstanding his con-

duet during the Anarchy, must have been accounted one of the party of the city, since he remained there throughout the whole period, and that the prosecutors were probably able to give evidence of many expressions apparently unfavourable to democracy, which had fallen from him in his manifold conversations, we cannot be surprised that the verdict was against him, but rather, as he himself professed to be, that the votes of the judges were almost equally divided. It appears, indeed, most likely, that if his defence had been conducted in the usual manner, he would have been acquitted; and that, even after the conviction, he would not have been condemned to death if he had not provoked the anger of the court by a deportment which must have been interpreted as a sign of profound contempt or of insolent defiance. When the verdict had been given, the prisoner was entitled to speak in mitigation of the penalty proposed by the prosecutor, and to assign another for the court to decide upon. Socrates is represented as not only disdaining to deprecate its severity by such appeals as were usually made in the Athenian tribunals to the feelings of the jurors, but as demanding a reward and honour instead of the punishment of a malefactor; and he was at last only induced by the persuasions and offers of his friends to name a trifling pecuniary mulct. The execution of his sentence was delayed by the departure of the Theoris, the sacred vessel which carried the yearly offerings of the Athenians to Delos. From the moment that the priest of Apollo had crowned its stern with laurel until its return, the law required that the city should be kept pure from all pollution, and, therefore, that no criminal should be put to death. The opening ceremony had taken place on the day before the trial of Socrates, and thirty days elapsed before the Theoris again sailed into the Piræus. During this interval some of his wealthy friends pressed him to take advantage of the means of escape which they could easily have procured for him. But he refused to prolong a life which was so near to its natural close—for he was little less than seventy years old—by a breach of the laws, which he had never violated, and in defence of which he had before braved death; and his attachment to Athens was so strong that life had no charms for him in a foreign land. His imprisonment was cheered by the society of his friends, and was probably spent chiefly in conversation of a more than usually elevated strain. When the summons came, he drank the fatal cup of hemlock in the midst of his weeping friends, with as much composure, and as little regret, as the last draught of a long and cheerful banquet. The sorrow which the Athenians are said to have manifested for his death, by signs of public mourning, and by the punishments inflicted on his prosecutors, seems not to be so well attested as the alarm it excited among his most eminent disciples, who perhaps considered it as the signal of a general persecution, and are said to have taken refuge at Megara and other cities. (*Diog. Laert.*, 2, 19, *seqq.*—*Enfield, Hist. Philos.*, vol. 4, p. 164, *seqq.*—*Ritter, Hist. Philos.*, vol. 2, p. 1, 16, *seqq.*—*Thirlwall's Greece*, vol. 4, p. 265, *seqq.*)—II. Surnamed Scholasticus, an ecclesiastical historian, who flourished about the middle of the fifth century. He was a native of Constantinople, and a pupil of the grammarians Ammonius and Hellenius. Socrates wrote an ecclesiastical history in seven books, from 306 to 439 A.D. He at first took for his guide the work of Rufinus; but having afterward perceived, from the works of Athanasius and from the correspondence of other fathers of the church, that Rufinus had fallen into great errors, he retouched the first two books of his history. It is an exact and judicious work, and is written with great simplicity. The severely orthodox have charged him with leaning to the opinions of the Novatians, and at other times with being led away by a certain Sabinus, who made a

collection of the acts of councils. Both reproaches, however, are devoid of foundation.—The best edition of his history is that of Reading, *Cant.*, 1720, fol.

SOGDIANA, a country of Upper Asia, between the Jaxartes and Oxus, lying to the west of Scythia extra Imaum, from which it is separated by the range of Imaus. It is bounded on the north by the Jaxartes, and on the south by the Oxus, and appears to correspond at the present day to northern Bucharey, the country of the *Usbeck Tartars*, a part of the country of *Pelur* and of *Little Tibet*. The chief range of mountains in this tract was called the Sogdian, and traversed the whole region between the Oxus and Jaxartes. Among the tribes in this quarter may be enumerated the Sogdiani, the Pissacæ, the Iatii, the Tachori, &c., along the Sogdian Mountains; the Madyeni in what is now the land of the Usbeck Tartars; the Oxiani and Chorasmi along the Oxus; the Drepiani, at the sources of the Jaxartes, &c. In the middle ages, Sogdiana became famous, under the Arabic name of *Soghd*, for its great fertility, and was represented as a country eight days' journey in length, full of gardens, groves, cornfields, &c. The territory around Samarcand, in particular, the Arabian geographers describe as a terrestrial paradise. The rich valley of Soghd presented so great an abundance of exquisite grapes, melons, pears, and apples, that they were exported to Persia, and even to Hindustan. Marcanda answers to the modern Samarcand. (*Buchhoff und Müller, Wörterb. der Geogr.*, p. 925.—*Malte-Brun, Geogr.*, vol. 2, p. 378, *Am. ed.*)

SOGDIANUS, a natural son of Artaxerxes Longimanus, who murdered his brother Xerxes. He was de-throned, however, in his turn by Ochus, after a reign of only six months and fifteen days, and was suffocated in sahes according to the Persian custom. (*Diod. Sic.*, 12, 71.—*Ctes.*, 47, *seqq.*)

SOL, the Sun. (*Vid.* Apollo, Hercules, Mithras, &c.)

SOLINUS, C. JULIUS, a Latin writer, whose period is unknown. Some critics place him in the middle of the second century; while others make him contemporary with the Emperor Heliogabalus, because they find that this prince had for a colleague, in his first consulship, a certain Adventus, and Solinus dedicates his work to a friend of the same name. This production is entitled *Polyhistor*, and is divided into fifty-six, or, according to other editions, seventy chapters. It is a collection of various notices, principally geographical, taken from different authors, many of whom are now lost, but particularly from Pliny, whose text may perhaps be corrected from this abridgment. Salmasius has proved, as far as things of this nature are susceptible of proof, that Solinus published two editions of his work, the first under the title of *Collectanea rerum memorabilium*, and the other, re-touched and enlarged, under that of *Polyhistor*. These two editions have been blended and confounded together by the copyists. We have also twenty-two verses, a poem, by Solinus, entitled *Pontica*. (*Burmman, Anthol. Lat.*, vol. 2, p. 383.)—The best edition of the *Polyhistor* is that of Salmasius (Saumaise), *Traj.*, 1689, 2 vols. 8vo.

SOLIS FONS, a celebrated fountain in Africa. (*Vid.* Ammon.)

SOLÆ, I. a city of Cyprus, on the northern shore of the island, and southwest of the promontory Crommyon. The inhabitants were called *Solæi*, whence some later writers give the name of the city as *Soli*. It was founded by an Athenian colony (*Strabo*, 683), and Solon is mentioned by Herodotus as having visited Philocyprus, the tyrant of the place, and having praised him in his verse (5, 113). Plutarch informs us that, at the time of Solon's arrival, Philocyprus reigned over a small city near the river Clarius, in a strong situation indeed, but in a very indifferent soil.

As there was an agreeable plain below, Solon persuaded him to raise there a larger and more pleasant city, and to transfer thither the inhabitants of the other. He also assisted in laying out the whole, and building it in the best manner for convenience and defence, so that Philocyprus shortly had it peopled in such a manner as to excite the envy of the neighbouring princes: and, therefore, though the former city was called *Æpia*, yet, in honour of Solon, he called the new one *Soli*. This story, however, appears to want confirmation, the more particularly, as Herodotus, who is fond of relating such things, makes no mention of the matter. It is more than probable that the anecdote owed its origin to the accidental similarity between the name of Solon and that of the city. Pococke found traces of the ancient place, which still bore the name of *Soloe* (vol. 2, p. 324).—The inhabitants of this city, as well as those of *Soloe* in Cilicia, were charged with speaking very ungrammatical Greek, whence the term *Solœicism* (*Σολοικισμός*), to denote any gross violation of the idiom of a language. (*Suidas*, s. v. *Σόλοι*).—II. A city of Cilicia Campestris, near the mouth of the river *Lamus*. It was founded by an Argive colony, strengthened by settlers from the city of *Lindus* in Rhodes. By intermingling with the rude Cilicians, the inhabitants so far corrupted their own dialect as to give rise to the term *Solœicism* (*Σολοικισμός*), to denote any violation of the idiom of a language. (*Vid.* *Soloe* I.) It is doubtful whether the term in question belongs properly to the city we are now considering, or the one in Cyprus; the greater number of authorities appear to be in favour of the former. *Soloe* suffered severely from *Tigranes*, king of Armenia, who wrested the greater part of Syria, and also Cilicia, from the *Seleucidae*. He carried the inhabitants of the place to *Tigranocerta*, his Armenian capital, in order to introduce there European culture. Pompey, therefore, found *Soloe* nearly desolate in his visit to these parts during the war with the pirates, and established here the remainder of the latter after they were conquered. The city was henceforward known, besides its own name, by that of *Pompeïopolis*. (*Strab.*, 671.—*Appian*, *Bell. Mithrad.*, 105.)—This city was the birthplace of *Chrysippus*, *Menander*, and *Aratus*. (*Mela*, 1, 13.—*Strabo*, l. c.) Captain *Beaufort* gives a detailed account of the topography and remains of this interesting city. (*Karamania*, p. 261, *seqq.*) *Mezzeti* is the name which most of the natives give to the modern site. (*Beaufort*, *ib.*, p. 266.—*Mannert*, *Geogr.*, vol. 6, pt. 2, p. 67.)

SOLÆTÆ, a promontory on the western coast of *Mauritania Tingitana*, now *Cape Cantin*. (*Herod.*, 2, 32.—*Id.*, 4, 43.)

SOLON, a celebrated Athenian lawgiver, and one of the seven sages of Greece. According to the most authentic accounts, he was the son of *Exæcætes*, and was sprung from the line of *Codrus*. His father had reduced his fortune by his imprudent liberality; and Solon, in his youth, is said to have been compelled, in order to repair the decay of his patrimony, to embark in commercial adventures—a mode of acquiring wealth which was not disdained by men of the highest birth, as it frequently afforded them the means of forming honourable alliances in foreign countries, and even of raising themselves to princely rank as the founders of colonies. It was, however, undoubtedly not more the desire of affluence than the thirst of knowledge that impelled Solon to seek distant shores; and the most valuable fruit of his travels was the experience he collected of men, manners, and institutions. We are unable to ascertain the precise time at which he returned to settle in Athens; but if, as is most probable, it was in the period following *Cylon's* conspiracy, he found his country in a deplorable condition, distracted within by the contests of exasperated parties, and scarcely able to resist the attacks of its least

powerful neighbours. Even the little state of *Megara* was at this time a formidable enemy. It had succeeded in wresting the island of *Salamis* from the Athenians, who had been repeatedly baffled in their attempts to recover what they esteemed their rightful possession. The losses they had sustained in this tedious war had broken their spirit, and had driven them to the resolution of abandoning for ever the assertion of their claims. A decree had been passed, which, under penalty of death, forbade any one so much as to propose the renewal of the desperate undertaking. Solon, who was himself a native of *Salamis*, and was, perhaps, connected by various ties with the island, was indignant at this pusillanimous policy; and he devised an extraordinary plan for rousing his countrymen from their despondency. He was endowed by nature with a happy poetical talent, of which some specimens are still extant in the fragments of his numerous works; which, though they never rise to a very high degree of beauty, possess the charm of a vigorous and graceful simplicity. He now composed a poem on the loss of *Salamis*, which *Plutarch* praises as one of his most ingenious productions. To elude the prohibition, he assumed the demeanour of a madman; and, rushing into the market-place, mounted the stone from which the heralds were used to make their proclamations, and recited his poem to the bystanders. It contained a vehement expostulation on the disgrace which the Athenian name had incurred, and a summons to take the field again, and vindicate their right to the lovely island. The hearers caught the poet's enthusiasm, which was seconded by the applause of his friends, and particularly by the eloquence of his young kinsman *Pisistratus*. The restraining law was repealed, and it was resolved once more to try the fortune of arms. Solon not only inspired his countrymen with hope, but led them to victory, aided in the camp, as in the city, by the genius of *Pisistratus*. The stratagem with which he attacked the *Megarians* is variously related; but he is said to have finished the campaign by a single blow, and certainly succeeded in speedily recovering the island. We may even conclude that the Athenians at the same time made themselves masters of the port of *Megara Nisæa*, since it is said to have been soon after reconquered by the *Megarians*. The reputation which Solon acquired by this enterprise was heightened, and more widely diffused throughout Greece by the part he took in the Sacred War, which ended with the destruction of *Cirrhæ*. But already, before this, he had gained the confidence of his fellow-citizens, and had begun to exert his influence in healing their intestine divisions. The outcry against *Megacles* and his associates in the massacre had risen so high, that it became evident that quiet could never be restored until they had expiated their offence, and had delivered the city from the curse which they seemed to have brought upon it. Solon, with the assistance of the most moderate nobles, prevailed on the party of *Megacles* to submit their cause to the decision of an impartial tribunal. Under such circumstances their condemnation was inevitable: those who had survived went into exile, and the bones of the deceased were taken out of their graves and transported beyond the frontier. In the mean while the *Megarians* had not relinquished their pretensions to *Salamis*, and they took advantage of the troubles which occupied the attention of the Athenians to dislodge their garrison from *Nisæa*, and to reconquer the island, where five hundred Athenian colonists, who had voluntarily shared Solon's first expedition, had been rewarded with an allotment of lands, which gave them a predominant influence in the government. It seems probable that it was after this event that the two states, seeing no prospect of terminating by arms a warfare subject to such vicissitudes, and equally harassing to both, new that their

SOLON.

honour had been satisfied by alternate victories, agreed to refer their claims to arbitration. At their request the Lacedæmonians appointed five commissioners to try the cause. Solon, who was the chief spokesman on the Athenian side, maintained their title on the ground of ancient possession, by arguments which, though they never silenced the Megarians, appear to have convinced the arbitrators. The strongest seem to have been derived from the Athenian customs, of which he pointed out traces in the mode of interment observed in Salamis, as well as inscriptions on the tombs, which attested the Attic origin of the persons they commemorated. He is said also to have adduced the authority of the Homeric catalogue of the Grecian fleet, by forging a line which described Ajax as ranging the ships which he brought from Salamis in the Athenian station; and he interpreted some oracular verses, which spoke of Salamis as an Ionian island, in a similar sense. Modern criticism would not have been much better satisfied with the plea, which he grounded on the Attic tradition, that the sons of the same hero had settled in Attica, and had been adopted as Athenian citizens, and, in return, had transferred their hereditary dominion over the island to their new countrymen. The weight, however, of all these arguments determined the issue in favour of the Athenians; and it seems more probable that the Megarians acquiesced in a decision to which they had themselves appealed, than that, as Plutarch represents, they almost immediately renewed hostilities. Party feuds continued to rage with unabated violence at Athens. The removal of the men whom public opinion had denounced as objects of divine wrath, was only a preliminary step towards the restoration of tranquillity; but the evil was seated much deeper, and required a different kind of remedy, which was only to be found in a new organization of the state. This, it is probable, Solon already meditated, as he must long have perceived its necessity. But he saw that, before it could be accomplished, the minds of men must be brought into a frame fitted for its reception, and that this could only be done with the aid of religion. There were superstitious fears to be stilled, angry passions to be soothed, barbarous usages, hallowed by long prescription, to be abolished; and even the authority of Solon was not of itself sufficient for these purposes. He therefore looked abroad for a coadjutor, and fame directed his view to a man peculiarly qualified to meet the extraordinary emergency. This was no other than the famous Epimenides, whom his contemporaries regarded as a being of a superior nature, and who, even to us, appears in a mysterious, or, at least, an ambiguous light, from our inability to decide how far he himself partook in the general opinion which ascribed to him an intimate connexion with higher powers. This person was publicly invited to Athens, to exert his marvellous powers on behalf of the distracted city; and, when his work was accomplished, he was dismissed with tokens of the warmest gratitude. (*Vid. Epimenides.*) But, though the visit of Epimenides was attended with the most salutary consequences, so far as it applied a suitable remedy to evils which were entirely seated in the imagination, and; though it may have wrought still happier effects by calming, soothing, and opening hearts which had before only beaten with wild and malignant passions, still it had not produced any real change in the state of things, but had, at the utmost, only prepared the way for one. This work remained to be achieved by Solon. The government had long been in the hands of men who appear to have wielded it only as an instrument for aggrandizing and enriching themselves. They had reduced a great part of the class whose industry was employed in the labours of agriculture to a state of abject dependence, in which they were not only debarr'd from all but, perhaps, a merely nominal

SOLON.

share of political rights, but held even their personal freedom by a precarious tenure, and were frequently reduced to actual slavery. The smaller proprietors, impoverished by bad times or casual disasters, were compelled to borrow money at high interest, and to mortgage their lands to the rich, or to receive them again as tenants upon the same hard terms as were imposed upon those who cultivated the estates of the great land-owners. According to the laws made by the nobles, the insolvent debtor might be seized by his creditor and sold into slavery; or torn from his home and condemned to end his days in the service of a foreign master, or driven to the still harder necessity of selling his own children. The eyes of Solon had frequently been struck with the dismal monuments of aristocratical oppression scattered over the fields of Attica, in the stone-posts, which marked that what was once a property had become a pledge, and that its former owner had lost his independence, and was in danger of sinking into a still more degraded and miserable condition; and such spectacles undoubtedly moved him, no less than that which roused the holy indignation of the elder Gracchus against the Roman grandees. (*Plut., Tib. Gracch., c. 8.*) Those who groaned under this tyranny were only eager for a change, and cared little about the means by which it might be effected. But the population of Attica was not simply composed of these two classes. An ancient geographical division of the country, which, from time immemorial, had determined the pursuits and the character of its inhabitants, now separated them into three distinct parties (*Πεδιαιῖς* or *Πεδιῶταις*, *lowlanders*; *Διῶκται*, *highlanders*; and *Παραλῶται*, *the men of the coast*), animated each by its peculiar interests, views, and feelings. The possessions of the nobles lay chiefly in the plains. As a body, they desired the continuance of the existing state of things, on which their power and exclusive privileges depended; but there were among them some moderate men, who were willing to make concessions to prudence, if not to justice, and to resign a part for the sake of securing the rest. The inhabitants of the highlands, in the eastern and northern parts of Attica, do not seem to have suffered any of the evils inflicted on the lowland peasantry; but, though independent, they were probably, for the most part, poor, and generally wished for a revolution which should place them on a level with the rich. Uniting their cause with that of the oppressed, they called for a thorough redress of grievances, by reducing, namely, that enormous inequality of possessions, which was the source of degradation and misery to them and their fellows. (*Plut., Sol., 13, 29.*) The men of the coast, who probably composed a main part of that class which subsisted by trade, by the exercise of the mechanical arts, and perhaps by the working of the mines, and now included a considerable share of affluence and intelligence, were averse to violent measures, but were desirous of a reform in the constitution, which should promote the prosperity of the country by removing all grounds of reasonable complaint, and should admit a larger number to the enjoyment of those rights which were now engrossed and abused by a few. The people in general felt the need of a leader, and would have preferred even the despotic rule of one man to the tyranny of their many lords. As Solon belonged to the nobility by birth and station, and had recommended himself to the people by the proofs he had shown of activity, prudence, justice, and humanity, he was chosen, with the unanimous consent of all parties, to mediate between them, and arbitrate their quarrels, as the person most capable of remedying the disorders of the state; and, under the title of archon, was invested with full authority to frame a new constitution and a new code of laws (*Ol. 46.3, B.C. 594*). As such an office, under such circumstances, conferred

SOLON.

almost unlimited power, and an ambitious man might easily have abused it to make himself master of the state. Solon's friends exhorted him to seize the opportunity of becoming tyrant of Athens; and they were not at a loss for fair arguments to colour their foul advice, reminding him of recent instances—of Tynnondas in Euboea, and Pittacus at Mytilene, who had exercised a sovereignty over their fellow-citizens without forfeiting their love. Solon saw through their sophistry, and was not tempted by it to betray the sacred trust reposed in him; but, satisfied with the approbation of his own conscience and the esteem of his countrymen, instead of harbouring schemes of self-aggrandizement, he bent all his thoughts and energies to the execution of the great task which he had undertaken. This task consisted of two main parts: the first and most pressing business was to relieve the present distress of the commonalty; the next to provide against the recurrence of like evils, by regulating the rights of all the citizens according to equitable principles, and fixing them on a permanent basis. In proceeding to the first part of his undertaking, Solon held a middle course between the two extremes—those who wished to keep all, and those who were for taking everything away. While he resisted the reckless and extravagant demands of those who desired all debts to be cancelled, and the lands of the rich to be confiscated and parcelled out among the poor, he met the reasonable expectations of the public by his *disburdening ordinance* (*Σεισάχθεια*), and relieved the debtor, partly by a reduction of the rate of interest, which was probably made retrospective, and thus, in many cases, would wipe off a great part of the debt, and partly by lowering the standard of the silver coinage, so that the debtor saved more than one fourth in every payment. (*Plut., Sol., 15.—Vid. Boeckh, Staatsh., 2, p. 360.*) He likewise released the pledged lands from their encumbrances, and restored them in full property to their owners; though it does not seem certain whether this was one of the express objects of the measure, or only one of the consequences which it involved. Finally, he abolished the inhuman law which enabled the creditor to enslave his debtor, and restored those who were pining at home in such bondage to immediate liberty; and it would seem that he compelled those who had sold their debtors into foreign countries to procure their freedom at their own expense. The debt itself, in such cases, was of course held to be extinguished. Solon himself, in a poem which he afterward composed on the subject of his legislation, spoke with a becoming pride of the happy change which this measure had wrought in the face of Attica, of the numerous citizens whose lands he had discharged, and whose persons he had emancipated, and brought back from hopeless slavery in strange lands. He was only unfortunate in bestowing his confidence on persons who were incapable of imitating his virtue, and who abused his intimacy. At the time when all men were uncertain as to his intentions, and no kind of property could be thought secure, he privately informed three of his friends of his determination not to touch the estates of the land-owners, but only to reduce the amount of debt. He had afterward the vexation of discovering, that the men to whom he had intrusted this secret had been base enough to take advantage of it, by making large purchases of land—which at such a juncture bore, no doubt, a very low price—with borrowed money. Fortunately for his fame, the state of his private affairs was such as to exempt him from all suspicion of having had any share in this sordid transaction. He had himself a considerable sum out at interest, and was a loser in proportion by his own enactment. This seems the most probable and accurate account of Solon's measures of relief. There was, however, another, adopted by some ancient writers, which represented him as

SOLON.

having entirely cancelled all debts, and as having only disguised the violence of this proceeding under a soft and attractive mien. It does not appear that the ancients saw anything to censure in his conduct according to either view. But the example of Solon cannot fairly be pleaded by those who contend that either public or private faith may be rightly sacrificed to expediency. He must be considered as an arbitrator, to whom all the parties interested submitted their claims, with the avowed intent that they should be decided by him, not upon the footing of legal right, but according to his own view of the public interest. It was in this light that he himself regarded his office, and he appears to have discharged it faithfully and discreetly. The strongest proof of the wisdom and equity of his measures is, that they subjected him to obloquy from the violent spirits of both the extreme parties. But their murmurs were soon drowned in the general approbation with which the disordering ordinance was received; it was celebrated with a solemn festival; and Solon was encouraged, by the strongest assurances of the increased confidence of his fellow-citizens, to proceed with his work; and he now entered on the second and more difficult part of his task. He began by repealing all the laws of Draco, except those which concerned the repression of bloodshed, which were, in fact, customs hallowed by time and by religion, and had been retained, not introduced, by his predecessor. As a natural consequence, perhaps, of this measure, he published an amnesty, or act of grace, which restored those citizens who had been deprived of their franchise for lighter offences, and recalled those who had been forced into exile; and it seems probable that this indulgence was extended to the house of Megacles, the Alcmonids, as they were called from a remote ancestor, the third in descent from Nestor, and to the partners of his guilt and punishment: the city, now purified and tranquillized, might be supposed to be no longer either polluted or endangered by their presence; and it was always liable to be disturbed by their machinations so long as they remained in banishment. The four ancient tribes were retained, with all their subdivisions; but it seems probable that Solon admitted a number of new citizens; for it is said that he invited foreigners to Athens by this boon, though he confined it to such as settled their whole family and substance, and had dissolved their connexion with their native land. The distinguishing feature of the new constitution was the substitution of property for birth, as a title to the honours and offices of the state. (Compare Niebuhr, *Rom. Hist.*, 2, 305, 2d ed., *Camb. trans.*) This change, though its consequences were of infinite importance, would not appear so violent or momentous to the generation which witnessed it, since at this time these two claims generally concurred in the same person. Solon divided the citizens into four classes, according to the gradations of their fortunes, and regulated the extent of their franchise and their contributions to the public necessities by the amount of their incomes. The first class, as its name expressed, consisted of persons whose estates yielded a nett yearly income, or rent, of 500 measures of dry or liquid produce (*Πεντακοσιέδμωτοι*). The qualification of the second class was three fifths of this amount: that of the third, two thirds, or, more probably, half of the latter. The members of the second class were called *knights*, being accounted able to keep a warhorse; the name of the third class, whom we might call yeomen, was derived from the yoke of cattle for the plough, which a farm of the extent described was supposed to require (*Ζευγίται*). The fourth class comprehended all whose incomes fell below that of the third, and, according to its name, consisted of hired labourers in husbandry (*Θήτες*). The first class was exclusively eligible to the highest offices, those of the nine archons, and probably to all

others which had hitherto been reserved to the nobles; they were also destined to fill the highest commands in the army, as in later times, when Athens became a maritime power, they did in the fleet. Some lower offices were undoubtedly left open to the second and third class, though we are unable to define the extent of their privileges, or to ascertain whether, in their political rights, one had any advantage over the other. They were at least distinguished from each other by the mode of their military service; the one furnishing the cavalry, the other the heavy-armed infantry. But, for their exclusion from the dignities occupied by the wealthy few, they received a compensation in the comparative lightness of their burdens. They were assessed, not in exact proportion to the amount of their incomes, but at a much lower rate; the nominal value of their property being for this purpose reduced below the truth, that of the knights by one sixth, that of the third class by one third. The fourth class was excluded from all share in the magistracy, and from the honours and duties of the full-armed warrior, the expense of which would, in general, exceed their means: by land they served only as light troops; in later times they manned the fleets. In return, they were exempted from all direct contributions, and they were permitted to take a part in the popular assembly, as well as in the exercise of those judicial powers which were now placed in the hands of the people. We shall shortly have occasion to observe how amply this boon compensated for the loss of all the privileges that were withheld from them. Solon's classification takes no notice of any other than landed property; yet, as the example of Solon himself seems to prove that Attica must already have carried on some foreign trade, it is not unlikely that there were fortunes of this kind equal to those which gave admission to the higher classes. But it can hardly be supposed that they placed their possessors on a level with the owners of the soil; it is more probable that these, together with the newly-adopted citizens, without regard to their various degrees of affluence, were all included in the lowest class. Solon's system then made room for all freemen, but assigned to them different places, varying with their visible means of serving the state. His general aim in the distribution of power, as he himself explains it in a fragment which Plutarch has preserved from one of his poems, was to give such a share to the commonalty as would enable it to protect itself, and to the wealthy as much as was necessary for retaining their dignity; in other words, for ruling the people without the means of oppressing it. He threw his strong shield, he says, over both, and permitted neither to gain an unjust advantage. The magistrates, though elected upon a different qualification, retained their ancient authority; but they were now responsible for the exercise of it, not to their own body, but to the governed. The judicial functions of the archons were perhaps preserved nearly in their full extent; but appeals were allowed from their jurisdiction to courts numerously composed, and filled indiscriminately from all classes. (*Plut., Sol.*, 18.) Solon could not foresee the change of circumstances by which this right of appeal became the instrument of overthrowing the equilibrium which he hoped to have established on a solid basis, when that which he had designed to exercise an extraordinary jurisdiction became an ordinary tribunal, which drew almost all causes to itself, and overruled every other power in the state. He seems to have thought that, while he provided sufficiently for the security of the commonalty by permitting the lowest of its members to vote in the popular assembly, and to sit in judgment on cases in which the parties were dissatisfied with the ordinary modes of proceeding, he had also ensured the stability of his new order of things by two institutions, which appeared to be sufficient guards against the sallies of democratical extravagance

—anchors, as Plutarch expresses it, on which the vessel of state might ride safely in every storm. These were the two councils of the Four Hundred and the Areopagus. The institution of the council of the Four Hundred was uniformly attributed to Solon; and, if this opinion be correct, which has, however, been made the subject of some dispute, then, according to the theory of Solon's constitution, the assembly of the people will appear to have been little more than the organ of that council, as it could only set upon the proposition laid before it by the latter. But the judicial power which Solon had lodged in the hands of the people was the most powerful instrument on which he relied for correcting all abuses and remedying all mischiefs that might arise out of the working of his constitution. A body of 6000 citizens was every year created by lot to form a supreme court, called Helisia, which was divided into several smaller ones, not limited to any precise number of persons. The qualifications required for this were the same with those which gave admission into the general assembly, except that the members of the former might not be under the age of thirty. It was therefore, in fact, a select portion of the latter, in which the powers of the larger body were concentrated, and exercised under a judicial form. Passing over the other features of the Athenian constitution, as settled by Solon, on which our limits will not allow us to dwell, we proceed at once to the remainder of his history. Solon was not one of those reformers who dream that they have put an end to innovation, and that the changes they have wrought are exempt from the general condition of mutability. But the very provisions which he made for the continual revision and amendment of his laws, seems to show the improbability of Plutarch's account: that he enacted them to remain in force for no more than a century. They were inscribed on wooden tablets, arranged in pyramidal blocks turning on an axis; which were kept at first in the Acropolis, but were afterward, for more convenient inspection, brought down to the Prytaneum. According to Plutarch, Solon, after the completion of his work, found himself exposed to such incessant vexation from the questions of the curious and the cavils of the discontented, that he obtained permission to withdraw from Athens for ten years, and set out on the travels in which he visited Asia Minor, Cyprus, and Egypt, collecting and diffusing knowledge, and everywhere leaving traces of his presence in visible monuments or in the memories of men. But there is some difficulty in reconciling this story with chronology, since it supposes him to have found Croesus in Lydia, who did not mount the throne within twenty or thirty years after; and the alleged occasion of the journey is very doubtful, though it is in substance the same with that assigned by Herodotus. It is probable that Solon remained for several years at Athens, to observe the practical effect of his institutions, and to second their operation by his personal influence. He was, undoubtedly, well aware how little the letter of a political system can avail until its practice has become familiar, and its principles have gained a hold on the opinions and feelings of the people, and that this must be a gradual process, and liable to interruption and disturbance. Hence it could not greatly disappoint or afflict him to hear voices raised from time to time against himself, and to perceive that his views were not generally or fully comprehended. But he may at length have thought it prudent to retire for a season from the public eye, the better to maintain his dignity and popularity; and, as he himself declared, that age, while it crept upon him, still found him continually learning, we need not be surprised if, at an unusually late period of life, he set out on a long course of travels. On his return, he found that faction had been actively labouring to pervert and undo his work, and was compelled eventually

to witness the partial overthrow of his system in the usurpation of Pisistratus. (*Vid.* Pisistratus.)—It is not certain how long he survived this inroad upon his institutions; one account, apparently the most authentic, places his death in the year following that in which the revolution occurred (B.C. 559). The leisure of his retirement from public life was to the last devoted to the Muses; and if we might trust Plato's assertions on such subjects, he was engaged at the time of his death in the composition of a great poem, in which he had designed to describe the flourishing state of Attica before the Ogygian flood, and to celebrate the wars which it waged with the inhabitants of the vast island which afterward sank in the Atlantic Ocean. On the fragments of this poem, preserved in the family, Plato, himself a descendant of Solon, professes to have founded a work which he left unfinished, but in which he had meant to exhibit his imaginary state in life and action. It is certainly not improbable that Solon, when the prospect of his country became gloomy, and his own political career was closed, indulged his imagination with excursions into an ideal world, where he may have raised a social fabric as unlike as possible to the reality which he had before his eyes at home, and perhaps suggested by what he had seen or heard in Egypt. It is only important to observe that the fact, if admitted, can lead to no safe conclusions as to his abstract political principles, and can still less be allowed to sway our judgment on the design and character of his institutions. (*Thirlwall's Greece*, vol. 2, p. 23, *seqq.*)—Solon is generally ranked under the gnomic poets, and some fragments of his productions in this department have been preserved by the ancient writers. Of these the finest is his "Prayer to the Muses." The fragments of Solon are found in the collections of H. Stephens, Winter-ton, Brunck, Gaisford, and Boissonnade. —(*Schöll, Hist. Lit. Gr.*, vol. 1, p. 238.)

SOLYMI, a people of Lycia, of whom an account is given under the head of Lycia.

SOMNUS, son of Erebus and Nox, was one of the deities of the lower world, and the god of Sleep. The Latin poet Ovid (*Met.*, 11, 592, *seqq.*), probably after some Grecian predecessor, as was usually the case, gives a beautiful description of the Cave of Sleep, near the land of the Cimmerians, and of the *cortège* which there attended on him, as Morpheus, Icelos or Phor-bétér, and Phantasos; the first of whom takes the form of man to appear in dreams, the second of animals, the third of inanimate objects. (*Keightley's Mythology*, p. 200.)

SORVU, a river of India, falling into the Ganges, and now the *Saone* or *Son*. As this river towards its origin is called *Ando-nadi*, it appears that the name *Andematis* (given also in Arrian), or, rather, *Ando-natis*, can denote no other than it. (*Plin.*, 6, 18.)

SOPHÈNE, a country of Armenia, between the principal stream of the Euphrates and Mount Masius. It is now called *Zoph*. (*Dio Cass.*, 36, 36.—*Plin.*, 5, 12.)

SOPHOCLES, a celebrated tragic poet, born at Colonus, a village little more than a mile from Athens, B.C. 495. He was, consequently, thirty years junior to Æschylus, and fifteen senior to Euripides, the former having been born B.C. 525, and the latter B.C. 480.—Sophilus, his father, a man of opulence and respectability, bestowed upon his son a careful education in all the literary and personal accomplishments of his age and country. The powers of the future dramatist were developed, strengthened, and refined by a careful instruction in the principles of music and poetry; while the graces of a person eminently handsome derived fresh elegance and ripened into a noble manhood amid the exercises of the palestra. The garlands which he won attested his attainments in both these departments of Grecian education. A still more striking proof of his personal beauty and early profi-

ciency is recorded in the fact that when, after the battle of Salamis, the population of Athens stood in solemn assembly around the trophy raised by their valour, Sophocles, at the age of sixteen, was selected to lead, with dance and lyre, the chorus of youths who performed the pæan of their country's triumph. (*Athen.*, 1, p. 20, c.) The commencement of his dramatic career was marked not more by its success than by the singularity of the occasion on which his first tragedy appeared. The bones of Theseus had been solemnly transferred by Cimon from their grave in the vale of Scyros to Athens (B.C. 468.—*Marm. Arund.*, No. 57). An eager contest between the tragedians of the day ensued. Sophocles, then in his twenty-fifth year, ventured to come forward as one of the candidates, among whom was the veteran Æschylus, now for thirty years the undoubted master of the Athenian stage. Party feelings excited such a tumult among the spectators, that the archon Aphepsion had not balloted the judges, when Cimon advanced with his nine fellow-generals to offer the customary libations to Bacchus. No sooner were these completed, than, detaining his colleagues, he directed them to take with him the requisite oath, and then seat themselves as judges of the performance. Before this self-constituted tribunal Sophocles exhibited his maiden drama, and by their decision was proclaimed first victor. This remarkable triumph was an earnest of the splendid career before him. From this event, B.C. 468, to his death, B.C. 405, during a space of three-and-sixty years, he continued to compose and exhibit. Twenty times did he obtain the first prize, still more frequently the second, and never sank to the third. An accumulation of success which left the victories of his two great rivals far behind. Æschylus won but thirteen dramatic contests. Euripides was still less fortunate.—Such a continuation of poetic exertion and triumph is the more remarkable, from the circumstance that the powers of Sophocles, so far from becoming dulled and exhausted by these multitudinous efforts, seem to have contracted nothing from labour and age save a mellowed tone, a more touching pathos, a sweet and gentle character of thought and expression. The life of Sophocles, however, was not altogether devoted to the service of the Muses. In his fifty-seventh year he was one of the ten generals, with Pericles and Thucydides among his colleagues, and served in the war against Samos. But his military talents were probably of no high order, and his generalship added no brilliancy to his dramatic fame. At a more advanced age he was appointed priest to Alon, one of the ancient heroes of his country; an office more suited to the peaceful temper of Sophocles. In the civil duties of an Athenian citizen he doubtless took a part. Nay, in extreme age, we find him one of the committee of the *πρόβουλοι*, appointed, in the progress of the revolution brought about by Pisander, to investigate the state of affairs, and report thereon to the people assembled on the hill of Colonus, his native place. (*Aristot., Rhet.*, 3, 18.) And there, as *πρόβουλος*, he assented, with characteristic easiness of temper, to the establishment of oligarchy, under the council of four hundred, "as a bad thing, but the least pernicious measure which circumstances allowed." The civil dissensions and extreme reverses which marked the concluding years of the Peloponnesian war must have fallen heavily on the mind of one whose chief delight was in domestic tranquillity, and who remembered that proud day of Salaminian triumph in which he bore so conspicuous a part. His sorrows as a patriotic citizen were aggravated by the unnatural conduct of his own family. (*Vit. Anon.—Cic., de Sen.*, § 7.) Jealous at the old man's affection for a grandchild by a second wife, an elder son or sons endeavoured to deprive him of the management of his property, on the ground of dotage and incapacity. The only refutation which the

father produced, was to read before the court his *Œdipus* at Colonus, a piece which he had just composed; or, according to others, that beautiful chorus only in which he celebrates the loveliness of his favourite residence (*Cic., de Fin.*, 5, 1). The admiring judges instantly arose, dismissed the cause, and accompanied the aged poet to his house with the utmost honour and respect. Sophocles was spared the misery of beholding the utter overthrow of his declining country. Early in the year 405 B.C., some months before the defeat of *Ægospotamos* put the finishing stroke to the misfortunes of Athens, death came gently upon the venerable old man, full of years and glory. The accounts of his death are very diverse, all tending to the marvellous. Ister and Neanthes state that he was choked by a grape; Satyrus makes him to expire from excessive exertion, in reading aloud a long paragraph out of the *Antigone*; others ascribe his death to extreme joy at being proclaimed the Tragic victor. Not content with the singularity of his death, the ancient recorders of his life add prodigy to his funeral also. He died when the Athenians were cooped up within their walls, and the Lacedæmonians were in possession of Decelea, the place of his family sepulchre. Bacchus twice appeared in a vision to Lysander, the Spartan general, and bid him allow the interment; which accordingly took place with all due solemnity. Pausanias, however, tells the story somewhat differently (1, 21). Ister states, moreover, that the Athenians passed a decree to appoint an annual sacrifice to so admirable a man. (*Vit. Anon.*)—Seven tragedies alone remain out of the great number which Sophocles composed; yet among these seven we probably possess the most splendid productions of his genius. Suidas makes the number which he wrote one hundred and twenty-three. Aristophanes, the grammarian, one hundred and thirty, seventeen of which he deemed spurious. Böckh considers both statements erroneous. It appears from the argument to the *Antigone*, that this play was exhibited a little before the generalship of Sophocles, B.C. 441, and that this was his thirty-second drama; and it is known that Sophocles began to exhibit B.C. 468. Hence Böckh argues that, as during the first twenty-seven years of his dramatic career he produced thirty-two tragedies, so during the remaining thirty-six years it is not probable he composed many more than this number. He therefore supposes that the true number is seventy, or nearly so. To Iophon, the son of Sophocles, he refers many of the plays which bore the father's name; others he ascribes to the favourite grandson, Sophocles, son of Ariston, by his wife or mistress Theoris. The result of Böckh's investigation is, that of the one hundred and six dramas whose titles remain, only twenty-six can, with any certainty, be assigned to the elder Sophocles. (*Böckh, ad Trag. Græc.*, c. 8, *seqq.*)—The personal character of Sophocles, without rising into spotless excellence or exalted heroism, was honourable, calm, and amiable. In his younger days he seems to have been addicted to intemperance in love and wine. (*Cic., Off.*, 1, 40.—*Athen.*, 13, p. 603.) And a saying of his, recorded by Plato, Cicero, and Athenæus, while it confirms the charges just mentioned, would also imply that years had cooled the turbulent passions of his youth. "I thank old age," said the poet, "for delivering me from the tyranny of my appetites." Yet even in his later days, the charms of a Theoris and an Archippe are reported to have been too powerful for the still susceptible dramatist. Aristophanes, who, in his *Ranæ*, manifests so much respect for Sophocles, then just dead, had, fourteen years before, accused him of avarice; an imputation, however, scarcely reconcilable with all that is known or can be inferred respecting the character of Sophocles. The old man, who was so absorbed in his art as to incur a charge of lunacy from the utter neglect of his affairs, could hard-

ly have been a miser. A kindly and contented disposition, however blemished by intemperance in pleasure, was the characteristic of Sophocles: a characteristic which Aristophanes himself so simply and yet so beautifully depicts in that single line.

'Ο δ' εὐκόλος μὲν ἐνθάδ', εὐκόλος δ' ἐκεῖ.—*Ran.*, 82.

It was Sophocles who gave the last improvements to the form and exhibition of tragedy. To the two performers of *Æschylus* he added a third actor; a number which was never afterward increased. Under his directions the effect of theatric exhibitions was heightened by the illusion of scenery carefully painted and duly arranged. The choral parts were still farther curtailed, and the dialogue carried out to its full development. The odes themselves are distinguished by their close connexion with the business of the play, the correctness of their sentiments, and the beauty of their poetry. His language, though at times marked by harsh metaphors and perplexed constructions, is pure and majestic, without soaring into the gigantic phraseology of *Æschylus* on the one hand, or sinking into the commonplace diction of Euripides on the other. His management of a subject is admirable. No one understood so well the artful envelopment of incident, the secret excitation of the feelings, and the gradual heightening of the interest up to the final crisis, when the catastrophe bursts forth in all the force of overwhelming terror or compassion. Such was Sophocles; the most perfect in dramatic arrangements, the most sustained in the even flow of dignified thought, word, and tone, among the tragic triumvirate. Longinus, it is true, while bestowing the highest praises upon Sophocles, alleges a frequent inequality; but this is scarcely borne out by anything in his extant tragedies (§ 33.—*Theatre of the Greeks*, 3d ed., p. 43, *seqq.*).—Nature, observes Schlegel, had refused Sophocles only one gift, a voice for song. He could only call forth and guide the harmonious effusions of other voices, and is therefore said to have departed from the established custom that the poet should act a part in his own play; so that once, only, he made his appearance in the character of the blind songster, Thamyris, playing on the lyre.—In so far as he had *Æschylus* for his predecessor, who had fashioned tragedy from its original rudeness into the dignity of his *Cothurnus*, Sophocles stands, in respect to the history of his art, in such a relation to that poet, that he could avail himself of the enterprise of that original master; so that *Æschylus* appears as the projecting predecessor, Sophocles as the finishing successor. That there is more art in the compositions of the latter is evident: the restriction of the chorus in proportion to the dialogue, the finish of the rhythms and of the pure Attic diction, the introduction of more numerous persons, the richer connexion of the fables, the greater multiplicity of incidents, and the complete development, the more quiet sustentation of all moments of the action, and the more theatrical display of the decisive ones, the more finished rounding off of the whole, even in a mere outward point of view. But there is yet another respect in which he outshines *Æschylus*, and deserved the favour of Destiny, which allowed him such a predecessor, and to compete with him on the same subjects: I mean the inward harmony and completeness of his mind, by virtue of which he satisfied, from his own inclination, every requisition of the beautiful; a mind whose free impulse was accompanied by a self-consciousness clear even to transparency. To surpass *Æschylus* in daring conception might be impossible; but I maintain that it is only on account of his wise moderation that Sophocles seems to be less daring; since everywhere he goes to work with the greatest energy, nay, perhaps with more sustained severity; as a man who is accurately acquainted with his limits insists the more confident-

ly on his rights within those limits. As *Æschylus* delights in carrying all his fictions into the disturbances of the old world of Titanism, Sophocles, on the contrary, seems to avail himself of Divine interference only of necessity. He formed human beings, as was the general agreement of antiquity, better, that is, not more moral and unerring, but more beautiful and noble than they are in reality.—As characteristic of this poet, the ancients have praised that native sweetness and gracefulness, on account of which they called him the Attic Bee. Whoever has penetrated into the feeling of this peculiarity, may flatter himself that the spirit for antique art has arisen within him; for modern sensibility, very far from being able to fall in with that judgment, would be more likely to find in the Sophoclean tragedy, both in respect of the representation of bodily suffering and in the sentiments and arrangements, much that is insufferably austere.—We will now proceed to give a brief sketch of the tragedies of Sophocles that have come down to us. 1. *Αἶακ μακροτόμοπος*, "*Ajax armed with the lash*." The subject of this piece is the madness of Ajax, his death, and the dispute which arises on the subject of his interment. Many critics have regarded the play as defective, because the action does not terminate with the death of the hero; but, after this catastrophe, an incident occurs which forms a second action. To this it has been replied that there is not, in fact, any double action, since the first is not terminated by the death of Ajax, to whom burial is refused: as the deprivation of funeral rites was regarded by the ancients in the light of one of the greatest misfortunes, the spectators could not have gone away satisfied so long as the question of burial remained unsettled in the case of one whose death they had mourned.—2. *Ἠλέκτρα*, "*Electra*." The subject of this piece is the vengeance which a son, urged on by an oracle, and in obedience to the decree of Heaven, takes on the murderers of his father, by consigning to death his own mother. The character of Electra, the daughter of Agamemnon, who here plays the principal part, is admirably delineated, and sustained with exceeding ability throughout the whole play. The recognition between the brother and sister forms one of the most touching scenes in the whole compass of the Grecian drama.—3. *Οἰδίπους Τύραννος*, "*King Œdipus*." It would be difficult to conceive a subject more thoroughly tragical than that which forms the basis of this play. The grand and terrific meaning of the fable, however, as Schlegel has well remarked, is a circumstance which is generally overlooked: to that very Œdipus, who solved the riddle of human life propounded by the Sphinx, his own life remained an inexplicable riddle, till it was cleared up, all too late, in the most dreadful manner, when all was irrecoverably lost. This is a striking image of the arrogant pretensions of human wisdom, which always proceeds upon generalities, without teaching its possessor the right application of them to himself. The Œdipus Tyrannus is regarded not merely as the chef-d'œuvre of Sophocles, but also, as regards the choice and disposition of the fable, as the finest tragedy of antiquity. And yet we know that it failed of obtaining the prize. It has been imitated by Seneca, P. Corneille, and Voltaire.—4. *Ἀντιγόνη*, "*Antigone*." Creon, king of Thebes, had ordered that no one should bestow the rites of burial on Polynices, and his object in so doing was to punish him for having borne arms against his country. Antigone, sister to the young prince, listening to the dictates of affection rather than those of fear, ventures to disregard this mandate, and falls a victim to her pious act.—5. *Τραχινίαι*, "*The Trachinian Women*," or the death of Hercules. The scene is laid at Trachis, and the chorus is composed of young females of the country. Seneca has imitated this piece in his *Hercules Furens*, and Rotrou in his *Hercule Mourant*.—

6. *Φιλοκτήτης*, "*Philoctetes*." It having been decreed by fate that Troy could not be taken without the presence of Philoctetes, whom the Greeks had abandoned in the island of Lemnos, Ulysses and Pyrrhus are sent to him to induce him to return to the Grecian camp. They succeed with great difficulty in accomplishing their object. This tragedy, though very simple in its plot, is marked by a constantly increasing interest, and the characters are well supported.—7. *Οἰδίπους ἐν Κολωνῷ*, "*Œdipus at Colonus*." The subject is the death of Œdipus, near the temple of the Eumenides at Colonus. Œdipus, blind and driven from his throne, seeks, under the guidance of his daughter, for a tomb in a foreign land, where the tale of his woes had arrived before him, and causes his intended presence to be regarded with dread. There is need of manifest proof of Divine protection to enable him to find an asylum and tomb in this stranger-land, and these proofs are vouchsafed him at the closing scene of his life.—The best editions of Sophocles are, that of Brunck, *Argent.*, 1786, 4to, 2 vols., and 1786–9, 8vo, 3 vols.; that of Erfurt, *Lips.*, 1802–1811, 7 vols. 8vo; and that of Hermann, *Lond.*, 1826, 2 vols. 8vo. The separate editions of the plays are numerous, and some of them valuable.

SOPHONISBA, a daughter of Asdrubal, the Carthaginian, celebrated for her beauty and unfortunate end. (*Vid.* Masinissa.)

SOPHRON, a native of Syracuse, born about 420 B.C., and celebrated as a writer of mimes. His pieces, composed in the Doric dialect, and not in verse properly so called, but in a species of cadenced prose (*καταλογισμὸν*.—*Athen.*, ed. Schweigh., vol. 11, p. 315), were great favourites with Plato, who became acquainted with them through Dion of Syracuse, and spread the taste for this species of composition at Athens. We have only a few titles and fragments remaining of the mimes of Sophron, which are altogether insufficient to enable us to form any very definite opinion of the character of these compositions; although we know that the fifteenth Idyl of Theocritus is an imitation of one of Sophron's mimes. Bartolomey thinks that these productions were in the style of the Fables of La Fontaine. Athenæus cites two kinds of mimes: one called *Μῦθοι ἀνδρείοι* (*Male mimes*); the other *Μῦθοι γυναικείοι* (*Female mimes*). Apollodorus of Athens wrote a commentary on the mimes of Sophron.—The fragments of Sophron are given in the *Classical Journal*, vol. 4, p. 380, and with additions and corrections in the *Museum Criticum*, vol. 2, p. 340–358, 559–560. Both these collections are by Blomfield. (*Schöll, Hist. Lit. Gr.*, vol. 2, p. 117.—Consult Müller, *Die Dörer*, vol. 2, p. 360, *seqq.*)

SOPHRONISCUS, the father of Socrates.

SORACTE, a mountain of Etruria, a little to the southeast of Falerii, now *Monte Santo Silvestro*, or, as it is by modern corruption sometimes termed, *Sant' Oreste*. On the summit was a temple and grove dedicated to Apollo, to whom an annual sacrifice was offered by a people of the country, distinguished by the name of Hirpi, who were on that account held sacred, and exempted from military service and other duties. (*Plin.*, 7, 2.) The sacrifice consisted in their passing over heaps of red-hot embers without being injured by the fire. (*Æn.*, 11, 785.—*Sil. Ital.*, 5, 175.) A remarkable fountain, the exhalations of which were fatal to birds, is mentioned as existing in the vicinity of this mountain by Pliny (31, 2) and Vitruvius (8, 3.—*Cramer's Anc. Italy*, vol. 1, p. 230).

SOSTRACHUS, an Egyptian mathematician, who assisted Julius Cæsar in regulating the Roman calendar. The philosopher, by tolerably accurate observations, discovered that the year was 365 days and 6 hours; and, to make allowance for the odd hours, he invented the intercalation of one day in four years. The

duplication of the sixth day before the calends of March was called the intercalary day, and the year in which this took place was styled Bissextile. This was the Julian year, the reckoning by which commenced 45 B.C., and continued till it gave place to something more accurate, and a still farther reformation under Pope Gregory XIII. Sosigenes was the author of a commentary upon Aristotle's book *de Calo*.

SOSTI, celebrated booksellers at Rome, in the age of Horace. (*Ep.*, 1, 20, 2.—*Ep. ad Pis.*, 345.)

SOSTRATUS, I. a grammarian in the age of Augustus. He was Strabo's preceptor.—II. An architect of Cnidus, B.C. 284, who built the tower of Pharos, in the Bay of Alexandria. (*Vid.* Pharos.)—III. A poet, who wrote a poem on the expedition of Xerxes into Greece. (*Juv.*, 10, 178.—*Lemaire, ad loc.*)

SOTADES, I. an Athenian poet of the middle comedy. (*Schöll, Hist. Lit. Gr.*, vol. 2, p. 115.)—II. A Greek poet, a native of Maronea, whose name has descended to posterity covered with infamy. He was the author of Cinædologic strains, which exceeded in impurity anything that had gone before them. These poems, at first called *Ionica*, were subsequently denominated *Sotadica*. Having, before leaving Alexandria, where he had been living some time, written a very gross epigram on Ptolemy Philadelphus, that prince caused him to be pursued. Sotades was seized in the island of Cnusus, enclosed in a case of lead, and cast into the sea. (*Athen.*, 14, p. 620. *ed. Schœnigh.*, vol. 6, p. 247.)

SOTAS, a surname of the first Ptolemy. (*Vid.* Ptolemæus I.)

SOTIS, the Egyptian name of the star Sirius. (*Vid.* Sirius.)

SOTIATES, a people of Gaul conquered by Cæsar. Their country, which formed part of Aquitania, extended along the Garumna or *Garonne*, and their chief town was Sotiatum, of which some traces still remain at the modern *Sot*. (*Cæs.*, B. G., 3, 20.)

SOTIEN, a grammarian of Alexandria, preceptor to Seneca, B.C. 204. (*Senec.*, *Ep.*, 49, 60.)

SOTOMEN, an ecclesiastical historian, born, according to some, at Salamis, in the island of Cyprus, but, according to others, at Gaza or Bethulia, in Palestine. He died 450 A.D. His history extends from the year 324 to 439, and is dedicated to Theodosius the Younger, being written in a style of inelegance and mediocrity. He is chargeable with several notorious errors in the relation of facts, and has incurred censure for his commendations of Theodorus of Mopsusta, with whom originated the heresy of two persons in Christ. His history is usually printed with that of Socrates and the other ecclesiastical historians. The best edition is that of Reading, *Cantab.*, 1720, folio. A work of Sezomen, not now extant, containing, in two books, a summary account of the affairs of the Church from the ascension of our Saviour to the descent of Licinius, was written before his history.

SPARTA, a celebrated city of Greece, the capital of Laconia. It was situated in a plain of some extent, bounded on one side by the chain of Taygetus, on the other by the less elevated ridge of Mount Thornax, and through which flowed the Eurotas. In the age of Thucydides it was an inconsiderable town, without fortifications, presenting rather the appearance of a collection of villages than of a regularly-planned and well-built city. The public buildings also were very few, and these conspicuous neither for their size nor architectural beauty: so that the appearance of Lacedæmon, as the historian observes, conveyed a very inadequate idea of the power and resources of the nation (1, 10). Before the Peloponnesian war, a great portion of the city had been destroyed by an earthquake, which also occasioned considerable damage in other parts of the country. *Ælian* states that only five

houses were left in Sparta after the shock had ceased. (*Var. Hist.*, 6, 7.—*Compare Plut., Vit. Cim.—Cic., de Divin.*, 1, 50.—*Plin.*, 2, 79.) It continued without walls during the most flourishing period of Spartan history, Lycurgus having inspired his countrymen with the idea that the real defence of a town consisted solely in the valour of its citizens. When, however, Sparta became subject to despotic rulers, fortifications were erected, which rendered the town capable of sustaining a regular siege. By that time it had increased considerably, being forty-eight stadia in circumference, as we are informed by Polybius, who adds, that it was double the size of Megalopolis in regard to the number of its houses and inhabitants, though it did not occupy an equal extent of ground, since the circuit of the Arcadian city was fifty stadia. The remains of Sparta are about two miles distant from the modern town of *Missira*. Sir W. Gell observes, that "the walls are of the lower ages, and consist of fragments and blocks taken from ancient edifices. The whole city appears to have been a mile long, in which were included five hills; some of these have ruins on their summits." (*Itin. of the Morea*, p. 221.—*Compare Dodwell*, vol. 2, p. 408.) We will now proceed to give a brief outline of Spartan history. According to fable, Lacedæmon, son of Jupiter, and of the nymph Taygeta, married Sparta, daughter of Eurotas, king of the Lelages, succeeded his father-in-law on the throne, and gave the country his own name, calling the city by that of his wife. He was probably a Hellenic prince, and one of the leaders of the Achæan colony, which Archander and Architeles led into Laconia, after their expulsion from Phthiotis. Here Lacedæmon, having persuaded the natives to receive a colony, gave his own name to the united people. Among the most celebrated of the early kings was Tyndarus, with whose sons Castor and Pollux the male line of Lacedæmon became extinct. Menelaus, between whom and Lacedæmon five kings had reigned, married Helen, the daughter of Tyndarus, and thus acquired the throne. Orestes, son of Agamemnon, who had married Hermione, the daughter of Menelaus, united Argos and Mycenæ with Lacedæmon. In the reign of his son and successor Tisamenus, it was conquered by the Heraclids, about 1080 B.C., who established a diarchy or double dynasty of two kings in Sparta. For, as neither the mother nor the Delphic oracle could decide which of the twin sons of Aristodemus, Eurysthenes and Procles, was first born, the province of Laconia was assigned to them in common; and it was determined that the descendants of both should succeed them. The Lacedæmonians, however, had little cause to rejoice at the arrival of the foreigners, whose fierce disputes, under seven rulers of both houses, distracted the country with civil feuds, while it was, at the same time, involved in constant wars with its neighbours, particularly the Argives. The royal authority was continually becoming feebler, and the popular power was increased by these divisions, until the government ended in an ochlocracy. At this time Lycurgus was born for the healing of the troubles. He was the only man in whom all parties confided; and, under the auspices of the gods, whose oracle he consulted, he established a new constitution of government in Sparta (about 880 B.C.), and thus became the saviour of his country. Lacedæmon now acquired new vigour, which was manifested in her wars against her neighbours, particularly in the two long Messenian wars, which resulted in the subjugation of the Messenians (B.C. 668). The battle of Thermopylæ (B.C. 480), in which the Spartan king Leonidas successfully resisted the Persian forces at the head of a small body of his countrymen, gave Sparta so much distinction among the Grecian states, that even Athens consented to yield the command of the confederated forces, by

SPARTA.

land and sea, to the Spartans. Pausanias, guardian of the infant son of Leonidas, gained the celebrated victory of Plataea over the Persians (B.C. 479), at the head of the allies. On the same day, the Grecian army and fleet, under the command of the Spartan king Leotychides, and the Athenian general Xanthippus, defeated the Persians, by land and sea, near Mycale. With the rise of the political importance of Sparta, the social organization of the nation was developed. The power of the kings was gradually limited, while that of the ephori was increased. After the Persians had been victoriously repelled, the Grecian states, having acquired warlike habits, carried on hostilities against each other. The jealousy of Sparta towards Athens rose to such a height, that the Lacedæmonians, under pretence that the Persians, in case of a renewal of the war, would find a tenable position in Athens, opposed the rebuilding of its walls and the fortification of the Piræus. Themistocles, discerning the real grounds of this proceeding, baffled the designs of Sparta by a stratagem, and thus contributed to increase the ill-will of that state towards Athens. The tyrannical conduct of Pausanias alienated the other allies from Sparta; and most of them submitted to the command of Athens. But, while Sparta was learning moderation, Athens became so arrogant towards the confederates, that they again attached themselves to the former power, which now began to make preparations in secret for a new struggle. The Athenians, however, formally renounced the friendship of Sparta, and began hostilities (B.C. 431). This war, the Peloponnesian, ended in the ascendancy of Sparta, and the entire humiliation of her rival (405). The rivalry of the Spartan general Lysander and the king Pausanias soon after produced a revolution, which delivered the Athenians from the Spartan yoke. The Spartans next became involved in a war with Persia, by joining Cyrus the Younger in his rebellion against his brother Artaxerxes Mnemon. The Persian throne was shaken by the victories of Agesilaus; but Athens, Thebes, Corinth, and some of the Peloponnesian states were instigated by Persian gold to declare war against the Lacedæmonians, who found it necessary to recall Agesilaus. The latter defeated the Thebans at Coronæ; but, on the other hand, the Athenian commander, Conon, gained a victory over the Spartan fleet at Cnidus, and took fifty galleys. This war, known as the Boeotian or Corinthian war, lasted eight years, and increased the reputation and power of Athens by the successes of her admiral, Conon, and her fortunate expeditions against the Spartan coasts and the islands of the Ægean. The arrogance of Athens again involved her in hostilities with Persia; and Antalcidas (B.C. 388) concluded the peace which bears his name, and which, though highly advantageous to Persia, delivered Sparta from her enemies. The ambitious designs of Sparta in concluding this peace soon became apparent: she continued to oppress her allies, and to sow dissension in every quarter, that she might have an opportunity of acting as umpire. Besides other outrages, she occupied, without provocation, the city of Thebes, and introduced an aristocratical constitution there. Pelopidas delivered Thebes, and the celebrated Theban war followed, in which Athens took part, at first against Sparta, but afterward in her favour. The latter was so much enfeebled by the war that she thenceforward ceased to act a distinguished part in Greece. No state was strong enough to take the lead, and the Macedonian king Philip at last made himself master of all Greece. Agis, king of Sparta, one of the bravest and noblest of its princes, ventured to maintain a struggle for the liberties of Greece; but he lost his life in the battle of Megalopolis, against Antipater. Archidamus IV. was attacked by Demetrius Poliorcetes, and Sparta was saved with difficulty. New troubles soon

SPARTA.

arose: Cleonymus, nephew of the king Areus, invited Pyrrhus into the country in aid of his ambitious projects, which were frustrated, partly by the negligence of Pyrrhus, and partly by the courage of the Spartans. Luxury and licentiousness were continually growing more and more prevalent, and, though several succeeding kings attempted to restore the constitution of Lycurgus, and restrain the power of the ephori, it was without success. Cleomenes, indeed, accomplished a reform, but it was not permanent. After an obstinate war against the Achæans and Antigonus, king of Macedonia, Cleomenes fled to Egypt, where he died. The state remained three years without a head, and was then ruled by the tyrants Machanidas and Nabis, by the latter of whom the most atrocious cruelties were committed. The Romans and the Achæan league effected the final fall of the state, which had been upheld for a short time by Nabis. Sparta was obliged to join the Achæan league, with which it afterward passed under the dominion of the Romans. (*Encyclop. Americ.*, vol. 11, p. 529, *seqq.*)—This appears the proper place to make a few remarks relative to the legislation of Lycurgus. The first important change introduced by this lawgiver into the Spartan constitution was the creation of a senate, consisting of twenty-eight members, who, being, in all matters of deliberation, possessed of equal authority with the kings, proved an effectual check against any infringement of the laws on their part, and preserved a just balance in the state by supporting the crown against the encroachments of the people, and protecting the latter against any undue influence of the regal power. It was also enacted that the people should be occasionally summoned, and have the power of deciding any question proposed to them. No measure, however, could originate with them; they had only the right of approving or rejecting what was submitted to them by the senate and two kings. But, as danger was to be apprehended from various attempts subsequently made by the people to extend their rights in these meetings, it was at length ordained that, if the latter endeavoured to alter any law, the kings and senate should dissolve the assembly and annul the amendment. With a view of counterbalancing the great power thus committed to the legislative assembly, and which might degenerate into oligarchy, five annual magistrates were appointed, named ephori, whose office it was, like that of the tribunes at Rome, to watch over the interests of the people, and protect them against the influence of the aristocracy. (*Vid. Ephori.*)—Lycurgus, in order to banish wealth and luxury from the state, made a new division of lands, by which the income and possessions of all were rendered equal. He divided the territory of Sparta into 9000 portions, and the remainder of Laconia into 30,000, of which one lot was assigned to each citizen and inhabitant. These parcels of land were supposed to produce seventy medimni of grain for a man and twelve for a woman, besides a sufficient quantity of wine and oil. The more effectually to banish the love of riches, the Spartan lawgiver prohibited the use of gold and silver, and allowed only iron money, affixing even to this the lowest value. He also instituted public repasts termed *Phiditia*, where all the citizens partook in common of such frugal fare as the law directed. The kings even were not exempted from this regulation, but ate with the other citizens; the only distinction observed with respect to them being that of having a double portion of food. The Spartan custom of eating in public appears to have been borrowed from the Cretans, who called these repasts *Andria*. (*Plut., Vit. Lycorg.*—*Aristot., Polit.*, 2, 8.)—At the age of seven, all the Spartan children, by the laws of Lycurgus, were enrolled in companies, and educated agreeably to his rules of discipline and exercise, which were strictly enforced. These varied according to the ages of the boys, but

were not entirely remitted even after they had attained to manhood. For it was a maxim with Lycurgus, that no man should live for himself, but for his country. Every Spartan, therefore, was regarded as a soldier, and the city itself resembled a great camp, where every one had a fixed allowance, and was required to perform regular service. In order that they might have more leisure to devote themselves to martial pursuits, they were forbidden to exercise any mechanical arts or trades, which, together with the labours of agriculture, devolved upon the Helots.—Till the seventh year the child was kept in the *gymnæum*, under the care of the women; from that age to the eighteenth year they were called *boys* (*παῖδες*), and thence to the age of thirty *youths* (*ἐφῆβοι*). In the thirtieth year the Spartan entered the period of manhood, and enjoyed the full rights of a citizen. At the age of seven the boy was withdrawn from the paternal care, and educated under the public eye, in company with others of the same age, without distinction of rank or fortune. If any person withheld his son from the care of the state, he forfeited his civil rights. The principal object of attention, during the periods of boyhood and youth, was the physical education, which consisted in the practice of various gymnastic exercises—running, leaping, throwing the discus, wrestling, boxing, the chase, and the *pancratium*. These exercises were performed naked, in certain buildings called *gymnasía*. Besides gymnastics, dancing and the military exercises were practised. A singular custom was the flogging of boys (*diastastigóns*) on the annual festival of Diana Orthia, for the purpose of inuring them to bear pain with firmness. (*Vid. Bomenicus.*) To teach the youth cunning, vigilance, and activity, they were encouraged to practise theft in certain cases; but if detected, they were flogged, or obliged to go without food, or compelled to dance round the altar, singing songs in ridicule of themselves. The dread of the shame consequent on being discovered sometimes led to the most extraordinary acts. Thus it is related that a boy who had stolen a young fox, and concealed it under his clothes, suffered it to gnaw out his bowels rather than reveal the theft by suffering the fox to escape. Modesty of deportment was also particularly attended to; and conciseness of language was so much studied, that the term *laconic* is still employed to signify a short and pithy manner of speaking. The Spartans were the only people of Greece who avowedly despised learning, and excluded it from the education of youth. Their whole instruction consisted in learning obedience to their superiors, the endurance of all hardships, and to conquer or die in war. The youth were, however, carefully instructed in a knowledge of the laws, which, not being reduced to writing, were taught orally. The education of the females was entirely different from that of the Athenians. Instead of remaining at home, as in Athens, spinning, &c., they danced in public, wrestled with each other, ran on the course, threw the discus, &c. The object of this training of the women was to give a vigorous constitution to their children. (*Encyclop. Americ.*, vol. 11, p. 529, *seqq.*—*Cramer's Anc. Greece*, vol. 3, p. 158, *seqq.*)

SPARTICUS, a celebrated gladiator, a Thracian by birth, who escaped from the gladiatorial training-school at Capua along with some of his companions, and was soon followed by great numbers of other gladiators. Bands of desperate men, slaves, murderers, robbers, and pirates, flocked to him from all quarters; and he soon found himself at the head of a force able to bid defiance to Rome. Four consular armies were successively defeated by this daring adventurer, and Rome itself was considered in imminent danger. But subordination could not be maintained in an army composed of such materials. Spartacus proposed to march into Gaul, invite Sertorius to join him, and then together

march on Rome. Had this plan been carried into effect, Rome, in all probability, must have fallen into the hands of the combined forces; but the tumultuous followers of Spartacus, longing for the pillage of the capital, compelled their leader to abandon his intention, and bend his course towards Rome. He was met and completely routed by the prætor Crassus, who thus acquired some renown in war, in addition to the influence which he possessed from his unequalled wealth. Spartacus behaved with great valour; when wounded in the leg, he fought on his knees, covering himself with his buckler in one hand, and using his sword with the other; and when at last he fell, it was upon a heap of Romans whom he had sacrificed to his fury (*B.C.* 71). In this battle no less than 40,000 of the followers of Spartacus were slain, and the war was thus brought to an end. (*Plut.*, *Vit. Crass.*—*Liv.*, *Epit.*, 97.—*Eutrop.*, 6, 2.—*Paterc.*, 2, 30.)

SPARTI (*Σπαρτί*), a name given to the men who sprang from the dragon's teeth which Cadmus sowed. They all destroyed one another except five, who survived, and assisted Cadmus in building Thebes. The names of the five, as given by the scholiast on Euripides (*Phœniss.*, 498), are Chthonius, Udamus, Pelorus, Hyperenor, and Echion. (*Vid. Cadmus.*)

SPARTANI or **SPARTIANS**, the inhabitants of Sparta. **SPARTIANUS** **ÆLIUS**, a Roman historian in the reign of Dioclesian. In his life of Ælius Verus, he informs us of his intention to give the biographies of all the emperors and Cæsars from the time of Julius. Whether he ever executed this project is uncertain: we have only from his pen the lives of Hadrian, Ælius Verus, Didius Julianus, Septimius Severus, Pescennius Niger, Caracalla, and Geta, among which the first part of the life of Hadrian, drawn from good sources, is the best. The first part of these biographies is addressed to Dioclesian; that of Caracalla to no one; the life of Geta is dedicated to Constantine. Heyne, therefore, is led to conclude that the last mentioned biography is not by Spartianus. Casaubon had started this opinion before him.—Spartianus is not remarkable for historical arrangement and method: his style also bears evident marks of the decline of the language. His works form part of the collection known by the name of "*Scriptores Historie Auguste*," the best edition of which is that from the Leyden press (*Lugd. Bat.*, 1671, 2 vols. 8vo.—Schöll, *Hist. Lit. Rom.*, vol. 3, p. 153.—Bähr, *Gesch. Rom. Lit.*, p. 337).

SPERCHIUS (*Σπερχειός*), a river of Thessaly, flowing from Mount Tymphrestus, a lofty range forming part of the chain of Pindus, in the country of the Ænians. (*Strabo*, 433.) Homer frequently mentions this river as belonging to the territory of Achilles, around the Malian Gulf. (*Il.*, 16, 174.—*Ib.*, 23, 142.) The tragic poets likewise allude to it. (*Æsch. Pers.*, 492.—*Soph.*, *Philoct.*, 722.) The ancient name appears to have reference to its rapid course (*σπερχεομαι*, "to move rapidly"). The modern appellation is the *Hellada*. (*Cramer's Anc. Greece*, vol. 1, p. 438.)

SPENSIPTOS, an Athenian philosopher, nephew to Plato, who occupied the chair of instruction during the term of eight years from the death of his master. Through the interest of Plato, he enjoyed an intimate friendship with Dion while he was resident at Athens; and it was at his instigation that Dion, encouraged by the promise of support from the malcontents of Syracuse, undertook his expedition against Dionysius the Tyrant, by whom he had been banished. Contrary to the practice of Plato, Spensippus required from his pupils a stated gratuity. He placed statues of the graces in the school which Plato had built. On account of his infirm state of health, he was commonly carried to and from the academy in a vehicle. On his way thither he one day met Diogenes and saluted

him; the early philosopher refused to return the salute, and told him that such a feeble wretch ought to be ashamed to live; to which Speusippus replied, that he lived, not in his limbs, but in his mind. At length, being wholly incapacitated by a paralytic stroke for the duties of the chair, he resigned it to Xenocrates. He is said to have been of a violent temper, fond of pleasure, and exceedingly avaricious. Speusippus wrote many philosophical works which are now lost, but which Aristotle thought sufficiently valuable to purchase at the expense of three talents. From the few fragments which remain of his philosophy, it appears that he adhered very strictly to the doctrines of his master. (*Enfield, History of Philosophy*, vol. 1, p. 243, seqq.)

SPHACTERIA, an island off the coast of Mycenæ, and at the entrance of the harbour of Pylos Messeniacus, which it nearly closed. It was also known by the name of Sphagia, which it still retains. Sphacteria is celebrated in Grecian history for the defeat and capture of a Lacedæmonian detachment in the seventh year of the Peloponnesian war. (*Strabo*, 359.)

SPHINX, a fabulous monster, an account of which will be found under the article **ŒDIPUS**.—The Sphinx is not mentioned by Homer; but the legend is noticed in the *Theogony* (v. 326), where she is called *Ῥη*. Though this legend is probably older than the time of the first intercourse with Egypt, the Theban monster bears a great resemblance to the symbolical statues placed before the temples of that land of mystery. In the pragmatizing days it was said (*Pausan.*, 9, 26) that the Sphinx was a female pirate, who used to land at Anthedon, and advance to the Phicean Hill, whence she spread her ravages over the country. Œdipus, according to these expounders of mythology, came from Corinth with a numerous army, and defeated and slew her. (*Keightley's Mythology*, p. 341, not.)—The Sphinx was a favourite emblem among the ancient Egyptians, and served, according to some, as a type of the enigmatic nature of the Egyptian theology. M. Mailliet is of opinion that the union of the head of a virgin with the body of a lion is a symbol of what happens in Egypt when the Sun is in the signs of Leo and Virgo, and the Nile overflows. According to Herodotus, however, the Egyptians had also their Androsphinxes, with the body of a lion and the face of a man. At the present day there still remains, about 300 paces east of the second pyramid, a celebrated statue of a sphinx, cut in the solid rock. Formerly, nothing but the head, neck, and top of the back were visible, the rest being sunk in the sand. It was, at an expense of 800*l.* or 900*l.* (contributed by some European gentlemen), cleared from the accumulated sand in front of it under the superintendence of Captain Caviglia. This monstrous production consists of a virgin's head joined to the body of a quadruped. The body is principally formed out of the solid rock; the paws are of masonry, extending forward 50 feet from the body; between the paws are several sculptured tablets, so arranged as to form a small temple; and farther forward a square altar with horns. The length of the statue, from the forepart of the neck to the tail, is 125 feet. The face has been disfigured by the arrows and lances of the Arabs, who are taught by their religion to hold all images of men or animals in detestation.

SPINA, a city of Gallia Cisalpina, near the entrance of the most southern branch of the Padus, called from it Ostium Spineticum. If we are to believe Dionysius of Halicarnæsus, who derives his information apparently from Hellenicus of Lesbos (*Ant. Rom.*, 1, 18), Spina was founded by a numerous band of Pelasgi, who arrived on this coast from Epirus long before the Trojan war. The same writer goes on to state that, in process of time, this colony became very flourishing, and held for many years the dominion of the sea,

from the fruits of which it was enabled to present to the temple of Delphi tithe offerings more costly than those of any other city. Afterward, however, being attacked by an overwhelming force of the surrounding barbarians, the Pelasgi were forced to quit their settlement, and finally to abandon Italy. It appears that no doubt can be entertained of the existence of a Greek city of this name, near one of the mouths of the Po, since it is noticed in the *Periplus of Scylax* (p. 13), and by the geographers Eudoxus and Artemidorus, as cited by Stephanus of Byzantium (s. v. *Σπίνα*). Strabo also speaks of it as having been once a celebrated city. The same geographer adds, that Spina was still in existence when he wrote, though reduced to the condition of a mere village. (*Strab.*, 214.—*Id.*, 421.—*Plin.*, 3, 6.) But the extreme antiquity which is assigned to the foundation of this city by Dionysius of Halicarnæsus has been thought by some modern critics to be liable to dispute. (Consult, in particular, the dissertation of Freret, *Mém. de l'Acad. des Inscr.*, vol. 18, p. 90.)—Spina would seem to have stood on the left bank of the *Po di Primaro*, not far from the later town or village of Argenta. (*Cramer's Anc. Italy*, vol. 1, p. 97, seqq.)

SPINTHARUS, a Corinthian architect. By the order of the Amphictyonic council he erected a new temple at Delphi after the burning of the old one (Olymp. 58.1.—B.C. 544). Respecting the latter event, consult *Philochor. fragm.*, p. 45.—*Clinton, Fast. Hell.*, p. 4. The age of Spintharus may be very probably fixed about Olymp. 60. (*Sillig, Dict. Art.*, s. v.)

SPOLETIUM, a city of Umbria, northeast of Interamna, in the southwestern section of the country. It was colonized A.U.C. 512 (*Vell. Patere.*, 1, 14), and is famous in history for having withstood an attack from Hannibal after the battle of Thrasymene. (*Liv.*, 23, 9.) This resistance had the effect of checking the advance of the Carthaginian general towards Rome, and compelled him to draw off his forces to Picenum. It should be observed, however, that Polybius makes no mention of this attack upon Spoletium; but expressly states that it was not Hannibal's intention to approach Rome at that time, but to lead his army to the seacoast (3, 86). This city suffered severely in the civil wars of Marius and Sylla, from proscription. (*Flor.*, 3, 21.—*Appian, Bell. Civ.*, 5, 33.) The modern name is *Spoleto*. (*Cramer's Anc. Italy*, vol. 1, p. 271.)

SPORADES, a name given by the Greeks to the numerous islands scattered (like so many seeds, *σπέρμα, spargo*) around the Cyclades, with which, in fact, several of them are intermixed, and those also which lay towards Crete and the coast of Asia Minor. (*Strabo*, 484.—*Scyl.*, *Periplus*, p. 18.—*Plin.*, 4, 12.)

SPURINNA, an astrologer, who told Cæsar to beware of the ides of March. As he went to the senate-house on the morning of the ides, Cæsar said to Spurinna, "*The ides are at last come*." "Yes," replied Spurinna, "*but not yet past*." Cæsar was assassinated a short time after. (*Sueton.*, *Vit. Jul.*, 81.—*Dio Cass.*, 44, 18.—*Val. Max.*, 8, 11, 2.)

STABIAE, a town of Campania, on the coast, about two miles below the river Sarnus, now *Castellamare di Stabia*. It was once a place of some note, but, having been destroyed by Sylla during the civil wars, its site was chiefly occupied by villas and pleasure-grounds. (*Plin.*, 3, 5.) It was at Stabia, after having just left the villa of his friend Pomponianus, that the elder Pliny fell a victim to his ardent curiosity and thirst for knowledge. (*Plin.*, *Ep.*, 6, 16.) According to Columella (*R. R.*, 10), this spot was celebrated for its fountains; and such was the excellence of the pastures in its vicinity, that the milk of this district was reputed to be more wholesome and nutritious than that of any other country. (*Cramer's Ancient Italy*, vol. 2, p. 181.)

STAGIRA, a city of Macedonia, on the upper shore of the peninsula of Mount Athos, near its junction with the mainland, and on the coast of the Sinus Strymonicus. It was a colony of Andros, as we learn from Thucydides (4, 188), and celebrated as the birth-place of Aristotle. (*Diog. Laert.*, 5, 14, *seq.*) Some trace of the ancient name is apparent in that of *Stavros*.

STASEAS, a peripatetic philosopher, who resided many years at Rome with M. Piso. (*Cic., de Orat.*, 1, 32.—*Id., Fin.*, 5, 3, *et* 35.)

STASINUS, an early poet of Cyprus, the author, according to some, of the Cyprian Epics, which others ascribe to Hegesias. This poem, entitled in Greek τὰ Κύπρια ἐπη, was in eleven books, and comprehended for its subject the whole period from the nuptials of Peleus and Thetis to the time when Jupiter resolved to excite the quarrel between Achilles and Agamemnon. It would appear from a passage in Herodotus (2, 117), that this poem was ascribed by some to Homer. The Hymn to Venus is thought to have formed part of the Cyprian Epics. We have only a few verses otherwise remaining of the poem. (*Schöll, Hist. Lit. Gr.*, vol. 1, p. 166, *seq.*)

STATIRA, I. the sister and wife of Darius, taken captive by Alexander, who treated her with the utmost respect. She died in childhood, and was buried by the conqueror with great magnificence. (*Plut., Vit. Alex.*)—Consult, however, the remarks of Bougainville, as to the accuracy of Plutarch's statement respecting the cause of her death, *Mém. de l'Acad. des Inscri.*, vol. 25, p. 34, *seqq.*—II. The eldest daughter of Darius, taken in marriage by Alexander. The nuptials were celebrated at Susa with great magnificence. She appears to have changed her name to Arsinoë after this union. This is Droysen's conjecture, which seems happily to explain the variations in the name which we find in Arrian (7, 4), compared with Photius (p. 686, *seq.*) and other authors. (*Thirlwall's Greece*, vol. 7, p. 77.) She was murdered by Roxana, who was aided in this by Perdiccas. (*Plut., Vit. Alex., sub fin.*)—III. A wife of Artaxerxes Mnemon, poisoned by her mother-in-law, Queen Parysatis. (*Plut., Vit. Artax.*)—IV. A sister of Mithradates the Great, celebrated for the fortitude with which she met her end, when Mithradates, after his defeat by Lucullus, sent Bacchides, the eunuch, with orders to put his wives and sisters to death. (*Plut., Vit. Lucull.*)

STATIUS, **PUBLIUS PAPINUS**, a Latin epic poet, born at Neapolis A.D. 61, and descended from a family that came originally from Epirus. His father, who was distinguished by his talent for poetry, taught at Neapolis the Greek and Latin languages and literature. Statius received his education at Rome, his father having gone with him to this city, where he became one of the preceptors of the young Domitian. This prince fixed his attention on the son of his instructor, who had been recommended to him by Paris, a celebrated comedian, and a favourite of Domitian. Statius, who was very poor, had sold to this actor his tragedy of Agave, which Paris published as his own composition. Out of gratitude, he invited the poet to a grand imperial banquet.—Statius gained the prize three times in the Alban games, but was defeated in the Capitoline. At the age of nineteen years he married the widow of a musician; her name was Claudia; and he extols, in many of his productions, her abilities and virtues. Disgusted at last, as he himself informs us, at the luxury of the Romans, he retired, a year before his death, to a small estate in the vicinity of Naples, which the emperor, perhaps, had given him, and there died, still quite young, A.D. 96.—Statius gained many admirers at Rome by the great facility with which Nature had endowed him for composing verses, on the spur of the moment, upon all kinds of subjects. He collected these productions together in a work which he entitled *Sylva*, or, as we would call it, *Mé-*

langes. It is divided into five books, and comprehends thirty-two small poems, mostly written in hexameters. Each book has a preface in prose, and is dedicated to one of the friends of the poet. In the preface to the first book Statius informs us that these poems have been composed in haste; that no one of them occupied more than two days, and that some are the work of merely a single day. These pieces treat of various subjects: we find among them a complimentary effusion addressed to Domitian, on the occasion of an equestrian statue being erected to him; an epithalamium; an ode for Lucan's birthday, &c.—Statius has also left an epic poem in twelve books, entitled *Thebais* ("The Thebaid"), and the commencement of another, called *Achilleis*, which his death prevented him from completing. The *Thebaid*, addressed to Domitian, is, like the *Punica* of Silius Italicus, the *Argonautica* of Valerius Flaccus, and the *Pharsalia* of Lucan, rather a historic than an epic poem. The principal source whence Statius borrowed was the poet Antimachus, whose *Thebaid* has not come down to us: his model was Virgil.—The subject of the *Thebaid* was well chosen; the war between the sons of Oedipus offered a fable truly epic, and rich in fearful scenes. Statius, however, has spoiled it, by giving it an historical form, adorned merely with episodes and machinery. He is not wanting in imagination, and in bold and daring ideas and sentiments; in this respect, indeed, he is preferable to Valerius Flaccus; but he is ignorant of the sublime art in which Homer surpasses all poets, that of giving each hero an individual character. His diction is deficient in simplicity and native ease; he mistakes exaggeration for grandeur, and subtle refinements for proofs of talent. These defects are the characteristics of his age, as well as that of making a great display of erudition, a fault which shows itself in all the epic poets of this period. Scaliger passes rather a favourable opinion on Statius. According to this critic, he ranks next to Virgil. (*Pet.*, 6, p. 841.)—Of the *Achilleis*, Statius finished only the first book; the second remains imperfect. It is probable that this poem, had the author lived to finish it, would have presented the same beauties and the same defects as the *Thebaid*. The plan was defective; the poet had not attended to unity of action, but proposed to himself to give the entire life of his hero.—The best editions of Statius are, that of Gronovius, *Amst.*, 1653, 12mo; that of Barth, *Cygnæ*, 1664, 2 vols. 4to; that of Markland (the *Sylva* merely), *London*, 1728, 4to; and that of Amar and Lemaire, *Paris*, 1825, 4 vols. 8vo. (*Schöll, Hist. Lit. Rom.*, vol. 2, p. 303, *seqq.*)

STATOR, a surname of Jupiter, given him by Romulus, because he stopped the flight of the Romans in their battle with the Sabines, after the carrying off by the Romans of the Sabine virgins. Romulus erected a temple on the spot where he had stood when he invoked Jupiter, in prayer, to stay the flight of his forces. The name is derived a *sistendo*. (*Liv.*, 1, 12.)

STELLIO, a youth turned into a kind of lizard by Ceres, because he derided the goddess. (*Ovid, Met.*, 5, 461.)

STENTOR, a Grecian warrior in the army against Troy. His voice was louder than the combined voices of fifty men. He is erroneously regarded by some commentators as a mere herald. (*Hom., Il.*, 5, 785, *seq.*—*Heyne, ad loc.*)

STENTORIS LACUS, an estuary which the Hebrews form at its mouth. (*Herod.*, 7, 58.)

STEPHANUS, a grammarian, who flourished, as is conjectured, about the close of the fifth century. He was professor in the imperial college at Constantinople, and composed a dictionary containing words denoting the names of places, and designating the inhabitants of those places. Of this work there exists only an abridgment made by Hermolaus, and dedicated to

the Emperor Justinian. This work was known by the title *περὶ Πόλεων*, *de Urbibus*, but that of the original was *Ἑθνικά*; hence it has been inferred that the author's intention was to write a geographical work. It seems that Stephanus, who is usually quoted by the title of Stephanus Byzantinus, or Stephanus of Byzantium, not only gave in his original work a catalogue of countries, cities, nations, and colonies, but, as opportunity offered, he described the characters of different nations, mentioned the founders of cities, and related the mythological traditions connected with each place, mingled with grammatical and etymological remarks. All this appears not in the meager abridgment of Hermolaus. We have a fragment, however, remaining of the original work relative to Dodona. The best edition of Stephanus is that of Berkell, completed by Gronovius, *L. Bat.*, 1688, fol. There is a very recent edition of the text by Westermann, *Lips.*, 1839, 8vo. (*Schöll, Hist. Lit. Gr.*, vol. 7, p. 38.)

STESICHRUS, a Greek lyric poet, born at Himera, in Sicily, and who flourished about 570 B.C. He lived in the time of Phalaris, and was contemporary with Sappho, Alcæus, and Pittacus. (*Clinton, Fast. Hellen.*, p. 5.) His special business was the training and directing of choruses, and he assumed the name of *Stesichorus*, or "leader of choruses," his original name being *Tisias*. This occupation must have remained hereditary in his family in Himera; a younger Stesichorus of Himera came, in Olympiad 73.1 (B.C. 485), to Greece as a poet (*Marm., Par.*, ep. 50); and a third Stesichorus of Himera was victor at Athens in Olympiad 102.3 (B.C. 370). The eldest of them, Stesichorus-Tisias, made a great change in the artistical form of the chorus. He it was who first broke the monotonous alternation of the strophe and antistrophe through a whole poem, by the introduction of the epode, differing in measure, and by this means made the chorus stand still. The chorus of Stesichorus seems to have consisted of a combination of several rows or members of eight dancers; the number eight appears, indeed, from various traditions, to have been, as it were, consecrated by him. The musical accompaniment was the cithara. On his arrangement of the strophe, antistrophe, and epode, was founded the Greek proverb, "*the three things of Stesichorus*" (*τὰ τρία Στησιχόρου*). His compositions, which consisted of hymns in honour of the gods, odes in praise of heroes, lyric-epic poems, such as an *Ἰλίου πέρους* ("Destruction of Troy"), an *Orestiad*, &c., were written in the Doric dialect, and are all now lost except a few fragments. Stesichorus possessed, according to Dionysius, all the excellences and graces of Pindar and Simonides, and surpassed them both in the grandeur of his subjects, in which he well preserved the characteristics of manners and persons; and Quintilian represents him as having displayed the sublimity of his genius by the selection of weighty topics, such as important wars and the actions of great commanders, in which he sustained with his lyre the dignity of epic poetry. Accordingly, Alexander the Great ranks him among those who were the proper study of princes. He was the inventor of the fable of the horse and the stag, which Horace and some other poets have imitated, and this he wrote to prevent his countrymen from making an alliance with Phalaris. The best collections of the fragments of Stesichorus are given by Blomfield, in the *Museum Criticum*, No. 6, p. 256; and by Kleine, *Berol.*, 1828, 8vo. They are also found in Gaisford's *Poeta Minores Græci*, ed. *Lips.*, vol. 3, p. 336-348. (*Müller, Hist. Lit. Gr.*, p. 198.)

STHENÉLUS, I. a king of Mycenæ, son of Perseus and Andromeda. He married Nicippe, the daughter of Pelops, by whom he had two daughters, and a son called Eurystheus. The name of this son is connect-

ed with the legend of Hercules, he having been born before Hercules, and, therefore, exercising a control over him. (*Vid. Hercules*.)—II. A son of Capaneus. He was one of the Epigoni, and also one of the suitors of Helen. He went to the Trojan war, and was, according to Virgil, in the number of those who were shut up in the wooden horse. (*Pausan.*, 2, 18.—*Virg.*, *Æn.*, 2, 10.)

STHENOBIA, a daughter of Jobates, king of Lycia, who married Proetus, king of Argos. She became enamoured of Bellerophon, who had taken refuge at her husband's court after the murder of his brother; and when he refused, she falsely accused him before Proetus of attempts upon her virtue. (*Vid. Bellerophon*.)

STILICHO, a Vandalic general, in the service of the Emperor Theodosius the Great, whose niece Serena he married. Theodosius having bequeathed the empire of the East to his son Arcadius, and that of the West to his second son Honorius, the former was left under the care of Rufinus, and the latter under the guardianship of Stilicho. No sooner was Theodosius removed by death, than Rufinus stirred up an invasion of the Goths, in order to procure the sole dominion; but Stilicho put down this scheme, and effected the destruction of his rival. After suppressing a revolt in Africa, he marched against Alaric, whom he signally defeated at Pollentia. After this, in A.D. 406, he repelled an invasion of barbarians, who penetrated into Italy under Rhadagaisus, a Hun or Vandal leader, who formerly accompanied Alaric, and effected the entire destruction of the force and its leader. Either from motives of policy or from state necessity, he then entered into a treaty with Alaric, whose pretensions upon the Roman treasury for a subsidy he warmly supported. This conduct excited a suspicion of his treachery on the part of Honorius, who massacred all his friends during his absence. He received intelligence of this fact at the camp of Bononia (*Bo-logna*), whence he was obliged to flee to Ravenna. Here he took shelter in a church, from which he was inveigled by a solemn oath that no harm was intended him, and was conveyed to immediate execution, which he endured in a manner worthy his great military character. Stilicho was charged with the design of de-throning Honorius, in order to advance his son Eucherius in his place; and the memory of this distinguished captain has been treated by the ecclesiastical writers with great severity. Zosimus, however, although otherwise unfavourable to him, acquits him of the treason which was laid to his charge; and he will live in the poetry of Claudian as the most distinguished commander of his age. (*Encyclop. Americ.*, vol. 12, p. 7.—*Gibbon, Decline and Fall*, c. 29, seq.)

STILPO, a philosopher of Megara, who flourished about 336 B.C. He was not only celebrated for his eloquence and skill in dialectics, but for the success with which he applied the moral precepts of philosophy to the correction of his natural propensities. Though in his youth he had been much addicted to intemperance and licentious pleasures, after he had ranked himself among philosophers he was never known to violate the laws of sobriety or chastity. With respect to riches he exercised a virtuous moderation. When Ptolemy Soter, at the taking of Megara, presented him with a large sum of money, and requested him to accompany him to Egypt, he returned the greater part of the present, and chose to retire, during Ptolemy's stay at Megara, to the island of Ægina. Afterward, when Megara was again taken by Demetrius, son of Antigonus, the conqueror ordered the soldiers to spare the house of Stilpo; and, if anything should be taken from him in the hurry of the plunder, to restore it. So great was the fame of Stilpo, that, when he visited Athens, the people ran out of their shops to see him, and even the most eminent philosophers of Athens took pleasure in attending upon his

discourses. On moral topics Stilpo is said to have taught, that the highest felicity consists in a mind free from the dominion of passion, a doctrine similar to that of the Stoics. (*Enfield's History of Philosophy*, vol. 1, p. 202.)

STOBÆUS, Joannes, a native of Stobi, in Macedonia, whence his name Stobæus. The particulars of his life are unknown, and we are even ignorant of the age in which he lived. All that can be said of his era is, that he was subsequent to Hierocles of Alexandria, since he has left us extracts from his works; and as he cites no more recent writer, it is probable that he lived not long after him. Stobæus had read much; he had acquired the habit of reading with a pen in his hand, and of making extracts from whatever seemed to him remarkable. Having made a large collection of these extracts, he arranged them in systematic order for the use of his son, whose education seems to have constituted the father's principal employment. This was the origin of a collection in four books, which he published under the title of *Ἀνθολόγιον ἐκλογῶν, ἀποφθεγμάτων, ὑποθηκῶν* ("An Anthology of Extracts, Sentences, and Precepts"). This work has come down to us, but under a form somewhat different, and which has consequently embarrassed the commentators. We have three books of extracts made by Stobæus, but they are given in the manuscripts as two distinct works: one composed of two books, the other of a single one. The former is entitled "*Physical, Dialectic, and Moral Selections*," the latter "*Discourses*." There exists, however, some confusion in this respect in the manuscripts. Some, which contain merely the Eclogæ or Extracts, call them the first and second books of Stobæus, without any more particular designation. Others give both works the title of Anthology.—In the Eclogæ and Discourses, Stobæus appears to have proposed to himself two different objects. The Eclogæ form, so to speak, an historical work, because they make us acquainted with the opinions of ancient authors on questions of a physical, speculative, and moral nature, whereas the Discourses constitute merely a moral work. It is on account of this diversity that some critics have thought that the Eclogæ never formed part of the Anthology, but originally made a separate work, and that the third and fourth books of the Anthology are lost. This hypothesis, however, seems at variance with the account that Photius gives of the Anthology of Stobæus. "The first book," says he, "is entirely physical; the commencement of the second is strictly philosophical (*λογικός*), but the greater part is moral. The third and fourth books are almost entirely devoted to moral and political subjects." It would seem from this that it is wrong to divide the extracts of Stobæus into two works, and that we possess actually, under two titles, his Anthology in four books, excepting that the copyists have united the third and fourth books into one.—It is from Photius also that we learn the object which Stobæus had in view when he made these selections, for we have not the beginning of the first book, where no doubt it was stated. Stobæus had devoted this part to a eulogium on philosophy, which was followed by an historical sketch of the ancient schools, and of their doctrines in relation to geometry, music, and arithmetic: of this chapter we have only the end, in which the subject of arithmetic is treated. The object of Stobæus, according to Photius, was to erect a column which might serve as a landmark to his son Sepsimius during the latter's course through life. The first book is subdivided into sixty chapters; the second contained forty-six, but we have only the first nine. The third book, or the first of the Discourses, was, in the time of Photius, composed of forty-two chapters, and the second of fifty-eight. In the manuscripts these one hundred chapters form only one book: the copyists, however, have, by their subdivi-

ion of some of the Discourses, made the number of chapters amount to one hundred and twenty-five, or, rather, one hundred and twenty-seven. Each chapter of the Eclogæ, and each discourse, has a particular title, under which the author has arranged his extracts, commencing with the poets, and passing from them, in order, to orators, philosophers, physicians, &c. The source whence each extract is obtained is indicated in the margin. These extracts are drawn from more than five hundred authors, both poets and prose writers, whose works have in a great measure perished. We find here, in particular, numerous passages from the ancient comic writers.—The best edition of the Eclogæ is that of Heeren, *Götting.*, 1792, 2 vols. (in 4) 8vo. It contains a very valuable dissertation by the editor, on the sources whence Stobæus obtained his materials. (*Commentatio de Fontibus Eclogarum Joannis Stobæi*).—The best edition of the Discourses is that of Gaisford, under the title, *Joannis Stobæi Florilegium*, Oxon., 1822, 4 vols. 8vo. (Schöll, *Hist. Lit. Gr.*, vol. 7, p. 183, seqq.)

STOSI, a city of Macedonia, in the district of Pæonia, to the north of Edessa, and not far from the junction of the Erigonus and Axios. Livy informs us that Philip wished to found a new city in its vicinity, to be called Perseæ, after his eldest son (39, 54). On the conquest of Macedonia by the Romans, Stobi was made the dépôt of the salt with which the Dardani were supplied from that country (45, 29). At a later period it became not only a Roman colony, but a Roman municipium, a privilege rarely conferred beyond the limits of Italy. (*Plin.*, 4, 10.—*Ulp.*, *Dig. de Consul. ult.*) In the reign of Constantine, Stobi was considered as the chief town of Macedonia Secunda, or Salutaris, as it was then called. (*Hierocl.*, *Syn.*, p. 641.—*Malch.*, *Exc. Legat.*, p. 61.) Stobi was the birthplace of Joannes Stobæus, the author of the Greek Florilegium which bears his name. The modern *Istib* is said to mark the site of the ancient city. (*Cramer's Ancient Greece*, vol. 1, p. 271.—*Bischoff und Müller, Wörterb. der Geogr.*, p. 931.)

STROCHIDES, islands in the Mediterranean, off the coast of Gaul, and in a southeast direction from Telo Martius or Toulon, now *Iles d'Hyères*. Strabo and Ptolemy make them five in number, but Pliny only three. They are called Prote (*Parquerolles*), Meæ (*Porto Croe*), and Hypæa (*du Levant or Titan*). They are said to have their name from their being ranged on the same line (*στροίχος*—*Plin.*, 3, 6.—*Mela*, 2, 7).

STROICI, a celebrated sect of philosophers, founded by Zeno of Citium. They received their name from the portico (*στροφή*) where the philosopher delivered his lectures. This was the "Pœcile," adorned with various paintings from the pencil of Polygnotus and other eminent masters, and hence was called, by way of eminence, the Porch. An account of the Stoic doctrine will be found at the end of the article Zeno.

STRABO, I. a Roman cognomen in the Fannian, Pompeian, and other families. It was first applied to those whose eyes were distorted, but afterward became a general name.—II. A celebrated geographer, born at Amasea in Pontus. The year of his birth is not exactly known, but it may be placed about fifty-four B.C. (*Clinton, Fasti Hellenici*, pt. 2, p. 277.) He studied at Nyssa under Aristodemus, at Amisus under Tyrannion, and at Seleucia under Xenarchus. He then proceeded to Alexandria, and attached himself first to the peripatetic Bæthius of Sidon; but Athenodorus of Tarsus eventually gained him over to the doctrines of the Porch. He then visited various parts of Asia Minor, Syria, Phœnicia, and Egypt as far as Syene and the Cataracts of the Nile. In this latter country he formed an intimate acquaintance with Ælius Gallus, the Roman governor. In the year 24 B.C. this general undertook, by order of Augustus, an expedition into

Arabia. At a subsequent period, Strabo travelled over Greece, Macedonia, and Italy with the exception of Cisalpine Gaul and Liguria. It is important to determine the extent of Strabo's travels, that we may know when he speaks as an eyewitness, and when he merely copies the accounts of his predecessors, or gives the narratives of other travellers. At an advanced period of life he compiled a work on Geography (*Γεωγραφικά*), in seventeen books, which has come down to us complete, with the exception of the seventh book, which is imperfect.—It is remarkable that, during a space of near five hundred years, from the time of Herodotus to that of Strabo, so little should have been added to the science of geography. The conquests of the Romans westward did certainly bring them acquainted with parts of Europe hitherto little known; but in the East, neither the Macedonian nor the Roman expeditions seem to have brought much to light that was before unknown of the state of Asia; while in Africa, as Rennell justly observes, geography lost ground. In the course of this period, indeed, many writers on this subject appeared; but, whatever were their merits (and the merits even of the most eminent among them seem to be not highly rated by Strabo), it is certain that they are all lost. We may collect, indeed, from a curious circumstance little known or regarded, that no complete or systematic work on geography at that time existed: for it appears from two or three of Cicero's letters to Atticus, that he once entertained thoughts of writing a treatise himself on the subject. He was deterred, however, he says, whenever he considered it, by the magnitude of the undertaking, and by perceiving how severely even Eratosthenes had been censured by the writers who succeeded him. In fact, he was probably restrained by a consciousness of his own incompetency in point of science, of which he makes a pretty broad confession to his friend; and whoever values the reputation of Cicero cannot regret that it was never risked on a system of geography, to be got up, as he himself hints it was intended to be, during a short summer tour among his country-houses in Italy.—It is not, however, merely to the respective character of the two individuals that we must attribute the inferiority of the geography of Herodotus, in all essential requisites, to that of Strabo. Much undoubtedly is owing to the manners and complexion of the times in which they respectively lived. The former came to the task with few materials supplied to his hands. Everything was to be collected by his own industry, without the aid of previous history, without political documents or political authority. The taste, moreover, and the habits of the people for whom he wrote, which must ever have a powerful influence over the composition of any writer, demanded other qualities than rigid authenticity, and a judicious selection of facts. It should be remembered that he was hardly yet emerged from the *story-telling* age; the pleasure of wondering had not yet been superseded by the pleasure of knowing; and the nine deities who give name to his books might be allowed to impart some share of their privilege of fiction, whenever sober truth has been insufficient to complete or adorn his narrative. Before the age of Augustus, however, an entire revolution had been effected in the intellectual habits and literary pursuits of men. The world had become in a manner, what it now is, a reading world. Books of every kind were to be had in every place. Accordingly, it became the chief business of writers who projected any extensive work, to examine and compare what had been already written; to weigh probabilities; to adjust and reconcile apparent difficulties; and to decide between contending authorities, as well as to collect and methodise a multitude of independent facts, and to mould them into one regular and consistent form. It was not without a just sense of the magnitude and difficulty of the undertak-

ing that Strabo engaged in this task, as is sufficiently proved by his own elaborate introduction. How many years were employed upon it is not certain; but we are sure, from the incidental mention made in different passages of historical events widely distant from each other, that it occupied a considerable portion of his life. It is impossible, indeed, to read any of his larger descriptions without feeling the advantages possessed by an eyewitness over a mere compiler. The strong and expressive outlines which he draws convey a lively idea, not merely of the figure and dimensions; but of the surface and general character, of extensive districts. These outlines are carefully filled up by a methodical and often minute survey of the whole region, marking distinctly its coasts, its towns, rivers, and mountains; the produce of the soil, the condition and manners of the inhabitants, their origin, language, and traffic; and in the more civilized parts of the world, in the states of Greece especially, we meet with continual information respecting persons and events, the memory of which is sacred to every one at all conversant with the writers of that extraordinary people. But it is not merely from the number and authenticity of the facts which it communicates that this work derives its value. Every page bears evidence of a philosophical and reflecting mind; a mind disciplined by science, and accustomed to trace the causes and connexion of things, as well in the province of physical phenomenon, as in the more intricate and varying system of human affairs. In this respect Strabo bears a strong resemblance to Polybius. But with the fondness of that historian for reflections and his steady love of truth, he has not copied the formality of his digressions, which so often interrupt the flow of the history, and which would be yet more unsuited in a geographical work. The reasonings and reflections of Strabo are just those which would naturally be excited in a mind previously well informed by the scenes over which he was travelling; but they never tempt him to lose sight of his main purpose, the collection and arrangement of facts. There is a gravity, a plainness, a sobriety, and good sense in all his remarks, which constantly remind us that they are subordinate and incidental, suggested immediately by the occasion; and they are delivered with a tincture of literature, such as a well-educated man cannot fail of imparting to any subject. On these accounts Strabo would be entitled to the perusal of every scholar, even if the geographical information were less abundant and authentic than it really is.—Strabo lived prior to any arrangement of the distances on the globe by measures taken from degrees of longitude and latitude. But this writer and his predecessor in the same branch of science were not unacquainted with the practice of measuring the distance from the equator as from a fixed line, by which the comparatively northerly or southerly situations of places might be determined; nor were they ignorant of some methods by which the longitude or distance of places to the east or west of each other might be estimated. But it was reserved for Ptolemy to reduce these observations into a regular system and to a tabular form, by which the situation of any one place, if correctly ascertained, might be compared with that of any other, and also with its distance from the equator and from the first meridian, drawn through Ferro, in the Canary or Fortunate Islands, as being the most westerly point of the earth known at that time.—The ancient astronomers and geographers could not but be conscious how defective were their instruments for observing the heavenly bodies; and how much greater dependance might be placed on their mechanical measurement of distances, to the accuracy of which we have reason to think they paid great attention, than on their celestial observations, to ascertain the truth of which they had so little artificial as-

distance. The proportion of the length of the gnomon to that of its meridian shadow at the solstice and the equinoxes, afforded the principal method of determining the distance of places from the equator, and these were, indeed, under a clear sky, a bright sun, and continued opportunities of repeating observations, laid down, in many instances, more nearly to the truth than could be expected from so simple and so rude an instrument. Still, however, they were liable to great uncertainty. The penumbra at the extremity of the shadow made the proportions doubtful. The semi-diameter of the sun (although Cleomedes seemed to be aware that this should be taken into the account) does not appear to be added to the altitude, and the circumstances, less important, indeed, though not to be neglected, of parallax and refraction, were altogether unknown. Instances of the incorrectness of gnomonic or sciöthentic observations may be given, too gross to be ascribed to any of these defects, and evidently owing to inaccuracy in the observers. Strabo mentions, in no less than four places, that the same proportion of the length of the gnomon to its solstitial shadow was found at Byzantium and at Marseilles, though the former was situated in $41^{\circ} 11'$, and the other in $43^{\circ} 17'$ of latitude, a difference of no less than $138'$ on the equator, equal to 158 English miles; and this fact is reported on the authority of Hipparchus and Eratosthenes, in a case, too, which was obvious to the senses, and depended neither on hypothesis nor calculation. It is more extraordinary that this mistake, after being adopted by Ptolemy, should be continued down to ages not very remote from our own. A still greater error is to be found in Strabo respecting the situation of Carthage. He says that the proportion of the length of the gnomon to that of the equinoctial shadow is as eleven to seven. This gives by plane trigonometry a latitude of $32^{\circ} 20'$, which is very near to the one adopted by Ptolemy. The true latitude of Carthage, according to the best observations, is $36^{\circ} 5'$. The error, therefore, is $272'$, or 313 English miles. These, and other remarks which might be here made, tend fully to show, that the ancient geographers are more deserving of praise when they express distances by measurements, in the correctness of which they excelled, than when they give them by calculations or observations, the principles of which they understood, but had not the means of reducing to practice. (*Quarterly Review*, vol. 5, p. 274, *seqq.*)—But to return more immediately to Strabo. A circumstance which cannot fail to surprise us is the little success with which Strabo's work appears to have met among the ancients, as far, at least, as we may infer from the silence which their writers for the most part preserve in relation to his labours. Marcianus of Heraclea, Athenæus, and Harpocration are the only ancient authors that cite him. Pliny and Pausanias do not even appear to have been acquainted with him by name. Josephus and Plutarch make mention of Strabo, but it is only to speak of his Historical Memoirs. The celebrity of Strabo dates from the middle ages: it was then so universal, that the custom arose of designating him by the simple title of "the Geographer."—The Geography of Strabo consists of two parts; the first, cosmographical, giving a description of the world, and comprising the first and second books; the second, chorographical, furnishing a detailed account of particular countries. This latter part commences with the third and ends with the seventeenth book; and thus consists of fifteen books, of which eight are devoted to Europe, six to Asia, and one to Africa.—The first book of the Geography of Strabo contains the general introduction to the work. In it the author shows the importance and utility of geographical studies. On this occasion he treats of the extent of Homer's geographical knowledge, and defends him against his detractors, even to such a degree

as to support the authority of the fables related by the bard. After Homer, Strabo passes in review the works of Anaximander, Hecataeus, Democritus, and Eudæmus of Cnidus: he commends the latter for his mathematical acquirements and for everything he relates concerning Greece, while he censures him for being fabulous in his account of the Scythians. He names Dicaearchus among the writers that have treated of general geography, whereas we merely know that he wrote the *Bior'Elládor*. Strabo ends his list of ancient geographers with Ephorus of Cummæ; Eratosthenes, Hipparchus, Polybius, and Posidonius forming the class of modern ones. His criticism on the first two books of Eratosthenes furnishes him with an opportunity of indulging in some researches relative to the adventures of Ulysses as given by Homer, the degree of acquaintance which the poet had with Egypt, and also the revelations which the surface of the earth has undergone.—In the second book Strabo continues his criticism on the work of Eratosthenes, and takes up the third book of that production. He makes many corrections on Hipparchus, and defends Eratosthenes against many unjust criticisms. He then proceeds to an examination of the works of Posidonius and Polybius. The remainder of the book treats of the knowledge requisite for a geographer, and particularly that of a mathematical nature: he then treats of the figure of the earth; its general divisions and climates. He states that the earth has the form of a globe, or, rather, seems to have such a form. The habitable portion of the earth resembles, according to him, a *chlamys* or military cloak; it is contained between two parallels, one of which passes through Ierne or Ireland, and the other through what is now the island of Ceylon. The earth is immovable and in the centre of the universe. The length of the earth from the equator to the north is 38,100 stadia, that of the habitable world 29,000. The breadth is about 70,000 stadia. The Caspian Sea is a gulf. The Sacrum Promontorium (Cape St. Vincent) is the most westerly point of Europe.—With the third book commences the chorographical part. Spain is the first country that occupies Strabo's attention; he first describes Bætica, then Lusitania and the northern coast as far as the Pyrenees, then the southern coast from the Columns of Hercules to the same range, and, finally, the islands in the neighbourhood of Spain, the Balears, Gades, and the Cassiterides. In giving the description of this country Strabo follows three writers who had travelled in it. The first of these is Artemidorus, who boasted of having pushed his way as far as Gades, although the account which he gives of the phenomena that there attended the setting of the sun does not seem to indicate one who had observed them himself: this traveller was very exact in his determination of distances. The second source whence Strabo derived his information concerning Spain, and his principal guide in this book, is Posidonius. The third is Polybius. Strabo, however, notes the changes which had taken place since the period of the last-mentioned writer. Independently of these three authorities, our geographer cites Ephorus, Eratosthenes, Timosthenes, Anaclepiades of Myrlea, and Athenodorus.—The fourth book is taken up with the description of Gaul, Britain, Ireland, Thule, and the Alps. After having treated of the four grand divisions of Gaul, Narbonensis, Aquitania, Lugdunensis, and Belgica, Strabo gives some general details on this country and its inhabitants. The Alps afford him an opportunity of treating of the Ligurians, Salyes, Rætii, Vindelicii, Taurisci, and other inhabitants of these mountains. For his description of Gaul Strabo could easily obtain information from persons who had filled public offices in that country (for in his day this country was completely subject to the Romans), as well as from those who had traded thither. In other respects

Cæsar was his principal guide, especially in the description of the *Silva Arduenna*, and the account of the manners and customs of the Germans in general. He makes use, also, of the same geographers that had aided him in the third book. For example, his description of the *Rhone* and *Isere*, of their embouchures, and of the countries lying between these rivers, appears to be taken from *Artemidorus*. In the description of *Gallia Narbonensis*, of which Cæsar does not treat, *Polybius* is his authority. In what relates to the ancient constitution of *Massilia (Marseille)* he has followed *Polybius*, or perhaps *Aristotle's* work on Governments. Strabo, it is true, does not cite the latter writer on this occasion, but we see from another passage that he had consulted his work. (*Strabo*, 321.) The other accounts that he gives respecting *Massilia* are obtained from travellers with whom Strabo was personally acquainted. He gives the narrative of *Timagenes*, according to whom the treasure which *Cæpio* found at *Tolosa* made part of the plunder which the *Tectosages* had carried off from *Delphi*. With respect to Britain, the description of which follows that of Gaul, as this country was not yet subjected to the Romans, Strabo had no other sources of information than the fifth book of Cæsar's *Commentaries*, and the verbal accounts of travellers. He confesses, also, that he has but scanty materials for Ireland. In speaking of *Thule*, he makes mention of *Pytheas*, whom he unjustly considers as a writer dealing altogether in fable. For the description of the Alps, and of their inhabitants, which terminates the fourth book, his authority was *Polybius*.—The fifth and sixth books are devoted to Italy. The sixth ends with a survey of the Roman power. With the exception of *Cisalpine Gaul* and *Liguria*, Strabo knew Italy from personal observation. *Polybius* is his principal guide among the writers whom he cites, particularly for *Cisalpine Gaul*: in his description of *Liguria* he quotes also from *Posidonius*. What he says respecting the origin of the *Etrurians* is found in *Herodotus*: his account of the early kings of Rome is probably abridged from *Dionysius of Halicarnassus*. In treating of the *Etrurians*, he makes a digression concerning the *Pelaegi*, and cites *Ephorus*, *Anticlide*, and others. For the description of *Etruria* he has consulted *Polybius*, *Eratostratus*, and *Artemidorus*. In giving the dimensions of *Corfica* and *Sardinia*, he refers, for the first time, to an author whom he merely cites under the title of a "Chorographer," but whom he distinguishes from *Eratostratus*, *Polybius*, and *Artemidorus*. This is a Roman writer, for his measurements are not in stadia, but in miles; and perhaps he is the same with the *Agrippa* who prepared a description of the Roman empire, which *Augustus* caused to be placed in the portico commenced by his sister. (*Plin.*, 3, 2.) *Fabius Pictor* and *Cæcilius* are his authorities for what he says respecting the origin of the Romans; and for the rest of Central Italy and *Magna Græcia*, he follows *Polybius*, *Artemidorus*, *Ephorus*, *Timæus*, *Apollodorus*, but, above all, *Antiochus of Syracuse*. For *Sicily* he cites *Posidonius*, *Artemidorus*, *Ephorus*, and *Timæus*.—The seventh book commences with a description of the countries situate along the *Ister* or *Danube*, and inhabited by the Germans, *Cimbri*, *Getae*, and *Tauri*: it then proceeds to notice the regions between this river, the *Euxine*, the *Adriatic*, *Illyricum*, and *Epirus*. The chapters on *Thrace* and *Macedonia* are lost. Here Strabo was unable to procure as good authorities as in the preceding books, and he himself confesses that he was wandering in the dark. Strabo seems to have had under his eyes an historian who treated of the wars between the Romans and Germans, and who was subsequent to Cæsar. The name of this writer appears to have been *Asinius*. All that Strabo relates concerning the *Cimbri* is taken from *Posidonius*; for *Ephorus* the grammarian, *Apollodo-*

rus, and *Hypsicrates* of *Amisæ* are only cited for isolated facts. The two latter appear to have left histories of the war with *Mithradates*. *Illyricum* is one of the countries which Strabo himself traversed.—From what he says on the subject, we see that in *Aristotle's* work on Governments, the constitutions of *Acarmania*, *Megaris*, *Ætolia*, and *Opuntia* were, among others, considered. *Polybius* and *Posidonius* have supplied Strabo with his materials for these regions; *Theopompus* and *Ephorus* were his guides in *Epirus*, and *Philochorus* in what relates to *Dodona*. He cites, also, a certain *Cineas*; but whatever he drew from this otherwise unknown author has perished with the end of the book.—The eighth book, and the two immediately following, contain Greece in general, and the *Peloponnesus* in particular. In the description of Greece, Strabo takes the Homeric poems for a basis. In the ephorographical part he consults also *Ephorus* and *Polybius*; in the physical part, *Posidonius* and *Hipparchus*; in the description of bays and harbours, *Artemidorus* and *Timosthenes*; and, in addition to all this, draws largely on his own information as a traveller in this country. Passing on to the description of *Elis*, he cites, for the fabulous ages, *Homer* and his commentators, *Apollodorus*, and *Demetrius of Scepsis*, as well as the other early poets; he relies principally, however, upon *Ephorus*. The other writers consulted by him for his account of the *Peloponnesus* are *Philochorus*, *Callisthenes*, *Hellanicus*, *Demetrius of Scepsis*, *Theopompus*, *Thucydides*, and *Aristotle*. What he says of the *Achean league* is taken from *Polybius*. The distances between places are obtained from *Artemidorus* and *Eratostratus*.—In the ninth book he describes *Megaris*, *Attica*, *Boeotia*, *Phocis*, *Locris*, and *Thessaly*, as well as *Hellas*, properly so called. The dimensions of *Attica* are taken from *Eudoxus*, the mathematician; its history from the *Atthidographi*, among whom he cites *Philochorus* and *Andron*. He has consulted, also, the memoirs of *Demetrius Phalereus*, for the purpose of learning the condition of *Attica* during the time of that individual. For *Bœotia*, *Locris*, and *Phocia*, *Ephorus* and others have been his authorities. What he gives respecting *Thessaly* is a kind of commentary on those passages in *Homer* where mention is made of the *Thessalians*.—The tenth book is occupied with the rest of Greece; *Eubœa*, *Acarmania*, *Ætolia*, *Crete*, the *Cyclades*, *Sporades*, &c. For the antiquities of *Eubœa*, *Homer* and his commentators have been consulted; for its history, *Theopompus* and *Aristotle*. When he treats of *Acarmania* and *Ætolia*, he follows *Homer* and another epic poet, probably a *Cyclic bard*, who had composed an *Alcæmonid*, which *Ephorus* had under his eyes. His other sources of information were *Apollodorus*, *Demetrius of Scepsis*, and *Artemidorus*. Before passing to *Crete*, Strabo makes a long digression respecting the *Curetes*. Among the crowd of writers who had treated of the subject, he distinguishes *Demetrius of Scepsis*, from whom he appears to have derived the account that he gives respecting the religious ceremonies of the *Cretans*; he refers, also, to *Archemachus of Eubœa*, an historian of an unknown epoch, cited frequently by *Athenæus*, to *Pherecydes of Scyros*, *Acusilas of Argos*, who gave a prose translation of the poetry of *Hesiod*, and to *Stesimbrotus of Thasos*. For the description of *Crete* his principal authority was *Sosicrates*. He names also *Eudoxus*, *Artemidorus*, *Hieronymus of Cardia*, and *Staphylus of Naucratis*. What relates to the government of *Crete* is taken from *Ephorus*. The account of the islands of the *Ægean* is the result of Strabo's own observations.—The eleventh book begins the description of Asia. Strabo bounds this part of the world by the *Tanais*, the *Ocean*, and what is now the *Isthmus of Suez*; but he believed it to be much less extensive than it is in reality. He was unacquainted with the vast regions of Asiatic Russia, and with those of Central Asia occu-

pied by Tartar and Mongul tribes: he knew merely a portion of Southern Asia. What he states respecting the shores of the Palus Mæotis and Euxine, is drawn, for the most part, if not altogether, from the narratives of travellers; perhaps, also, from his own personal observations. For the measurement of distances he follows Artemidorus. In relation to Iberia and Albania, Strabo consulted, besides Artemidorus, the historians of the Mithradatic war, of whom Theophanes and Posidonius were the two principal ones. To these must be added Metrodorus of Scepsis, and Hysicrates of Amies. From the latter is taken the digression respecting the Amazons. In his description of the Caspian Sea, Strabo has followed very bad guides. His prejudice against Herodotus prevented him from following that historian, who knew very well that the Caspian is a lake, and who gives its dimensions with tolerable accuracy. The opinion which made it a gulf of the Northern Ocean originated very probably with the followers of Alexander, who were either deceived as to its nature, or misled by national vanity. The chief author of Strabo's mistake relative to the Caspian appears to have been Patroclus, the admiral of Seleucus and Antiochus. Pliny states that this navigator entered into the Northern Ocean by the way of the Caspian Sea; but Strabo corrects Pliny's error, by making Patroclus merely conjecture that one might sail by this route to India. The description of Hyrcania and the neighbouring countries is taken from Patroclus, Eratosthenes, Aristobulus, and Polyclethus; that of the Massagætæ from Herodotus; that of Bactriana from Eratosthenes. For Parthia, Strabo's authority was Apollodorus of Artemis, whom we know merely through the medium of the geographer, but who would seem to have lived only a short time before him, since he had written the history of the war between the Romans and Parthians. An extract from the same historian, on the kingdom of Bactria, is almost all the information that is given us respecting this state. The exact ideas which Strabo has in relation to the Oxus and Iaxartes are owing to Patroclus; the fables respecting the Derbices, Caspii, and Hyrcanii are found in Herodotus. For the description of Media he cites Apollonides, and especially Q. Dellius, the friend and companion of Marc Antony, whom Plutarch mentions in his life of the triumvir. In place of Q. Dellius, some editions of Strabo have the corrupt reading Adelpsius.—In the *twelfth book* commences the description of Asia Minor. Here Strabo finds himself in the country of his youth, and relates much that he himself had seen. As regards the earlier periods, he relies on the authority of Hellanicus, Ephorus, Theopompus, the historians of the Mithradatic wars, and particularly Theophanes. When treating of the Mysians, to whom some writers join the Lydians, he speaks of Xanthus the Lydian, and of Menecrates of Elea, his contemporary, who had written an *Ἑλληνοπονυακὴ περίοδος*, and a work on the origin of cities (*περί κτίσεων*).—In the *thirteenth book* Strabo returns towards the Propontis, and describes the seacoast from Cyzicus to Cumæ, comprehending the Troad and Æolis. To this he adds an account of Lesbos, which lies opposite. From thence, turning towards the interior, he stops by the way at the cities of Pergamus, Sardis, Hierapolis, and some others. In his description of the Troad, Homer is Strabo's first and leading authority; the commentators on the poet, namely, Eudoxus of Cnidus, Damasias of Sigæum, Charon of Lampascus, Scylax, and Ephorus, occupy the second rank. To these must be added Callisthenes, and a writer born in this country, Demetrius of Scepsis, who had written thirty books on sixty verses of the Iliad. From this author is taken the story about Aristotle's library. (*Vid.* Scepsis.) Ephorus, Thucydides, and Artemidorus are cited for distances; Lycurgus the orator, Hellanicus, and Menecrates are the authorities

for the different theories among the ancients respecting the origin of the Trojans.—In the *fourteenth book* Strabo is still occupied with Asia Minor; he describes Ionia, with the islands of Samos and Chios; the Isle of Rhodes, Caria, Lycia, Pamphylia, Cilicia, and the Isle of Cyprus. The ancient history of Ionia is taken from Pherecydes of Scyros, and the poets, such as Mimnermus and Hipponax. On the subject of the founding of Miletus, our author consulted Ephorus; and, as regards the colonies planted by this city, Anaximides of Lampascus. The history of Polycrates is taken from Herodotus; that of the Athenian expedition to Samos, from Thucydides. In the account of the early history of Ephesus, Artemidorus is followed; in the case of the other cities, Pherecydes of Scyros, and Ephorus, as well as the poets. The history of the kingdom of Pergamus, and of the attempt of Aristonicus, is taken, very probably, from Posidonius. Strabo had himself visited these countries and collected materials; the same was the case with Rhodes. For Caria he obtained accounts from the grammarian Apollodorus; but especially from a certain Philip, who had written a history of the early times of Caria. The authority for Lycia was probably Artemidorus, whom Strabo cites for distances. What he states respecting Cilicia, and of the great number of slaves sent from that country to the slave-market at Delos, in order to supply the Roman demand for this unfortunate class of beings, appears to have been extracted from Posidonius. It is certain, at least, that the writer from whom Strabo obtained these particulars was subsequent to the war of Pompey with the pirates. Strabo then engages in a discussion against the grammarian Apollodorus, who, according to him, had misunderstood both Homer and Ephorus in many things relating to Asia Minor. In the description of Cyprus he corrects Damasias and Eratosthenes, on the authority, probably, of Artemidorus.—In the *fifteenth book* Strabo commences the description of Asia beyond Taurus, or Southern Asia; this book is devoted to India and Persia. Here our author describes regions which he never saw. He himself acknowledges that all that was known in his day respecting India was full of obscurity and contradiction. His own ideas, too, concerning the shape of this country, is altogether false; he represents it as a rhomboid, the northern and southern sides of which measured 3000 stadia (nearly 115 leagues) more than the eastern and western. He had, consequently, no knowledge whatever of the peninsula of Decan. In the whole of India he was only acquainted with three cities: Taxila, Patala, and Palibothra. If, however, the geographical information relative to this country be meager and unsatisfactory, the deficiency is, in some degree, compensated by the very full account that is given of the manners and institutions of the people. Besides Eratosthenes, who is his principal guide, Strabo has derived much information from the historians of Alexander and his successors, particularly Patroclus and Aristobulus, whom he considers most worthy of reliance; after them he ranks Megasthenes and Nearchus: he gives little credit to Onesicritus, Daimachus, and Clitarchus. In treating of the course of the Ganges, he gives the opinion of Artemidorus: he cites the account given by Nicolaus Damasceus of his interview with the ambassadors sent from Taprobana to Augustus; he quotes, also, a certain Megillus, who had written on the culture of rice.—After India, Strabo describes the Empire of Persia. He comprehends, under the name of Ariana, the provinces situate between the Indus and a line drawn from the Caspian Gates (Pylæ Caspiæ) to the embouchure of the Persian Gulf. In his description of the coasts of Persia he follows Nearchus and Onesicritus; and with regard to the countries in the interior, he remarks, that he has nothing more to say respecting

them than Eratosthenes had, who himself derived his own information from the historians of Alexander. For the dimensions of the country he cites Bæton and Diognetes. His authorities for the description of Persia Proper (or Persis) are Eratosthenes and Polyclitus: his account of Persepolis and Pasargada is borrowed from Aristobulus, and is found also in Arrian. In speaking of the worship of fire, he gives us to understand that he has been an eyewitness of the ceremony, since he remarks that Cappadecia, a province over which he had travelled, contained many Magi, or worshippers of fire (*ῥήγαι*). The remainder of his account of Persian manners is taken from Herodotus and Xenophon. — The *sixteenth* book terminates the account of Asia: it contains a description of Assyria, a name under which Strabo, besides Adiabene, comprehends also Babylonia and Mesopotamia; to this succeeds an account of Syria, together with Phœnicia and Palestine; and last of all comes Arabia. The description of Aturia, or the Assyrian province in which was situate the city of Ninus, is taken from an historian of Alexander, who, together with Herodotus, Polyclitus, and Eratosthenes, has also been his authority for Babylonia. What he states concerning the Parthian empire is probably taken from Posidonius; for mention is made, in the course of it, of the war waged by Pompey against Tigranes. The account which he gives of the stone dikes, by which the Assyrians had fettered the navigation of the Tigris, is found also in Arrian, and appears to have been borrowed from Aristobulus and Nearchus. The picture of Babylonian manners is traced after the original drawn by Herodotus, and also after that of Posidonius. Strabo had travelled in Syria, and therefore speaks of it as an eyewitness. He gives the distances according to Eratosthenes and Artemidorus; in the history of the Seleucids he follows Posidonius. We find here a remarkable passage respecting Moses and the Jews, taken from some author who wrote after the capture of Jerusalem by Pompey. — What Strabo mentions under the head of Arabia is taken from Eratosthenes, with the exception of the account that is given of the western part of the country; this appears to have been drawn from Artemidorus, who had himself copied it from Agatharchidas. The book concludes with accounts derived by Strabo from conversations with travellers, particularly with the Stoic philosopher, Athenodorus of Tarsus, the friend and preceptor of Augustus, who had visited Petra, the chief city of the Nabathæi, and in company with Ælius Gallus, with whom Strabo became acquainted in Egypt. — The *seventeenth* and *last* book comprehends Egypt, Ethiopia, and Libya, which we call Africa, and which comprised under the name of Libya the countries of Cyrenaica, Mauritania, and the territories of Carthage. The division of the Roman empire into provinces terminates the work. What Strabo relates concerning the Nile is obtained from Eratosthenes, Eudorus, and Aristeon. Strabo, moreover, was personally acquainted with the course of the stream as far as the Cataracts. His account of the Ptolemies is based upon the testimony of Polybius, and in part, very probably, upon his continuator, Posidonius. In the narrative of Alexander's march across the desert to the oracle of Ammon, Strabo follows Callisthenes and the other companions of the prince. The recital of Petronius, who, during the reign of Augustus, carried on war against the Ethiopians, the work of Agatharchidas, and the history of Herodotus, are the sources whence he draws his materials for an account of the countries lying to the south of Egypt. With regard to Libya, and particularly the Oases and the temple of Ammon, he takes Eratosthenes for his guide, and for the distances, Artemidorus; while for the historical portion, Posidonius, in all likelihood, served as authority. He cites also Timosthenes and Iphicrates, writers otherwise un-

known, who had treated of the botany of Libya. Although, in treating of Mauritania, he makes mention of the two Jubas, he does not seem to have been acquainted with the work of the younger on Africa: for, had he known it, he would certainly have furnished us with many interesting selections relative to the interior of the country. — There exists an abridgment or Chrestomathy of the entire work of Strabo, made subsequently to A.D. 980, by which the text of the main work has often been corrected, the latter having come to us in a very corrupt state. Besides the Chrestomathy, several collections of extracts from Strabo have reached our time: they are still in manuscript, and to be found in European libraries. By the help of these, the text of the large work might be still farther corrected. — Strabo wrote also an historical work, a continuation of Polybius, which he himself cites under the title of *Ἱστορικὰ ἱστορίαι* (*Historical Memoirs*). These memoirs were carried down a little farther, it would seem, than the continuation of the same historian made by Posidonius; for it appears from Plutarch that the death of Cæsar was mentioned in them. — Among the most useful editions of Strabo may be mentioned that of Casaubon, *Genev.*, 1587, fol., reprinted at Paris by Morel, after the death of Casaubon, 1620, fol.; that of Almeloveen, *Amst.*, 1708, fol., which is a reprint of Casaubon's, enriched with notes from various scholars; that of Siebenkees, continued by Tzschucke, and after him by Friedemann, but never completed, *Leips.*, 1796–1818, 7 vols. 8vo; and that of Coray, Paris, 1816–19, 4 vols. 8vo. This last contains the best Greek text: it has no Latin version, but is accompanied by an excellent commentary and several tables. The Oxford edition of Strabo, by Falconer, 1507, 2 vols. fol., is a beautiful specimen of typography, but a very unfortunate model of accurate scholarship: it is noted also for having given rise to an angry controversy between the Edinburgh Review and some of the scholars of England. — The French translation of Strabo, undertaken at the command of government, and executed by Du Theil and Coray, enjoys a high reputation. The translation, with the critical and historical notes, was assigned to the two scholars just named; and M. Gosselin had charge of the formation of the maps and the geographical illustrations. It appeared during 1805–20, and is in 5 vols. 4to. An able review of it is given in the *London Quarterly*, vol. 5, p. 273, *seqq.* (*Schöll, Hist. Lit. Gr.*, vol. 5, p. 278, *seqq.*)

STRATO, I. a philosopher of Lampascus, disciple and successor in the school of Theophrastus, or the peripatetic school, of which he took charge B.C. 286, and who continued over it for eighteen years, with a high reputation for learning and eloquence. Ptolemy Philadelphus made him his preceptor, and repaid his services with a royal present of eighty talents. In his opinion concerning matter, Strato departed essentially from the system both of Plato and Aristotle, and he is said to have nearly approached that system of atheism which excludes the deity from the formation of the world. Cicero states that this philosopher conceived all Divine power to be seated in nature, which possesses the causes of production, increase, and diminution, but is wholly destitute of sensation and figure. He taught, also, that the seat of the soul is in the middle of the brain, and that it only acts by means of the senses. (*Encyclopædia of Philosophy*, vol. 1, p. 295, *seq.*) — II. A physician of Berytus, a pupil of Erasistratus, and, like him, a determined enemy to bleeding. He became the head of a school. (*Schöll, Hist. Lit. Gr.*, vol. 3, p. 488.) — III. A licentious poet, a native of Sardia. Many epigrams of his are preserved in the Greek Anthology (*Schöll, Hist. Lit. Gr.*, vol. 4, p. 56.)

STRATON. *See* Strato.

STRATONICE, wife of Antiochus I. (Soter), king of

Syria, and previously the wife of Seleucus. (Consult remarks at the commencement of the article Antiochus.)

STRATONICĒA, I. a city of Caria, between Alabanda and Atinda, and one of the three most important cities in the interior of the country. It was founded and fortified by Antiochus Soter, and called after his wife Stratonice. The modern *Eskihissar* marks the ancient site. It would seem from Stephanus of Byzantium (*s. v. Εκαργαία*), that an earlier city called Irdias, and also Hecatesia and Chrysaoris, occupied the spot where Stratonicea was afterward founded. In consequence of some restorations by Hadrian, this latter city received the name of Hadrianopolis, but did not long retain it. (*Hierod.*—*Strabo*, 660.—*Polyb.*, 30, 19.—*Plin.*, 5, 29.) Ptolemy gives the name of the place as Stratonice. (*Leake's Tour*, p. 235.—*Chishull, Antiq. Asiat.*, p. 155.)—II. A city near Mount Taurus, called *Stratonicea ad Taurum* (*Στρατονικεῖα ἡ πρὸς τῷ Ταύρῳ*), to distinguish it from the former. (*Strabo*, l. c.)

STRATONIS TURRIS, a city of Judæa, afterward called *Cæsarea* by Herod, in honour of Augustus. (*Vid. Cæsarea*.)

STRONGYLE, one of the *Lipari* isles, or the first of the *Æolus* Islands to the northeast. It was called Strongyle (*Στρογγύλη*) by the Greeks on account of its round figure, whence, by corruption, the modern name *Stromboli*. It is celebrated for its extraordinary volcano, which is the only one known whose eruptions are continued and uninterrupted. The island is, in fact, merely a single mountain, whose base is about nine miles in circumference. The crater is supposed to have been anciently situated on the summit of the mountain; it is now on the side. From various testimonies collected by Spallanzani, he concludes that the volcano has burned for more than a century where it now does, without any sensible change in its situation. The same writer is of opinion that the material origin and increase of Stromboli is to be attributed to porphyry, which, melted by subterranean conflagrations, and rarefied by elastic gaseous substances, arose from the bottom of the sea, and, extending itself on the sides in lava and scoria, has formed an island of its present size. The earliest eruptions of Stromboli, authenticated by historical accounts, are prior to the Christian era by about 290 years, the date of the reign of Agathocles of Syracuse. (*Schol. ad Apoll. Rhod.*, 4, 761.) It burned, likewise, in the time of Augustus and Tiberius. After this latter period, a long succession of ages ensued, during which, from the want of historical documents, we are ignorant of the state of Stromboli. In the seventeenth century we again know that it ejected fire, which it has continued to do to the present time. The ancients made this island the residence of *Æolus*, monarch of the winds; and Pliny gives us the germe of the whole fable when he states that the inhabitants could tell three days beforehand, from the smoke of the volcano, what winds were going to blow. (*Plin.*, 3, 8.)—Strongyle was inhabited as early as the days of Thucydides. About twenty-five years ago, *Stromboli* did not contain more than two hundred inhabitants; but at present more than two thousand are collected in a single town. (*Mannert, Geogr.*, vol. 9, pt. 2, p. 465.—*Malte-Brun*, vol. 7, p. 780.)

STROPHĒIDES, small islands off the coast of Elia, in the Ionian Sea. They were two in number, and, according to Strabo, belonged to the territory of Cyparissa. (*Strab.*, 359.) They were first called *Plotas*, but took their name of *Strophades* from the circumstance of Zetes and Calais, the sons of Boreas, having returned from thence (*στροφῆς*, "to turn") after they had driven the Harpies thither from the table of Phineus. (*Apoll. Rhod.*, 2, 295.) According to the scholiast, however, the islands were so called because the

sons of Boreas turned to Jupiter *Æneides*, whose altar stood on a promontory of Cephallenia, and supplicated him for aid to overtake the Harpies. (*Heyne, ad Apollod.*, 1, 7, 21.)—These islands are known to navigators at the present day under the name of *Strivali*. (*Cramer's Anc. Greece*, vol. 3, p. 121.)

STROPHŪS, I. a king of Phocis. He married a sister of Agamemnon, by whom he had Pylades, celebrated for his friendship with Orestes. After the murder of Agamemnon by Clytemnestra and *Ægisthus*, the king of Phocis educated at his own house, with the greatest care, his nephew, whom Electra had secretly removed from the dagger of his mother and her adulterer. (*Pausan.*, 2, 29.—*Hygin.*, *fab.*, 1, 17.)—II. A son of Pylades by Electra, the sister of Orestes.

STRYMON, a large river of Thrace, forming the boundary of that country on the side of Macedonia. (*Scyl.*, *Peripl.*, p. 27.) It rises in the chain of Mount Scymnus, and, after a course of nearly two hundred miles, through the territory of the Paonians, the *Mædi*, *Sinti*, and *Edones*, which were Thracian tribes, falls into the gulf to which it communicated the name of *Strymonicus*, now *Golfo di Contessa*. (*Strabo*, 331.) Pliny states, that the Strymon had its source in Mount *Hæmus*, and that it formed seven lakes before it proceeded on its course (4, 10). The Strymon gave its name to a wind which was prevalent in the gulf into which that river discharges itself, and blew with great violence from the north. (*Herod.*, 8, 118.) The Strymon was also celebrated for its eels. (*Antiph.*, *ap. Athen.*, 7, 54.) According to Lucas, the modern name of this stream is *Karason*, or the "*Black River*;" but some maps term it the river of *Orphano*, from a small town near its mouth. (*Cramer's Anc. Greece*, vol. 1, p. 289.)

STYMPHĒLIS, I. a region of Macedonia, south of Orestia, and annexed to the former country upon the conquest of that kingdom by the Romans. (*Liv.*, 45, 30.)—II. *Palus*, a lake of Arcadia, near the town of *Stymphalus*, and once the fabled haunt of birds, thence called *Stymphalides*. (*Apollod.*, 2, 5, 6.—*Schol. ad Apoll. Rhod.*, 2, 1054.) Pausanias imagines that these came from Arabia, as there existed some of the same name in that country (8, 22). The *Stymphalides*, confounded by others with the Harpies, are said to feed on human flesh, and were fabled to have been destroyed by Hercules. The *Stymphalian* lake was supposed to communicate with the *Erasinus*, a small river of Argolis. (*Herod.*, 6, 76.—*Strabo*, 371.) The Emperor Hadrian caused water to be conveyed from a fountain in the *Stymphalian* territory to Corinth. (*Cramer's Ancient Greece*, vol. 3, p. 309.)

STYMPHĒLUS, a town of Arcadia, northeast of Orchomenus, and near the confines of Achaia. In the time of Pausanias it was annexed to Argolis by the voluntary choice of its inhabitants; but it was an Arcadian town at the epoch of the Trojan war, having been founded, according to the traditions of the country, long before that period by *Stymphalus*, a descendant of *Arceas*. (*Pausan.*, 8, 22.) Its antiquity is also attested by Pindar, who calls it the mother of Arcadia. (*Olymp.*, 6, 167.) The remains of *Stymphalus* are about an hour to the west-southwest of *Zaraka*, and stand upon a rocky eminence rising from the northeast side of the lake. (*Cramer's Anc. Greece*, vol. 3, p. 309.)

STYX, I. a daughter of *Oceanus* and *Tethys*. She married *Pallas*, by whom she had *Victory*, *Strength*, *Luck* (*Ζῆλος*.—*Heyne ad Apollod.*, 1, 2, 4, *not. crit.*), and *Violence*. (*Apollod.*, l. c.)—II. A celebrated torrent in Arcadia, which precipitated itself over a rocky height in the vicinity of *Noacris*, to join the river *Crathis*. The waters of the *Styx* were said to be poisonous, and to possess the property of dissolving metals and other hard substances exposed to their action.

The only thing in which it could be kept was a mule's hoof; every other kind of vessel split immediately on receiving it. Hence, say the ancient writers, it was in a mule's hoof that some of this water was sent to Asia by Antipater, for the purpose of poisoning Alexander. (*Plin.*, 30, 53.—*Eliau*, H. A., 10, 40.—*Justin*, 13, 14.—*Quint. Curt.*, 10, 10, 25.—*Senec.*, *Quaest. Nat.*, 3, 25.—*Vitruv.*, 8, 3.—*Varro*, *ap. Solin.*, c. 7.) Herodotus relates that Cleomenes, king of Sparta, assembled in this quarter the Arcadian chiefs whom he had united in a plot against that city, and made them swear by this "infernal" stream that they would persevere in their resolutions. The historian describes the Nonacrian Styx as a scanty rill, distilling from the rock, and falling into a hollow basin surrounded by a wall (6, 75). Pausanias, however, represents the Styx as falling from one of the most elevated summits that he had ever seen (8, 17, 5), and this statement agrees with the accounts of modern travellers. (*Von Stackelberg*, *La Grèce, Vues pittoresques, &c.*, *livrais.* xvii., *Paris*, 1831.—*Pouqueville*, *Voyage de la Grèce*, vol. 5, p. 458.) On comparing the language of Herodotus with that of Pausanias in another passage (8, 18, 2), it would appear that the historian merely speaks of the Styx after it has descended from the mountain-height. The modern name of the Styx is *Maronero*, or "Black Water," an appellation derived from the dark colour of the rocks over which it flows. (*Von Stackelberg*, l. c.—*Pouqueville*, l. c.) Various etymologies are assigned for the ancient name. Servius derives it from the *hateful* and *gloomy* nature of the stream (ἀπὸ τοῦ στυγερῶς.—*Serv. ad Virg.*, *Æn.*, 6, 133). According to another account, when Ceres, in the course of her wandering to recover her lost daughter, was pursued by Neptune, and compelled to change herself into a mare, she came to this Arcadian stream, and, having beheld her altered form in it, was so disgusted at the sight that she regarded its waters with *hatred*, and made them black of hue (δυσχρῆστί τε καὶ τοῦ ὄπαρ μέλαν ἐποίησε.—*Ptol.*, *Hephæst.*, *ap. Phot.*, *cod.*, 190; vol. 1, p. 148, *ed. Bekk.*).—III. A fabulous river of the lower world, the idea of which was in all probability borrowed from the Styx of Arcadia. It was said to encompass the lower region nine times in its winding course (*Virg.*, *Georg.*, 4, 480), and is described by the poets as a broad, dull, and sluggish stream of but little depth, whence the expression "Stygian lake" (*Æn.*, 6, 134), "Stygian fen" (*Æn.*, 6, 323), and the like, so frequently applied to it. According to the popular belief, the gods regarded this stream with so much reverence that they were accustomed to swear by it, and deemed such an oath the most binding in its nature. (*Æn.*, 6, 324.) If, however, any deity ever violated an oath thus taken, the punishment was believed to be deprivation of nectar and ambrosia, and the loss of all heavenly privileges for the space of ten whole years. Hesiod, in a curious passage of the *Theogony*, gives the particulars of this punishment very minutely, but makes it apply to the case of celestial perjury in general, not merely to the violation of an oath taken in the name of the infernal river. According to the poet, when any one of the gods is guilty of perjury, Iris is sent down to Hades, and brings up thence, in a golden vase, some of the chilling water of this celebrated stream. The offending deity is compelled to swallow the noxious draught, and thereupon he lies outstretched for one whole year, without senses or motion, nor partakes of the nectar and ambrosia. At the end of this year other troubles are in store for him. For nine whole years is he now separated from the society of the gods, neither attending at the council of Jove nor partaking of the banquet. In the tenth year his punishment ends, and he is restored to his former privileges. (*Hes.*, *Theog.*, 783, *seqq.*—Compare *Hom.*, *Il.*, 14, 272.—*Heyne*, *ad loc.*)

SUADA, the goddess of Persuasion, called Πίσχυς

(Πισχύς) by the Greeks. *Hermesianax* made her one of the Graces. (*Hermes.*, *ap. Pausan.*, 9, 35.)

SUASURA, a river of India, falling into the Indus near the modern city of *Attock*. D'Anville makes the modern name of the Suastus to be the *Susat*. Mannert supposes this to be the same river with that called Choasap by Strabo and Curtius, and the name Suastus, which is used by Ptolemy in speaking of this stream, to be an error. (*Mannert*, *Geogr.*, vol. 5, pt. 1, p. 30.)

SUBLICIUS PONS, the most ancient, and also the first in order, if we ascend the river, of all the bridges thrown over the Tiber at Rome. It was called *Sublicius* because constructed of wood, and resting on *piles* or *stakes* (*publica*.—*Fest.*, s. v. *Sublicius*). This bridge was built by Ancus Marcius (*Liv.*, 1, 33), but was rendered more celebrated for the gallant manner in which it was defended by Horatius Cocles against the forces of Porsenna. For some centuries after, this bridge was, through motives of religious feeling, kept constantly in repair with the same materials of which it had been originally framed, without the addition of a single nail for the purpose. This continued, as we learn from Dio Cassius (50, 9), till towards the end of the republic, when it was rebuilt of stone by the censor Paulus Emilius Lepidus. (*Plut.*, *Vit. Num.*) Julius Capitolinus states (c. 8) that it was repaired by Antoninus Pius in marble. (*Cramer's Anc. Italy*, vol. 1, p. 467.)

SUBURRA, one of the most populous and busy parts of ancient Rome. If, however, the Suburra was one of the most frequented parts of Rome, it was also the most prodigate. (*Propert.*, 4, 7, 15, *seq.*—*Horat.*, *Epod.*, 5, 57.—*Martial.*, 6, 66.) The term Suburra is sometimes used synonymously with that of Rome, especially by Juvenal. (*Sat.*, 3, 5.—*Id.*, 10, 155.) Julius Cæsar is said to have first lived in this part of Rome, and in rather an humble dwelling. (*Sueton.*, *Vit. Jul.*, 46.) Varro gives various etymologies for the name (*L. L.*, 4, 8), but they all appear unsatisfactory. (*Cramer's Anc. Italy*, vol. 1, p. 389.)

SUCRO, I. now *Xucar*, a river of Hispania Tarraconensis, in the territory of the Contestani. It rises in Mount Idubeda, and falls into the Mediterranean. (*Mela*, 2, 6.—*Plin.*, 3, 3.)—II. A city of Hispania Tarraconensis, in the territory of the Edetani, and at the mouth of the river Sucro. It lay between Carthago Nova and the river Iberus. It was in ruins as early as the days of Pliny. The modern *Cullera* marks its site. (*Plin.*, 3, 3.—*Liv.*, 28, 26.—*Id.*, 29, 19.)

SUESA, I. Pometia, an ancient Volscian city, the site of which must ever remain a matter of mere conjecture. It appears to have been in the neighbourhood of the Pomptine Paludes, to which it gave name. This town was taken and sacked by Tarquinius Superbus, and the booty is said to have furnished him with the means for laying the foundation of the Capitol. (*Liv.*, 1, 58.) It was again, at a later period, taken and sacked by the consul Servilius, and from that period we lose all traces of it in history. Suesia Pometia was a colony of Alba, according to Dionysius (1, 4) and Virgil (*Æn.*, 6, 773.—*Cramer's Anc. Italy* vol. 2, p. 95, *seq.*)—II. Aurunca, the capital of the Aurunci. (*Vid.* Aurunci.)

SUSSIONES, a people of Gallia Belgica, between the Remi, Veromandui, Vadocasses, Meldi, and Catualani. Their capital, Augusta, afterward Suesiones, now *Seissons*, stands on Orons, now the *Aisne*. They were subdued by Cæsar. (*Cas.*, *B. G.*, 8, 6.—*Liv.*, *Epit.*, 104.—*Plin.*, 4, 17.)

SUTRONIUS, I. C. Paulinus, a Roman commander, who, in the reign of Claudius, made war upon the Mauri, and was the first Roman general that crossed Mount Atlas with an army. He commanded subsequently in Britain, and there crushed a dangerous rebellion. He wrote an account of his campaign in Af-

SUA.—II. Tranquillus, a Roman historian, born about the beginning of the reign of Vespasian. His father, Suetonius Lenis, was tribune of the thirteenth legion in the war of Otho. The son followed at Rome the profession of a grammarian and rhetorician. He became intimately acquainted with the younger Pliny, who recommended him to Trajan, and procured for him the office of tribune, and the *Jus trium liberorum*, though he had, in fact, no issue. Under the Emperor Hadrian he was appointed private secretary (*Magister Epistolarum*), but was degraded from this post for having been wanting in respect to the Empress Sabina. The year of his death is not known.—The principal work that remains to us of Suetonius is his Biography of the first twelve Cæsars. In some manuscripts these lives are divided into eight books, an arrangement most probably made by the copyists. The object of Suetonius was not so much to give a history of the political and military events that occurred during the reign of each of these princes, as to delineate their private characters, their virtues and vices, in a word, the whole of their private life. His narratives do not follow a chronological order: the division is rather one resulting directly from the subject matter; as, for example, the birth of each emperor, his manner of life, occupations, amusements, &c. Suetonius traces his characters with remarkable fidelity, and, according to St. Jerome, with the same freedom with which they lived; "*pari libertate ac ipsi vixerunt*." Like Plutarch, he seems to have collected his materials from several very different authorities; but he had one great advantage over the Greek biographer in the superior knowledge which he naturally possessed of the laws and usages of the Romans; so that on those subjects his testimony is much more trustworthy. We do not see any grounds for the charge of malignity which has been sometimes brought against him; on the contrary, he appears to have recorded the virtues and vices of the Cæsars with great impartiality; and certainly it is not the fault of Suetonius if their vices seem to preponderate. He merely gives a plain and candid account of facts, many of them otherwise unknown, but of the greatest importance for history. His style is simple, concise, and correct, without either ornament or affectation.—Besides these biographies, we have from the pen of Suetonius an account of distinguished grammarians, and a fragment of a similar work on celebrated rhetoricians. To him also are ascribed lives of Terence, Horace, Lucan, Pliny the elder, Juvenal, and Persius. These are probably supposititious. Suetonius wrote also other works, on the Schools of the Greeks, on Rome and its institutions, a genealogy of Roman families, &c., but these are all lost.—The best editions of Suetonius are, that of P. Iscusi, *Leovard.*, 1714, 2 vols. 8vo; that of Oudendorp, *L. Bat.*, 1751, 2 vols. 8vo; that of Ernesti, *Lips.*, 1775, 2 vols. 8vo; but particularly that of Crusius, *Lips.*, 1816–18, 3 vols. 8vo. (*Schöll, Hist. Lit. Rom.*, vol. 2, p. 387.)

SUEVI, a powerful people of Germany, consisting of many tribes, and inhabiting the eastern section of the country, from the Danube to the Sinus Codanus. Among the separate tribes composing this nation, Ptolemy enumerates the Langobardi, Semnones, and Angli. The Catti, Marcomanni, Ubii, Sygambri, &c., were often included under the same general appellation. In process of time, the names of the several tribes became gradually more prevalent, that of Suevi less and less frequent, until the term became fixed as a designation of those that had settled in what, at the present day, is denominated *Suabia*. (*Cæs.*, *B. G.*, 4, 1, *seqq.*—*Tac.*, *German.*, 38, 45.—*Pliny*, 4, 14.—*Pertz.*, *Mon. Germ. Hist.*, 1, 100, 283, 519.) Lucan calls them *Flavi*, from their having, in general, reddish hair, which their name is likewise said to signify. (*Lucan*, 2, 51.)

1270

SUIDAS, a Greek lexicographer, of whom so little is known that some have doubted whether a person of this name ever existed. His name, however, is found in all the MSS. of his *Lexicon*, and is often mentioned by Eustathius in his commentary on Homer. He seems to have flourished between 900 and 1025 A.D. He is the author of a *Lexicon* compiled from various authors. It differs essentially from other works of this kind, in giving not only the explanation of words, but, at the same time, an historical notice of the most celebrated authors, and extracts from their works. On account of the peculiar uniformity of style which prevails in the biographical notices, it has been conjectured that Suidas borrowed them all from some *Onomasticon*; and, from an expression which he himself uses in the article *Hezychius*, some have been led to believe that a work of the latter furnished him with his chief materials. In making his compilation, however, Suidas has shown great negligence, and a total want of judgment and critical talent. He cites from vitiated and corrupt readings; he confounds individuals and authors; and oftentimes his citations do not prove what he intends. It is uncertain whether the carelessness of copyists may not have been the cause of many of these errors. Notwithstanding its errors and imperfections, it is a very useful book, and a storehouse of all sorts of erudition. It furnishes an account of poets, orators, historians, &c., with many passages from ancient authors whose works are lost. The best edition, until of late, used to be that of Kuster, *Centab.*, 1705, 3 vols. fol. In 1834, however, a new edition of Kuster's work appeared from the Clarendon press, *Oxford*, in 2 vols. fol., by Gaisford, which is in every respect far superior to the former. In the same year, Bernhardt, a German scholar, commenced re-editing Gaisford's labours, in the 4to form, at the Halle press. This latter work is still in a course of publication. (*Hoffmann, Lex. Bibliograph.*, vol. 3, p. 650.—*Schöll, Hist. Lit. Gr.*, vol. 6, p. 289.)

SUIDONES, a people of Scandinavia, famed for their skill in navigation as early as the days of Tacitus (*German.*, 44). They were the earliest inhabitants of what is now called *Sweden*, which country in early times was called *Sviar*. From them *Sweden*, in the middle ages, received the appellation of *Sveonland* and *Sueonia*. (*Bischoff und Möller, Wörterb. der Geogr.*, p. 985.)

SULLA. *Vid.* Sylla.

SULMO, I. a city of Latium, which stood on the site of the modern *Sermonetta Vecchia*. It must not be confounded with the place of the same name situated among the Peligni. Virgil probably alludes to it when he gives the name of Sulmo to a Latin warrior. (*Æn.*, 10, 517.) In Pliny's time no vestige of it remained.—II. A city of the Peligni, about seven miles southeast of Corfinium, now *Sulmona*. It was the birthplace of Ovid, who has made us acquainted with that fact in more than one passage. The improbable story of its having been founded by Solymna, a Phrygian, one of the companions of Æneas, which we find in the same poet (*Æn.*, 4, 79), is re-echoed by Silius Italicus (9, 76). We learn from Florus (2, 21) that this city was exposed to all the vengeance of Sylla for having been attached to the cause of Marius. It was not, however, destroyed by that general, since we soon after hear of its having fallen into the hands of Cæsar, together with Corfinium. (*Bell. Civ.*, 1, 16.) Frontinus states that it was a Roman colony. (*Cramer's Anc. Italy*, vol. 1, p. 334.)

SULPICIÆ, a poetess in the time of Domitian, who wrote a poem on the banishment of the philosophers by that emperor. We have remaining a Satire in seventy verses, entitled "*De edicto Domitiani, quo Philosophos urbe ejecit*." It is found in many editions of Persius and Juvenal, and even of Ausonius. This is supposed to be, in fact, the production of Sul-

pitia. (*Bähr, Gesch. Röm. Lit.*, p. 181.) The Sulpitia here alluded to must not be confounded with another in the time of Tibullus. To the latter are ascribed by some critics a portion of the elegies in the fourth book of Tibullus, namely, from the 2d to the 12th inclusive. (*Berthe, Advers.*, 59, 16.—*Brouckhaus, ad Tibull.*, p. 384.)

SULPITIA LEX, I. *Militaris*, by P. Sulpitius, the tribune, A.U.C. 665. It ordained that the prosecution of the Mithradatic war should be taken from Sylla and vested in Marius.—II. Another, *de Senatu*, by Servius Sulpitius, the tribune, A.U.C. 665. It required that no senator should contract a debt over 2000 denarii (\$300).—III. Another, *de Civitate*, by P. Sulpitius, the tribune, A.U.C. 665. That the Italian allies, who had obtained the rights of citizenship, and had been formed into eight new tribes, should be distributed throughout the thirty-five old tribes; and also that the manumitted slaves, who used formerly to vote only in the four city tribes, might vote in all the tribes.

SULPITIA GENS, a distinguished patrician family at Rome, the two principal branches of which were the Camerini and Galbe.

SULPITIUS, I. Servius Sulpitius Rufus, a distinguished patrician, brother-in-law of C. Licinius Stolo. He was highly esteemed for his talents and virtues, and filled many important offices in the state. Sulpitius was four times military tribune with consular power; the last of these times in 400 B.C.—II. Servius Sulpitius Peticus, was consul B.C. 362, with Licinius Stolo. Scenic exhibitions are said to have been first given during this year, and it was during this same year that Sulpitius drove a nail into the side of the temple of Jupiter on account of the ceasing of a pestilence.—III. Publius Sulpitius Saverio, was consul B.C. 279, with P. Decius Mus, and defeated Pyrrhus at Asculum.—IV. Servius Sulpitius Galba. (*Vid. Galba II. and III.*)—V. Caius Sulpitius Gallus. (*Vid. Gallus I.*)—VI. Publius Sulpitius, a tribune of the commons in 122 B.C., and a person of most turbulent character. As a partisan of Marius, he brought forward a law to deprive Sylla of the charge of the war against Mithradates, and to vest it in Marius. He also proposed another law respecting the Italian allies. (*Vid. Sulpitia Lex III.*) While these matters were pending, he paraded the streets, surrounded by armed bands, and a set of ruffians whom he called his anti-senate: the Italians also streamed in extraordinary numbers to the city, to await the passage of the law in which they were interested. On their first insertion into the register of citizens, eight new tribes had been created for them, whose suffrages were only then demanded when the old five-and-thirty gave no decision. Sulpitius now proposed by his law to distribute them throughout all the tribes. Rome became thereupon a scene of confusion and riot; both parties, the old citizens and the Italians, fought with sticks and clubs in the streets and forum; and the law was near being passed by force, when Sylla, who remained at Rome, came to the aid of the senatorial party. The senate was assembled in the temple of Castor, and regularly besieged by the people because it had caused to be announced the measure usual in extreme confusion of an interruption of all public business. In the tumult that arose, Sylla's son-in-law was slain; his colleague escaped the hands of the mob with difficulty; and Sylla himself, to save his life, was compelled to take off the restriction upon public business merely to be let out of the city. He betook himself to his army, while Sulpitius carried his law, and the appointment also of Marius in Sylla's stead, as commander-in-chief against Mithradates. Sylla now marched upon Rome, and the city was stormed like a hostile town. Sulpitius the tribune perished, a price having been set upon his head, and Marius himself narrowly escaped being taken.—

VII. Servius Sulpitius Rufus, a contemporary and friend of Cicero's, and one of the most eminent lawyers of his time. He had been a pupil, in judicial studies, of F. Balbus and C. Aquilius Gallus. According to the testimony of Cicero, Sulpitius was the first that gave a scientific form to Roman jurisprudence; in other words, he carried it back to first principles. He was consul 50 B.C., with M. Marcellus. Of his legal writings (*Reprehensa M. Scævola capita; De testandis sacris; De dote, &c.*), and also of his speeches, nothing remains. (Consult *Otto, "de Vita, studiis, scriptis, et honoribus Serv. S. Rufi," Traj. ad Rhen.*, 1737.)—VIII. C. Sulpitius Apollinaria, a native of Carthage, and grammarian, flourished in the time of the Antonines. We have nothing from him relative to the branch of knowledge which he professed to teach. The verses, however, that are found at the commencement of Terence's plays, as arguments to the respective pieces, are supposed to be his. We have also an epigram of his on the order which Virgil gave to burn the *Æneid*. (*Burmans, Anthol. Lat.*, vol. 1, p. 352.—*Schöll, Hist. Lit. Rom.*, vol. 3, p. 308.)—IX. Sulpitius Severus, an ecclesiastical historian, born about 363 A.D., in Aquitania. We have from him a sacred history (*Historia Sacra*), from the creation of the world to A.D. 410; a Life of St. Martin of Tours, and some dialogues and letters. The latest edition of his united works is that of Prato, *Verona*, 1741–5, 2 vols. 4to.

SUMMANUS, an Etrurian deity, whose worship was adopted, probably very early, at Rome. A temple was erected to him at the Circus Maximus in the time of the war with Pyrrhus (*Ovid, Fast.*, 6, 731), and his earthen statue stood on the top of the temple of Jupiter on the Capitol. (*Cic., Div.*, 1, 10.) Nocturnal lightnings were ascribed to Summanus, as diurnal ones were to Jupiter (*Plin.*, 2, 53.—*August.*, *Civ. D.*, 4, 23); and when trees had been struck with lightning, the *Fratres Arvales* sacrificed to him black wethers. (*Gruter, Inscrip.*, p. 121.) He may, therefore, have been only a god of the night; but we are assured that he was Pluto and Disipiter. (*Mart., Capell.*, 2, 40.—*Arnob., adv. Gent.*, 37.) Varro joins him with Vulcanus, as one of the gods worshipped by the Sabine Tatius. (*L. L.*, 4, p. 22.) As his Roman name was probably a translation, the usual derivation of it, *Summus Manium*, is perhaps founded on truth. His festival, the *Summanalia*, was on the 20th of June, when cakes shaped like a wheel were offered to him. (*Keightley's Mythology*, p. 530, seq.)

SUNION, a celebrated promontory of Attica, forming the extreme point of that province towards the south. Near the promontory stood the town of the same name, with a harbour. (*Pausan.*, 1, 1.) Sunium was held especially sacred to Minerva as early as the time of Homer (*Od.*, 3, 278), and here the goddess had a beautiful temple, whence her appellation of *Sunias*. The promontory of Sunium is frequently mentioned in Grecian history. Herodotus, in one place (4, 99), calls it the Suniac angle (*τὸν γωνίον τὸν Σουνιακόν*). Thucydides reports that it was fortified by the Athenians after the Sicilian expedition, to protect their vessels which conveyed corn from Eubœa, and were, consequently, obliged to double the promontory (8, 4).—Travellers who have visited Sunium inform us that this edifice was originally decorated with six columns in front, and probably thirteen on each side. Spohn reports, that in his time nineteen columns were still standing. The whole edifice was of white marble, and of the most perfect architecture.—According to Hobhouse (vol. 1, p. 342, *Am. ed.*), nine columns, without their entablatures, front the sea, in a line from west-northwest to east-southeast; three are standing on the side towards the land, on the north; and two, with a pilaster, next to the corner one of the northern columns, towards the sea on the east; and

there is a solitary one on the southeastern side. This last has obtained for the promontory the name of *Cape Colossi*, or the *Cape of the Column*. The whiteness of the marble has been preserved probably by the sea-vapour, in the same manner as Trajan's triumphal arch at Ancona. The rock on which the columns stand is precipitous, but not inaccessible, nor very high. It bears, according to Hobbouse, a strong resemblance to the picture in Falconer's "Shipwreck;" but the view given in Anacharsis places the temple just in the wrong position. Sunium was considered by the Athenians an important post, and as much a town as the Piræus, but could not have been very large, according to Hobbouse, who is of opinion that, when Euripides styles it the *rich rock of Sunium* in his *Cyclops*, he alludes to the wealth of the temple, not the fertility of the soil. The same writer justly considers the assertion of Pausanias to be unworthy of belief, when he states that the spear and the crest of the statue of Minerva in the Acropolis might be seen from Sunium, a straight line of nearly 30 miles.—Sir W. Gell observes that "nothing can exceed the beauty of this spot, commanding from a portico of white marble, erected in the happiest period of Grecian art, and elevated 300 feet above the sea; a prospect of the Gulf of Ægina on one side, and the Ægean on the other." (*Itin.*, p. 82.) Dodwell states that "the temple is supported on its northern side by a regularly constructed terrace wall, of which seventeen layers of stone still remain. The fallen columns are scattered about below the temple, to which they form the richest foreground. The walls of the tower, of which there are a few remains, may be traced nearly down to the port on the southern side; the greater part of the opposite side, upon the edge of the precipice, was undefended, except by the natural strength of the place and the steepness of the rock; the walls were fortified with square towers." (*Tour*, vol. 1, p. 540.—*Cramer's Anc. Greece*, vol. 2, p. 377.)

SURÆUM MARE, a name of the Adriatic Sea, as situated above Italy. The name of *Mare Inferum* was applied for the opposite reason to the sea below Italy.

SURĒNA, a powerful officer under Orodes, king of Parthia, and who had aided in raising that monarch to the throne. He distinguished himself at the storming of Selencia, and was afterward appointed commander of the Parthian forces against Crassus, whom he overthrew in the memorable victory at Charra, and afterward entrapped and put to death. Surena himself was not long after put to death by Orodes. (*Plut.*, *Vit. Crass.*)

SURRENTUM, a city of Campania, on the lower shore of the Sinus Crater, and near the Promontorium Minervæ. The place is reported to have been of very ancient date, and was said to have derived its name from the Sirens, who, as poets sung, in days of yore made this coast their favourite haunt, and had a temple consecrated to them here. (*Strab.*, 247.) Surrentum appears to have become a Roman colony in the reign of Augustus. The wine of the Surrentine hills was held in great estimation by the ancients. (*Ovid, Met.*, 15, 709.—*Martial*, 13, 110.—*Stat.*, *Sylv.*, 3, 5.) Pliny, however, relates that Tiberius used to say of this wine, that physicians had agreed to give it a name, but that, in reality, it was only a better sort of vinegar. (*Plin.*, 14, 16.) The modern name of Surrentum is *Sorrento*, and it is celebrated as the birthplace of Tasso, and admired for the exquisite beauty of its scenery and the salubrity of its climate. (*Cramer's Anc. Italy*, vol. 2, p. 183.)

SUSA (-orum), a celebrated city of Susiana in Persia, on the east side of the Eulæus or Choaspes. (*Herod.*, 5, 52.) The founder, according to Herodotus, was Darius; whereas Strabo gives, from Grecian traditions, the name of Tithonus, the father of Memnon; and Memnon himself is said to have built the

palace at Susa, afterward called *Memnonium* or *Memnonia*. Susa itself is sometimes called *Memnonia*. (*Vid. Memnon I.*) Susa was 120 stadia in circumference; according to Polyclitus 300 stadia; and the account of the last-mentioned writer, which Strabo quotes, that the city had no walls, deserves full credit, since, in all the movements of Alexander and his successors in this quarter, it is constantly represented as an unfortified city. (*Strabo*, 727.) When, therefore, mention is made in other writers of walls, we must refer what is said to the citadel merely. This citadel was termed *Memnonium*, and is represented as a place of great strength. Alexander found great treasures here. (*Strabo*, 731.) We are informed by Strabo that Susa or Susen meant in Persian "a lily," and that the city was so called from the abundance of these flowers that grew in the vicinity. Perhaps the appellation may have had somewhat more of an Oriental meaning, and have denoted the lily (i. e., the fairest) among cities.—Great difficulty exists in relation to the site of this ancient place. Mannert declares for *Taster* or *Schooshter*, and not for the more northwestern *Sus*; but consult the remarks of Williams (*Geography of Ancient Asia*, p. 12, *seqq.*). It was customary with the kings of Persia to spend the summer in the cool, mountainous country of Ecbatana, and the winter at Susa, the climate being warmer there than elsewhere.

SUSANIŌN, a Greek poet of Megara, who is supposed by some to have been the inventor of comedy, on the authority of the Arundel marble. If the marble, however, be correct, by the term *κωμῳδία*, as applied to him, we can understand nothing beyond a kind of rough, extemporal farce, performed by the chorus, into which Susaniŏn might have improved the Phallic song. His date may be inferred to be about 562 B.C. (*Theatre of the Greeks*, 3d ed., p. 70, in *notis*.—Compare the remarks of Bentley, *Dissertation on Phalaris*, vol. 1, p. 249, *seqq.*, ed. Dyce.)

SUSIĀNA or **SUSIS**, a province of Persia, to the east of Babylonia proper. It was a large level tract, shut in by lofty mountains on all sides but the south, and was hence exposed to the hot winds from this quarter, while the cool winds from the north were kept off by the mountains. Hence Susiana was selected as the winter residence of the Persian king, but suffered much from heat in summer. The chief rivers were the Ulæus and Tigris, and, on the confines of Persia, the Oroatis. The modern name of Susiana is *Chusistan*. The ancient capital was Susa, whence the appellation of Susiana was derived. (*Vid. Susa.*)

SUSIPĀ PVLÆ, narrow passes over mountains from Susiana into Persia. (*Curt.*, 5, 13, 17.—Consult *Schmieder*, *ad loc.*, and *Diod. Sic.*, 17, 68.)

SUTHUL, a town of Numidia, of which mention is made only in Sallust (*Bell. Jug.*, 37) and Priscian (5, 2; vol. 1, p. 173, ed. Krehl). Barbie du Bocage suspects that this town is the same with that called Sufetala (now *Sbeitla*) in the *Itin. Ant.* The name Suthul is said by some to signify "the town of eagles," but with what authority it is hard to say. Gesenius more correctly deduces its meaning from the Hebrew, and makes it equivalent to "*plantatio*," i. e., settlement or colony. (*Gesen.*, *Phæn. Mon.*, p. 427.)

SUTRĀTUM, a city of Etruria, about eight miles to the west of Nepete, and in a northeastern direction from Cære. It was a city of some note, and was considered by the Romans as an important acquisition in furtherance of their designs against Etruria. Having been surprised by the latter power, it fell into their hands, but was almost immediately recovered by Camillus. (*Liv.*, 6, 3.) Sutrium was colonized by the Romans, as Velleius Paterculus reports, seven years after Rome had been taken by the Gauls (1, 14). It is now *Sutri*. (*Cramer's Ans. Italy*, vol. 1, p. 324.)

SYLÆUS, an early Greek poet, who, according to Ælian (*V. H.*, 14, 31), lived after Orpheus and Ma-

seus, and was the first that sang of the Trojan war. Diogenes Laertius writes the name Saguria, and makes him to have been the contemporary and rival of Homer. (*Diog. Laert.*, 2, 46.)

SYBARIS, I. a river of Lucania, running by the city of the same name, and falling into the Sinus Tarentinus. It is now the *Cochile*. Its waters were said to render horses shy. (*Strab.*, 263.—*Ellian*, *H. N.*, 2, 36.)—II. A celebrated city of Lucania, on the Sinus Tarentinus, and near the confines of Bruttium. It was situate between the rivers Sybaris and Crathis, and is said to have been founded by the people of Trozene, not long after the siege of Troy. (*Aristot.*, *Polit.*, 6, 3.—*Solin.*, 8.) But these were subsequently joined by a more numerous colony of Achæans, under the conduct of Iseliceus (*Strab.*, 263), about 720 B.C. (*Euseb.*, *Chron.*, 2.) The rise and progress of this celebrated republic must have been wonderfully rapid. We are told that it held dominion over four different people and twenty-five towns; and that the city extended fifty stadia, or upward of six miles, along the Crathis: But the number of its inhabitants capable of bearing arms, which are computed at 300,000 by several ancient writers, and which are said to have been actually brought into the field, is so prodigious as to raise considerable doubts as to the accuracy of these statements. The accounts which we have of their luxury and opulence are not less extraordinary: to such a degree, indeed, did they indulge their taste for pleasure, that a Sybarite and a voluptuary became synonymous terms. Athenæus, in particular, dwells on their inordinate sensuality and excessive refinement. His details are chiefly drawn from Timæus, Phylarchus, and Aristotle. Among other particulars which he gives, upon the authority of these Greek writers, are the following. It was forbidden by law to exercise in the city any trade or craft, the practice of which was attended with noise, lest the sleep of its inhabitants might be disturbed; and, for the same reason, an edict was enforced against the breeding of cocks. On the other hand, great encouragement was held out to all who should discover any new refinement in luxury, the profits arising from which were secured to the inventor by patent for the space of a year. Fishermen and dyers of purple were specially exempted from the payment of taxes and duties. A crown of gold was awarded to those who distinguished themselves by the sumptuousness of their entertainments, and their names were proclaimed by heralds, at the solemn festivals, as public benefactors. To these banquets their women were also invited, and invitations were sent them a year in advance, that they might have sufficient time to provide themselves with dresses suitable to the occasion. These were of the most costly description, generally purple or saffron-coloured, and of the finest Milesian wool. Dionysius of Syracuse, having become possessed of one of these robes, which was esteemed a singular rarity from its peculiar magnificence, sold it to the Carthaginians for 120 talents, upward of 20,000*l.* When they retired to their villas, the roads were covered with an awning, and the journey, which might easily have been accomplished in one day, was the work of three. Their cellars were generally constructed near the seaside, whither the wine was conveyed from the country by means of pipes. The Sybarites were also said to have invented vapour baths.—History has recorded the name of one individual, famed beyond all his countrymen for his effeminacy and sensuality. Smindyres, the son of Hippocrates, is stated by Herodotus to have been by far the most luxurious man that ever lived (6, 127). It is reported, that when he went to Sicily on suite to the daughter of Clisthenes, tyrant of that city, he was accompanied by a train of a thousand cooks and fowlers, and that he far surpassed that prince and all his court in magnificence and splendour. (*Athen.*, 12,

3.) But this prosperity and excess of luxury were not of long duration; and the fall of Sybaris was hastened with a rapidity only equalled by that of its sudden elevation. The events which led to this catastrophe are thus related by Diodorus Siculus. A democratical party, at the head of which was Telys, having gained the ascendancy, expelled five hundred of the principal citizens, who sought refuge at Crotona. This city, upon receiving a summons to give up the fugitives or prepare for war, by the advice of Pythagoras made choice of the latter alternative; and the hostile armies met near the river Traena, in the Crotoniat territory. The forces of Crotona, headed by the celebrated Milo, amounted to 100,000 men, while those of Sybaris were triple that number; the former, however, gained a complete victory, and but few of the Sybarites escaped from the sword of the enemy in the route which ensued. The victorious Crotoniats, following up their success, advanced against Sybaris, and, finding it in a defenceless state, totally destroyed the town by turning the waters of the Crathis, and thus overwhelming it with the inundation. This event is supposed to have happened nearly 510 years B.C. (*Diod. Sic.*, 12, 9.—*Herod.*, 5, 44.—*Strabo*, 263.) The greater part of the Sybarites who escaped from the general destruction retired to their colonies on the Tyrrhenian Sea; but a small remnant still adhered to their native soil, and endeavoured, but in vain, to restore their fallen city. The city of Thurii was afterward erected in the immediate vicinity. (*Vid.* Thurii.)—As Sybaris was utterly destroyed, no ruins remain to guide us in our search of its position. Swinburne imagined, however, that he had discovered some vestiges of this city about three miles from the coast. (*Cramer's Anc. Italy*, vol. 2, p. 364, *seqq.*)

SYBARITA, an inhabitant of Sybaris. (*Vid.* Sybaris.)

SYENE, now *Assuan*, a town of Thebais, on the extremities of Egypt. Juvenal, the poet, was banished there on pretence of commanding a legion stationed in the neighbourhood.—It is famous for being the place where the first attempt was made to ascertain the measure of the circumference of the earth by Eratosthenes. In this town, according to Strabo, a well was sunk, which marked the summer solstice, and the day was known when the style of the sundial cast no shade at noon; at that instant the vertical sun darted his rays to the bottom of the well. The observations of the French astronomers place *Assuan* in 24° 5' 23" of north latitude. If this was formerly situated under the tropic, the position of the earth must be a little altered, and the obliquity of the ecliptic diminished. But we should be aware of the vagueness of observations made by the ancients, which have conferred so much celebrity on these places. The phenomenon of the extinction of the shadow, whether within a deep pit or round a perpendicular gnomon, is not confined to one exact mathematical position of the sun, but is common to a certain extent of altitude, corresponding to the visible diameter of that luminary, which is more than half a degree. It would be sufficient, therefore, that the northern margin of the sun's disk should reach the zenith of Syene on the day of the summer solstice, to abolish all lateral shadow of a perpendicular object. Now, in the second century, the obliquity of the ecliptic, reckoned from the observations of Hipparchus, was 23° 49' 25". If we add the semidiameter of the sun, which is 16' 57", we find for the northern margin 24° 6' 22", which is within a second of the actual latitude of Syene. At present, when the obliquity of the ecliptic is 23° 28', the northern limb of the sun comes no nearer the latitude of Syene than 21' 3", yet the shadow is scarcely perceptible. We have, therefore, no important reason for admitting a greater diminution in the obliquity of the ecliptic than that which is shown by real astronomical observation of the most authentic and

exact kind. That of the well of Syene is not among the number of these last, and can give us no assistance in ascertaining the position of the tropic thirty centuries ago, as some respectable men of science seem to have believed.—Nature presents a peculiar spectacle around Syene. Here are the terraces of reddish granite of a particular character, hence called Syenite; a term applied to those rocks which differ from granite in containing particles of hornblende. These mighty terraces, shaped into peaks, cross the bed of the Nile, and over them the river rolls majestically its impetuous and foaming waves. Here are the quarries from which the obelisks and colossal statues of the Egyptian temples were dug. An obelisk, partially formed and still remaining attached to the native rock, bears testimony to the laborious and patient efforts of human art. (*Malte-Brun*, vol. 4, p. 89, *seqq.*, *Am. ed.*)

SYENNÉSIS, a satrap, or, rather, tributary monarch of Cilicia, when Cyrus the Younger made war upon his brother Artaxerxes. The name Syennesis appears, in fact, to have been a common appellation for the native princes of this country. (Consult *Bähr*, *ad Herod.*, 1, 64.—*Krüger*, *ad Xen.*, *Anab.*, 1, 2, 12.—*Stanl.*, *ad Esch.*, *Pers.*, 326.)

SYLLA, LUCIUS CORNELIUS, was born at Rome A.U.C. 616, B.C. 138, in the consulship of M. Æmilius Lepidus and C. Hostilius Mancinus, four years before the death of Tiberius Gracchus. Sylla was a patrician by birth; his father, however, did nothing to promote either the honour or the wealth of his family, and his son was born with no very flattering prospects either of rank or fortune. We know not by whom his education was superintended; but he acquired, either from his instructors, or by his own exertions in after life, an unusual portion of knowledge; and he had the character of being very profoundly versed in the literature of both his own country and Greece. (*Sallust*, *Bell. Jug.*, 95.) But intellectual superiority affords no security for the moral principles of its possessor; and Sylla, from his earliest youth, was notorious for gross sensuality, and for his keen enjoyment of low and profligate society. He is said to have merely occupied lodgings at Rome, and to have lived in a way which seems to have been reckoned disgraceful to a man of patrician family, and to have incurred great indignance. For his first advancement in life he was indebted to the fondness of a prostitute, who had acquired a large sum of money, and left it all to him by her will; and he also inherited the property of his mother-in-law, who regarded him as her own son. Sylla was chosen one of the quaestors A.U.C. 646, and joined the army of Marius, who was then in his first consulship, and carrying on the war against Jugurtha in Africa. Here his services were of great importance, since it was to him that Jugurtha was at last surrendered by Bocchus, king of Mauritania. This latter circumstance excited, as is said, the jealousy of Marius; but Sylla nevertheless served under him as one of his lieutenants in the war with the Cimbri, where he again greatly distinguished himself. Finding, however, the ill will of his general daily increasing, he left him, and served in the army of Lutatius Catulus, the colleague of Marius: and in this situation, being charged with the duty of supplying the soldiers with provisions, he performed it so well, that the army of Catulus was in the midst of abundance, while that of Marius was labouring under severe privations. This still farther inflamed the animosity with which Marius already regarded him. For some years after this period Sylla seems to have lived in the mere enjoyment of his favourite pleasures of intellectual and sensual excitement. At length, A.U.C. 657, he became a candidate for the office of praetor, but without success. In the following year, however, he was more fortunate, having been elected to this same magistracy without the previous step of going through the office of

ædile; and he is said to have exhibited on the occasion no fewer than a hundred lions; the first time, it is said, that the male lion was ever brought forward in the sports of the circus. (*Plin.*, 8, 16.) On the expiration of the praetorship he obtained the province of Cilicia, and was commissioned to replace on the throne Ariobarzanes, king of Cappadocia, who had been lately expelled by Mithradates. (*Plut.*, *Vit. Syll.*, c. 6.—*Liv.*, *Epit.*, 70.) This he easily effected; for Mithradates was not yet prepared to encounter the power of Rome; and it is farther mentioned as a memorable circumstance in the life of Sylla, that while he was yet in Cappadocia, he received the first communication ever made to any Roman officer by the sovereign of Parthia. Arsaces, king of that country, perceiving that the Romans extended their influence into his neighbourhood, sent an embassy to Sylla to solicit their alliance. In the interview between the Roman praetor and the Parthian ambassador, Sylla claimed the precedence in rank with the usual arrogance of his countrymen; and by this behaviour, in all probability, left no very friendly feeling in the mind of Arsaces; and rather encouraged than lessened that jealousy of the Roman power, which the Parthians in the sequel were often enabled to manifest with more success than any other nation since the time of Hannibal. On Sylla's return to Rome, he was threatened with a prosecution on account of corrupt proceedings in his province; but the matter was never brought to a trial. Soon after this the Social War broke out, in which Sylla served as lieutenant under the consul Lucius Julius Cæsar; and during this same contest the name of Marius is hardly mentioned, whereas the services of Sylla were of the most eminent kind. Towards the close of this war, A.U.C. 685, Sylla went to Rome to stand candidate for the consulship; and the prospect of his attaining to that dignity was most galling to the jealousy of Marius, especially as a war with Mithradates now appeared certain; and, if a general of Sylla's reputation filled the office of consul, his claims to the command of the army employed in the contest would prevail over all others. Sylla's application for the consulship was a successful one, and Q. Pompeius was chosen as his colleague. Information soon after was received that Mithradates had attacked and overrun the Roman dominions in Asia Minor, and war was therefore declared against him at Rome; whereupon Asia and Italy being named as the province of the consuls, the latter fell to the lot of Q. Pompeius, and the former to that of Sylla. But the turbulent tribune Publius Sulpitius, the devoted partisan of Marius, was determined that this arrangement should not be carried into effect. The army which Sylla was to command was at this time employed near Nola, as that city, which had revolted in the Social War, still refused to submit to the Romans; but he himself remained in the city with his colleague, endeavouring to baffle the project of Sulpitius by proclaiming frequent holidays, and ordering, consequently, a suspension of public business. A violent tumult in consequence ensued; Sylla, finding himself in the power of his enemies, was compelled to yield, and immediately thereafter left Rome for his army, and Sulpitius soon caused a law to be passed depriving Sylla of the command against Mithradates, and vesting it in Marius. Two military tribunes were sent to announce this change to Sylla. The army of the latter, however, were as indignant as himself at this new arrangement. The two military tribunes were murdered, and the whole force, consisting of six legions, broke up from its quarters, and began to march upon Rome. The city was assaulted and taken; Sulpitius, being betrayed by one of his slaves, was put to death by Sylla's orders, and his head exposed on the rostra; while Marius, after a series of romantic adventures, escaped to Africa. Sylla having thus crushed the opposite faction,

SYLLA.

prescribed Marius, his son, and his chief adherents, re-established the power of the senate, and appointed his friend Octavius and his enemy Cinna to the consulship, set out against Mithradates. The relief of Greece was the first object of Sylla; and this he accomplished after taking Athens by storm, and defeating the armies of Mithradates in two great battles. Weakened and dispirited by these reverses, the King of Pontus readily concluded a treaty with the Roman general, who, on his part, was equally desirous of a peace, that he might return to Rome, where the Marian faction had regained the ascendancy. Sylla had probably expected to produce a comparative equilibrium at Rome by the appointment to the consulship of one from each of the contending factions. Here, however, his policy failed, probably from being too refined, or from his not taking into consideration the new element which had been introduced by the admission of the Italian states to the citizenship. He had, in a great measure, exterminated the democratic party in Rome itself, and restored the power of the senate; but Cinna perceived the means of raising a powerful body of new adherents, by proposing to throw open all the tribes to the Italian states, which would have given them a preponderance in every popular assembly. This the other consul, Octavius, opposed; and Cinna was compelled to withdraw to the country, where he soon mustered a powerful army of the disaffected allies. Marius, who had fled to Africa, being informed of the turn which affairs had taken at Rome, conceived hopes of recovering his power, and immediately returned to Italy, joined Cinna, and, at the head of an immense horde of robbers and semi-barbarians, the very dregs of the populace of all Italy, who flocked to his standard from all quarters, advanced against the city. At his approach Rome was thrown into consternation; and there not being any forces sufficient to oppose him, the senate offered to capitulate, on condition that the lives of the opposite party should be spared. During the progress of these negotiations, Marius entered the city at the head of his armed and barbarous adherents, secured the gates that none might escape, and gave the signal for slaughter. On rushed his barbarians like wolves, sparing neither age nor sex, while Marius gazed on the horrid scene with grim and savage delight. During five days and five nights the hideous massacre was continued with relentless ferocity, while the streets were deluged with blood, and the heads of the murdered victims were exhibited in the forum, or laid before the monster himself for his peculiar gratification. At length Cinna grew sick of the protracted butchery; but the barbarians of Marius could not be restrained till they were themselves surrounded and cut to pieces by Cinna's soldiers. Having gratified his revenge by this bloody butchery, Marius nominated himself consul for the seventh time, and chose Cinna to be his colleague. This he did without the formalities of a public assembly, as if to consummate his triumph over the liberties of his country, thus trampled upon by an act at once of violation and of insult. But a short time did he enjoy his triumph and revenge. In the seventeenth day of his seventh consulate, and in the seventeenth year of his age, he expired, leaving behind him the character of having been one of the most successful generals and most pernicious citizens of Rome. Sylla, having concluded a treaty with Mithradates, returned at the head of his victorious army, prepared and determined to inflict the most signal and ample vengeance upon the Marian faction, whom he deemed equally foes to himself and to the republic. Before his arrival in Italy, Cinna had been killed in a mutiny of his own troops; and none of the other leaders possessed talent and influence enough to make head against him. After a short but severe struggle, Sylla prevailed, and immediately commenced his dreadful,

SYLLA.

deliberate, and systematic course of retribution. All who had either taken part directly with Marius, or who were suspected of attachment to the democratic party, were put to death without mercy, and, what was almost more terrible, apparently without wrath. Sylla even produced publicly a list of those he had doomed to death, and offered a reward for the heads of each. He thus set the example of proscription, which was afterward so fatally imitated in the various convulsions of the state. His next step was to depopulate entirely several of those Italian states which had joined the Marian faction, and to parcel out the lands among his own veteran troops, whom he thus at once rewarded and disbanded in the only manner likely to reconcile them to peaceful habits. Having thus satisfied his revenge, his next care was to reform and reconstruct the constitution and government of the state, shattered to pieces by long and fierce intestine convulsions. He caused himself to be appointed dictator for an unlimited time. He restrained the influence of the tribunes by abolishing their legislative privileges, reformed and regulated the magistracy, limited the authority of governors of provinces, enacted police regulations for the maintenance of public tranquillity, deprived several of the Italian states of their right of citizenship, and, having supplied the due number of the senate by additions from the equestrian order, he restored to it the possession of the judicative order. Having at length completed his career as a political reformer, Sylla voluntarily resigned his dictatorship, which he had held for nearly three years, declared himself ready to answer any accusation that could be made against him during his administration, walked unmolested in the streets as a private person, and then withdrew to his villa near Cumæ, where he amused himself with hunting and other rural recreations. Whether his retirement might have remained long undisturbed by the relatives of his numerous victims cannot be known, as he died in the year after his abdication of power, leaving, by his own direction, the following characteristic inscription to be engraved on his tomb: "Here lies Sylla, who was never outdone in good offices by his friend, nor in acts of hostility by his enemy." The civil wars between Marius and Sylla may be considered even more worthy the careful study of the historian than those of Cæsar and Pompey, for a right understanding of the circumstances which led to the destruction of Roman liberty, as the latter but concluded what the former had begun. Indeed, the strife between Marius and Sylla was itself the natural sequel of that contest between the aristocratic and democratic factions, if they ought not rather to be termed the factions of wealth and poverty, which gave rise to the sedition of the Gracchi, and which, being conducted on both sides with no spirit of mutual concession, none of mutual regard for public welfare, deepened into the most bitter and rancorous animosity, such as could end in nothing but mutual destruction. Of the worst spirit of democracy, we see in Marius what may be called a personification; fierce, turbulent, sanguinary, relentless; brave to excess, but savagely ferocious; full of wily stratagems in order to gain his object, then dashing from him every hard-won advantage by his reckless brutality. On the other hand, the aristocratic spirit had its representative in Sylla; haughty, cautious, and determined, forming his schemes with deep forethought, prosecuting them with deliberate perseverance, and abandoning them with cold contempt when his object was accomplished. He held his dictatorial sway till he had satiated his revenge, and re-established, as he thought, the government on an aristocratical basis; then scornfully laid aside his power, and yielded himself up to voluptuous indulgence. By these means it was made clearly evident that Rome no longer possessed sufficient public or private virtue to maintain her republican

institutions; that she was tottering on the very brink of a complete and final revolution, leading with fatal certainty to a military despotism; and the only question was, whether her despotic ruler should be a Marius or a Sylla; whether he should spring from among the democratic populace or the aristocratic nobility: a question not long to be left in doubt. Many of the laws enacted by Sylla were of a wise and beneficial character, though their general aim was too manifestly the restoration of aristocratic power to the senate. What effect his personal influence, had his life been prolonged, might have had in consolidating his political reforms, cannot certainly be known, though it may very safely be conjectured that not even his power could long have prevented new convulsions. The malady lay too deep to be reached by any merely political measures of a remedial nature. It had its essence in the degeneracy and moral turpitude of the entire body of the republic, both nobles and people, which there was nothing in their external circumstances to prevent, or in their national religion to heal. Besides, as, in the recent wars and revolutions, almost all property had experienced a change of possessors, there were vast numbers throughout all Italy eager for a counter revolution. Several young men also of abilities and ambition were prepared to emulate the career of Marius or of Sylla, which could not be done without a renewal of that contest, the heavings of which had not yet wholly subsided. Of these, the chief were Lepidus, Crassus, Pompey, and Sertorius, and perhaps Lucullus. (*Hetherington's Hist. Rome*, p. 141, *seqq. Encyclop. Metropol.*, div. 3, vol. 2, p. 113.)

SYMMACHUS, a Roman senator of the fourth century, who became prefect of Rome, pontiff, augur, and proconsul of Africa. He vigorously resisted the changes that were made in the national religion by the triumphs of Christianity, and headed a deputation from the senate to the Emperor Valentinian II., requesting the re-establishment of priests and vestals, and of the altar of Victory. This application was resisted by St. Ambrose, bishop of Milan, who composed an answer to the petition of Symmachus, as did also the poet Prudentius. Symmachus lost his cause, and for some reason was banished by Valentinian or Theodosius, the latter of whom recalled him, and raised him to the consulship, A.D. 391. The petition above mentioned is preserved in the ten books of Symmachus's epistles, still extant. His oratory was of that kind which characterized the decline of Roman literature. "The luxuriance of Symmachus," says Gibbon, "consists of barren leaves without fruit, and even without flowers. Few facts and few sentiments can be extracted from his verbose correspondence." Of these epistles, the best edition is that of Scioptius, *Mogunt.*, 1608, 4to. (*Schöll, Hist. Lit. Rom.*, vol. 3, p. 200, *seqq.*)

SYMPLEGADES, two islands or rocks at the entrance of the Euxine Sea. (*Vid. Cyanæ.*)

SYNCELLUS, one of the Byzantine historians, who derived his name from his being *Syncellus*, or *Constant Resident*, with Tarasius, patriarch of Constantinople. Syncellus lived in the time of Charlemagne, and began to write his history in 792, but was prevented by death from extending it beyond the times of Maximian and Maximin. Notwithstanding its many defects, the work of Syncellus forms a valuable addition to the study of ancient chronology. Since the first book of the Chronicle of Eusebius was discovered, it has been ascertained that this work was one of the principal sources whence Syncellus drew his materials. He has, in fact, copied Eusebius to such a degree, that, by reuniting the scattered passages which he has culled from him, we might almost re-establish the text of the former. The only edition, until lately, was that of Goar, *Paris*, 1652, fol. A new edition, however, corrected from two valuable Paris MSS.,

was published in 1829, 2 vols. 8vo, as part of the Bonn collection of the Byzantine writers. (*Schöll, Hist. Lit. Gr.*, vol. 6, p. 365.)

SYNÆSUS, I. a native of Cyrene, and one of the most remarkable among the literary men of the fifth century. He was born A.D. 378, of a distinguished family, and studied at Alexandria under Hypatia and other celebrated instructors. So rapid was the progress he made, that, at the age of nineteen years, he was chosen by the inhabitants of Cyrene to present to the Emperor Arcadius a golden crown which had been voted him. The discourse which he delivered on this occasion, and which is still preserved, has been much admired. At this period he was still a pagan: subsequently, however, he was persuaded by Theophilus, bishop of Alexandria, to embrace Christianity. He was for a long time, however, very unsettled in his theological notions, and it was this very uncertainty which induced him for a considerable time to withstand the solicitations of Synesius, and not accept a bishopric. He yielded, however, A.D. 410, and separating from a wife for whom he cherished a deep affection, he was consecrated bishop of Ptolemais in Cyrenaica. Synesius appears to have died prior to 431, since, among the members of the council of Ephesus, which was held this same year, we find Eupotius, the brother of Synesius, and his successor in the diocese of Ptolemais.—The works of Synesius are rather philosophical and literary than theological. They are written with elegance. When the subject admits, his diction is elevated, and sometimes even sublime. He possesses the art of rendering abstract subjects agreeable, by intermingling with them mythological and historical, or else poetical passages. His letters, which are 154 in number, afford varied, amusing, and instructive reading. His Hymns, in iambs of four or five feet, present a singular mixture of poetic images, Christian truths, and Platonic reveries, for it was to the school of Plato that he always continued to be more or less attached. The most complete edition of his works is that of Petavius (Petavi), *Paris*, 1612, fol.; reprinted in 1631 and 1640. (*Schöll, Hist. Lit. Gr.*, vol. 7, p. 91.)—II. A philosopher, who wrote a commentary on the work of Democritus respecting things of a physical and mystical nature. It is found in the *Bibliotheca Græca* of Fabricius (vol. 8, p. 233).

SYNNAS (-ādos), or SYNNAIDA (-drum), a town of Phrygia, northwest of the plain of Ipeus. Ptolemy gives the name as *Synade*, probably through an error of the copyists: the form *Synnas* (-ados) is customary with the poets. (*Stat., Sylv.*, 1, 5, 36.) According to Stephanus Byzantinus, the name arose from the circumstance of many Grecian colonists settling here, the city being originally called *Synæa* (*Συναια*), and this term being corrupted by the neighbouring inhabitants into *Synnada* (*Συνναια*, from *σύν* and *ναια*, to live). Strabo calls it a small place (*ὅβ' μεγάλη πόλις*.—*Strabo*, 577), and we know nothing very important in relation to it: with the Romans, however, it was a *Conventus Juridicus*. (*Pliny*, 5, 29, where the name appears as a feminine, *Synnada*.)—Between this place and Docimæum, which lay to the northwest, were famous marble quarries, whence a beautiful kind of white marble, with red spots, was obtained. This was held in very high repute by the Romans, and was much used in buildings. The Romans named this marble, after the town of Synnada, *lapis Synnadicus*; whereas the inhabitants of the country called it *λίθος δοκιμῆς* or *δοκιματός*, from Docimæum. Strabo speaks of the high degree of value attached to it, and of slabs and columns of it having been transported to Rome at a great expense.—The site of Synnada appears to have been in the neighbourhood of the modern *Buhundin*, where extensive quarries are still to be seen. (*Leake's Tour*, p. 54.)

SYRPHAX, a king of the Massæyli in Libya, who

married Sophonisba, the daughter of Asdrubal, and forsook the alliance of the Romans to join himself to the interest of his father-in-law and of Carthage. Encamping his army apart from that of Asdrubal, both camps were in the night surprised and burned by Scipio. Afterward, in a general engagement, the united Carthaginian and Numidian armies were defeated. Syphax, upon this, hastened back to his own country; but, being pursued by Lælius and Masinissa, he, together with his son Vermina, was taken prisoner, and brought back to Scipio. The conqueror carried him to Rome, where he adorned his triumph. Syphax died at Tibur, B.C. 201, and was honoured with a public funeral. His possessions were given to Masinissa. (*Liv.*, 24, 48, *seqq.*—*Id.*, 29, 23, *seqq.*—*Id.*, 30, 5, *seqq.*—*Id.*, 30, 45.)—This proper name has the penult in the oblique cases always long, except in a single instance in Claudian (15, 91), where we find *Syphacem*. The context (*haurire venena compulsum*) cannot by any possibility apply to Syphax, and therefore Barthe conjectures *Hannibalem* for *Syphacem*, in the passage of Claudian just referred to, an emendation which is now very generally received. Artaud, however (in Lemaire's edition), retains the old reading.

SYRACŪSÆ, a celebrated city of Sicily, founded about 732 years before the Christian era, by Archias, a Corinthian, and one of the Heraclids. (*Thucyd.*, 6, 3.)—The parts of the city were five in number: Ortygia, Achradina, Tyca, Neapolis, and Epipolæ. The first was that originally colonized and fortified by the Corinthians under Archias; and being then an island, and most of it rocky and of difficult approach, it must have been very strong. It is now about two miles in circumference, and probably obtained its name from the abundance of *quails* there (*ὄρνις*, "a quail"). In process of time the city extended to the continent, and a suburb was added, called *Achradina*, probably from the rockiness of the ground. This, in time, occupied all the lower part of that peninsula between the Portus Laccius and the Portus Troglitorum, and was, next to Ortygia, the best peopled, though not, perhaps, in proportion to its extent. A wall was then drawn in a straight line from the Portus Troglitorum to the docks at Syracuse, and this was for some time the limits of the city. Afterward, however, were added no less than three suburbs, Tyca, Temenites (subsequently Neapolis), and Epipolæ. Temenites and Tyca were so called from the temples of Apollo and of Fortune situated there, and of which the *τέμενα*, or sacred closes, no doubt, originally occupied a great part of their sites. *Τύχη* was probably Syracusan for *τύχη* ("fortune"). Neapolis was of later foundation, and occupied the site of Temenites. These several parts were all gradually surrounded by walls, and included in the city; and thus, in the end, Syracuse became one of the most extensive cities in Europe. Ortygia, being the original city, was called the citadel, or the city, *καὶ ἑφορῖν*. The Epipolæ, which was north of Temenites and Tyca, and of a triangular figure, derived its name from its elevated site, now called *Belvedere*; the highest parts of which were occupied by the Syracusan castles of Euryalus and Labdalum. (Compare Göller, *de situ et origine Syracusarum*, Lips., 1818, 8vo.—*Bloomfield ad Thucyd.*, 6, 75; vol. 3, p. 118, in *notis*.)—Syracuse had two harbours, formed by the island of Ortygia: one called the smaller harbour, and also Portus Laccius, between the upper side of Ortygia and the mainland; the other on the southern side, between Ortygia and the Plemmyrian promontory, and running up far like a bay; this was called the great harbour, and was not only extremely capacious, but also perfectly secure against storms and the violence of the sea.—The original constitution of Syracuse, like that of so many Dorian settlements, was aristocratical.

It subsequently fell under the power of tyrants, some of whom advanced its power and prosperity to a very high pitch. (*Vid.* Gelon, Hiero, Dionysius.)—It occupies also a conspicuous place in the Peloponnesian war, on account of the unfortunate expedition sent hither by the Athenians. (*Vid.* Peloponnesiacum Bellum.) After a long period of alternate fortune, Syracuse at last fell into the hands of the Romans under Marcellus, after a siege of about three years, B.C. 312.—Of the five ancient divisions of Syracuse, Ortygia alone is now remaining; it is about two miles round, and supposed to contain about 17,000 inhabitants. There are some remains, however, still visible of the ancient Syracuse, in the ruins of porticoes, temples, and palaces. The famous fountain of Arethusa rose in the island of Ortygia; but, though still a striking object from its discharge of waters, it now serves merely as a resort for washerwomen.—"If mighty names and events," observes a modern writer, "crowd upon the mind when we barely read the name of Syracuse, what vivid historic associations must be awakened by the soil itself! The city of Syracuse was invoked by Pindar as '*The Fane of Mars*,' and extolled by Cicero as the most beautiful in the Grecian world. It was the scene of some of the greatest beings and events of antiquity; of Gelon's patriotism, of Harmocrates's valour, and of Dionysius's transcendent genius. It baffled Carthage; it crushed and captured the proudest armada equipped by Athens in the plenitude of her power; and, after opposing the science of Archimedes to the strength of Rome, it was lost only by the inebriety of its guards during the night of Diana's festival. Its fate stirred compassion even in the heart of its rugged conqueror. When Marcellus looked down at morning from its heights on the whole expanse of Syracuse, the sight of its palaces and temples glittering in the sun, of its harbours so lately impregnable, and its fleets so lately invincible, the recollection of its ancient glory, the knowledge of its impending fate, and the importance of his own victory impressed him with such emotions that he burst into tears. After a lapse of two thousand years, the traveller who looks down from the same spot sees the scene of desolation completed. Groves, palaces, and temples have all disappeared, and the arid rock alone remains, where the serpent basks, and the solitary wild-flower is unbent by human footsteps. From the Roman conquest the city dated its decay; its treasures plundered, its pictures and statues torn away, and its liberties crushed, arts, commerce, agriculture, and population simultaneously declined. Some vestiges of the grandeur of Syracuse undoubtedly remained, even under the oppression of Rome and the degeneracy of the Byzantine empire; but the convulsion of earthquakes and the fanatic fury of Saracenic invaders at last effaced it from the catalogue of large cities; and now, under the feeblest branch of the Bourbons, it has only a squalid, superstitious, and idle population of 17,000 souls. The portion of its land that was once most fertile is at present become a peevish marsh. But though at this day there are so few remains of the numerous and vast buildings of Syracuse that it is difficult to guess how their materials have disappeared, there are still some noble traces of its ancient architecture. In the island of the harbour called Ortygia, some foundations have been discovered which apparently belonged to the stupendous granaries built amid the fortifications of the place by the great Dionysius. The modern cathedral, dedicated to '*Our Lady of Columns*,' is so called from its enclosing within its walls the celebrated temple of Minerva, with twenty-four of its noble pillars, twenty-eight feet in height, and six feet six inches in diameter. The nave of the modern church is formed out of the ancient cells, the walls having been perforated

to admit of passages into the side aisles, which consist of the north and south porticoes of the ancient peristyle. Cicero is diffuse in his description of this ancient edifice, which, though spared by Marcellus, was stripped to the bare walls of all its splendid ornaments by the infamous Verres. Upon the summit of its roof there was elevated an enormous gilded shield, that was consecrated to Minerva. This object, which was visible a great way off in the reflection of the sun, was beheld with religious respect; and the mariner at sea made an offering when he took leave of its last glimmerings. In that quarter of the city which was called Achradina there are also vestiges of the walls once defended by the genius of Archimedes. Here and there the rock itself is chiselled into battlements; and, wherever there are remains of gateways, they are found so placed that they must have obliged the assailant to approach them for a great length of way with his unshielded right side unprotected. The Hexapylon of Syracuse was not, as many commentators on Livy have supposed, a mere part of the wall, but a noble fortress, constructed with such consummate skill as to have excited the admiration of the best modern judges of military architecture. Its ruins still exhibit the size and extent of its subterranean passages, whence both infantry and cavalry might make their sallies, and retreat again under protection of the fort; the huge, square towers of its solid masonry are still to be traced; and the ground is strewn with the vast blocks of parapets, which are bored with grooves for pouring melted pitch and lead on the heads of the assailants. Such was ancient Syracuse. The fullest sympathy need not prevent our repeating a doubt as to the vast population of old ascribed to it. True, the circuit of its walls was twenty-two miles; and Thucydides, long before its era of prosperity under Dionysius, allows that it was equal to Athens; but the increase of its population after Thucydides' time is merely conjectured, and the inhabitants of all Attica scarcely exceeded half a million."

SYRIA, a country of Asia, bounded on the east by the Euphrates and a small portion of Arabia, north by the range of Taurus, west by the Mediterranean, and south by Arabia. The name *Syria* has been transmitted to us from the Greeks. Pococke conjectures that it might possibly come from Sur, the ancient name of Tyre, the chief city of the whole country. It is more natural, however, to suppose that the name *Syria* is a corruption or abridgment of *Assyria*, and that the form in question was first adopted by the Ionians, who frequented these coasts after the Assyrians of Nineveh had made this country a part of their empire, about 750 B.C. (*Mannert, Geogr.*, vol. 6, pt. 1, p. 432, *seqq.*)—It was divided into several districts and provinces, including, besides Syria Proper, Phœnicia, Palestine, and, according to Pliny, Mesopotamia and Babylonia. Syria is called in Scripture *Aram*, and the inhabitants *Arameans*, a name derived from Aram, the fifth son of Shem, the father of the Syrians. Mesopotamia is also called *Aram* in the sacred text; but the appellation *Naharim*, i. e., *between the rivers*, is always added, for distinction's sake, to the latter. The name transmitted to us by the Greeks is, as above stated, a corruption or abridgment of *Assyria*. The Greeks, however, were not unacquainted with the term *Arameans*, but they gave it a wide appellation, making it comprehend the Syrians, the inhabitants of Mesopotamia, the Assyrians, and the White Syrians, or *Leuco-Syri*, as far as Pontus, because they saw that all these nations used a common language, the same customs, and the same religious faith. The history of Syria is included in that of its conquerors. It appears to have been first reduced by Tiglath Pileser, king of Assyria, about 750 B.C.; previously to whose invasion it was divided into petty territories, of which

the kingdom of Damascus was the principal. After the fall of the Assyrian monarchy it came under the Chaldean yoke; it shared the fate of Babylonia when conquered by the Persians; and was again subdued by Alexander the Great. At his death, B.C. 323, it was erected into an independent monarchy under the Seleucids, and continued to be governed by its own sovereigns till, weakened and devastated by civil wars between competitors for the throne, it was finally reduced by Pompey to a Roman province, about 66 B.C., after the monarchy had subsisted two hundred and fifty-seven years. The Saracens, in the decline of the Roman empire, next became the masters of Syria, about A.D. 622. When the crusading armies poured into Asia, this country became the grand theatre of the contest between the armies of the cross and the crescent, and its plains were deluged with Christian and Moslem blood. Antioch, under the Roman empire the magnificent and luxurious capital of the East, and, next to Rome and Alexandria, the greatest city in the empire, was the first object of the invaders. It sustained, in 1098, a protracted siege uninjured, during which the Christian camp experienced all the horrors of famine: carrion was openly dressed, and human flesh is said to have been eaten in secret. It fell at length through treachery: in the silence of the night, the crosses commenced their indiscriminate butchery of its sleeping inhabitants. The dignity of age, the helplessness of infancy, and the beauty of the weaker sex, were, say the historians, alike disregarded by the Latin savages; and Greeks and Armenians were for some time, equally with the Mussulmans, exposed to their fury. More than ten thousand victims perished in this massacre. In the following spring Jerusalem shared the same fate. On the erection of the transitory Latin kingdom of Jerusalem, the country of Tripoli formed a distinct but dependant principality. In the ecclesiastical division, Berytus, Sidon, Acre, and Pannias were episcopal sees in the province of Tyre. Tyre itself was a royal domain. The battle of Tiberias, in 1186, made the illustrious Saladin the master of these places; Jerusalem capitulated the following year, and Antioch submitted to the Moslem conqueror, who thus became lord of both Syria and Egypt. Syria remained subject to the sultans of Egypt till, in 1517, Selim I. overthrew the Mamelouk dynasty, and Syria and Egypt became absorbed in the Ottoman empire.—The situation of Syria, its distance from the seat of government, and the nature of the country, have rendered it difficult to keep it in regular subjection; and the power of the Porte in this country has been for some time on the decline, especially since the time of Djézzar Pacha. A number of petty independent chiefs have sprung up, who have set the power of the sultan at defiance. Burckhardt states that Badjazze, Alexandretta, and Antakia (Antioch) had each an independent aga. Berber, a formidable rebel who had fixed his seat at Tripoli, where he had maintained himself for six years, had been but recently subdued (in 1812) by the Pacha of Damascus. Aintab (to the north of Aleppo), as well as Edlip and Shogre (between Aleppo and Latikia), had also their own chiefs. Throughout Syria, as is the case, indeed, with respect to the whole of Asiatic Turkey, the Turks do not form more than two fifths of the population. All civil and military employments, however, are in their hands. Besides Turks, and those natives who may claim to be considered as of genuine Syrian extraction, the country is inhabited by Kourds, Turcomans, Bedouin Arabs, Chinganes, and other nomade hordes; by Druses, Ensaïries, and Motoualis; by Maronites, Armenians, Greek Christians, and Jews. No country, perhaps, exhibits a greater variety in the character of its population. The old Syrian language is said to be spoken in a few districts, chiefly in the

neighbourhood of Damascus and Mount Libanus. The Arabic predominates both in the country and the towns. A corrupt mixture of Syriac and Chaldean is spoken in some parts by the peasantry, while the Turkish is spoken by the Osmanlis and the nomadic hordes of the north. These various nations and tribes will come more particularly under our notice in describing the districts to which they respectively belong. The most natural division of the country is that which corresponds to its present political distribution into pashalics, to which we shall accordingly adhere. The coast from Akka to Djebail, with the mountains inhabited by the Druses, is comprehended under the pashalic of Seide and Akka. Near Djebail, the pashalic of Tarabolos (Tripoli) begins, and extends along the coast to Laikiia. The north of Syria, from the Levant to the Euphrates, is included within that of Haleb (Aleppo). The remainder of the country, including by far the largest territory, is the vicereignty of the Pacha of Sham (Damascus). (*Mod. Trav.*, pt. 3, p. 1.)

SYRINX, a nymph of Arcadia, daughter of the river Ladon. (*Vid.* Pan, page 967, col. 2.)

SYROS, an island in the *Egean Sea*, one of the Cyclades, situate between Cythnus and Rhenea. It was celebrated for having given birth to Phercydes, the philosopher, a disciple of Pittacus. (*Diog. Laert.*, 1, 119.—*Strabo*, 487.) It is singular that Strabo should affirm that the first syllable of the word Syros is pronounced long, whereas Homer, in the passage which he quotes, has made it short. (*Od.*, 15, 402.) Syros, now *Syra*, is said by Pliny to be twenty miles in circumference. (*Pliny*, 4, 12.—*Cramer's Anc. Greece*, vol. 3, p. 409.)

SYRTES, two gulfs on the northern coast of Africa, one called Syrtis Minor, on the coast of Byzacium, and now the *Gulf of Gabes*; the other called Syrtis Major, on the coast of Cyrenaica, now the *Gulf of Sidra*. The former is supposed to derive its modern name from the city of Tacape, which was at the head of it. The latter is called by the natives *Syrte-al-Kibber*, i. e., "The great Syrtis," which the sailors have corrupted into *Sidra*. The Syrtis Minor is about 45 geographical miles in breadth, and runs up into the continent about 75 miles. It is still an object of apprehension to sailors, in consequence of the variations and uncertainties of the tides on a flat and shelvy coast. The Syrtis Major is about 180 geographical miles between the two capes, and penetrates 100 miles into the land. The name *Syrtis* is generally derived from the Greek *σῦρσις*, "to drag," in allusion to the agitation of the sand by the force of the tides. (Compare *Sallust, Bell. Jug.*, c. 78.) It is more than probable, however, that the appellation is to be deduced from the term *Sert*, which still exists in Arabic as the name for a desert tract or region: for the term Syrtis does not appear to have been confined to the mere gulfs themselves, but to have been extended also to the desert country adjacent, which is still, at the present day, called *Sert*. (*Ritter, Erdkunde*, vol. 1, p. 929, 2d ed.)

T.

TABELLÆ LEGES, laws passed at various times for the purpose of enabling the Roman commons to vote by ballot, and no longer *vive voce*. The object of these laws was to diminish the power of the nobility. Voting by ballot was allowed by the Gabinian law, A.U.C. 614, in conferring honours; two years after, at all trials except for treason, by the Cassian law; in passing laws, by the Papirian law, A.U.C. 622; and, lastly, in trials for treason, also by the Coelian law, A.U.C. 630.

TABERNÆ, I. Rhenanæ, a city of Gallia Belgica, in the territory of the Nemetes, now *Rhein-Zabern*.

(*Ann. Marcell.*, 16, 2.)—II. A city of Gallia Belgica, between Argentoratum (*Strasbourg*) and Divodurum (*Metz*). The modern name is *Berg-Zabern*.—III. Tribocorum, a town in the territory of the Tribocci, now *Elsass-Zabern*. (*Bischoff und Möller, Wörterb. der Geogr.*, p. 942.)

TABOR, a mountain of Galilee. (*Vid.* Itabyrius.)

TABRICE, a city on the coast of Numidia, and near the limits of the Provincia Zeugitana, now *Tabarca*. (*Polyb.*, 12, 11.) Ptolemy writes the name Thabrica; and Pliny, Tabracha. (*Plin.*, 5, 3.)

TABURNUS, a lofty mountain in Samnium, the southern declivities of which were covered with olive grounds. It closed in the Caudine Pass on the southern side. The modern name is *Taburno* or *Tabor*. It derives celebrity from Virgil. (*Æn.*, 12, 715.—*Geogr.*, 2, 307.)

TACAPÆ, a town of Africa, at the head of the Syrtis Minor. It is now *Cabes* or *Gaps*. Near it were some medicinal waters, called *Aquæ Tacapinæ*, now *El-Hamma*. (*Plin.*, 5, 4.—*Jân. Anton.*, 50, 59, 74, &c.)

TACFARINAS, a Numidian by birth, and the leader of a revolt in Africa against the Roman power, in the reign of Tiberius. He had served among the Roman auxiliaries, and acquired in this way some knowledge of military discipline. Deserting, subsequently, from the forces among which he had been enrolled, he collected together some predatory bands, whom he accustomed to discipline, and finally appeared as the leader of the Musulani, a powerful nation on the borders of the desert. The Mauri also were drawn into the confederacy, and the Cinihi too were forced to join it. Furus Camillus, the proconsul of Africa, marched against and defeated him. He afterward, however, renewed the war, and was again defeated by Apronius, and driven into the desert. Still unsubdued in spirit, he appeared a third time as an enemy, and was defeated by Blæus. He again carried on the war, after this, with renewed strength and vigour, but was again overcome by Dolabella, and fell fighting bravely. (*Tacit.*, *Ann.*, 2, 52.—*Id. ib.*, 3, 20.—*Id. ib.*, 3, 74.—*Id. ib.*, 4, 23, *seqq.*)

TACHAMPSEO, an island in the Nile, near Philæ. The Egyptians held one half of this island, and the rest was in the hands of the Ethiopians. (Consult *Herod.*, 2, 29.)—The name Tachampseo is thought to signify "the island of crocodiles," the Egyptian term for these animals being *χάμψαι*, according to Herodotus (2, 70.—Consult *Cruaser, Comment. Herod.*, p. 83.—*Jablonski, Voc. Egypt.*, p. 368.—*Champollion, l'Égypte sous les Pharaons*, vol. 1, p. 152). Mannert makes it answer to the modern *Derar* (*Geogr.*, vol. 10, pt. 1, p. 231); but Heeren is in favour of *Calaptsché* (*Idem*, vol. 2, pt. 1, p. 359.—Consult *Bähr, ad Herod.*, 2, 29).

TACHOS, a king of Egypt in the time of Artaxerxes Ochus. Having revolted against the Persians, he drew the Greeks over into his interests, especially the Athenians and Spartans. The former sent Chabrias to his aid; the latter, Agesilaus. A misunderstanding soon arose between the Spartan leader and Tachos, on account of Agesilaus having offered advice which was rejected by Tachos, and also because the former had merely the command of the mercenaries, whereas Chabrias had charge of the fleet, while Tachos exercised supreme control over all the forces. Agesilaus, in consequence of this, espoused the interests of Nectanebis, cousin to Tachos, and had him proclaimed king while Tachos was absent in Phœnicia with the Egyptian forces. Tachos, upon this, fled to the Persians, B.C. 361. He reigned about two years. (*Corn. Nep.*, *Vit. Ages.*—*Diod. Sic.*, 15, 92.—*Id.*, 16, 48, *seqq.*)

TACITUS, C. CORNELIUS, a celebrated Latin historian, born in the reign of Nero. The exact year cannot

be ascertained; but as Pliny the Younger informs us that he and Tacitus were nearly of the same age, it is supposed that Tacitus was born A.U.C. 809 or 810, about the sixth year of Nero's reign. The place of his nativity is nowhere mentioned, but it is generally thought to have been Interamna (now Terni), in Umbria. He was the son of Cornelius Tacitus, a procurator appointed by the prince to manage the imperial revenue and govern a province in Belgic Gaul. The person so employed was, by virtue of his office, of equestrian rank. The place where Tacitus received his education, Massilia, now *Marseille*, was at that time the seat of literature and polished manners. Agricola was trained up there; but there is no reason to think that Tacitus formed and enlarged his mind at the same place, since, when he relates the fact about his father-in-law, he is silent respecting himself. If he was educated at Rome, we may be sure that it was a method very different from the fashion then in vogue. Tacitus, it is evident, did not imbibe the smallest tincture of that frivolous science and that vicious eloquence that debased the Roman genius. He most probably had the good fortune to be formed upon the plan adopted in the time of the republic; and with the help of a sound scheme of home discipline, and the best domestic example, he grew up, in a course of virtue, to that vigour of mind which gives such animation to his writings. It is reasonable to suppose that he attended the lectures of Quintilian, who, in opposition to the sophists of Greece, taught for more than twenty years the rules of that manly eloquence which is so nobly displayed in his Institutes. Some critics have applied to Tacitus the passage in which Quintilian, after enumerating the writers who flourished in that period, says, "There is another person who gives additional lustre to the age; a man who will deserve the admiration of posterity. I do not mention him at present: his name will be known hereafter" (10, 1).—If this passage relates to Tacitus, the prediction has been fully verified. When Quintilian published his great work, in the reign of Domitian, Tacitus had not then written his *Annals* or his *History*. Those immortal compositions were published in the time of Trajan.—The infancy of Tacitus kept him untainted by the vices of Nero's court. He was about twelve years old when that emperor finished his career of guilt and folly; and in the tempestuous times that ensued, he was still secured by his tender years. Vespasian restored the public tranquillity, revived the liberal arts, and gave encouragement to men of genius. Our author's first ambition was to distinguish himself at the bar.—Agricola was joint consul with Domitian, A.U.C. 880, for the latter part of the year. Tacitus, though not quite twenty, had given such an earnest of his future fame, that Agricola chose him for his son-in-law. Thus distinguished, our author began the career of civil preferment. Vespasian had a just discernment of men, and was the friend of rising merit. Rome at length was governed by a prince who had the good sense and virtue to consider himself as the chief magistrate, whose duty it was to redress all grievances, restore good order, and give energy to the laws. In such times, the early genius of Tacitus attracted the notice of the emperor. The foundation of his fortune was laid by Vespasian. Tacitus does not tell the particulars, but it is probable that he began with the functions of the *Vigintivirate*; a body of twenty men commissioned to execute an inferior jurisdiction for the better regulation of the city. That office, according to the system established by Augustus, was a preliminary step to the gradations of the magistracy. The senate had power to dispense with it in particular cases, and accordingly we find Tiberius applying to the fathers for that indulgence in favour of Drusus, the son of Germanicus. It is probable that Tacitus became one of the *Vigintivirate*,

and, consequently, that the road of honour was laid open to him. The death of Vespasian did not check him in his progress. Titus was the friend of virtue. The office of quaestor was, in the regular course, the next public honour; and it qualified the person who discharged it for a seat in the senate. Titus reigned little more than two years. Domitian succeeded to the imperial dignity. Suspicious, dark, and sullen, he made the policy of Tiberius the model of his government. He saw public virtue, and he destroyed it; and yet, in that disastrous period, Tacitus rose to preferment. The historian himself furnishes a solution of this enigma. Agricola, he tells us, had the address to restrain the headlong violence of the tyrant by his prudence and moderation. Tacitus imitated this line of conduct, and, instead of giving umbrage to the prince and provoking the tools of power, he was content to display his eloquence at the bar. Tacitus had a talent for poetry, and his verses, most probably, served to ingratiate him with the tyrant, who affected to be a votary of the Muses. If, in addition to this, he was the author of a book of apophthegms called *Facilia*, that very amusement could not fail to prove successful in gaining for him the notice of Domitian. By this emperor Tacitus was made praetor, A.D. 88; he was also appointed one of the college of *Quaestores*. In A.D. 78 he married the daughter of Julius Agricola. On the death of his father-in-law, A.D. 83, he quitted Rome, but returned to it in the year 97, when Nerva was on the throne. This prince named him successor in the consulship to Virginius Rufus, who had just died. In honour of Virginius, the senate decreed that the rites of sepulture should be performed at the public expense. Tacitus delivered the funeral oration from the rostra. Praise from such an orator, Pliny says, was sufficient to crown the glory of a well-spent life. (*Epist.*, 2, 1.) Nerva died A.U.C. 851, having about three months before adopted Trajan for his successor. In that short interval the critics have agreed to place the publication of the life of Agricola; and their reason is, because Tacitus mentions *Nerva Caesar*, but does not style him *Divus*, the deified Nerva, which, they say, would have been the case if the emperor was then deceased; but they forget that, in the same tract (c. 44), our author tells us how ardently Agricola wished to see the elevation of Trajan to the seat of empire, and that wish would have been an awkward compliment to the reigning prince. It seems therefore probable that the *Life of Agricola* was published in the reign of Trajan.—The production just mentioned is one of the most perfect specimens of biography that any language can show, and the noblest monument ever erected by any writer to any individual. We know not, on perusing it, which most to admire, the exalted and amiable character of the hero, or the truth, sensibility, and tone of calmness that prevail throughout the piece. The misfortunes of the times had imparted an air of melancholy to the style of Tacitus, which gives the work in question a sombre and touching character. His friendship towards his father-in-law never renders him unfaithful to the truth, nor does he attempt to conceal his indignation at the policy of the Roman government, of which Agricola was sometimes compelled to be the instrument.—The Treatise on the Manners of the Germans (*De situ, moribus, et populis Germaniae*), it is generally agreed, made its appearance in the year of Rome 851. The new emperor, whose adoption and succession had been confirmed by a decree of the senate, was at the head of the legions of Germany when he received the intelligence of the death of Nerva and his own accession to the empire. Being of a warlike disposition, he was not in haste to leave the army, but remained there during the entire year. In such a juncture, a picture of German manners could not fail to excite the curiosity of the public. The

second consulship of Trajan is mentioned in the tract (c. 37), and that was A.U.C. 851, in conjunction with Nerva, who died before the end of January. It is therefore certain that the description of Germany saw the light in the course of that year.—In this treatise but little reliance can be placed on the geographical notices of Tacitus, which are very defective. His remarks on the manners, usages, and political institutions of this people are, on the other hand, peculiarly valuable. The historian is supposed by the best critics to have derived his principal information relative to the Germans from persons who had served against them, and, in particular, from Virginus Rufus, who, as we learn from the Letters of Pliny, was the friend of Tacitus. The great work, also, of the elder Pliny on Germany, now lost, must have been an important aid. As to the object of the historian in composing this work, some have even gone so far as to suppose that his sole intention was to satirize the corrupt morals of his contemporaries, by holding forth to view an ideal and highly-coloured picture of barbarian virtue. According to these same writers, his object was to bring back his countrymen to their ancient simplicity of manners, and thus oppose an effectual barrier to those enemies who menaced the safety of their descendants. But a perusal of the work in question destroys all this fanciful hypothesis. The analogy between many of the rude manners of the early Germans and those of the aborigines of North America at once stamps the work with the seal of truth. What if Tacitus dwells with a certain predilection upon the simple manners of Germany? It surely is natural in one who had become disgusted with the excesses of Italy. We are not to suppose, however, that this work of Tacitus is free from errors. The very manner in which he acquired his information on this subject must have led to misconceptions and mistakes. Religious prejudices also served occasionally to mislead the historian, who beheld the traces of Greek and Roman mythology even in the North.—The friendship that subsisted between Tacitus and the younger Pliny is well known. It was founded on the consonance of their studies and their virtues. They were both convinced that a striking picture of former tyranny ought to be placed in contrast to the felicity of the times that succeeded. Pliny acted up to his own idea of this in the panegyric on Trajan, where we find a vein of satire against Domitian running throughout the whole piece. It appears in his letters that he had some thoughts of writing a history on the same principle; but he had not resolution to undertake that arduous task. Tacitus had more vigour of mind; he thought more intensely, and with deeper penetration than his friend. We find that he had formed, at an early period, the plan of his History, and resolved to execute it in order to show the horrors of slavery, and the debasement of the Roman people through the whole of Domitian's reign. (*Vit. Agr.*, c. 3.) He did not, however, though employed in a great and important work, renounce immediately all his practice in the forum, but continued to be employed there until the trial of Marius Priscus, who had been proconsul of Africa, and stood impeached before the senate at the suit of the province. Priscus had presented a memorial, praying to be tried by a commission of select judges. Tacitus and Pliny, by the special appointment of the fathers, were advocates on the part of the Africans. They thought it their duty to inform the house that the crimes alleged against Priscus were of too atrocious a nature to fall within the cognizance of an inferior court. The case was therefore heard at an adjourned meeting of the senate, and the eloquence of Pliny and Tacitus, but more particularly of the latter, succeeded in establishing the guilt of the accused. The senate concluded the business with a declaration that Tacitus and Pliny had executed the trust reposed in them to the full sat-

isfaction of the house. The case was tried A.U.C. 853, in the third year of Trajan's reign. From that time Tacitus dedicated himself altogether to his History. Pliny informs us (*Ep.*, 4, 13), that our author was frequented by a number of visitors, who admired his genius, and for that reason went in crowds to his levee. From that confux of men of letters Tacitus could not fail to gain the best information. Pliny sent a full detail of all the circumstances attending the death of his uncle, the elder Pliny, who lost his life in the eruption of Vesuvius, in order that an exact relation of that event might be transmitted to posterity.—Trajan reigned nineteen years. He died suddenly in Cilicia, A.U.C. 870, A.D. 117. The exact time when Tacitus published his History is uncertain, but it was in some period of Trajan's reign. He was resolved to send his work into the world in that happy age when he could think with freedom, and what he thought he could publish with perfect security. (*Hist.*, 1, 1.) He began from the accession of Galba, A.U.C. 823, and followed down the thread of his narrative to the death of Domitian, in the year 849; the whole comprising a period of seven-and-twenty years, full of important events and sudden revolutions, in which the prætorian bands, the armies in Germany, and the legions in Syria claimed a right to raise whom they thought proper to the imperial seat, without any regard for the authority of the senate. Such was the subject Tacitus had before him. The summary view which he has given of those disastrous times is the most awful picture of civil commotion and the wild distraction of a frantic people. It is not exactly known into how many books the work was divided. Vossius makes the number no less than thirty; but, to the great loss of the literary world, we have only the first four books, and the commencement of the fifth. The work must have been a large one, if we may judge from the portion that has reached us, since this contains the transactions of little more than a single year. The reign of Titus, "the delight of human kind," is totally lost, and Domitian has escaped the vengeance of the historian's pen. The History being finished, Tacitus did not think that he had completed his portraiture of slavery. He went back to Tiberius, who left a model of tyranny for his successors. This second work he called by the name of *Annals*. It included a period of four-and-fifty years, from the year 767 to the death of Nero in 821. During the period embraced by the History the whole empire was convulsed, and the author had to arrange the operations of armies in Germany, Batavia, Gaul, Italy, and Judæa, all in motion almost at the same time. This was not the case in the *Annals*. The Roman world was in a state of general tranquillity, and the history of domestic transactions was to supply Tacitus with materials. The author has given us, with his usual brevity, the true characters of this part of his work. "The detail," he says, "into which he was obliged to enter, while it gave lessons of prudence, was in danger of being dry and unentertaining. In other histories, the operations of armies, the situation of countries, the events of war, and the exploits of illustrious generals awaken curiosity and expand the imagination. We have nothing before us but acts of despotism, continual accusations, the treachery of friends, the ruin of innocence, and trial after trial, always ending in the same catastrophe. Events like these will give to the work a tedious uniformity, without an object to enliven attention, without an incident to prevent satiety." (*Ann.*, 4, 33.) But the genius of Tacitus surmounted every difficulty. He was able to keep attention awake, to please the imagination, and enlighten the understanding. The style of the *Annals* differs from that of the History, which required stately periods, pomp of expression, and harmonious sentences. The *Annals* are written in a strain more subdued and

temperate: every phrase is a maxim; the narrative goes on with rapidity; the author is sparing of words, and prodigal of sentiment; the characters are drawn with a profound knowledge of human nature; and when we see them figuring on the stage of public business, we perceive the internal spring of their actions; we see their motives at work, and, of course, are prepared to judge of their conduct. The *Annals*, as well as the *History*, have suffered by the barbarous rage and more barbarous ignorance of the tribes that overturned the Roman empire. Of the sixteen books which originally composed the *Annals*, the following are lost: a part of the fifth, from the seventh to the tenth both inclusive, the beginning of the eleventh, and the end of the sixteenth. We miss, therefore, three years of Tiberius, the entire four years of Caligula, the first six of Claudius, and the last two of Nero. And, on the other hand, we have the history of the reign of Tiberius, with the exception of the three years just mentioned, the latter years of Claudius, and the history of Nero down to A.D. 67.—We find that Tacitus intended, if his life and health continued, to review the reign of Augustus (*Ann.* 3, 24), in order to detect the arts by which the old constitution was overturned, to make way for the government of a single ruler. This, in the hands of such a writer, would have been a curious portion of history; but it is probable he did not live to carry his design into execution. The time of his death is not mentioned by any ancient author. It seems, however, highly probable that he died in the reign of Trajan, and we may reasonably conclude that he survived his friend Pliny. Those two writers were the ornaments of the age; both men of genius; both encouragers of literature; the friends of liberty and virtue. The esteem and affection which Pliny cherished towards our author is evident in many of his letters, but nowhere more than in the following passage: "I never was touched with a more sensible pleasure than by an account which I received lately from Cornelius Tacitus. He informed me that, at the last Circensian games, he sat next to a stranger, who, after much discourse on various topics of learning, asked him if he was an Italian or a Provincial. Tacitus replied, 'Your acquaintance with literature must have informed you who I am.' 'Ay!' said the man; 'pray, then, is it Tacitus or Pliny I am talking with?' I cannot express how highly I am pleased to find that our names are not so much the proper appellations of men as a kind of distinction for learning itself." (*Ep.*, 10, 23.) Had Pliny been the survivor, he, who lamented the loss of all his friends, would not have failed to pay the last tribute to the memory of Tacitus. The commentators assume it as a certain fact that our author must have left issue; and their reason is, because they find that M. Claudius Tacitus, who was created emperor A.D. 276, deduced his pedigree from the great historian. (*Vopisc.*, *Vit. Tac.*) That excellent prince was only shown to the world. He was snatched away by a fit of illness at the end of six months, having crowded into that short reign a number of virtues. Vopiscus tells us that he ordered the image of Tacitus, and a complete collection of his works, to be placed in the public archives, with a special direction that ten copies should be made every year at the public expense. But, when the mutilated state in which our author has come down to posterity is considered, there is good reason to believe that the orders of the prince were never executed.—Tacitus has well deserved the appellation that has been bestowed upon him of "the greatest historian of antiquity." To the generous and noble principle which guided his pen throughout his work, he united a fund of knowledge and the colours of eloquence. Every short description is a picture in miniature: we see the persons acting, speaking, or suffering; our passions are kept in a tumult of emotion; they succeed each other

in quick vicissitude; they mix and blend in various combinations; we glow with indignation, we melt into tears. The *Annals*, in fact, may be called an historical picture-gallery. It is by this magic power that Tacitus has been able to animate the dry regularity of the chronologic order, and to spread a charm over the whole that awakens curiosity and unchains attention. How different from the gazette-style of Suetonius, who relates his facts in a calm and unimpassioned tone, unmoved by the distress of injured virtue, and never rising to indignation. Tacitus, on the contrary, sits in judgment on the prince, the senate, the consuls, and the people; and he finds eloquence to affect the heart, and through the imagination to inform the understanding.—Tacitus has been called the Father of Philosophical History; and the title is well bestowed if it be considered as confined to his acute and forcible criticisms on individual character, and the moral dignity and pathos of his manner; but of Political philosophy we discover in this excellent writer but few traces. To this department of wisdom, the times, both those which Tacitus saw and those of which his fathers could tell him, were fatally unpropitious. They exhibited a frame of society (if we may disgrace that expression by so applying it) suffering a course of experiments too frightfully violent to issue in fine results. In a nation thus tried with extremes, we could hardly expect to meet with the refinements of political science; and supposing them there to exist, an historical account of such a nation affords little scope for the display of them.—It may be expected that some notice should be taken of the objections which have been urged against Tacitus by the various writers who have thought proper to place themselves in the chair of criticism. The first charge exhibited against our author is, that he has written bad Latin. This shall be answered by a writer who was master of as much elegance as can be attained in a dead language "Who," exclaims Muretus, "are we moderns, even if all who have acquired great skill in the Latin language were assembled in a body; who are we, that presume to pronounce against an author (Tacitus) who, when the Roman language still flourished in all its splendour (and it flourished to the time of Hadrian), was deemed the most eloquent orator of his time! When we reflect on the number of ancient authors whose works have been destroyed, which of us can pretend to say that the words which appear new in Tacitus were not known and used by the ancients? and yet, at the distance of ages, when the productions of genius have been wellnigh extinguished, we of this day take upon us a decisive tone to condemn the most celebrated writers, whose cooks and mule-drivers understood the Latin language, and spoke it, better than the most confident scholar of the present age."—The next allegation against Tacitus is grounded upon the conciseness and consequent obscurity of his style. The love of brevity, which distinguishes Tacitus from all other writers, was probably the result of his early admiration of Seneca; and, perhaps, was carried farther by that constant habit of close thinking, which could seize the principal idea, and discard all unnecessary appendages. Tacitus was sparing of words and lavish of sentiment. Montesquieu says he knew everything, and therefore abridged everything. In the political maxims and moral reflections, which, where we least expect it, dart a sudden light, yet never interrupt the rapidity of the narrative, the comprehensive energy of the sentence gives all the pleasure of surprise, while it conveys a deep reflection. The observations which Quintilian calls *lumina sententiarum* crowded fast upon the author's mind, and he scorned to waste his strength in words; he gave the image in profile, and left the reader to take a round-about view.—It may be asked, Is Tacitus never obscure? He certainly is: his own laconic

manner, and, it may be added, the omissions of the copyists, have occasioned some difficulties; but he who has made himself familiar with the peculiarities of his style will not be much embarrassed. But still it may be said that, in so long a work, one continued strain of studied brevity fatigues the ear, and tires the reader by an unvaried and disgusting monotony. Variety, it must be admitted, would give new graces to the narrative, and prevent too much uniformity. The celebrated Montaigne observes, that Tacitus abounds with strong and vigorous sentences, often constructed with point and subtlety, agreeably to the taste of the age, which delighted in the gay and brilliant; and when those were not in the thought, the writer was sure to find an antithesis in the expression. And yet it is remarkable that the same writer, who owns that for twenty years together he read by fits and starts, tells us himself that he read Tacitus a second time in one regular train, without interruption.—A third allegation of the critics is, that Tacitus was a misanthrope, who beheld human nature with a malignant eye, and, always suspecting the worst, falsified facts, in order to paint men worse than they were. The answer is obvious: Tacitus was fallen on evil times; he says, "A black and evil period lies before me. The age was sunk to the lowest depth of sordid adulation, inasmuch that not only the most illustrious citizens, in order to secure themselves, were obliged to crouch in bondage; but even men of consular and prætorian rank, and the whole senate, tried, with emulation, who should be the most obsequious of slaves." (*Ann.*, 3, 65.) In such times, who could live free from suspicion? Tacitus knew the character of Tiberius; he was an accurate observer of mankind: but he must have been credulous indeed, or the willing dupe of a profligate court, if he had not laid open the secret motives of all, and traced their actions to their first principles. At the head of the critics who have endeavoured to enforce the charge of falsehood and malevolence stands Famianns Strada, the elegant author of the well-known *Prologiones Academica*, and the wars in Holland, entitled *De Bello Belgico*: but it will be sufficient, in answer to his laboured declamations, to say with Lord Bolingbroke, "He was a rhetor, who condemned Tacitus, and presumed to write history himself."—The imputation of atheism, which has been urged by critics of more piety than discernment, is easily refuted. Whatever were our author's doubts concerning fate, free-will, and the influence of the planets, let the fine apostrophe to the departed spirit of Agricola be perused with attention, and every sentiment will discover a mind impressed with the idea of an overruling Providence. There are many passages in the *Annals* and the *History* to the same effect: but more on this head is unnecessary. Nor does the paradox suggested by Boccacini deserve a longer discussion. That author gives it as his opinion, that the whole design of the *Annals* was to teach the art of despotism: it may, with as good reason, be said, that Lord Clarendon wrote the history of the Grand Rebellion with intent to teach schismatics, Puritans, and Republicans how to murder the king. (*Murphy, Essay on the Life and Genius of Tacitus*, p. 10, *seqq.*)—There has come down to us a dialogue entitled *De claris oratoribus, sive de causis corruptæ eloquentiæ*. The manuscripts and old editions name Tacitus as the author of this production; a great number of commentators, however, ascribe it to Quintilian, and some to Pliny the Younger. They who argue from the language of manuscripts allege in their favour Pomponius Sabinus, a grammarian, who states that Tacitus had given to the works of Mæcenas the epithet of *calamistri*. Now the passage to which the grammarian alludes is actually found in the 26th chapter of the dialogue under consideration. The author of the dialogue, moreover, informs us, in the first chap-

ter, that he was a very young man (*juvenis ædmodum*) when he wrote it, or, at least, when he supposes it to have been held in his presence. This point of time is clearly determined in the 17th chapter; it was the sixth year of the reign of Vespasian, A.D. 75. Tacitus at this period would be about sixteen years of age. From what has been said then, it will be perceived that, as far as chronology is concerned, nothing prevents our regarding Tacitus as the author of the dialogue in question. It is true, we find a marked difference between the style of the writer of this dialogue and that of the historian; but would not the intervening period of forty years sufficiently account for this discrepancy, and the language of the man be different from the tone of early youth? Might not, too, the same writer have varied his style in order to adapt it to different subjects? Ought he not to assimilate it to the various characters who bear a part in the dialogue? Induced by these and other reasons, Pithou, Dodwell, Schulze, and many others, have given their opinion in favour of our adhering to the titles of the manuscripts, and have ascribed the dialogue to Tacitus. Rhenanus was the first who entertained doubts respecting the claim of Tacitus to the authorship of this production, and since his time, Donae, Stephens, Freinshemius, and others no less celebrated, have contended that Quintilian, not Tacitus, must be regarded as the true writer of the work. They place great reliance on two passages of Quintilian, where that writer says expressly that he had composed a separate treatise on the causes of the corruption of eloquence (*Inst. Or.*, 6, 8, 6), as well as on many other passages in which this same work is cited, without the author's indicating the title. How can we suppose, it is asked, that either Tacitus or Pliny would be inclined to treat of a subject which had already been discussed by Quintilian? These same critics observe, moreover, that there appears to be a great analogy, not only between the matters treated of in this dialogue and those which form the subject of Quintilian's writings, but also between his style and that of the work in question. But it may be replied, in the first place, that, at the time when the dialogue was written, Quintilian was already thirty-three years of age, a period of life to which the expression *juvenis ædmodum* can with no propriety whatever be made to apply. In the next place, the argument deduced from analogy of style is not the most conclusive, since those critics who assign the work to Pliny or Tacitus adduce a similar argument in support of their claims. On the other hand, the argument which has been drawn from identity of title would be a very strong one, if it were not a fact that the second title, which is found in modern editions, *De causis corruptæ eloquentiæ*, owes its existence entirely to Lipsius, who thought fit to add this second title, which he had found in Quintilian. All the manuscripts and the early editions merely have the title *De claris oratoribus*, or else this one, *Dialogus an sui sæculi oratores et quare concedant*. Another circumstance very much against the idea of Quintilian's being the author of the piece, is the fact of his more than once referring the reader to his other work for matters of which the dialogue we are considering makes not the slightest mention; such, for example, are the hyperbole and exaggeration, of which he speaks in the third book, ch. 3 and 6. The latest editor of Quintilian, Spalding, has carefully collected all these passages, which, in his opinion, show that Quintilian was not the author of the dialogue.—On the introduction of printing, the manuscript of the *Annals* had become so scarce, that, when Vindelinus of Spire published his edition, in 1468 or 1469, of the works of Tacitus, it contained merely the last six books of the *Annals*, four books of the *History*, with part of the fifth, the Treatise on the Manners of the Germans, and the Dialogue concerning Oratory. The
